Export designations: C-130H, C-130H-30, KC-130H, C-130H-MP, VC-130H and C-130J

Israel Defence Force names: C/KC-130 Karnaf (Rhinoceros), EC-130 Aya (Condor)/Sapeer (Sapphire)

TYPE: Tactical transport and multimission aircraft.

PROGRAMME: US Air Force specification issued 1951; first production contract for C-130A to Lockheed September 1952, two prototypes, 231 C-130As, 230 C-130Bs and 491 C-130Es manufactured (details in earlier *Jane's*). For later military versions, see below; more than 70 models, variants delivered. Lockheed delivered 2,000th Hercules (C-130H 91-1231 to 165th ALS, Kentucky ANG) 14 May 1992, 2,100th Hercules delivered early 1995.

Small selection (14) of nearly 40 Hercules which celebrated the aircraft's 40th birthday at Fairford, UK, in 1994 *(Paul Jackson)*

1995

CURRENT VERSIONS. **C-130H**: Deliveries started March 1965 to Royal New Zealand Air Force; in service with 49 countries. Features include updated avionics, improved wing, new corrosion protection, and Allison T56-A-15 engines flat rated at 3,362 kW (4,508 shp). Can deliver up to 19,052 kg (42,000 lb) by low-velocity air drop, or by low altitude parachute extraction system (LAPES). Total 301 regular transport C-130Hs funded for USAF/ANG/AFRes in FY73-94; from 1994, new aircraft have Bendix/King TCAS II collision avoidance system. Night Vision Instrument System introduced to USAF aircraft from May 1993, others for special roles, as detailed below. C-130Hs of 757th ALS, AFRes, at Youngstown, Ohio, are sole USAF aircraft equipped for aerial spraying. In January 1993, Chrysler Technologies Airborne Systems and Bendix/King won cockpit upgrade competition for USAF Hercules (and 148 C-141s) involving four 150 × 200 mm (6 × 8 in) liquid crystal displays, Bendix/King digital autopilot, Sundstrand ground collision avoidance and other avionics improvements. Total 672 Hercules to be modified, including C-130Es and Hs. *Detailed description applies mainly to C-130H except where indicated.*

C-130H-MP: Maritime patrol version, one delivered to Indonesian Air Force, three to Royal Malaysian Air Force. Maximum T-O weight 70,310 kg (155,000 lb), maximum payload 18,630 kg (41,074 lb), and T56-A-15 engines; search time 2 hours 30 minutes at 1,525 m (5,000 ft) at 1,800 n mile (3,333 km, 2,070 mile) radius or 16 hours 50 minutes at 200 n mile (370 km, 230 mile) radius. Optional and standard search features include sea search radar, observer seats and windows, INS/Omega navigation, crew rest and galley slide-in module, flare launcher, loudspeaker, rescue kit airdrop platform, side-looking radar, passive microwave imager, low-light TV, infra-red scanner, camera with data annotation and ramp equipment pallet with observer station.

C-130H-30: Stretched version of current production C-130; fuselage lengthened by 4.57 m (15 ft 0 in); troop and cargo capability increased by 40 per cent.

AC-130H Spectre: Gunship version with sideways-firing 105 mm recoilless howitzer, 40 mm cannon and two 20 mm Vulcan guns; infra-red and low-light TV sensors, and side-looking head-up display for aiming at night while circling target; in-flight refuelling. Conversion by Lockheed Aircraft Service Company (now LMAS). New fire control computers and navigation and sensors installed under Special Operations/Forces Improvements (SOFI), include Magnavox AN/ARC-187 UHF satellite navigation. Flight testing began September 1989; first upgrade completed mid-1990, last of current nine completed 1993. In service with 16th Special Operations Squadron at Hurlburt Field, Florida.

EC-130H Compass Call: Works with ground-based C^3CM to jam enemy command, control and communications. Operated by 41st and 43rd Electronic Combat Squadrons at Davis-Monthan AFB, Arizona. (Eight earlier EC-130Es of 7th ACCS being updated by Loral to ABCCC III standard in $34 million programme, 1990.)

HC-130H: Extended range USAF aircraft for aerial recovery of personnel or equipment and other duties; 43 delivered from October 1964; update announced Spring 1987 includes self-contained navigation, night vision goggles cockpit and new communications equipment, applied to 31 aircraft, 21 of these modified for in-flight refuelling and now designated HC-130P (which see). US Coast Guard ordered 35, including 10 as HC-130H-7 with T56-A-7B power plants; 31 in USCG service, 1994. Further six HC-130H(N)s funded FY88 to FY93 for 210th RQS, ANG, in Alaska, delivered from 28 November 1990; has helicopter refuelling capability from outset.

JC-130H: Four US Air Force HC-130Hs equipped to recover re-entering space capsules.

DC-130H: Two US Air Force HC-130Hs modified for drone control.

KC-130H: Probe-drogue tanker similar to KC-130R, exported to Argentina (two), Brazil (two), Israel (two), Morocco (two), Saudi Arabia (eight), Singapore (one) and Spain (five).

LC-130H: Similar to LC-130R (which see); four acquired by 139th AS, ANG, at Schenectady. Two more currently on order.

MC-130H Combat Talon II: Conversion of new-build C-130H for day/night infiltration and exfiltration, resupply of Special Operations Forces, psychological warfare and aerial reconnaissance; terrain-following radar; six-man crew; 25 (including YMC-130H prototype 74-1686, now retired, and special test aircraft 83-1212, which alternatively designated C-130X) funded in FY83-90; first flight by E-Systems (see below) at Greenville Spring 1988; flight testing began at Edwards AFB September 1988; MC-130Hs augment MC-130Es at Hurlburt Field; first four delivered 17 October 1991 and temporarily with 8th SOS prior to formation of 15th SOS on 1 October 1992; others to 1st SOS at Kadena, Japan; 7th SOS at Alconbury (now Mildenhall), UK (beginning with 86-1699 on 10 September 1992); and 1550th ATS (training) at Kirtland AFB, New Mexico (three aircraft).

Equipment includes Emerson Electric AN/APQ-170 precision ground-mapping/weather/terrain-following and avoidance radar in enlarged radome, inertial navigation, automatic computed air release point, high-speed low-level release system, ground acquisition receiver/interrogator, Texas Instruments AN/AAQ-15 infra-red detection system, eight multifunction displays, secure voice UHF-VHF-FM radios, retractable FLIR pod, angle of attack probe, AN/ALQ-8 ECM pod under each wing, and in-flight refuelling. Defensive equipment includes Litton AN/ALR-69 RWR, ITT AN/ALQ-172 detector/jammer,

RC-130H Unofficial designation for two Moroccan aircraft (CN-AOP and CN-AOQ) fitted with SLAR on port undercarriage pannier by Flight Systems Inc

VC-130H: VIP transport

C-130J: Lockheed designation for next-generation Hercules with new power plant and digital avionics. 25 ordered by RAF in December 1994 with deliveries from 1996. See Hercules II

C-130K. RAF version of C-130H, much of avionics and instrumentation made in UK. 66 delivered as **Hercules C. Mk 1** beginning September 1966; one modified by Marshall of Cambridge for RAF Meteorological Research Flight as **Hercules W Mk 2**. Thirty lengthened by 4.57 m (15 ft), equivalent to commercial L-100-30, and redesignated **Hercules C. Mk 3**: first aircraft modified at Marietta, remaining 29 by Marshall of Cambridge. Six modified to **C. Mk 1K** tankers, of which four received Racal Orange Blossom ESM, which also fitted to one C Mk 1; 20 C. Mk 3s received AN/APN 169B station-keeping equipment, some have provision for AN/ALQ-157 IR jammers, AN/ALR-66 RWR fitted inside wingtips from late 1993; all fitted with refuelling probes 1982 89

HC-130N US Air Force search and rescue version of C-130H for recovery of aircrew and space capsules; 15 delivered with helicopter refuelling capability, advanced direction finding equipment.

HC-130P: C-130H modified for refuelling helicopters in flight and recovering parachute-borne payloads, 20 built for USAF, details in 1979 80 *Jane's*. HC-130N/Ps to be upgraded by Rockwell with SOF Improvement package including self-protection aids for refuelling operations in hostile airspace

EC-130Q: Similar to earlier EC-130G, but with improved equipment and crew accommodation for TACAMO command communication with submarines. 18 built, HF and VLF SIMOP (simultaneous operation). Last aircraft (161531) retired from VQ-4 on 26 May 1992, replaced by Boeing E-6A, two EC-130Qs converted to TC-130Q; three to NASA as transports; remainder to storage

TC-130Q. Two surplus EC-130Qs with trailing wire aerial removed to permit normal cargo loading via rear doors, wingtip pods retained; first (159348) noted 1990. Two TC-130Qs are similar

KC-130R Probe-drogue tanker version of C-130H; 14 delivered to US Marine Corps VMGR-252 and 352, changes from KC-130F (1975-76 *Jane's*) include 3,362 kW (4,508 shp) engines, higher T-O and landing weights, external fuel tanks for additional 10,296 litres (2,720 US gallons; 2,265 Imp gallons) fuel, and removable 13,627 litre (3,600 US gallon, 2,997 Imp gallon) fuel tank in cargo hold (all fuel can be used to increase tanker's range), single-point refuelling of normal and additional tanks from existing filler, operating weight empty 36,279 kg (79,981 lb), maximum T-O weight 79,378 kg (175,000 lb), can offload up to 20,865 kg (46,000 lb) of fuel, equivalent to 26,790 litres (7,077 US gallons, 5,893 Imp gallons), at radius of 1,000 n miles (1,852 km, 1,151 miles); maximum fuel offload capability 31,750 kg (70,000 lb), equivalent to 40,765 litres (10,769 US gallons, 8,967 Imp gallons)

LC-130R: C-130H with wheel/ski landing gear for US Navy Squadron VXE-6 in Antarctic; details in 1979-80 *Jane's*

Hercules 'single engine demonstrator' fitted with AE 2100 engine and R391 propeller in C-130J trials programme *(Paul Jackson)*

1994

CC-130T: Canadian Forces' designation for five CC-130s converted by Northwest Industries, 1992-93, as tankers with two FRL Mk 32B hose-drum units beneath wings and 13,627 litre (3,600 US gallon, 2,998 Imp gallon) tank in cargo hold

KC-130T: Tanker for US Marine Corps (Reserve), able to refuel helicopters and fighters, eight delivered to Marine Aerial Refueller Transport Squadron 234 (VMGR-234), starting November 1983, others to VMGR-452; deliveries two per year since 1990 total 28 required by 1995 (14 per squadron), but only 24 ordered to date. Similar to KC-130R, but with updated avionics including INS, Omega and Tacan, new autopilot and flight director and solid-state search radar. KC-130Ts delivered in 1984 had Bendix/King AN/APS-133 colour radar, flush antennae and orthopaedically designed crew seats

KC-130T-30: Stretched KC-130T (similar to C-130H 30) for US Navy; first (164597) delivered to VMGR-452, 29 October 1991, second in November 1991 to VMGR-234

C-130T: Transport, with secondary refuelling capability, for US Navy, first of six (164762) to VR-54 at New Orleans 20 August 1991, first of six to VR 48 at NARF Andrews, Maryland, October 1992, but subsequently reassigned to VR-53 at same base. VR-55 at Alameda, California expected to be third unit with this version. Total 22 required, 18 ordered to date

AC-130U Spectre: Third-generation gunship version of C-130H, details under Rockwell entry

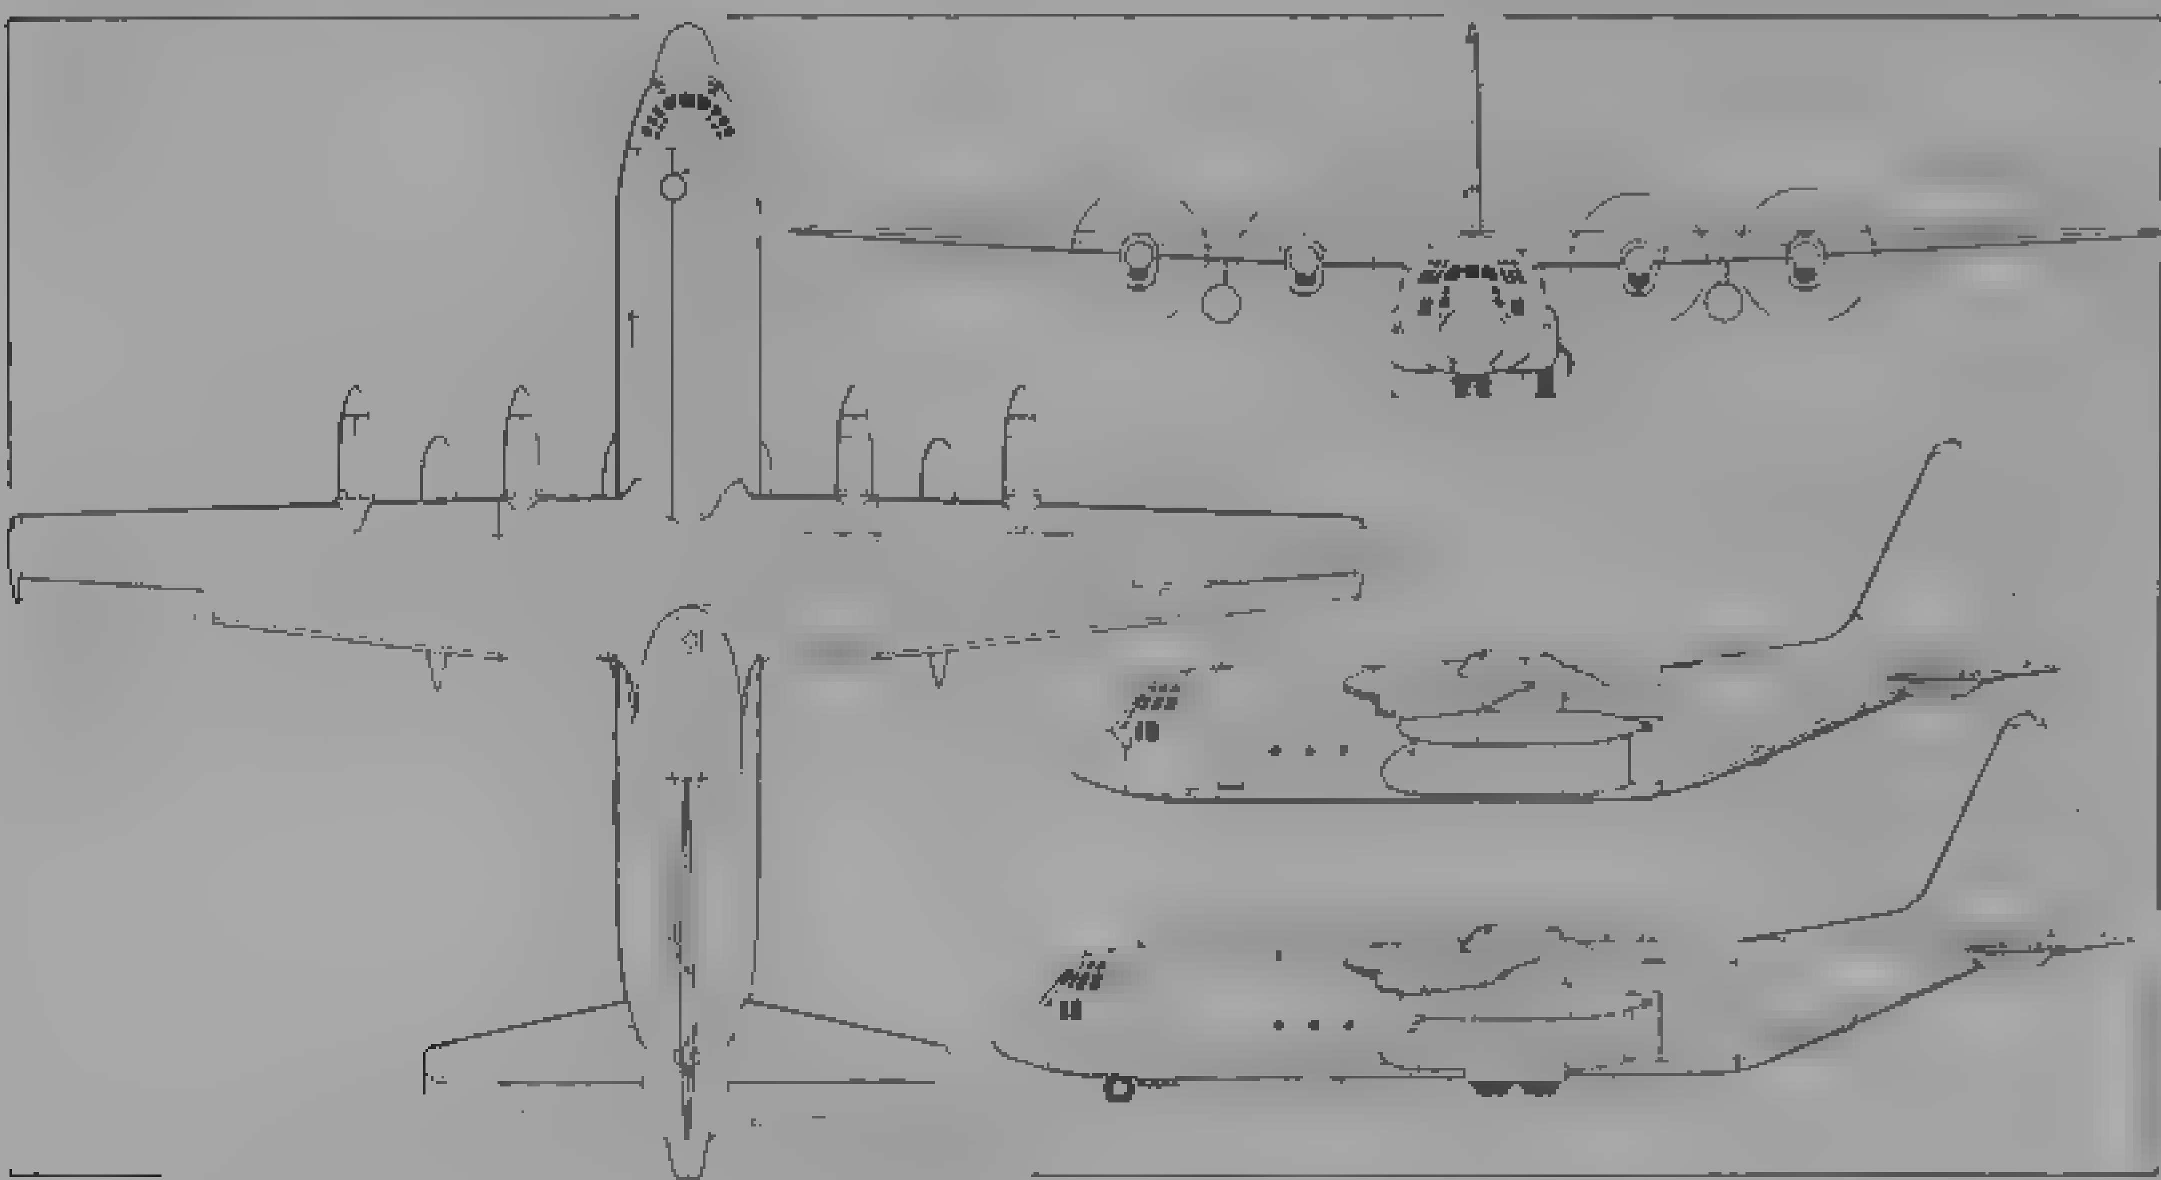
EC-130V Surveillance conversion of USCG HC-130H (1721) with E-2C Hawkeye's AN/APS 125 radar. Conversion by General Dynamics, Fort Worth, first flight 31 July 1991; to CGAS Clearwater, Florida. Programme terminated, April 1993, due to budget cuts, aircraft transferred to USAF's 514th Test Squadron at Hill AFB, Utah, late 1993. However, USCG HC 130H 1502 received AN/APS-137 radar in 1994 after modification at Elizabeth City CGAS

Hercules II. Privately funded development, launched 1991. First customer is RAF, which ordered 25 in December 1994, three to be delivered in 1996, followed by nine, eight and five respectively in 1997-99. Powered by Allison AE 2100 turboprops, six-blade Dowty R391 propellers and equipped with new two-crew glass cockpit (optional navigator/engineer position available). Also known as **C-130J**, or **L-100J** in civilian form. Optional refuelling probe on upper port side of fuselage; available in standard length and -30 versions. Performance improvements over C 130E Hercules include 40 per cent additional range, 40 per cent higher cruise ceiling, 50 per cent reduction in time to cruise height; 22 per cent reduction in take-off run and 21 per cent increase in cruise speed

Hercules II/C 130J optimised for economical operations, justifying customers' substitution for earlier C 130s on 30 year lifetime savings alone. Entirely revised flight deck reduces LRUs by half and wire assemblies by 85 per cent, has four 15 × 20 cm (6 × 8 in) LCDs, plus HUD for both pilots, lighting compatible with NVGs. Most systems digitalised, although hydraulics largely unaltered, provision for integrated self-defence suite (RWR, MAW, chaff/flare and IR jammers). Manpower requirements of typical 18 aircraft squadron reduced by 38 per cent (661 down to 406) compared with earlier C-130 versions, as

Lockheed Martin LC-130H Hercules equipped with ski landing gear and JATO, operated by 139th AS of New York ANG *(Paul Jackson)*

1995



Lockheed Martin C-130H-30 stretched Hercules, with upper side view of standard C-130H *(Jane's/Dennis Punnett)*

1993

result of halved flight crew and 50 per cent better maintainability

Parts fabrication began 2 March 1994 for c/n 5408, roll out due July 1995, first flight November 1995. Five to be built in 1995, increasing to 36 by 1997. RAF is launch customer; USAF requires about 200 (plus more for ANG later) but funded only initial two for evaluation purposes, strong interest from Australia and New Zealand. Sales anticipated as 400 to 700 over 10 years

RAF Hercules C Mk 1 XV181 fitted by Marshall Aerospace with AE 2100 engine and R391 propeller in port inner position to assess physical aspects of installation in Hercules airframe and measure blade/shaft stress and noise/vibration characteristics. Designated 'single engine demonstrator', began 50 hour flight test programme on 19 March 1994, subsequently returned to standard after successful trials

CUSTOMERS: Military and government Hercules operators for C-130H export versions only are given in the table

COSTS: Specific figures not available, but in region of $30 to $40 million for C-130H, for C-130J $40 million (1995)

DESIGN FEATURES: Can deliver loads and parachutists over lowered rear ramp and parachutists through side doors, removable external fuel tanks outboard of engines are standard fittings, cargo hold pressurised. Wing section NACA 64A318 at root and NACA 64A412 at tip; dihedral 2° 30', incidence 3° at root, 0° at tip

FLYING CONTROLS: All control surfaces boosted by dual hydraulic units, trim tabs on ailerons, both elevators and rudder; elevator tabs have AC main supply and DC standby; Lockheed Fowler trailing-edge flaps, provision for two removable afterbody ventral strakes

C-130J has same flying controls, integrated with digital autopilot/flight director

STRUCTURE: All-metal two-spar wing with integrally stiffened taper-machined skin panels up to 14.63 m (48 ft 0 in) long

LANDING GEAR: Hydraulically retractable tricycle type. Each main unit has two wheels in tandem, retracting into fairings built on to the sides of the fuselage. Nose unit has twin wheels and is steerable ±60°. Oleo shock-absorbers. Mainwheel tyres size 56 × 20-20, pressure 6.62 bars (96 lb/sq in), Nosewheel tyres size 39 × 13-16, pressure 4.14 bars (60 lb/sq in). Goodyear air-cooled multiple disc hydraulic brakes with anti skid units. Retractable combination wheel/skis available. Minimum ground turning radius C-130H, 11.28 m (37 ft) about nosewheel and 25.91 m (85 ft) about wingtip; C-130H-30, 14.33 m (47 ft) about nosewheel and 27.43 m (90 ft) about wingtip. Identical figures applicable to C-130J and C-130J-30 respectively

C-130J has new, modular mainwheels with self-jacking struts for simplified replacement and improved nose gear strut to assist rough field operations

POWER PLANT: Four 3,362 kW (4,508 shp) Allison T56-A-15 turboprops, each driving a Hamilton Standard 54H60 four blade constant-speed fully feathering reversible-pitch propeller. Fuel in six internal (four integral and two bladder type) tanks in wings, with total capacity of 25,816 litres (6,820 US gallons, 5,679 Imp gallons) and two optional underwing pylon tanks, each with capacity of 5,300 litres (1,400 US gallons; 1,166 Imp gallons). Total fuel capacity 36,416 litres (9,620 US gallons, 8,010 Imp gallons). Single pressure refuelling point in starboard wheel well. Overwing gravity fuelling. Oil capacity 182 litres (48 US gallons, 40 Imp gallons)

C-130J powered by four 4,474 kW (flat-rated to 6,000 shp) Allison AE 2100D3 turboprops fitted with Dowty R391 six-blade composites propellers and Lucas Aerospace FADEC, propulsion system provides 31 per cent more take-off thrust and is 18 per cent more efficient, propeller has 90 per cent fewer parts and weighs 15 per cent less. New fuel system

ACCOMMODATION: Crew of four on flight deck, comprising pilot, co-pilot, navigator and systems manager (fully performance qualified flight engineer on USAF aircraft). Provision for fifth man to supervise loading. Sleeping bunks for relief crew, and galley. Flight deck and main cabin pressurised and air conditioned. Standard complements for C-130H are as follows: 92 troops, 64 paratroopers, 74 litter patients plus two attendants. Corresponding data for C-130H-30 are 128 troops, 92 paratroopers, and 97 litter patients plus four attendants. Air transport and airdrop loads such as Sheridan light armoured vehicle, 19 051 kg (42,000 lb) when rigged for airdrop, are common to both C-130H and C-130H-30; light and medium towed artillery weapons, or variety of wheeled and tracked vehicles and multiple 463L supply pallets (five in C-130H and seven in C-130H-30, plus one on rear ramp for each model) are transportable; C-130H-30 is only airlifter which can airdrop entire field artillery section (ammo platform, weapon, prime mover, and eight crew jumping over ramp) in one pass. Hydraulically operated main loading door and ramp at rear of cabin. Paratroop door on each side aft of landing gear fairing. Two emergency exit doors standard; two additional doors optional on C-130H-30

C-130J has accommodation for two flight deck crew members, with provisions for optional engineer/navigation workstation

SYSTEMS: Air conditioning and pressurisation system maximum pressure differential 0.52 bar (7.5 lb/sq in). Three independent hydraulic systems, utility and booster systems operating at a pressure of 207 bars (3,000 lb/sq in), rated at 65.1 litres (17.2 US gallons, 14.3 Imp gallons)/min for utility and booster systems, 30.3 litres (8.0 US gallons, 6.7 Imp gallons)/min for auxiliary system. Reservoirs are unpressurised. Auxiliary system has hand-pump for emergencies. Electrical system supplied by four 40 kVA AC alternators, plus one 40 kVA auxiliary alternator driven by APU in port main landing gear fairing. Four transformer-rectifiers for DC power. There are differences between the installed components for US government and export versions. Babcock Power Ltd High Volume Mine Layer (HVML) system available as an option, using modular roll-on pallets. Leading-edges of wing, tailplane and fin anti-iced by engine bleed air

C-130J will have Lucas generator. C-130J environmental control system similar to that of C-130H model, incorporating dual air-cycle machines, but with 30 per cent greater cooling capacity and a digital electronic control system

Flight deck of C-130J Hercules II, showing HUDs and modernised instrumentation

1994

AVIONICS: *Comms:* Dual AN/ARC 190 HF, dual AN/ARC 186 VHF, dual AN/ARC-164 UHF, AN/AIC-13 PA system, AN/AIC-18 intercom, AN/APX-100 IFF/AIMS ATC transponder, A-100A cockpit voice recorder, emergency locator transmitter provision for KY 58 secure voice communications, provision for USTS Satcom system, C 130J to have AN/ARC-222 VHF

Radar: Westinghouse low-power colour radar (LPCR 130-1B) replaced Sperry radar from March 1993. C 130J will also have low power colour radar, but specific model undetermined

Flight: Dual AN/ARN-118 UHF nav, dual AN/ARN-147 VHF nav, self contained navigation system (SCNS), AN/ARN 152(V) microwave landing system, dual AN/ARN 149 ADF, DG-301E UHF direction-finder, AN/APN-218 Doppler nav, AN/APN-232 combined altitude radar altimeter, dual FD-109 flight director system. Sundstrand ground proximity warning system, Kollsman altitude alerter, flight data recorder. C-130J equipment will include HG 9550 radar altimeter, AN/ARN-153(V) Tacan, a Digital Autopilot/Flight Director (DA/FD), dual Honeywell laser INS with embedded GPS receivers, E-TCAS and provision for microwave landing system

Instrumentation: C-130J to utilise Flight Dynamics HUD at pilot and co-pilot positions, plus four colour liquid-crystal displays which are NVG-compatible.

Mission: AN/APN-169C station keeping equipment. C-130J to use Co-ordinated Aircraft Positioning System, type to be determined

Self-defence: C-130H/J models have provisions for Loral AN/AAR-47 missile warning system, Sanders AN/ALQ-157 infra-red countermeasures system, Tracor AN/ALE-40 or AN/ALE-47 chaff/flare dispensing systems and AN/ALR-69 enhanced radar warning system

EQUIPMENT: Some USAF and RAF Hercules fitted with Aero Consultants cockpit armour for relief flights into war zones, 1993

ARMAMENT: Fitment of Rockwell Hellfire ASM to AC-130H/U studied 1991-92

DIMENSIONS, EXTERNAL:

Wing span	40.41 m (132 ft 7 in)
Wing chord, at root	4.88 m (16 ft 0 in)
mean	4.16 m (13 ft 8½ in)
Wing aspect ratio	10.07
Length overall

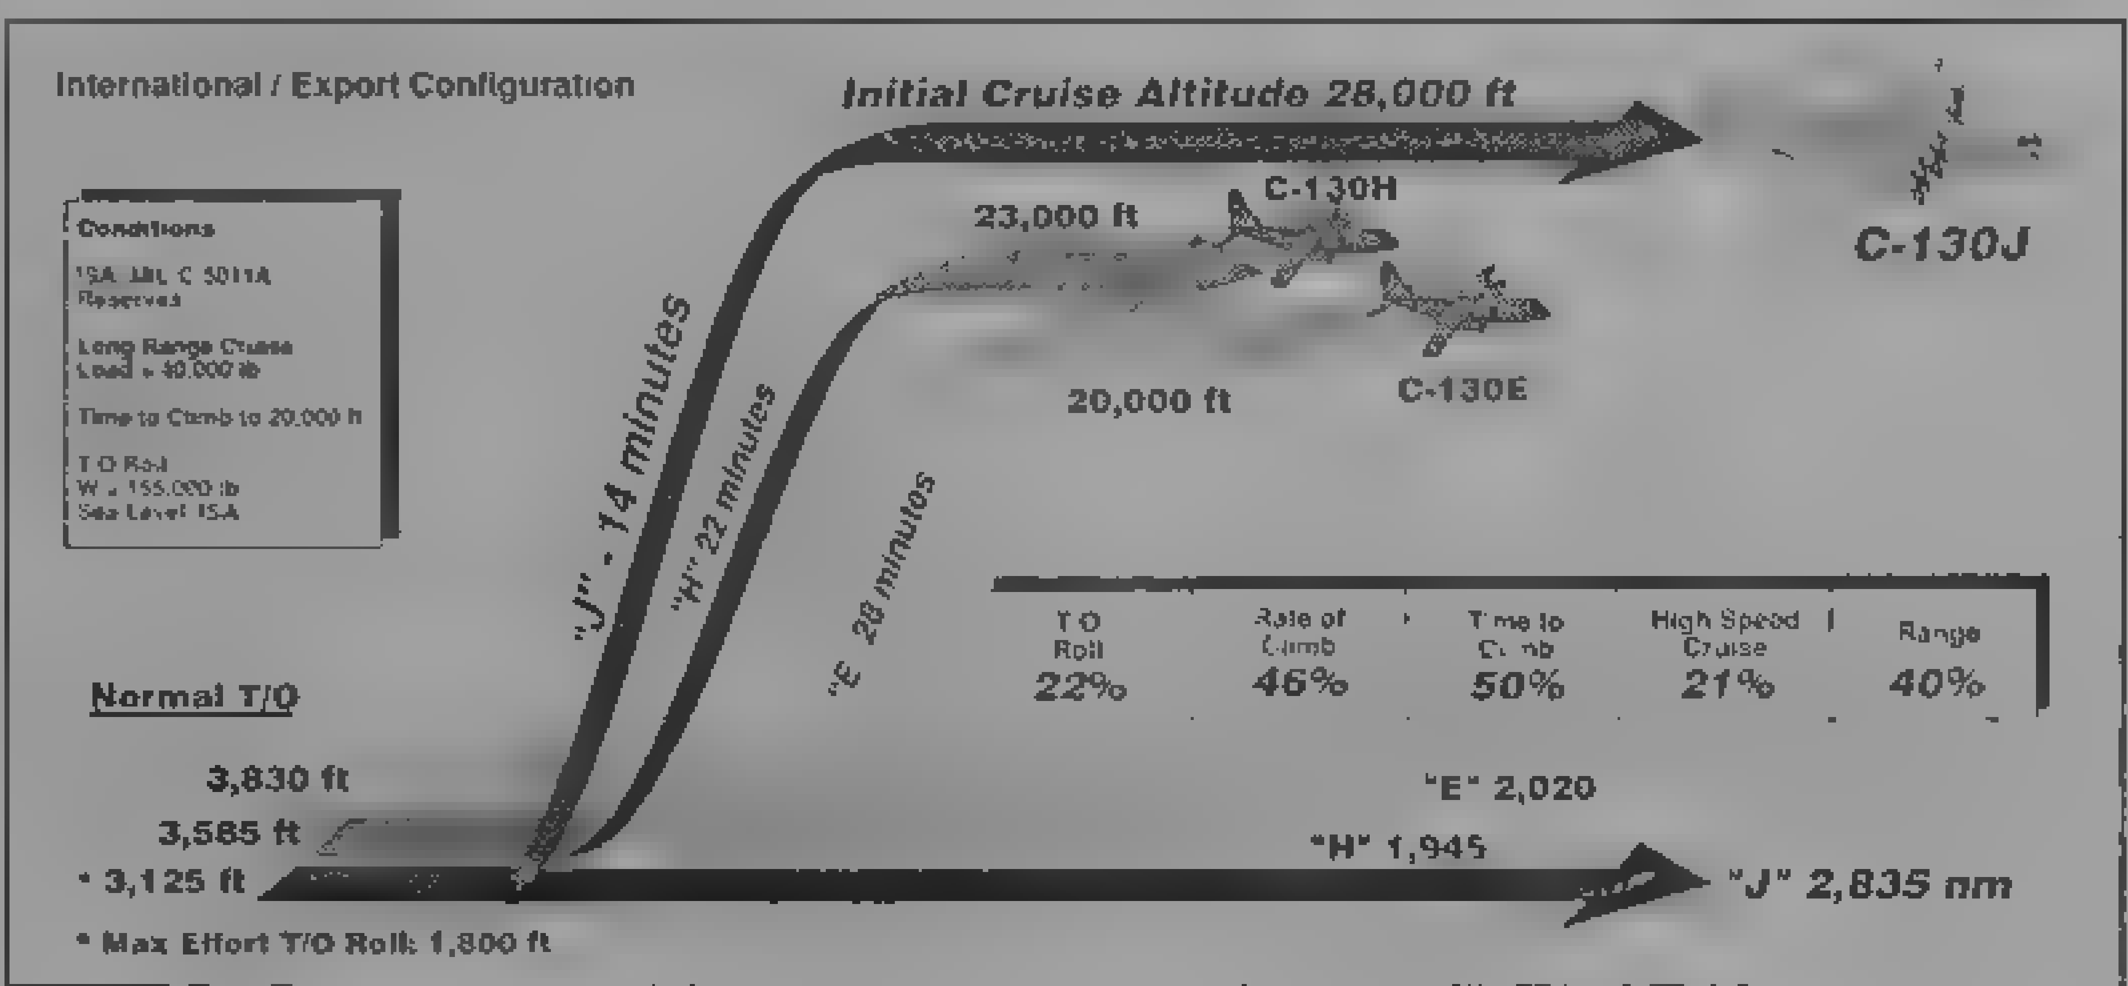
1995

Artist's impression of commercial L-100J Hercules II

1995



C-130J Hercules II's performance improvements over C-130E and C-130H

1995

C-130J	21,785 kg (48,028 lb)
C-130J-30	20,074 kg (44,255 lb)
Max normal T-O weight	70,305 kg (155,000 lb)
Max overload T-O weight	79,380 kg (175,000 lb)
Max normal landing weight	70,305 kg (155,000 lb)
Max overload landing weight	79,380 kg (175,000 lb)
Max zero-fuel weight, 2.5g:	
C-130H	55,210 kg (121,720 lb)
C-130J	54,095 kg (119,255 lb)
Max wing loading (normal): C-130H	433.68 kg/m² (88.83 lb/sq ft)
Max power loading (normal): C-130H	5.23 kg/kW (8.60 lb/shp)
C-130J	3.93 kg/kW (6.45 lb/shp)

PERFORMANCE (at max normal T-O weight, unless indicated otherwise):

Max cruising speed:	
C-130H	315 kts (583 km/h; 362 mph)
C-130J	348 kts (645 km/h; 400 mph)
Econ cruising speed:	
C-130H	300 kts (556 km/h; 345 mph)
C-130J	339 kts (628 km/h; 390 mph)
Stalling speed	100 kts (185 km/h; 115 mph)
Max rate of climb at S/L:	
C-130H	548 m (1,800 ft)/min
C-130J	640 m (2,100 ft)/min
Time to 6,100 m (20,000 ft): C-130H	22 min
C-130J	14 min
Cruising altitude: C-130H	7,010 m (23,000 ft)
C-130J	8,535 m (28,000 ft)
Service ceiling at 66,681 kg (147,000 lb) AUW:	
C-130H	8,075 m (26,500 ft)
C-130J	9,315 m (30,560 ft)
Service ceiling, OEI, at 66,678 kg (147,000 lb) AUW:	
C-130H	5,485 m (18,000 ft)
C-130J	6,955 m (22,820 ft)
Runway LCN: asphalt	37
concrete	42
T-O run: C-130H	1,219 m (4,000 ft)
C-130J	1,003 m (3,290 ft)
T-O to 15 m (50 ft): C-130H	1,676 m (5,500 ft)
C-130J	1,433 m (4,700 ft)
Landing from 15 m (50 ft) at 58,967 kg (130,000 lb) AUW:	
C-130H	762 m (2,500 ft)
C-130J	777 m (2,550 ft)
Landing run at 58,967 kg (130,000 lb) AUW:	
C-130H	457 m (1,500 ft)
C-130J	427 m (1,400 ft)
Range with 18,144 kg (40,000 lb) payload and Mil-C-5011A reserves:	
C-130H	1,945 n miles (3,602 km; 2,238 miles)
C-130J	2,835 n miles (5,250 km; 3,262 miles)

UPDATED

LOCKHEED MARTIN L-100 SERIES COMMERCIAL HERCULES

TYPE: Civilian version of C-130.

PROGRAMME: Initial variants described in earlier *Jane's*; current models below.

CURRENT VERSIONS: **L-100-20 (Model 382E)**: Fuselage stretched by 2.54 m (8 ft 4 in); certificated 4 October 1968. Allison 501-D22A engines; one L-100-20 was Lockheed HTTB testbed (see 1991-92 *Jane's*); military/government operators listed under C-130 entry.

L-100-30 (Model 382G): Fuselage stretched 4.57 m (15 ft 0 in); military operators listed under C-130 entry; first civil operator Saturn Airways in December 1970.

L-100-30HS: Hospital version fitted by Lockheed Martin Aircraft Service Company (which see) with operating theatre, intensive care, advanced anaesthesia and X-ray facilities; five delivered to Saudi Arabia; electrical generators and air conditioners in underwing pods allow hospital to operate independently for 72 hours.

L-100J (Model 382J): Civil equivalent of military Hercules II, with AE 2100 turboprops, Pemco cargo loading system; able to carry standard M-1/M-2 containers, loaded via standard rear ramp/door or optional 2.74 × 3.51 m (9 ft 0 in × 11 ft 6 in) port side cargo door; maximum cargo payload 20,553 kg (45,312 lb) palletised, 21,625 kg (47,675 lb) bulk; maximum zero-fuel weight 56,245 kg (124,000 lb); range at MZFW 1,997 n miles (3,701 km; 2,300 miles).

CUSTOMERS: See table.

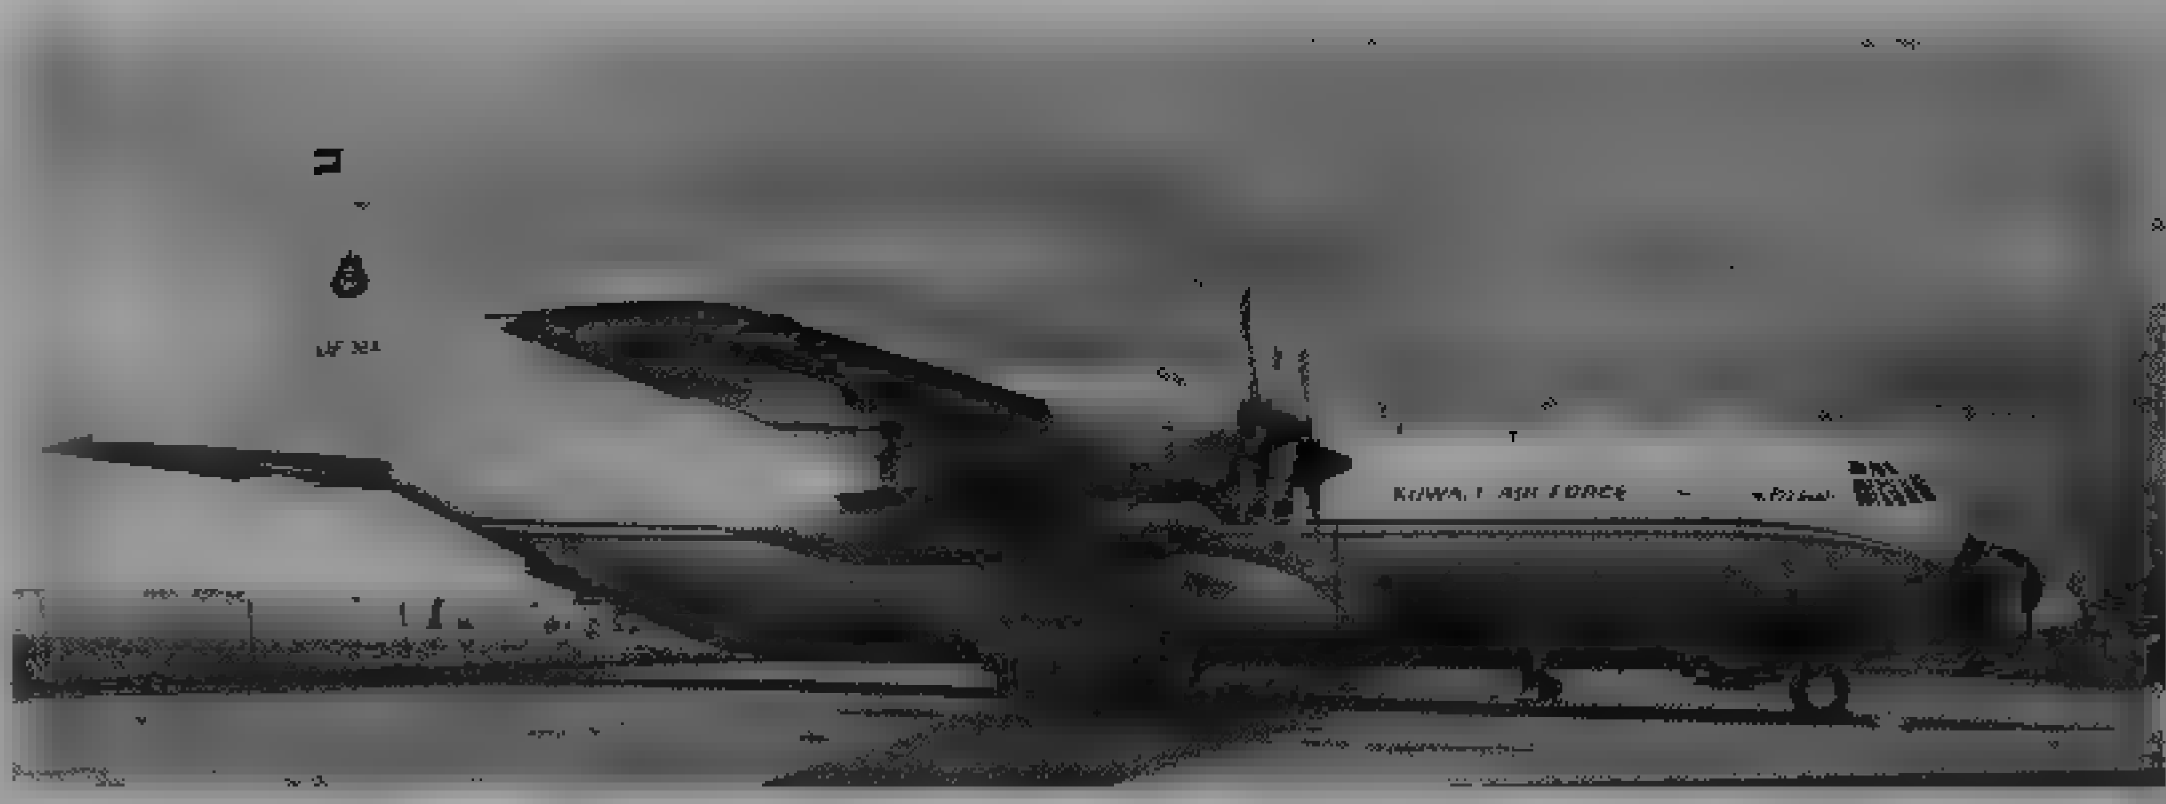
DESIGN FEATURES: Details of C-130H apply to L-100, except as detailed below. All C-130s and L-100s delivered since April 1984 have two 0.61 × 1.22 m (24 × 48 in) emergency exits which, together with rear personnel doors, allow carriage of 79 passengers; optional additional exit each side allows for 100 passengers; supplemental oxygen provided for passengers; various galley and toilet layouts available.

FLYING CONTROLS: As C-130H.

STRUCTURE: As C-130H.

LANDING GEAR: As for C-130H, except mainwheel tyre pressure 3.24 to 7.38 bars (47 to 107 lb/sq in) and nosewheel tyre pressure 4.14 bars (60 lb/sq in). Minimum ground turning radius: L-100-20, 26.8 m (88 ft); L-100-30, 27.5 m (90 ft).

POWER PLANT: Four 3,362 kW (4,508 shp) Allison 501-D22A turboprops.



Lockheed Martin L-100-30 of the Kuwait Air Force (*Paul Jackson*) *1994*

DIMENSIONS, EXTERNAL: As for C-130H except:

Length overall: L-100-20	32.33 m (106 ft 1 in)
L-100-30/L-100J	34.37 m (112 ft 9 in)
Wheelbase: L-100-20	11.30 m (37 ft 1 in)
L-100-30/L-100J	12.32 m (40 ft 5 in)
Crew door (integral steps): Height	1.14 m (3 ft 9 in)
Width	0.76 m (2 ft 6 in)
Height to sill	1.04 m (3 ft 5 in)

DIMENSIONS, INTERNAL:

Cabin, excl flight deck:	
Length: L-100-20	15.04 m (49 ft 4 in)
L-100-30, excl ramp	17.07 m (56 ft 0 in)
L-100-30, incl ramp	19.93 m (65 ft 4¾ in)
Max height	2.74 m (9 ft 0 in)
Floor area, excl ramp: L-100-20	46.36 m² (499.0 sq ft)
L-100-30	52.30 m² (563.0 sq ft)
Floor area, ramp	9.57 m² (103.0 sq ft)
Volume, incl ramp: L-100-20	150.28 m³ (5,307 cu ft)
L-100-30	171.1 m³ (6,042 cu ft)

WEIGHTS AND LOADINGS:

Operating weight empty:	
L-100-20	34,781 kg (76,680 lb)
L-100-30	35,260 kg (77,736 lb)
L-100J	34,438 kg (75,923 lb)
Max payload: L-100-20	23,637 kg (52,110 lb)
L-100-30	23,158 kg (51,054 lb)
L-100J	21,808 kg (48,078 lb)
Max ramp weight	70,670 kg (155,800 lb)
Max T-O weight	70,308 kg (155,000 lb)
Max landing weight	61,235 kg (135,000 lb)
Max zero-fuel weight: L-100-30	58,420 kg (128,790 lb)
L-100J	56,245 kg (124,000 lb)
Max fuel weight: L-100-30	29,380 kg (64,772 lb)
L-100J	20,726 kg (45,694 lb)
Max wing loading	433.5 kg/m² (88.8 lb/sq ft)
Max power loading	5.23 kg/kW (8.6 lb/shp)

PERFORMANCE (at max T-O weight, except where indicated):

Max cruising speed at 6,100 m (20,000 ft) at 54,430 kg (120,000 lb) AUW: L-100-30	308 kts (571 km/h; 355 mph)
L-100J	358 kts (663 km/h; 412 mph)
Landing speed	124 kts (230 km/h; 143 mph)
Max rate of climb at S/L: L-100-30	518 m (1,700 ft)/min
L-100J	640 m (2,100 ft)/min
Runway LCN: asphalt	37
concrete	42
FAR T-O field length	1,905 m (6,250 ft)
FAR landing field length at max landing weight	1,478 m (4,850 ft)
Range:	
L-100-30 with max payload, 200 n miles (370 km; 230 miles) to alternate and 45 min reserves	1,244 n miles (2,303 km; 1,431 miles)
L-100J	1,999 n miles (3,702 km; 2,300 miles)
L-100-30 with zero payload	3,264 n miles (6,045 km; 3,756 miles)
L-100J	4,087 n miles (7,569 km; 4,703 miles)

OPERATIONAL NOISE LEVELS (FAR Pt 36, Stage 2):

T-O sideline	96.7 EPNdB
T-O flyover: at T-O power	97.8 EPNdB
at cutback power	94.8 EPNdB
Approach flyover	98.1 EPNdB

UPDATED

LOCKHEED MARTIN GALAXY

USAF designation: C-5

TYPE: Strategic transport.

PROGRAMME: Total 81 C-5As and 50 C-5Bs built for USAF; final delivery 17 April 1989; all except five C-5As remain in service; last described in 1989-90 *Jane's*.

US Congress, concerned over McDonnell Douglas C-17 Globemaster III (which see) cost and performance, ordered USAF to investigate possible alternative in 1994 for November 1995 decision. Lockheed Martin offering restart of C-5 production against main alternative of military Boeing 747.

CURRENT VERSIONS: **C-5D**: Offered for USAF's Non-Developmental Airlift Aircraft (NDAA) requirement. Changes include new power plant and digital avionics adapted from C-130J (identical hardware and 60 per cent of software), including Sanders mission computers and flat panel displays and Honeywell autopilot.

POWER PLANT: Four 222 kN (50,000 lb st) General Electric CF6-80C2 turbofans.

NEW ENTRY

LOCKHEED MARTIN SKUNK WORKS (Division of Lockheed Martin Aeronautics Sector)

1011 Lockheed Way, Palmdale, California 93599-3740
Telephone 1 (805) 572 2974
Fax 1 (805) 572 2209
PRESIDENT: Jack S Gordon
DIRECTOR OF PUBLIC RELATIONS: James W Ragsdale

Nickname, Skunk Works became official title when former Lockheed Advanced Development Company renamed in 1995. LMSW functions autonomously at Palmdale, has specialised in 'black' or covert development programmes, including U 2/TR 1, SR 71 and F-117A

UPDATED

COMMON AFFORDABLE LIGHTWEIGHT FIGHTER (CALF)/JAST

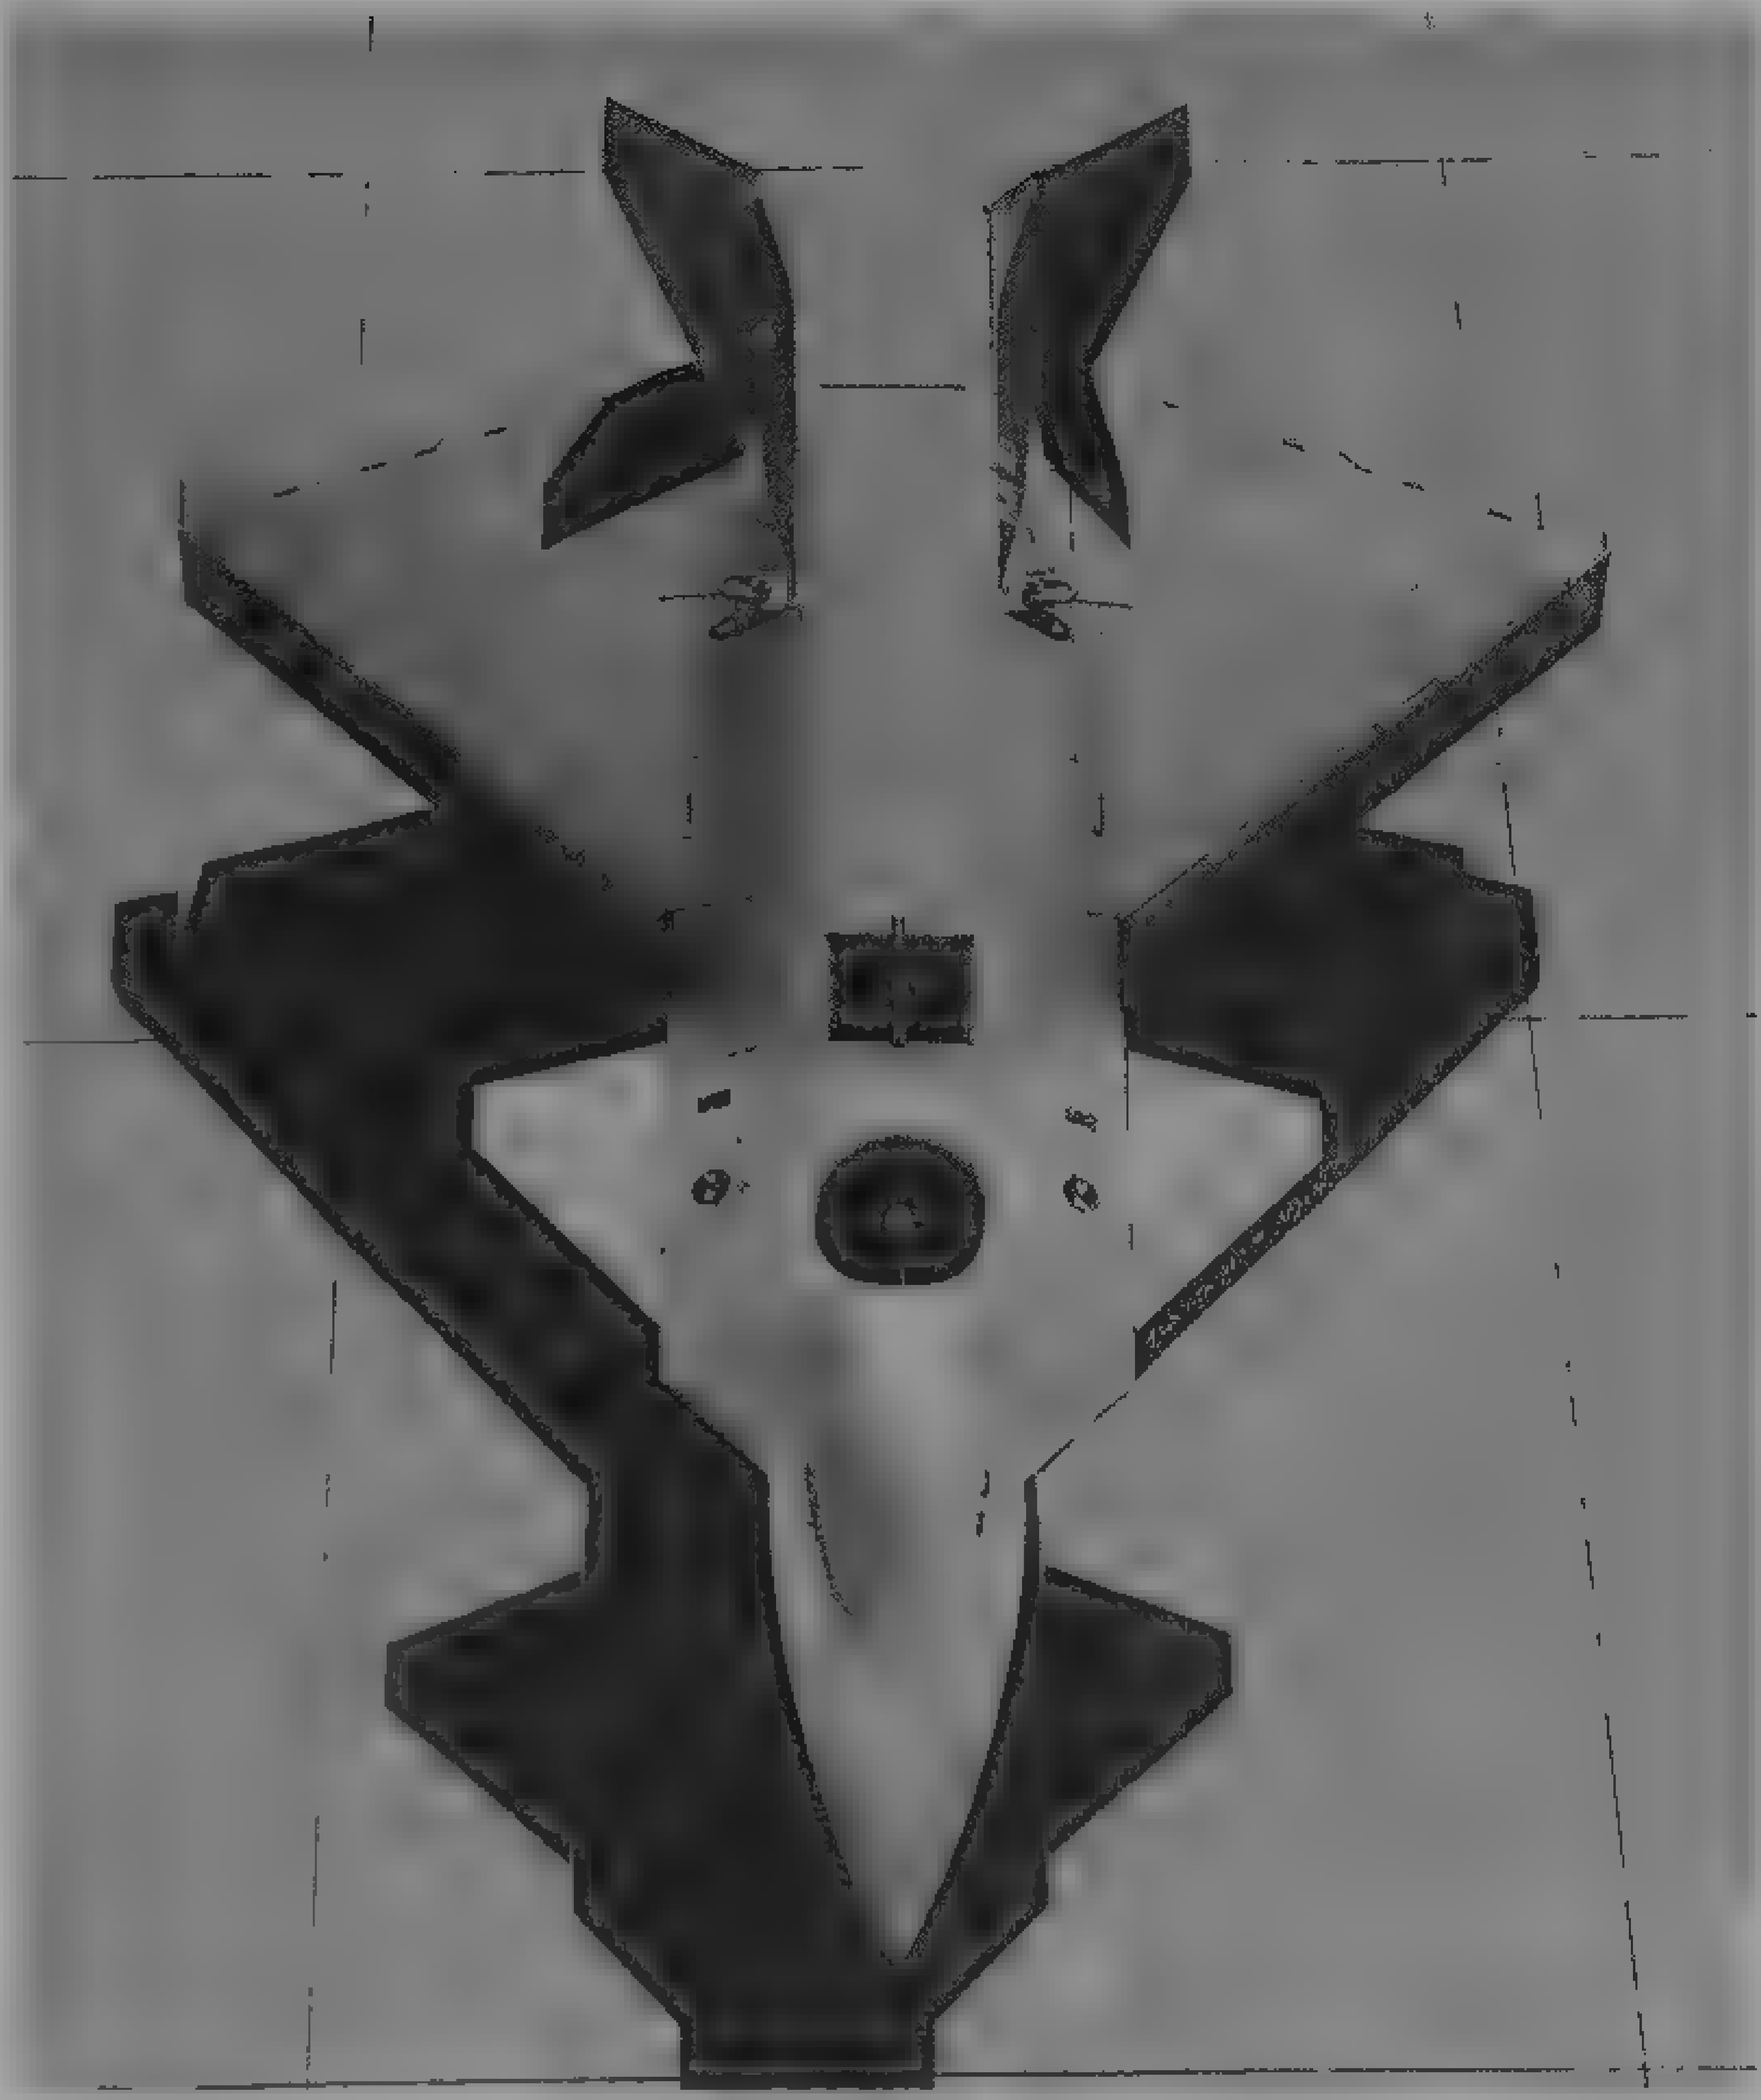
TYPE: Strike-fighter technology demonstrator

PROGRAMME: US Department of Defense designation **X-32** allocated for technology demonstrator phase of Advanced Research Projects Agency (ARPA) programme. CALF project initially launched as STOVL Strike Fighter (SSF now envisaged as X-32B) to provide US Navy/Marine Corps with replacement for F/A 18 Hornet and AV 8B Harrier II later expanded to include USAF F-16 replacement candidate (X-32A), in which vertical lift system eliminated in favour of additional fuel to produce longer range, conventional take-off aircraft

Lockheed Martin one of four teams in contention for X 32 contract, others headed by Boeing, McDonnell Douglas and Northrop Grumman. Lockheed Martin partnered by Allison, Pratt & Whitney and Rolls-Royce engine manufacturers. Congressional pressure in Autumn 1994 resulted in CALF project merging with Joint Advanced Strike Technology (JAST) programme (see US Navy entry)

On 27 April 1995, Lockheed unveiled 86 per cent scale model of JAST demonstrator for wind tunnel tests and in June revealed agreement with Yakovlev of Russia to purchase data on cancelled Yak-141 programme, which employed similar propulsion system. Model JAST, with F100 engine, to begin tunnel trials at NASA Ames September 1995

NEW ENTRY



Wind tunnel model (86 per cent scale) of Lockheed Martin JAST demonstrator

1995

LOCKHEED MARTIN F-117A NIGHTHAWK

TYPE: Precision attack aircraft with stealth elements, optimised for radar energy dispersion and low IR emission

PROGRAMME: Production complete, details of development and early service appeared in the 1993-94 and earlier *Jane's*. Navalised A/F-117X proposal described separately

CURRENT VERSIONS: **F-117A**: *As described*

F-117A+: Proposed modification of existing F-117A aircraft, utilising latest technology, Lockheed Martin quoting programme development cost of $79 million, covering operational prototype and including detail design, tooling modification of test aircraft, manufacture of full-size pole model, ground and flight trials plus full-scale development of 18 advanced low-observable technologies. Company claims result to be vastly enhanced stealth fighter with greatly improved survivability prospects in high-threat environment

Lockheed Martin F-117A revealing details of FLIR air intake grilles and auxiliary intake doors *(Paul Jackson)*

1995

F-117B: Skunk Works proposal for new-build programme taking advantage of commonality with A/F-117X naval version (which see). Features redesigned wing and horizontal tail surfaces of A/F-117X and GE F414 afterburning turbofan engines, plus all weather sensors advanced signature reduction and improved aerodynamic qualities. Maximum gross take-off weight 33,203 kg (73,200 lb); internal payload 4,536 kg (10,000 lb), combat radius 980 n miles (1,815 km, 1,127 miles). Current Lockheed Martin sales effort envisages joint Air Force/Navy programme to capitalise on modular production methods and economies of scale

A/F-117X: See next entry

CUSTOMERS: USAF, five preseries plus 59 production, deliveries seven, eight, eight, eight, eight, seven, five, four and three in calendar years 1982-90 final delivery of 88-0843 on 12 July 1990) Currently operational at Holloman AFB New Mexico, with 49th Fighter Wing (7th, 8th and 9th Fighter Squadrons)

COSTS: $6,560 million programme (1990), including $2,000 million R&D $4,270 million for procurement and $295 4 million for infrastructure. Average unit cost $42 6 million (then year dollars

DESIGN FEATURES: Multifaceted airframe designed to reflect radar energy away from originating transmitter, particularly downward-looking AEW aircraft, vortexes from many sharp edges, including leading-edge of wing designed to form co-ordinated lifting air flow pattern wings have 67° 30′ sweepback, much greater than needed for subsonic performance, with aerofoil formed by two flat planes underneath and three on upper surface, forward underwing surface blends with forward fuselage, all doors and access panels have serrated edges to suppress radar reflection, internal weapons bay 4 7 m (15 ft 5 in) long and 1 75 m (5 ft 9 in) wide divided longitudinally by two lengthwise doors hinged on centreline; boom refuelling receptacle on port side of top plate, aft of cockpit. Frontal radar cross-section estimated as 0 01 m² (0 1 sq ft)

FLYING CONTROLS: Four omnidirectional air probes at nose indicate GEC Astronics quadruplex fly-by-wire control system, similar to that of F-16, using two-section elevons and all-moving ruddervators together for control and stability, ruddervators swept about 65° and set at 85° to each other

STRUCTURE: Material principally aluminium, two-spar wings, fuselage has flat facets mounted on skeletal subframe, jointed without contour blending; surfaces coated with various radar-absorbent materials Weapons bay doors and landing gear leg doors of composites, nickel alloy honeycomb jetpipes

LANDING GEAR: Tricycle type by Menasco, with single wheels all retracting forward. Loral brakes (steel originally, being replaced by carbon/carbon), wheels (F-15E size) and

Artist's impression of Lockheed Martin A/F-117X stealth fighter proposal to US Navy

1995

anti-skid system. Goodyear tyres. All doors have serrated edges to suppress radar reflections. Emergency arrester hook with explosively jettisoned cover. Pioneer Aerospace braking parachute (black).

POWER PLANT: Two 48.0 kN (10,800 lb st) class General Electric F404-GE-F1D2 non-augmented turbofans. Rectangular overwing air intakes with 2.5 × 1.5 cm (1 × ⅝ in) heated grid for anti-icing and low observability. Auxiliary air intake doors in horizontal surface immediately to the rear. Part of cold air ingested bypasses engine and is mixed with exhaust gases for cooling. Narrow-slot 'platypus' exhausts, designed by Astech/MCI, in rear fuselage, 1.65 m (5 ft 5 in) long and 0.10 m (4 in) high, with extended lower lip, surrounded by heat tiles of type used on Space Shuttle and with 11 vertical, internal guide vanes. Sundstrand air turbine starter. In-flight refuelling receptacle in decking aft of cockpit, illuminated for night refuelling by lamp at apex of cockpit. Optional drop tank on internal weapon pylon.

ACCOMMODATION: Pilot only. McDonnell Douglas ACES II zero/zero ejection seat. Five Sierracin/Sylmar Corporation individually framed flat-plate windows, including single-piece windscreen. Transparencies gold-coated for radar dissipation. Canopy hinged to open upward and backward.

SYSTEMS: AiResearch environmental control, auxiliary power and emergency power systems.

AVIONICS: *Comms:* Retractable radio antennae on spine and beneath fuselage, ahead of port main landing gear.

Flight: GEC-Marconi flight control computer/navigation interface and autopilot computer (NIAC) system, Honeywell SPN-GEANS INS (replaced by Honeywell H 423/E ring laser gyro from August 1991), Rockwell Collins GPS to be added, SLI Avionic Systems Corporation expanded data transfer system and AHRS, Honeywell radar altimeter.

Instrumentation: HUD based on Kaiser AN/AVQ-28, large head-down display for FLIR imagery flanked by two multifunction CRTs, Harris Corporation digital moving map added as retrofit with full colour MFDs.

Mission: Texas Instruments retractable downward looking infra-red (DLIR) sensor and laser designator beneath forward fuselage to starboard of nosewheel bay. Texas Instruments foward looking infra-red (FLIR) sensor, with dual fields of view, in recessed emplacement, covered by fine mesh screen, below windscreen. (FLIR and DLIR to be replaced by improved equipment during third phase retrofit in 1994.) IBM AP-102 mission computer (replacing original three Delco M362F computers).

ARMAMENT: "Full range of USAF tactical fighter ordnance", principally two 2,000 lb bombs: BLU 109B low level laser guided or GBU-10/GBU-27 laser-guided glide weapons; alternatively, AGM-65 Maverick or AGM-88 HARM ASMs. Provision for AIM-9 Sidewinder (against AWACS aircraft). Internal carriage on two extensible beams in weapon bay. (Only missiles with seeker heads extended below aircraft prior to launch, bombs released from within weapons bay.)

DIMENSIONS, EXTERNAL:

Wing span	13.20 m (43 ft 4 in)
Length overall	20.08 m (65 ft 11 in)
Height overall	3.78 m (12 ft 5 in)

AREAS (estimated):

Wings, gross	84.8 m² (913.0 sq ft)

WEIGHTS AND LOADINGS:

Weight empty (estimated)	13,381 kg (29,500 lb)
Internal weapons load	2,268 kg (5,000 lb)
Max T-O weight	23,814 kg (52,500 lb)

PERFORMANCE (* = not confirmed by USAF):

Max level speed	561 kts (1,040 km/h; 646 mph)
Normal max operating speed	Mach 0.9
* T-O speed at normal combat weight	165 kts (306 km/h; 190 mph)
* Landing speed	150 kts (227 km/h; 172 mph)
Mission radius, unrefuelled, 2,268 kg (5,000 lb) weapon load	570 n miles (1,056 km; 656 miles)
g limit	+6

UPDATED

LOCKHEED MARTIN A/F-117X

TYPE: Private venture, long-range, naval strike/attack aircraft.

PROGRAMME: Proposed adaptation of F-117, revealed 1993 under designation F-117N Seahawk; potential gap-filler between 1999 retirement of Grumman A-6 Intruder and service entry of JAST replacement for cancelled A/F-X, complement to F/A-18E Hornet. Low-risk development, meeting most A/F-X requirements apart from folded size and maximum speed. Lockheed to guarantee radar signature and weapon delivery accuracy. Original F-117N proposal rejected by Pentagon, mid-1993; resubmitted as A/F-117X with afterburning engines early 1994 to improve multirole characteristics. Navy lacks funding to pursue A/F-117X.

CUSTOMERS: Nil. First delivery possible within five years of order.

COSTS: Figures quoted 1993 for concept definition and development, $2,600 to $2,900 million, plus $4,360 million for 50 aircraft built at eight per year; or $7,450 million for 100 aircraft at 16 per annum. Programme cost, including initial spares, training and support: $8,460 million for 50, $12,250 million for 100. Later cost estimate (April 1994) quotes flyaway price of $76 million, based on 100-aircraft production run.

DESIGN FEATURES: Based on F-117A, but with new wing of 48° sweep, incorporating folding for onboard stowage; and additional horizontal tail surfaces. Modified jet exhaust, improved coatings, new aperture and edge technologies reduce enemy's detection and engagement possibilities by 50 per cent. Enlarged weapons bay and provision for external stores stowage triples combat load.

STRUCTURE: Centre and aft fuselage dimensionally similar to F-117A, but with structural strengthening; forward fuselage and vertical tails identical to earlier version. Keel dropped 0.48 m (1 ft 7 in) and curved weapons bay doors added to double internal weapons capacity. Navalisation adds 4,082 kg (9,000 lb) to empty weight.

LANDING GEAR: Original F-117A landing gear replaced by units from Grumman F-14 Tomcat.

POWER PLANT: Two afterburning General Electric F414 turbofans.

ACCOMMODATION: Pilot only, beneath all-transparent canopy.

AVIONICS: Some 80 to 85 per cent commonality with F-117A, but existing sensors replaced by integrated radar and IR system comprising high-resolution ground-targeting radar, FLIR and IRST; data presentation on 20 × 20 cm (8 × 8 in) LCD.

ARMAMENT: Internally, up to four 2,000 lb Joint Direct Attack Munitions or four GBU-27 LGBs in attack role, or, in air defence role, four AIM-120 AMRAAMs (clipped fin modification); or two bombs and two AAMs (AIM-120 or AIM-9 Sidewinder). Externally, total of four underwing pylons for standoff missiles or fuel.

WEIGHTS AND LOADINGS:

Weapon load: internal	4,536 kg (10,000 lb)
external	3,629 kg (8,000 lb)
Stores 'bring back' capability	5,443 kg (12,000 lb)
Max T-O weight	29,841 kg (65,789 lb)

PERFORMANCE:

Mission radius, unrefuelled	680 n miles (1,260 km; 783 miles)

1991

LOCKHEED MARTIN TACTICAL AIRCRAFT SYSTEMS (Division of Lockheed Martin Aeronautics Sector)

Lockheed Boulevard, Fort Worth, Texas 76108
Telephone: 1 (817) 777 2000
Fax: 1 (817) 763 4797
PRESIDENT: Dain M Hancock
MANAGER, PUBLIC AFFAIRS: Joe W Stout

General Dynamics' Tactical Military Aircraft Division at Fort Worth sold to Lockheed, became Lockheed Fort Worth Company on 1 March 1993, renamed LMTAS following merger between Lockheed and Martin in 1995

Fort Worth activities include production of F-16 Fighting Falcon, previously shared development of F-22A ATF (with Lockheed and Boeing). Also receiving development contracts eventually to be worth $800 million in connection with Mitsubishi FS-X design and anticipates over $2,000 million of production work when manufacture begins in Japan, provides technical support for Taiwan's IDF combat aircraft development programme. Has design leadership over Skunk Works in connection with submissions for JAST programme (see US Navy entry). Fort Worth workforce reduced to 13,000 by 1995

UPDATED

LOCKHEED MARTIN (GENERAL DYNAMICS) F-16 FIGHTING FALCON

Israel Defence Force names: F-16A/B Netz (Falcon), F-16C Barak (Lightning) and F-16D Brakeet (Thunderbolt)

TYPE: Single- and two-seat multirole fighter

PROGRAMME: Emerged from YF-16 of US Air Force Lightweight Fighter prototype programme 1972 (details under General Dynamics in 1977-78 and 1978-79 *Jane's*), first flight of prototype YF-16 (72-01567) 2 February 1974 first flight of second prototype (72-01568) 9 May 1974 selected for full-scale development 13 January 1975; day fighter requirement extended to add air-to-ground capability with radar and all-weather navigation, production of six single-seat F-16As and two two-seat F-16Bs began July 1975; first flight of full-scale development aircraft 8 December 1976, first flight of F-16B 8 August 1977 Fleet of 3,300 F-16s achieved 5 millionth flying hour late in 1993 and 3,500th aircraft delivered 27 April 1995

After adjusting production rates in mid-1993, Lockheed to build 150 F-16s in 1994, followed by 90, 90 and 159 up to 1997 Final 12 F-16s for USAF ordered in FY94, but USAF considering plan to build 120 F-16C/Ds with funds from proposed USAF sale of older F-16A/Bs; if approved, first six to be funded in FY96

CURRENT VERSIONS: **F/A-16.** Proposed modification of 300 Block 30/32 aircraft for close air support (CAS)/battlefield air interdiction (BAI) in late 1990s; head-steered FLIR, Pave Penny laser ranger and 30 mm cannon pod 200 F-16Cs to have received CAS/BAI modifications from 1995, including DTS, Navstar GPS and improved data modem. Block 30/32 upgrade abandoned January 1992 in favour of CAS/BAI assignment of Block 40/42 aircraft, having LANTIRN capability; these require more simple modification with ground datalink, laser spot tracker, anti jam radio, missile approach warner, provision for pilot's night vision goggles and upgrades to LANTIRN pods Deployment plan envisages 4½ wings of Block 40/42s for night CAS and two wings of Block 30/32s for day CAS Meanwhile, first dedicated CAS/BAI aircraft were F-16As of ANG's 138th FS at Syracuse, New York, operational 1989, equipment including fixed GPU-5/A 30 mm centreline cannon; first improved data modem installed November 1990; squadron received F-16Cs in 1991

Half brothers from the Lockheed Martin stable, an F-16C Fighting Falcon formates with a P-38 Lightning *(Paul Jackson)*

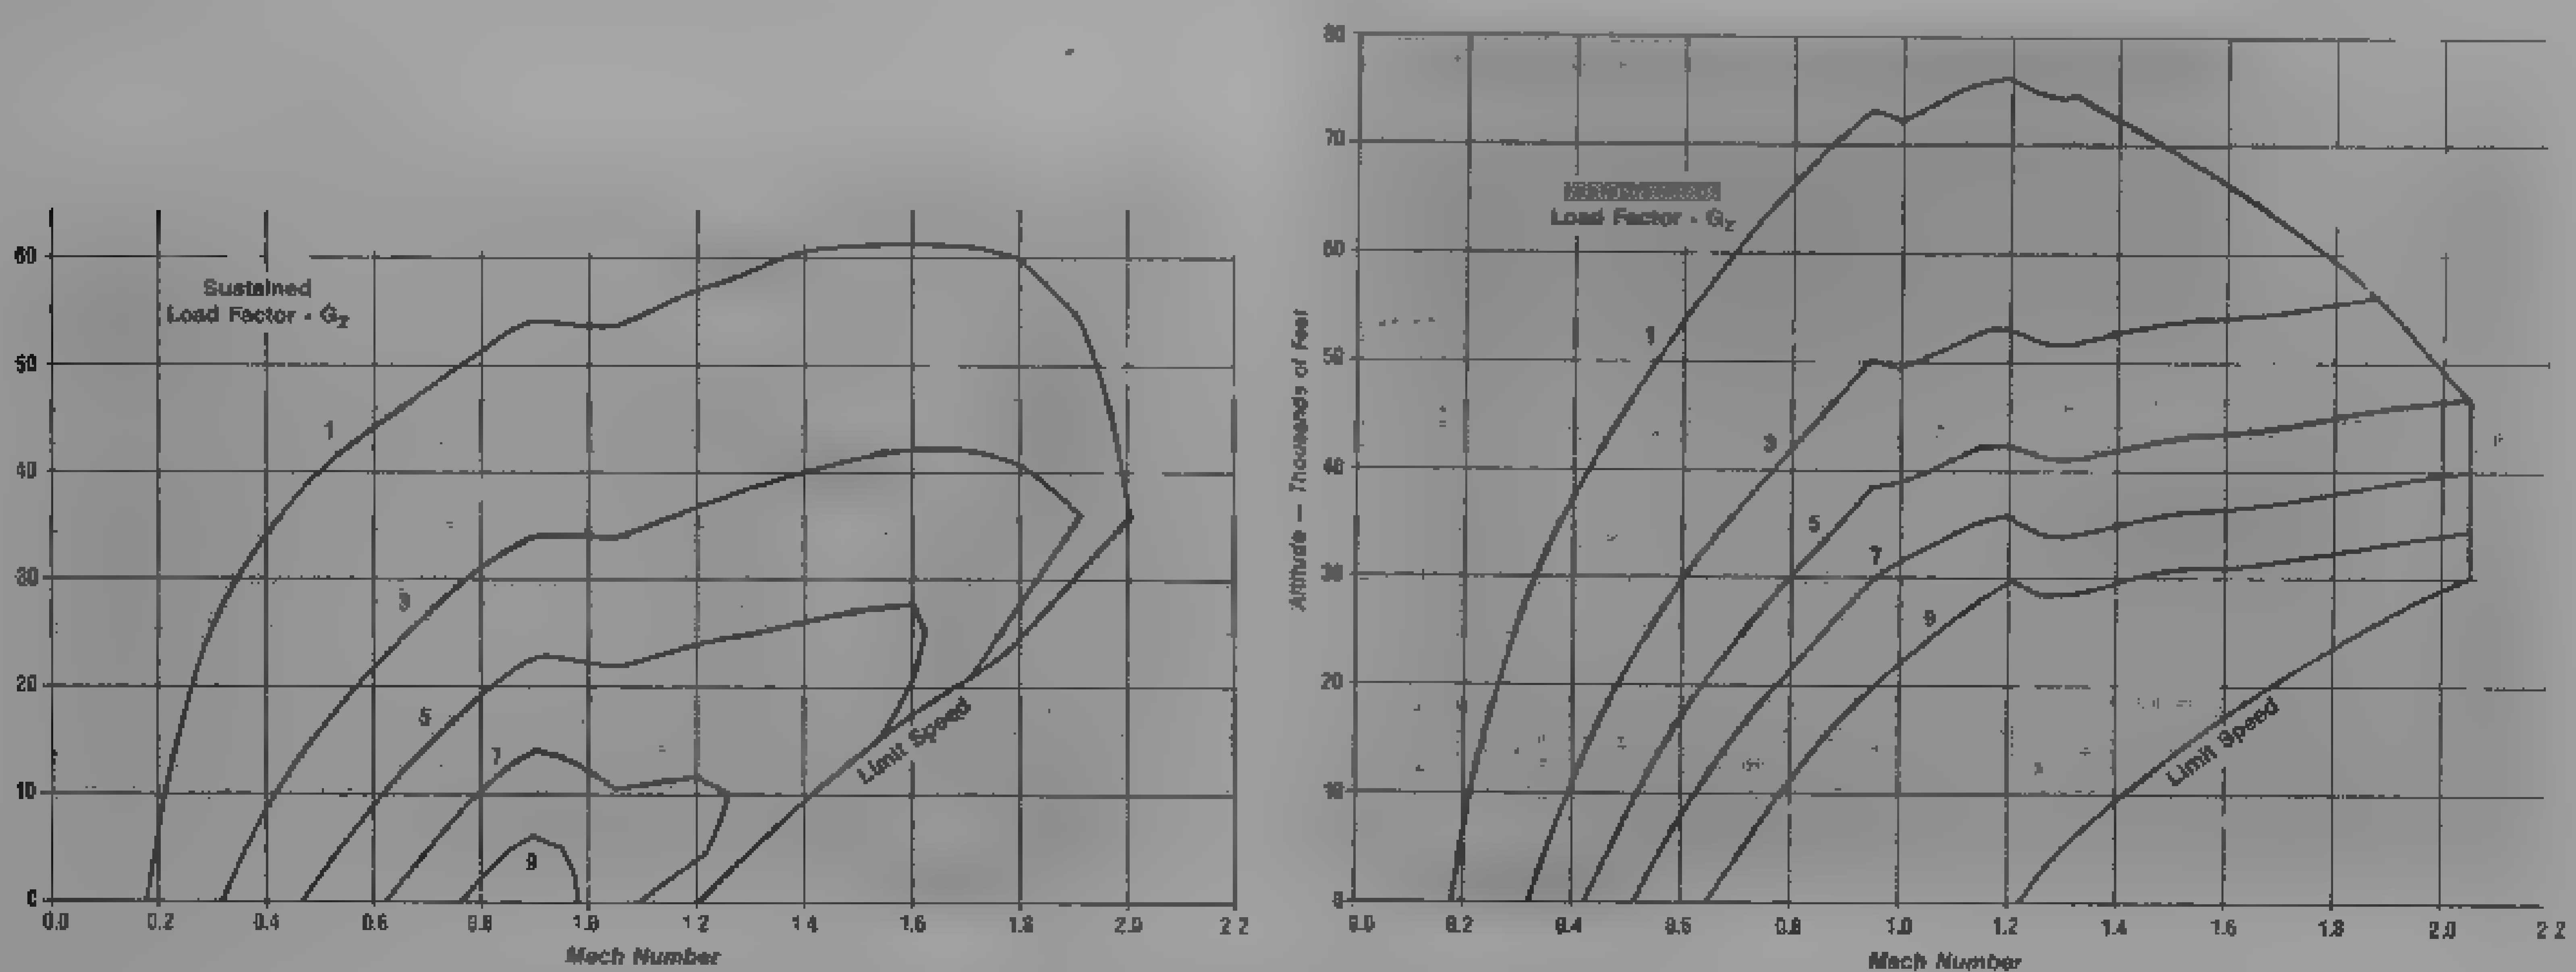
1995

F-16A. First production version for air-to-air and air-to-ground missions; production for USAF completed March 1985, but still available for other customers, international sales continue; powered since late 1988 (Block 15OCU) by P&W F100-PW-220 turbofan, Westinghouse AN/APG-66 range and angle track radar; first flight of first aircraft (78-0001) 7 August 1978, entered service with 388th TFW at Hill AFB, Utah, 6 January 1979; combat ready October 1980, when named Fighting Falcon; most now serving ANG and AFRES, power plants being upgraded to F100-PW-220E, 1991-96. In 1994, first AFRes F-16A/Bs gained BAe Terprom (terrain profile matching) software for ground collision avoidance. Also produced in Europe Built in Blocks 01, 05, 10 and 15, of which Blocks 01 and 05 retrofitted to Block 10 standard 1982-84, Block 15 retrofitted to OCU standard from late 1987 First **GF-16A** ground trainers relegated to instructional use at 82nd Training Wing, Sheppard AFB, by 1993

Taiwanese F-16A/Bs, due for delivery from July 1996, are to unique Block 20 standard; avionics configuration similar to MLU, including colour displays and AN/APX-111 IFF; Block 20 combat potential exceeds that of early F-16Cs

Operational Capabilities Upgrade (OCU): USAF/NATO co-operative programme to equip F-16A/B for next-generation BVR air-to-air and air-to-surface weapons; radar and software updated, fire control and stores management computers improved, data transfer unit fitted, combined radar-barometric altimeter fitted, and provision for AN/ALQ-131 jamming pods. Ring laser INS and upgrade from P&W F100-PW-200 to F100-PW-220E planned for 1990s FMS exports since 1988 to Block 15OCU standard with F-16C features including ring laser INS, AN/ALR-69 RWR, F100-PW-220 power plant and AIM-9P-4 Sidewinder AAM capability

Mid-Life Update (MLU): Development authorised 3 May 1991 (signature of final partner), US government contract to GD 15 June 1991, originally planned to be applied to 533 aircraft of USAF (130), Belgium (110), Denmark (63), Netherlands (172) and Norway (58) from 1996 in co-development/co-production programme. USAF withdrew 1992, but ordered 223 modular computer retrofit kits from MLU to equip Block 50/52 aircraft. European share renegotiated on 28 January 1993 to new totals of Belgium 48 plus 24 options, Denmark 61, Netherlands 136; and Norway 56, letters of offer and acceptance finalised 30 June 1993 Lockheed awarded contract for 301 MLU kits for European air forces on 17 August 1993, kit deliveries begin to air forces in October 1996, for completion in late 1999 Cockpit similar to F-16C/D Block 50 with wide-angle HUD, night vision goggle compatibility, modular mission computer replacing existing three, BAe Terprom digital terrain system, AN/APG-66(V2A) fire control radar, GPS, improved data modem, two Honeywell 10 cm



F-16 MANOEUVRABILITY

Fighting Falcon's reputation for agility is demonstrated by manoeuvring envelopes at progressively higher *g*, sustained loadings left, instantaneous right, both assume half fuel and armament of two wingtip Sidewinder AAMs and full (511 rounds) cannon

1995

Among Fort Worth's recent deliveries are first Block 52D F-16Cs to South Korea

1995

(4 in) square LCD colour displays (replacing mono CRTs) and provision for microwave landing system (MLS). Inlet hardpoints and wiring for FLIR pods will be added to Block 10 aircraft. Options include helmet-mounted display and Hazeltine AN/APX 111 IFF interrogator/transponder both taken up by Netherlands and Norway. Aircraft for prototype conversion to GD in September 1992, including Danish F-16B ET-204, Netherlands F-16B J-650, Norwegian F-16A 299 and USAF/ANG F-16A 80-0584. First flight (by last-mentioned aircraft) 28 April 1995, formal debut 11 May 1995.

F-16(ADF). Modification of 279 (actually 272 because of preconversion attrition) Block 15 F-16A/Bs as USAF air defence fighters to replace F-4s and F-106s with 11 Air National Guard squadrons, ordered October 1986. Modifications include upgrade of AN/APG-66 radar to improve small target detection and provide continuous-wave illumination, provision of AMRAAM datalink, improved ECCM, Bendix/King AN ARC-200 HF/SSB radio (F-16A only), Teledyne/E-Systems Mk XII advanced IFF, provision for Navstar GPS Group A, low-altitude warning, voice message unit, night identification light (port forward fuselage of F-16A only), and ability to carry and guide two AIM-7 Sparrow missiles. First successful guided launch of AIM-7 over Point Mugu range, California, February 1989. F-16(ADF) can carry up to six AIM-120 AMRAAM or AIM-9 Sidewinder or combinations of all three missiles, retains internal M61 20 mm gun. GD converted one prototype, then produced modification kits for installation by USAF Ogden Air Logistics Center, Utah, in conjunction with upgrade to OCU avionics standard; first Ogden aircraft, F-16B 81-0817, completed October 1988. Development completed at Edwards AFB during 1990, operational test and evaluation with 57th Fighter Weapons Wing at Nellis AFB, Nevada, first F-16(ADF), 81-0801, delivered to 114th Fighter Training Squadron at Kingsley Field, Oregon, 1 February 1989; 194th Fighter Interceptor Squadron, California ANG, Fresno, achieved IOC in 1989, following receipt of first aircraft (F-16B 82-1048) on 13 April 1989, first AIM-7 launch by ANG (159th FS) June 1991. Programme completed early 1992, includes approximately 30 F-16Bs. Majority of F-16(ADF) aircraft now in storage.

F-16B: Standard tandem two-seat version of F-16A fully operational both cockpits, fuselage length unaltered, reduced fuel.

GF-16B Ground trainers in use for instructional tasks at Sheppard AFB by 1993.

F-16C/D: Single-seat and two-seat USAF Multinational Staged Improvement Program (**MSIP**) aircraft respectively, implemented February 1980. **MSIP** expands growth capability to allow for ground attack and beyond visual-range missiles, and all-weather, night and day missions; **Stage I** applied to Block 15 F-16A/Bs delivered from November 1981 included wiring and structural changes to accommodate new systems. **Stage II** applied to Block 25 F-16C/Ds from July 1984 includes core avionics, cockpit and airframe changes. **Stage III** includes installation of systems as they become available, beginning 1987 and extending up to Block 50/52, including selected retrofits back to Block 25. Changes include Westinghouse AN/APG-68 multimode radar with improved range, resolution, more operating modes and better ECCM than AN/APG-66, advanced cockpit with upgraded interfaces and up-front controls, GEC-Marconi wide-angle HUD, two multifunction displays, Fairchild mission data transfer equipment and radar altimeter, expanded base of fin giving space for proposed later fitment of AN/ALQ-165 Airborne Self-Protection Jamming system (since cancelled), increased electrical power and cooling capacity; structural provision for increased take-off weight and manoeuvring limits; and MIL-STD-1760 weapons interface for use of smart weapons such as AIM-120A AMRAAM and AGM-65D IR Maverick. First AIM-120 operational launch (by any aircraft), 27 December 1992. F-16D (90-0778) of 33rd FS/363rd FW destroyed Iraqi MiG-25.

Common engine bay introduced at **Block 30/32** (deliveries from July 1986) to allow fitting of either P&W F100-PW-220 (Block 32) or GE F110-GE-100 (Block 30) Alternate Fighter Engine. Other changes include computer memory expansion and seal-bonded fuselage fuel tanks. First USAF wing to use F-16C/Ds with F110 engines was 86th TFW at Ramstein AB, Germany, from October 1986. Additions in 1987 included full Level IV multitarget compatibility with AMRAAM (as Block 30B), voice message unit, Shrike anti-radiation missiles (from August), crash survivable flight data recorder and modular common inlet duct allowing full thrust from F110 at low airspeeds.

Software upgraded for full Level IV multitarget compatibility with AMRAAM early 1988. Industry-sponsored development of radar missile capability for several European air forces resulted in firing of AIM-7F and AIM-7M missiles from F-16C in May 1988, capability introduced mid-1991, missiles guided using pulse Doppler illumination while tracking targets in a high PRF mode of the AN/APG-68 radar.

Block 40/42 Night Falcon (deliveries from December 1988) upgrades include AN/APG-68(V) radar allowing 100 hour operation before maintenance, full

First Block 50D version of F-16C (91-0360) during a predelivery test flight

1995

compatibility with Lockheed Martin low-altitude navigation and targeting infra-red for night (LANTIRN) pods, four-channel digital flight control system, expanded capacity core computers, diffractive optics HUD, enhanced envelope gunsight, GPS, improved leading-edge flap drive system, improved cockpit ergonomics, high gross weight landing gear, structural strengthening, and provision for improved EW equipment. LANTIRN gives day/night standoff target identification, automatic target handoff for multiple launch of Mavericks, autonomous laser-guided bomb delivery and precision air-to-ground laser ranging. Combat Edge pressure breathing system installed 1990 for higher pilot g tolerance.

First Block 40 F-16C/Ds issued in late 1990 to 363rd FW (Shaw AFB, South Carolina), first LANTIRN pods to 36th FS/51st FW at Osan, South Korea, in 1992.

Block 50/52 (deliveries began with F-16C 90-0801 in October 1991 for operational testing) upgrades include F110-GE-129 and F100-PW-229 increased performance engines (IPE), AN/APG-68(V5) radar with advanced programmable signal processor employing VHSIC technology, Have Quick IIA UHF radio, Have Sync VHF anti-jam radio and AN/ALR-56M advanced RWR. Changes initiated at **Block 50D/52D** in 1993 include full integration of HARM/Shrike anti-radiation missiles via Texas Instruments interface, upgraded programmable display generator with digital terrain system (DTS) provisions and scope for digital map capability, ring laser INS (Honeywell H-423 selected 1990) and AN/ALE-47 advanced chaff/flare dispenser.

First Block 50D/52D (91-0360) delivered to USAF on 7 May 1993, optimised for defence suppression missions having software for horizontal situation display on existing two MFDs and provision for one of 100 HARM (AGM-88 High-Speed Anti-Radiation Missile) targeting systems ordered by USAF includes Pave Penny sensor in pod on starboard side of nose, ahead of cockpit; AN/ASQ-213 HARM targeting system has 40 to 80 per cent of F-4G 'Wild Weasel' Phantom's capability but can receive accurate threat location information from F-4Gs via improved data modem (IDM) also added at Block 50D/52D stage together with HARM aircraft-launcher interface, doubled-capacity (128 Kbits) flight planning cartridge and new VHF antenna in fin. (Block 30/32 and later F-16Cs had lower level of HARM capability employed by 52nd FW at Spangdahlem AB, Germany, until replaced by Block 50/52 aircraft in 1993-94.)

Deliveries of Block 50/52 began to 4th FS of 388th FW at Hill AFB, Utah, from October 1992; others to 480th FS of 52nd FW at Spangdahlem, Germany, replacing Block 30 aircraft from (first delivery) 20 February 1993. Block 50D/52D aircraft initially to 309th FS (now 79th FS) of 363rd (now 20th) FW at Shaw AFB, South Carolina, followed by 23rd FS/52nd FW at Spangdahlem, Germany, from 14 January 1994, then squadrons at Mountain Home AFB, Idaho, and Misawa, Japan. Final 144 F-16Cs and 20 F-16Ds (including FY94) will be Block 50/52Ds.

GF-16C: Ground trainers in use at Sheppard AFB for instructional purposes in 1993.

Block 50 Plus: Projected version with synthetic aperture radar mode for adverse-weather delivery of JDAM weapons; passive missile warning; terrain-referenced navigation and 2,271 litre (600 US gallon; 500 Imp gallon) external tanks.

Block 60: LANTIRN nav/attack avionics installed internally; APU; additional internal fuel in Israeli-style enlarged spine. Proposal only.

Block 60/62. Projected development to meet possible USAF multirole fighter requirement, employing technology from F-22A programme.

NF-16D: Variable stability in-flight simulator test aircraft (**VISTA**) modified from Block 30 F-16D (86-0048) ordered December 1988 to replace NT-33A testbed. Features include vertical surface direct force generators above and below wings, Calspan variable stability flight control system, fully programmable cockpit controls and displays, additional computer suite, permanent flight test data recording system, variable feel centrestick and computer, and safety pilot in rear cockpit. Internal gun, RWR and chaff/flare equipment removed, providing space for Phase II and III growth including additional computer, reprogrammable display generator and customer hardware allowance. 'Israeli-type' bulged spine. First flight 9 April 1992; delivery due July 1992 but aircraft stored after five flights because of funding shortage; fitted with axisymmetric thrust vectoring engine nozzle (AVEN) for 90 flight, 120 hour MATV (Multi-Axis Thrust Vectoring) trials programme beginning 2 July 1993; thrust vectoring first used on 30 July, all except first few sorties flown at Edwards AFB; demonstrated transient 115° AoA and sustained 80°; nose-pointing authority demonstrated at 90° AoA at zero airspeed. MATV test programme completed 15 March 1994 after 95 sorties and 135.7 flight hours. NF-16D subsequently returned to VISTA configuration. See table under NASA heading for performance comparison of MATV F-16 with Rockwell/DASA X-31A and McDonnell Douglas F/A-18HARV.

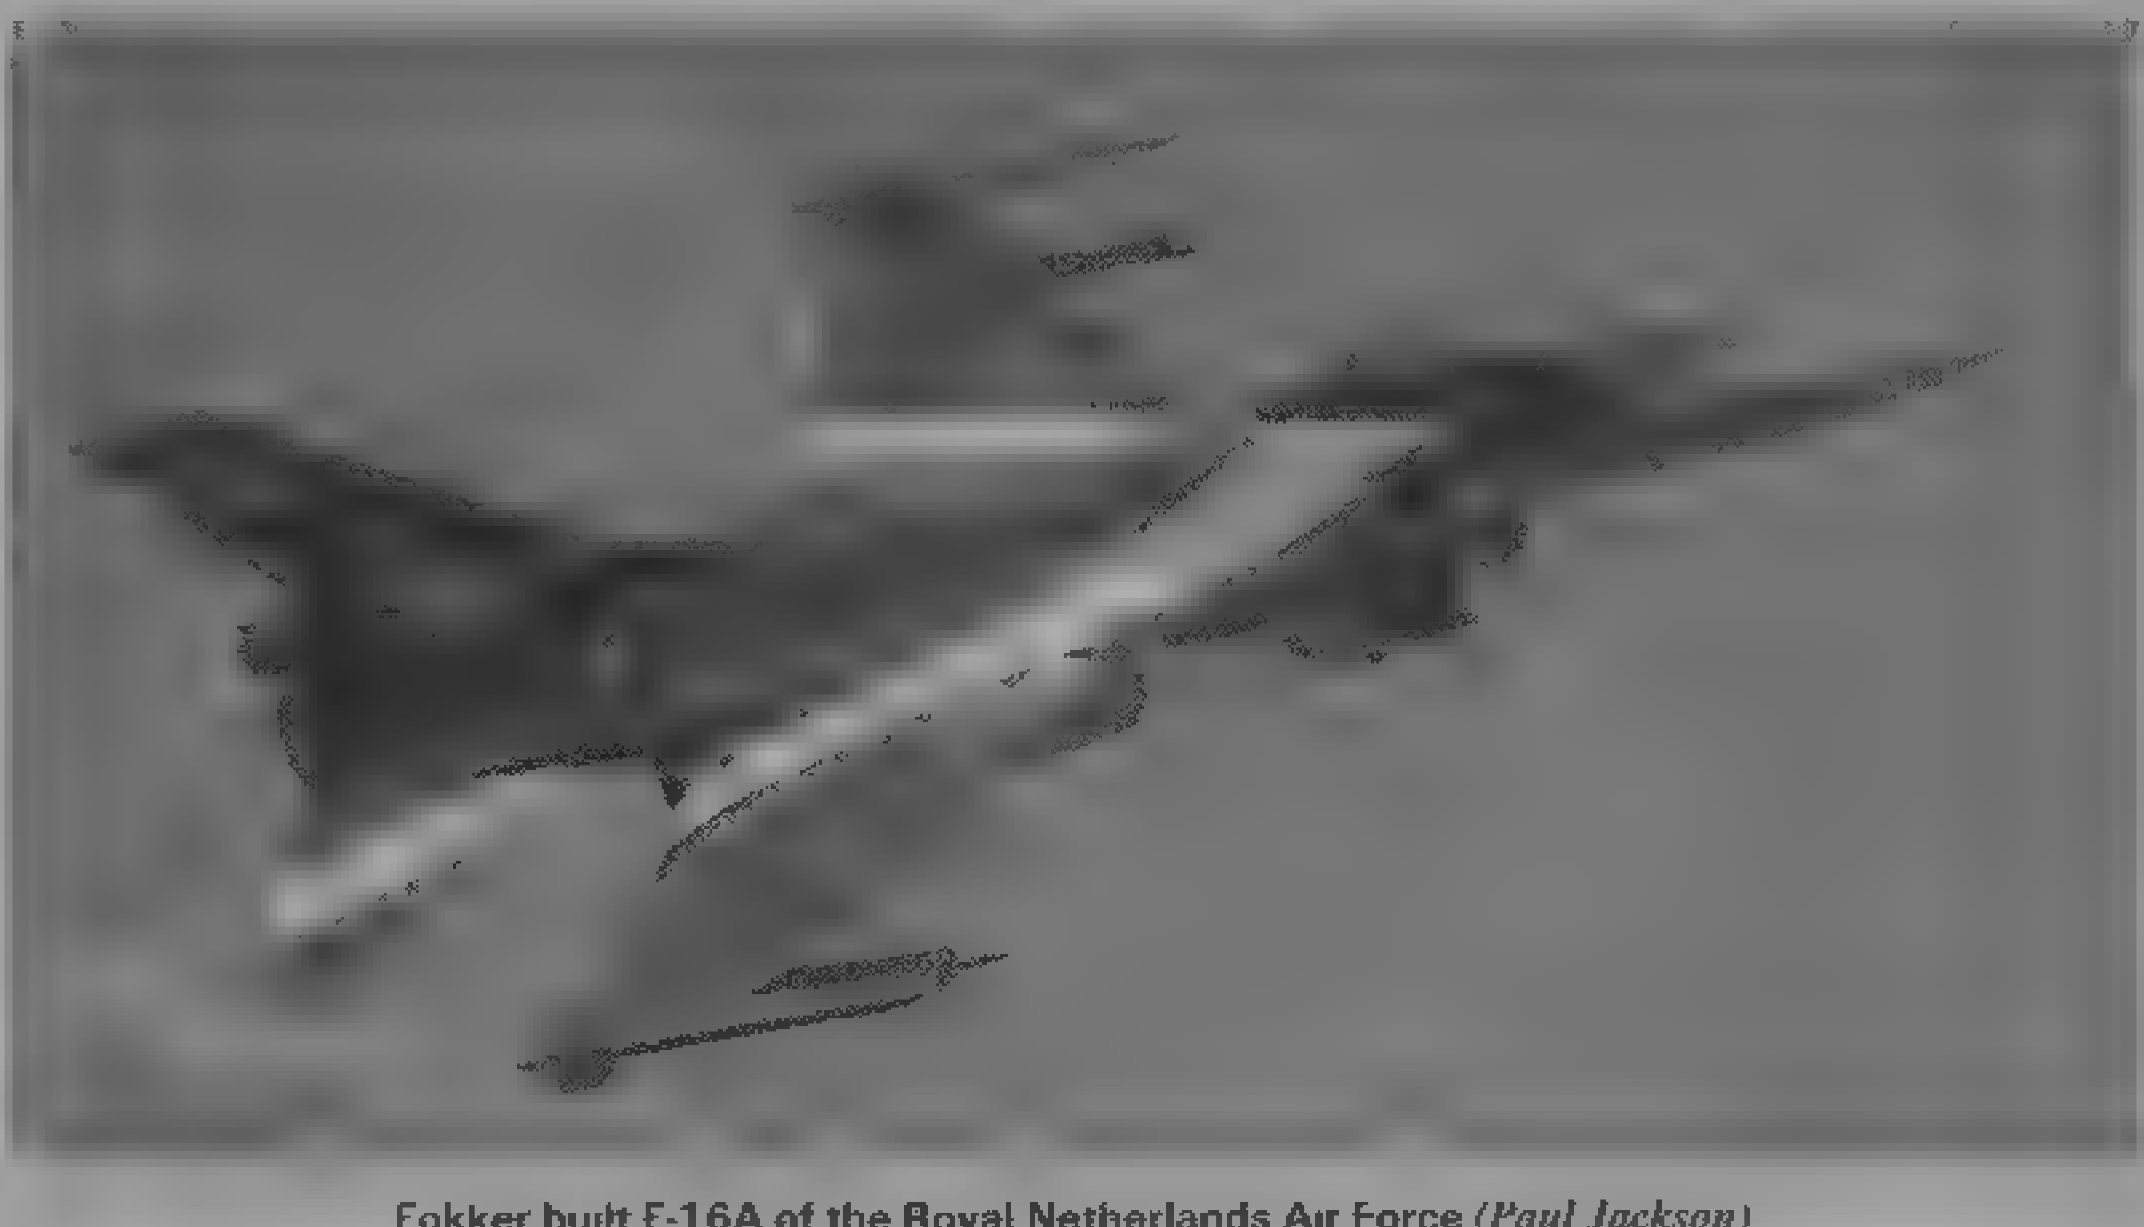
USAF intends to install permanent thrust vectoring nozzle on VISTA aircraft to continue trials programme. If funding can be obtained, this is expected in 1997.

F-16N: US Navy supersonic adversary aircraft (SAA) modified from F-16C/D Block 30; selected January 1985, deliveries of 26 aircraft started 1987 and completed 1988; features include AN/APG-66 instead of AN/APG-68 radar, F110-GE-100 engine, deletion of M61 gun, AN/ALR-69 RWR, titanium in lower wing fittings instead of aluminium and cold working of lower wing skin holes to resist greater frequency of high g; wingtips fitted only for AIM-9 practice missiles and ACMI AIS pods, but normal tanks and stores on other stations. Four of 26 are two-seat **TF-16N**. F/TF-16Ns serve, or have served, with 'Top Gun' Fighter Weapons School (eight) and with VF-126 (six) at NAS Miramar, California, VF-45 (six) at NAS Key West, Florida, and VF-43 (six) at NAS Oceana, Virginia. Inactivations and reductions in size of Navy adversary training force has resulted in first examples being placed in storage during 1994, with more expected to follow and these aircraft subject of possible transfer to Bahrain in exchange for F-5 Tiger fleet.

FS-X and TFS-X. F-16 derivatives selected by Japan Defence Agency for its FS-X requirement 19 October 1987, details under Mitsubishi in Japan section.

F-16 Recce: Four existing European recce pods, including that for Tornado, demonstrated in flight on F-16 fighters with minimum changes. RNethAF reconnaissance **F-16A(R)** operational since 1983 with Orpheus pods, some Danish F-16As given reconnaissance tasking from January 1994 using locally designed Per Udsen MRP (modular reconnaissance pod) with interchangeable wet film and electro-optical sensors. Following 1993 cancellation of ATARS centreline pod for F-16 Block 30, USAF seeking new sensors for podded installation on up to 60 Block 42 F-16Cs.

AFTI/F-16: Modified preseries F-16A (75-0750) used for US Air Force Systems Command Advanced Fighter Technology Integration (AFTI), first flight 10 July 1982, previous achievements detailed in 1986-87, 1987-88 and 1991-92 *Jane's*, currently with Block 15 horizontal tail surfaces, Block 25 wing and Block 40 avionics. Trials programmes include automatic target designation and attack (1988), night navigation and map displays (1988-89), digital datalink and two-aircraft operations (1989), autonomous attack (1989-91) and night attack (1989-92), tested automatic ground collision avoidance system and pilot-activated, low-level pilot disorientation recovery system 1991, LANTIRN pod and Falcon Night FLIR trials, 1992. Most recent test project concerned live firing of AGM-88 HARM as part of demonstration of advanced technology



Fokker built F-16A of the Royal Netherlands Air Force *(Paul Jackson)*

1994

Late standard F-16 cockpit, as planned for MLU

1995

applicable to Suppression of Enemy Air Defence (SEAD) mission. Total 600 plus sorties by mid-1994.

F-16XL: Two F-16XL prototypes, in flyable storage since 1985, leased from General Dynamics by NASA; first flight of single-seat N848NA/75-0749, 9 March 1989. NASA modified this aircraft at Dryden with wing glove having laser-perforated skin to smooth air flow over cranked arrow wing in supersonic flight, reducing drag and turbulence and saving fuel. Two-seat N849NA/75-0747, with GE F110-GE-129 engine, similarly converted early 1992. One aircraft presently earmarked to test laminar flow panel installed on upper port wing as part of NASA's High Speed Research Program. Project expected to last one year from September 1995. F-16XL described in 1985-86 *Jane's*.

F-16B-2. Second preseries F-16B (75-0752) converted to private-venture testbed of close air support and night navigation and attack systems; equipment includes F-16C/D HUD, helmet sight or GEC-Marconi Cat's Eyes NVGs, Falcon Eye head-steered FLIR or LANTIRN nav/attack pods, digital terrain system (Terprom), and automatic target handoff system. Alternative nav/attack FLIR pods comprise GEC-Marconi Atlantic and Lockheed Martin Pathfinder (LANTIRN derivative). NVG compatible cockpit lighting. Equipment testing continues on AFTI testbed, which see.

F-16ES. Enhanced Strategic two-seat, long-range interdictor F-16 proposal, developed November 1993 in response to Israeli preference for F-15I Eagle, additional fuel in one 2,271 litre (600 US gallon; 500 Imp gallon) centreline tank and two conformal tanks, each of 1,893 litres (500 US gallons, 417 Imp gallons), on sides of Israeli-style enlarged spine. Combat radius extended to in excess of 1,000 n miles (1,852 km; 1,151 miles). Not purchased, but conformal tanks flight tested on leased F-16C (83-1120) from 5 November 1994. Demonstrator vehicle featured 7.32 m (24 ft 0 in) shapes representative of tanks attached to upper wing and fuselage on each side to validate predicted aerodynamic effects and flight performance. Other F-16ES features, including simulated FLIR sensor installation, also evaluated during 21 sortie programme that was completed in January 1995. Estimated cost of production F-16ES in vicinity of $25 million.

F-16U: Proposed two-seat version being offered to United Arab Emirates which has admitted requirement for up to 80 interdictor aircraft, other contenders for this order comprising McDonnell Douglas F-15U Plus Strike Eagle and Sukhoi Su-37. Lockheed proposal features extended-range capability, superior to that of F-16ES derivative, plus delta-wing planform. Presentation of data was expected to take place in October 1994, with the UAE decision likely to follow in 1995. Likely to possess internally mounted IR navigation and targeting sensor equipment.

Length increased to 16.15 m (53 ft 0 in); span to 11.90 m (39 ft 0 in); wing area more than doubled, to 65.03 m² (700 sq ft); empty weight 11,294 kg (24,900 lb); fuel weight up 134 per cent to 11,793 kg (26,000 lb); maximum T-O weight increased to 23,609 kg (52,050 lb); and range (hi-lo-hi with four 2,000 lb bombs) doubled to 755 n miles (1,400 km; 870 miles).

F-16X. Projected development for 2010 service entry. 1.42 m (5 ft 0 in) fuselage stretch; modified F-22 delta wing with increased leading-edge sweep, but similar taper, section, twist, camber, moving surfaces and structure; some 80 per cent additional internal fuel, obviating drop tanks for most combat missions; conformal AIM-120 AMRAAM carriage; developed version of F100 or F110 engine; cost, two-thirds of F/A-18E Hornet.

CUSTOMERS: See tables. Total 3,964 production aircraft ordered by December 1994, including planned USAF procurement of 2,208 and 28 embargoed Pakistan Air Force examples.

COSTS: $18 million, USAF flyaway, FY92 prices. $20 million, export, 1995 prices. $31.5 million for modification of one F-16D Block 30 as NF-16D, which see, placed December 1988. MLU worth $2,000 million, 1991, including $300 million development phase. F-16 ADF programme cost $1 million per aircraft.

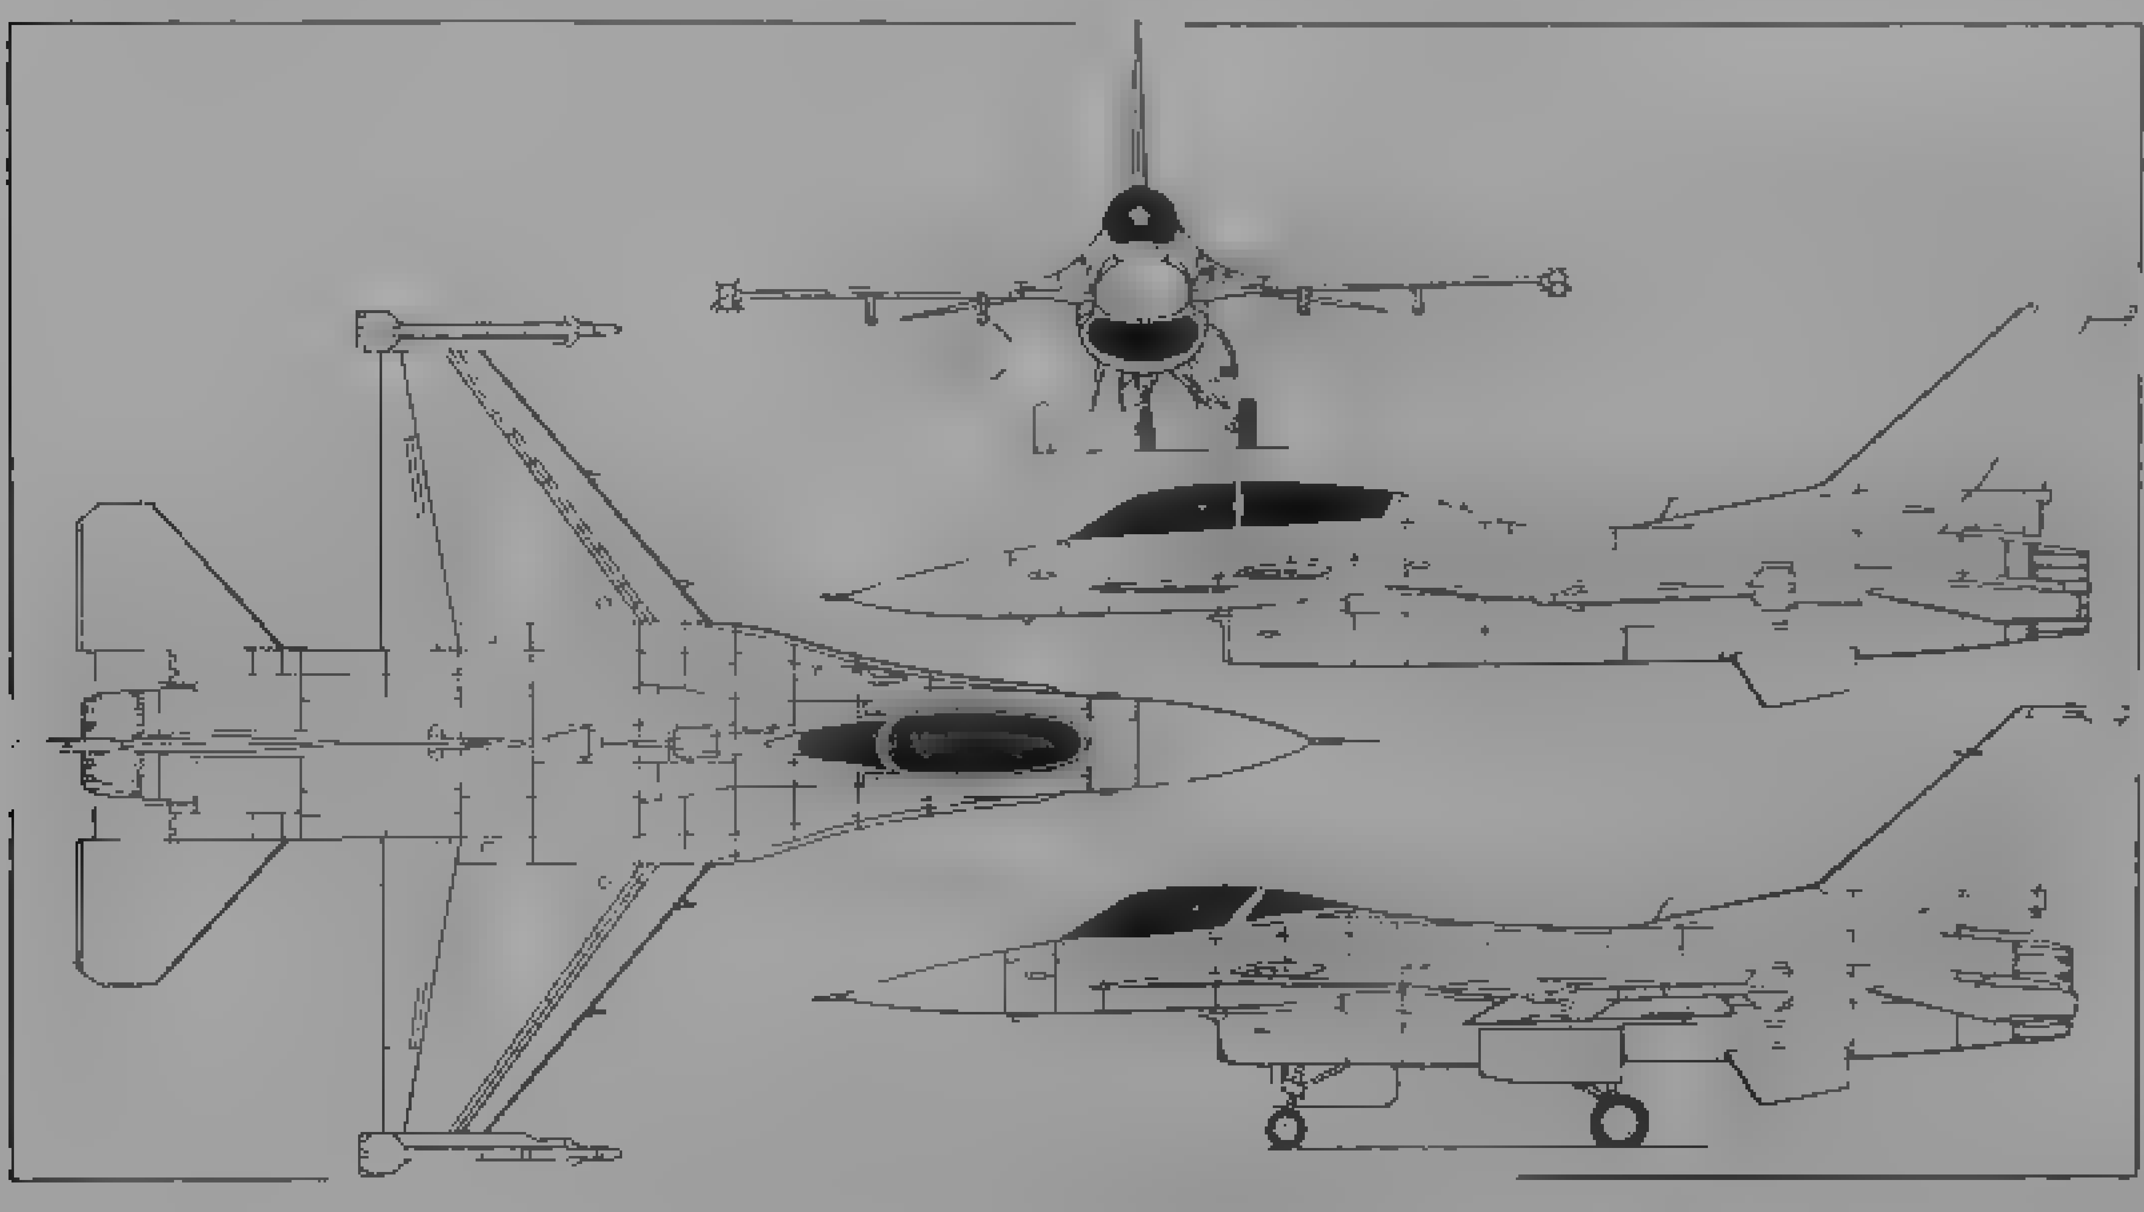
DESIGN FEATURES (refers mainly to Block 40 F-16C/D): Cropped delta wings blended with fuselage, with highly swept vortex control strakes along fuselage forebody and joining wings to increase lift and improve directional stability at high angles of attack; wing section NACA 64A-204, leading-edge sweepback 40°, relaxed stability (rearward CG) to increase manoeuvrability; deep wing-roots increase rigidity, save 113 kg (250 lb) structure weight and increase fuel volume, fixed geometry engine intake; pilot's ejection seat inclined 30° rearwards; single-piece birdproof forward canopy section, two ventral fins below wing trailing-edge. Baseline F-16 airframe life planned as 8,000 hours with average usage of 55.5 per cent in air combat training, 20 per cent ground attack and 24.5 per cent general flying, structural strengthening programme for pre-Block 50 aircraft required during 1990s.

FLYING CONTROLS: Four-channel digital fly-by-wire (analog in earlier variants), pitch/lateral control by pivoting monobloc tailerons and wing-mounted flaperons; maximum rate of flaperon movement 52°/s, automatic wing leading-edge manoeuvring flaps programmed for Mach number and angle of attack, flaperons and tailerons interchangeable left and right, sidestick control column with force feel replacing almost all stick movement.

STRUCTURE: Wing, mainly of light alloy, has 11 spars, five ribs and single-piece upper and lower skins, attached to fuselage by machined aluminium fittings; leading-edge flaps are one-piece bonded aluminium honeycomb and driven by rotary actuators; fin is multispar, multirib with graphite epoxy skins; brake parachute or ECM housed in fairing aft of fin root; tailerons have graphite epoxy laminate skins, attached to corrugated aluminium pivot shaft and removable full-depth aluminium honeycomb leading-edge, ventral fins have aluminium honeycomb and skins, split speedbrakes in fuselage extensions inboard of tailerons open to 60°. Nose radome by Brunswick Corporation.

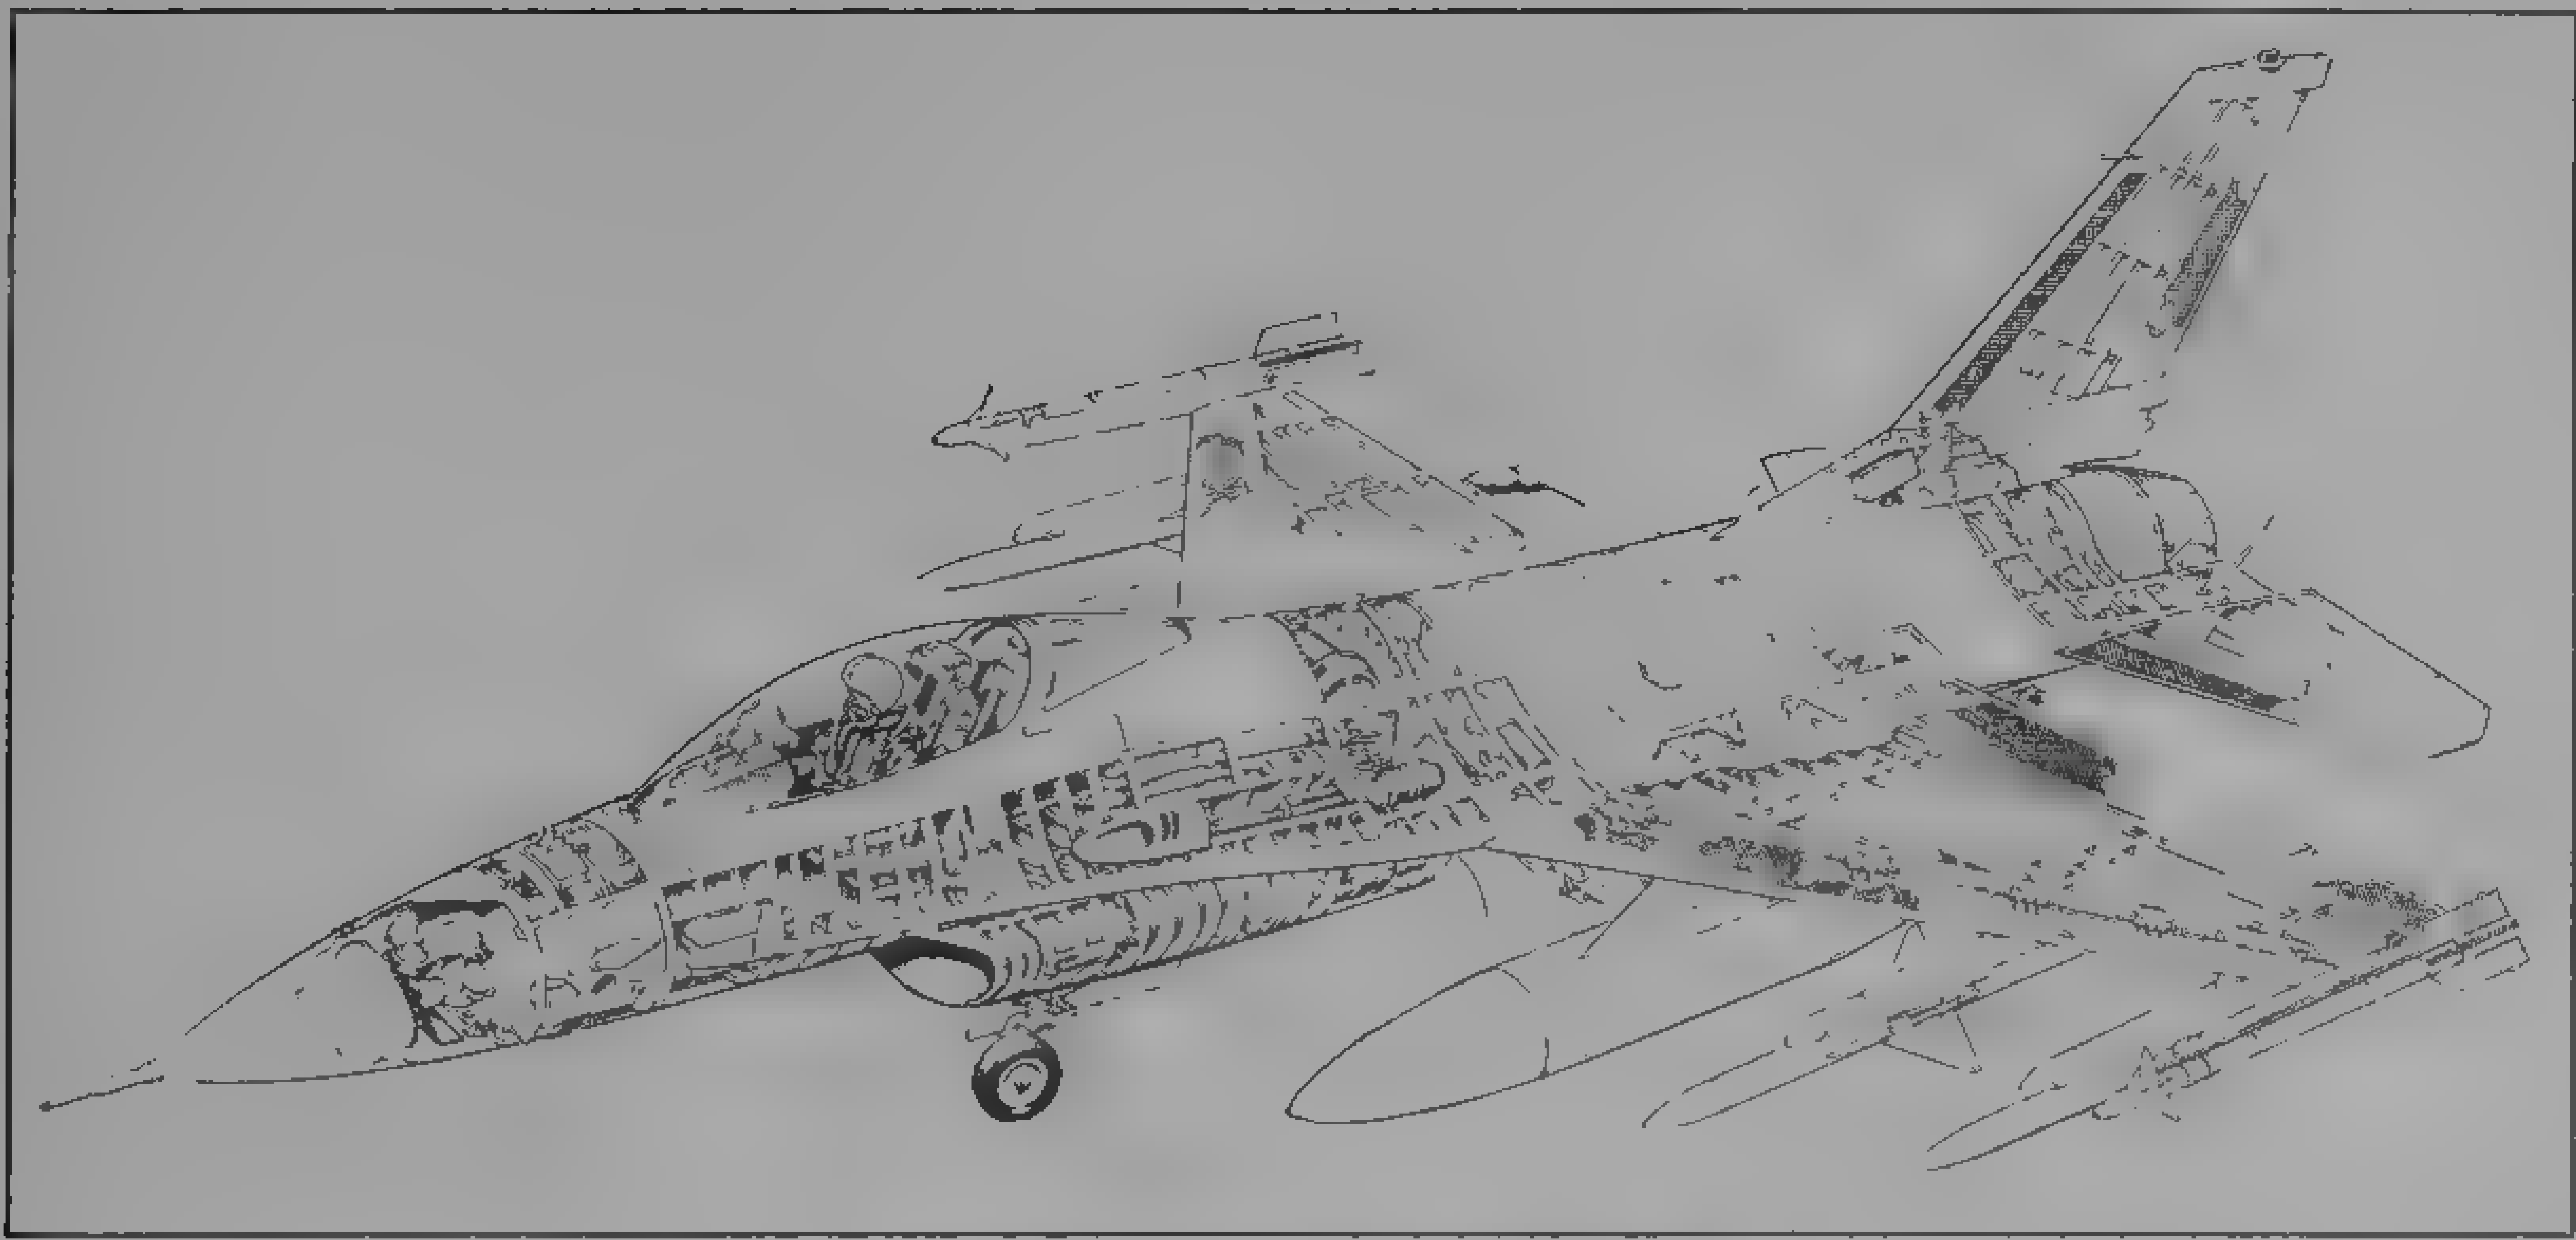
LANDING GEAR: Menasco hydraulically retractable type, nose unit retracting rearward and main units forward into fuselage. Nosewheel is located aft of intake to reduce the risk of foreign objects being thrown into the engine during ground operation, and rotates 90° during retraction to lie horizontally under engine air intake duct. Oleo-pneumatic struts in all units. Aircraft Braking Systems mainwheels and brakes, Goodyear or Goodrich mainwheel tyres, size 27.75 × 8.75-14.5, pressure 14.48 to 15.17 bars (210 to 220 lb/sq in) at T-O weights less than 13,608 kg (30,000 lb). Steerable nosewheel with Goodyear, Goodrich or Dunlop tyre, size 18 × 5.7-8, pressure 20.68 to 21.37 bars (300 to 310 lb/sq in) at T-O weights less than 13,608 kg (30,000 lb). All but two main unit components interchangeable. Brake-by-wire system on main gear, with Aircraft Braking Systems anti-skid units. Runway arresting hook under rear fuselage. Irvin 7.01 m (23 ft 0 in) diameter braking parachute fitted in Greek, Indonesian, Netherlands (retrofit completed December 1992), Norwegian, Turkish and Venezuelan F-16s. Landing/taxi lights on nose landing gear door.

POWER PLANT: One 131.6 kN (29,588 lb st) General Electric F110-GE-129, or one 129.4 kN (29,100 lb st) Pratt & Whitney F100-PW-229 afterburning turbofan as alternative standard. These Increased Performance Engines (IPE) installed from late 1991 in Block 50 and Block 52 aircraft. Immediately previous standard was 128.9 kN (28,984 lb st) F110-GE-100 or 105.7 kN (23,770 lb st) F100-PW-220 in Blocks 40/42. Of 1,416 F-16Cs and F-16Ds ordered by USAF, 555 with F100 and 861 with F110. IPE variants have half share each in FY92 procurement of 48 F-16s for USAF, following eight reliability trial installations including six Block 30 aircraft which flew 2,400 hours between December 1990 and September 1992. F100s of ANG and AFRes F-16A/Bs upgraded to 220E standard from late 1991. Fixed geometry intake, with boundary layer splitter plate, beneath fuselage. Apart from first few, F110-powered aircraft have intake widened by 30 cm (1 ft 0 in) from 368th F-16C (86-0262). Israeli second batch F-16D-30s have power plants locally modified by Bet-Shemesh Engines to F110-GE-110A with provision for up to 50 per cent emergency thrust at low level. USAF AVEN (axisymmetric vectoring engine nozzle) trials, 1992, involved F100-IPE-94 and F110; possible application to F-16.



F-16C (GE F110 turbofan) with extra side view (top) of two-seat F-16D (P&W F100 turbofan) *(Jane's/Dennis Punnett)*

1990



Cutaway drawing of Lockheed Martin F-16

1995

Standard fuel contained in wing and five seal-bonded fuselage cells which function as two tanks, 3,986 litres (1,053 US gallons; 876 Imp gallons) in single-seat aircraft, 3,297 litres (871 US gallons; 726 Imp gallons) in two-seat aircraft. Halon inerting system. In-flight refuelling receptacle in top of centre-fuselage, aft of cockpit. Auxiliary fuel can be carried in drop tanks: one 1,136 litres (300 US gallons, 250 Imp gallons) under fuselage. 1,402 litres (370 US gallons, 308 Imp gallons) under each wing. Optional 2,271 litre (600 US gallon, 500 Imp gallon) underwing tanks.

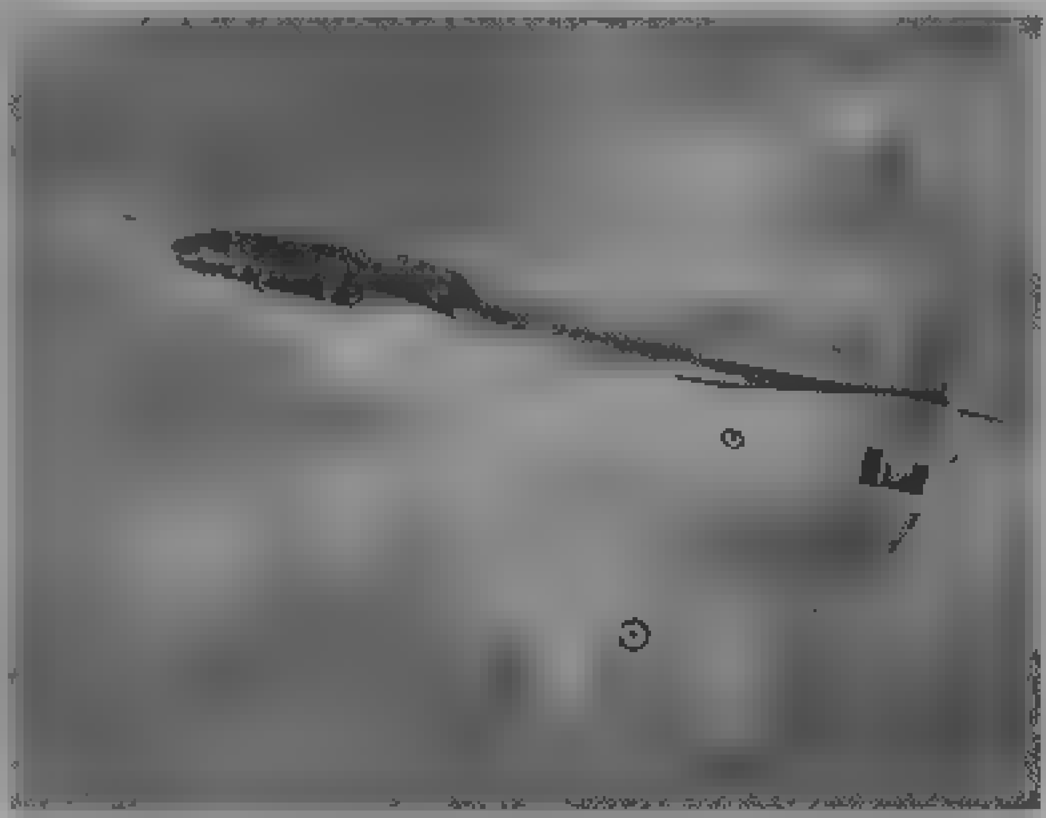
ACCOMMODATION: Pilot only in F-16C, in pressurised and air conditioned cockpit. McDonnell Douglas ACES II zero/zero ejection seat. Bubble canopy made of polycarbonate advanced plastics material. Inside of USAF F-16C/D canopy (and most Belgian, Danish, Netherlands and Norwegian F-16A/Bs) coated with gold film to dissipate radar energy. In conjunction with radar-absorbing materials in air intake, this reduces frontal radar signature by 40 per cent. Windscreen and forward canopy are an integral unit without a forward bow frame, and are separated from the aft canopy by a simple support structure which serves also as the breakpoint where the forward section pivots upward and aft to give access to the cockpit. A redundant safety lock feature prevents canopy loss. Windscreen/canopy design provides 360° all-round view, 195° fore and aft, 40° down over the side, and 15° down over the nose. To enable the pilot to sustain high *g* forces, and for pilot comfort, the seat is inclined 30° aft and the heel line is raised. In normal operation the canopy is pivoted upward and aft by electrical power; the pilot is also able to unlatch the canopy manually and open it with a back-up handcrank. Emergency jettison is provided by explosive unlatching devices and two rockets. A limited displacement, force-sensing control stick is provided on the right hand console, with a suitable armrest, to provide precise control inputs during combat manoeuvres.

The F-16D has two cockpits in tandem, equipped with all controls, displays, instruments, avionics and life support systems required to perform both training and combat missions. The layout of the F-16D second station is similar to the F-16C, and is fully systems-operational. A single-enclosure polycarbonate transparency, made in two pieces and spliced aft of the forward seat with a metal bow frame and lateral support member, provides outstanding view from both cockpits.

SYSTEMS: Regenerative 12 kW environmental control system, with digital electronic control, uses engine bleed air for pressurisation and cooling of crew station and avionics compartments. Two separate and independent hydraulic systems supply power for operation of the primary flight control surfaces and the utility functions. System pressure (each) 207 bars (3,000 lb/sq in), rated at 161 litres (42.5 US gallons, 35.4 Imp gallons)/min. Bootstrap type reservoirs, rated at 5.79 bars (84 lb/sq in).

Electrical system powered by engine-driven Westinghouse 60 kVA main generator and 10 kVA standby generator (including ground annunciator panel for total electrical system fault reporting), with Sundstrand constant speed drive and powered by a Sundstrand accessory drive gearbox. 17 Ah battery. Four dedicated, sealed cell batteries provide transient electrical power protection for the fly-by-wire flight control system.

An onboard Sundstrand/Solar jet fuel starter is provided for engine self start capability. Simmonds fuel measuring system. AlliedSignal emergency power unit automatically



Artist's impression of F-16U proposed to United Arab Emirates

1995

drives a 5 kVA emergency generator and emergency pump to provide uninterrupted electrical and hydraulic power for control in the event of the engine or primary power systems becoming inoperative.

AVIONICS: *Comms:* Magnavox AN/ARC-164 UHF transceiver (AN/URC-126 Have Quick IIA in Block 50/52); provision for Magnavox KY-58 secure voice system; Collins AN/ARC-186 VHF AM/FM transceiver (AN/ARC-205 Have Sync Group A in Block 50/52), ARC-190 HF radio, government furnished AN/AIC-18/25 intercom and SCI advanced interference blanker. Teledyne Electronics AN/APX 101 IFF transponder with government furnished IFF control, government furnished National Security Agency KIT-1A/TSEC cryptographic equipment.

Radar: Westinghouse AN/APG-68(V) pulse Doppler range and angle track radar, with planar array in nose. Provides air-to-air modes for range-while-search, uplook search, velocity search, air combat, track-while-scan (10 targets), raid cluster resolution, single target track and (later) high PRF track to provide target illumination for AIM-7 missiles, plus air-to-surface modes for ground mapping, Doppler beam-sharpening, ground moving target, sea target, fixed target track, target freeze after pop-up, beacon, and air-to-ground ranging.

Flight: Litton LN-39 standard inertial navigation system (ring laser Litton LN-93 or Honeywell H-523 in Block 50/52 and current FMS F-16A/B: LN-93 for Egypt, Indonesia, Israel, South Korea, Pakistan, Portugal and Taiwan plus Netherlands retrofit and Greek second batch); Collins AN/ARN-108 ILS, Collins AN/ARN-118 Tacan, Rockwell GPS, Honeywell central air data computer, General Dynamics enhanced stores management computer, Gould AN/APN-232 radar altimeter. BAe Terprom digital terrain system to be installed in all new USAF F-16s, USAF reserve F-16s and 301 European aircraft destined for MLU in first instance, but could be offered to FMS customers from 1996 on Block 20 F-16A/B aircraft. Optional equipment includes Collins VIR 130 VOR/ILS.

Instrumentation: GEC-Marconi wide-angle holographic electronic HUD with raster video capability (for LANTIRN) and integrated keyboard; data entry/cockpit interface and dedicated fault display by Litton Canada and Lockheed Martin, Astronautics cockpit/TV set.

Mission: Honeywell multifunction displays. Lockheed Martin LANTIRN package comprises AN/AAQ-13 (navigation) and AN/AAQ-14 (targeting) pods. Turkish aircraft (150+ to be modified by 1996) to share 60 LANTIRN pod systems. LANTIRN also purchased by Greece and South Korea and required for second Thailand batch. Enhanced capability LANTIRN incorporating second-generation FLIR tested by F-16 at Eglin AFB early 1995. Sharpshooter pod (down-rated export version of AAQ-14 LANTIRN targeting system) acquired by Bahrain and Israel, but latter to get indigenous Rafael Litening IR targeting and navigation pod as replacement (initial funding already undertaken with first delivery expected 1996). Pakistan F-16s carry Thomson-CSF Atlis laser designator pods. Singapore considering LANTIRN, GEC-Marconi TIALD and Rafael Litening options. Texas Instruments AN/ASQ-213 HARM Targeting System (HTS) pod carried by Block 50/52D aircraft. Entered service 1994 and currently deployed by USAF units in USA, Japan and Germany. Some Netherlands F-16As equipped with early Delft Orpheus reconnaissance pods, Danish F-16As with Per Udsen recce pods. Historical details in 1986-87 and earlier editions. New modular mission computer and colour displays for retrofit as part of MLU and new production in Block 20 F-16A/Bs.

Self defence: Dalmo Victor AN/ALR-69 radar warning system replaced in USAF Block 50/52 by Loral AN/ALR-56M advanced RWR, which also ordered for USAF Block 40/42 retrofit and (first export) Korean Block 52s. Provision for Westinghouse AN/ALQ-131 or Raytheon AN/ALQ-184 jamming pods. AN/ALQ-131 supplied to Bahrain, Egypt, Netherlands and Pakistan. Taiwan to get 80 Raytheon AN/ALQ-184 (first export order and first foreign use). Israeli Air Force F-16s extensively modified with locally designed and manufactured equipment, as well as optional US equipment to tailor them to the IAF defence role. This includes Elisra SPS 3000 self protection jamming equipment in enlarged spines of F-16D-30s and Elta EL/L-8240 ECM in third batch of F-16C/Ds, replacing Loral AN/ALQ-178(V)1 Rapport ECM in Israeli F-16As. Belgian F-16s have Dassault Electronique Carapace passive ECM system in fin-root housing on 100 aircraft (with some reserve systems) from April 1995 (to be used in conjunction with active AN/ALQ-131 jamming pods to be obtained from surplus US stocks). Loral AN/ALQ-178(V)3 Rapport III integral self-protection system in Turkish F-16C/Ds. In March 1993 Greece ordered integrated Litton ASPIS self defence system, comprising AN/ALR-93 RWR, Tracor chaff/flare dispensers and (initially on only 35 aircraft) Raytheon AN/ALQ-187 IDIAS jammer. Denmark has Northrop Grumman AN/ALQ-162 jammer integrated in one wing pylon. Tracor AN/ALE-40(V)-4 chaff/flare dispensers (AN/ALE-147 in Block 50/52).

ARMAMENT: General Electric M61A1 20 mm multibarrel cannon in the port side wing/body fairing, equipped with a General Electric ammunition handling system and an enhanced envelope gunsight (part of the head-up display system) and 511 rounds of ammunition. There is a mounting for an air-to-air missile at each wingtip, one underfuselage centreline hardpoint, and six underwing hardpoints for additional stores. For manoeuvring flight at 5.5 *g* the underfuselage station is stressed for a load of up to 1,000 kg (2,200 lb), the two inboard underwing stations for 2,041 kg (4,500 lb) each, the two centre underwing

stations for 1,587 kg (3,500 lb) each, the two outboard underwing stations for 318 kg (700 lb) each, and the two wingtip stations for 193 kg (425 lb) each. For manoeuvring flight at 9 g the underfuselage station is stressed for a load of up to 544 kg (1,200 lb), the two inboard underwing stations for 1,134 kg (2,500 lb) each, the two centre underwing stations for 907 kg (2,000 lb) each, the two outboard underwing stations for 204 kg (450 lb) each, and the two wingtip stations for 193 kg (425 lb) each. There are mounting provisions on each side of the inlet shoulder for the specific carriage of sensor pods (electro-optical, FLIR and so on); each of these stations is stressed for 408 kg (900 lb) at 5.5 g, and 250 kg (550 lb) at 9 g.

Typical stores loads can include two wingtip-mounted AIM-9L/M/P Sidewinders, with up to four more on the outer underwing stations. Rafael Python 3 on Israeli F-16s from early 1991, centreline GPU-5/A 30 mm cannon, drop tanks on the inboard underwing and underfuselage stations, a Lockheed Martin Pave Penny laser spot tracker pod along the starboard side of the nacelle, and bombs, air-to-surface missiles or flare pods on the four inner underwing stations. Stores can be launched from Aircraft Hydro-Forming MAU-12C/A bomb ejector racks, Hughes LAU-88 launchers, or Orgen triple or multiple ejector racks. Non-jettisonable centreline GPU-5/A 30 mm gun pods on dedicated USAF ground-attack F-16As. Weapons launched successfully from F-16s, in addition to Sidewinders and AIM-120A AMRAAM, include radar guided Sparrow and Sky Flash air-to-air missiles, French Magic 2 infra-red homing air-to-air missiles,

F-16 TABLES

Table 1 provides a rapid reference to customers and quantities; more detailed information on production rates appears in Tables 2 and 3

Notes

[1] Built by Sabca (Belgium). 221st and last Sabca F-16 (BAF FA-136) delivered 22 October 1991
[2] One built by Fokker (Netherlands)
[3] Built by Fokker; 300th and last Fokker F-16 (RNethAF J-021) delivered 27 February 1992
[4] Two F-16Cs and six F-16Ds built by GD; remainder by TAI
[5] Two built by Fokker
[6] Three built by Sabca
[7] Plus seven F-16As and two F-16Bs leased from USAF with 425th FS at Luke AFB, Arizona
[8] TAI production
[9] 12 built by GD, 36 CKD kits and 72 produced locally by Samsung Aerospace
[10] Two converted to F-16XL, including one as two-seat
[11] Embargoed. Pakistan offered compromise batch of 38 aircraft. Offer rejected and 28 completed aircraft of follow-on order for 71 placed in storage at Davis-Monthan AFB, Arizona. Alternative buyer being sought

Note A. Currently operated by 56th FW, Luke AFB, Arizona (307 FS/Singapore training element) and also 93 FS of AFRes, 111, 114, 148, 152, 178, 179, 182, 184, 186, 195 and 198 FSs, ANG.
Note B. Currently operated by 8th FW, Kunsan AB, South Korea (35, 80 FSs); 20th FW, Shaw AFB, South Carolina (77, 78, 79 FSs); 23rd W, Pope AFB, North Carolina (74 FS); 31st FW, Aviano AB, Italy (510, 555 FSs), 35th FW, Misawa AB, Japan (13, 14 FSs), 51st FW, Osan AB, South Korea (36 FS), 52nd FW, Spangdahlem AB, Germany (22, 23 FSs); 57th W, Nellis AFB, Nevada (USAF Weapons School, 414 Test Sqdn, 422 Test and Evaluation Sqdn, Thunderbirds Air Demonstration Sqdn), 347th FW, Moody AFB, Georgia (68, 69 FSs), 354th FW, Eielson AFB Alaska (18 FS), 366th W, Mountain Home AFB, Idaho (389 FS), 388th FW, Hill AFB, Utah (4, 34, 421 FSs), and also 302, 457, 466, 704 and 706 FSs, AFRes, 107, 112, 113, 119, 120, 121, 124, 125, 134, 138, 149, 157, 159, 160, 162, 170, 174, 175, 176, 188 and 194 FSs, ANG.

Blocks 1 and 5 retrofitted to Block 10 standard 1982-84, Block 15 retrofitted to Block 15OCU (avionics standard only) from 1987. New build F-16As are Block 15OCU from November 1987.

Export programme code-names are: Bahrain - Peace Crown, Egypt - Peace Vector I, II, III, IIIA and IV, Greece - Peace Xenia I-II, Indonesia - Peace Bima Sena, Israel - Peace Marble I-III, South Korea - Peace Bridge I-II, Pakistan - Peace Gate I-IV, Portugal - Peace Atlantis, Singapore - Peace Carven I-II, Taiwan - Peace Fenghuang, Thailand - Peace Naresuan I-II, Turkey - Peace Onyx I-II (and CAE-Link simulator, Peace Onyx III) and Venezuela - Peace Delta.

Omitted are two YF-16s.

Recent orders. Turkey firmed-up option on 40 F-16C/Ds in February 1994. Singapore ordered 18 F-16C/D-52Ds in July 1994, with follow-on negotiations expected to add further six aircraft under FMS programme in March 1995.
Intentions: Israel planning 30 F-16C-40s and 30 F-16D-40s for delivery from July 1997.
Transfers. Israel received 36 F-16As and 14 F-16Bs from surplus USAF stocks August 1994 to March 1995. Denmark received three ex-USAF F-16As in July 1994

AGM-65A/B/D/G Maverick air-to-surface missiles, HARM and Shrike anti-radiation missiles, Harpoon anti-ship missiles (clearance trials 1993-94), and, in Royal Norwegian Air Force service, the Penguin Mk 3 anti-ship missile

DIMENSIONS, EXTERNAL (F-16C, D):

Wing span: over missile launchers 9.45 m (31 ft 0 in)
over missiles 10.00 m (32 ft 9¾ in)
Wing aspect ratio 3.20
Length overall 15.03 m (49 ft 4 in)
Height overall 5.09 m (16 ft 8½ in)
Tailplane span 5.58 m (18 ft 3¾ in)
Wheel track 2.36 m (7 ft 9 in)
Wheelbase 4.00 m (13 ft 1½ in)

AREAS (F-16C, D):

Wings, gross 27.87 m² (300.0 sq ft)
Flaperons (total) 2.91 m² (31.32 sq ft)
Leading-edge flaps (total) 3.41 m² (36.72 sq ft)
Fin, incl dorsal fin 4.00 m² (43.10 sq ft)
Rudder 1.08 m² (11.65 sq ft)
Horizontal tail surfaces (total) 5.92 m² (63.70 sq ft)

WEIGHTS AND LOADINGS:

Weight empty:
F-16C: F100-PW-220 8,273 kg (18,238 lb)
F110-GE-100 8,627 kg (19,020 lb)
F-16D: F100-PW-220 8,494 kg (18,726 lb)
F110-GE-100 8,853 kg (19,517 lb)
Max internal fuel: F-16C 3,104 kg (6,846 lb)
F-16D 2,567 kg (5,659 lb)
Max external fuel (both) 3,066 kg (6,760 lb)
Max external load (both) 5,443 kg (12,000 lb)
Typical combat weight:
F-16C (F110) 10,780 kg (23,765 lb)
Max T-O weight:
air-to-air, no external tanks:
F-16C (F110) 12,331 kg (27,185 lb)
with external load:
F-16C Block 30/32 17,010 kg (37,500 lb)
F-16C Block 40/42 19,187 kg (42,300 lb)
Wing loading:
at 12,927 kg (28,500 lb) AUW 464 kg/m² (95.0 lb/sq ft)
at 19,187 kg (42,300 lb) AUW 688 kg/m² (141.0 lb/sq ft)
Thrust/weight ratio (clean) 1.1 to 1

PERFORMANCE:

Max level speed at 12,200 m (40,000 ft) above Mach 2.0
Service ceiling more than 15,240 m (50,000 ft)
Radius of action:
F-16C Block 40, two 907 kg (2,000 lb) bombs, two Sidewinders, 3,940 litres (1,040 US gallons; 867 Imp gallons) external fuel, tanks dropped when empty, hi-lo-lo-hi 740 n miles (1,371 km; 852 miles)

LOCKHEED MARTIN AIRCRAFT SERVICES (LMAS) (Division of Lockheed Martin Aeronautics Sector)

1800 East Airport Drive, Ontario, California 91761-0033
Telephone: 1 (909) 395 2411
PRESIDENT: Harold T Bowling
EXECUTIVE VICE-PRESIDENT: Arthur J Schwetz
VICE-PRESIDENT PROGRAMMES: Ned Duffield
VICE-PRESIDENT OPERATIONS: Robert Chambers
DIRECTOR, COMMUNICATIONS: Ronald C Lindeke

LMAS (known until 1995 as Lockheed Aircraft Service Company) is oldest aircraft modification company in the world; has designed, fabricated and installed major aircraft structural modifications and integrated complete avionic systems for US military, foreign governments and commercial customers; has completed conversions on such aircraft as Boeing KC-135 and 707, McDonnell Douglas DC-8 and Lockheed Martin C-130, C-141, L-188 Electra, L-1011 and P-3. Manufactures solid state flight data recorders and tactical reconnaissance pods, operates OMNILOG (worldwide logistics support service) which tracks more than 20 million aircraft components. Lockheed Aeromod Center Inc (LACI) of Greenville, South Carolina, maintains and modifies large military and civil aircraft; in December 1990 opened 21,740 m² (234,000 sq ft) western area facility for commercial aircraft maintenance and modification at Tucson, Arizona.

Airod Sdn Bhd (see 1994-95 *Jane's*), joint venture between LAS International and Aerospace Industries Malaysia, maintains, modifies and overhauls aircraft at Subang International Airport, Kuala Lumpur. Guangzhou Aircraft Maintenance Engineering Company Limited (GAMECO) is joint venture company formed by Civil Aviation Administration of China-Guangzhou Regional Administration (CAAC-GRA), Lockheed Aircraft Service International (LASI) and Hutchison China Trade Holdings Limited (HCT); new maintenance hangar is the largest in China and able to accommodate one Boeing 747 and two 737s or four 737s simultaneously; hangar and adjoining shop complex occupy 14,000 m² (150,700 sq ft).

In February 1992, LAS formed joint venture, Aeroplex of Central Europe (ACE), with Malév Hungarian Airlines for upgrading existing facilities and expansion of commercial aircraft maintenance and overhaul capability at Budapest International Airport (Ferihegy). ACE provides aircraft maintenance and support of Malév fleet of Boeing 737-200 and Tu-154 and -134 aircraft and offers third-party maintenance to airlines in Central Europe, Middle East and Africa.

Latest joint venture involves new subsidiary company established in Argentina, where LMAS won contract to operate Córdoba Material Area for 25 years, beginning 1 July 1995. Depot managed by Lockheed Aircraft Argentina SA (LAASA) and work includes aircraft maintenance support under terms of agreement with Argentine Ministry of Defence, plus modernisation of 18 A-4M Skyhawks bought from US Navy for Argentine service (further 18 to be overhauled by LMAS at Chino, California). Whole project valued at $200 million and will entail inspection and rewiring, engine refurbishment; upgraded avionics; pilot and technician training; spares support and provision of technical manuals.

LAS specialises in design and application of special mission packages for converted C-130s, for electronic warfare, command control communication and countermeasure systems, and signal intelligence; completed upgrading of nine AC-130H Spectre gunships into Special Operations Forces Improvement (SOFI) configuration in 1993.

Lockheed L-1011 TriStar conversions have included range, MTOW and fuel capacity increases; VIP custom interiors, and L-1011 Freighter 2000 programme.

Further data in 1991-92 *Jane's* and in *Jane's Aircraft Upgrades*.

MAULE

MAULE AIR INC

2099 GA Highway, 133 South, Moultrie, Georgia 31768
Telephone: 1 (912) 985 2045
Fax: 1 (912) 890 2402
Telex: 804613 MAULE MOUL
PRESIDENT AND ENGINEERING MANAGER: Belford D Maule
VICE-PRESIDENT, SECRETARY AND TREASURER: June D. Maule
ENGINEER: Don Richie
SALES MANAGER: Don Merrill

Original Maule Aircraft Corporation formed to manufacture M-4, a four-seat extrapolation of Piper Cub, transferred to Moultrie, Georgia, 1968; production ceased 1975. Maule Air Inc formed 1984 to produce uprated M-5 Lunar Rocket and M-7 Super Rocket; Lunar Rocket discontinued, but variants listed below currently available. Employment 100 in February 1995. Sales revenue for 1994 totalled $6 million.

UPDATED

MAULE TRAINER, STAR ROCKET, SUPER ROCKET and STAR CRAFT

TYPE: Two/four/five-seat light aircraft.

CURRENT VERSIONS: **MX-7-160 Sportplane**: Mid-length wingspan four-seater, 119 kW (160 hp) Textron Lycoming O-320-B2D engine, Sensenich two-blade fixed-pitch metal propeller, and four-position flaps.

MXT-7-160 Trainer: As MX-7-160, but tricycle landing gear; two seats standard, four seats optional.

MX-7-180A Sportplane: As MX-7-160, but 134 kW (180 hp) Textron Lycoming O-360-C4F engine.

MXT-7-180A Trainer: As MXT-7-180A, but tricycle landing gear, two seats standard, four seats optional.

MX-7-180B Star Rocket: Short wingspan four-seater (fifth seat optional), 134 kW (180 hp) Textron Lycoming O-360-C1F engine, Hartzell two-blade constant-speed metal propeller, 265 litre (70 US gallon, 58 Imp gallon) fuel tanks standard, and five-position flaps.

MXT-7-180 Star Craft: As MX-7-180B, but mid-length wingspan and tricycle landing gear.

M-7-235B Super Rocket: Long wingspan five-seater, choice of 175 kW (235 hp) carburetted Textron Lycoming O-540-J1A5D, low-compression Mogas approved O-540-B4B5 or fuel-injected IO-540-W1A5D engines, Hartzell constant-speed propeller, 265 litre (70 US gallon, 58 Imp gallon) fuel tanks standard, five-position flaps, fuselage raised 12.7 cm (5 in) at trailing-edge of wing and baggage area moved aft 12.7 cm (5 in) to accommodate fifth seat, recommended for high gross weight short field operation, and for floatplane operation.

MT-7-235 Super Rocket: As M-7-235B, but tricycle landing gear, mid-length wingspan, four-position flaps and IO-540-W1A5D engine only.

MX-7-235 Super Rocket: Short wingspan four-seater (fifth optional); power plant as M-7-235B, five-position flaps.

M-8-235: Mid-length wingspan four-seater (fifth optional) with wide-track spring steel landing gear instead of oleo legs; Textron Lycoming O-540-J1A5D or IO-540-W1A5D engine, Hartzell constant-speed propeller, 265 litre (70 US gallon; 58 Imp gallon) fuel tanks standard and four-position flaps.

MX-7-420 Starcraft: Short wingspan, 313 kW (420 shp) Allison 250-B17C turboprop driving Hartzell HC-B3TF-7A three-blade constant-speed feathering and reversing propeller; 265 litre (70 US gallon, 58 Imp gallon) fuel tanks.

Maule MXT-7-160 trainer two/four-seat light aircraft *1995*

MXT-7-420 Starcraft: As MX-7-420, but tricycle landing gear.

M-7-420 Starcraft: As MX-7-420, but EDO 2500 amphibious floats.

CUSTOMERS: Total of more than 1,900 produced, 71 delivered in 1994, 1995 deliveries expected to total 100. Mexican Air Force received 10 MXT-7-180s in 1994.

COSTS (1994, standard equipment): MX-7-160 $90,063; MXT-7-160 $98,700; MX-7-180A $94,999; MXT-7-180A $103,635; MX-7-180B $105,850; MXT-7-180 $115,353; M-7-235B (O-540 engine) $118,062; M-7-235B (IO-540 engine) $125,062; MT-7-235 $135,707; M-8-235 (O-540 engine) $123,369; M-8-235 (IO-540 engine) $130,369; MX-7-420 $450,000; MXT-7-420 $490,000; M-7-420 $550,000.

DESIGN FEATURES: USA 35B (modified) wing section, dihedral 1°, incidence 0° 30′, cambered wingtips standard.

FLYING CONTROLS: Ailerons linked to rudder servo tab to allow normal flying with aileron wheel only; trim tab in port elevator, rudder trim by spring to starboard rudder pedal; flap deflection 40° down for slow flight (further setting of 48° down on some models), 24° down, 0° and 7° up for improved cruise performance; underfin on floatplane and amphibious versions.

STRUCTURE: All-metal two-spar wing with dual struts and glassfibre tips; fuselage frame of welded 4130 steel tube with Ceconite covering aft of cabin and metal doors and skin round cabin; glassfibre engine cowling.

LANDING GEAR: Non-retractable tailwheel or nosewheel type. Maule oleo-pneumatic shock-absorbers in main units on M-7 and MX-7 models, streamlined spring steel main units on M-8 tailwheel and all tricycle landing gear models. Maule steerable tailwheel. Cleveland mainwheels with Goodyear or McCreary tyres size 17 × 6.00-6, pressure 1.79 bars (26 lb/sq in). Tailwheel tyre size 8 × 3.50-4, pressure 1.03 to 1.38 bars (15 to 20 lb/sq in). Cleveland hydraulic disc brakes. Parking brake. Oversize tyres, size 20 × 8.50-6 (pressure 1.24 bars; 18 lb/sq in), and fairings aft of mainwheels optional. Provisions for fitting optional Aqua 2400 or Edo 2400B floats or Edo 797-2500 amphibious floats (not on tricycle gear models).

POWER PLANT: One flat-four or flat-six engine as described under Current Versions, driving a Hartzell, McCauley or Sensenich two-blade constant-speed propeller. Three-blade McCauley propeller optional (on 175 kW, 235 hp versions). Two fuel tanks in wings with total usable capacity of 151 litres (40 US gallons, 33 Imp gallons). Auxiliary fuel tanks in outer wings (standard on some models), to provide total capacity of 265 litres (70 US gallons, 58 Imp gallons). Refuelling points on wing upper surface.

ACCOMMODATION: Two, four or five seats according to model, as described under Current Versions: individual, adjustable front seats, rear bench seat. Dual controls standard. Baggage compartment, capacity 113 kg (250 lb), aft of seats, cargo capacity with passenger seats removed 349 kg (770 lb). One front-hinged door on port side; three doors on starboard side, forward and centre doors hinged at front edge, rear baggage door hinged at rear edge to form double cargo door providing an opening 1.30 m (4 ft 3 in) wide to facilitate loading of bulky cargo; aircraft may be flown with doors removed. Accommodation heated and ventilated.

SYSTEMS: Hydraulic system for brakes only; electrical system powered by 60 A engine-driven alternator; 12 V battery (24 V battery on turboprops).

AVIONICS: *Comms*: Single Bendix/King KX 125-01 nav/com and KT-76AA transponder, Narco AR-850 altitude encoder, EBC102A ELT, broadband antenna, microphone, and cabin overhead speaker. Options include Bendix/King KX-155-38 or KX-155-42 nav/com, Trans-Cal KE-127 altitude encoder, Sigtronics SPA-400 intercom, push-to-talk switch, dual microphone/headphone jacks in front or rear, marker beacon antenna, Telex ProAir 2000E headset.

Flight: Optional choice of KI-203-00/204-02/206-04/208-00/209-01 VOR/LOC/GS indicators, KN 62A-01 or KN-64-00 DME, KN 75-00 glide slope receiver, KNS 80-00 integrated nav/RNAV/DME, KR-21 marker beacon receiver, KR-86-21 or KR-87-16 digital ADF, Narco ELT910 ELT, Garmin 100-321 GPS, Trimble TNL2000A GPS, Century IIB autopilot, avionics master switch and avionics cooling kit.

M-7-235B Super Rocket five-seat light aircraft

1995

Instrumentation: Standard (MX-7, MXT-7, M-7 and M-8 models, but others generally similar) includes full gyro panel/vacuum system, SigmaTek true airspeed indicator, carburettor air temperature gauge, acoustic stall warner, Alcor EGT gauge (one-, four- or six-cylinder), vertical speed indicator, alt meter, compass, tachometer, electric turn co-ordinator, electric fuel gauge, fuel pressure gauge, cylinder head temperature, manifold pressure gauge, oil temperature/pressure gauges, OAT gauge, ammeter, clock and stall warning light.

EQUIPMENT (MX-7, MXT-7, M-7 and M-8, others similar): Includes instrument and dome lights, auxiliary cabin heater, auxiliary fuel pump, auxiliary power plug, heated pitot tube, cabin soundproofing, cloth velour upholstery, cabin steps, cargo tiedowns, landing light in port wing, navigation lights, wingtip strobe lights, tinted windscreen, windscreen defroster, and standard external paint scheme in Maule White base colour with two-tone trim. Optional equipment includes dual-calliper brakes, dynamically balanced propeller, McCauley three-blade constant-speed metal propeller (175 kW, 235 hp models only), wing corrosion proofing, fuselage/tail surfaces/engine mount powder coating, Aviall hour meter, jump seat in baggage compartment, cabin door pockets, Plexiglas door, observation window, skylight, pilot's or co-pilot's swing-out window, shoulder harnesses, landing light in starboard wing, fuselage grab handles, fire extinguisher, float reinforcement, lift rings and fairing, Schweizer glider tow/release kit and aircraft tow bar.

DIMENSIONS, EXTERNAL:
Wing span: short wing models 9.40 m (30 ft 10 in)
mid-length wing models 10.03 m (32 ft 11 in)
long wing models 10.26 m (33 ft 8 in)
Wing chord, constant, all 1.60 m (5 ft 3 in)
Wing aspect ratio: short wing models 6.02
long wing models 6.40
Length overall: piston-engined models 7.16 m (23 ft 6 in)
turboprop models 7.32 m (24 ft 0 in)
Height overall:
tailwheel models 1.93 m (6 ft 4 in)
tricycle models 2.54 m (8 ft 4 in)
floatplane 3.05 m (10 ft 0 in)
amphibian 3.20 m (10 ft 6 in)
Propeller diameter: MX-7-160, MXT-160
1.88 m (6 ft 2 in)
MX-7-180A, MXT-7-180A, MX-7-180B, MXT-7-180
1.93 m (6 ft 4 in)
M-7-235, MT-7-235, MX-7-235, M-8-235
2.06 m (6 ft 9 in)
M-7-235, MT-7-235, MX-7-235 three-blade
option 1 2.03 m (6 ft 8 in)
option 2 2.08 m (6 ft 10 in)
MX-7-420, MXT-7-420, M-7-420 2.03 m (6 ft 8 in)

DIMENSIONS, INTERNAL:
Cabin:
Max width: piston-engined models 1.07 m (3 ft 6 in)
turboprop models 0.96 m (3 ft 2 in)

AREAS:
Wings, gross: short wing models 14.67 m² (157.9 sq ft)
long wing models 16.44 m² (177.0 sq ft)

WEIGHTS AND LOADINGS:
Weight empty: MX-7-160 603 kg (1,330 lb)
MXT-7-160 635 kg (1,400 lb)
MX-7-180A 612 kg (1,350 lb)
MXT-7-180A 644 kg (1,420 lb)
MX-7-180B 619 kg (1,365 lb)
MXT-7-180 517 kg (1,140 lb)
M-7-235B landplane 680 kg (1,500 lb)
M-7-235B floatplane 794 kg (1,750 lb)
MX-7-235 676 kg (1,490 lb)
M-8-235 696 kg (1,535 lb)
MX-7-420 626 kg (1,380 lb)
Max T-O weight: MX-7-160, MXT-7-160
998 kg (2,200 lb)
MX-7-180A, MXT-7-180A 1,089 kg (2,400 lb)
all other landplanes 1,134 kg (2,500 lb)
M-7-235B floatplane 1,247 kg (2,750 lb)
Max wing loading:
MX-7-180B, MX-7-235, MX-7-420
77.30 kg/m² (15.83 lb/sq ft)
M-7-235B 68.96 kg/m² (14.12 lb/sq ft)
M-7-235B floatplane 75.86 kg/m² (15.54 lb/sq ft)
Max power loading:
MX-7-160, MXT-7-160 8.37 kg/kW (13.75 lb/hp)
MX-7-180A, MXT-7-180A 8.12 kg/kW (13.33 lb/hp)
MX-7-180B, MXT-7-180 8.45 kg/kW (13.89 lb/hp)
M-7-235B, MX-7-235, M-8-235
6.47 kg/kW (10.64 lb/hp)
M-7-235B floatplane 7.12 kg/kW (11.70 lb/hp)
MX-7-420 3.62 kg/kW (5.95 lb/shp)

PERFORMANCE (at max T-O weight, ISA):
Max level speed:
M-7-235B floatplane 130 kts (241 km/h; 150 mph)
MX-7-420 174 kts (322 km/h; 200 mph)
Cruising speed (75% power) at optimum altitude:
MXT-7-160 113 kts (209 km/h; 130 mph)
MX-7-160, MXT-7-180A
117 kts (217 km/h; 135 mph)
MXT-7-180, MX-7-180A
120 kts (225 km/h; 139 mph)
MX-7-180 126 kts (233 km/h; 145 mph)
MX-7-235, M-7-235B, M-8-235
139 kts (257 km/h; 160 mph)
M-7-235 floatplane 125 kts (232 km/h; 144 mph)
MX-7-420: 50% power 156 kts (290 km/h; 180 mph)
75% power 169 kts (314 km/h; 195 mph)
Stalling speed, flaps down, power off:
MX-7-160, MXT-7-160, MX-7-180A, MXT-7-180A,
MX-7-180B, MXT-7-180
MX-7-235 35 kts (64 km/h; 40 mph)
M-7-235B, M-8-235 31 kts (57 km/h; 35 mph)
M-7-235B floatplane 47 kts (87 km/h; 54 mph)
MX-7-420 44 kts (81 km/h; 50 mph)
Max rate of climb at S/L:
MX-7-160, MXT-7-160 251 m (825 ft)/min
MX-7-180A, MXT-7-180A 280 m (920 ft)/min
MX-7-180B, MXT-7-180 365 m (1,200 ft)/min
M-7-235B, MT-7-235, MX-7-235, M-8-235
609 m (2,000 ft)/min
M-7-235B floatplane 411 m (1,350 ft)/min
MX-7-420 1,432 m (4,700 ft)/min
Service ceiling:
MX-7-160, MXT-7-160 3,965 m (13,000 ft)
MX-7-180A, MXT-7-180A, MX-7-180B,
MXT-7-180 4,575 m (15,000 ft)
M-7-235B, MT-7-235, MX-7-235, M-8-235,
MX-7-420 6,100 m (20,000 ft)
M-7-235B floatplane 5,180 m (17,000 ft)
T-O run:
MX-7-160, MXT-7-160, MX-7-180B 183 m (600 ft)
MXT-7-180, MX-7-420 61 m (200 ft)
MX-7-180A, MXT-7-180A 168 m (550 ft)
MX-7-235 (O-540 engine) 46 m (150 ft)
MX-7-235 (IO-540 engine), M-7-235B,
M-8-235 38 m (125 ft)
M-7-235B floatplane 305 m (1,000 ft)
T-O to 15 m (50 ft):
MX-7-160, MXT-7-160 360 m (1,180 ft)
MX-7-180A, MXT-7-180A 350 m (1,150 ft)
MX-7-180B, MXT-7-180, M-7-235B,
MX-7-235, M-8-235 183 m (600 ft)
M-7-235B floatplane 381 m (1,250 ft)
Landing from 15 m (50 ft):
all landplane models 152 m (500 ft)
M-7-235B floatplane 305 m (1,000 ft)
Landing run:
MX-7-420 91 m (300 ft)
M-7-235B floatplane 244 m (800 ft)
Range with max fuel, 30 min reserves:
MX-7-160, MXT-7-160
469 n miles (869 km; 540 miles)
MX-7-180A, MXT-7-180A
434 n miles (804 km; 500 miles)
MXT-7-180 825 n miles (1,528 km; 950 miles)
Range with max fuel, no reserves:
MX-7-180 912 n miles (1,689 km; 1,050 miles)
MX-7-235, M-7-235B, M-8-235: O-540 engine
760 n miles (1,408 km; 875 miles)
MX-7-235, M-7-235B, M-8-235:
IO-540 engine 829 n miles (1,537 km; 955 miles)
M-7-235B floatplane: O-540 engine
608 n miles (1,126 km; 700 miles)
IO-540 engine 669 n miles (1,239 km; 770 miles)
MX-7-420: 75% 457 n miles (846 km; 526 miles)
50% power 644 n miles (1,194 km; 742 miles)

Telephone: 1 (314) 232 0232
Fax: 1 (314) 234 3826

Corporate Office

CHAIRMAN AND CEO: John F McDonnell
EXECUTIVE VICE-PRESIDENT: John Capellupo
SENIOR VICE-PRESIDENT, NEW AIRCRAFT AND MISSILE PROGRAMS NAMP: James M Sinnett
SENIOR VICE-PRESIDENT, C-17 PROGRAM: Donald Kozlowski
VICE-PRESIDENT AND GENERAL MANAGER, NAMP: David O Swain

Formed 28 April 1967 by merger of Douglas Aircraft Co Inc and the McDonnell Company, encompasses their subsidiaries plus former Hughes Helicopter Company acquired in 1984 and renamed McDonnell Douglas Helicopter Company; helicopter company was for sale for a time but then incorporated in main company, now as McDonnell Douglas Helicopter Systems. Employees totalled 68,500 worldwide in early 1995, some 18,500 fewer than in 1992.

McDonnell Douglas was largest US defence contractor prior to 1995 formation of Lockheed Martin; early 1990s strategy has been return to profitability; this achieved 1993 and improved in 1994, despite continued fall in airliner sales after reorganising to recover from combined downturn in defence and civil markets. Workforce reduced by 20 per cent and non-core businesses sold. Company is looking for risk-sharing partners for new civil programmes in order to extend its family of airliners and its market share.

Major operating units of McDonnell Douglas Corporation (MDC) Aerospace Group were reorganised in August 1992 and are:

McDonnell Douglas Aerospace (MDA)

Follows this entry

MDA administratively divided into MDA East and MDA West and comprises the government aerospace business of McDonnell Douglas Corporation including the C-17 Globemaster III formerly a Douglas Aircraft programme. MDA W address is 5301 Bolsa Avenue, Huntington Beach, California 92647. *Telephone:* 1 (714) 896 1300 *Fax:* 1 (714) 896 1308

Douglas Aircraft Company (DAC)

Self-contained civil airliner manufacturer. Follows McDonnell Douglas Aerospace entry.

Fax: 1 (314) 234 3826

Development and production continues to concentrate on F/A-18 Hornet, T-45 Goshawk, F-15 Eagle and AV-8B Harrier II. McDonnell teamed with Vought in study of potential replacement for A-12A Advanced Tactical Aircraft, designated A/F-X, which subsequently cancelled. Joined with British Aerospace, February 1992, to study joint advanced STOVL fighter (see International section); currently involved in design of contender for JAST programme (see US Navy entry). V/STOL research centre established at St Louis January 1994. St Louis delivered 10,000th military jet aircraft in February 1993.

1995

MCDONNELL DOUGLAS F-15C/D EAGLE

Israel Defence Force names: F-15A/B Baz (Eagle), F-15C/D Akef (Buzzard)

US production of interceptor F-15A/B/C/D Eagles completed in 1992, but F-15C/D continues (in F-15J/DJ form) in Japan by Mitsubishi (which see). Refer also to production tables with F-15E entry which follows.

USAF proceeding with development of SEAD capability for F-15C using $21 million and $37.4 million appropriations in FY94 and FY95. Demonstration/validation programme to be conducted with F-15 Precision Direction Finder in conjunction with Texas Instruments AGM-88 HARM. If successful, could pave way for suitably adapted Eagles to replace F-4G Phantom in 'Wild Weasel' role from about 1997-98. Consideration also being given to using F-15C in reconnaissance role, following two-flight evaluation of Loral Fairchild ATARS sensor pod system on F-15D, first flight 19 April 1995; however, F-16C remains favoured USAF candidate for this mission.

UPDATED

MCDONNELL DOUGLAS F-15E/I/S EAGLE

Israel Defence Force name: Ra'am (Thunder)

TYPE: Two-seat dual role attack/air superiority fighter.

PROGRAMME: Demonstration of industry funded Strike Eagle prototype (71-0291) modified from F-15B, including accurate blind weapons delivery, completed at Edwards AFB and Eglin AFB during 1982; product improvements for the F-15E were tested on four Eagles, amongst which were the Strike Eagle prototype, an F-15C and an F-15D, between November 1982 and April 1983, including first take-off at 34,019 kg (75,000 lb), 3,175 kg (7,000 lb) more than F-15C with conformal tanks; new weight included conformal tanks, three other external tanks and eight 500 lb Mk 82 bombs; 16 different stores configurations tested, including 2,000 lb Mk 84 bombs, and BDU-38 and CBU-58 weapons delivered visually and by radar.

Full programme go-ahead announced 24 February 1984; first flight of first production F-15E (86-0183) 11 December 1986; first delivery to Luke AFB, Arizona, 12 April 1988; first delivery 29 December 1988 to 4th Wing at Seymour Johnson AFB, North Carolina. Small number of F-15Es used for trials with 3246th Test Wing at Eglin AFB, Florida, and 6510th TW (412th TW from October 1992) at Edwards AFB, California; trials include 87-0180 with GE F110-GE-129 engines in place of F100s. P&W F100-PW-229 first flown in F-15E of 6510th TW on 2 May 1990.

CURRENT VERSIONS: **F-15E**: Basic version, *as detailed*.

F-15F: Proposed single-seat version, optimised for air combat, not built.

F-15H: Proposed export version, lacking specialised air-to-ground capability, supplanted by F-15S.

F-15I: Israeli export version of F-15E, selected November 1993, confirmed 27 January 1994; 21 ordered 12 May 1994 for delivery from 1997 at one per month; option on four more. Tactical electronic warfare system deleted, to be replaced by Israeli built integrated system including active jamming, radar- and missile-warning and dispenser subsystems. Otherwise identical to USAF F-15E, with F100-PW-229 engines, provision for LANTIRN pods, full capability AN/APG-70 radar, Kaiser holographic HUD, Litton ring laser INS and VHSIC central computer.

F-15S: Saudi Arabian export version of F-15E, lacking some air-to-air and air-to-ground capabilities. Saudi Arabian request for 72 aircraft approved by US government in December 1992, initially designated **F-15XP**; first funds assigned by US government on 23 December 1992, contract signature by Saudi government May 1993; planned delivery rate halved early 1994, now to be one per month from 1995. First F-15S flown 19 June 1995, official roll-out 12 September 1995.

Saudi versions comprise 24 optimised for air-to-air missions and 48 optimised for air-to-ground; largely outfitted with F-15C/D systems, AN/APG-70 radar 'de-tuned' to match AN/APG-63 performance, lacking computerised mapping; some ECM deleted. Lockheed Martin Sharpshooter reduced capability version of LANTIRN nav/attack pods; no conformal tanks (or tangential stores carriage). Armament includes AGM-65D/G Maverick, AIM-9M and AIM-9S Sidewinder missiles, CBU-87 submunitions dispenser and GBU-10/12 bombs. Saudi programme includes about 154 Pratt & Whitney F100-PW-229 engines.

F-15U Plus: Version conceived to satisfy United Arab Emirates requirement for 20 to 80 long-range interdictor aircraft, in which it is competing against Lockheed Martin F-16, Dassault Rafale, Eurofighter 2000 and Sukhoi Su-37 (Su-30MK). F-15U Plus proposal anticipates extended range, with additional 2,570 kg (5,665 lb) of fuel in thicker clipped-delta, 50° leading-edge sweep wing, more stores stations and internally situated infra-red navigation and targeting sensor suite in lieu of LANTIRN. Typical ordnance loads would comprise nine 2,000 lb Mk 84 bombs or seven laser guided GBU-24s.

Offer envisages co-development, with UAE funding cost of developing and testing any new components; alternative proposal envisages delivery to UAE of standard F-15E Strike Eagle under FMS, either option dependent upon US government policy, which still to be established.

CUSTOMERS: USAF funding for originally planned 392 reduced to 200; however, further nine funded in FY91 and FY92, comprising three Desert Storm loss replacements and six with proceeds of sale to Saudi Arabia of 24 surplus F-15C/Ds. Saudi Arabia 72 (F-15Ss), Israel 21 (F-15I). USAF offered follow-on procurement from 1995 to coincide with start of Saudi deliveries.

USAF F-15E PROCUREMENT

Batch	FY	Qty	First aircraft
Lot 1	86	8	86-0183
Lot 2	87	42	87-0169
Lot 3	88	42	88-1667
Lot 4	89	36	89-0471
Lot 5	90	36	90-0227
Lot 6	91	36	91-0300
Lot 7	91	6	91-0600
Lot 8	92	3	92-0364
		—	
Total		**209**	

Initial USAF unit 4th Wing, declared operational October 1989, currently with 333, 334, 335 and 336 Squadrons and others with 57th Wing USAF Weapons School at Nellis AFB, Nevada. 90th FS of 3rd Wing at Elmendorf, Alaska, received first F-15E on 29 May 1991. 391st FS sole F-15E squadron in multitype 366th Wing at Mountain Home AFB, Idaho, received first aircraft (reallocated from early production) 6 November 1991. 492nd and 494th FS of 48th FW at Lakenheath, UK, received first aircraft on 21

February 1992 (46th arrival at Lakenheath, 16 June 1993, was 200th F-15E, 91-0335). Deliveries of Lot 7 began to 48th FW on 13 April 1994 and final USAF F-15E (92-0366) delivered to 57th Wing on 11 July 1994. Initial contract placed with McDonnell Douglas by US government on 18 December 1992 for 72 Saudi aircraft, project name, Peace Sun IX.

COSTS: $35 million, flyaway, $2.000 million for 21 F-15Is (1993), Israel.

DESIGN FEATURES: NACA 64A aerofoil section with conical camber on leading-edge; sweepback 38° 42′ at quarter-chord, thickness/chord ratio 6.6 per cent at root, 3 per cent at tip; anhedral 1°, incidence 0°. Twin fins positioned to receive vortex flow off wing and maintain directional stability at high angles of attack. Straight two-dimensional external compression engine air inlet each side of fuselage. Air inlet controllers by Hamilton Standard. Air inlet actuators by National Water Lift. Mission includes approach and attack at night and in all weather; main systems include new high resolution, synthetic aperture Hughes AN/APG-70 radar, wide field of view FLIR, Lockheed Martin LANTIRN navigation (AN/AAQ-13) and targeting (AN/AAQ-14) pods beneath starboard and port air intakes respectively; air-to-air capacity with AIM-7 Sparrow, AIM-9 Sidewinder and AIM-120 AMRAAM retained, rear cockpit has four multipurpose CRT displays for radar, weapon selection, and monitoring enemy tracking systems, front cockpit modifications include redesigned up-front controls, wide field of view HUD, colour CRT multifunction displays for navigation, weapon delivery, moving map, precision radar mapping and terrain-following. Engines have digital electronic control, engine trimming and monitoring, fuel tanks are foam-filled, more powerful generators, better environmental control.

FLYING CONTROLS: Plain ailerons and all moving tailplane with dog-tooth extensions, both powered by National Water Lift hydraulic actuators, rudders have Ronson Hydraulic Units actuators; no spoilers or trim tabs; Moog boost and pitch compensator for control column, plain flaps, upward-opening airbrake panel in upper fuselage between fins and cockpit. Digital triple-redundant Lear Astronics flight control system capable of automatic coupled terrain-following.

STRUCTURE: Wing based on torque box with integrally machined skins and ribs of light alloy and titanium; aluminium honeycomb wingtips, flaps and ailerons, airbrake panel of titanium, aluminium honeycomb and graphite/epoxy composites skin. Strike version of Eagle includes 60 per cent of normal F-15 structure redesigned to allow 9 g and 16,000 hours fatigue life; superplastic forming/diffusion bonding used for upper rear fuselage, rear fuselage keel, main landing gear doors, and some fuselage fairings, plus engine bay structure. New wing design that would provide 33 per cent range increase and give double the number of weapons stations of existing F-15E revealed in 1994. This could be incorporated in future production aircraft (including proposed United Arab Emirates F-15U) or installed on existing F-15s as retrofit programme.

LANDING GEAR: Hydraulically retractable tricycle type, with single wheel on each unit. All units retract forward. Cleveland nose and main units, each incorporating an oleo-pneumatic shock-absorber. Bendix wheels and Michelin AIR X radial tyres on all units. Nosewheel tyre size 22 × 7.75-9, mainwheel tyres size 36 × 11-18, tyre pressure 21.03 bars (305 lb/sq in) on all units. Bendix five-rotor carbon disc brakes.

POWER PLANT: Initially, two Pratt & Whitney F100-PW-220 turbofans, each rated for take-off at 104.3 kN (23,450 lb st), installed, with afterburning. Later aircraft have option of Pratt & Whitney F100-PW-229s or 129.0 kW (29,000 lb st) General Electric F110-GE-129s. USAF aircraft 135 onwards (90-0233), built from August 1991, have 129.4 kN (29,100 lb st) Pratt & Whitney F100-PW-229s, which also ordered for Saudi F-15S. Internal fuel in foam filled structural wing tanks and six Goodyear fuselage tanks, total capacity 7,643 litres (2,019 US gallons; 1,681 Imp gallons). Simmonds fuel gauge system. Optional conformal fuel tanks (CFT) attached to side of engine air intakes, beneath wing, each containing 2,737 litres (723 US gallons; 602 Imp gallons). Provision for up to three additional 2,309 litre (610 US gallon, 508 Imp gallon) external fuel tanks. Maximum total internal and external fuel capacity 20,044 litres (5,295 US gallons, 4,409 Imp gallons).

ACCOMMODATION: Two crew, pilot and weapon systems officer, in tandem on McDonnell Douglas ACES II zero/zero ejection seats. Single-piece, upward-hinged, bird-resistant canopy.

SYSTEMS: Lucas Aerospace generating system for electrical power, with Sundstrand 60/75/90 kVA constant speed drive units. Litton molecular sieve oxygen generating system (MSOGS) introduced in 1991 to replace liquid oxygen system. AiResearch air conditioning system. Three independent hydraulic systems (each 207 bars, 3,000 lb/sq in) powered by Abex engine-driven pumps; modular hydraulic packages by Hydraulic Research and Manufacturing Company. AlliedSignal APU for engine starting, and for provision of limited electrical or hydraulic power on the ground independently of main engines.

AVIONICS: *Comms*: Magnavox AN/ARC-164 UHF transceiver and UHF auxiliary transceiver with cryptographic capability; Teledyne Electronics AN/APX-101 IFF transponder, Hazeltine AN/APX-76 IFF interrogator with Litton reply evaluator.

Radar: Hughes Aircraft AN/APG-70 I band pulse Doppler radar provides air-to-air capability equal to F-15C, plus high-resolution synthetic aperture mode for air-to-ground.

Flight: Triple redundant Lear Astronics digital flight control system with automatic terrain-following standard. IBM CP-1075C very high-speed integrated circuit (VHSIC) central computer introduced in 1992 (replacing CP-1075). Honeywell AN/ASK-6 air data computer, Honeywell AN/ASN-108 AHRS, Honeywell CN-1655A/ASN ring laser gyro INS providing basic navigation data and serving as primary attitude reference system, Collins AN/ARN-118 Tacan, Collins HSI presenting aircraft navigation information on a symbolic pictorial display, Collins AN/ARN-112 ILS receiver, Collins ADF receiver. Dorne & Margolin glide slope localiser antenna and Teledyne Avionics angle of attack sensors. Collins miniature airborne GPS receiver for installation from 1995.

Instrumentation: FLIR imagery displayed on Kaiser IR 2394/A wide field of view HUD; Honeywell vertical situation display set using CRT to present radar, electro-optical identification and attitude director indicator formats to pilot under all light conditions, moving map display by Bendix/King RP-341/A remote map reader. Honeywell digital map system intended to replace remote map reader from 1996.

Mission: Lockheed Martin LANTIRN externally mounted sensor package comprising AN/AAQ-13 navigation pod and AN/AAQ-14 targeting pod.

Self-defence: Northrop Grumman Enhanced AN/ALQ-135(V) internal countermeasures set provides automatic jamming of enemy radar signals, Loral AN/ALR-56C RWR, Magnavox AN/ALQ-128 EW warning set, Tracor AN/ALE-45 chaff dispenser.

ARMAMENT: 20 mm M61A1 six-barrel gun in starboard wing root, with 512 rounds. General Electric lead computing gyro. Provision on underwing (one per wing) and centreline pylons for air-to-air and air-to-ground weapons and external fuel tanks. Wing pylons use standard rail and launchers for AIM-9 Sidewinder and AIM-120 AMRAAM air-to-air missiles, AIM-7 Sparrow and AIM-120 AMRAAM can be carried on ejection launchers on the fuselage or on tangential stores carriers on CFTs. Maximum aircraft load (with or without CFTs) is four each AIM-7 or AIM-9, or up to eight AIM-120. Single or triple rail launchers for AGM-65 Maverick air-to-ground missiles can be fitted to wing stations only.

Tangential carriage on CFTs provides for up to six bomb racks on each tank, with provision for multiple ejector racks on wing and centreline stations. Edo BRU-46/A and BRU-47/A adaptors throughout, plus two LAU-106A/As

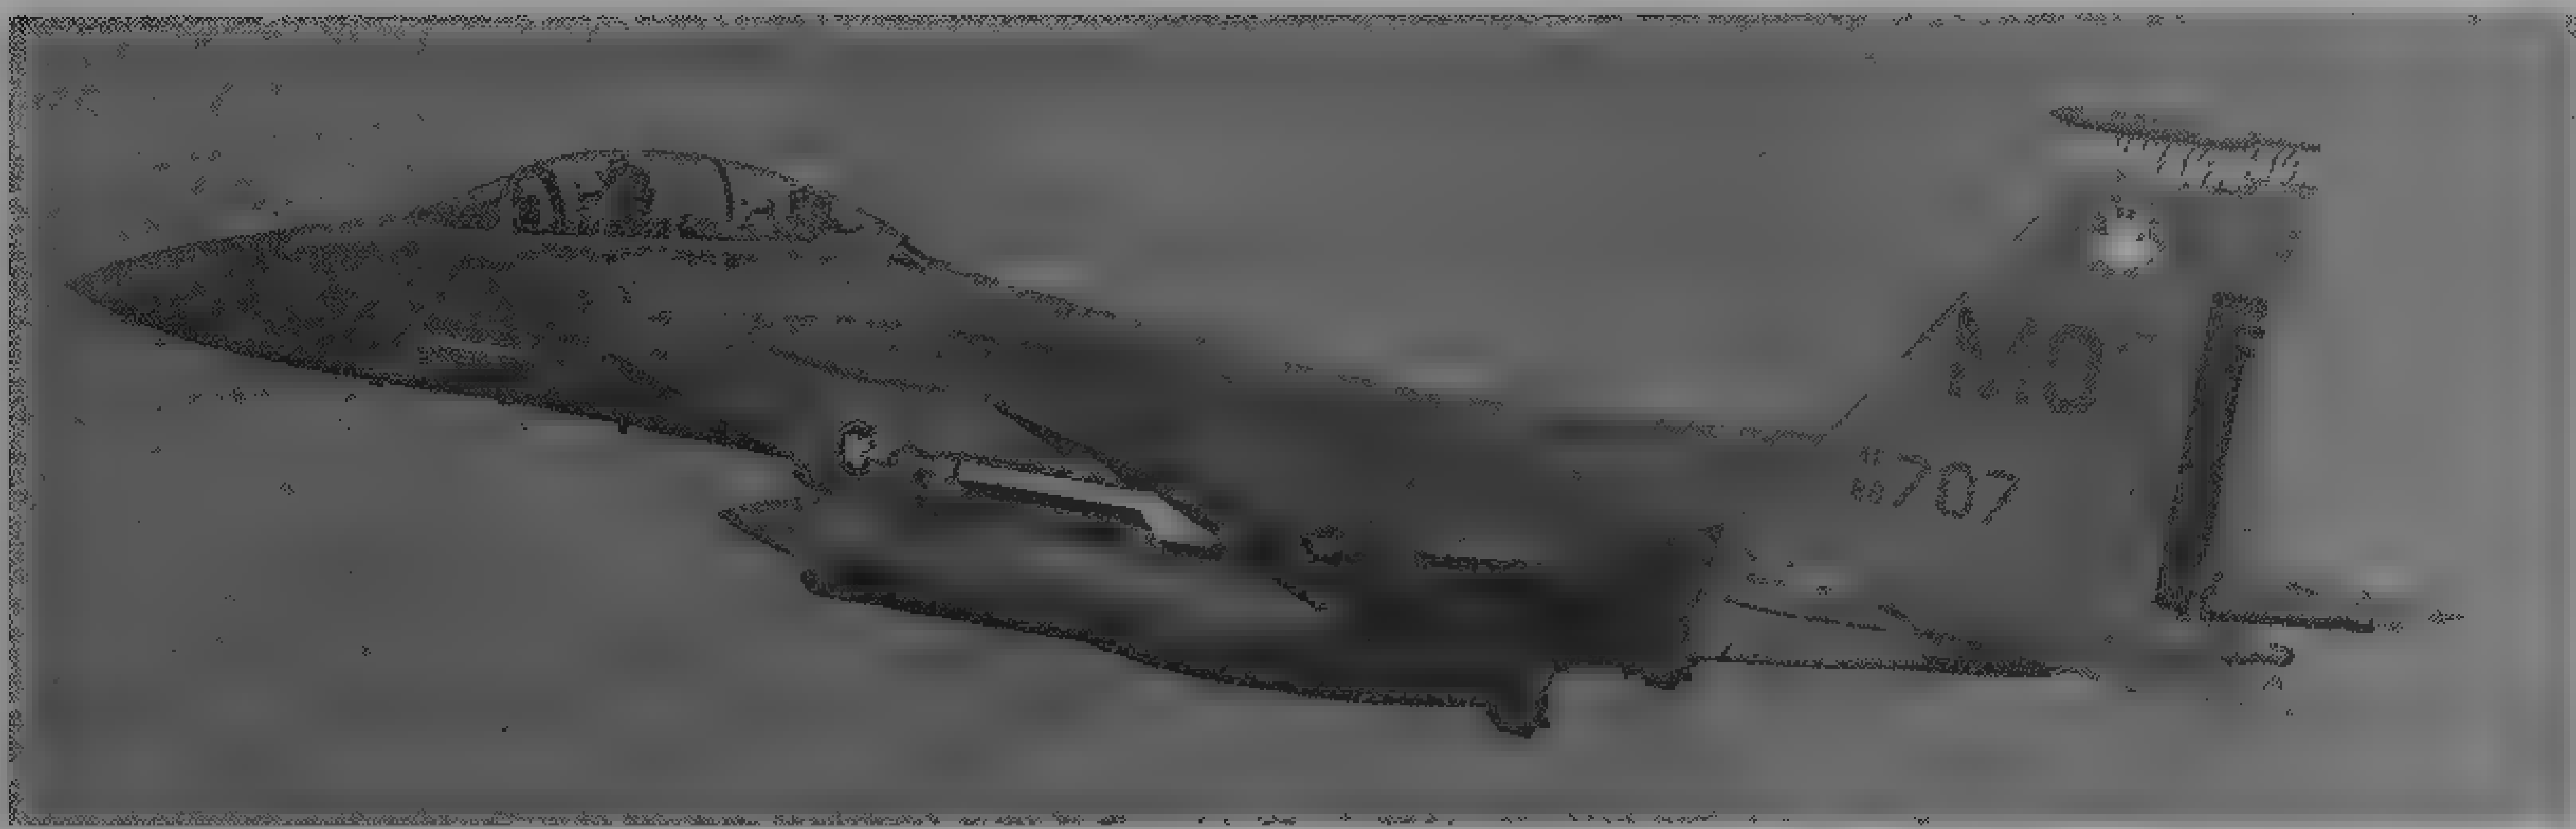
[3]Production continues in Japan (see Mitsubishi)

UPDATED



McDonnell Douglas F-15E Eagle of composite 366th Wing which also includes B-1Bs, F-16Cs, F-15Cs and KC-135R tankers

1995

each side of lower fuselage. F-15E can carry a wide variety and quantity of guided and unguided air-to-ground weapons, including Mk 20 Rockeye (26), Mk 82 (26), Mk 84 (seven), BSU-49 (26), BSU-50 (seven), GBU-10 (seven), GBU-12 (15), GBU-15 (two), GBU 24 (five), CBU 52 (25), CBU-58 (25), CBU-71 (25), CBU-87 (25) or CBU-89 (25) bombs; SUU-20 training weapons (three), A/A-37 U-33 tow target (one), and B57 and B61 series nuclear weapons (five). An AN/AXQ-14 datalink pod is used in conjunction with the GBU-15, LANTIRN pod illumination is used to designate targets for laser-guided bombs. AGM-130 powered standoff bomb integrated in 1993. AGM-88 HARM capability in 1996. AN/AWG-27 armament control system

DIMENSIONS, EXTERNAL:

Wing span	13.05 m (42 ft 9¾ in)
Wing aspect ratio	3.01
Length overall	19.43 m (63 ft 9 in)
Height overall	5.63 m (18 ft 5½ in)
Tailplane span	8.61 m (28 ft 3 in)
Wheel track	2.75 m (9 ft 0¼ in)
Wheelbase	5.42 m (17 ft 9½ in)

AREAS:

Wings, gross	56.5 m² (608.0 sq ft)
Ailerons (total)	2.46 m² (26.48 sq ft)
Flaps (total)	3.33 m² (35.84 sq ft)
Fins (total)	9.78 m² (105.28 sq ft)
Rudders (total)	1.85 m² (19.94 sq ft)
Tailplanes (total)	10.34 m² (111.36 sq ft)

WEIGHTS AND LOADINGS (F100-PW-220 engines):

Operating weight empty (no fuel, ammunition, pylons or external stores)	14,515 kg (32,000 lb)
Max weapon load	11,113 kg (24,500 lb)
Max fuel weight: internal (JP4)	5,952 kg (13,123 lb)
CFTs (two, total)	4,265 kg (9,402 lb)
external tanks (three, total)	5,396 kg (11,895 lb)
max internal and external	15,613 kg (34,420 lb)
Max T-O weight	36,741 kg (81,000 lb)
Max zero-fuel weight	28,440 kg (62,700 lb)
Max landing weight: unrestricted	20,094 kg (44,300 lb)
at reduced sink rates	36,741 kg (81,000 lb)
Max wing loading	650.5 kg/m² (133.2 lb/sq ft)
Max power loading	176.13 kg/kN (1.73 lb/lb st)

PERFORMANCE:

Max level speed at height	Mach 2.5
Max combat radius	685 n miles (1,270 km, 790 miles)
Max range	2,400 n miles (4,445 km, 2,762 miles)

UPDATED

MCDONNELL DOUGLAS F-15S/MTD

TYPE: One-off F-15 STOL/manoeuvring technology demonstrator for USAF.

PROGRAMME: Ordered October 1984, first prototype F-15B (71-0290) modified, first flight 7 September 1988; first flight with two-dimensional vectoring nozzles 10 May 1989; reverse thrust applied in flight 22 March 1990; demonstrated deceleration from Mach 1.6 to Mach 0.7. From May 1991 participated in USAF/MDC integrated controls and avionics for air superiority (ICAAS) programme. Completed assigned programme 12 August 1991 (138th sortie) by demonstrating autonomous night landing capability. Stored for 22 months, reflown June 1993 at St Louis to NASA/Dryden for baseline performance assessment with conventional nozzles, fitted in November 1993 with F100-PW-229 engines for further calibration until April 1994; then fitted with pitch and yaw vectoring nozzles designed by Pratt & Whitney for ACTIVE (Advanced Control Technology for Integrated VEhicles) flight test programme, beginning September 1994; intention is to prove effectiveness of vectoring nozzles sufficiently to reduce area of both F-15's vertical fins by 50 per cent. Additional data in 1991-92 *Jane's*.

VERIFIED

MCDONNELL DOUGLAS F/A-18 HORNET

US Navy/Marine Corps designations: F/A-18A, B, C, D
Royal Australian Air Force designations: AF-18A and ATF-18A
Canadian Forces designations: CF-188A/B
Spanish Air Force designations: C.15 and CE.15

TYPE: Carrierborne and land-based attack/fighter.

PROGRAMME: US Navy study of VFAX low cost, lightweight multimission fighter accepted Spring 1974. VFAX study terminated August 1974 and replaced by derivative of either General Dynamics YF-16 or Northrop YF-17 lightweight fighter prototypes. McDonnell Douglas proposed F-17 derivative with Northrop as associate, resultant Navy Air Combat Fighter called Hornet accepted in two versions, F-18 fighter and A-18 attack aircraft; single F/A-18 selected to fill both roles. McDonnell Douglas prime contractor and Northrop principal subcontractor for all versions agreed 1985; first Hornet flight (160775) 18 November 1978, 11 development aircraft flying by March 1980; delivery of F/A-18A/B (TF-18A designation dropped) to US Navy and Marines began May 1980 and completed 1987, millionth flying hour achieved 10 April 1990 two millionth on 17 September 1993.

Enhancements to Hughes AN/APG-65 radar funded ($65.7 million) May 1990, new signal and data processors, upgraded receiver/exciter. Resultant AN/APG-73 received $257 million funding in June 1991 for initial production of 12 in FY92, first flight in trials Hornet at St Louis on 15 April 1992, installed in production F/A-18s from 1994 (first two F/A-18Cs with this radar delivered to VFA-146 and 147 at NAS Lemoore, California, on 25 and 26 May 1994).

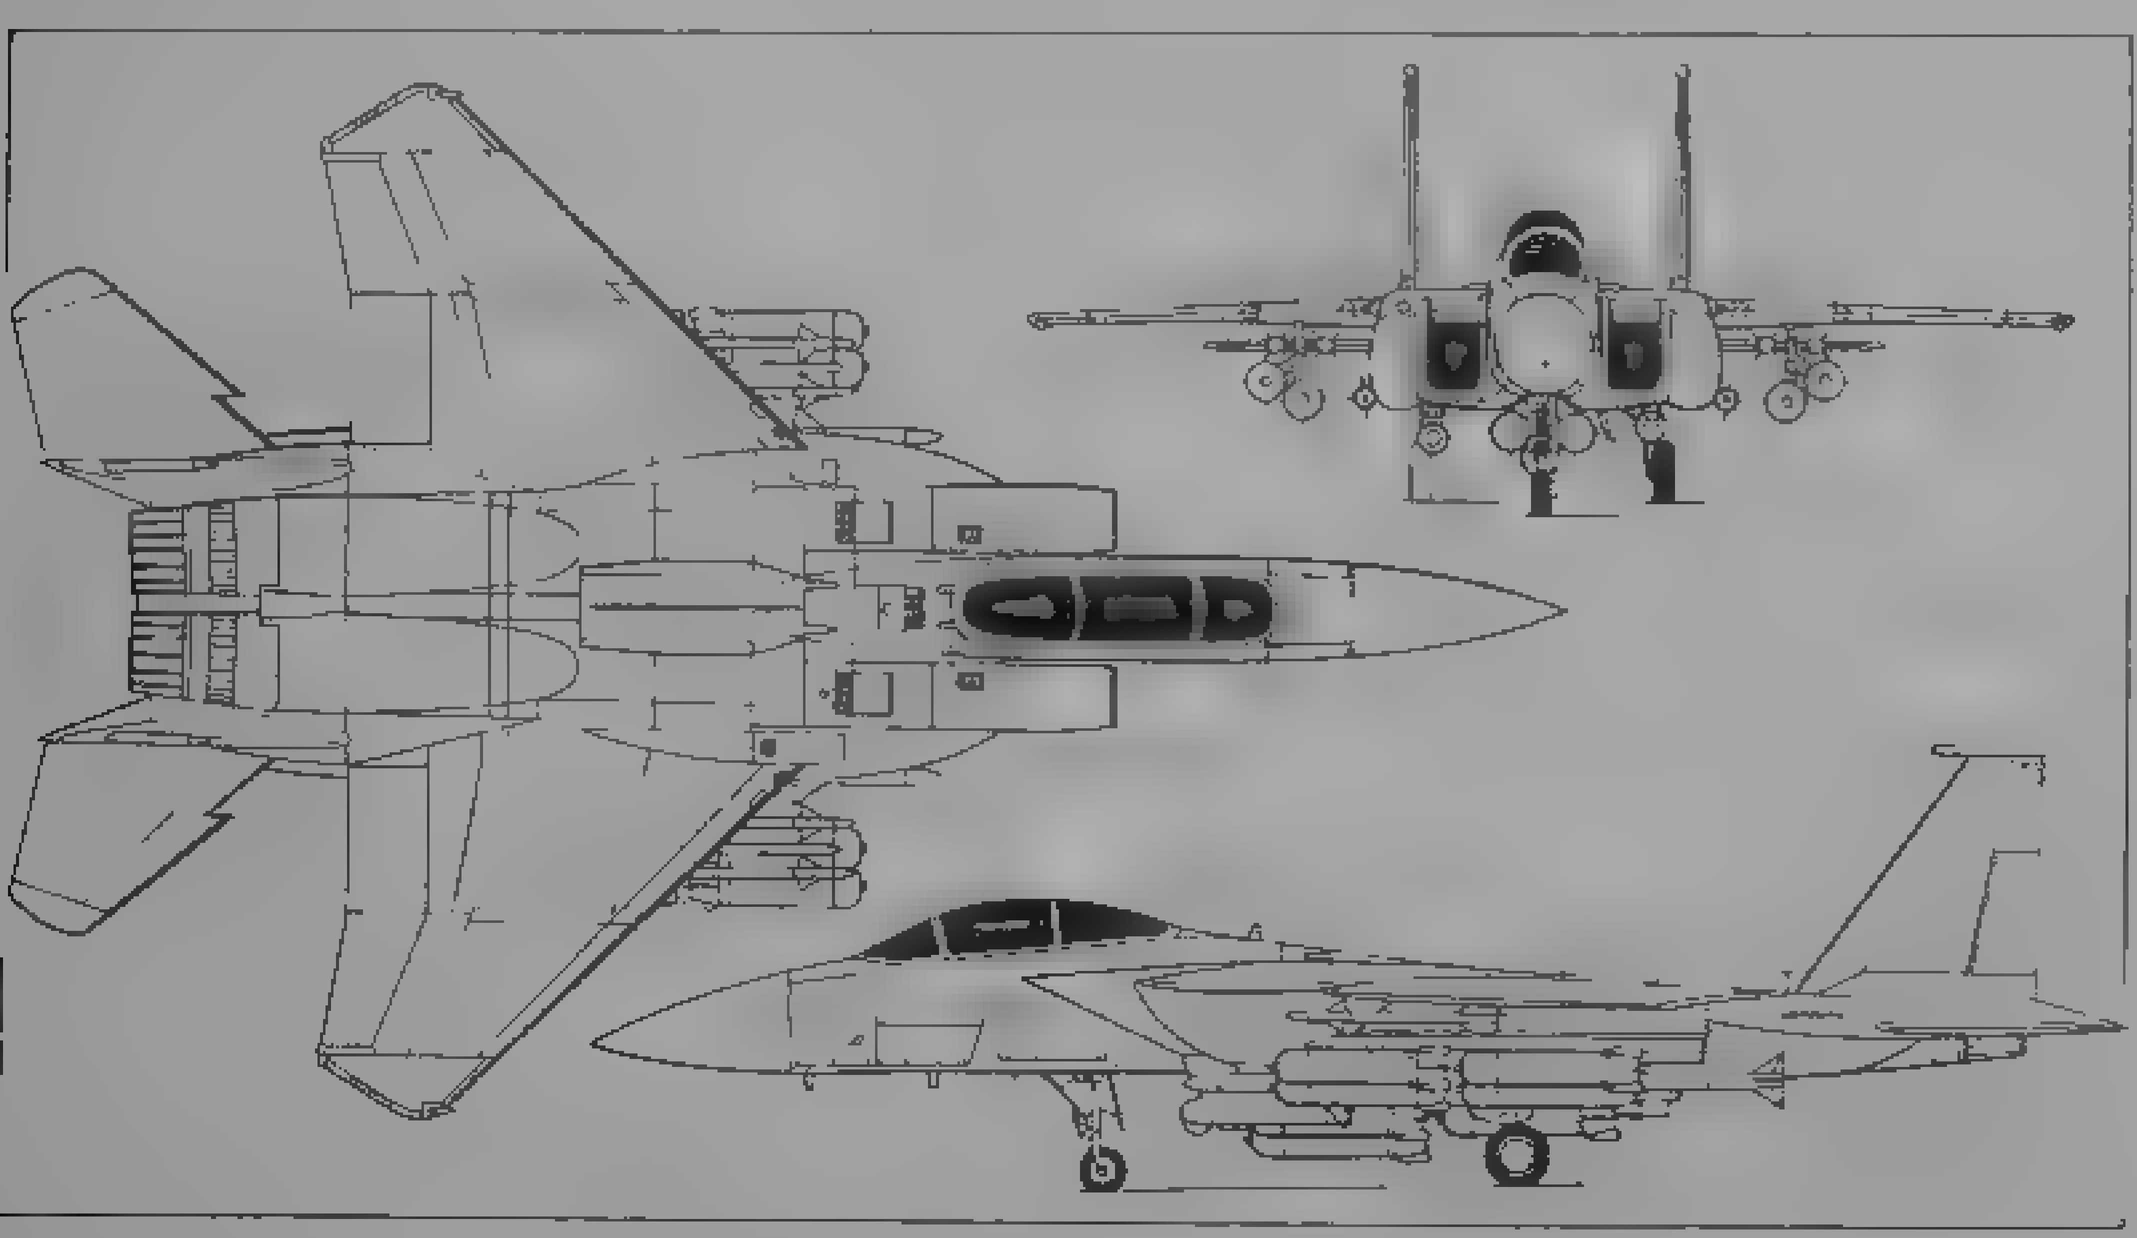
CURRENT VERSIONS: **F/A-18A**: Single-seater. Total of 371 F/A-18As and 39 two-seat F/A-18Bs (plus 11 prototypes, including two tandem-seat trainers) for USN and USMC as escort fighters to replace F-4s and as attack aircraft replacing A-7s under FY79 to FY85 contracts, first training squadron (VFA-125) formed at NAS Lemoore, California, November 1980; in service 7 January 1983 with Marine Fighter/Attack Squadron VMFA-314 at MCAS El Toro, California, first Navy squadron, VFA-113 of Pacific Fleet, October 1983, first Atlantic Fleet squadrons formed NAS Cecil Field, Florida, 1 February 1985, same month VFA-113 and VFA-25 embarked in USS *Constellation*.

US Navy and Marines squadrons with F/A-18A/Bs are tabulated. Electronic warfare training F/A-18A/Bs used AN/ALQ-167 jamming, AN/ALE-4 chaff and AN/AST-4/6 threat simulator pods. 'Aggressor' training aircraft of VFA-127 wear desert camouflage and Cuban/Iraqi/Libyan insignia. First combat experience by VFA-131, 132, VMFA-314 and 323 from USS *Coral Sea* attacking Libyan targets 1986.

F/A-18B: Combat capable two-seater, originally designated TF-18A, internal fuel capacity reduced by 6 per cent, production figures and US operating squadrons, see table and F/A-18A.

F/A-18C and F/A-18D: Single- and two-seat versions respectively. Purchased from FY86 onwards, 137 F/A-18Cs and 31 F/A-18Ds bought under FY86 and FY87 procurements are baseline non-night attack models; overall total of 558 F/A-18C/Ds (including Night Attack – see below) funded between FY86 and FY94 (batches of 84, 84, 84, 84, 66, 48, 36, 36 and 36), further 24 in FY95 and 12 in FY96 for completion of first-generation Hornet production, first flight of production F/A-18C (163427) 3 September 1987. *Main description applies to F/A-18C except where indicated.*

Modifications include provision for up to six AIM-120 AMRAAM missiles (two on fuselage and two on each outboard pylon), up to four imaging IR Maverick missiles (one on each wing pylon), provision for reconnaissance equipment, upgraded stores management set with 128 kbits memory, Intel 8086 processor, MIL-STD-1553B armament multiplex bus with MIL-STD-1760 weapons interface capability, flight incident recorder and monitoring set (FIRAMS) with integrated fuel/engine indicator, data storage set for recording maintenance and flight incidents data, signal data processor interfacing with fuel system to provide overall system control, enhanced built-in test capability and automatic CG adjustment as fuel is consumed, maintenance status panel isolating faults to card level; and new faster XN-6 mission computer with twice memory of previous XN-5, upgraded to XN-8 from FY91. Small rectangular fence retrofitted to US Navy aircraft above LEX strake just ahead of wing leading-edge broadens LEX vortexes, reduces fatigue and improves directional control at angles of attack higher than 45°. AIM-120A AMRAAM cleared for use by Hornet from September 1993, initially on aircraft of VFA-22, VFA-94 and VMFA-314 in Arabian Gulf.



McDonnell Douglas F-15E Eagle equipped for high ordnance payload air-to-ground mission *(Jane's/Dennis Punnett)*

1987

F/A-18D Night Attack Hornet of Marine Corps squadron VMFA(AW)-242 'Batmen' firing rockets
1994

F/A-18C/D Night Attack. First flight of prototype 6 May 1988, one Night Attack F/A-18C (163985) and one D (163986) delivered to Naval Air Test Center, Patuxent River, on 1 and 14 November 1989 respectively, all F/A-18Cs and Ds delivered subsequently (FY88 procurement) have all-weather night attack avionics. Hughes AN/APG-73 radar (first F/A-18 flight test 15 April 1992) standard from May 1994, initially on aircraft of VFA-146 and VFA-147. US Navy squadrons equipped with F/A-18C Night Attack, US Marine Corps 'VMFA-' squadrons also F/A 18C Night Attack, Marines 'VMFA(AW)-' squadrons with F/A-18D Night Attack, deliveries of night capable C versions to VMFA-312 began 5 August 1991, night-capable Ds to VMFA(AW)-121 from April 1990; third Night D squadron, VMFA(AW)-225, equipped from 1 July 1991, but later to adopt reconnaissance role. Marine Corps has replaced six squadrons of Grumman A-6Es, McDonnell Douglas OA-4s and RF-4Bs in attack, reconnaissance and forward air controller roles, with 96 Hornets, of which first 48 authorised in 1990; remainder in F/A 18D (RC) configuration (see below). Navy squadrons unchanged with two-seaters used as trainers only. 1,000th Hornet was F/A-18D 164237, delivered to VMFA (AW)-242 on 22 April 1991. USN/USMC operating squadron status in table.

Night Attack system includes GEC Cat's Eyes pilot's night vision goggles, Hughes AN/AAR-50 thermal imaging navigation set (TINS) presenting forward view in Kaiser AN/AVQ-28 raster HUD, colour multifunction displays and Smiths colour digital moving map, external sensor pods comprise Loral AN/AAS-38 NITE Hawk targeting FLIR and TINS. NITE Hawk added laser target designator/ranger subsystem from January 1993, initially for squadrons VFA 146 and -147, operating in Arabian Gulf. USMC version of F/A-18D has mission-capable rear cockpit with no control column, but two sidestick weapons controllers and two Kaiser 12.7 cm (5 in) colour MFDs in addition to Smiths Srs 2100 colour map display, may be converted to dual control, with stick and throttles, for pilot training.

F/A-18D(RC). Simple reconnaissance version, launched 1982 and first flown 1984, included a twin-sensor package replacing gun in nose; was to be fitted with Martin Marietta Advanced Tactical Airborne Reconnaissance System (ATARS) centreline pod, first sensor-capable aircraft delivered to El Toro, February 1992, ATARS development cancelled June 1993. As replacement, 31 F/A-18Ds of Marine Corps to receive partial ATARS fit, comprising electro-optical overflight sensors, long-range optical sensor and modified version of Hughes AN/APG-73 radar capable of producing high-resolution strip maps.

F/A-18E/F. Described separately.

AF-18A and ATF-18A. Royal Australian Air Force versions, decision to purchase 75 announced 20 October 1981, deliveries started 17 May 1985; first flight of ATF 18A assembled by AeroSpace Technologies of Australia (ASTA), 26 February 1985, first flight of Australian manufactured aircraft (ATF 18A, A21-104) 3 June 1985, last of 57 single-seat and 18 two-seat Hornets delivered 16 May 1990; Hornet replaced Dassault Mirage IIIO; units are No. 2 OCU, Williamtown, No. 3 Squadron (formed August 1986) and No. 77 Squadron at same base, and No. 75 Squadron, Tindal. Weapons include AIM-7M, AIM 9M, AGM 88 HARM, AGM-84 Harpoon, GBU-10/GBU-12/Paveway II LGBs, Mk 82 bombs and 70 mm rockets. From 1990, remaining 74 aircraft being fitted with F/A-18C/D type avionics and (from 1991) provision for Loral AN/AAS 38 IR tracking and laser designating pod.

CF-18A and B. Canada's purchase of 138 Hornets (finalised as 98 CF-18As and 40 two-seat CF-18Bs, known respectively as **CF-188A** and **CF-188B**) announced 10 April 1980; first flight of CF 18 29 July 1982; deliveries between 25 October 1982 and September 1988; CF units were No. 410 OCU and Nos. 416 and 441 Squadrons at CFB Cold Lake, Alberta, 425 and 433 at Bagotville, Quebec, and 439 and 421 Squadrons of No. 4 Fighter Wing/No. 1 Air Division at Baden Sollingen, Germany; last aircraft left Europe 26 January 1993. Currently active with Nos. 425 and 433 Squadrons at Bagotville and Nos. 411 (OCU), 416 and 441 at Cold Lake; defence reductions expected to reduce this to four, with up to a quarter of CF-18 fleet being placed in store. Differences from US Navy F/A-18A/B include ILS, in-flight identification spotlight in port side of fuselage, and provision for LAU-5003 19-tube pods for CRV 7 70 mm (2.75 in) high-velocity submunition rockets; other weapons are AIM 7M and AIM 9L air-to-air missiles, 500 lb Mk 82 bombs and Hunting BL755 CBUs. Pilot has comprehensive cold weather land survival kit. Upgrade planned for late 1990s.

EF-18A and B. Spanish versions, purchase of 60 single-seat Hornets and 12 two-seaters, known respectively as **C 15** and **CE 15**, under Futuro Avion de Combate y Ataque programme announced 30 May 1983; financial restrictions reduced number from 84 and deliveries then stretched from 36, 24 and 12 during 1986 to 1988 to 1., 26, 15, 12 and eight during 1986 to 1990; maintenance performed in Spain by CASA, which also works on USN Hornets with 6th Fleet in Mediterranean. First flight Spanish Hornet 4 December 1985, deliveries began 10 July 1986, all 12 trainers delivered by early 1987; armament includes AIM-7F and AIM-9L air-to-air missiles, AGM 84 Harpoon, AGM-88 HARM and free-fall bombs; AIM-120 AMRAAM ordered 1990. First 36 aircraft have Sanders AN/ALQ-126B deception jammers ordered in 1987, final 36 received Northrop Grumman AN/ALQ-162(V) systems.

Units equipped are Ala de Caza 15 (15th Fighter Wing) formed at Zaragoza December 1985 and operational December 1987, with 30 A and six B shared between Escuadrones 151 and 152, Ala de Caza 12 at Torrejon (Escuadrones 121 and 122) completed re-equipping in July 1990. One attrition replacement required. Agreement in 1992 to upgrade Spanish aircraft to **F-18A+/B+** standard close to F/A-18C/D, of 71 available, 46 to be converted by McDonnell Douglas between September 1992 and March 1994, final 25 by CASA by 1995. Engineering Change

Notes: Begins F/A-18C production
[2]Begins F/A 18D production
Begins F/A 18C Night Attack production
[4]Begins F/A 18D Night Attack production
[5]Nine prototypes, 371 As, 137 Cs and 224 C Nights
[6]Two prototypes, 39 Bs, 31 Ds and 94 D Nights

Proposal 287 includes later mission and armament computers, databuses, data-storage set, new wiring, pylon modifications and software

Spain decided in January 1995 to obtain 24 former USN F/A-18A Hornets, with six more on option. Aircraft will be subjected to update before delivery and will have late standard F404 engines plus other Spanish-specified modifications

CUSTOMERS: See table of production. Total 1,263 Hornets delivered by 21 April 1994, of which 938 to US forces, USN proposed procurement of 1,156 production Hornets first generation models total 1,015 including prototypes, with follow-on F/A-18E/F versions set to raise procurement to in excess of 2,000 for USN/MC by year 2015

In addition to US Navy/Marine Corps, Australia, Canada and Spain (see Current Versions), Switzerland selected 26 F/A-18Cs and eight F/A-18Ds powered by GE F404-GE-402 engines and with AN/APG-73 radar and night vision systems in October 1988, as its Neue Jagdflugzeug to replace front line F-5Es, purchase ratified by parliament 12 June 1992, confirmed by referendum 6 June 1993, deliveries planned from February 1996, with NITE Hawk FLIR pods

Kuwait contract signed September 1988 for 32 F/A-18Cs and eight F/A-18Ds together with AGM-65G Maverick, AGM-84 Harpoon, AIM-7F Sparrow and AIM-9L Sidewinder, first flight 19 September 1991, first three delivered to No. 25 Squadron 25 January 1992, 20 more before year end, final delivery to No. 9 Squadron 23 August 1993, but additional small purchases planned F404-GE-402 power plants

Finland selected seven F/A-18Ds (built by McAir) and 57 F/A-18Cs (for assembly from kits by Valmet), announcement 6 May 1992; letter of offer signed 5 June 1992, 402 engines and AN/APG-73 radar; initial procurement of four aircraft in 1993 first US built aircraft (F-18D HN-461) flown 21 April 1995 prior to formal roll-out on 7 June 1995; initial four F-18Ds for delivery in November 1995 Valmet production begins September 1995 for first delivery 12 months later

Malaysia confirmed order for eight USMC-standard F/A-18Ds (AN/APG-73 radar and -402 engines) 29 June 1993, FMS contract placed with manufacturer 7 April 1994, four to be delivered in January 1997, remainder four months later Malaysia later requested price/availability data for additional 10 or 16 F/A-18Ds for delivery in 1997-98, decision expected by Summer 1995. Singapore also interested began Hornet evaluation at NWC China Lake, 7 February 1994, eventually purchased more F-16s

Canadian No 441 Squadron CF-18A 188781 wearing 'Invasion Stripes' for 50th anniversary of D-Day *(Paul Jackson)*

Disbanded units are VFA-132 on 1 June 1992; VFA-303 and VFA-305 both October 1994; VMFA-333 and VMFA-531 both 31 March 1992; VAQ-34 on 1 October 1993, VX-4 and VX-5 both September 1994 (replaced by VX-9). All F/A-18A operators, except VX-4 and VX-5 which used several versions. VF-21 and VA-115 to convert from F-14 and A-6 respectively and will be redesignated as VFA-21/115 following transition to F/A-18. USMC squadrons at El Toro to relocate to Miramar

COSTS: $25 million, flyaway unit cost, 1991. $55.632 million (1991) US programme, 1,167 aircraft

DESIGN FEATURES: Sharp-edged, cambered leading-edge extensions (LEX), slots at fuselage junction and outward canted twin fins are designed to produce high agility and docile performance at angles of attack over 50°, wings have 20° sweepback at quarter-chord and fold up 90° at inboard end of ailerons, even on land-based F/A-18s, landing gear designed for unflared landings on runways as well as on carriers

FLYING CONTROLS: Full digital fly-by-wire controls using ailerons and tailerons for lateral control, plus flaps in flaperon form at low airspeeds, leading- and trailing-edge flaps scheduled automatically for high manoeuvrability, fast cruise and slow approach speed, both rudders turned in at take-off and landing to provide extra nose-up [illegible] fly-by-wire returns towards 1 g flight if pilot releases controls, lateral and then directional control progressively washed out as angle of attack reaches extreme values height, heading and airspeed holds provided in fly-by-wire system, US Navy aircraft can land automatically using carrier-based guidance system, airbrake panel located on top of fuselage, between fins. Bertea hydraulic actuators for trailing-edge flaps, Hydraulic Research actuators for ailerons, National Water Lift actuators for tailerons

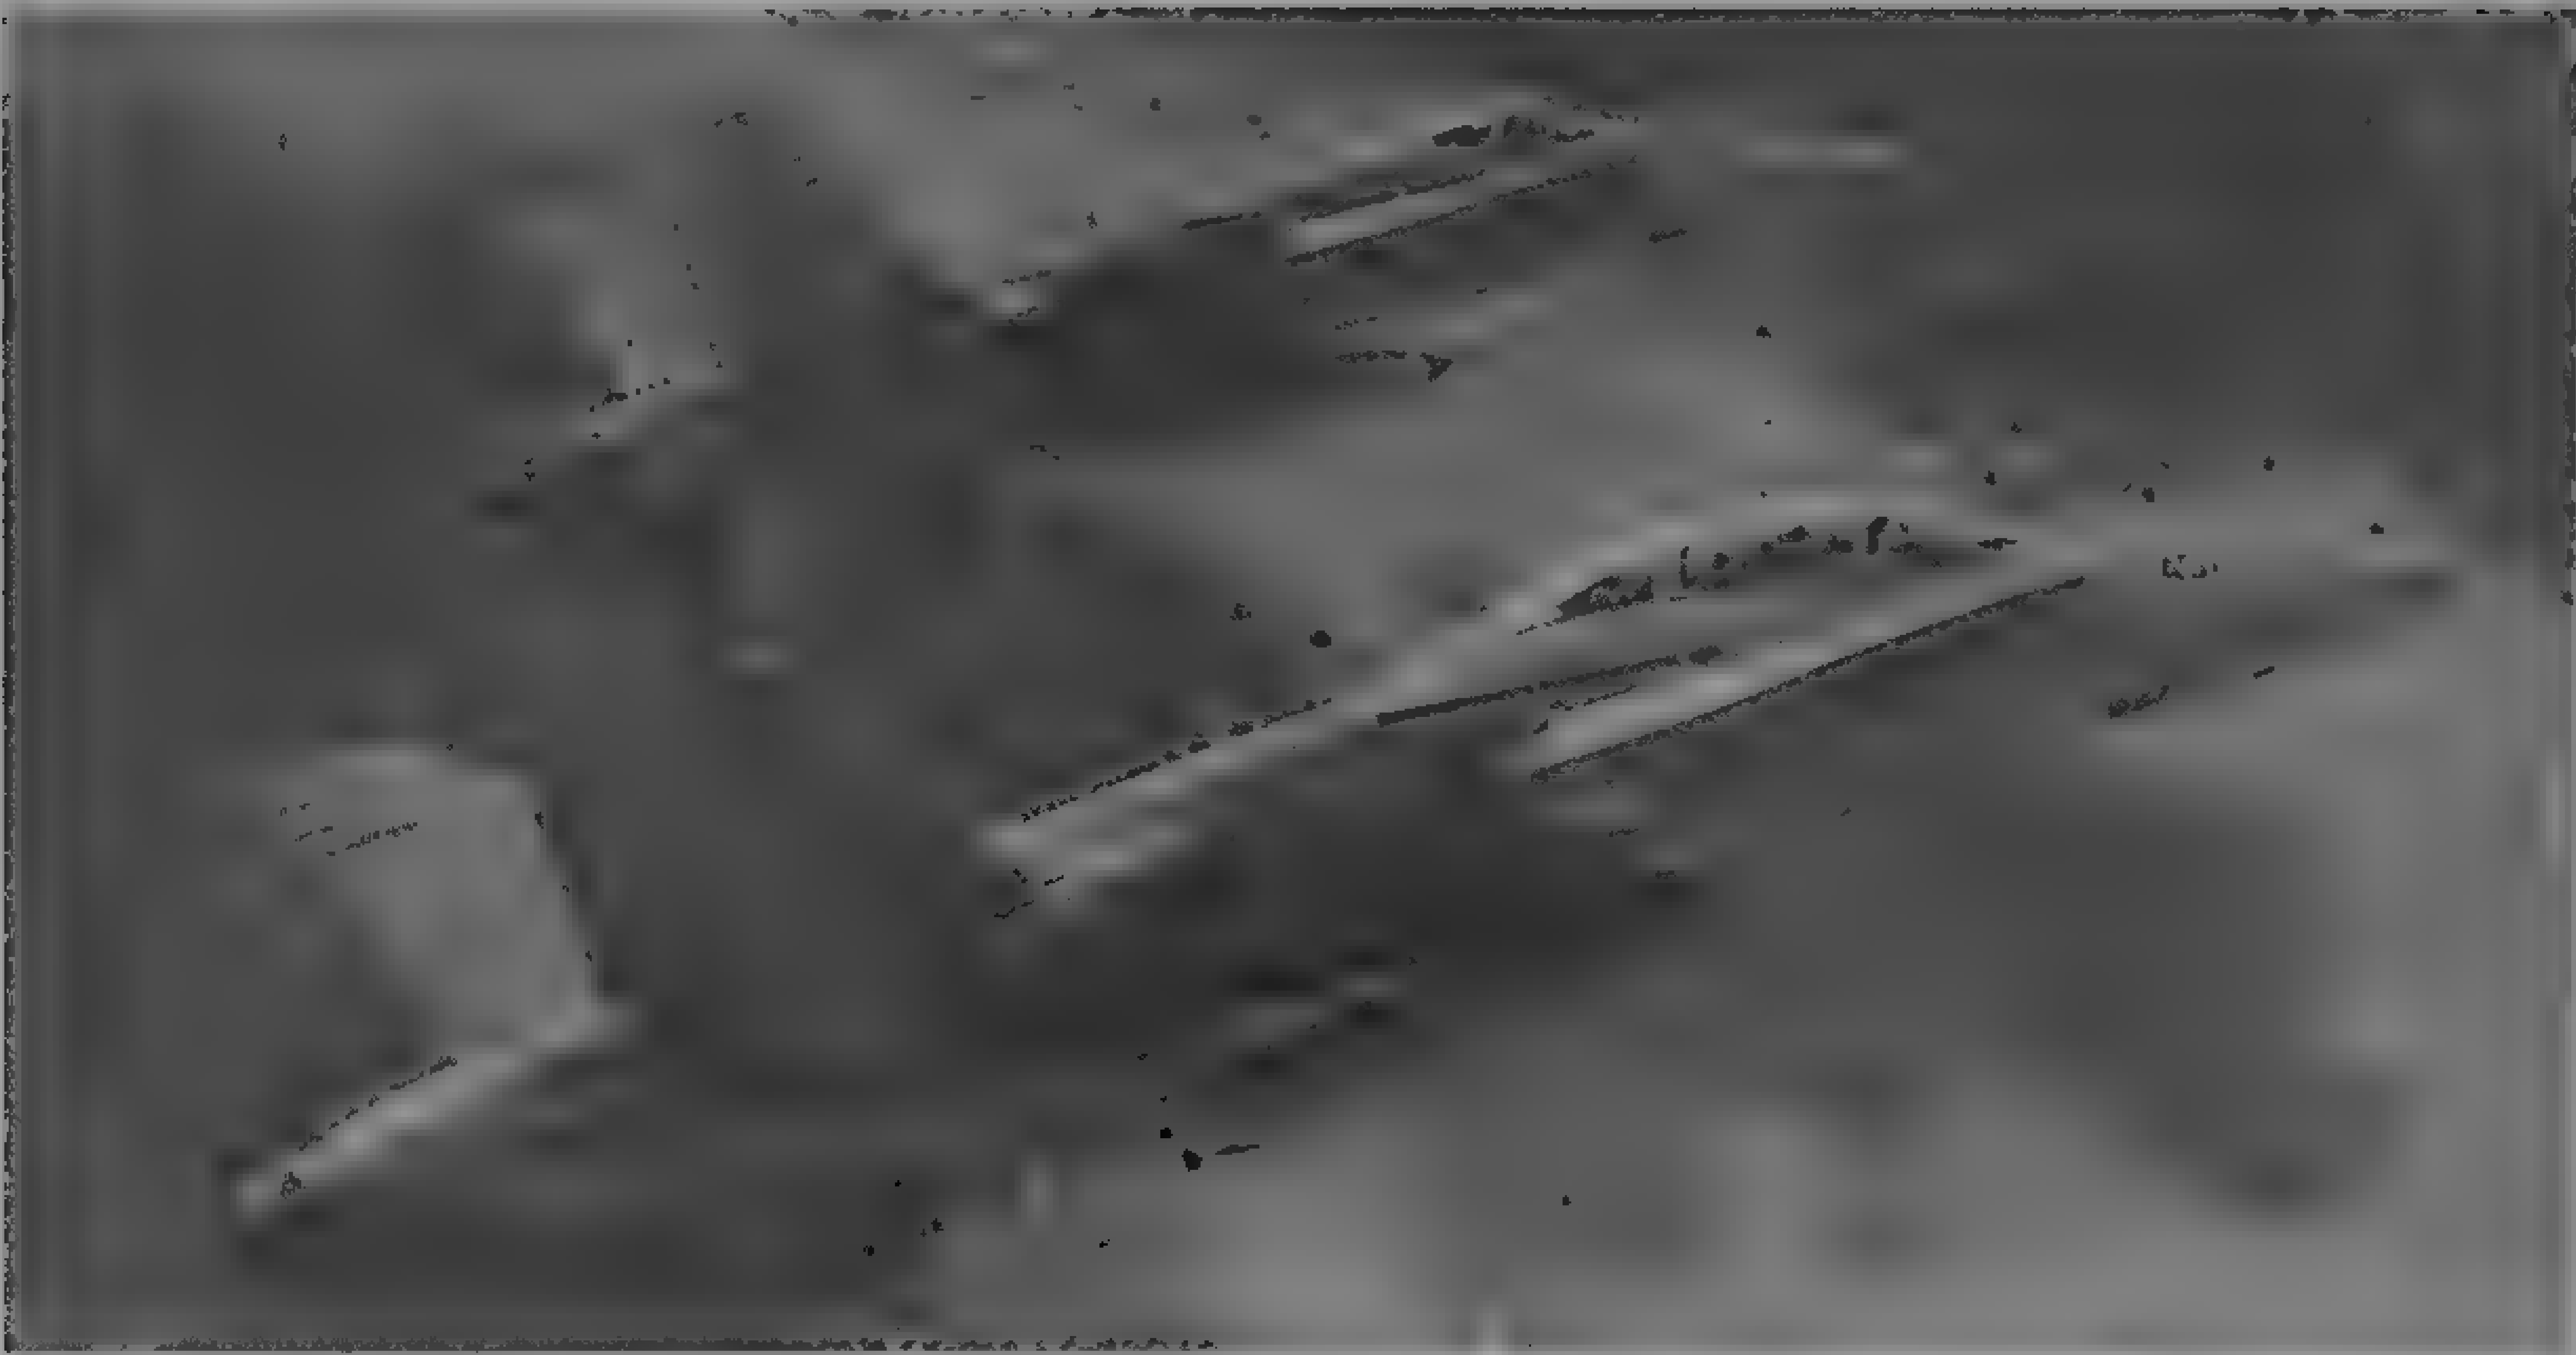
STRUCTURE: Multispar wing mainly of light alloy, with graphite/epoxy inter-spar skin panels and trailing-edge flaps, tail surfaces mainly graphite/epoxy skins over aluminium honeycomb core, graphite/epoxy fuselage panels and doors, titanium engine firewall. Northrop Grumman produces rear and centre fuselages: assembly and test at McDonnell Douglas St Louis factory; CASA produces horizontal tail surfaces, flaps, leading-edge extensions, speedbrakes, rudders and rear side panels for all F/A-18s

LANDING GEAR: Dowty retractable tricycle type, with twin-wheel nose and single-wheel main units. Nose unit retracts forward, mainwheels rearward, turning 90° to stow horizontally inside the lower surface of the engine air ducts Bendix wheels and brakes. Nosewheel tyres size 22 × 6.6-10, 20 ply pressure 24.13 bars (350 lb/sq in) for carrier operations, 10.34 bars (150 lb/sq in) for land operations Mainwheel tyres size 30 × 11.5-14.5, 24 ply, pressure 24.13 bars (350 lb/sq in) for carrier operations, 13.79 bars (200 lb/sq in) for land operations. Ozone nosewheel steering unit. Nose unit towbar for catapult launch. Arrester hook, for carrier landings, under rear fuselage

POWER PLANT: Two General Electric F404-GE-400 low bypass turbofans initially, each producing approximately 71.2 kN (16,000 lb st) with afterburning F404-GE-402 EPE (Enhanced Performance Engine) standard from early 1992, rated at approximately 78.3 kN (17,600 lb st). Self-sealing fuel tanks and fuel lines, foam in wing tanks and fuselage voids. Internal fuel capacity (JP5) approximately 6,061 litres (1,600 US gallons, 1,333 Imp gallons). Provision for up to three 1,250 litre (330 US gallon, 275 Imp gallon) external tanks. Canadian Hornets carry three 1,818 litre (480 US gallon, 400 Imp gallon) tanks. Flight refuelling probe retracts into upper starboard side of nose. Simmonds fuel gauging system. Fixed ramp air intakes

ACCOMMODATION: Pilot only, on Martin-Baker SJU-5/6 zero/zero ejection seat, in pressurised, heated and air conditioned cockpit. Upward opening canopy, with separate windscreen, on all versions. Two pilots in F/A-18B and USN F/A-18D; pilot and Naval Flight Officer in USMC F/A-18D

SYSTEMS: Two completely separate hydraulic systems, each at 207 bars (3,000 lb/sq in). Maximum flow rate 212 litres (56 US gallons, 46.6 Imp gallons)/min. Bootstrap type



Unusual formation of McDonnell Douglas F/A-18D (foreground) and F/A-18C both belonging to Marine Corps squadron VMFA(AW) 533, normally equipped only with the 'D' version

1995

reservoir, pressure 5.86 bars (85 lb/sq in). AiResearch air conditioning system. General Electric electrical power system. AlliedSignal GTC36-200 APU for engine starting and ground pneumatic, electric and hydraulic power. Oxygen system. Fire detection and extinguishing systems.

AVIONICS: *Comms*: AN/ARC-182 UHF/VHF. Conrac communications system control. Hazeltine AN/APX-111 IFF for Kuwait.

Radar: Hughes Aircraft AN/APG-65 multimode digital air-to-air and air-to-ground tracking radar, with air-to-air modes which include velocity search (VS), range while search (RWS), track while scan (TWS - track 10 targets and display eight to pilot) and raid assessment mode (RAM). Improved Hughes Aircraft AN/APG-73 replaced AN/APG-65 in F/A-18C/D for USN, USMC, Finland, Malaysia and Switzerland from May 1994.

Flight: Automatic carrier landing system (ACLS) for all-weather carrier operations; Collins AN/ARN-118 Tacan, DF-301E UHF/DF, Eaton AN/ARA-63 receiver/decoder, JET ID-1791/A flight director indicator, AlliedSignal HSI, General Electric quadruple redundant fly-by-wire flight control system, with direct electrical back-up to all surfaces and direct mechanical back-up to tailerons, Litton AN/ASN-130A inertial navigation system (plus GPS from FY93), being replaced by Litton AN/ASN-139 ring laser system (including retrofits), Normalair-Garrett digital data recorder for AlliedSignal maintenance recording system; flight incident recording and monitoring system (FIRAMS), Smiths standby altimeter, Kearflex standby airspeed indicator, standby vertical speed indicator, cockpit pressure altimeter. Night Attack F/A-18 has Hughes AN/AAR-50 thermal imaging navigation set (TINS).

Instrumentation: Smiths Industries multipurpose colour map display, two Kaiser monochrome MFDs (colour on Night Attack Hornets), central GEC-Marconi-AlliedSignal CRT, Kaiser AN/AVQ-28 HUD, GEC-Marconi FID 2035 horizontal situation display, plus provision for GEC-Marconi Cat's Eyes NVGs.

Mission: Two Control Data Corporation AN/AYK-14 digital computers, GEC-Marconi Type 117 laser designator, Harris AN/ASW-25 radio datalink and Loral AN/AAS-38 NITE Hawk targeting FLIR.

Self-defence: Magnavox AN/ALR-50 RWR, Litton AN/ALR-67 RWR, Goodyear AN/ALE-39 chaff dispenser (AN/ALE-47 from FY93 including exports to Finland, Malaysia and Switzerland), Sanders AN/ALQ-126B deception jammers (additionally, Northrop Grumman AN/ALQ-162(V) CW jammers in Canadian and later Spanish aircraft), ITT/Westinghouse AN/ALQ-165 jammer selected by Finland and Switzerland.

ARMAMENT: Nine external weapon stations, comprising two wingtip stations for AIM-9 Sidewinder air-to-air missiles; two outboard wing stations for an assortment of air-to-air or air-to-ground weapons, including AIM-7 Sparrows, AIM-9 Sidewinders, AIM-120 AMRAAMs (launch trials by VX-4 in 1992, cleared for squadron use mid-1993), AGM-84 Harpoons and AGM-65F Maverick missiles; two inboard wing stations for external fuel tanks, air-to-ground weapons or Brunswick ADM-141 TALD tactical air-launched decoys; two nacelle fuselage stations for Sparrows or Lockheed Martin AN/ASQ-173 laser spot tracker/strike camera (LST/SCAM) or AN/AAS-38 and AN/AAR-50 sensor pods (see Avionics); and a centreline fuselage station for external fuel or weapons. Air-to-ground weapons include GBU-10 and -12 laser-guided bombs, Mk 82 and Mk 84 general purpose bombs, and CBU-59 cluster bombs. An M61A1 20 mm six-barrel gun with 570 rounds, is mounted in the nose and has a McDonnell Douglas director gunsight, with a conventional sight as back-up.

DIMENSIONS, EXTERNAL:

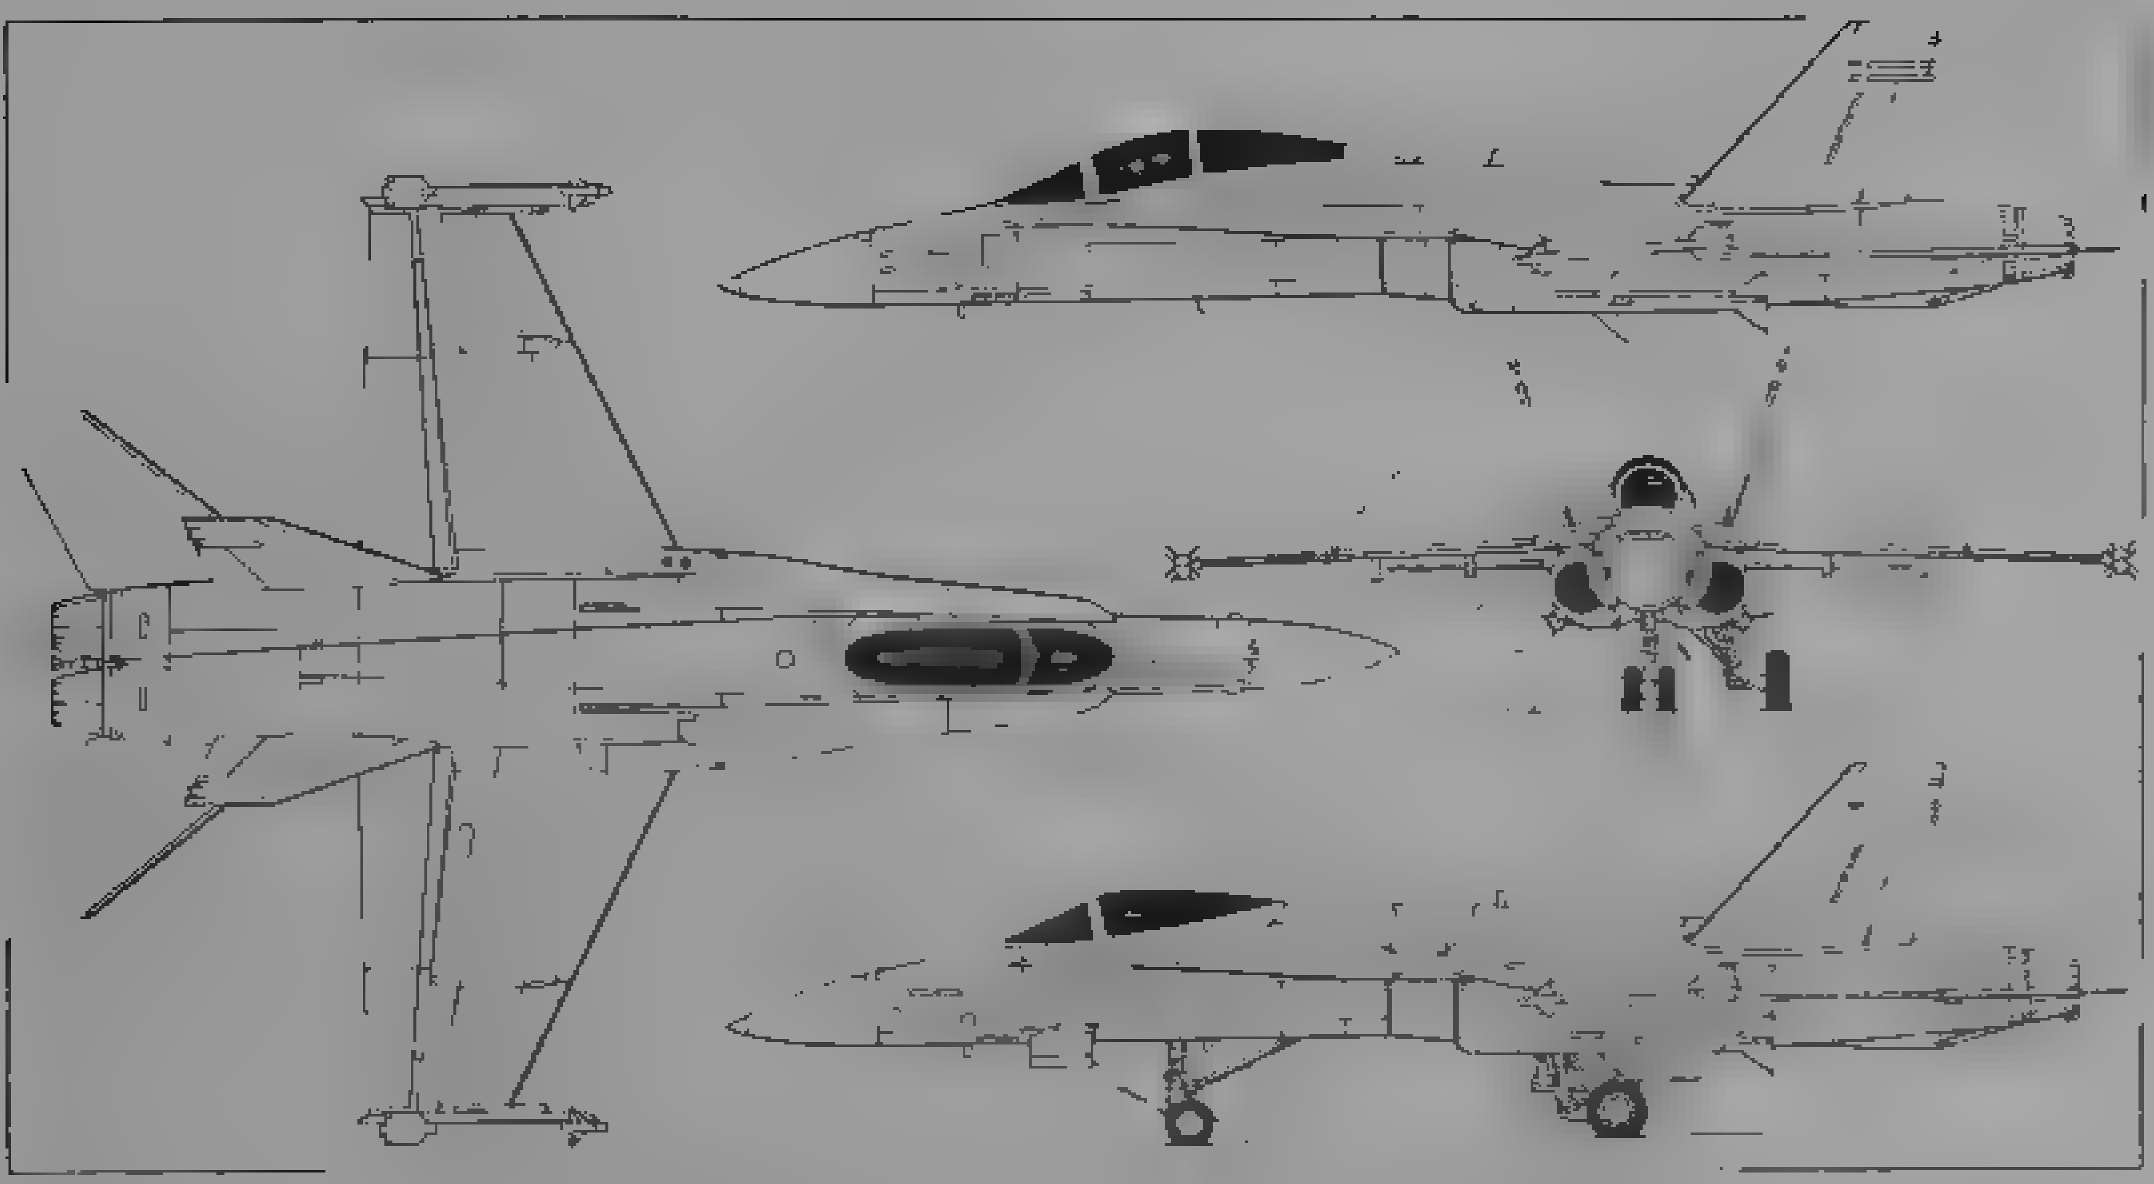
Wing span	11.43 m (37 ft 6 in)
Wing span over missiles	12.31 m (40 ft 4¾ in)
Wing chord: at root	4.04 m (13 ft 3 in)
at tip	1.68 m (5 ft 6 in)
Wing aspect ratio	3.52
Width, wings folded	8.38 m (27 ft 6 in)
Length overall	17.07 m (56 ft 0 in)
Height overall	4.66 m (15 ft 3½ in)
Tailplane span	6.58 m (21 ft 7¼ in)
Distance between fin tips	3.60 m (11 ft 9½ in)
Wheel track	[illegible]
Wheelbase	[illegible]

AREAS:

Wings, gross	37.16 m² (400.0 sq ft)
Ailerons (total)	2.27 m² (24.4 sq ft)
Leading-edge flaps (total)	4.50 m² (48.4 sq ft)
Trailing-edge flaps (total)	5.75 m² (61.9 sq ft)
Fins (total)	9.68 m² (104.2 sq ft)
Rudders (total)	1.45 m² (15.6 sq ft)
Tailerons (total)	8.18 m² (88.1 sq ft)

Hughes AN/APG-73 radar in the nose of an F/A-18C

1994



McDonnell Douglas F/A-18C Hornet with additional side view (top) of F/A-18D (*Jane's/Dennis Punnett*) *1991*

WEIGHTS AND LOADINGS:

Weight empty	10,810 kg (23,832 lb)
Max fuel weight: internal (JP5)	4,926 kg (10,860 lb)
external: F/A-18 (JP5)	3,053 kg (6,732 lb)
CF-18 (JP4)	4,246 kg (9,360 lb)
Max external stores load	7,031 kg (15,500 lb)
T-O weight: fighter mission	16,651 kg (36,710 lb)
attack mission	23,541 kg (51,900 lb)
max	approx 25,401 kg (56,000 lb)
Max wing loading (attack mission)	600.83 kg/m² (123.06 lb/sq ft)
Max power loading (attack mission)	156.80 kg/kN (1.54 lb/lb st)

PERFORMANCE:

Max level speed	more than Mach 1.8
Max speed, intermediate power	more than Mach 1.0
Approach speed	134 kts (248 km/h; 154 mph)
Acceleration from 460 kts (850 km/h; 530 mph) to 920 kts (1,705 km/h; 1,060 mph) at 10,670 m (35,000 ft)	under 2 min
Combat ceiling	approx 15,240 m (50,000 ft)
T-O run	less than 427 m (1,400 ft)
Min wind over deck: launching	35 kts (65 km/h; 40 mph)
recovery	19 kts (35 km/h; 22 mph)
Combat radius, interdiction, hi-lo-lo-hi	290 n miles (537 km; 340 miles)
Combat endurance, CAP 150 n miles (278 km; 173 miles) from aircraft carrier	1 h 45 min
Ferry range, unrefuelled	more than 1,800 n miles (3,333 km; 2,071 miles)

UPDATED

MCDONNELL DOUGLAS F/A-18E/F HORNET

TYPE: Single/two-seat carrier-based strike/attack and maritime air supremacy aircraft.

PROGRAMME: Proposed 1991 as replacement for cancelled GD/MDC A-12 and follow-on for early F/A-18As and other USN/MC tactical aircraft as they phase out; development funding approved by Congress for FY92; $4.88 billion engineering and manufacturing development contract awarded June 1992, covering seven flight test aircraft (five Es, two Fs) and three ground test articles, plus associated 7½ year test programme; $754 million award in 1992 to GE for F414 engine development.

Critical design review (CDR) undertaken 13 to 17 June 1994 at St Louis by team of independent government evaluators, successfully negotiated, with F/A-18E/F satisfying or surpassing all timescale, cost, technical, reliability and maintainability requirements.

Principal subcontractor Northrop Grumman launched assembly process of first aircraft (165164) 24 May 1994 with start of work on centre/aft fuselage section at Hawthorne, California. First forward fuselage section followed suit on new assembly line at St Louis, Missouri 23 September 1994, completed 12 January 1995, except for wiring; mating with centre/aft section from Hawthorne effected 8 May 1995. Roll-out due September 1995; first flight planned December 1995; assembly of first production article to begin 1998, service entry expected 2001.

CURRENT VERSIONS: **F/A-18E**: Single-seat.

F/A-18F: Two-seat combat-capable trainer.

F/A-18 C²W: See Addenda.

CUSTOMERS: US Navy. Seven prototypes, approval for 12 in FY97, with production rising incrementally to peak rate of 48 per annum during FY98 to FY01. Broad requirement identified for over 1,000 by FY15.

COSTS: Development estimated $4.8 billion (1992); $1,089 million in FY92 budget, $943 million in FY93; approximate $1,500 million in FY94 and $1,348 million requested for FY95. $2,200 million in provisional FY97 budget for first 12 aircraft. Navy plans 1,000 aircraft in $49,000 million programme.

DESIGN FEATURES: Stretched versions of F/A-18C/D, gross landing weight increased by 4,536 kg (10,000 lb); 0.86 m (2 ft 10 in) fuselage plug, wings photometrically increased in size to provide 9.29 m² (100.0 sq ft) extra area and 1.31 m (4 ft 3½ in) span increase; wings 2.5 cm (1 in) deeper at root, larger horizontal tail surfaces, LEX size substantially increased in early 1993 (from total 5.8 m²; 62.4 sq ft to 7.0 m²; 75.3 sq ft - compared with 5.2 m²; 56.0 sq ft on current F/A-18C/Ds), restoring F/A-18C manoeuvre capability at 30 to 35° AoA, additional 1,637 kg (3,600 lb) of internal and 1,406 kg (3,100 lb) of external fuel, 40 per cent extra range; further two (making 11) weapon hardpoints (Stations 2 and 10, inboard of wingtips, for AAMs and ASMs of up to 520 kg; 1,146 lb), additional survivability measures; air intakes redesigned and slewed to increase mass flow to more powerful F414-400 engines.

FLYING CONTROLS: As F/A-18C/D.

STRUCTURE: As F/A-18C/D.

LANDING GEAR: As F/A-18C/D.

POWER PLANT: Two General Electric F414-GE-400 turbofans, each rated at approximately 97.86 kN (22,000 lb st) with afterburning. Internal fuel capacity (JP5 fuel) 8,062 litres (2,130 US gallons; 1,774 Imp gallons). Provision for three 1,818 litre (480 US gallon; 400 Imp gallon) external tanks.

ACCOMMODATION: As F/A-18C/D.

SYSTEMS: High commonality with F/A-18C/D. Leland Electrosystems power generating system provides 60 per cent more electrical power than in F/A-18C. Hamilton Standard air conditioning, Vickers hydraulic pumps.

AVIONICS: Over 90 per cent commonality with F/A-18C, but differences include following.

Radar: Hughes AN/APG-73 multimode, digital air-to-air and air-to-ground radar as standard.

Instrumentation: Cockpit upgraded with 75 × 130 mm (3 × 5 in) touch-panel LCD upfront display and 160 mm (6¼ in) square colour LCD tactical situation display; retains two 130 mm (5 in) square monochrome displays and will have monochrome programmable LCD in place of existing F/A-18C engine/fuel display.

Self-defence: Raytheon AN/ALE-50 towed radar missile decoy stowed between jetpipes.

ARMAMENT: Full range of USN offensive and defensive ordnance. 'Bring back' load increased to 4,082 kg (9,000 lb).

DIMENSIONS, EXTERNAL (approx):

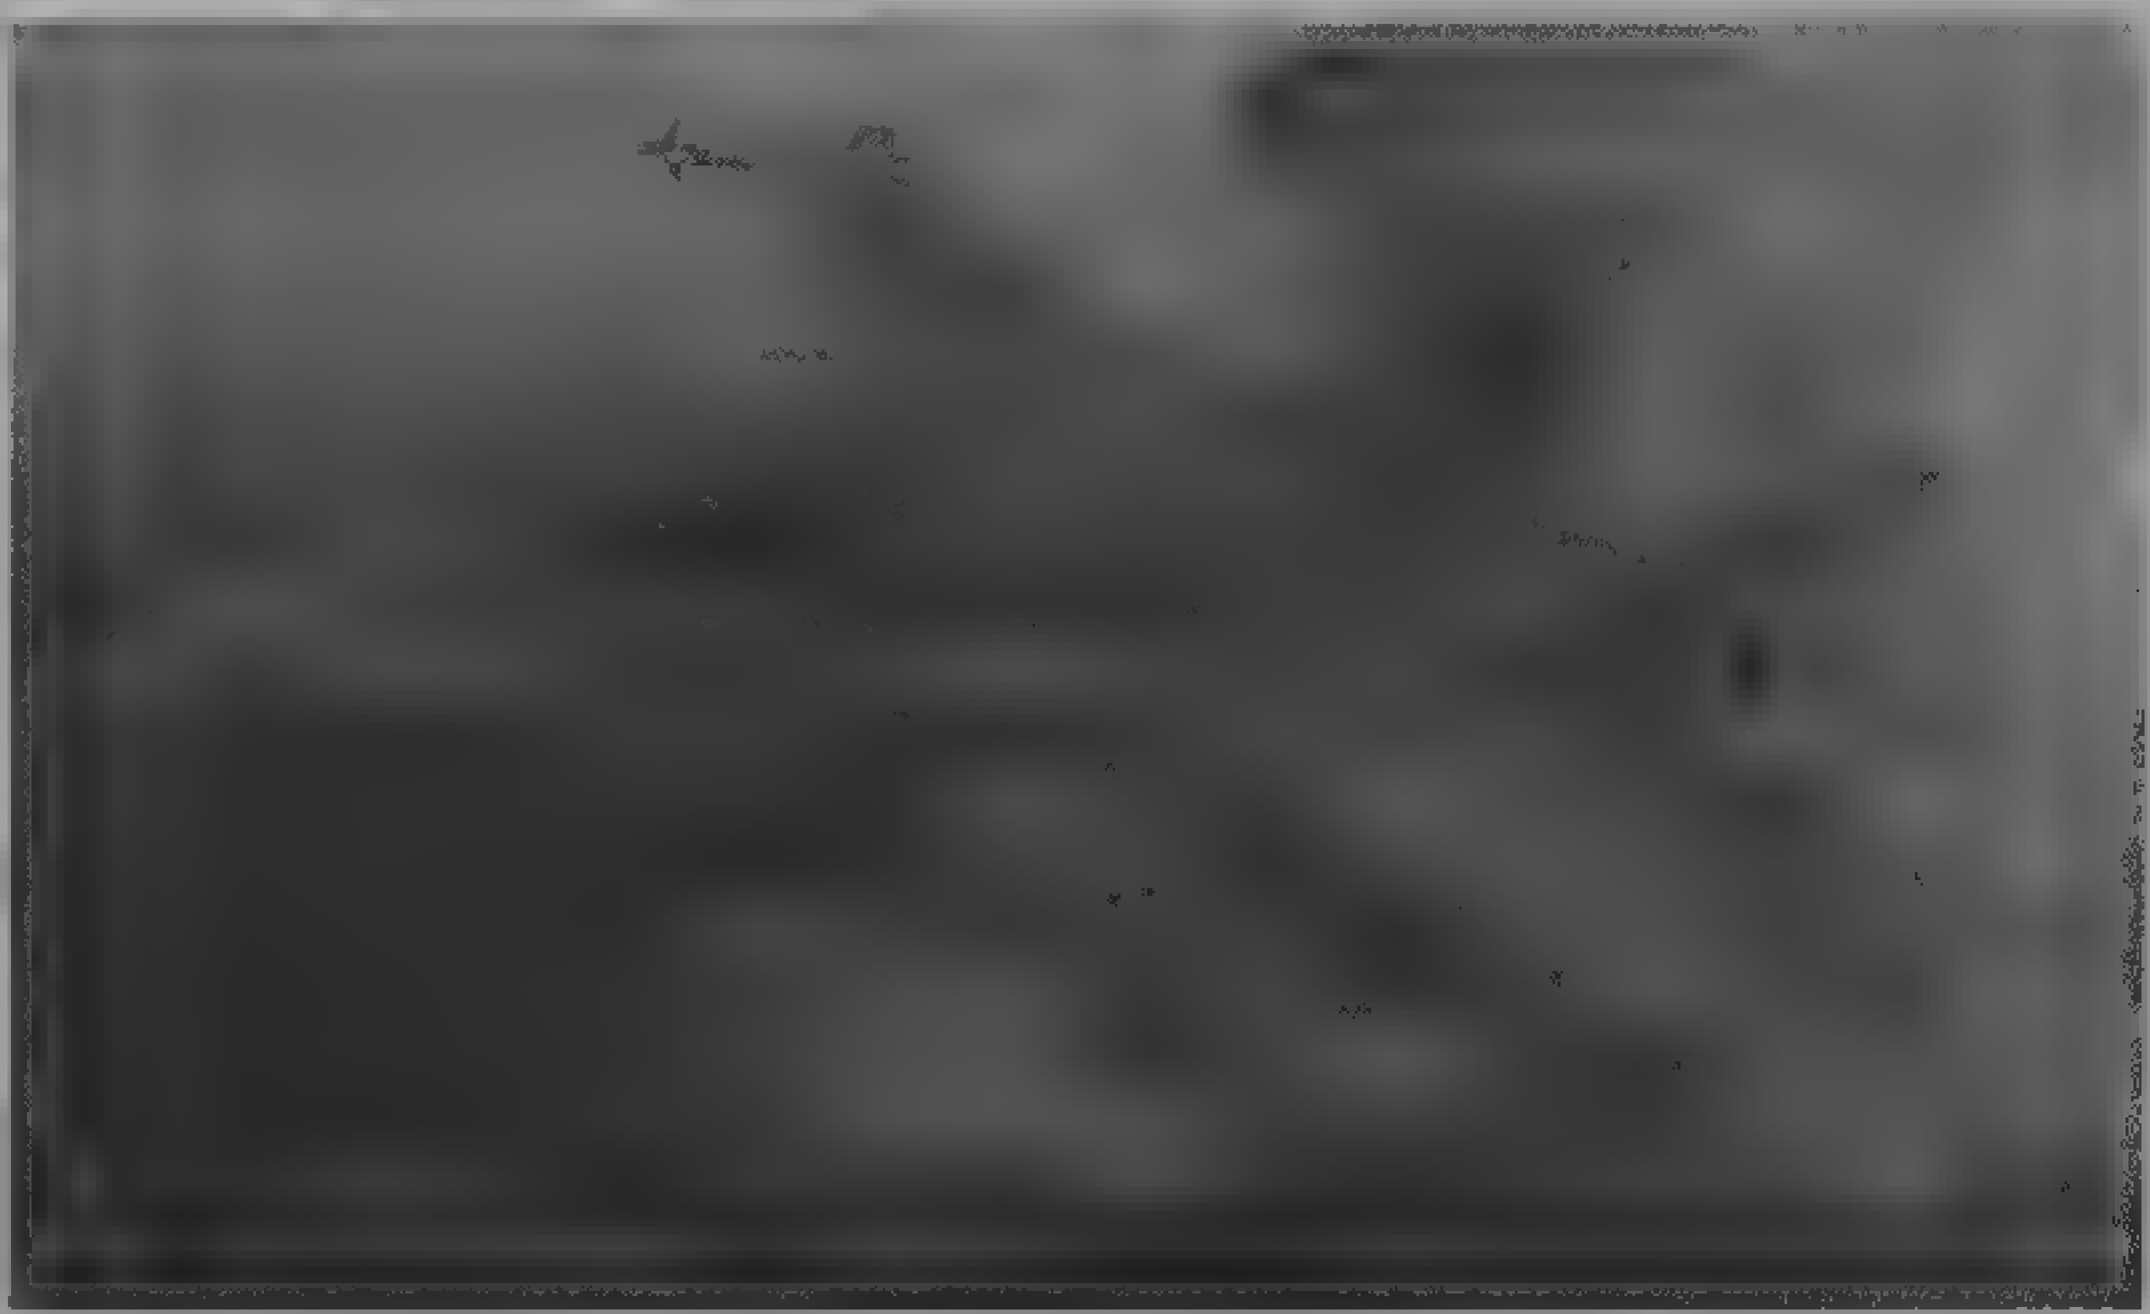
Wing span over missiles	13.62 m (44 ft 8½ in)
Wing aspect ratio	4.00
Width, wings folded	9.32 m (30 ft 7¼ in)
Length overall	18.31 m (60 ft 1¼ in)
Height overall	4.88 m (16 ft 0 in)

AREAS:

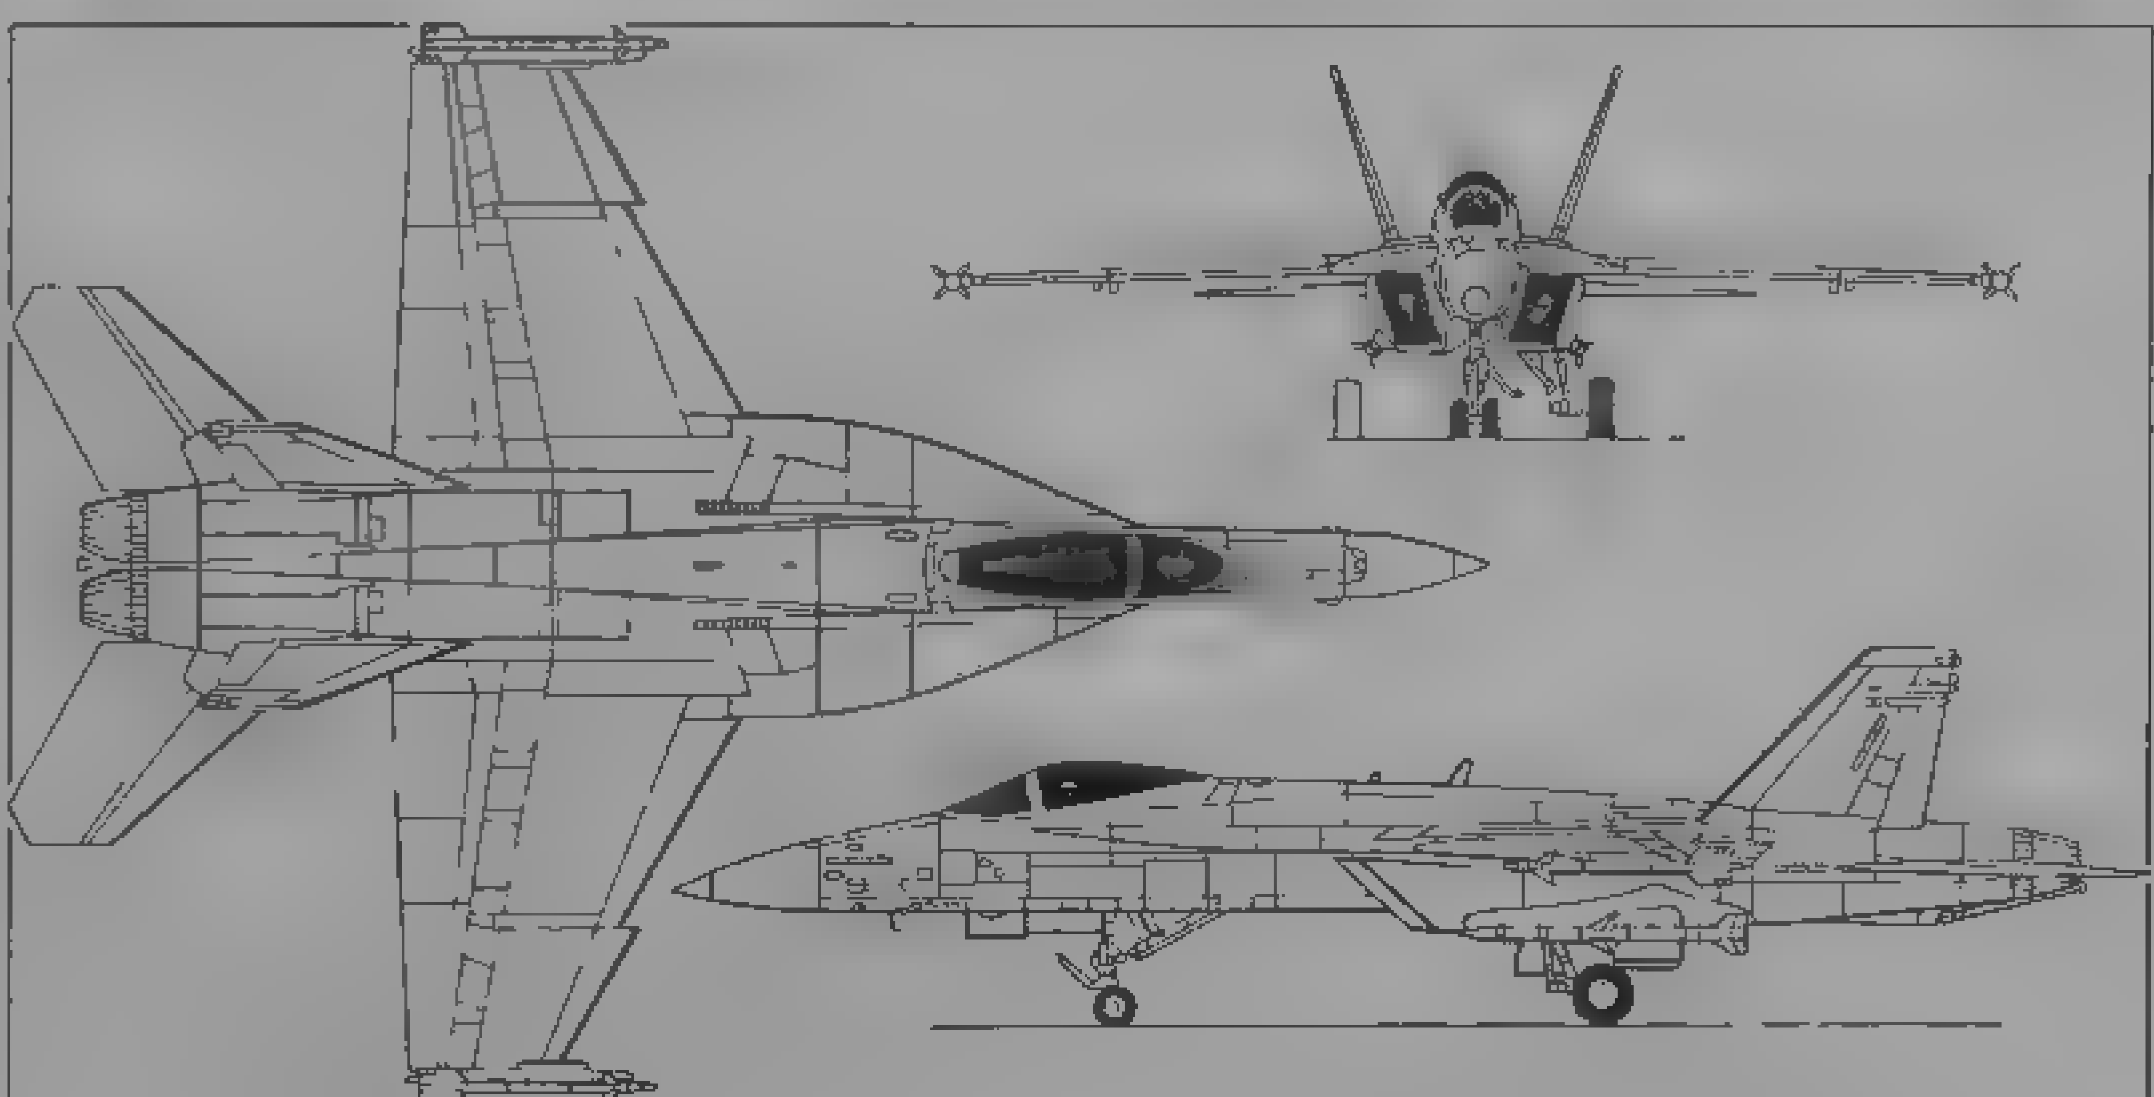
Wings, gross	46.45 m² (500.0 sq ft)

WEIGHTS AND LOADINGS:

Weight, empty: design target	13,387 kg (29,574 lb)
specification limit	13,864 kg (30,564 lb)
Max fuel weight: internal (JP5)	6,531 kg (14,400 lb)
external (JP5)	4,436 kg (9,780 lb)
Max external stores load	8,051 kg (17,750 lb)



Computer-generated image of McDonnell Douglas F/A-18E *1995*



McDonnell Douglas F/A-18E advanced version of the Hornet (*Jane's/Mike Keep*) *1992*

T-O weight, attack mission 29 937 kg (66 000 lb)
Max wing loading 620.0 kg/m² (127.0 lb/sq ft)
Max power loading 47.1 kg/kN (1.44 lb/lb st)

PERFORMANCE (estimated)
Max level speed at altitude more than Mach 1.8
Combat ceiling 15 240 m (50 000 ft)
Min wind over deck
launching 30 kts (56 km/h; 34.5 mph)
recovery 15 kts (28 km/h; 17.5 mph)
Combat radius specification, interdiction with four 1 000 lb bombs, two Sidewinders and two 1 818 litre (480 US gallon; 400 Imp gallon) external tanks, navigation FLIR and targeting FLIR
hi-lo-lo-hi 390 n miles (722 km; 449 miles)
fighter escort with two Sidewinders and two AMRAAM 410 n miles (760 km; 472 miles)
Combat endurance: maritime air superiority, six AAMs, three 1 818 litre (480 US gallon; 400 Imp gallon) external tanks, 150 n miles (278 km; 173 miles) from aircraft carrier 2 h 15 min

MCDONNELL DOUGLAS C-17A GLOBEMASTER III

TYPE: Long-range and intra theatre heavy cargo transport.

PROGRAMME: US Air Force selected McDonnell Douglas to develop C-X cargo aircraft 28 August 1981; full-scale development called off January 1982 and replaced on 26 July 1982 by slow-paced preliminary development order; development and three prototypes (one flying) ordered 31 December 1985; fabrication of first C-17A (T1/87-0025) began 2 November 1987; first production C-17A contract 20 January 1988; assembly started at Long Beach 24 August 1988; assembly of prototype completed 21 December 1990. Programme transferred from Douglas Aircraft Company to McDonnell Douglas Aerospace in 1992.

First flight 15 September 1991 – also delivery to 6517th Test Squadron/6510th TW, Edwards AFB (unit renumbered 417th TS/412th TW on 2 October 1992); 100th hour/35th sortie 17 January 1992; first aerial refuelling 11 April 1992 during 51st sortie (155 hours 48 minutes); first stall testing 7 May 1992; 200th hour/65 sorties 8 May 1992; achieved VNE (Mach 0.875/510 knots) May 1992; first opening of cargo door in flight 17 June 1992; 300th hour/73 sorties 13 August 1992; 100th sortie/326 hours 29 August 1992; new software for expansion of flight envelope flown 5 January 1993; 400th sortie, 25 May 1993 (by P5/89-1191); first paratroop drop, 9 July 1993 (from T1/87-0025); two new payload-to-altitude records established by P1/88-0265) on 8 October 1993, increasing C-17's records to 21. First overseas service flight (P11/92-3291) to Mildenhall, UK, 25 May 1994. Development flight testing completed 15 December 1994, by which time 16 production aircraft delivered and 22nd record set. Initial AMC Squadron (17th AS) received its 12th and final C-17A 22 December 1994; achieved IOC 17 January 1995. Second squadron (14th AS) received its first aircraft 17 February 1995.

Two static test airframes (T2 and T3) commissioned 30 November 1991 and Spring 1992; development continued until 1995; named Globemaster III on 5 February 1993; peak production target 18 per year; assembly in new 102,200 m² (1.1 million sq ft) facility at Long Beach, California, dedicated 13 August 1987. Feasibility study for hose-drogue tanker/transport combi, Spring 1991.

CUSTOMERS: US Air Force original requirement 210; cut to 120 by 1991; capped at 40 in January 1994 for two year probationary period, during which contractor to achieve performance, cost and delivery targets; decision thereafter on balance of 80 C-17s or alternative modification of existing airliner. Settlement of 6 January 1994 extends flight trials from 80 to 152 aircraft-months and relaxes some performance specifications. Events for 1995 comprise 30 day reliability, maintainability and availability demonstration to take place in June/July, and 'Milestone 3B' review in November, when US DoD will assess programme status and determine whether to limit procurement to 40 aircraft or proceed with further orders.

First operating squadron is 17th AS of 437th AW at Charleston AFB, North Carolina, supported by reservist personnel of 317th AS/315th AW; total 12 received.

C-17 PROCUREMENT

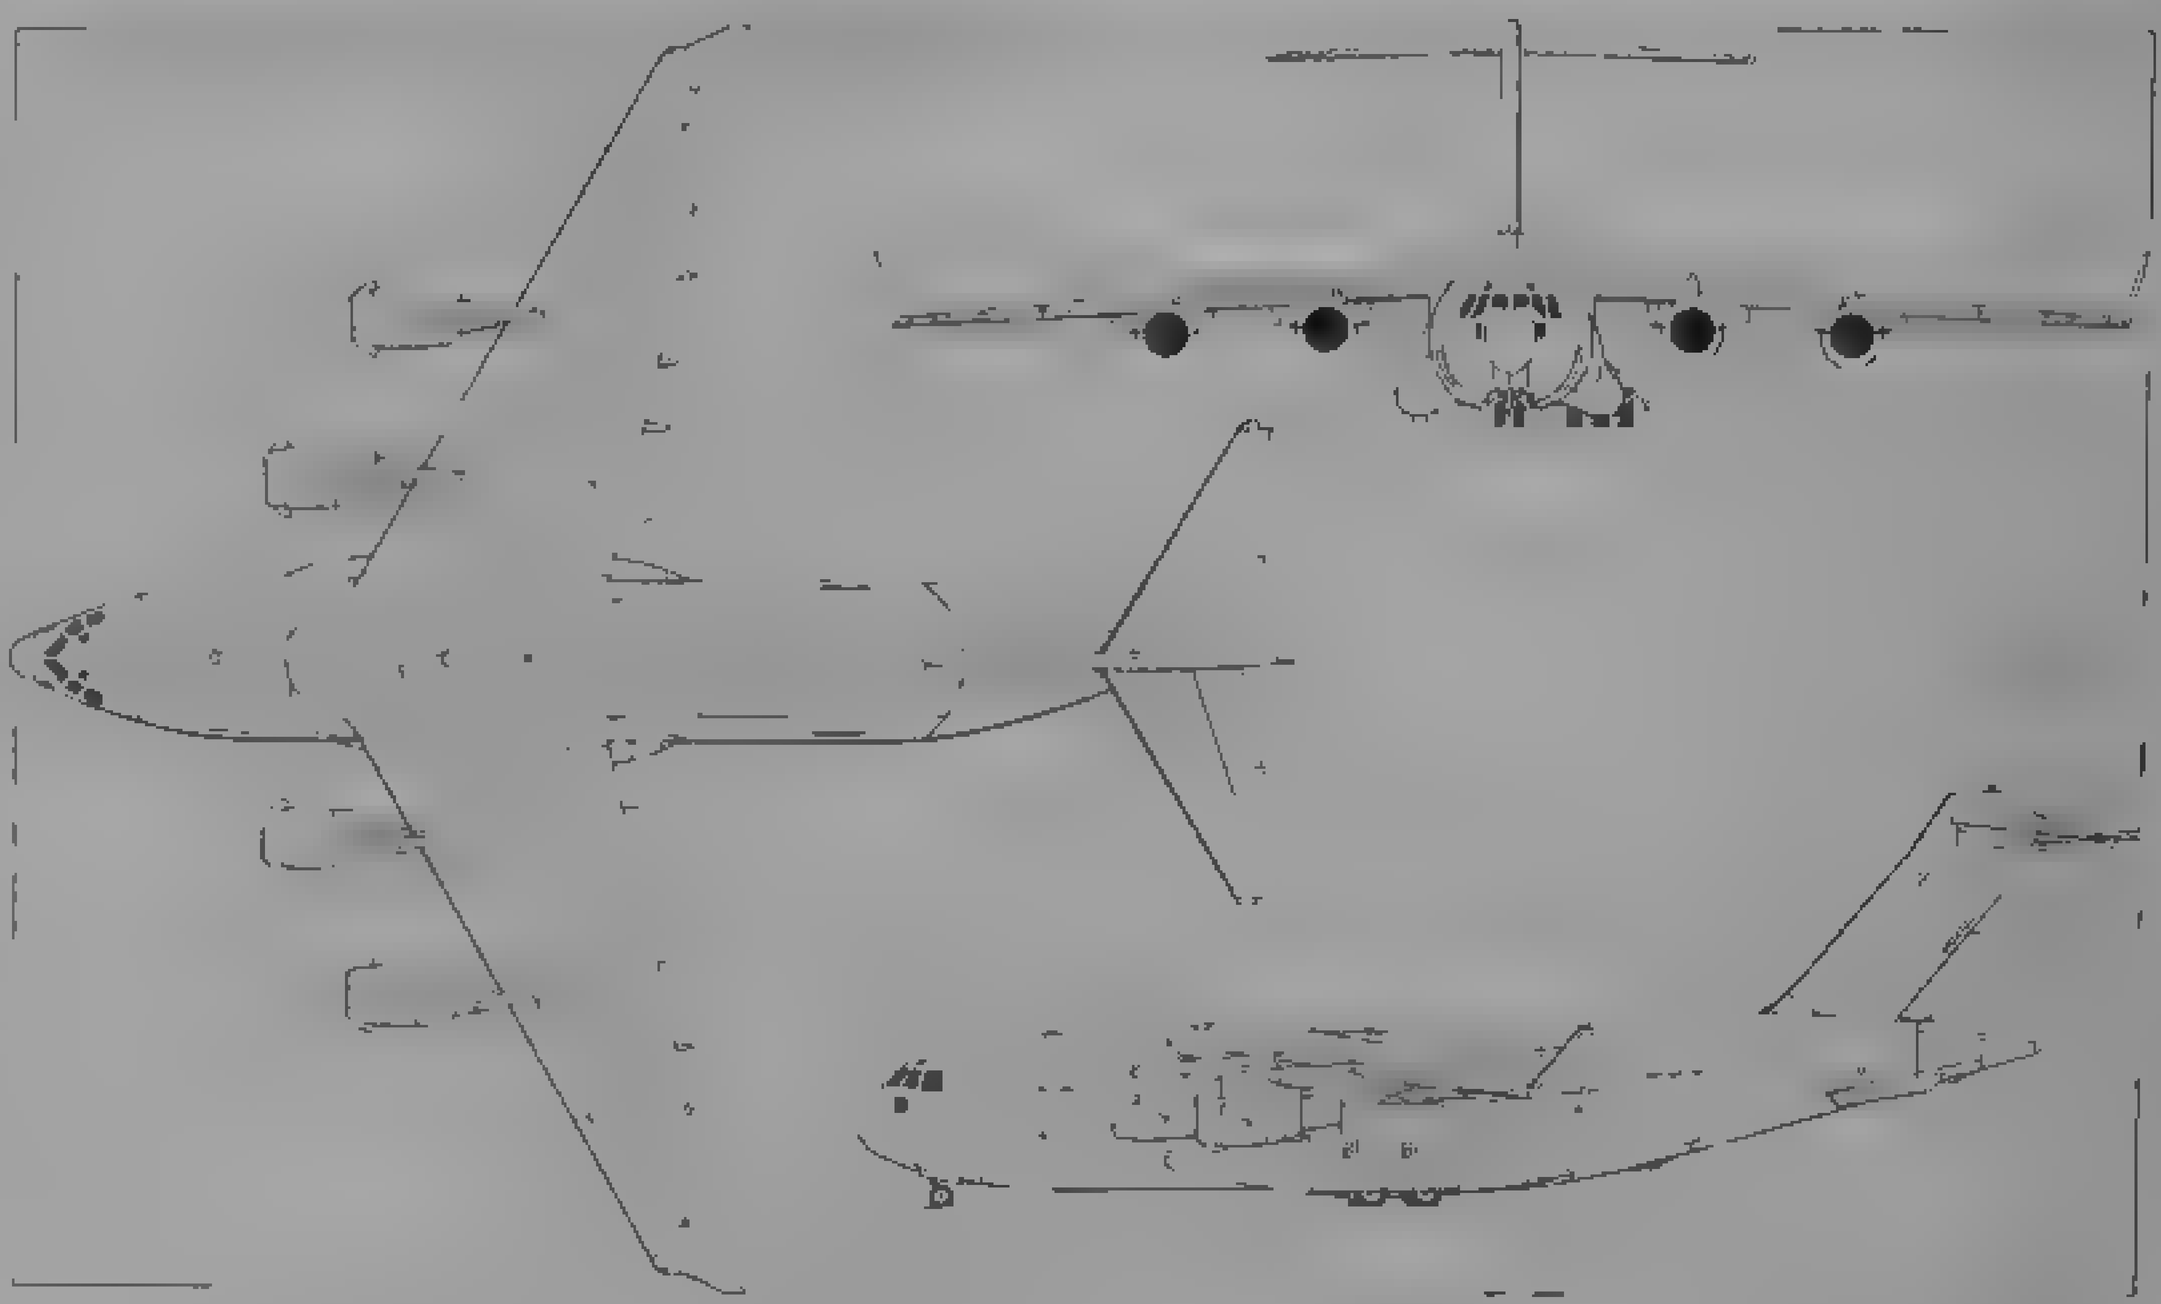
McDonnell Douglas C-17A Globemaster III of 17th Airlift Squadron
1995



McDonnell Douglas C-17A Globemaster III long-range heavy cargo transport *(Jane's/Dennis Punnett)*
1985

Initial assignments of production aircraft as below:

P1/88-0265: First flight/delivery 18 May 1992, 417th TS; structural, systems, acoustic, mission systems, unpaved field and air refuelling test aircraft; air load testing began October 1992 flying M60 tank (41 277 kg; 91,000 lb); first C-17 airdrop, 3 May 1993 (2,890 kg; 6,370 lb of ballast); trial of 40-pallet container delivery system; wing modifications, August 1993; load trials from October 1993; first LAPES delivery 3 May 1994. Currently engaged on follow-on flight test duty.

P2/88-0266: First flight/delivery 21 June 1992, 417th TS; range/payload trials and tests of additional avionics including global positioning system, communications/navigation equipment. Undergoing predelivery modification at McDonnell Douglas Tulsa early 1995.

P3/89-1189: First flight/delivery 7 September 1992; landed on desert strip at Edwards AFB, 417th TS; electromechanical systems and all weather trials; Eglin AFB, 2 November for six months of climatic trials; Edwards 30 May 1993; anti icing tests (behind KC-135 water sprayer) 28 and 30 June 1993; overseas deployments for 12 months, from September/October 1993; Eielson AFB, Alaska, for cold weather trials, from 15 January 1994; first North Pole flight 10 February 1994; Mitchell Field, Milwaukee, for adverse weather trials, from 7 March 1994. Modified at McDonnell Douglas Tulsa 1995, prior to joining AMC.

P4/89-1190: First flight 9 December 1992; delivery 20 January 1993 to 417th TS; first C-17 without test instrumentation; initial evaluation and airlift training with USAF Operational Test and Evaluation Center, Kirtland AFB, New Mexico; troop-dropping trials, including first C-17 night parachute drop, 24 August 1993; IOT&E testing continuing.

P5/89-1191: First flight 31 January 1993; production configuration; delivered for lightning and electromagnetic resistance evaluation at Patuxent River NAS 12 March 1993; returned to Edwards, 27 July 1993. After modification at McDonnell Douglas Tulsa was delivered to 437th AW 17 January 1995.

P6/89-1192: First flight 8 May 1993; first direct delivery to Charleston AFB 14 June 1993; maintenance familiarisation and crew training (first sortie, 29 June 1993) for 17th AS/437th AW, first for squadron.

Lot 3 completed on 8 February 1994 with delivery of

P10/90-1535, Lot 4 completed 20 August 1994, with first from Lot 5 on 29 September 1994, final Lot 5 aircraft (P20/93-0604) delivered June 1995.

COSTS: Initial award $3,387 million for development, placed 31 December 1985. First production contract $603.6 million (1988) for two aircraft, second production contract $757 million for four aircraft (1989); originally expected unit cost $125 million. Programme unit cost now $294 million (1994), or $35,274 million for 120 aircraft. December 1992 estimate of costs for development, plus first six production aircraft, was $7,700 million ($2,000 million above target, $1,130 million over maximum price). Lot 3 ceiling price $1,200 million: estimated (1993) cost $1,000 million. Lot 6 fully funded at $1,600 million.

DESIGN FEATURES: Externally blown flap system based on McDonnell Douglas YC-15 medium STOL transport prototypes (see 1979-80 *Jane's*), with extended flaps in exhaust flow from engines during take-off and landing, combines load-carrying capacity of C-5 with STOL performance of C-130; required to operate routinely from 915 m (3,000 ft) long and 27.45 m (90 ft) wide runways, complete 180° three-point turn in 25 m (82 ft) and reverse up 1 in 50 gradient when fully loaded using thrust reversers. Structure designed to survive battle damage and protect crew, essential line-replaceable units (LRU) to be replaceable in flight; rear-loading ramp. Supercritical wing with 25° sweepback, 2.90 m (9.5 ft) high NASA winglets.

FLYING CONTROLS: First military transport with all-digital FBW control system and two-crew cockpit with central stick controllers, two full-time, all-function HUDs and four multifunction electronic displays; outboard ailerons and four spoilers per wing; four elevator sections, two-surface rudder split into upper and lower segments, full-span leading-edge slats; two-slot, fixed-vane, simple hinged flaps over about two-thirds of trailing-edge; small strakes under tail. Quadruple-redundant Lockheed Martin digital fly-by-wire flight control system, with mechanical back-up.

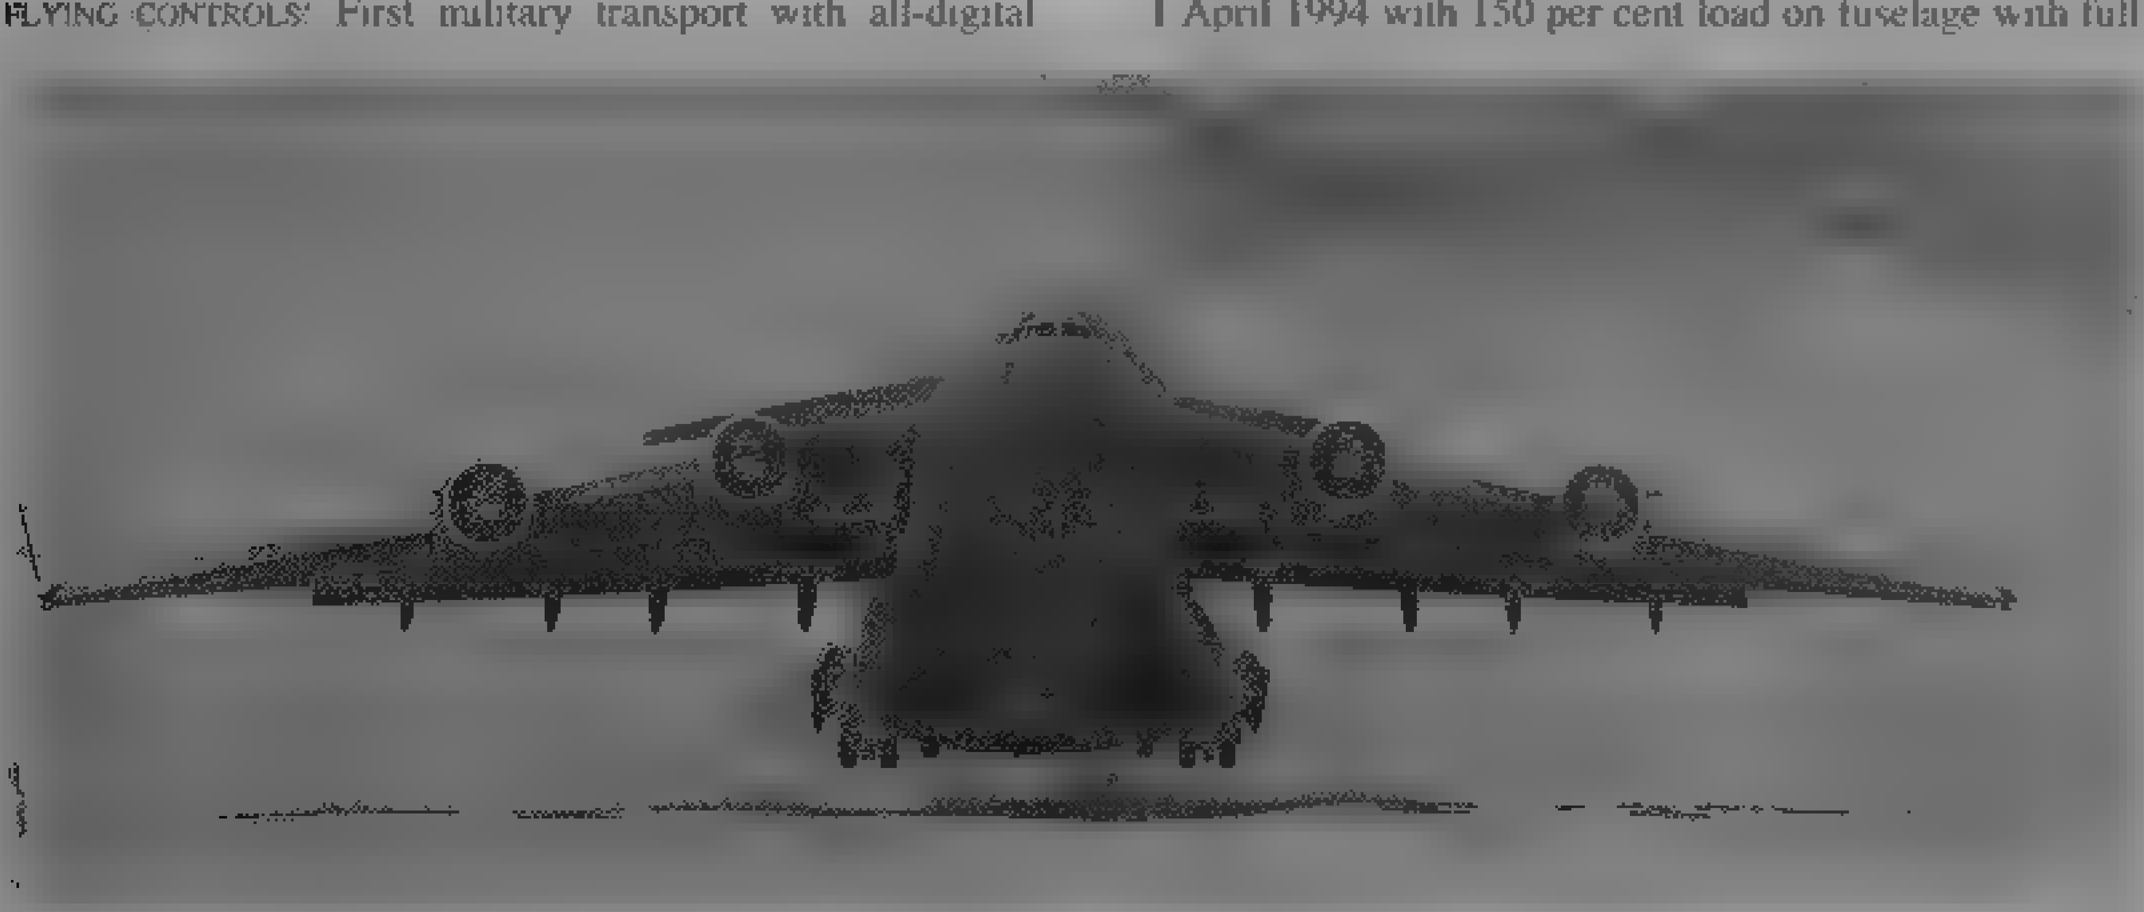
STRUCTURE: Major subassemblies produced in new factory at Macon, Georgia: some 50 subcontractors of which 21 for airframe; subcontractors include Raytheon (composites winglets), Northrop Grumman (composites ailerons, rudder and elevators), Vought (vertical and horizontal stabilisers, engine nacelles and thrust reversers), Reynolds Metals Company (wing skins), CC Industries (wing spars and stringers), Kaman Aerospace (wing ribs and bulkheads), Lockheed Martin (tailcone), Heath Tecna (wing-to-fuselage fillet), Aerostructures Hamble (composite flap hinge fairing and trailing-edge panels) and Northwest Composites (main landing gear pod panels). C-17A structure is 69.3 per cent aluminium, 12.3 per cent steel alloys, 10.3 per cent titanium and 8.1 per cent composites. Wings of P1-P10 undergoing local strengthening as consequence of load test of 1 October 1992: first rework to P8/90-0533 at McDonnell Douglas, Tulsa, between 3 January and 9 April 1994. Ground static qualification testing completed 1 April 1994 with 150 per cent load on fuselage with full fuel. Durability test fuselage completed simulated 1/4 service lifetime (45,000 hours 12,819 sorties/28,500 landings) on 23 November 1994, proceeding with second full life cycle. Proposal, early 1994, to design all-composites horizontal tail surfaces for weight-saving resulting in McDonnell Douglas securing a $40.7 million contract to build new unit, expected to be 50 per cent cheaper and 20 per cent lighter than existing tail.

LANDING GEAR: Hydraulically retractable tricycle type, with free-fall emergency extension, designed for sink rate of 4.57 m (15 ft)/s and suitable for operation from paved runways or unpaved strips. Mainwheel units, each consisting of two legs in tandem with three wheels on each leg, rotate 90° to retract into fairings on lower fuselage sides, tyre size 50 × 21-20, pressure 9.52 bars (138 lb/sq in). Menasco twin-wheel nose leg retracts forwards; tyre size 40 × 16-14, pressure 10.69 bars (155 lb/sq in). Bendix wheels and carbon brakes. Minimum ground turning radius at outside mainwheels 17.37 m (57 ft 0 in); minimum taxiway width for three-point turn 27.43 m (90 ft 0 in); wingtip/tailplane clearance 74.24 m (237 ft 0 in).

POWER PLANT: Aircraft have four Pratt & Whitney F117-PW-100 (PW2040) turbofans, with maximum flat rating of 181.0 kN (40,700 lb st), pylon-mounted in individual underwing pods and each fitted with a directed flow thrust reverser deployable both in flight and on the ground. Provision for in-flight refuelling. Two outboard wing fuel tanks of 21,210 litres (5,603 US gallons; 4,666 Imp gallons) each, two inboard wing fuel tanks of 30,056 litres (7,940 US gallons; 6,612 Imp gallons) each; total capacity 102,610 litres (27,086 US gallons; 22,572 Imp gallons). Plessey fuel pumps.

ACCOMMODATION: Normal flight crew of pilot and co-pilot, side by side and two observer positions on flight deck, plus loadmaster station at forward end of main floor, access to flight deck via downward opening airstair door on port side of lower forward fuselage. Bunks for crew immediately aft of flight deck area, crew comfort station at forward end of cargo hold.

Main cargo hold able to accommodate US Army wheeled and tracked vehicles, including 5 ton expandable vans in two rows, or three Jeeps side by side, or up to three AH-64A Apache attack helicopters, with loading via hydraulically actuated rear loading ramp which forms underside of rear fuselage when retracted. Aircraft fitted with 27 stowable tip-up seats along each sidewall and another 48 seats carried on board which can be erected along the centreline, optionally up to 48 litters for medical evacuation mission or up to 100 passengers on 10-passenger pallets in addition to 54 sidewall seats. Air



Bicycle Lake, California, was the scene of C-17A Globemaster III austere field trials

C-17A cargo area dimensions

1994

delivery system capability for nine 463L pallets plus two on ramp in single row, or handling system for 18 463L pallets in double row. Airdrop capability includes single platforms of up to 27,215 kg (60,000 lb), multiple platforms of up to 49 895 kg (110,000 lb), or up to 102 paratroops Equipped for low-altitude parachute extraction system (LAPES) drops. The C-17A is only aircraft able to airdrop outsize firepower such as the US Army's M2 infantry fighting vehicle; also able to carry the M1 main battle tank in combination with other vehicles

Cargo handling system includes rails for airdrops and rails/rollers for normal cargo handling. Each row of rails/rollers can be converted quickly by a single loadmaster from one configuration to the other Total of 295 cargo tie-down rings, each stressed for 11,340 kg (25,000 lb), all over cargo floor forming grid averaging 74 cm (29 in) square. Three quick erecting litter stanchions, each supporting four litters, permanently carried. Main access to cargo hold is via rear-loading ramp, which is itself stressed for 18,145 kg (40,000 lb) of cargo in flight. Underfuselage door aft of ramp moves upward inside fuselage to facilitate loading and unloading Paratroop door at rear on each side, four overhead FEDS (flotation equipment deployment system) escape hatches and liferafts, two forward and two aft of wing

SYSTEMS Include AiResearch computer-controlled integrated environmental control system and cabin pressure control system, 2,440 m (8 000 ft) equivalent cabin pressure up to 11,280 m (37,000 ft), quad-redundant flight control and four independent 276 bar (4,000 lb/sq in) hydraulic systems, independent fuel feed systems, electrical system AlliedSignal GTCP331 APU (at front of starboard landing gear pod), provides auxiliary power for environmental control system, engine starting, and on-ground electronics requirements, onboard inert gas generating system (OBIGGS) for the explosion protection system, pressurised by engine bleed air at 4 1 bars (60 lb/sq in) to produce NEA (nitrogen-enriched air) and governed by a Gull Inc system controller; fire suppression system, Pyrotector (Graviner Inc) smoke detection systems. All phases of cargo operation and configuration change capable of being handled by one loadmaster

Electrical system includes single 90 kVA generator per engine and an APU, providing 115/200 V, three-phase, 400 Hz power; four 200 A transformer-rectifiers providing 28 V DC; single-phase, 1,000 VA inverter for ground refuelling and emergency AC; and two 40 Ah Ni/Cd batteries for APU starting and emergency DC. Aeromedical equipment provided with 60 Hz power

AVIONICS: *Comms.* Telephonic Corporation radio management system; UHF; Satcom, VHF-AM/FM, HF, secure voice and jam-resistant UHF/VHF/FM intercom, IFF/SIF; en route army/marine UHF LOS and Satcom hook-up; cockpit voice recorder; crash position indicator

Radar. Bendix/King AN/APS-133(V) weather/mapping radar

Flight. Delco Electronics mission computer with MDC software and electronic control system; Hamilton Standard aircraft and propulsion data management computer, Honeywell dual air data computers; Teledyne Controls warning and caution system; master warning system provides aural and voice alerts plus visual alerts on glare shields; General Dynamics automatic test equipment, and support equipment data acquisition and control system, four inertial reference units; VOR/DME, Tacan ILS/marker beacon; UHF-DF; ground proximity warning system; radar altimeter, flight data recorder; flight plan entry manually or by preprogrammed cassette

Instrumentation. Advanced digital avionics and four full-colour multifunction displays (MFDs); two GEC-Marconi full flight regime foldable head-up displays

Mission. Integrated mission and communications keyboards (MCKs) and displays (MCDs), Sierra Research station keeping equipment (SKE) displayed on MFD.

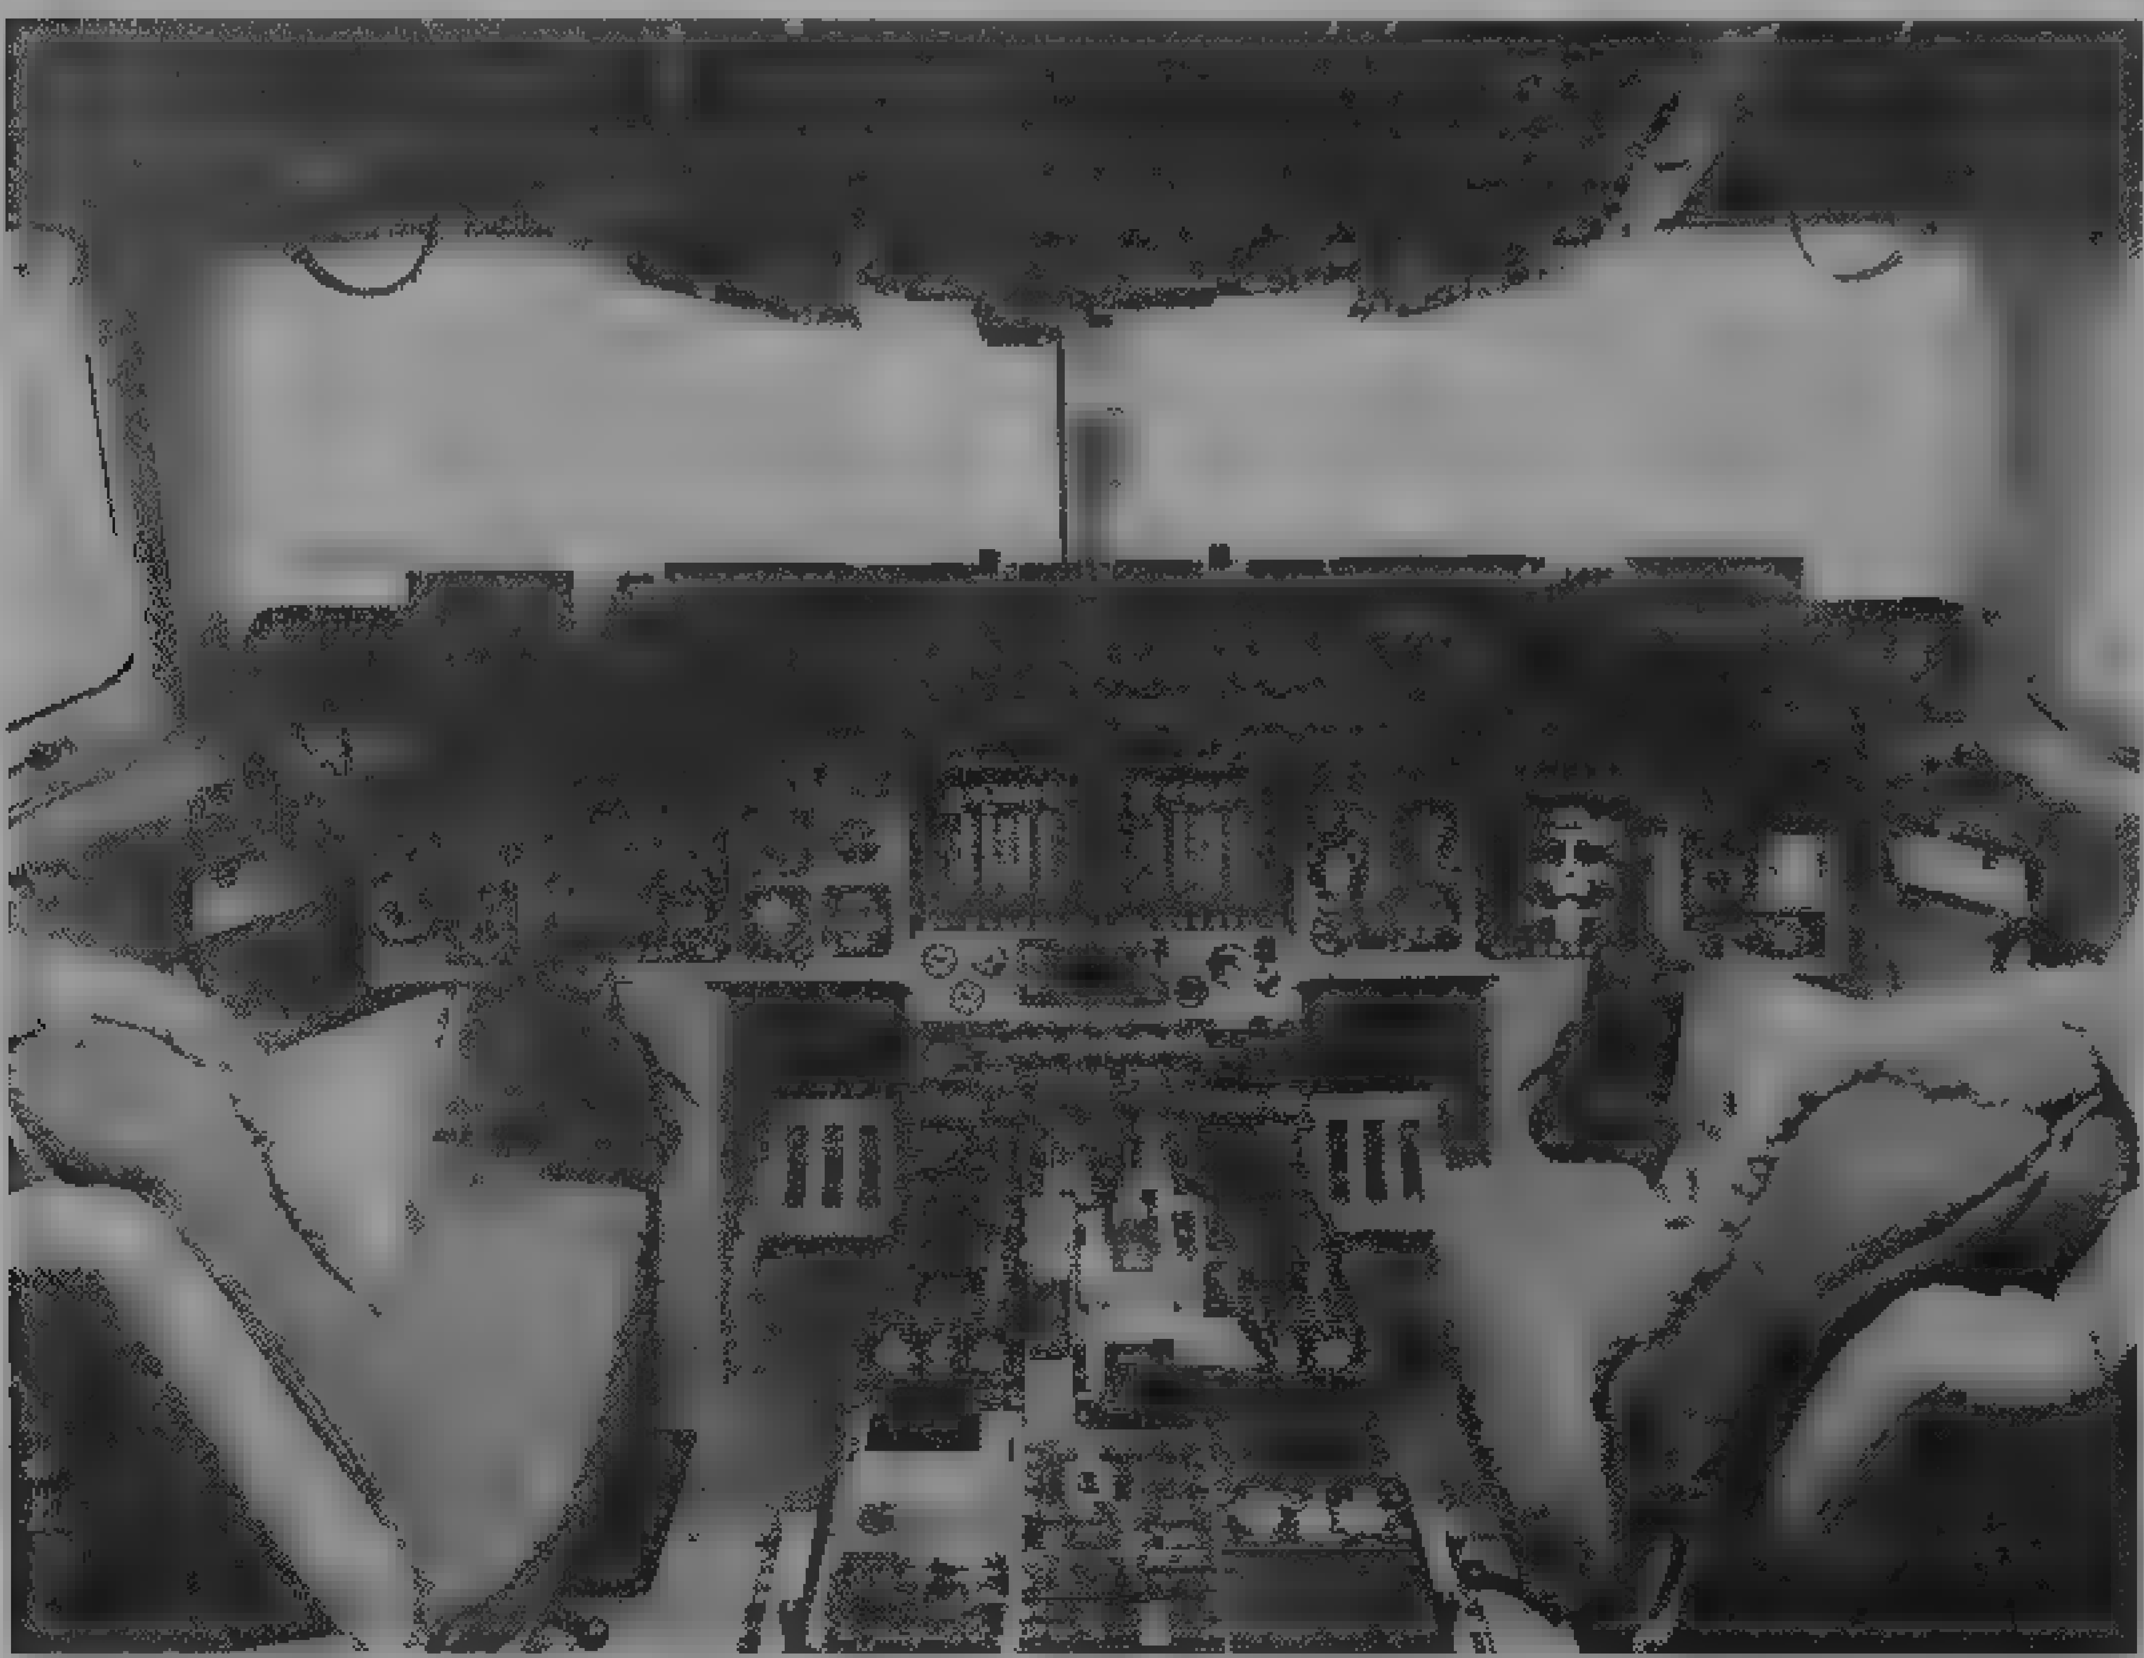
Self-defence. Development of defensive electronic systems completed in 1994. Missile approach warning system and associated automatic flare dispenser installed on five aircraft

DIMENSIONS, EXTERNAL

Wing span wings only	50.29 m (165 ft 0 in)
at winglet tips	51 76 m (169 ft 10 in)
Wing aspect ratio	7 16
Length, overall	53.04 m (174 ft 0 in)
fuselage	48 49 m (159 ft 1¼ in)
Height overall	16 79 m (55 ft 1 in)
Fuselage diameter	6 85 m (22 ft 6 in)
Tailplane span	19 81 m (65 ft 0 in)
Wheel track	10 27 m (33 ft 8½ in)
Wheelbase	20.05 m (65 ft 9½ in)
Height to sill	approx 1 62 m (5 ft 4 in)
Ground clearance under engine pods	
inboard	2.71 m (8 ft 10½ in)
outboard	2 35 m (7 ft 8½ in)

DIMENSIONS, INTERNAL

Cargo compartment	
Length, incl 6 05 m (19 ft 10 in) rear-loading ramp	26 82 m (88 ft 0 in)
Loadable width	5 49 m (18 ft 0 in)
Height under wing	3.76 m (12 ft 4 in)



Flight deck of the C-17A Globemaster III

1994

Paratroop door, port side, showing slipstream deflector and jumping 'balcony' ***(Paul Jackson)***

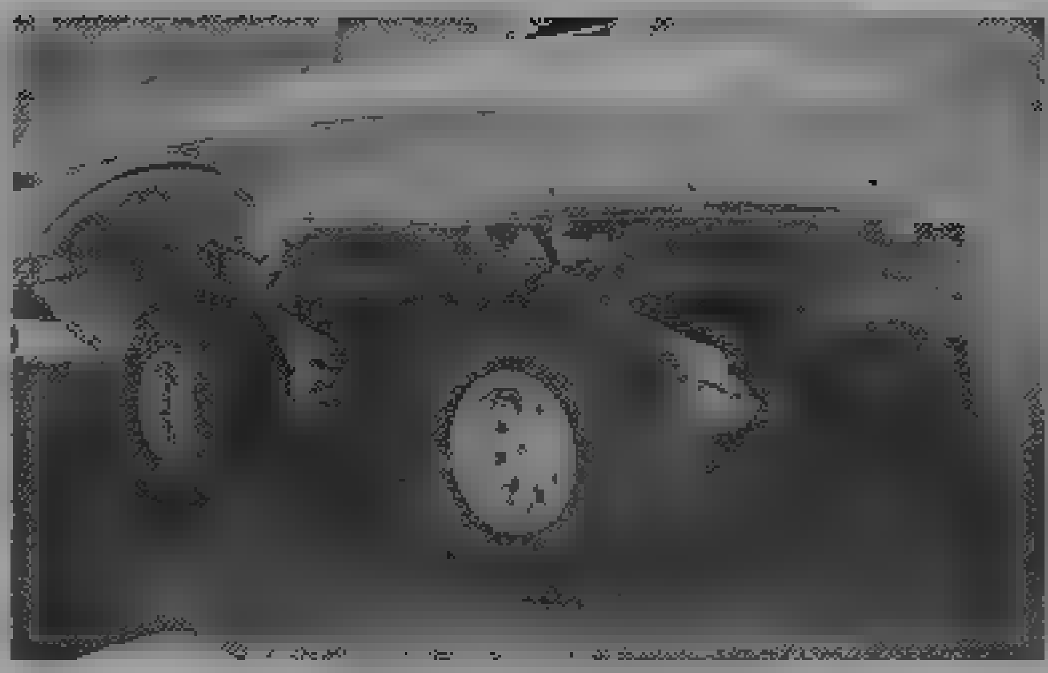
1995

Max height 4.11 m (13 ft 6 in)
Volume 592 m³ (20,900 cu ft)

AREAS
Wings, gross 353 m² (3,800 0 sq ft)
Ailerons (total) 11 83 m² (127 34 sq ft)
Tailplane 79 2 m² (845 0 sq ft)

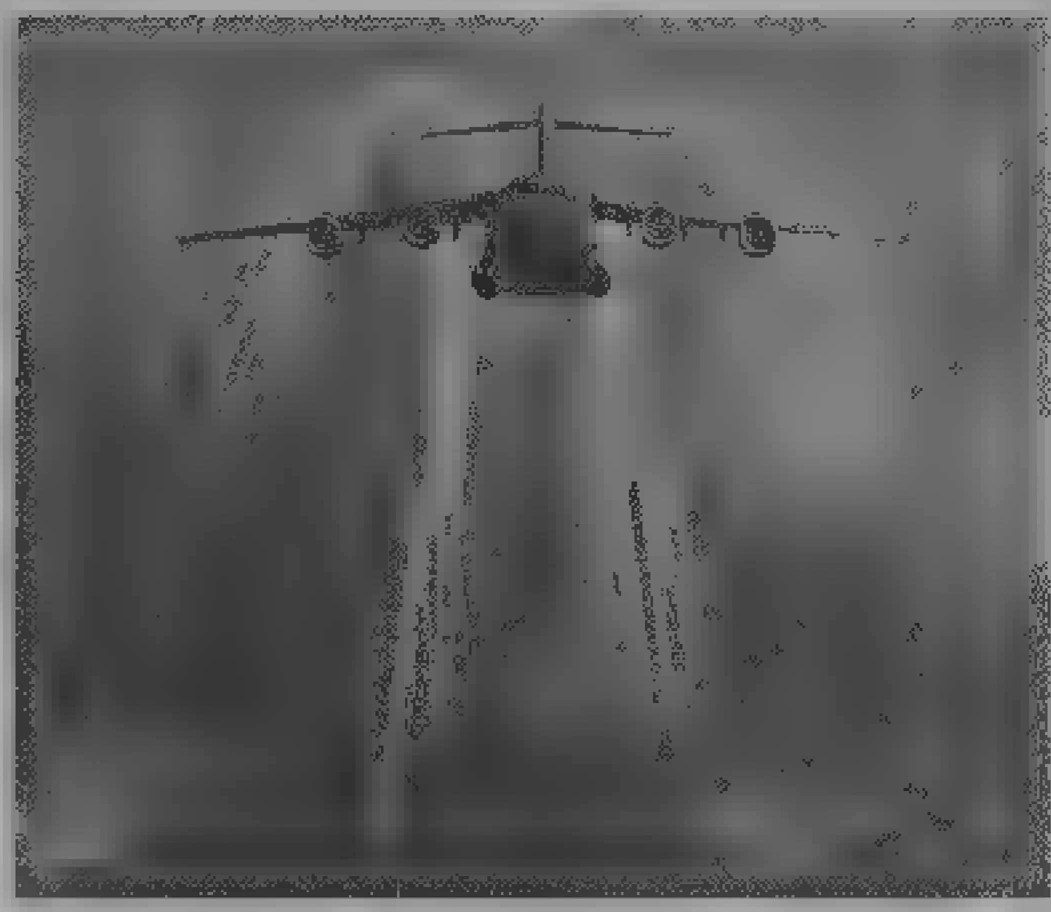
WEIGHTS AND LOADINGS
Operating weight empty 125,645 kg (277,000 lb)
Typical payload
inter-theatre logistics mission (2.5 *g* load factor) 54,421 kg (120,000 lb)
heavy logistics mission (2 25 *g* load factor) 68,039 kg (150,000 lb)
Max payload (2 25 *g*) 76,657 kg (169,000 lb)
Ramp capacity 18,143 kg (40,000 lb)
Max T-O weight 265,352 kg (585,000 lb)
Max wing loading 751 71 kg/m² (153 95 lb/sq ft)
Max power loading 366 51 kg/kN (3 59 lb/lb st)

PERFORMANCE (estimated, pending completion of flight test programme)
Normal cruising speed at 8,535 m (28,000 ft) Mach 0 74
Max cruising speed at low altitude 350 kts (648 km/h, 403 mph) CAS
Airdrop speed at S/L 115 250 kts (213-463 km/h, 132 288 mph) CAS
at 7,620 m (25,000 ft) 130-250 kts (241-463 km/h, 150-288 mph) CAS
Approach speed with max payload 115 kts (213 km/h; 132 mph) CAS
Service ceiling 13,715 m (45,000 ft)
Runway LCN (paved surface) better than 49
T-O field length with 72,575 kg (160,000 lb) payload and fuel for 2,400 n miles (4,445 km, 2,762 miles) 2,286 m (7,500 ft)
Landing field length with 76,655 kg (169 000 lb) payload, using thrust reversal 915 m (3,000 ft)



C-17A's main landing gear (*Paul Jackson*) 1995

Radius, T-O with 36,786 kg (81,100 lb) payload in 975 m (3 200 ft), land in 823 m (2,700 ft), T-O with similar payload in 853 m (2,800 ft) and land in 792 m (2,600 ft), all at load factor of 3 *g*, no in-flight refuelling 500 n miles (925 km, 575 miles)
Radius, T-O with 56,245 kg (124,000 lb) payload in 2 012 m (6,600 ft) at load factor of 2 25 *g*, land in 915 m (3,000 ft), T-O with zero payload (load factor of 3 *g*) in 671 m (2,200 ft) and land in 701 m (2,300 ft), no in-flight refuelling 1,900 n miles (3,519 km, 2,186 miles)
Range with payloads indicated, with no in-flight refuelling
72,575 kg (160,000 lb), T-O in 2,286 m (7,500 ft), land in 915 m (3,000 ft), load factor of 2 25 *g* 2 400 n miles (4,445 km, 2,762 miles)
68,039 kg (150,000 lb), T-O in 2,320 m (7,600 ft), land in 885 m (2 900 ft), load factor of 2 25 *g* 2,700 n miles (5,000 km, 3,107 miles)



An interim C-17A defensive system of IR flares was tested at Eglin AFB, Florida, in Summer 1994 1995

54,421 kg (120,000 lb), T-O in 1,830 m (6,000 ft), land in 853 m (2 800 ft), load factor of 2 5 *g* 2,800 n miles (5,185 km, 3,222 miles)
self ferry (zero payload), T-O in 1,128 m (3,700 ft), land in 701 m (2,300 ft) load factor of 2 5 *g* 4 700 n miles (8,704 km; 5,408 miles)

Hughes Helicopters Inc became subsidiary of McDonnell Douglas Corporation 6 January 1984, name changed to McDonnell Douglas Helicopter Company 27 August 1985, changed again to McDonnell Douglas Helicopter Systems in September 1993 In February 1994, alliance announced with Hunting Aviation of Singapore to represent McDonnell Douglas helicopters in nations of Pacific Rim and Middle East

Main company base at Mesa, Arizona, with 52,955 m² (570,000 sq ft) AH-64 Apache assembly and testing factory and another 123,980 m² (1,334,500 sq ft) completed in 1986; MD 500/530 production line transferred to Mesa 1986-87 workforce 3,400 in mid-1994. Chain Gun systems manufactured at Culver City

Model 300 helicopter design rights sold to Schweizer Aircraft Corporation (which see) at Elmira, New York, 1986, following licence production by Schweizer since 1983. McDonnell Douglas helicopters produced under licence by Kawasaki, Japan (civil and military 500D) Korean Airlines (civil and military 500D and 500E, and fuselages for all MD 500s sold worldwide); Agusta, Italy (500D, 500E and 530F civil variants), Agusta licence extended mid-1993 to include MD 520N

UPDATED

MCDONNELL DOUGLAS APACHE

US Army designations. AH-64A and D
Israel Defence Force name Pethen (Cobra)

TYPE. Day/night twin-engined attack helicopter

PROGRAMME. Original Hughes Model 77 entered for US Army advanced attack helicopter (AAH) competition, first flights of two development prototype YAH-64s 30 September and 22 November 1975, details of programme in 1984-85 and earlier *Jane's*, selected by US Army December 1976; named Apache late 1981

Deliveries started 26 January 1984, 800th delivered July 1993; 867 by December 1994, at which time US Army had ordered 821 (excluding prototypes) with export contracts totalling 104 AH-64As, latter total increased to 213 by July 1995. Self deployment capability shown by 14th Apache with four 871 litre (230 US gallon; 191 Imp gallon) external tanks, which flew 1,020 n miles (1,891 km 1 175 miles) Mesa - Santa Barbara - Mesa - Tucson - Mesa with 45 minutes fuel remaining on 4 April 1985; initial

Model of Longbow Apache to be ordered for British Army (*Paul Jackson*) 1994

operating capability achieved by 3rd Squadron, 6th Cavalry Regiment, July 1986, 33 of 35 planned AH-64A battalions, including seven National Guard and two Army Reserve, combat-ready by July 1994, first combat use (11 AH-64As) in operation Just Cause, Panama, December 1989, used extensively (288) during January/February 1991 Gulf War against Iraq, including first air strike of conflict First AH-64As issued to Army National Guard in 1987, fourth ArNG unit (1 211 AvRgt in Utah) established 1990; first overseas regiment 2/6 Cavalry Regiment, Illesheim, Germany, September 1987, eighth in Europe (3-4 AvRgt at Finthen) equipped 1990; battalion consists of 18 AH-64As and 13 Bell OH 58 Kiowas; more than 160 AH-64As based in Germany at peak strength, but force now reduced Deployed to South Korea March 1994, with 17th Aviation Brigade (5 501st AVN) at Camp Eagle

Eleven month programme to integrate air-to-air Stinger began October 1987; four missiles mounted in pairs on wingtips; five firings early 1989; air-to-air development programme included firing two AIM 9 Sidewinders in hover and at 80 knots (148 km/h, 92 mph) at White Sands, New Mexico, November 1987, laser ranging and tracking tests on Bell UH 1 and LTV A 7 flown in 1989; M230 Chain Gun being improved for air-to-air use, Matra Mistral captive carry tests completed. New missile control system by Base 10 Defense of Trenton, New Jersey, used for two more Stinger firings during 1990; Sidearm anti-radiation missile from AH-64A hit RF emitter on armoured vehicle at US Naval Weapons Center 25 April 1988 Total 800,000 hours flown by Apache to mid-1995

CURRENT VERSIONS **AH-64A**: Production for US Army and export. All to be upgraded to AH-64D; last in 2010. Retrofit from 1993 with SINCGARS secure radios and GPS, first installed in Apaches of 5-501 Aviation Regiment on deployment to Camp Eagle, South Korea *Detailed description applies to AH-64A except where indicated*

AH-64B. Cancelled in 1992. Was planned near-term upgrade of 254 AH-64As with improvements derived from operating experience in 1991 Gulf War, including GPS, SINCGARS radios, target handover capability, better navigation, and improved reliability including new rotor blades

AH-64C Previous designation for upgrade of AH-64As to near AH 64D standard, apart from omission of Longbow radar and retention of -701 engines provisions for optional fitment of both. Army requested draft proposal, August 1991, funding for two prototype conversions awarded in September 1992. With exception of AH 64Ds and re-sales, all remaining US Army AH 64As (approximately 540) to have been modified. Designation abandoned late 1993, all Apaches to become AH-64D, including those not fitted with radar

AH-64D Longbow Apache Current improvement programme based on Westinghouse mast-mounted Longbow millimetre-wave radar and Lockheed Martin Hellfire with RF seeker; includes more powerful GE T700-

McDonnell Douglas AH 64A Apache firing Hellfire ATM

1994

GE-701C engines, larger generators for 70 kVA peak loads, Plessey AN/ASN-157 Doppler navigation, MIL-STD 1553B databus allied to dual 1750A processors, and a vapour cycle cooling system for avionics, early user tests completed April 1990.

Full-scale development programme, lasting 51 months, authorised by Defense Acquisition Board August 1990 but airframe work extended in December 1990 to 70 months to coincide with missile development, supporting modifications being incorporated progressively, first flight of AH-64A (82-23356) with dummy Longbow radome 11 March 1991, first (89-0192) of six AH-64D prototypes flown 15 April 1992, second (89-0228) flew 13 November 1992, fitted with radar in mid 1993 and flown 20 August 1993, No 3 (85-25410) flown 30 June 1993; No 4 (90-0423) on 4 October 1993, No 5 (formerly AH-64C No 1) 19 January 1994 (first Apache with new Hamilton Standard lightweight flight management computer), No 6 flown 4 March 1994 (last two mentioned converted from 85-25408 and 85-25477 and lack radar. Six AH-64Ds to fly 3,300 hour test programme, production deliveries to start mid 1997 from planned first batch of 24. Following redesignation of AH-64C in late 1993, entire Army inventory to be known as AH-64D Longbow Apache, although only 227 (original AH-64D total) to carry Longbow radar.

Capability exists to convert any AH-64D to Longbow Apache configuration in 4 to 8 hours, this potential demonstrated June 1994 when Army personnel removed Longbow radar, associated equipment and T700-GE-701C engines from AH-64D prototype and installed them on second (non-radar) aircraft, which then test flown for 30 minutes. AH-64D to equip 26 battalions, company strength to be three with radar plus five without; three companies per battalion. Longbow can track flying targets and see through rain, fog and smoke that defeat FLIR and TV, RF Hellfire can operate at shorter ranges, it can lock-on before launch or launch on co-ordinates and lock-on in flight. Longbow scans through 360° for aerial targets or scans over 270° in 90° sectors for ground targets, mast-mounted rotating antenna weighs 113 kg (250 lb).

Further modifications include 'manprint' cockpit with large displays, air-to-air missiles, digital autostabiliser, integrated GPS/Doppler/INS/air data/laser/radar altimeter navigation system, digital communications, faster target handoff system and enhanced fault detection with data transfer and recording. AH-64D No 1 made first Hellfire launch on 21 May 1993; first RF Hellfire launch 4 June 1994, first demonstration of digital air-to-ground data communications with Symetrics Industries improved data modem, 8 December 1993.

Training of US Army instructors began Summer 1994 in anticipation of Force Development Test and Experimentation (FDT&E) trial, using three prototypes, starting October 1994, followed by Initial Operational Test and Evaluation (IOT&E) January to March 1995; 3,600 hours flown by AH-64D to June 1995. Successful completion of FDT&E and IOT&E precursor to start of modification programme in 1996; long-lead contract awarded to McDonnell Douglas December 1994 covering start up funds for initial batch of remanufactured Apaches.

Test successes of 1994 include June trial in which Longbow Apache tracked moving ground target with radar and scored direct hit with RF Hellfire, communication of digital data with Joint STARS and UH-60 Black Hawk via improved data modem in September; demonstration of new tri-service embedded GPS/INS in October; and RF Hellfire ripple-launch capability in November, when single Apache scored hits on three targets at close, medium and long range with three missiles, time of engagement, from detection to target impacts, less than 30 seconds.

GAH-64A. At least 17 AH-64As grounded for technical instruction.

JAH-64A. Seven AH-64As for special testing, of which one reverted to standard.

WAH-64D. Assembled by Westland, British Army version with Longbow radar and two Rolls-Royce/Turboméca RTM322 turboshafts, commitment to 67 announced 13 July 1995, Hellfire ATM as main armament, AAM choice expected 1997.

CUSTOMERS: US Army 827, of which 800th (including exports) delivered 1 September 1993, see Programme and Current Versions for details. Confirmed exports totalled 104 by December 1994, 213 orders and firm commitments by July 1995. Israel ordered 18 in March 1990, first two delivered 12 September 1990 to 113 Squadron, powered by T700-GE-701s, further 24 second-hand (including 18 US Army Europe AH-64As delivered September 1993 from 24 pledged in October 1992), also for 127 Squadron, first two units based at Ramon; deliveries to 190 Squadron at Ramat David, 1995.

Deliveries began in April 1993 to Saudi Arabia (12) and in 1995 to Egypt (24). Further orders from Greece (20) and United Arab Emirates (20), both in December 1991, six handed over to UAE on 30 October 1993, 14 followed in 1994. Greek deliveries from 1995. Ten more ordered for UAE in June 1994, 12 more to Egypt approved early 1995. Kuwait, Sweden and South Korea also known to be interested and version of AH-64D Longbow Apache offered to British Army by consortium of McDonnell Douglas, Westland, Lockheed Martin, Westinghouse and Shorts; UK announced proposed order for 67, July 1995. Netherlands signed contract on 24 May 1995 for 30 Apaches for 1998 service entry with Nos. 301 and 302 Squadrons at Gilze-Rijen, radar not required. US Army has offered 10 AH-64As on lease basis for period 1996-99. Production rate slowed from five to four per month in late 1993, reduced to three per month in February 1995.

COSTS: New $18 million Longbow radar costs $2 million (1990) without supporting modifications compared with $9.96 million flyaway cost of AH-64A. Longbow R&D contract (for four prototypes) $194.6 million. Programme cost (807 aircraft at 1991 values) $1,169 million. Latest Egyptian request costed at $318 million for 12 Apaches plus four spare Hellfire launchers, 34 70 mm (2.75 in) rocket launchers, six spare T700 engines, one spare TADS/PNVS system and miscellaneous spares.

DESIGN FEATURES: AH-64 is required to continue flying for 30 minutes after being hit by 12.7 mm bullets coming from anywhere in the lower hemisphere plus 20°; also survives 23 mm hits in many parts; target acquisition and designation system (TADS) and pilot night vision system (PNVS) sensors mounted in nose, low airspeed sensor above main rotor hub, avionics in lateral containers, chin-mounted Chain Gun fed from ammunition bay in centre-fuselage, four weapon pylons on stub wings (six when air-to-air capability is installed), engines widely separated, with integral particle separators and built-in exhaust cooling fittings; four-blade main rotor with lifting aerofoil blade section and swept tips, blades can be folded or easily removed, tail rotor consists of two teetering two-blade units crossed at 55° to reduce noise, airframe meets full

1995

crash-survival specifications. Two AH-64s will fit in C-141, six in C-5 and three in C-17A

Main transmission by Litton Precision Gear Division can operate for 1 hour without oil, tail rotor drive, by Aircraft Gear Corporation, has grease lubricated gearboxes with Bendix driveshafts and couplings, gearboxes and shafts can operate for 1 hour after ballistic damage; main rotor shaft runs within airframe-mounted sleeve, relieving transmission of flight loads and allowing removal of transmission without disturbing rotor. AH-64A has flown aerobatic manoeuvres and is capable of flying at 0.5 g

FLYING CONTROLS: Fully powered controls with stabilisation and automatic flight control system, automatic hover hold, tailplane incidence automatically adjusted by Hamilton Standard control to streamline with downwash during hover and to hold best fuselage attitude during climb, cruise, descent and transition

STRUCTURE: Main rotor blades (by Tool Research and Engineering Corporation, Composite Structures Divisions) tolerant to 23 mm cannon shells, have five U-sections forming spars and skins bonded with structural glassfibre tubes, laminated stainless steel skin and composites rear section, blades attached to hub by stack of laminated steel straps with elastomeric bearings. Teledyne Ryan produces all fuselages, wings, tail, engine cowlings, canopies and avionics containers

LANDING GEAR: Menasco trailing arm type, with single mainwheels and fully castoring, self-centring and lockable tailwheel. Mainwheel tyres size 8.50-10, tailwheel tyre size 5.00-4. Hydraulic brakes on main units. Main gear is non-retractable, but legs fold rearward to reduce overall height for storage and transportation. Energy absorbing main and tail gears are designed for normal descent rates of up to 3.05 m (10 ft)/s and heavy landings at up to 12.8 m (42 ft)/s. Take-offs and landings can be made at structural design gross weight on terrain slopes of up to 12° (head-on) and 10° (side-on)

POWER PLANT: Two 1,265 kW (1,696 shp) General Electric T700-GE-701 turboshafts, derated for normal operations to provide reserve power for combat emergencies, and with automatic OEI rating of 1,285 kW (1,723 shp); -701C engines from 604th (89-0192) AH-64A onward (1990) giving 1,409 kW (1,890 shp) maximum continuous and 1,447 kW (1,940 shp) OEI. Engines mounted one on each side of fuselage, above wings, with key components armour-protected. Upper cowlings let down to serve as maintenance platforms. Two crash-resistant fuel cells in fuselage, combined capacity 1,421 litres (375 US gallons, 312 Imp gallons). Modifications ordered September 1993 for carriage of four 871 litre (230 US gallon, 192 Imp gallon) Brunswick Corporation external tanks on 437 Apaches. Total internal and external fuel 4,910 litres (1,295 US gallons, 1,078 Imp gallons). 'Black Hole' IR suppression system protects aircraft from heat seeking missiles; this eliminates an engine bay cooling fan, by operating from engine exhaust gas through ejector nozzles to lower the gas plume and metal temperatures

ACCOMMODATION: Crew of two in tandem: co-pilot/gunner (CPG) in front, pilot behind on 48 cm (19 in) elevated seat. Crew seats, by Simula Inc, are of lightweight Kevlar. Teledyne Ryan canopy, with PPG transparencies and transparent acrylic blast barrier between cockpits, is designed to provide optimum field of view. Crew stations are protected by Ceradyne Inc lightweight boron armour shields in cockpit floor and sides, and between cockpits, offering protection against 12.7 mm armour-piercing rounds. Sierracin electric heating of windscreen. Seats and structure designed to give crew a 95 per cent chance of surviving ground impacts of up to 12.8 m (42 ft)/s

SYSTEMS: AiResearch totally integrated pneumatic system includes a shaft-driven compressor, air turbine starters, pneumatic valves, temperature control unit and environmental control unit. Parker Bertea dual hydraulic systems, operating at 207 bars (3,000 lb/sq in), with actuators ballistically tolerant to 12.7 mm direct hits. Redundant flight control system for both rotors. In the event of a flying control system failure, the system activates Honeywell secondary fly-by-wire control. Bendix electrical power system, with two 35 kVA fully redundant engine-driven AC generators, two 300 A transformer-rectifiers, and URDC standby DC battery. AlliedSignal GTP 36-55(H) 93 kW (125 shp) APU (36-155(BH) in AH-64D) for engine starting and maintenance checking. DASA (TST) electric blade de-icing

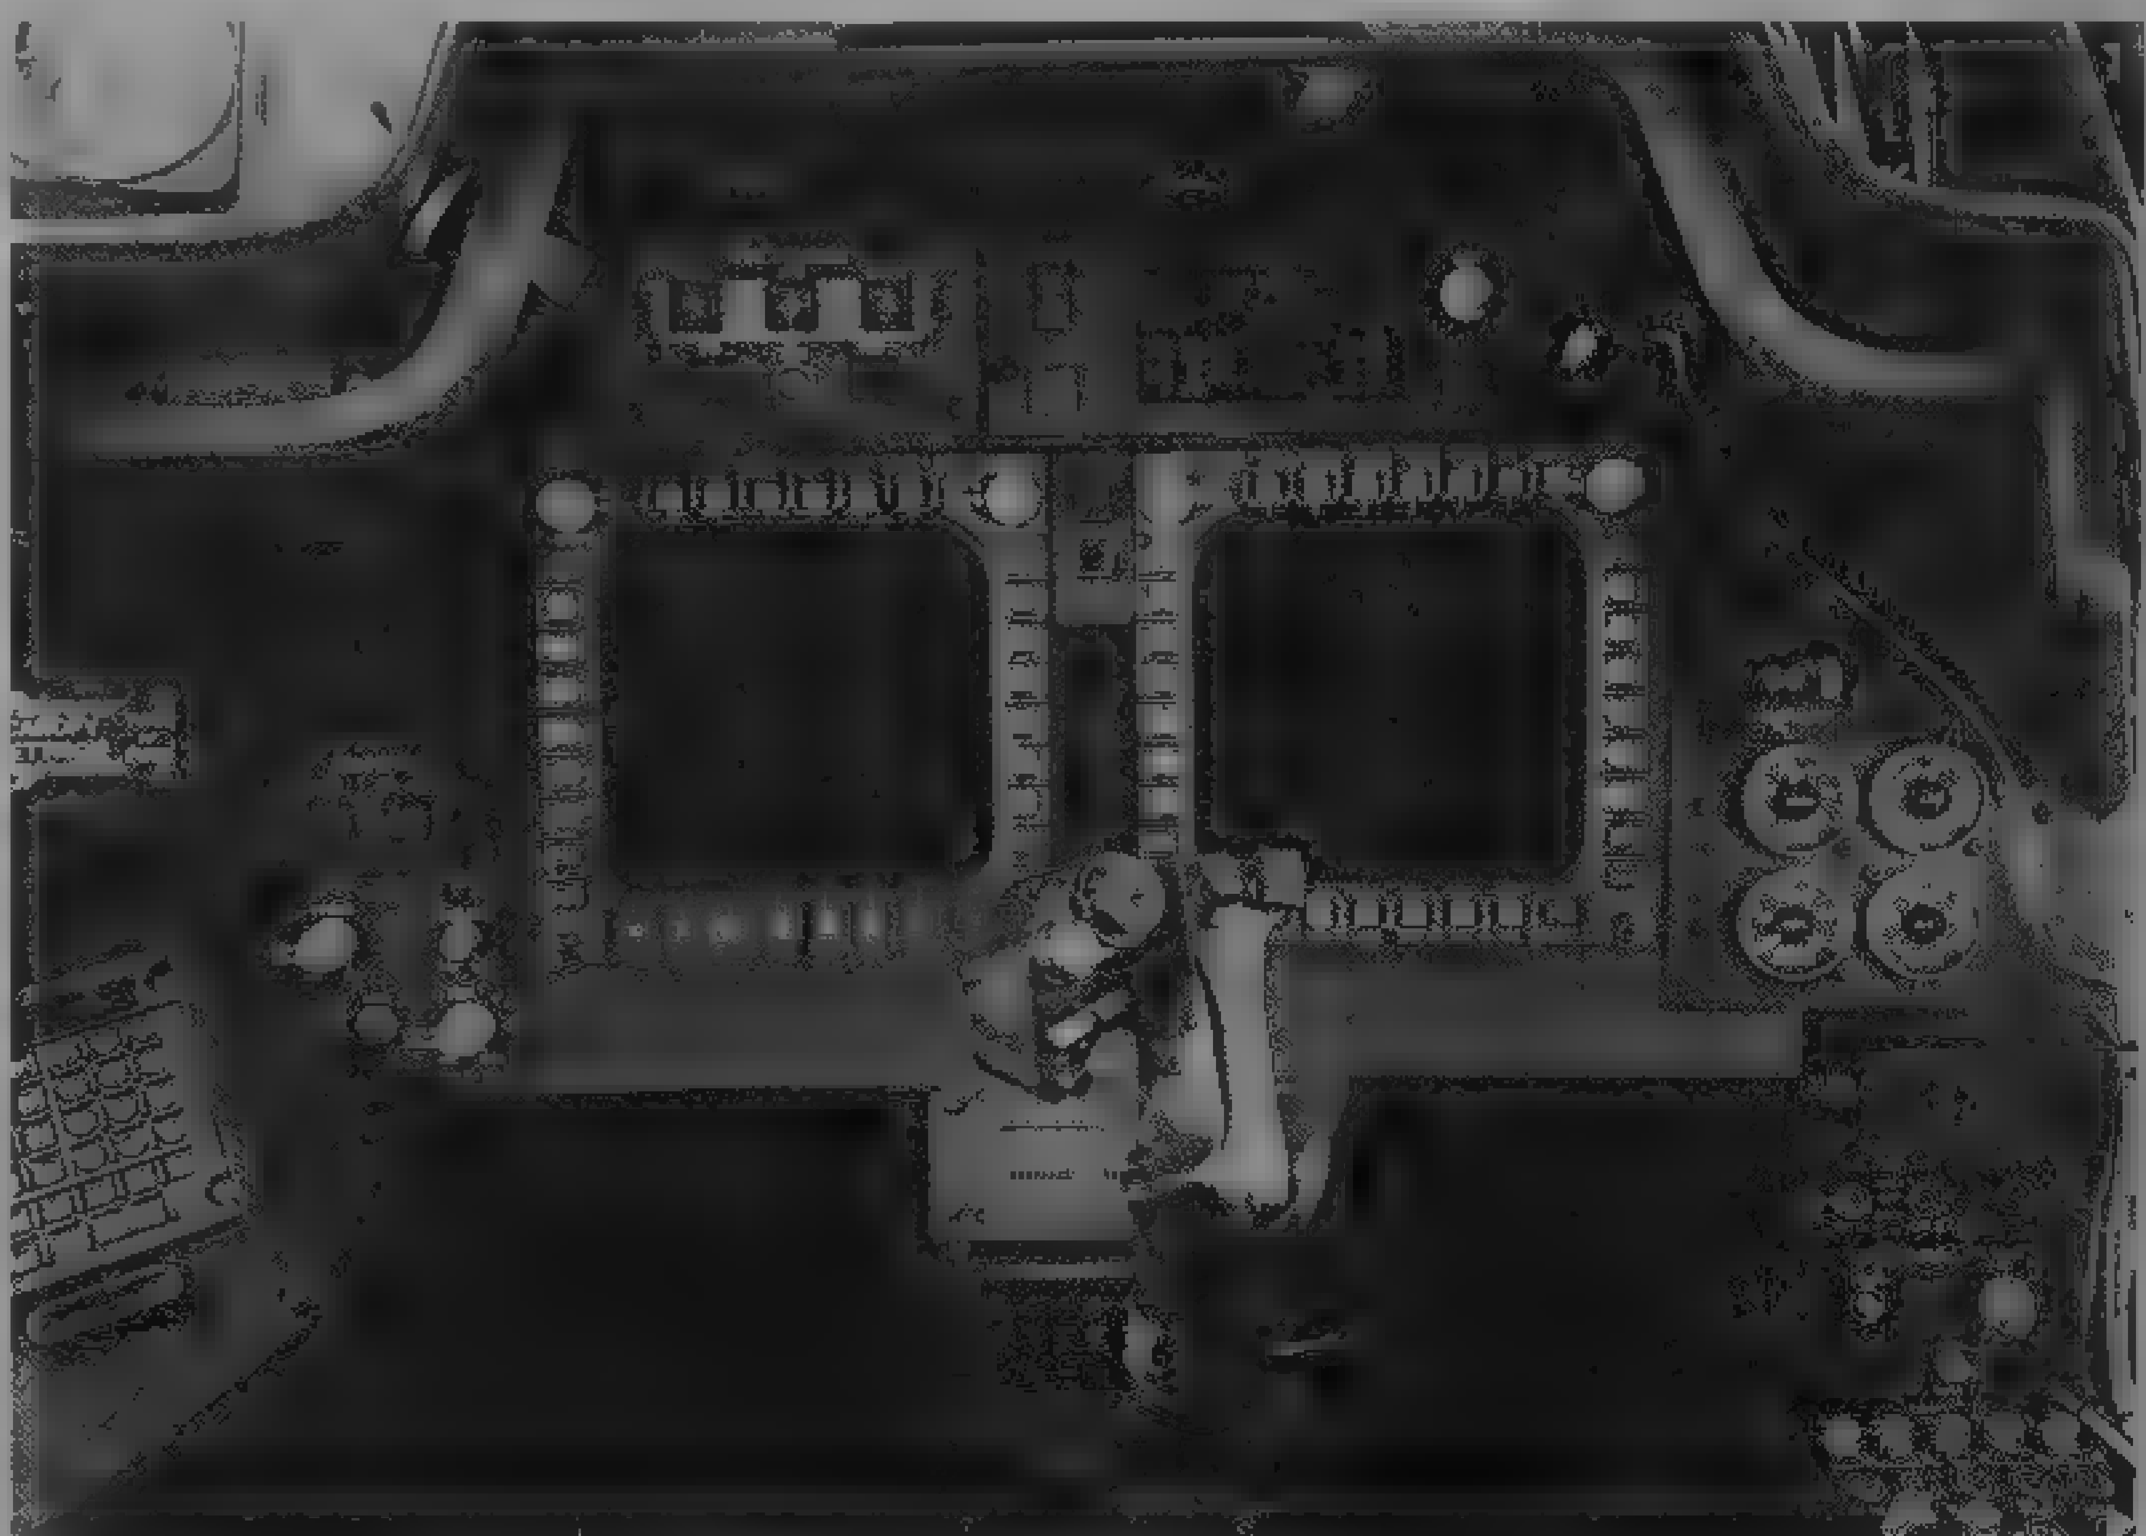
AVIONICS: *Comms:* AN/ARC-164 UHF, AN/ARC-186 UHF/VHF, retrofit of SINCGARS secure radio from 1993. KY-28/58/TSEC crypto secure voice, C 8157 secure voice control, AN/APX 100 IFF unit with KIT-1A secure encoding, Tempest C-10414 intercom

Radar: AH-64D Longbow Apache has Lockheed Martin Longbow mast-mounted 360° radar, presenting up to 256 targets on tactical situation display, detects air targets in air-to-ground mode; air-to-air mode for flying targets only

Flight: Plessey Electronic Systems AN/ASN-137 lightweight Doppler navigation system (upgrade to AN/ASN-157 on AH-64D), Litton LR 80 (AN/ASN 143) strapdown AHRS, AN/ARN-89B ADF, GPS retrofit from 1993, Honeywell digital automatic stabilisation equipment (DASE), Astronautics Corporation HSI, Pacer Systems omnidirectional, low-airspeed air data system, remote magnetic indicator, BITE fault detection and location. Doppler system, with AHRS, permits nap-of-the-earth navigation and provides data for storing target locations

Instrumentation: Honeywell all-raster symbology generator processes TV data from IR and other sensors, superimposes symbology, and distributes the combination to CRT and helmet-mounted displays. Honeywell AN/APN-209 radar altimeter video display unit, AH-64D with 'Manprint' (manpower integration) cockpit instrumentation including Litton Canada upfront display and two Bendix/King 15 × 15 cm (6 × 6 in) monochrome CRT displays. AH-64A's 1,200 cockpit switches reduced to approximately 200 on AH-64D

Mission: Lockheed Martin Orlando Aerospace target acquisition and designation sight and AN/AAQ-11 pilot's night vision sensor (TADS/PNVS) comprises two independently functioning, fully integrated systems mounted on nose



Pilot's cockpit on the AH-64D Apache

1995

TADS consists of a rotating turret (±120° in azimuth, ±30/-60° in elevation) housing sensor subsystems, optical relay tube in the CPG's cockpit, three electronic units in the avionics bay, and cockpit-mounted controls and displays, used principally for target search, detection and laser designation, with CPG as primary operator (can also provide back-up night vision to pilot in event of PNVS failure). Once acquired by TADS, targets can be tracked manually or automatically for autonomous attack with gun, rockets or Hellfire missiles. TADS daylight sensor consists of TV camera with narrow (0° 50′) and wide angle (4° 0′) fields of view, direct view optics (4° narrow and 18° wide angle), laser spot tracker, and International Laser Systems laser rangefinder/designator. Night sensor, in starboard half of turret, incorporates FLIR sight with narrow, medium and wide angle (3° 6′, 10° 6′ and 50°) fields of view.

PNVS consists of FLIR sensor (30 × 40° field of view) in rotating turret (±90° in azimuth, +20/−45° in elevation) mounted above TADS, electronic unit in the avionics bay, and pilot's display and controls, provides pilot with thermal imaging for nap-of-the-earth flight to, from and within battle area at night or in adverse daytime weather, at altitudes low enough to avoid detection. PNVS imagery displayed on monocle in front of one of pilot's eyes, flight information including airspeed, altitude and heading is superimposed on this imagery to simplify piloting. Monocle is part of Honeywell integrated helmet and display sighting system (HADSS) worn by both crew members. Retrofit of Rockwell Collins Automatic Target Handover System in AH-64A, transmits 1,200 bits/s. AH-64D to have Symetrics Industries improved data modem for transmission of target data (and eventually real time imagery) between helicopters, tactical jet, Joint-STARS airborne command posts, HQs and ground units at 16,000 bits/s, plus radio frequency interferometer beneath radome for identification of hostile transmitters.

Self defence: Aircraft survivability equipment (ASE) consists of Aerospace Avionics AN/APR-39 passive RWR, Sanders AN/ALQ-144 IR jammer, AN/AVR-2 laser warning receiver, AN/ALQ-136 radar jammer and chaff dispensers.

ARMAMENT: McDonnell Douglas M230 Chain Gun 30 mm automatic cannon, located between the mainwheel legs in an underfuselage mounting with Smiths Industries electronic controls. Normal rate of fire is 625 rds/min of HE or HEDP (high-explosive dual purpose) ammunition, which is interoperable with NATO Aden/DEFA 30 mm ammunition. Maximum ammunition load is 1,200 rounds. New 'Sideloader' system demonstrated June 1994, cuts normal loading time of 20 minutes by up to half and reduces number of personnel required from two to one; under US Army consideration for fleetwide adoption. Gun mounting is designed to collapse into fuselage between pilots in the event of a crash landing. Four underwing hardpoints, with Aircraft Hydro-Forming pylons and ejector units, on which can be carried up to 16 Hellfire anti-tank missiles or up to seventy-six 2.75 in FFAR (folding fin aerial rockets) in their launchers or a combination of Hellfires and FFAR. Planned modification adds two extra hardpoints for four Stinger, four Mistral or two Sidewinder (including Sidearm anti-radiation variant) missiles. Hellfire remote electronics by Rockwell, Bendix aerial rocket control system, multiplex (MUX) system units by Honeywell. Co-pilot/gunner (CPG) has primary responsibility for firing gun and missiles, but pilot can override his controls to fire gun or launch missiles.

AH-64A Apaches for the United Arab Emirates await delivery at Mesa

1995

DIMENSIONS, EXTERNAL:

Main rotor diameter	14.63 m (48 ft 0 in)
Main rotor blade chord	0.53 m (1 ft 9 in)
Tail rotor diameter	2.79 m (9 ft 2 in)
Length overall: tail rotor turning	15.54 m (51 ft 0 in)
both rotors turning	17.76 m (58 ft 3¼ in)
Wing span: clean	5.23 m (17 ft 2 in)
over empty weapon racks	5.82 m (19 ft 1 in)
Height: over tailfin	3.55 m (11 ft 7½ in)
over tail rotor	4.30 m (14 ft 1¼ in)
to top of rotor head	3.84 m (12 ft 7 in)
overall (top of air data sensor)	4.66 m (15 ft 3½ in)
overall, AH-64D	4.95 m (16 ft 3 in)
Main rotor ground clearance (turning)	3.59 m (11 ft 9¼ in)
Distance between c/l of pylons:	
inboard pair	3.20 m (10 ft 6 in)
outboard pair	4.72 m (15 ft 6 in)
Tailplane span	3.40 m (11 ft 2 in)
Wheel track	2.03 m (6 ft 8 in)
Wheelbase	10.59 m (34 ft 9 in)

AREAS:

Main rotor disc	168.11 m² (1,809.5 sq ft)
Tail rotor disc	6.13 m² (66.0 sq ft)

WEIGHTS AND LOADINGS:

Weight empty: AH-64A	5,165 kg (11,387 lb)
AH-64D	5,352 kg (11,800 lb)
Max fuel weight: internal	1,108 kg (2,442 lb)
external (four Brunswick tanks)	2,712 kg (5,980 lb)
Structural design gross weight	6,650 kg (14,660 lb)
Primary mission gross weight	6,552 kg (14,445 lb)
Design mission gross weight	8,006 kg (17,650 lb)
Max T-O weight: -701 engine	9,525 kg (21,000 lb)
701C engine, ferry mission, full fuel	10,107 kg (22,283 lb)
Max disc loading	60.12 kg/m² (12.31 lb/sq ft)

PERFORMANCE (A: AH-64A at 6,552 kg, 14,445 lb AUW with 701 engines, B: AH-64A with -701C engines, L: Longbow Apache at 7,480 kg, 16,491 lb with -701C engines, ISA except where indicated):

Never exceed speed (VNE)	197 kts (365 km/h, 227 mph)
Max level and max cruising speed: A	158 kts (293 km/h, 182 mph)
L	141 kts (261 km/h, 162 mph)
Max rate of climb at S/L: B	990 m (3,240 ft)/min
L	942 m (3,090 ft)/min
Max vertical rate of climb at S/L:	
A	762 m (2,500 ft)/min
B	771 m (2,530 ft)/min
L	474 m (1,555 ft)/min
Service ceiling: A	6,400 m (21,000 ft)
Service ceiling, OEI: A	3,290 m (10,800 ft)
B	3,800 m (12,480 ft)
Hovering ceiling:	
IGE: A	4,570 m (15,000 ft)
B	5,245 m (17,210 ft)
L	4,115 m (13,500 ft)
OGE: A	3,505 m (11,500 ft)
B	4,125 m (13,530 ft)
L	2,990 m (9,810 ft)
Max range, internal fuel (30 min reserves):	
A	260 n miles (482 km, 300 miles)
B	220 n miles (407 km, 253 miles)
L	220 n miles (407 km, 253 miles)
Ferry range, max internal and external fuel, still air, 45 min reserves	1,024 n miles (1,899 km, 1,180 miles)
Endurance at 1,220 m (4,000 ft) at 35°C	1 h 50 min
Max endurance, internal fuel	3 h 9 min
g limits at low altitude and airspeeds up to 164 kts (304 km/h, 189 mph)	+3.5/−0.5

WEIGHTS FOR TYPICAL MISSION PERFORMANCE (A: anti-armour at 1,220 m/4,000 ft and 35°C, four Hellfire and 320 rounds of 30 mm ammunition, B: as A, but with 1,200 rounds, C: as A, but with six Hellfire and 540 rounds, D: anti-armour at 610 m/2,000 ft and 21°C, 16 Hellfire and 1,200 rounds, E: air cover at 1,220 m/4,000 ft and 35°C, four Hellfire and 1,200 rounds, F: as E but at 610 m/2,000 ft and 21°C, four Hellfire, 19 rockets, 1,200 rounds, G: escort at 1,220 m/4,000 ft and 35°C, 19 rockets and 1,200 rounds, H: escort at 610 m/2,000 ft and 21°C, 38 rockets and 1,200 rounds):

Mission fuel: A	727 kg (1,602 lb)
G	741 kg (1,633 lb)
E	745 kg (1,643 lb)
C	902 kg (1,989 lb)
B	1,029 kg (2,269 lb)
D	1,063 kg (2,344 lb)
H	1,077 kg (2,374 lb)
F	1,086 kg (2,394 lb)
Mission gross weight: A	6,552 kg (14,445 lb)
E	6,874 kg (15,154 lb)
G	6,932 kg (15,282 lb)
B, C	7,158 kg (15,780 lb)
D	7,728 kg (17,038 lb)
F	7,813 kg (17,225 lb)
H	7,867 kg (17,343 lb)

TYPICAL MISSION PERFORMANCE (A-H as above):

Cruising speed at intermediate rated power:	
C	147 kts (272 km/h, 169 mph)
D	148 kts (274 km/h; 170 mph)
F	150 kts (278 km/h, 173 mph)
B	151 kts (280 km/h, 174 mph)
E, H	153 kts (283 km/h; 176 mph)
A	154 kts (285 km/h; 177 mph)
G	155 kts (287 km/h, 178 mph)
Max vertical rate of climb at intermediate rated power:	
B, C	137 m (450 ft)/min
H	238 m (780 ft)/min
F, G	262 m (860 ft)/min
E	293 m (960 ft)/min
D	301 m (990 ft)/min
A	448 m (1,470 ft)/min
Mission endurance (no reserves): A, E, G	1 h 50 min
C	1 h 47 min
D, F, H	2 h 30 min
B	2 h 40 min

1995

UPDATED

McDonnell Douglas MD 530F Lifter of the Mexican Air Force

1995

MCDONNELL DOUGLAS MD 500/530

TYPE: Single-engined utility helicopter.

PROGRAMME: See earlier *Jane's* for MD 500D and previous versions. First flight MD 500E (N5294A) 28 January 1982, first flight MD 530F, 22 October 1982.

CURRENT VERSIONS: **MD 500E**: Replaced MD 500D in production 1982; deliveries started December 1982. Allison 250-C20R became optional replacement for standard 250-C20B in late 1988; window area of forward canopy increased in 1991 model. MD 500E introduced many cabin improvements including more space for front and rear seat occupants, lower bulkhead between front and rear seats, T tail and optional four-blade Quiet Knight tail rotor.

MD 530F Lifter: Powered by Allison 250-C30; transmission rating increased from 280 kW (375 shp) to 317 kW (425 shp) from 11 July 1985; diameter of main rotor increased by 0.3 m (1 ft 0 in) and of tail rotor by 5 cm (2 in); cargo hook kit for 907 kg (2,000 lb) external load available, certificated 29 July 1983; first delivery 20 January 1984. *Detailed description applies to MD 500E and 530F except where indicated.*

MD 500/530 Defender: Described separately.

CUSTOMERS: More than 4,630 MD 500/530 series produced by late 1994; 33 MD 500E/530F/520N series helicopters delivered in 1994.

COSTS: Typical MD 500E $700,000; MD 530F $968,000.

DESIGN FEATURES: Fully articulated five-blade main rotor with blades retained by stack of laminated steel straps; blades can be folded after removing retention pins; two-blade tail rotor with optional X pattern four-blade Quiet Knight tail rotor to reduce external noise; optional high skid landing gear to protect tail rotor in rough country; protective skid on base of lower fin; narrow-chord fin with high-set tailplane and endplate fins introduced with MD 500D. Main rotor rpm (500E/530F) 492/477 normal; main rotor tip speed 207 to 208 m (680 to 684 ft)/s; tail rotor rpm 2,933/2,848.

FLYING CONTROLS: Plain mechanical without hydraulic boost. Pilot sits on left instead of normal right-hand seating.

STRUCTURE: A-frame based on two A frames from rotor head to landing gear legs, enclosing rear seat occupants; front seat occupants protected within straight line joining rotor hub and forward tips of landing skids; engine mounted inclined in rear of fuselage pod, with access through clam shell doors; main rotor blades have extruded aluminium spar hot-bonded to wraparound aluminium skin; tail rotor blades have swaged tubular spar and metal skin.

LANDING GEAR: Tubular skids carried on McDonnell Douglas oleo-pneumatic shock absorbers. Utility floats, snow skis and emergency inflatable floats optional.

POWER PLANT: MD 500E powered by 313 kW (420 shp) Allison 250-C20B or 335.6 kW (450 shp) 250-C20R turboshaft, derated in both cases to 280 kW (375 shp) for T-O; maximum continuous rating 261 kW (350 shp). MD 530F has 485 kW (650 shp) Allison 250-C30 turboshaft, derated to 317 kW (425 shp) for take-off and 261 kW (350 shp) maximum continuous.

MCP transmission rating 261 kW (350 shp); improved, heavy-duty transmission, rating 447 kW (600 shp), derated to 280 kW (375 shp) on production aircraft from June 1995. Two interconnected bladder fuel tanks with combined usable capacity of 232 litres (61.3 US gallons, 51 Imp gallons). Self sealing fuel tank optional. Refuelling point on starboard side of fuselage. Auxiliary fuel system, with 79.5 litre (21 US gallon, 17.5 Imp gallon) internal tank, available optionally. Oil capacity 5.7 litres (1.5 US gallons, 1.2 Imp gallons). Greater capacity internal fuel tanks also available.

ACCOMMODATION: Forward bench seat for pilot and two passengers, with two or four passengers, or two litter patients and one medical attendant, in rear portion of cabin. Low-back front seats and individual rear seats with fabric or leather upholstery, optional. Baggage space capacity 0.3 m³ (... cu ft) under and behind rear seat in five-seat form. Clear space for 1.19 m³ (42 cu ft) of cargo or baggage with only three front seats in place. Two doors on each side. Interior soundproofing optional.

SYSTEMS: Aero Engineering Corporation air conditioning system or Fargo pod-mounted air conditioner optional.

AVIONICS (MD 500E): Optional avionics listed below.

Comms: Dual Bendix/King KY 195 or Collins VHF-251 transceivers, Bendix/King KT 76 or Collins TDR-950 transponder, intercom system, headsets, microphones, and public address system.

Flight: Dual Bendix/King KX 175 or Collins VHF-251/231 nav receivers, latter with IND-350 nav indicator. Bendix/King KR 85 or Collins ADF 650 ADF.

EQUIPMENT: Standard equipment includes basic VFR instruments and night flying lighting. Optional equipment includes shatterproof glass, heating/demisting system, radios and intercom, attitude and directional gyros, rate of climb indicator, nylon mesh seats, dual controls, cargo hook, cargo racks, underfuselage cargo pod, heated pitot tube, extended landing gear, blade storage rack, litter kit, emergency inflatable floats, inflated utility floats, FLIR radar and 30 Mcd Spectrolab SX-16 Nightsun searchlight.

DIMENSIONS, EXTERNAL:
Main rotor diameter: 500E 8.05 m (26 ft 5 in)
530F 8.33 m (27 ft 4 in)
Main rotor blade chord 0.171 m (6¾ in)
Tail rotor diameter: 500E 1.37 m (4 ft 6 in)
530F 1.42 m (4 ft 8 in)
Distance between rotor centres:
500E 4.67 m (15 ft 4 in)
530F 4.88 m (16 ft 0 in)
Length overall, rotors turning:
500E 8.61 m (28 ft 3 in)
530F 8.97 m (29 ft 5 in)
Length of fuselage 7.49 m (24 ft 7 in)
Height to top of rotor head (standard skids; for extended skids add 0.27 m, 11¼ in) 2.67 m (8 ft 9 in)
Tailplane span 1.65 m (5 ft 5 in)
Skid track (standard) 1.91 m (6 ft 3 in)
Cabin doors (each): Height 1.13 m (3 ft 8½ in)
Max width 0.76 m (2 ft 6 in)
Height to sill: 500E 0.79 m (2 ft 7 in)
530F 0.76 m (2 ft 6 in)
Cargo compartment doors (each):
Height 1.12 m (3 ft 8¼ in)
Width 0.88 m (2 ft 10½ in)
Height to sill: 500E 0.71 m (2 ft 4 in)
530F 0.66 m (2 ft 2 in)

DIMENSIONS, INTERNAL:
Cabin: Length 2.44 m (8 ft 0 in)
Max width 1.31 m (4 ft 3½ in)
Max height 1.52 m (5 ft 0 in)

AREAS:
Main rotor blades (each): 500E 0.62 m² (6.67 sq ft)
530F 0.65 m² (6.96 sq ft)
Tail rotor blades (each): 500E 0.063 m² (0.675 sq ft)
530F 0.066 m² (0.711 sq ft)
Main rotor disc: 500E 50.89 m² (547.81 sq ft)
530F 54.58 m² (587.50 sq ft)
Tail rotor disc: 500E 1.53 m² (16.47 sq ft)
530F 1.65 m² (17.72 sq ft)
Fin 0.56 m² (6.05 sq ft)
Tailplane 0.76 m² (8.18 sq ft)

WEIGHTS AND LOADINGS:
Weight empty: 500E 655 kg (1,445 lb)
530F 717 kg (1,580 lb)
Max normal T-O weight: 500E 1,361 kg (3,000 lb)
530F 1,406 kg (3,100 lb)
Max overload T-O weight:
500E, 530F 1,610 kg (3,550 lb)
Max T-O weight, external load:
530F 1,701 kg (3,750 lb)
Max normal T-O disc loading:
500E 26.76 kg/m² (5.48 lb/sq ft)
530F 25.78 kg/m² (5.28 lb/sq ft)
Max normal T-O power loading (from June 1995):
500E, 530F 4.87 kg/kW (8.00 lb/shp)

PERFORMANCE (at max normal T-O weight, ISA, except where indicated):
Never-exceed speed (VNE) at S/L:
500E, 530F 152 kts (282 km/h; 175 mph)
Max cruising speed at S/L:
500E 134 kts (248 km/h; 154 mph)
530F 133 kts (246 km/h; 153 mph)
Max cruising speed at 1,525 m (5,000 ft):
500E 132 kts (245 km/h; 152 mph)
530F 134 kts (248 km/h; 154 mph)

McDonnell Douglas MD 500E five/seven-seat utility and executive helicopter

1993

Econ cruising speed at S/L:
500 E 129 kts (239 km/h; 149 mph)
530 F 131 kts (243 km/h; 151 mph)
Econ cruising speed at 1,525 m (5,000 ft):
500E, 530F 123 kts (228 km/h; 142 mph)
Max rate of climb at S/L: 500E 536 m (1,760 ft)/min
530 F 631 m (2,070 ft)/min
Vertical rate of climb at S/L: 500E 248 m (813 ft)/min
530 F 446 m (1,462 ft)/min
Service ceiling: 500E 4,575 m (15,000 ft)
530 F 4,875 m (16,000 ft)
Hovering ceiling IGE: ISA: 500E 2,590 m (8,500 ft)
530 F 4,360 m (14,300 ft)
ISA+20°C: 500E 1,830 m (6,000 ft)
530 F 3,660 m (12,000 ft)
Hovering ceiling OGE: ISA: 500E 1,830 m (6,000 ft)
530 F 3,660 m (12,000 ft)
ISA+20°C: 500E 975 m (3,200 ft)
530 F 2,970 m (9,750 ft)
Range, 2 min warm-up, standard fuel, no reserves:
500 E at S/L 233 n miles (431 km; 268 miles)
530 F at S/L 202 n miles (374 km; 232 miles)
500 E at 1,525 m (5,000 ft)
258 n miles (478 km; 297 miles)
530 F at 1,525 m (5,000 ft)
228 n miles (422 km; 262 miles)

UPDATED

MCDONNELL DOUGLAS 500/530 DEFENDER

US Army designations: AH-6, EH-6, MH-6

TYPE: Military derivatives of MD 500/530.

PROGRAMME: Earlier 500MD Scout Defender, TOW Defender, 500MD/ASW Defender and 500MD Defender II described in 1987-88 and earlier *Jane's*. Except for TOW Defender, military Defenders have same airframe as current civil 500/530; versions available detailed below.

CURRENT VERSIONS: **500MG Defender:** As 530MG, but with 313 kW (420 shp) Allison 250-C20B and MD 500E rotor system.

TOW Defender: Retains round nose of earlier MD 500. M65 TOW sight in nose; carries four TOW missiles; available with Allison 250-C20B, 250-C20R or 250-C30.

Paramilitary MG Defender: Introduced July 1985 as low-cost helicopter suitable for police, border patrol, rescue, narcotics control and internal security use; available in either 500E or 530F configurations.

530MG Defender: Based on MD 530F Lifter, first flight of prototype/demonstrator (N530MG) 4 May 1984, designed mainly for point attack and anti-armour, but also suitable for scout, day and night surveillance, utility, cargo lift and light attack. Integrated crew station with multifunction display allows hands on lever and stick (HOLAS) control of weapon delivery, communications and flight control. HOLAS based on Racal RAMS 3000, designed for all-weather and NOE flight and connected to MIL-STD-1553B digital databus linking the processor interface unit (PIU), control and display unit (CDU) and data transfer unit (DTU). CDU used for flight planning, navigation, frequency selection and subsystem management and has its own monochrome display and keyboard; multifunction display is high-definition monochrome tube with symbolic and alphanumeric capability; data input to DTU using ground loader unit inserted in cockpit receptacle.

Other equipment includes Astronics Corporation autopilot, Decca Doppler navigator with Racal Doppler velocity sensor, GEC-Marconi FIN 1110 AHRS, twin Collins VHF/UHF AM/FM radios; Bendix/King HF radio, ADF/VOR, radar altimeter and transponder; Telephonics intercom; SFENA attitude indicator. Options include mast-mounted Hughes TOW sight, FLIR, RWR, IFF, GPWS and laser ranger.

McDonnell Douglas 530MG Defender equipped with TOW missile tubes and nose-mounted Hughes M65 sight

1995

One of two new-build McDonnell Douglas MH-6Hs of the US Army's 160th Special Operations Aviation Regiment

1995

Weapons qualified or tested include TOW 2, FN Herstal pods containing 7.62 mm or 0.50 in machine guns, and 2.75 in rockets in seven- or 12-tube launchers, stores attached by standard 14 in NATO racks. Future armament will include General Dynamics air-to-air Stinger and 7.62 mm McDonnell Douglas Chain Gun. Chaff and flare dispensers with automatic chaff discharge available. Both cyclic sticks have triggers for gun or rocket firing; co-pilot/gunner's visual image display has two handgrips for TOW/FLIR operation.

Nightfox: Introduced 1986 for low-cost night surveillance and military operations, equipment includes FLIR Systems Series 2000 thermal imager and night vision goggles, with same weapons as 530MG; available in both 500MG and 530MG forms.

Following versions of H-6 have been used by the US Army's 160th Special Operations Aviation Regiment at Fort Campbell, Kentucky:

EH-6B: Four conversions of OH-6A, two to AH-6C, two to MH-6B.

MH-6B: Twenty-four conversions of OH-6A, plus two from EH-6B, four to AH-6C, 10 survivors sold in 1991-92.

AH-6C: Eleven conversions of OH-6A, plus six from EH/MH-6. Six lost, others remain.

MH-6C: Three conversions of OH-6A, all remain.

EH-6E: Three new-build, all to MH-6H.

MH-6E: Fifteen new-build, 10 to MH-6H, two to MH-6J, one lost.

AH-6F: Eight new-build, six to AH-6G, two lost.

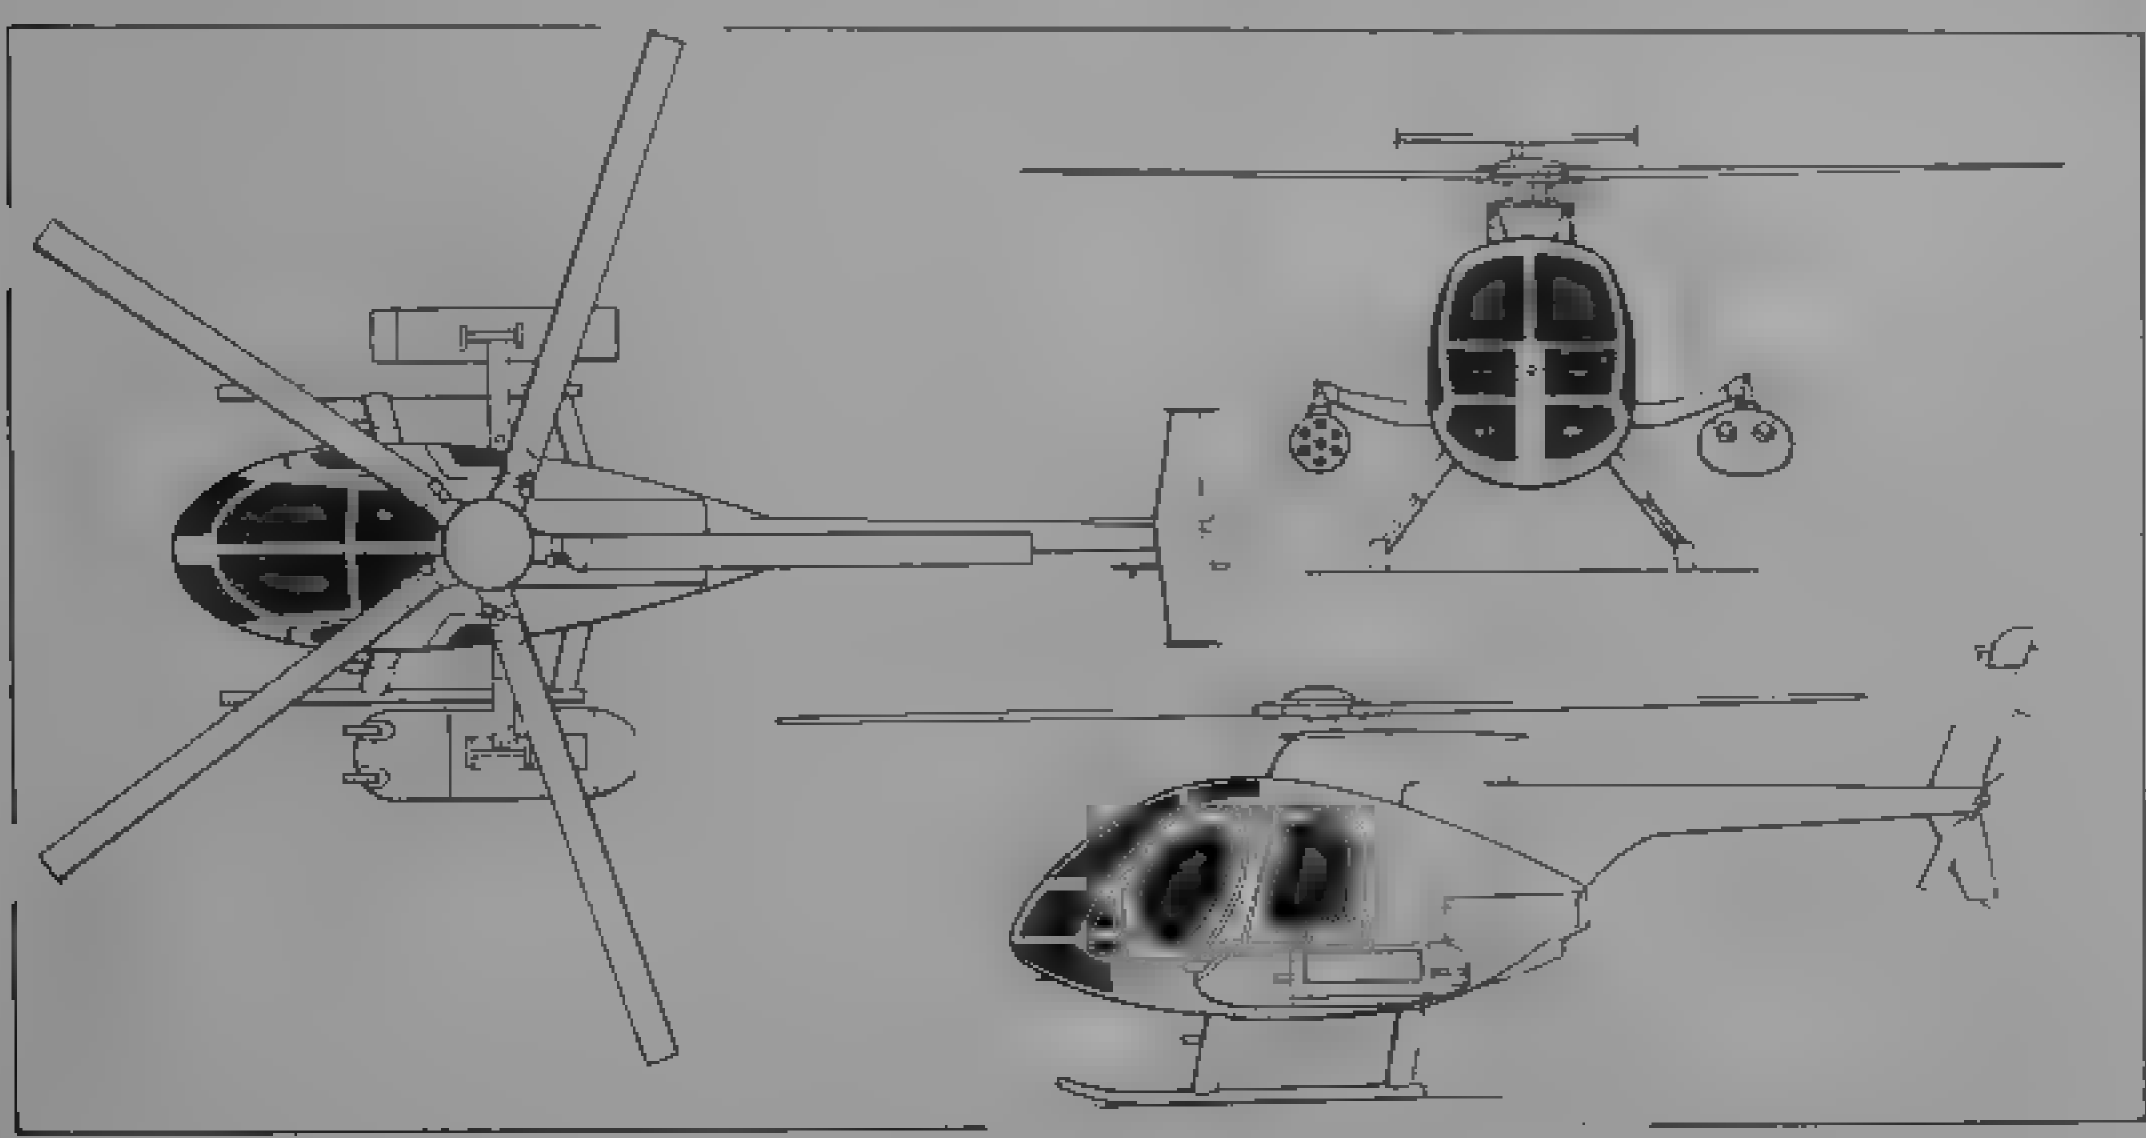
AH-6G: Four new-build, plus six from AH-6F.

MH-6H: Two new-build (FY85) equivalent of MD 530F, plus 13 conversions from EH/MH-6E; two to MH-6J, two lost.

AH-6J: Twenty or more new-build from FY88-91 procurement. In service by mid-1992, four or more converted from MH-6E/H, NOTAR tail configuration.

MH-6J: Small number funded in FY90-91, NOTAR tail configuration.

AH-6F and MH-6E based on MD 500MG; AH-6G and MH-6F/H based on MD 530MG, all can carry 7.62 mm



McDonnell Douglas 530MG Defender, with seven-tube rocket launcher and FN Herstal gun pod *(Jane's/Dennis Punnett)*

1985

Minigun, machine gun and rocket pods, with provision for air-to-air Stinger. MH-6E, MH-6F and MH-6H have multifunction displays and FLIR used in association with night vision goggles.

Re-equipment of 160th SOAR with NOTAR variant officially began with four conversions and two new AH-6/MH-6s, of which first pair formally delivered on 1 July 1992. Programme of 39 conversions cancelled soon afterwards. Meanwhile, up to 30 new-build H-6Js delivered in 1991-92 to unannounced orders; serial numbers include 88-25349 to '357, 89-25351 to '356, 90-25357 to '363 and 92-25364 to '366, all allegedly NOTAR; however 160th reportedly received only small number of NOTAR helicopters before returning these to manufacturer in early 1995 because improved acoustic signature outweighed by decrease in lift capability. AH-6J/MH-6J have common avionics and multirole capability with AH-6G armed version and MH-6H personnel transport. Folding tailboom for compact air transport. M134 7.62 mm Minigun; BEI Hydra 70 mm rocket pods, Aerocrafter 0.5 in machine gun pods. Optional Litton AIM-1 laser marker, Hughes AN/AAQ-16 FLIR. Optional cabin fuel tanks, capacity 110 litres (29 US gallons, 24 Imp gallons) or 236 litres (62.5 US gallons, 52 Imp gallons). Bendix/King KNS600 FMS, Omega/VLF, Tacan, VOR, GPS, Honeywell AN/APN-209 radar altimeter.

CUSTOMERS: Operated by US Army (as detailed above) and also by Colombia (six 500MG and three 530MG delivered from 1986) and Philippines (22 520MGs from October 1990, plus six in 1992 and five ordered in 1993). Earlier Model 500s in military service with Argentina (500D/M), Colombia (500D/E), Iraq (500D), Israel (500MD), Kenya (500D/M/MD/ME), North Korea (500D/E) and South Korea (500MD). OH-6 and civilian standard Model 500/530 in other air arms. See also Korean Airlines entry in 1994-95 *Jane's* for co-developed 520MK Black Tiger (non-NOTAR version of 500/530, despite designation).

AVIONICS: See Current Versions.

ARMAMENT: See Current Versions.

DIMENSIONS, EXTERNAL:

As for 500E/530F except:

Length of fuselage: 500MD/TOW	7.62 m (25 ft 0 in)
530MG	7.29 m (23 ft 11 in)
Height to top of rotor head:	
500MD/TOW	2.64 m (8 ft 8 in)
530MG	2.62 m (8 ft 7 in)
530MG with MMS	3.41 m (11 ft 2¼ in)
Height over tail (endplate fins):	
500MD/TOW	2.71 m (8 ft 10½ in)
530MG	2.59 m (8 ft 6 in)
Width over skids: 500MD/TOW	1.93 m (6 ft 4 in)
530MG	1.96 m (6 ft 5 in)
Width over TOW pods: 500MD/TOW, 530MG	3.23 m (10 ft 7¼ in)
Tailskid ground clearance:	
500MD/TOW	0.64 m (2 ft 1¼ in)
530MG	0.61 m (2 ft 0 in)

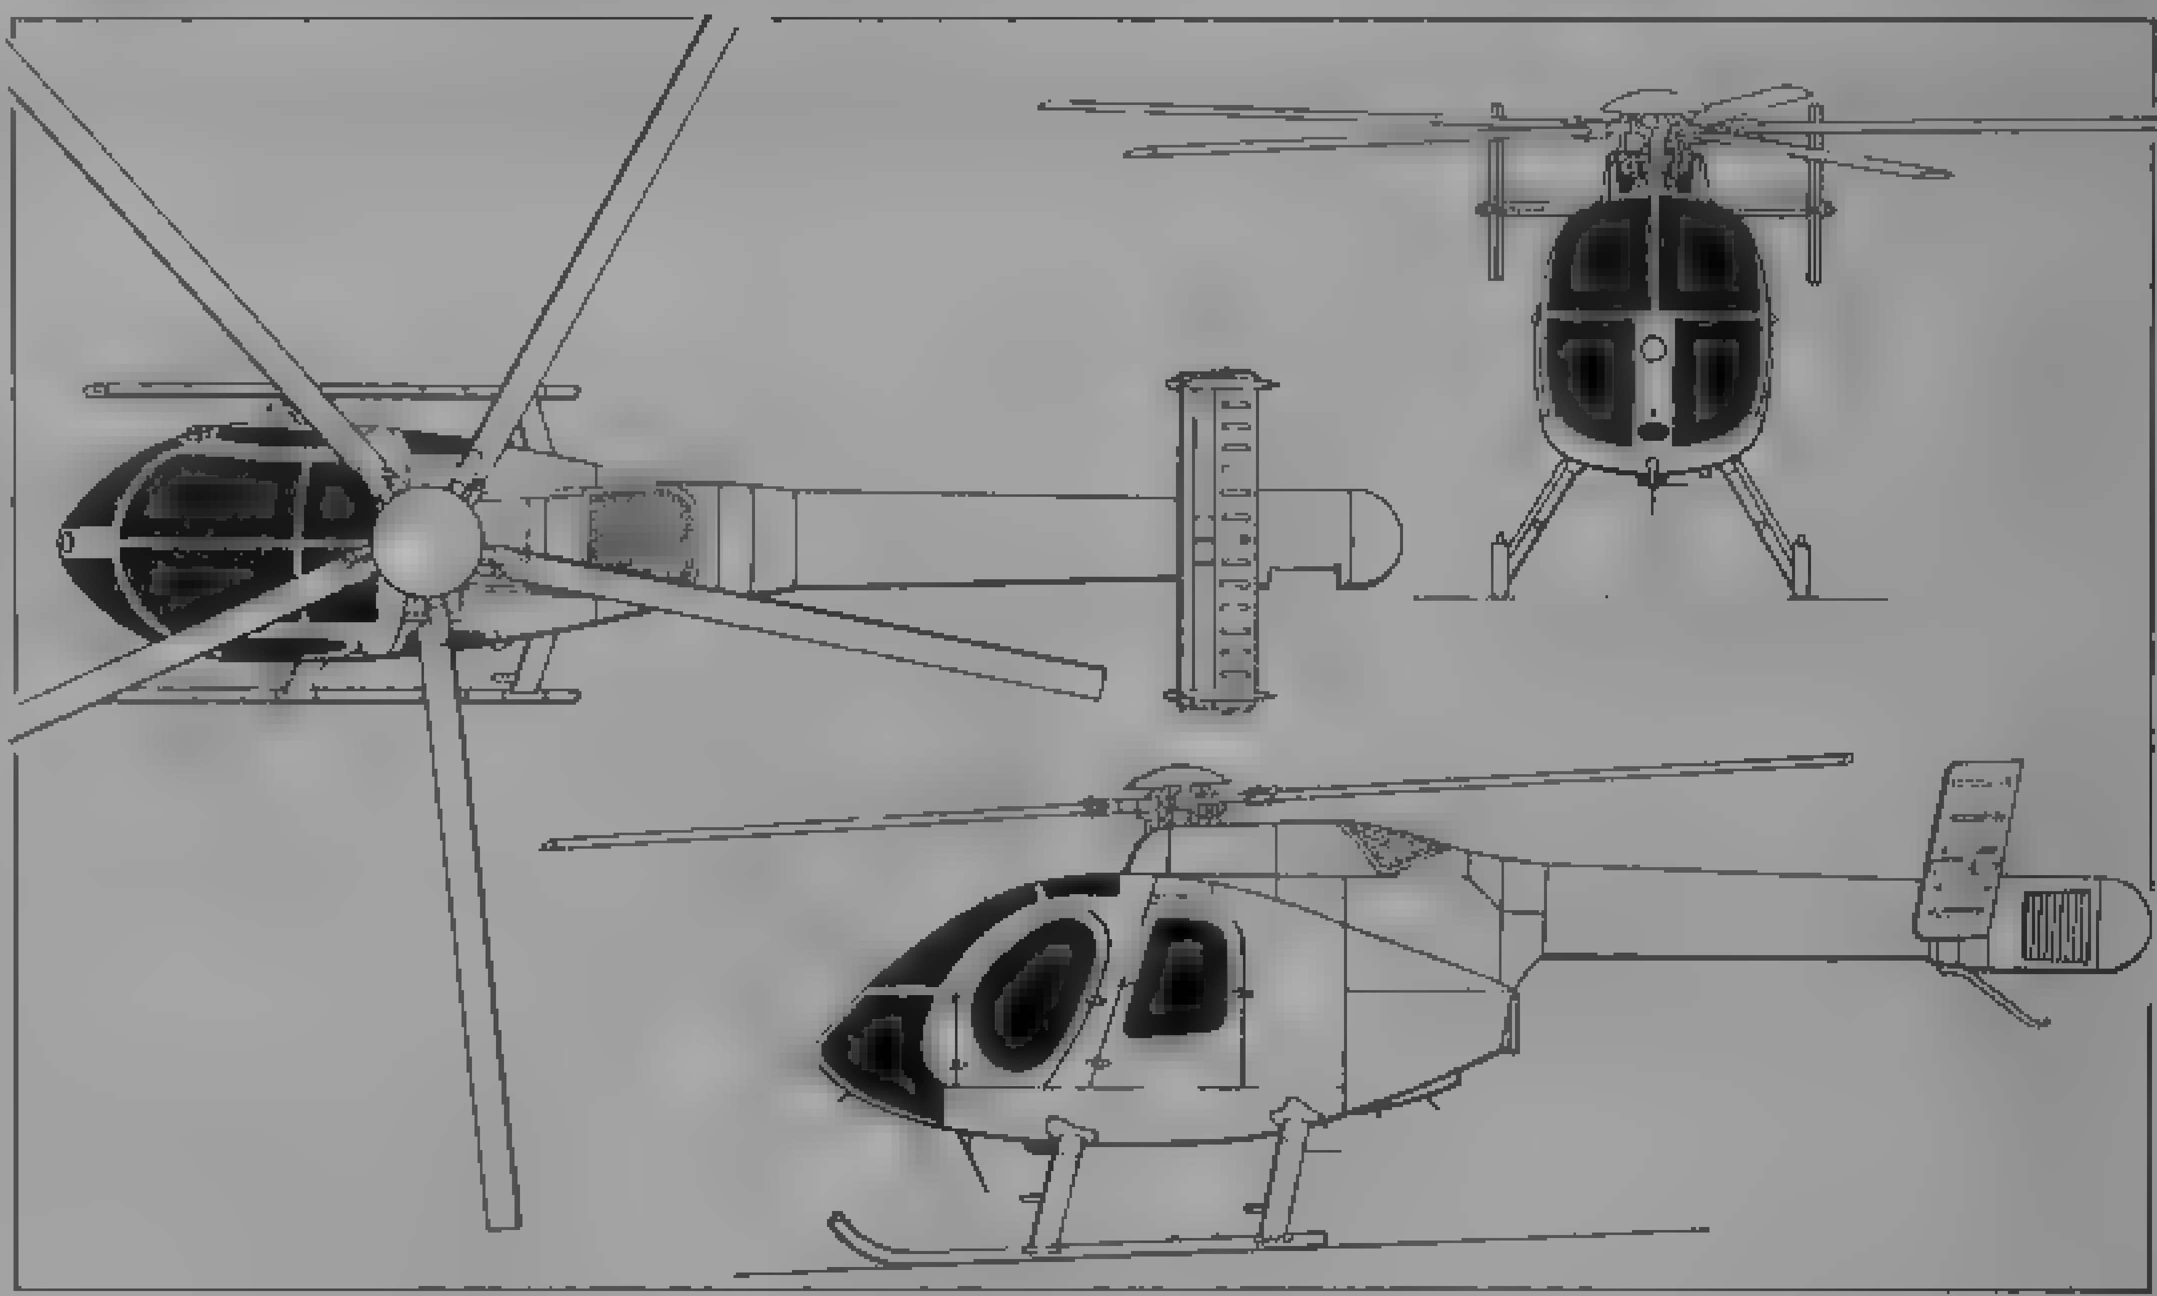
WEIGHTS AND LOADINGS:

Weight empty, equipped:	
500MD/TOW	849 kg (1,871 lb)
530MG	898 kg (1,979 lb)
Max T-O weight:	
500MD/TOW, normal	1,361 kg (3,000 lb)
500MD/TOW, max overload	1,610 kg (3,550 lb)
530MG, normal	1,406 kg (3,100 lb)
530MG, max overload	1,701 kg (3,750 lb)
Max disc loading:	
500MD/TOW	31.64 kg/m² (6.48 lb/sq ft)
530MG	31.16 kg/m² (6.38 lb/sq ft)

PERFORMANCE (at max normal T-O weight, except where indicated):

Never-exceed speed (VNE) at S/L:	
500MD/TOW, 530MG	130 kts (241 km/h; 150 mph)
Max cruising speed at S/L:	
500MD/TOW, 530MG	121 kts (224 km/h; 139 mph)
Max cruising speed at 1,525 m (5,000 ft):	
500MD/TOW	120 kts (222 km/h; 138 mph)
530MG	123 kts (228 km/h; 142 mph)
Max rate of climb at S/L, ISA:	
500MD/TOW	520 m (1,705 ft)/min
530MG	626 m (2,055 ft)/min
Vertical rate of climb at S/L:	
500MD/TOW	248 m (813 ft)/min
530MG	445 m (1,660 ft)/min
Service ceiling: 500MD/TOW	4,635 m (15,210 ft)
530MG	over 4,875 m (16,000 ft)
Hovering ceiling IGE:	
ISA: 500MD/TOW	2,590 m (8,500 ft)
530MG	4,360 m (14,300 ft)
ISA+20°C: 500MD/TOW	1,830 m (6,000 ft)
530MG	3,660 m (12,000 ft)
500MD/TOW, 35°C	1,340 m (4,400 ft)
530MG, 35°C	2,680 m (8,800 ft)
Hovering ceiling OGE:	
ISA: 500MD/TOW	1,830 m (6,000 ft)
530MG	3,660 m (12,000 ft)
ISA+20°C: 500MD/TOW	975 m (3,200 ft)
530MG	2,970 m (9,750 ft)
500MD/TOW, 35°C	732 m (2,400 ft)
530MG, 35°C	2,120 m (6,950 ft)

FLIR equipped McDonnell Douglas MD 520N in law enforcement configuration
1995



McDonnell Douglas MD 520N five-seat NOTAR helicopter *(Jane's/Mike Keep)*
1992

Range, 2 min warm-up, standard fuel, no reserves:	
500MD/TOW at S/L	203 n miles (376 km; 233 miles)
530MG at S/L	176 n miles (326 km; 202 miles)
500MD/TOW at 1,525 m (5,000 ft)	227 n miles (420 km; 261 miles)
530MG at 1,525 m (5,000 ft)	200 n miles (370 km; 230 miles)
Endurance with standard fuel, 2 min warm-up, no reserves:	
500MD/TOW at S/L	2 h 23 min
530MG at S/L	1 h 56 min
500MD/TOW at 1,525 m (5,000 ft)	2 h 35 min
530MG at 1,525 m (5,000 ft)	2 h 7 min

UPDATED

MCDONNELL DOUGLAS MD 520N

TYPE: Five-seat light utility helicopter with no tail rotor (NOTAR).

PROGRAMME: First flight OH-6A NOTAR testbed 17 December 1981; programme details in 1982-83 *Jane's*; extensive modifications during 1985 with second blowing slot, new fan, 250-C20B engine and MD 500E nose; flight testing resumed 12 March 1986 and completed in June, retired to US Army Aviation Museum, Fort Rucker, Alabama, October 1990. Commercial MD 520N and MD 530N NOTAR helicopters announced February 1988 and officially launched January 1989, to be powered by 335.6 kW (450 shp) 250-C20R-2 and 485 kW (650 shp) 250-C30 respectively; first flight of first MD 530N (N530NT) 29 December 1989, first flight 520N (N520NT) 1 May 1990 and first production 520N 28 June 1991; 520N certificated 13 September 1991, first production 520N (N521FB) delivered to Phoenix Police Department 31 October 1991. MD 520N set new Paris to London speed record in September 1992, at 1 hour 22 minutes 29 seconds. Now certificated in 21 countries. MD520N fleet had logged more than 45,000 flight hours by January 1995.

CURRENT VERSIONS: **MD 520N**: NOTAR version of MD 500, offering more power, higher operating altitude and greater maximum T-O weight than MD 500E. Transmission rating 280 kW (375 shp) for T-O, maximum continuous 261 kW (350 shp). Fuel capacity 235 litres (62 US gallons; 51.6 Imp gallons). *Description applies to this version.*

MD 530N: Company "has no plans" to certificate MD 530N; MD 520N fills most of its roles.

MD 600N: Stretched version, described separately.

MD 520N Defender: Military variant, being developed, including retrofit of some US Army AH/MH-6s as MH-6J (which see).

CUSTOMERS: Orders and options for more than 200 MD 520Ns, 70 delivered by January 1995. Recent customers include Los Angeles Country Sheriff's Department, which ordered nine in January 1995, three of which were delivered in June 1995, the remainder scheduled for delivery before end of 1996. By June 1995 more than 70 MD 520NS were in service with law enforcement agencies in Phoenix, Arizona, Burbank, Glendale, Huntington Beach, Ontario and San Jose, California, Hernando County, Florida, Hamilton County, Ohio, which has seven 520Ns; San Juan, Puerto Rico and Calgary, Alberta, Canada. Phoenix Police Department pioneered use of MD 520Ns for firefighting, using 341 litre (90 US gallon, 75 Imp gallon) 'Bambi' buckets to drop 151,416 litres (40,000 US gallons, 33,307 Imp gallons) of water on fires in remote desert and mountain areas.

COSTS: Original $2.2 million 24 month contract from US Army Applied Technology Laboratory and Defense Advanced Research Projects Agency (DARPA) for modification of OH-6A (65-12917). Typical cost of MD 520N $825,000.

DESIGN FEATURES: NOTAR (no tail rotor) system provides anti-torque and steering control without an external tail rotor, thus eliminating the danger of tail strikes; air emerging through Coanda slots and steering louvres is cool and at low velocity. Believed to be currently the quietest turbine helicopter, based on FAA certification test noise figures. Main rotor rpm 477, main rotor tip speed 208 m (684 ft)/s, NOTAR system fan rpm 5,388. Emergency floats among options.

McDonnell Douglas MD 530N Defender undergoing flight testing near Mesa, Arizona

1995

MD 520N of Phoenix (Arizona) Police carrying four members of a SWAT rapid reaction team

1995

FLYING CONTROLS: Unboosted mechanical, as in earlier models. Rotor downwash over tailboom deflected to port by two Coanda type slots fed with low pressure air from engine-driven variable-pitch fan in root of tailboom; this counters normal rotor torque, some of fan air is also vented at tail through variable-aperture louvres controlled by pilot's foot pedals, giving steering control in hover and forward flight. Port moving fin on tailplane connected to foot pedals, primarily to increase directional control during autorotation and allow touchdown at under 20 knots (37 km/h, 23 mph); starboard fin operated independently by yaw damper.

STRUCTURE: Same as for MD 500E/530F, except graphite composites tailboom; metal tailplane and fins, new high efficiency fan with composites blades fitted in production aircraft. NOTAR system components now have twice the lifespan of conventional tail rotor system assemblies. During 1993, NOTAR system components warranty increased from two to three years.

POWER PLANT: One Allison 250-C20R turboshaft, derated to 317 kW (425 shp) for T-O and 280 kW (375 shp) maximum continuous. Improved, heavy-duty transmission, rating 447 kW (600 shp), derated to 317 kW (425 shp) on production aircraft from June 1995.

DIMENSIONS, EXTERNAL:

Rotor diameter	8.33 m (27 ft 4 in)
Length overall, rotor turning	9.78 m (32 ft 1¼ in)
fuselage	7.77 m (25 ft 6 in)
Height to top of rotor head	
standard skids	2.74 m (9 ft 0 in)
extended skids	3.01 m (9 ft 10½ in)
Height to top of fins	2.83 m (9 ft 3½ in)
Tailplane span	2.01 m (6 ft 7¼ in)
Skid track	1.92 m (6 ft 3½ in)

AREAS:

Rotor disc	54.5 m² (586.8 sq ft)

WEIGHTS AND LOADINGS:

Weight empty: standard	742 kg (1,636 lb)
Max fuel weight	183 kg (404 lb)
Max hook capacity	1,004 kg (2,214 lb)
Max T-O weight: normal	1,519 kg (3,350 lb)
with external load	1,746 kg (3,850 lb)
Max normal disc loading	27.87 kg/m² (5.71 lb/sq ft)
Max normal T-O power loading (from June 1995)	4.80 kg/kW (7.88 lb/shp)

PERFORMANCE (at normal max T-O weight, ISA, except where indicated):

Never-exceed speed (V_{NE})	152 kts (281 km/h, 175 mph)
Max cruising speed at S/L	135 kts (249 km/h, 155 mph)
Max rate of climb at S/L: ISA	564 m (1,850 ft)/min
ISA + 20°C	480 m (1,575 ft)/min
Service ceiling	4,320 m (14,175 ft)
Hovering ceiling IGE	2,753 m (9,034 ft)
Hovering ceiling OGE: ISA	1,537 m (5,043 ft)
ISA +20°C	1,292 m (4,241 ft)
Range at S/L	217 n miles (402 km; 250 miles)
Endurance at S/L	2 h 24 min

OPERATING NOISE LEVELS:

T-O	85.4 EPNdB
Approach	87.9 EPNdB
Flyover	80.2 EPNdB

UPDATED

McDONNELL DOUGLAS MD EXPLORER

TYPE: Eight-seat twin-engined light helicopter.

PROGRAMME: Formerly MDX and given engineering designations MD 900/901; now known simply as MD Explorer. Announced February 1988, launched January 1989. Hawker de Havilland Limited of Australia designed and manufactures airframe. Canadian Marconi tested initial version of integrated instrumentation display system (IIDS) early 1992, Kawasaki Heavy Industries completed 50 hour test of transmission early 1992. Other partners include Aim Aviation (interior), IAI (cowling and seats) and Lucas Aerospace (actuators). Ten prototypes and trials aircraft of which seven (Nos. 1, 3-7 and 9) for static tests, first flight (No.2/N900MD) 18 December 1992, followed by No.8/N900MH 17 September 1993 and No.10/N9208V 16 December 1993; first production/demonstrator Explorer (No.11/N9201I) flown 3 August 1994. FAA certification 2 December 1994, first delivery 16 December 1994.

CURRENT VERSIONS: **Explorer:** Civilian utility version, as described. **Combat Explorer:** Displayed at Paris Air Show, June 1995, demonstrator N9015P (No.15). Can be configured for utility, medevac or combat missions, armament may include seven- or 19-tube 70 mm rocket pods, 0.50 calibre machine gun pods, chin-mounted FLIR night pilotage system and roof-mounted NightHawk surveillance and targeting systems. Combat weight 3,130 kg (6,900 lb), two P&WC PW206A engines. *Details apply to civilian version with P&WC PW206A engines except where indicated.*

CUSTOMERS: Certificates of interest for about 200 by February 1995 from over 100 operators, representing planned production until 1999; market estimated at 800 to 1,000 in first decade; first delivery 16 December 1994 to Petroleum Helicopters Inc (PHI), which has ordered five Explorers; second delivery December 1995 to Rocky Mountain Helicopters for EMS duties with affiliate Care flight/REMSA in Reno, Nevada; recent customers (February 1995) include Aero Asahi of Japan (15), Japan Digital Laboratory (1) and McDonnell Douglas Helicopter Systems' Japanese distributor Tomen (1). Three built 1994, 20 intended in 1995, rising to planned annual production rate of 48 in 1997.

COSTS: Basic price about $3 million, typically equipped $3.5 million, target direct operating cost $375 (1994) per hour.

DESIGN FEATURES: NOTAR anti-torque system, all composites five-blade rotor with bearingless flexbeam retention and pitch case, tuned fixed rotor mast and mounting truss for vibration reduction, replaceable rotor tips, modified A frame construction from rotor mounting to landing skids protects passenger cabin, energy-absorbing seats absorb 20 *g* vertically and 16 *g* fore and aft, onboard health monitoring, exceedance recording and blade track/balance.

FLYING CONTROLS: NOTAR tailboom (see details under MD 520N), mechanical engine control from collective pitch lever is back up for electronic full authority digital engine control. Automatic stabilisation and autopilot offered for IFR operation.

STRUCTURE: Cockpit, cabin and tail largely carbonfibre; top fairings Kevlar composites; no magnesium, lightning strike protection embedded in composite skin. Transmission overhaul life 5,000 hours, glassfibre blades have titanium leading-edge abrasion strip and are attached to bearingless hub by carbonfibre encased glassfibre flexbeams; rotor blades and hub on condition.

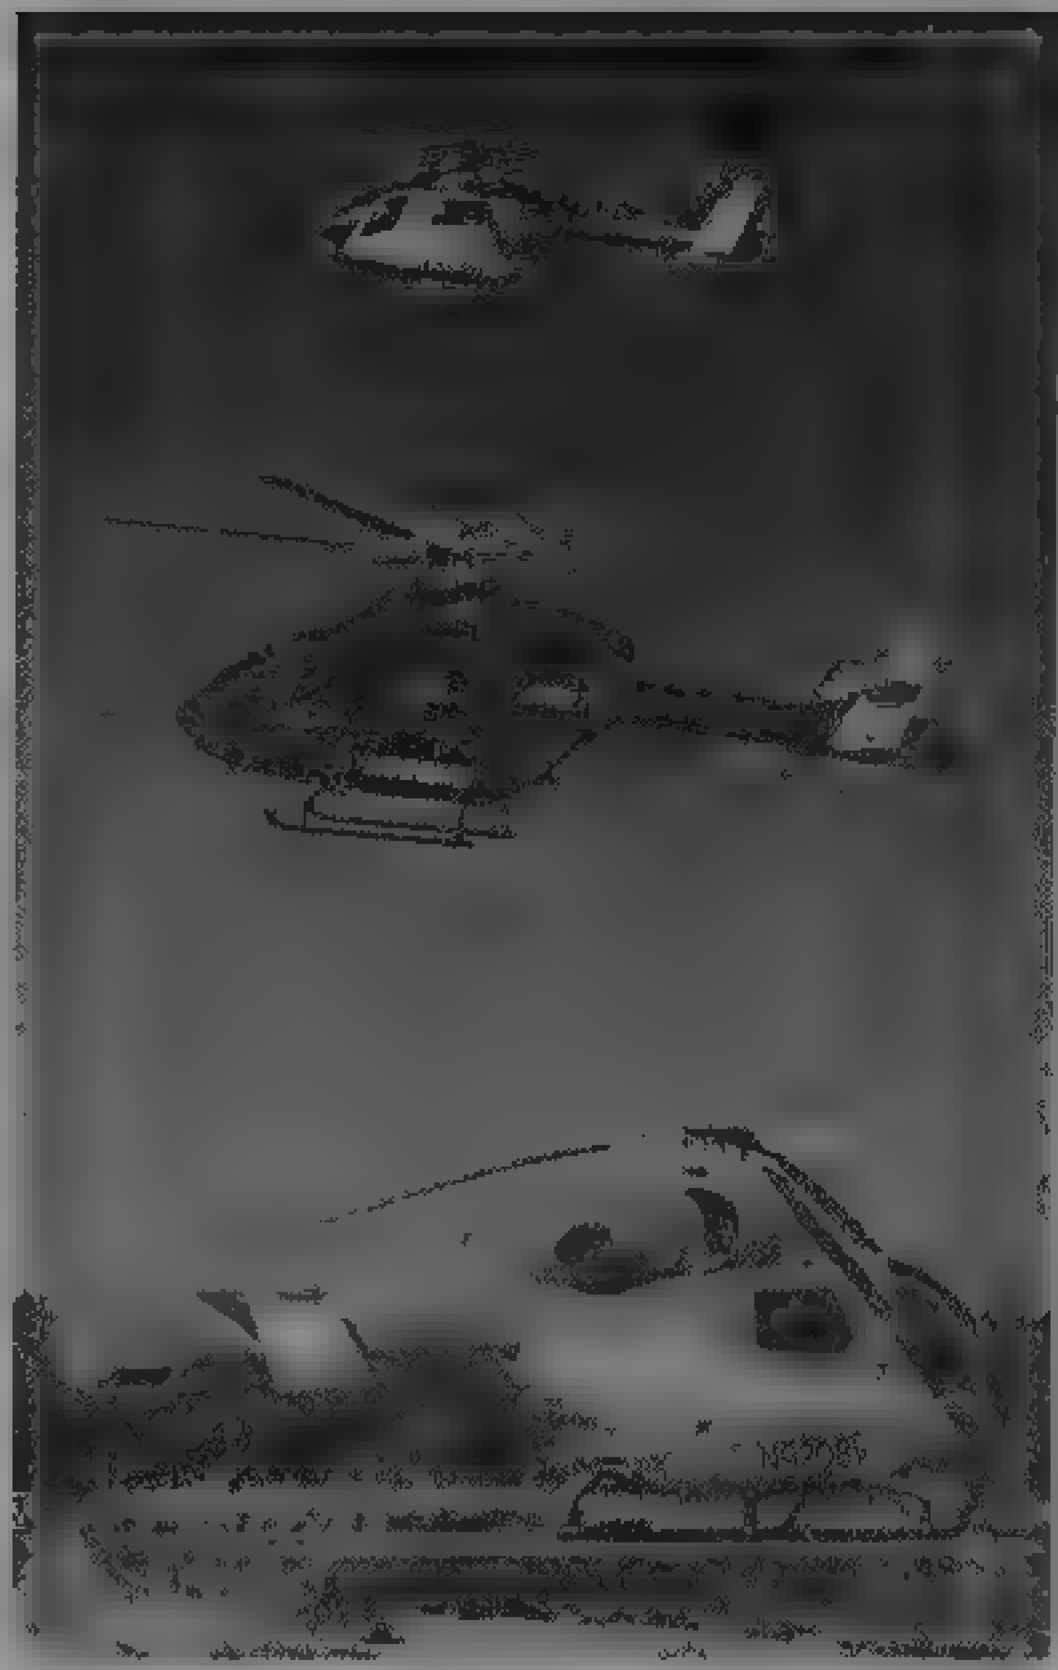
LANDING GEAR: Fixed skids with replaceable abrasion pads.

POWER PLANT: First 128 MD Explorers to be powered by two Pratt & Whitney Canada PW206Bs, each rated at 469 kW (629 shp) for 5 minutes for T-O, thereafter, will be available powered by two Turbomeca TM319 2 Arrius 2Cs, each rated at 478 kW (641 shp) for 5 minutes for T-O. Engines equipped with FADEC. Transmission rating 746 kW (1,000 shp) for 5 minutes for T-O, 671 kW (900 shp) maximum continuous, and 429 kW (575 shp) for 2½ minutes OEI.

Fuel contained in single tank under passenger cabin, useful capacity 602 litres (159 US gallons; 132.4 Imp gallons), optional 666 litres (176 US gallons; 146 Imp gallons); single-point refuelling, self-sealing fuel lines

Prototype Combat Explorer equipped with two sensors above and below cockpit and armament including rocket launcher

1995



Second (top), first and third prototypes of MD Explorer

1995

ACCOMMODATION: Two pilots or pilot/passenger in front on energy-absorbing adjustable crew seats with five-point shoulder harnesses/seat belts, six passengers in club-type energy-absorbing seating with three-point restraints, rear baggage compartment accessible through rear door; cabin can accept long loads reaching from flight deck to rear door; hinged, jettisonable door to cockpit on each side; sliding door to cabin on each side

AVIONICS: Full IFR capability for single- or two-pilot operation

Comms: Two headsets standard. Bendix/King Silver Crown VHF transceiver, audio control panel, ELT, cockpit voice recorder and Wulfsberg Flexcomm II optional

Radar: Weather radar optional

Flight: Optional equipment includes Bendix/King Silver Crown VOR/ILS, HSI, ADF, DME, marker beacon receiver, radar altimeter, Loran C and GPS. Coupled three-axis autopilot optional

Instrumentation: Single- or two-pilot instrument panels incorporate Canadian Marconi integrated instrumentation display system (IIDS) with high-resolution sunlight-readable LCD screen displaying engine and system information including engine condition trend monitoring, exceedance recording, caution annunciators, onboard track and balance of rotor and fan, weight on cargo hook, outside air temperature, digital clock, running time meter and RS-232 download modem interface for personal computer. Other standard instrumentation includes airspeed indicator, encoding altimeter, vertical speed indicator, turn and slip indicator, wet compass and clock. FFIS 40 electronic flight information system and parallel IIDS monitor for long-line hook operations from left seat optional

Mission: Law enforcement panel with space for FLIR screen available

EQUIPMENT: Standard equipment includes magnetic chip detectors on engines, tiedown fittings, flush-mounted cargo tiedowns, rotor blade tiedowns, right side passenger step, utility beige colour carpet, trim, wall and ceiling panels, soundproofing, tinted windows, map case, recessed hover and approach light, wander and white dome lights in cockpit, white dome light in cabin, utility light in baggage compartment, single 28 V DC power outlet each in cockpit and cabin, single colour external paint with two-colour accent stripes, FOD covers, pitot tube cover and cockpit fire extinguisher

Optional equipment includes dual controls, heated pitot head, rotor brake, pilot-activated engine fire extinguisher, engine air particle separator, maintenance hand pump for hydraulics, external cargo hook with 1,361 kg (3,000 lb) capacity, wire strike kit, emergency floats for skids, retractable landing light, left side cabin step, landing gear and rotor fairing canopy cover, heater/defogger, vapour-cycle air conditioner, upgraded soundproofing, passenger service unit with air gaspers and reading lights, window reveal panels, matching close-out panel for aft baggage area, upgraded passenger seats, smoke detector in baggage compartment, jack point fittings and ground handling wheels

DIMENSIONS, EXTERNAL:

Rotor diameter	10.31 m (33 ft 10 in)
Length: overall, rotor turning	11.83 m (38 ft 10 in)
fuselage	9.85 m (32 ft 4 in)

Prototype McDonnell Douglas MD 600N eight-seat helicopter *1995*

MD 600N prototype with MD 520N (of which it is a stretched derivative) above *1995*

MCDONNELL DOUGLAS MD 600N

TYPE: Single-turboshaft light helicopter, stretched version of MD 520N.

PROGRAMME: Announced as 'concept', 8 November 1994; prototype, then known as MD 630N, (N630N, converted from MD 530F demonstrator) first flight 22 November 1994, 138 days after project approval; public debut at Heli Expo in Las Vegas January 1995; production go-ahead 28 March 1995, at which time designation changed to MD 600N; prototype had flown 35 hours by June 1995; second prototype then under construction, to fly before end 1995. FAA certification and first customer deliveries in second half of 1996.

CUSTOMERS: Launch customer AirStar Helicopter of Arizona (two); orders for first year's production (total unspecified) received on day of public debut; Saab Helikopter AB of Sweden and Rotair Limited of Hong Kong ordered one each in June 1995, for 1997 delivery; market estimated at 150 to 180 by 2000.

COSTS: Target direct operating cost $234 (1995) per hour.

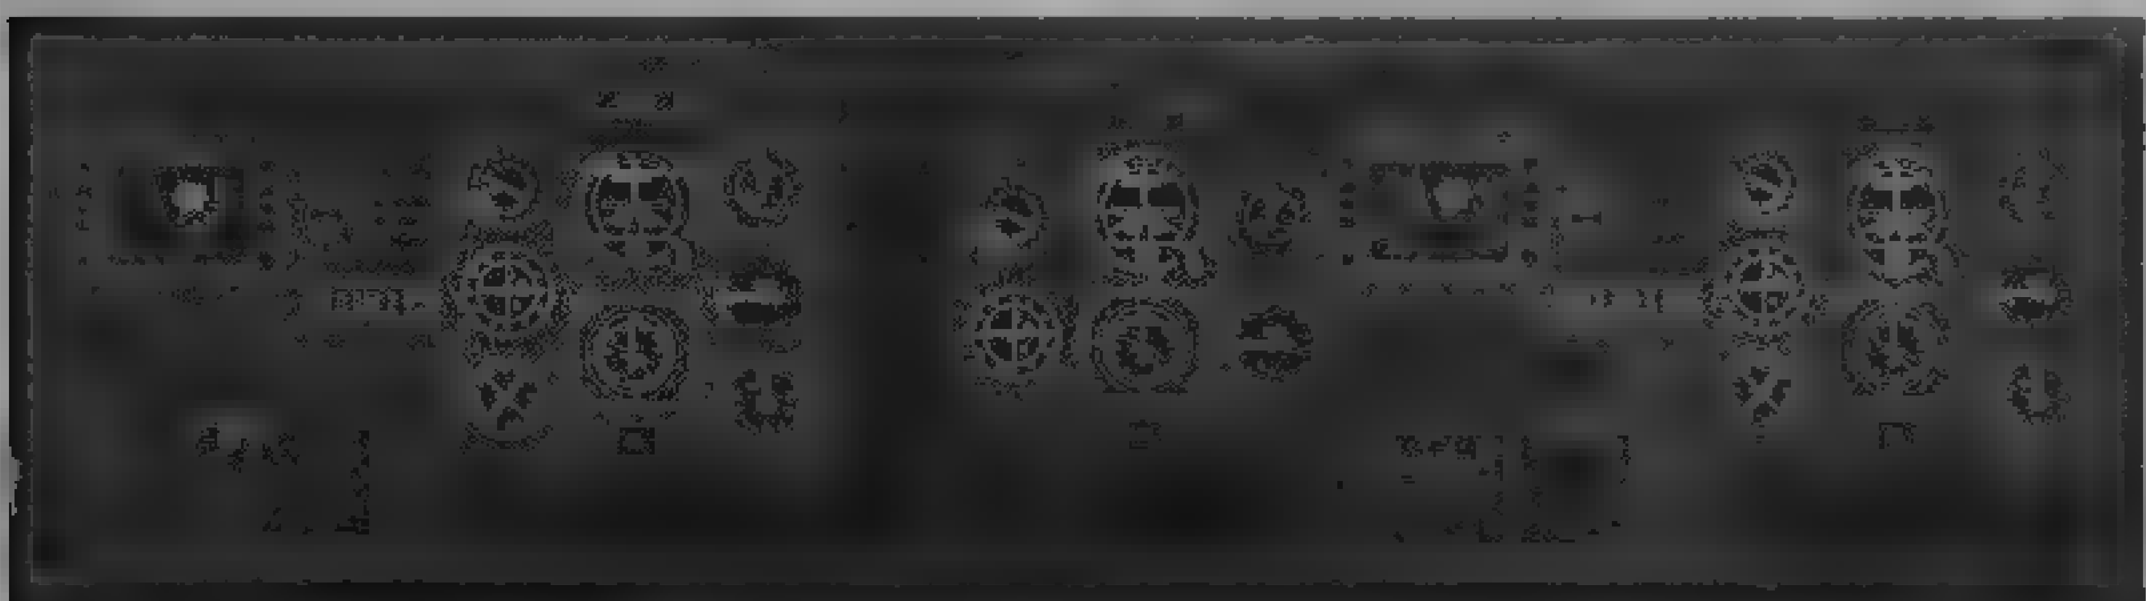
DESIGN FEATURES: Stretched MD 520N airframe (less than 1 per cent new parts) by means of 0.76 m (2 ft 6 in) plug aft of cockpit/cabin bulkhead and 0.71 m (2 ft 4 in) plug in tailboom, combined with more powerful engine, uprated transmission and six-blade main rotor. Cabin has flat floor to assist cargo handling, and will feature quick-change interior configurations to suit multiple-use operators. Intended for civil, utility, offshore, executive transport, medevac, touring, law enforcement and other noise-sensitive operations, also adaptable for armed scout, utility and other military missions.

Description generally as for MD 520N except as follows:

POWER PLANT: One 485 kW (650 shp) Allison 250-C47 turboshaft, derated to 447 kW (600 shp) for T-O and 429 kW (575 shp) maximum continuous, with FADEC. Transmission rating 447 kW (600 shp). Fuel capacity 454 litres (120 US gallons; 100 Imp gallons), in underfloor tank.

ACCOMMODATION: Seating capacity for eight persons including pilot. Two side-opening 'accordion' type doors to passenger cabin on each side, single door to cockpit on starboard side.

WEIGHTS AND LOADINGS:	
Weight empty	875 kg (1,930 lb)
Useful load: internal	984 kg (2,170 lb)
external	1,247 kg (2,750 lb)
Max hook capacity	1,361 kg (3,000 lb)
Max T-O weight: internal load	1,859 kg (4,100 lb)
slung load	2,204 kg (4,860 lb)



Alternative single- (left) and dual-pilot instrument panels available for MD Explorer *1995*

PERFORMANCE (provisional):
Never exceed speed (VNE) 152 kts (282 km/h; 175 mph)
Max cruising speed, S/L to 1,525 m (5,000 ft), ISA
134 kts (248 km/h; 154 mph)
Max rate of climb at S/L, ISA 518 m (1,700 ft)/min
Max operating altitude 6,100 m (20,000 ft)
Hovering ceiling, ISA: IGE 3,200 m (10,500 ft)
OGE 2,070 m (6,800 ft)
Max range 400 n miles (740 km; 460 miles)
Endurance 3 h 42 min

NEW ENTRY

OTHER AIRCRAFT

In March 1994, agreement reached with Anglo-Italian EHI (see International section) for McDonnell Douglas to define an **EHI EH 101** variant to meet US armed forces' medium-lift helicopter requirements. Available, if selected, from 1999; production at Mesa.

Douglas delivered 976 DC-9s up to 1982 and its 2,000th twin-jet airliner, an MD-80 to American Airlines, on 11 June 1992. Plan to sell up to 49 per cent of Douglas to Taiwan Aerospace during 1992 and jointly develop MD-12 did not materialise. Douglas still willing to consider an airliner manufacturing alliance, but airliner business is again profitable.

Douglas reduced workforce from between 40,000 and 43,000 in 1990, before military C-17 was reassigned, to around 11,000 by end of 1994; productivity increased so that man-hours to produce an MD-11 reduced from 300,000 in 1991 to 140,000 by end 1994, and for a twin-jet from 100,000 to 50,000; MD-90 modular manufacturing system applied also to MD-80 during 1993; company can therefore remain viable while producing fewer than 30 twin-jets a year, compared with 136 needed in 1989, and around 30 tri-jets a year. Company can fund own development of forthcoming derivatives MD-90-50 and MD-11ER, but development of MD-XX and MD-12 at a standstill, awaiting market upturn.

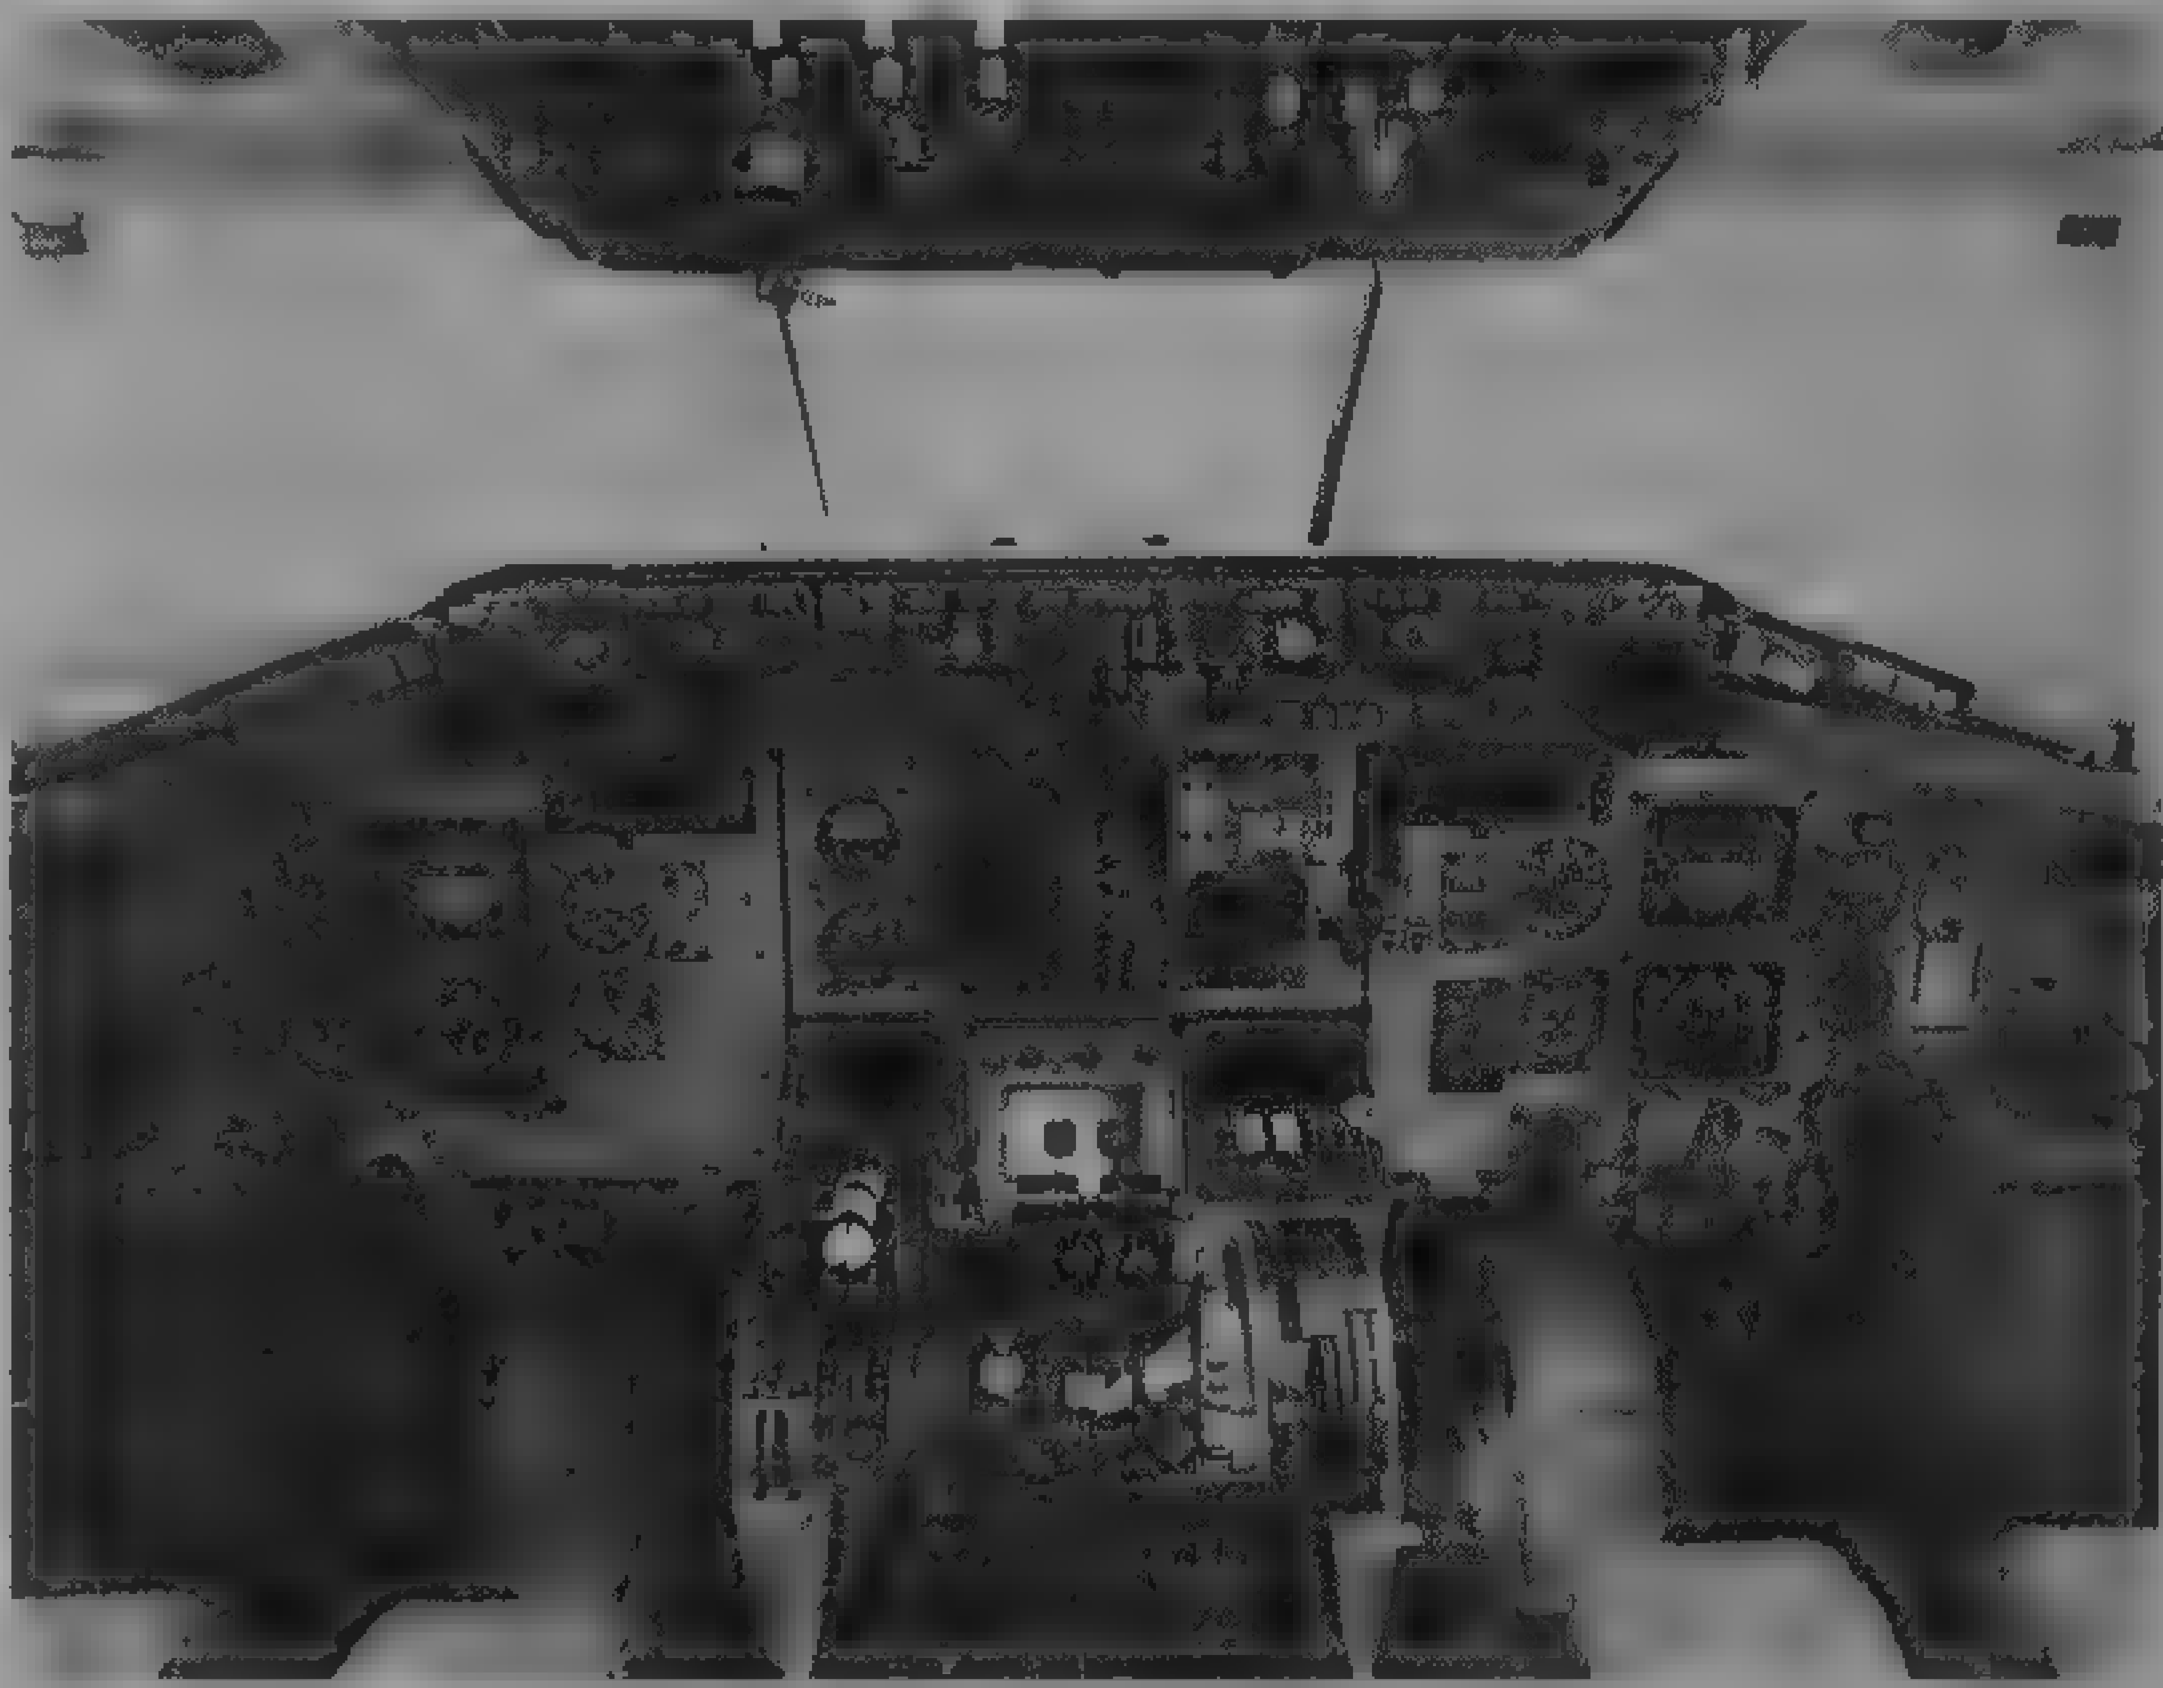
UPDATED



McDonnell Douglas MD-80 series modern flight deck with EFIS panels, two flight management system control displays on centre console, weather radar screen, LED engine indicators and autopilot controls in the glareshield

1994

MCDONNELL DOUGLAS MD-80 SERIES

TYPE: Twin-turbofan short/medium-range airliner.

PROGRAMME: Began as Super 80 higher capacity variant of DC-9; first flight 18 October 1979; first flight of second and third prototypes (N1002G and N1002W) 6 December 1979 and 29 February 1980 respectively; FAA certification 26 August 1980; first delivery, to Swissair, 12 September 1980.

CURRENT VERSIONS: **MD-81:** Basic version with maximum seating for 172 passengers; P&W JT8D-209 engines with automatic power reserve; two-man crew; maximum five-abreast passenger seating.

MD-82: Announced 16 April 1979; powered by P&W JT8D-217s for hot and high performance and increased payload/range; same size cabin as MD-81 and -83; first flight 8 January 1981, certificated 31 July 1981 at maximum T-O weight 66,680 kg (147,000 lb); in service August 1981; same fuel capacity and landing weight as MD-81. Second version, certificated mid-1982, has JT8D-217As and higher maximum T-O weight.

Chinese MD-82: Agreement signed 12 April 1985 for assembly by Shanghai Aviation Industrial Corporation (see SAMF in Chinese section) of 25 out of 26 MD-82s ordered by China, another five MD-82s and five MD-83s approved April 1990; US built first aircraft delivered 30 September 1985; first flight of SAMF assembled MD-82 2 July 1987, in service 4 August 1987; second aircraft delivered 18 December 1987. FAA certificate extended to Chinese built aircraft 9 November 1987; 27 MD-82s delivered by SAMF by end 1992 (plus five MD-83, see Trunkliner below). Douglas interests vested in McDonnell Douglas Pacific & Asia Ltd; SAMF assembles aircraft and makes tailplane and landing gear doors; Chengdu Aircraft Industrial Corporation is second source for nose sections for China and USA (see also Trunkliner variant).

MD-83: Extended-range version powered by JT8D-219s, announced 31 January 1983, 2 per cent lower fuel consumption than -217As, two extra fuel tanks in cargo compartment. Passenger capacity same as MD-81 and -82. First flight 17 December 1984, FAA certification 1985, in service Alaska Airlines and Finnair early 1986; on 14 November 1985, Finnair MD-83 made longest MD-80 flight covering 3,406 n miles (6,308 km; 3,920 miles) from Montreal to Helsinki in 7 hours 26 minutes; first revenue transatlantic service flown by Transwede between Stockholm and Fort Lauderdale, Florida, with stops at Oslo and Gander. Five MD-83s built in China by SAMF (see MD-82 entry above) completed first quarter 1993.

MD-87: Short fuselage version for maximum 139 single-class passengers, fin height increased, powered by JT8D-217Cs with 2 per cent lower fuel consumption than 217As, other -200 series engines available; first flight 4 December 1986, certificated 21 October 1987; first deliveries to Finnair and Austrian Airlines; optional front and rear cargo compartment auxiliary fuel tanks each hold 2,139 litres (565 US gallons; 470.5 Imp gallons). MD-87 has MD-80 cruise performance improvement package including fillet fairing between engine pylons and fuselage, fairing on APU, improved sealing on horizontal tail, low-drag flap hinge fairings, and extended low-drag tailcone. MD-87 also first of series with EFIS, AHRS and HUD as standard.

MD-88: Combines JT8D-219 power plant with EFIS cockpit displays, flight management system, onboard windshear detection system and increased use of composites in structure. Redesigned cabin interior for 142 passengers (14 first/128 coach class) five-abreast; wider aisle; redesigned overhead bins. First flight 15 August 1987, FAA certification 9 December 1987; entered service 5 January 1988 with principal customer Delta Air Lines (125 ordered).

MD-80/90 Trunkliner: Agreement worth $1,000 million signed 25 June 1992 to produce three MD-82, 17 MD-82T and 20 MD-90-30T Trunkliners in China (which see under SAMF heading), but renegotiated mid-1994, and amended $1,600 million contract signed 4 November 1994 for first 20 aircraft, a mix of MD-80s and MD-90s, to be built by Douglas. Chengdu Aircraft Industrial Corporation making nose sections, passenger and pilot doors and airstairs and airstair doors for Trunkliners and US built MD-80/90s, Shenyang will be responsible for assembly of tail surfaces, incorporating SAMF tailplanes and elevators, electrical wiring, radio racks and electrical power centres and Xian will make forward fuselages and wings, offset work to be offered on IAE V2500 engines. Further discussions planned for 1995 could lead to 130 additional MD-90Ts. MD-82/90Ts were to have dual tandem landing gear with four-wheel bogies designed jointly by Douglas and Shanghai Aircraft Research Institute of CATIC under separate contract signed in 1990, gear proved unnecessary and development discontinued; first MD-90 Trunkliner to be delivered in 1997.

MD-80 Executive Jets: Corporate and executive versions of MD-83 and MD-87 offered, typically seating 20 passengers, MD-83 maximum range 4,100 n miles (7,593 km; 4,718 miles), MD-87 maximum range 4,500 n miles (8,334 km; 5,178 miles).

McDonnell Douglas MD-81, MD-82, MD-83 and MD-88 are externally identical

1994

CUSTOMERS: For order backlogs and deliveries, see table on earlier page. 1,000th delivered 23 March 1992. Operators include, but are not limited to: Adria Airways, Aero Cancun, Aero Lloyd, Aerolineas Argentinas, Aeromexico, Aeropostal, Air Aruba, Air Liberté, Air Liberté Tunisia, Airtours, Alaska Airlines, Alitalia, ALM Antillean Airlines, American Airlines, AOM-Minerve, ATI, Austrian Airlines, Austral, Aviaco, Avianca, Balair, Beiya Airlines, Centennial Airlines, China Eastern, China Northern, Continental, CTA, Delta Air Lines, Eagle Airlines, Eurofly, Far Eastern Air Transport, Finnair, Great American Airways, Iberia, Japan Air System, Korean Air, Meridiana Italy, Midwest Express, National Airlines, Nordic East Airlines, North American Airlines, Northwest, Oasis, Reno Air, SAS, Spanair, Sun Jet International, Swissair, Transwede, Trinidad & Tobago, TWA, USAir, Venus Air and ZAS Airline of Egypt.

DESIGN FEATURES: MD-80 has DC-9 wing span increased by centre-section plugs and 0.61 m (2 ft 0 in) wingtip extensions; fuselage extended by plugs fore and aft of wing; larger wing holds more fuel, wingtip winglets tested and rejected in early 1994; systems improvements include digital integrated flight guidance and control system, 'dial a flap' control for more accurate flap settings, flow-through cooling of avionics compartment, larger capacity APU, recirculation of ventilating air, and advanced digital fuel gauging system. Performance management system similar to that of DC-10 standard from April 1983, optional flight management system giving horizontal and vertical guidance. Other features include increased use of composites such as Kevlar wing/fuselage fillets introduced 1983. Flight deck changes include advanced AHRS, optional Honeywell EFIS, flat LED displays, alternative flight management systems, and Honeywell windshear guidance system (certificated June 1989; now standard on all new MD-80s and retrofittable).

Wing sweepback at quarter-chord 24° 30', mean thickness/chord ratio 11.0 per cent, dihedral 3°, incidence 1° 15'.

FLYING CONTROLS: Manual ailerons, elevators with assister tabs, electrically actuated variable incidence tailplane; hydraulically actuated rudder with manual standby; automatic landing available; full-span, three-position leading-edge slats; three spoilers per wing, of which outboard two for flight and ground braking and one for lift dumping; hydraulically actuated double-slotted flaps cover 67 per cent of span; one underwing vortillon fence on each wing.

STRUCTURE: All metal two-spar wing with riveted spanwise stringers; glassfibre trailing edges on wings, ailerons, flaps, elevators and rudder; detachable wingtips, most of cabin floor made of balsa or Nomex core sandwich; engine pylons by Calcor and fuselage panels by Alenia.

LANDING GEAR: Retractable tricycle type of Cleveland Pneumatic manufacture, with steerable nosewheels (±27° on MD-81/82/87/88, ±25° on MD-83). Hydraulic retraction, nose unit forward, main units inward. Twin Goodyear wheels and tyres on each unit. Mainwheel tyres size 44.5 × 16.5-20, pressure 11.38 bars (165 lb/sq in). Nosewheel tyres size 26 × 6.6-14, pressure 10.34 bars (150 lb/sq in). Goodyear disc brakes. Hydro-Aire Mk IIIA anti-skid units. Douglas ram air brake cooling. Minimum ground turning radius, MD-81/82/83/88 about nosewheel 22.43 m (73 ft 7¼ in); MD-87 about nosewheel 19.54 m (64 ft 1¼ in), MD-81/82/83/88 about wingtip 20.04 m (65 ft 9 in), MD-87 about wingtip 19.63 m (64 ft 5 in).

POWER PLANT: Two Pratt & Whitney JT8D-209 turbofans in MD-81, pod mounted one each side of rear fuselage, and each rated at 82.3 kN (18,500 lb st), with emergency thrust reserve of 3.34 kN (750 lb). MD-82 has JT8D-217s, each rated at 89 kN (20,000 lb st), with emergency thrust reserve of 3.78 kN (850 lb), or -217As of similar rating. MD-83 has JT8D-219 engines of 93.4 kN (21,000 lb st) with thrust reserve of 3.11 kN (700 lb). MD-87 has JT8D-217C engines of 89 kN (20,000 lb st), with an emergency thrust reserve of 3.78 kN (850 lb). MD-88 has 93.4 kN (21,000 lb st) JT8D-219 turbofans with thrust reserve of 3.1 kN (700 lb). Target type thrust reversers.

Standard fuel capacity in MD-81/82/87/88 is 21,876 litres (5,779 US gallons, 4,812 Imp gallons), increased in MD-83 (and, optionally, MD-87) to 26,260 litres (6,939 US gallons, 5,778 Imp gallons) by two 2,195 litre (580 US gallon, 483 Imp gallon) auxiliary tanks in cargo compartment. Pressure refuelling point in starboard wing leading-edge. Overwing gravity refuelling points.

ACCOMMODATION: Crew of two and observer seat on flight deck, plus cabin attendants. Seating arrangements are optional to meet specific airline requirements, maximum optional seating capacity is for 172 passengers (130 in MD-87). Fully pressurised and air conditioned, one toilet forward on port side, two at rear of cabin, provisions for galley at each end of cabin. Passenger door at front of cabin on port side, with built-in electrically operated airstairs, and rear hydraulically operated ventral stairway, are standard; whole tailcone can be jettisoned to allow emergency exit over retracted rear ventral stairway. Servicing and emergency exit doors at starboard forward end and port rear end of cabin. Three cargo doors for underfloor holds on starboard side. Overwing emergency exits, two each side.

SYSTEMS: AiResearch dual air cycle air conditioning and pressurisation system utilising engine bleed air, maximum differential 0.54 bar (7.77 lb/sq in). Two separate 207 bar (3,000 lb/sq in) hydraulic systems for operation of spoilers, flaps, slats, rudder, landing gear, nosewheel steering, brakes, thrust reversers and ventral stairway. Maximum flow rate 30.3 litres (8 US gallons, 6.7 Imp gallons)/min. Airless bootstrap type reservoirs, output pressure 2.07 bars (30 lb/sq in). Pneumatic system, for air conditioning/pressurisation, engine starting and ice protection, utilises 8th or 13th stage engine bleed air and/or APU. Electrical system includes three 40 kVA 120/208 V three-phase 400 Hz alternators, two engine-driven, one driven by APU. Oxygen system of diluter demand type for crew on flight deck, continuous flow chemical canister type with automatic mask presentation for passengers. Anti-icing of wing, engine inlets and tailplane by engine bleed air. Electric windscreen de-icing. Thermal anti-icing of leading-edges. TDG Aerospace NOFOD heater panel certificated by FAA as means of preventing 'cold corner' in inner wing fuel tank from forming ice on wing skin and shedding it into engine intakes. APU provides pneumatic and electrical power on ground, and electrical power in flight.

AVIONICS: Dual Honeywell integrated digital flight systems.

Radar: Colour weather radar standard.

Flight: Dual Honeywell flight management systems (FMS), Cat IIIa autoland, autopilot and stability augmentation, performance management system, speed command with digital full-time autothrottles, thrust rating indicator, dual Honeywell air data systems, Sundstrand HUD optional.

DIMENSIONS, EXTERNAL (all versions, except as indicated):

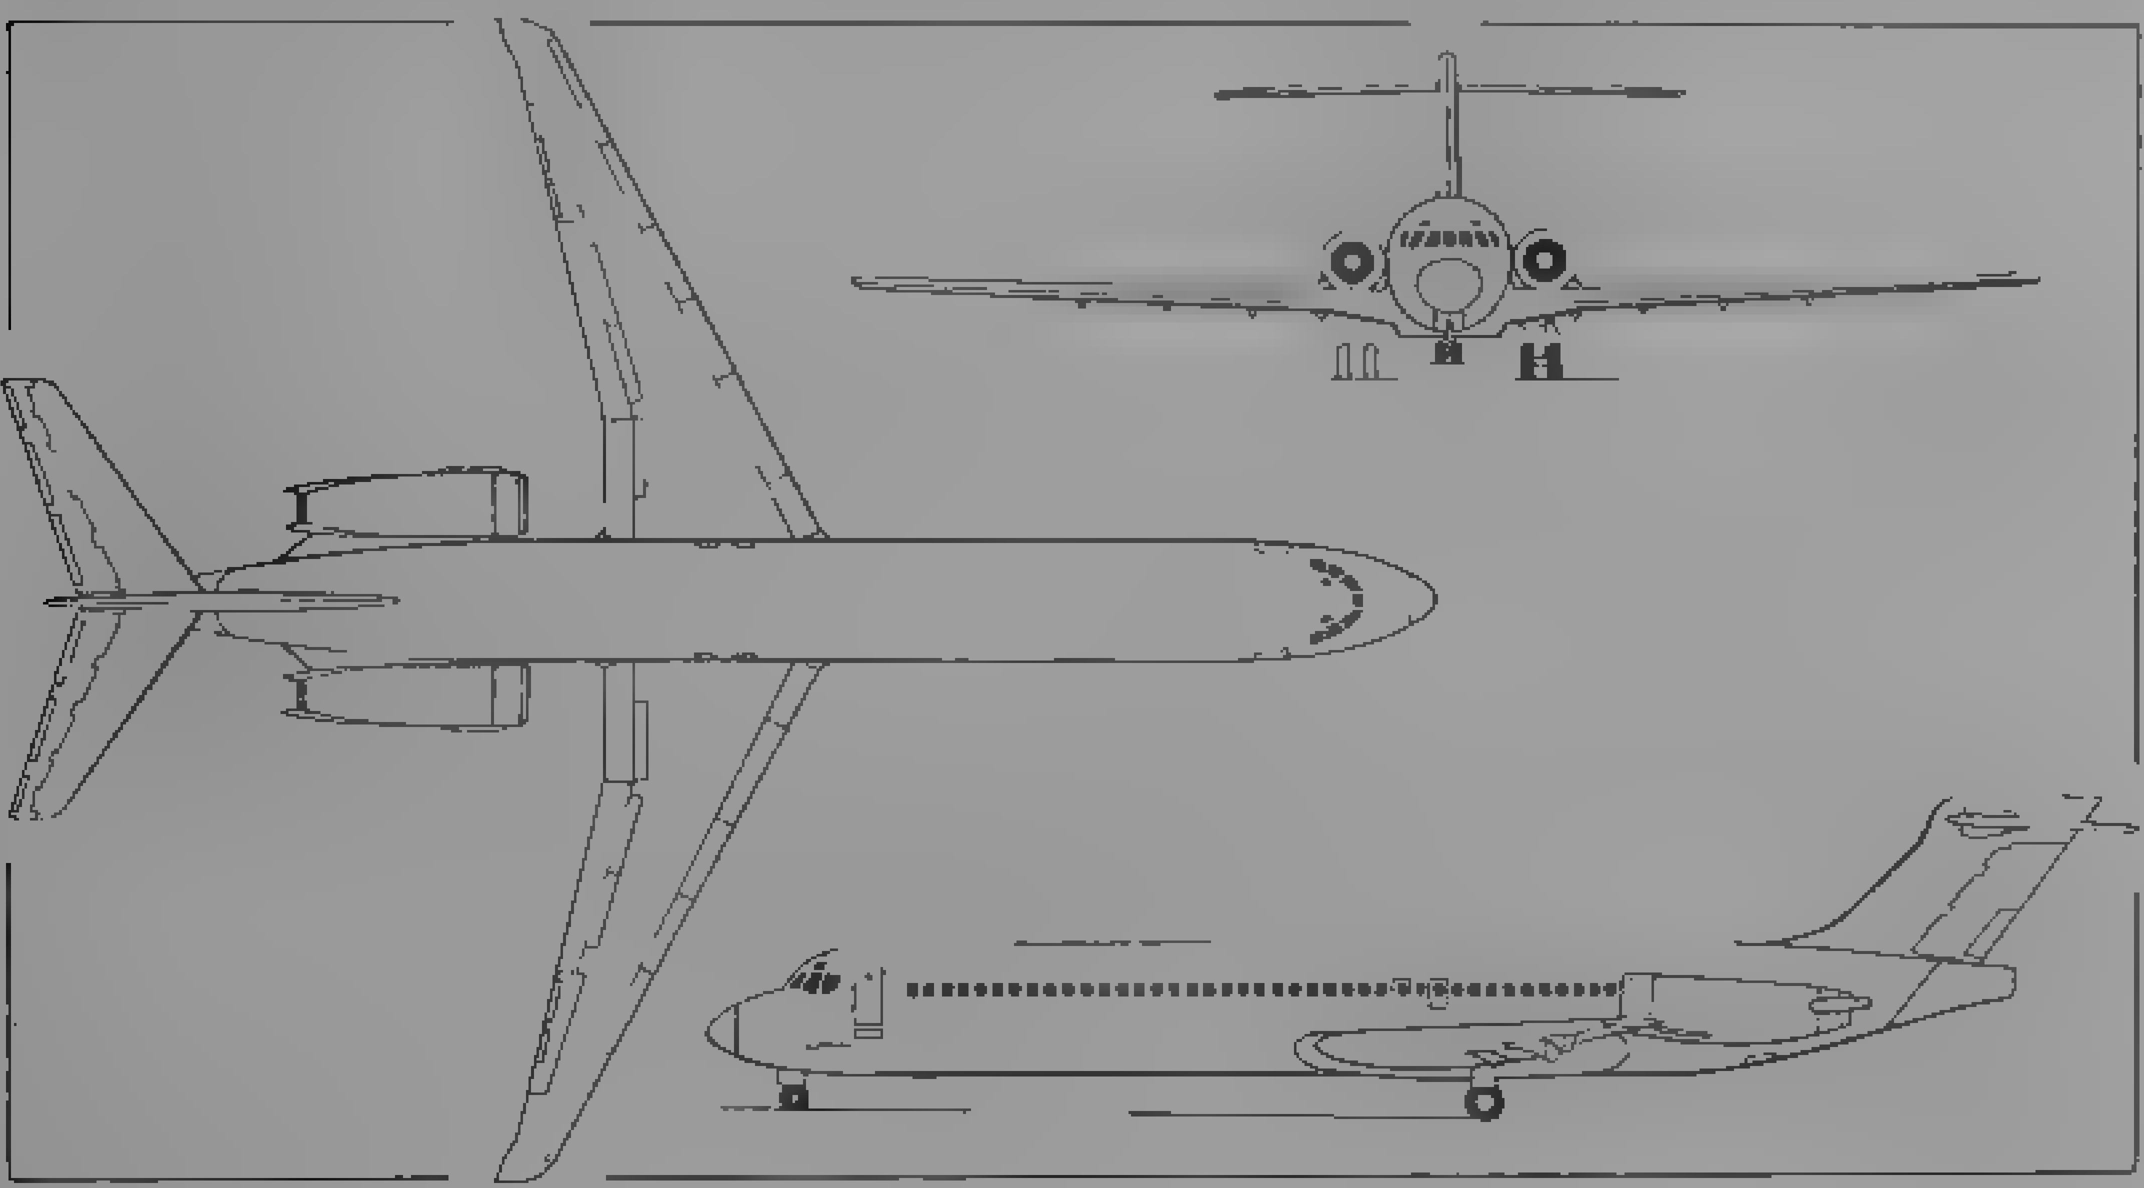
Wing span	32.87 m (107 ft 10¼ in)
Wing chord, at root	7.05 m (23 ft 1¼ in)
at tip	1.10 m (3 ft 7¼ in)
Wing aspect ratio	9.62
Length overall: except MD-87	45.06 m (147 ft 10 in)
MD-87	39.75 m (130 ft 5 in)
Length of fuselage:	
except MD-87	41.30 m (135 ft 6 in)
MD-87	36.30 m (119 ft 1 in)
Fuselage: max diameter	3.61 m (11 ft 10 in)
Height overall: except MD-87	9.19 m (30 ft 2 in)
MD-87	9.50 m (31 ft 2 in)
Tailplane span	12.24 m (40 ft 2 in)
Wheel track	5.08 m (16 ft 8 in)
Wheelbase: except MD-87	22.07 m (72 ft 5 in)
MD-87	19.18 m (62 ft 11 in)
Passenger door (port, fwd):	
Height	1.83 m (6 ft 0 in)
Width	0.86 m (2 ft 10 in)
Height to sill	2.36 m (7 ft 9 in)
Service door (stbd, fwd): Height	1.22 m (4 ft 0 in)
Width	0.69 m (2 ft 3 in)
Height to sill	2.36 m (7 ft 9 in)
Service door (port, rear): Height	1.52 m (5 ft 0 in)
Width	0.69 m (2 ft 3 in)
Height to sill	2.82 m (9 ft 3 in)
Freight and baggage hold doors:	
Height	1.27 m (4 ft 2 in)
Width	1.35 m (4 ft 5 in)
Height to sill: fwd	1.47 m (4 ft 10 in)
centre	1.42 m (4 ft 8 in)
rear	1.65 m (5 ft 5 in)
Rear cargo door (MD-87): Height	1.27 m (4 ft 2 in)
Width	0.91 m (3 ft 0 in)
Height to sill	1.65 m (5 ft 5 in)
Emergency exits (overwing, port and stbd):	
Height	0.91 m (3 ft 0 in)
Width	0.51 m (1 ft 8 in)

DIMENSIONS, INTERNAL:

Cabin, excl flight deck, incl toilets:	
Length	30.78 m (101 ft 0 in)
Max width	3.14 m (10 ft 3¾ in)
Max height	2.06 m (6 ft 9 in)
Floor area	89.65 m² (965.0 sq ft)
Volume	191.9 m³ (6,778 cu ft)
Freight holds (underfloor, MD-81/82):	
fwd	12.29 m³ (434.0 cu ft)
centre	10.65 m³ (376.0 cu ft)
rear	12.54 m³ (443.0 cu ft)
Freight holds (underfloor, MD-83 with extra fuel tanks):	
total	28.7 m³ (1,013 cu ft)
Freight holds (underfloor MD-87):	
total	26.6 m³ (938 cu ft)
with extra fuel tanks	19.7 m³ (695 cu ft)

AREAS:

Wings, gross	115.1 m² (1,239 sq ft)
Ailerons (total)	3.53 m² (38.0 sq ft)



McDonnell Douglas MD-87, a short-fuselage variant of the MD-80 series airliners *(Jane's/Dennis Punnett)*

1993

Fin, excl dorsal fin (except -87) 9.51 m² (102.4 sq ft)
Rudder 6.07 m² (65.3 sq ft)
Tailplane 29.17 m² (314.0 sq ft)

WEIGHTS AND LOADINGS:
Operating weight empty: -81 35,329 kg (77,888 lb)
-82, -88 35,369 kg (77,976 lb)
-83 optional fuel 36,145 kg (79,686 lb)
-87 standard fuel 33,237 kg (73,274 lb)
-87 optional fuel 33,965 kg (74,880 lb)
Fuel load:
-81, -82, -87 standard 17,763 kg (39,162 lb)
-83, -87 optional 21,216 kg (46,773 lb)
Max structural payload:
-81 18,194 kg (40,112 lb)
-82, -88 19,969 kg (44,024 lb)
-83 optional fuel 19,193 kg (42,314 lb)
-87 standard 17,566 kg (38,726 lb)
-87 optional fuel 16,837 kg (37,120 lb)
Max T-O weight: -81 (-217 engines), -87 standard 63,505 kg (140,000 lb)
-81 (-217A engines), -82, -87 optional, -88 standard 67,810 kg (149,500 lb)
-83 optional 72,575 kg (160,000 lb)
Max zero-fuel weight: -81 53,525 kg (118,000 lb)
-82, -83 55,340 kg (122,000 lb)
-87 standard and optional 50,800 kg (112,000 lb)
Max landing weight:
-81, -87 standard 58,060 kg (128,000 lb)
-82, -87 optional, -88 58,965 kg (130,000 lb)
-83 optional 63,275 kg (139,500 lb)
Max wing loading:
-81, -87 standard 534.6 kg/m² (109.5 lb/sq ft)
-82, -87 optional, -88 standard 574.7 kg/m² (117.7 lb/sq ft)
-83, -88 optional 615.0 kg/m² (126.0 lb/sq ft)
Max power loading: -81 385.8 kg/kN (3.78 lb/lb st)
-82, -87 optional, -88 381.0 kg/kN (3.74 lb/lb st)
-83 optional 388.5 kg/kN (3.81 lb/lb st)
-87 standard 356.8 kg/kN (3.50 lb/lb st)

PERFORMANCE (at max T-O weight except where indicated):
Max level speed: all 500 knots (925 km/h; 575 mph)
Max cruising speed: all Mach 0.80
Normal cruising speed: all Mach 0.76
FAA T-O field length: -81 2,210 m (7,250 ft)
-82 2,270 m (7,450 ft)
-83 2,552 m (8,375 ft)
-87 1,859 m (6,100 ft)
FAA landing field length, at max landing weight:
-81 1,478 m (4,850 ft)
-82 1,500 m (4,920 ft)
-83 1,585 m (5,200 ft)
-87 1,429 m (4,690 ft)
Range with max fuel:
-87 standard 2,980 n miles (5,522 km; 3,431 miles)
-87 optional 3,650 n miles (6,764 km; 4,203 miles)
Range (-81, -82, -83 with 155 passengers, domestic reserves, -87 with 130 passengers, domestic reserves):
-81 1,564 n miles (2,897 km; 1,800 miles)
-82 2,050 n miles (3,798 km; 2,360 miles)
-83 2,502 n miles (4,635 km; 2,880 miles)
-87 standard 2,372 n miles (4,393 km; 2,730 miles)
-87 optional 2,833 n miles (5,248 km; 3,261 miles)

OPERATIONAL NOISE LEVELS (FAR Pt 36):
T-O: -81, -82, -83 90.4 EPNdB
-87 estimated 88.7 EPNdB
Sideline: -81, -82, -83 94.6 EPNdB
-87 estimated 92.8 EPNdB
Approach: -81, -82, -83 93.3 EPNdB
-87 estimated 93.3 EPNdB

UPDATED

McDONNELL DOUGLAS MD-90

TYPE: Stretched MD-80 follow-on, powered by IAE V2500 turbofans.

PROGRAMME: Launched 14 November 1989; first flight of T1 prototype (N901DC) 22 February 1993; second aircraft (N902DC) made first flight three weeks early on 27 August 1993 and was used for avionics and systems tests, including automatic landing; first production aircraft flown 20 September 1994, three days ahead of schedule; FAA certification achieved 16 November 1994, by which time three MD-90s had flown 1,906 flight tests hours in 1,450 flights; first delivery, N902DA (-30 version; 2,094th of DC-9/MD-80/MD-90 family) to Delta Air Lines, 24 February 1995; service entry 1 April 1995 on Dallas/Fort Worth - Newark, New Jersey route.

CURRENT VERSIONS: **MD-90-30**: Has MD-80 fuselage lengthened by 1.45 m (4 ft 9 in) ahead of wing, same enlarged tail surfaces as MD-87, powered elevators, 153 two-class passengers, five-abreast; maximum 172 passengers limited by exit doors and hatches, two IAE V2525-D5 turbofans.
Details below apply mainly to this version.

MD-90-30 Trunkliner: 20 ordered for assembly and delivery by Shanghai Aviation Industrial Corporation (SAIC) 25 June 1992; first delivery 1998 (see MD-80/90 Trunkliner entry).

MD-90-50: Provides 700 n miles (1,296 km; 805 miles) more range at same payload, maximum T-O weight increased to 78,245 kg (172,500 lb); wing, fuselage, tail surfaces, landing gear, wheels and brakes reinforced; provision for up to 6,738 litres (1,780 US gallons; 1,482 Imp gallons) of additional fuel; IAE V2528-D5 engines giving 124.5 kN (28,000 lb st) each.

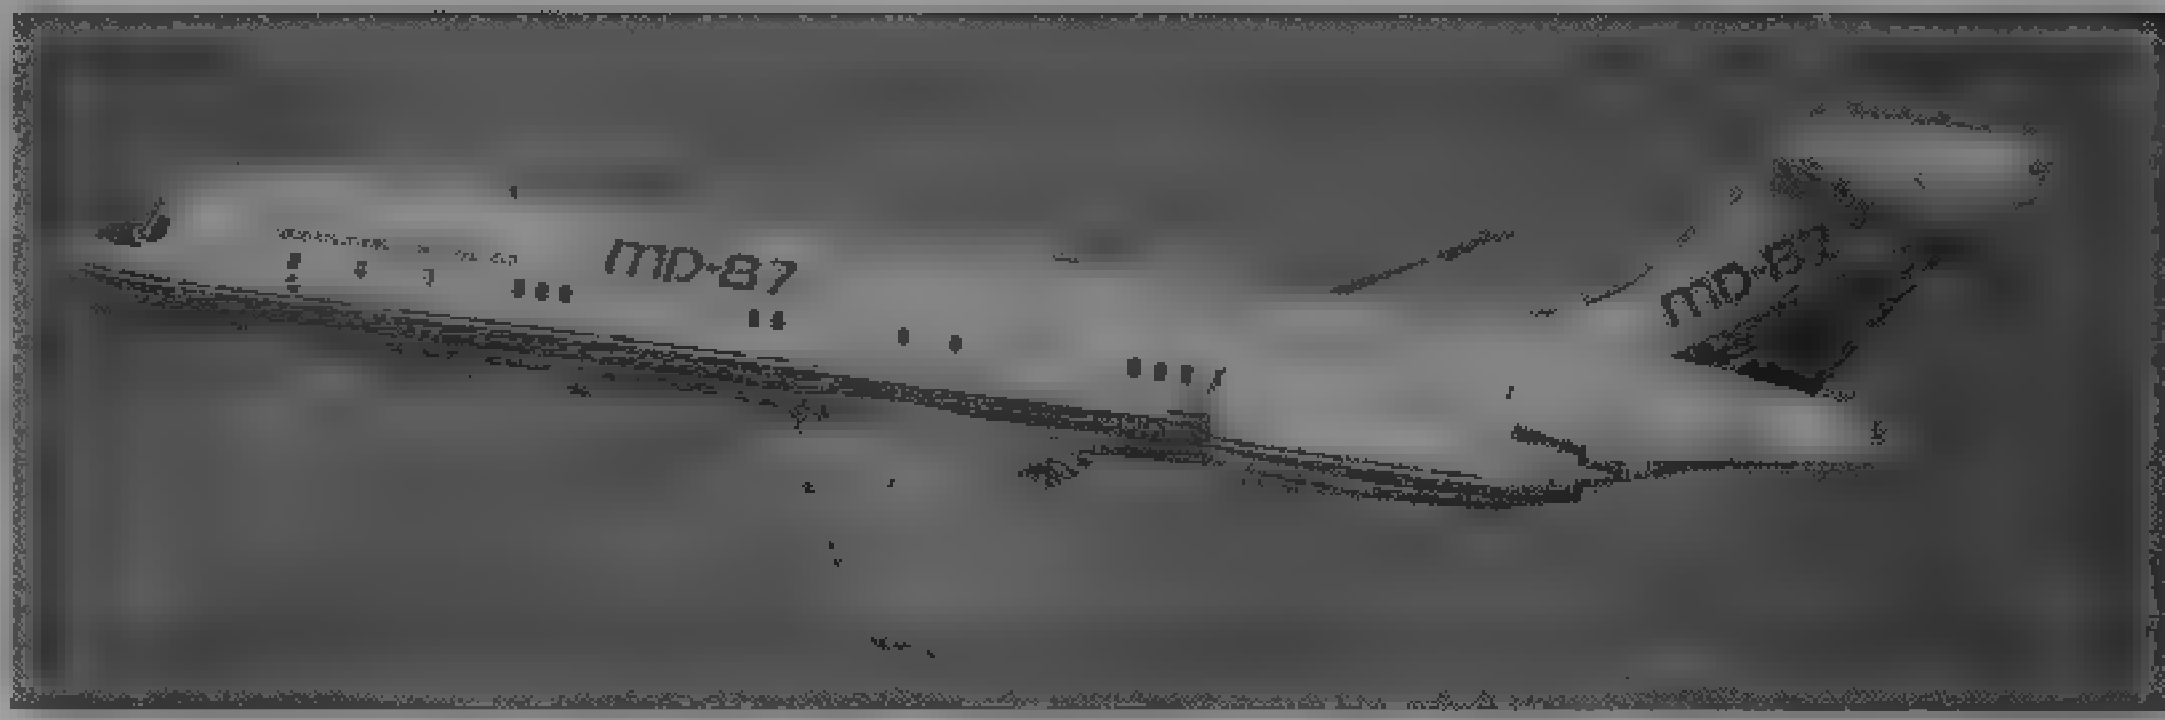
MD-90-55: Similar to MD-90-50 but with extra pair of doors in forward fuselage section to allow maximum 187 charter class passengers.

CUSTOMERS: Launch customer Delta Air Lines (50 ordered plus 115 on option, later reported as 31 firm and 106 options); other customers reported to include China (Trunkliner), Great China, SAS (six plus six converted from MD-80s) and Japan Air System. For totals, see table on first page of Douglas entry.

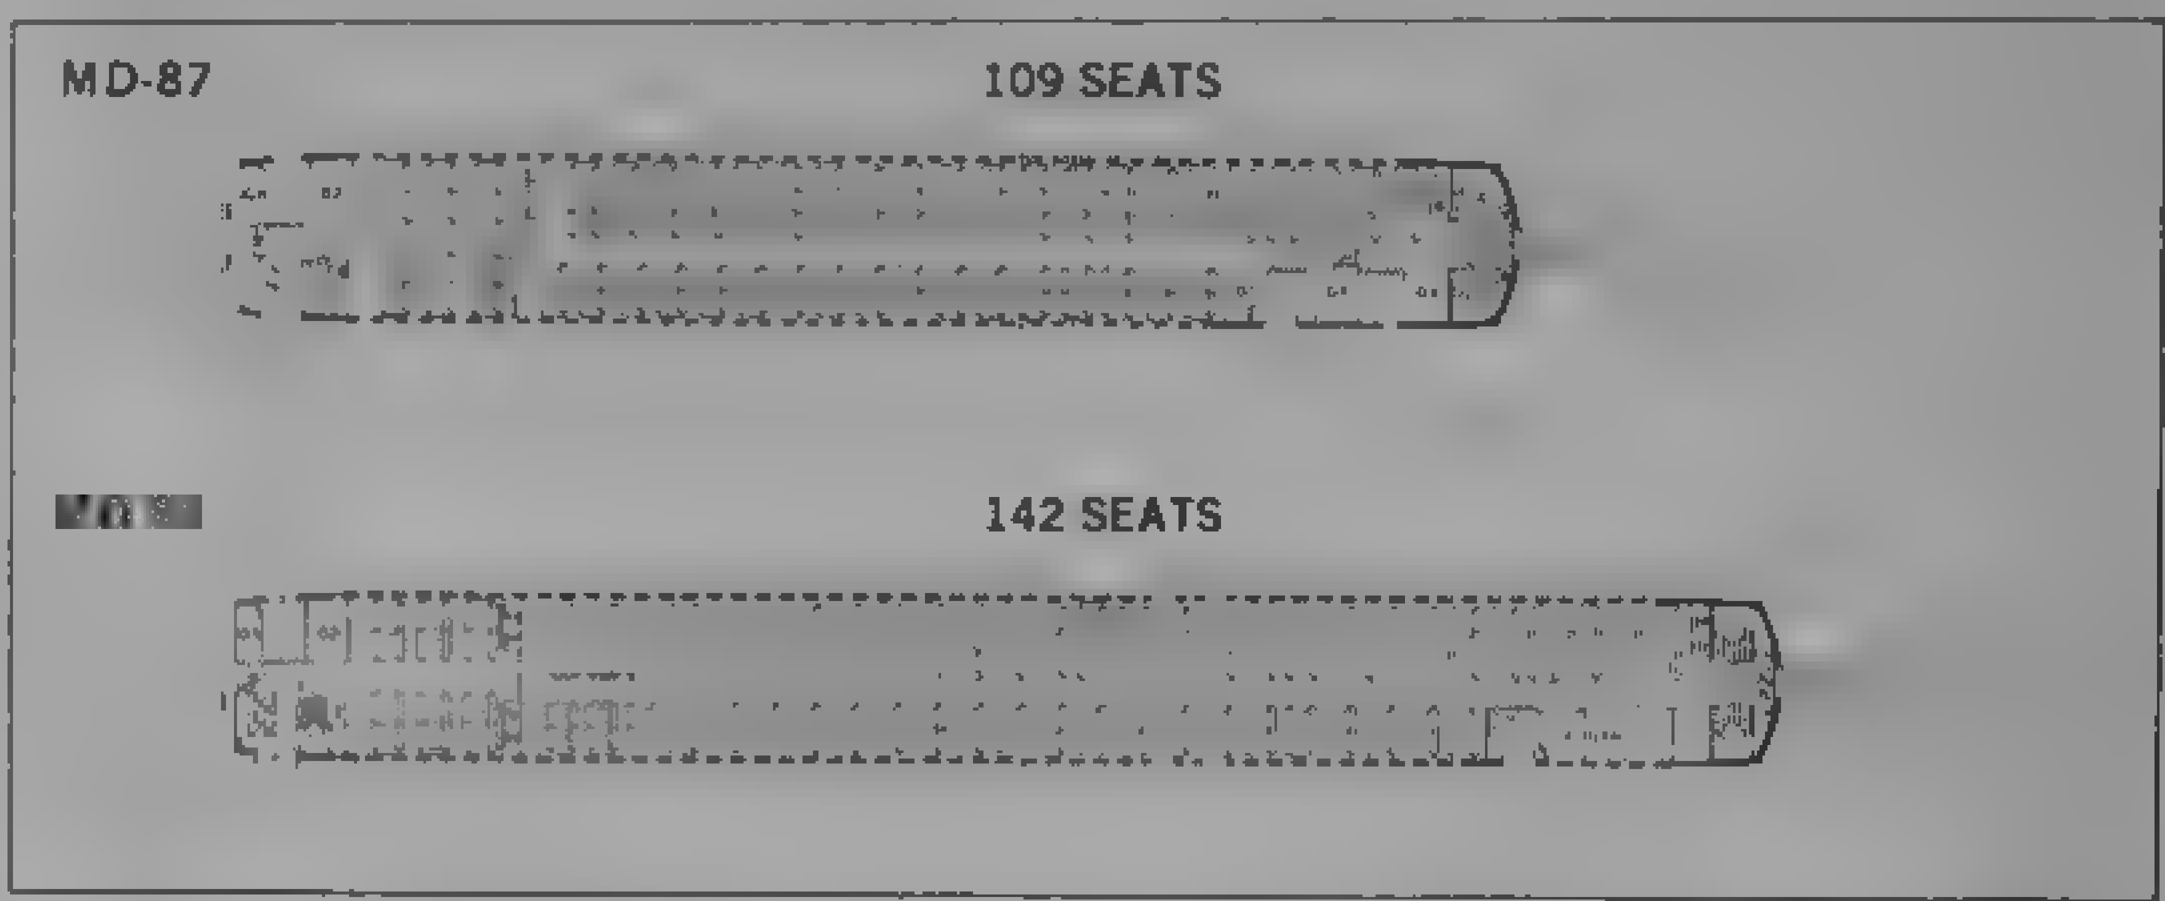
DESIGN FEATURES: Being built on MD-80 production line, powered by IAE V2500 engines rated by engine control system for power required by MD-90-30 and MD-90-50; 10 more two-class passengers than MD-80 accommodated by forward fuselage stretch of 1.37 m (4 ft 6 in) to compensate for higher engine weight, better power/weight ratio than MD-80; noise level expected to be 20 dB below Stage 3 and with very low emissions; improved cabin includes larger baggage bins, better lighting and hand rail at bin level. Wing sweep at quarter-chord, 24° 30'.

FLYING CONTROLS: Powered elevators with dual actuators, and manual reversion with servo tabs, to cope with increased pitch-axis inertia caused by heavier engines and longer forward fuselage; double-slotted flaps; three-position leading-edge slats, spoilers for airbrake and lift dumping; flight deck similar to MD-88, but Douglas planning new six-screen layout similar to that of MD-11. Three-position leading-edge slats.

STRUCTURE: Structure broadly as late MD-80, but new modular manufacturing system, developed and tested on both prototypes, allows both types to be built on same production line and in about half the man-hours of earlier MD-80s; subassemblies contributed by Alenia, AeroSpace Technologies of Australia, Aerospatiale, CASA, Chengdu Aircraft Industrial Corporation, Shanghai Aviation Industrial Corporation (SAIC) and Shanghai Aircraft Manufacturing Factory (SAMF) are built up into fuselage modules in Salt Lake City.

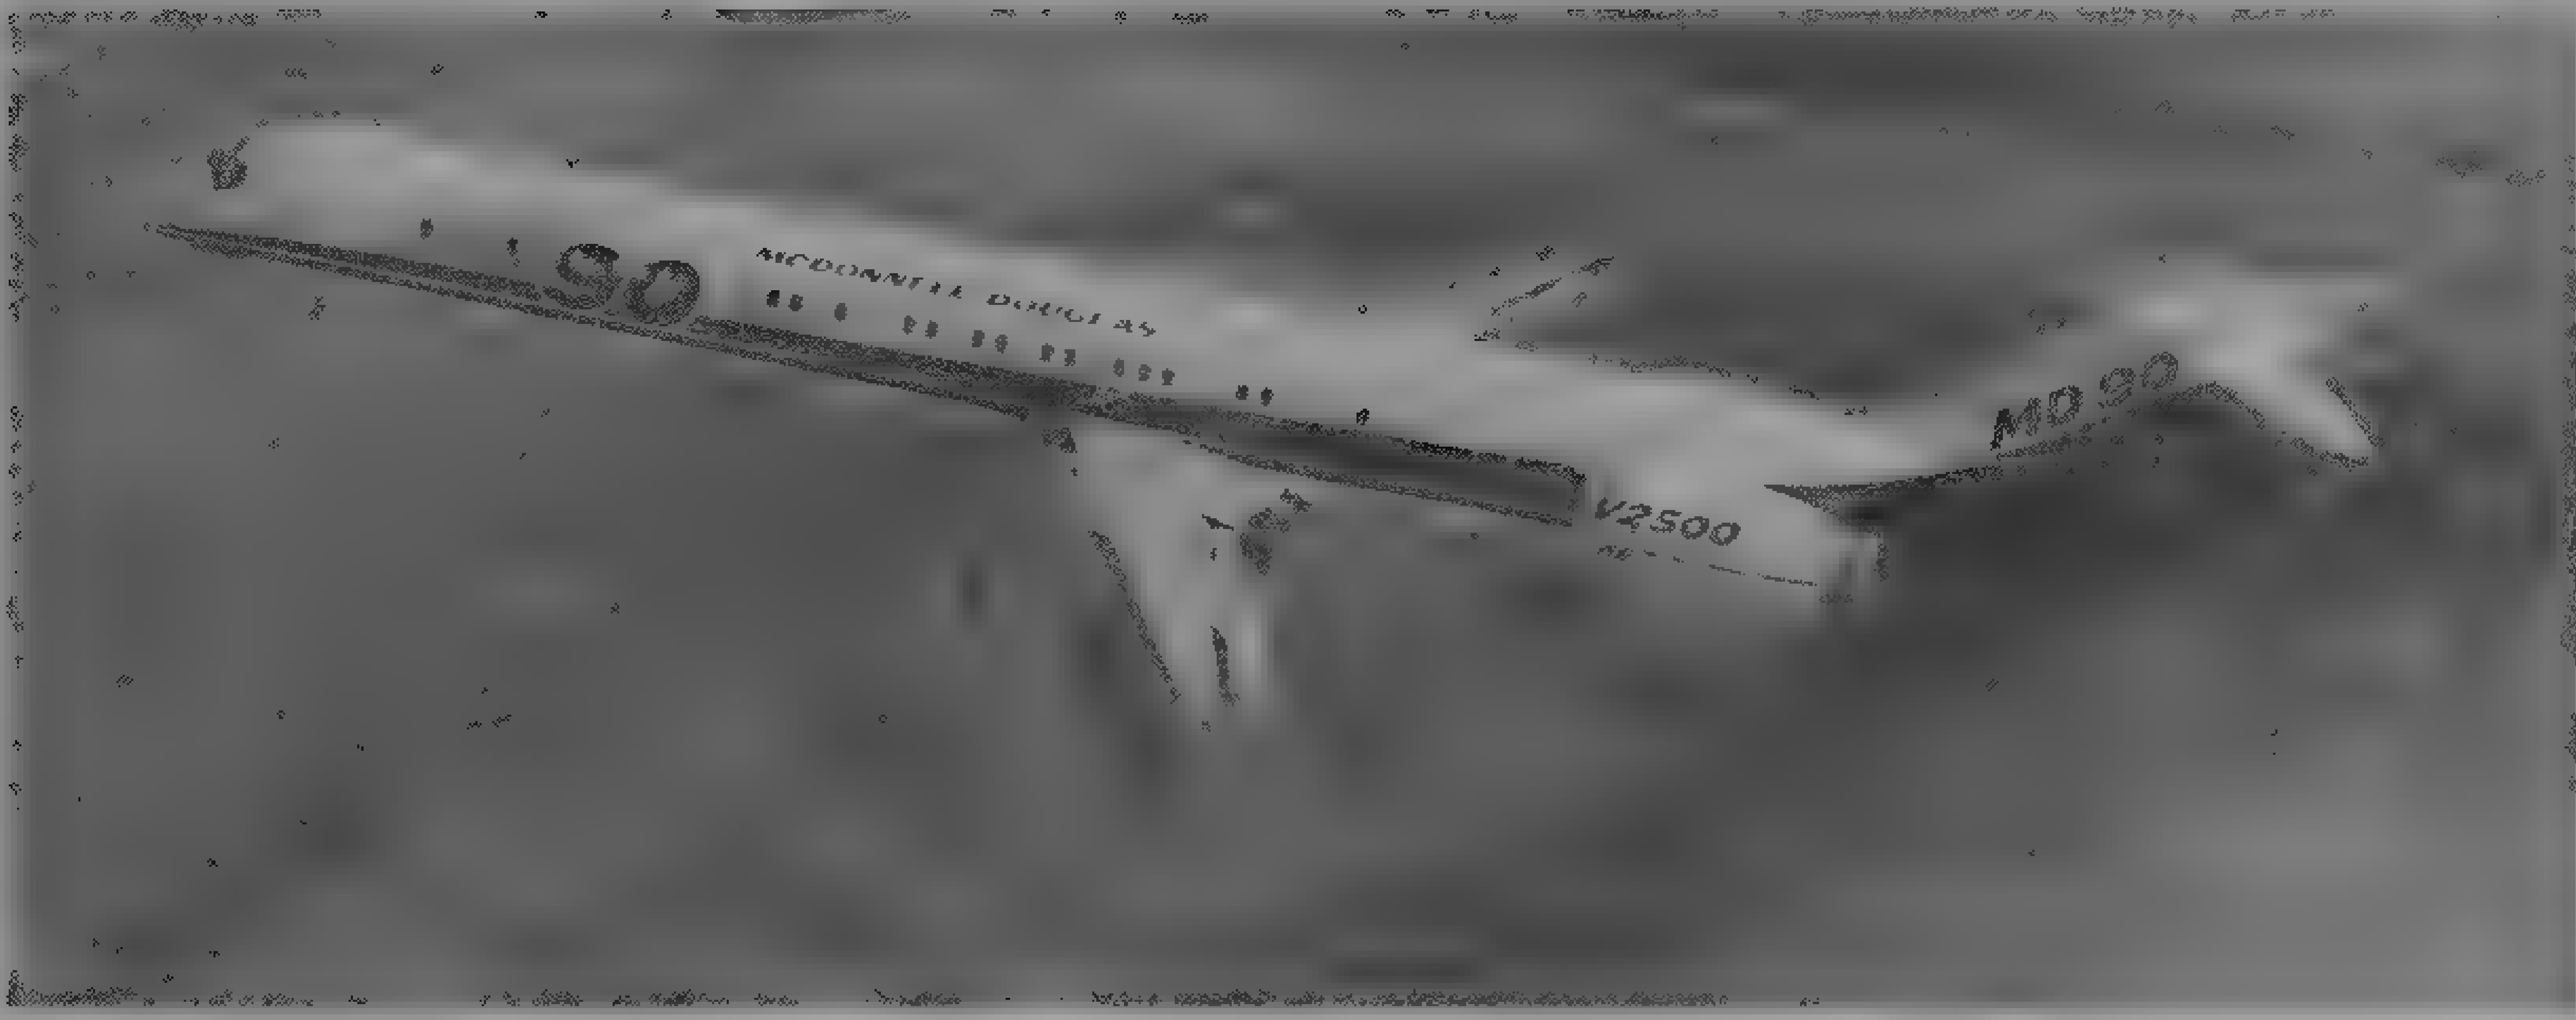


MD-87 is short fuselage member of MD-80 family of jetliners
1995



Typical mixed class seating arrangement in MD-80 and MD-87
1995

Flight deck of MD-90 showing two two-screen EFIS, LED matrix engine indicators, full flight management system panels on centre console and autopilot controllers under the glareshield
1994



Prototype of MD-90-30, which will eventually succeed the MD-80

1994

LANDING GEAR: Retractable tricycle type with twin wheels on all units, as MD-80.

POWER PLANT: Two 111.2 kN (25,000 lb st) IAE V2525-D5 in MD-90-30, two 124.5 kN (28,000 lb st) V2528-D5 in MD-90-50 and -55, thrust maintained at S/L up to 30°C ambient temperature, power output determined by electronic engine control, cascade thrust reversers for use on ground only. MD-90-30 fuel tankage 22,107 litres (5,840 US gallons; 4,863 Imp gallons), MD-90-50 tankage 28,845 litres (7,620 US gallons; 6,345 Imp gallons) including 6,738 litres (1,780 US gallons; 1,482 Imp gallons) in extra tanks in baggage compartment.

ACCOMMODATION: Traditional Douglas five-abreast seating; two more seat rows than MD-80, larger and lighted overhead stowage bins, lighted full-grip handrail on stowage bins illuminates seat labels, new vacuum lavatories.

SYSTEMS: New system elements, compared with MD-80, include Bendix variable-speed, constant frequency electrical generation, new AlliedSignal 421 kW (565 shp) GTCP131-9D APU to provide greater engine-starting power and 8,000 hour life, carbon wheel brakes with digital anti-skid saving 181 kg (400 lb) weight, centre-wing de-icing system using warmed fuel from engine oil cooler circulated through inboard fuel tanks, and new environmental control system providing higher flow rates.

AVIONICS: *Flight*: Honeywell electronic flight instruments, flight management system (FMS), digital flight guidance system (DFGS) with auxiliary control system (ACS), new air data computer, and advanced inertial reference system based on ring laser gyro platform.

Instrumentation: LED displays for engine and system monitoring.

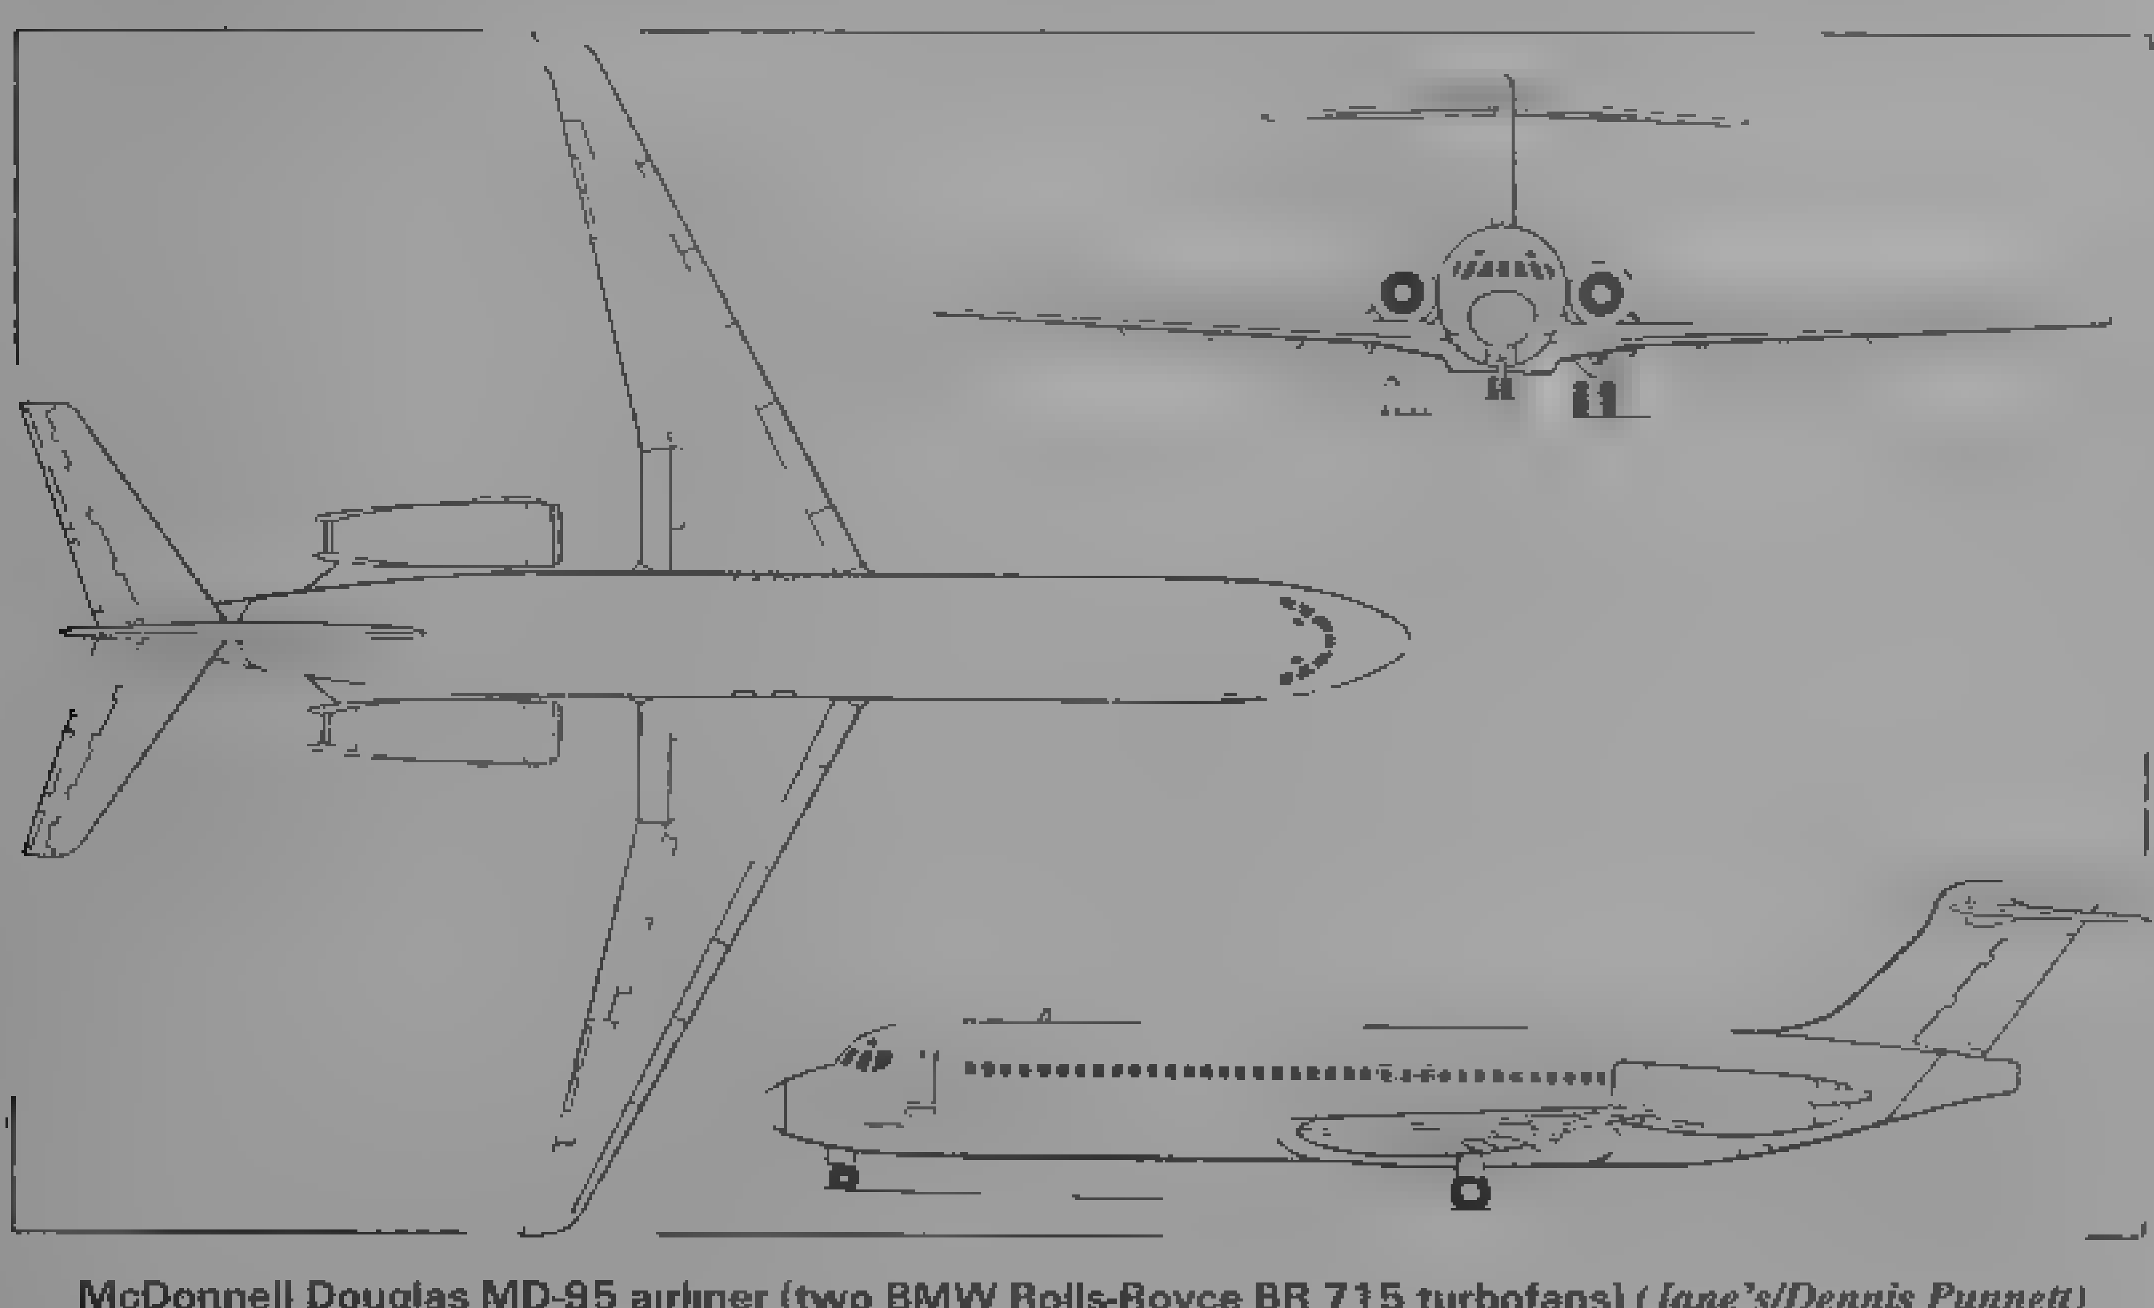
1994



McDonnell Douglas MD-95 airliner (two BMW Rolls-Royce BR 715 turbofans) *(Jane's/Dennis Punnett)*

1993

DIMENSIONS, EXTERNAL (all versions):

Wing span	32.87 m (107 ft 10 in)
Wing aspect ratio	9.62
Length overall	46.51 m (152 ft 7 in)
Height overall	9.33 m (30 ft 7¼ in)
Wheel track	5.09 m (16 ft 8½ in)
Wheelbase	23.52 m (77 ft 2 in)

DIMENSIONS, INTERNAL:

Baggage volume (total): -30	36.8 m³ (1,300 cu ft)
-50, -55 with optional fuel	23.3 m³ (822 cu ft)

AREAS:

Wings, gross: all	112.3 m² (1,209 sq ft)

WEIGHTS AND LOADINGS:

Operating weight empty: -30	39,916 kg (88,000 lb)
-50	41,685 kg (91,900 lb)
Space limited payload: -30	17,350 kg (38,250 lb)
-50, -55 with extra tanks	15,195 kg (33,500 lb)
Max T-O weight: -30	70,760 kg (156,000 lb)
-50, -55	78,245 kg (172,500 lb)
Max ramp weight: -30	71,215 kg (157,000 lb)
-50, -55	78,700 kg (173,500 lb)
Max zero-fuel weight: -30	58,965 kg (130,000 lb)
-50, -55	61,235 kg (135,000 lb)
Max landing weight: -30	64,410 kg (142,000 lb)
-50, -55	71,210 kg (156,000 lb)
Max wing loading: -30	614.75 kg/m² (125.91 lb/sq ft)
-50, -55	679.78 kg/m² (139.23 lb/sq ft)
Max power loading: -30	318.14 kg/kN (3.12 lb/lb st)
-50, -55	315.93 kg/kN (3.08 lb/lb st)

PERFORMANCE (estimated, at max T-O weight, ISA, except where indicated):

Cruising speed at 10,670 m (35,000 ft): all	437 kts (809 km/h, 503 mph) Mach 0.76
FAA T-O field length: -30	2,135 m (7,000 ft)
-50, -55	2,347 m (7,700 ft)
FAA landing field length, at max landing weight: -30	1,564 m (5,130 ft)
-50, -55	1,628 m (5,340 ft)
Range, with international reserves (-30 and -50 with 153 passengers, -55 with 187 passengers): -30	2,275 n miles (4,216 km; 2,620 miles)
-50	3,022 n miles (5,600 km; 3,480 miles)
-55	2,700 n miles (5,003 km; 3,109 miles)

UPDATED

MCDONNELL DOUGLAS MD-95

TYPE: 100-passenger twin-jet transport.

PROGRAMME: Announced at Paris Air Show 1991, potential airline customers briefed and manufacturing partners announced in Berlin, November 1994; modification of former Eastern Airlines DC-9-30 into first prototype began late 1994; this, and two further flight test aircraft, expected to fly in 1997; first flight of production aircraft January 1998, joint JAA/FAA certification anticipated in March 1998, first customer delivery August 1998.

CURRENT VERSIONS: **MD-95-30**: Initial production version.

MD-95-30ER: Extended range version with additional fuselage fuel tank, capacity 4,277 litres (1,130 US gallons; 941 Imp gallons). Other versions may be developed.

CUSTOMERS: Unlaunched by March 1995, but Scandinavian Airlines System and International Lease Finance Corporation unofficially reported to have received formal offers; about 70 commitments thought to be required for launch. McDonnell Douglas predicts requirements for more than 1,600 aircraft in this class over the next 20 years, with 300 to 500 MD-95 sales over life of programme.

DESIGN FEATURES: About 1 m (3 ft 3 in) longer than DC-9-30; DC-9/MD-80 fuselage cross-section, DC-9-34 wing planform, systems and avionics are blend of low cost and advanced technology.

Artist's impression of the McDonnell Douglas 100-passenger MD-95 airliner

1995

FLYING CONTROLS: Basically fully powered with manual reversion, as MD-90, double-slotted flaps, full span leading-edge slats with two settings, wing mounted spoilers for airbrakes. Flight deck technology based on MD-90.

STRUCTURE: Generally as MD-80/MD-90. Partners are Alenia (fuselage sections), Korean Airlines Aerospace Division (nose structure and main passenger door/entry area), Halla Engineering and Heavy Industry Ltd (wings, in conjunction with McDonnell Douglas Canada, which will build initial sets of wings for flight test aircraft and early production units), ShinMaywa Industries Ltd (horizontal tail surfaces and engine pylons), British Aerospace Chadderton Aerostructures Division (aft fuselage and fin), Israel Aircraft Industries SHL Servo Systems (landing gear), AlliedSignal Aerospace (AiResearch environmental control system), Honeywell Inc (flight guidance and avionics systems), Sundstrand Aerospace (electrical power generating system), and (in partnership with Sundstrand) Auxiliary Power International Corporation (APU). Final assembly of MD-95s will be undertaken by Dalfort Aviation at Love Field, Dallas, Texas, nominal production rate one aircraft per week. A new Douglas Delivery Center will be established alongside the Love Field assembly plant.

LANDING GEAR: Retractable tricycle with steerable nosewheel, twin wheels on all legs.

POWER PLANT: Two BMW Rolls-Royce BR 715 turbofans each giving 82.29 kN (18,500 lb st) at T-O at 30° ambient; 88.96 kN (20,000 lb st) thrust rating optional for MD-95-30ER, cascade thrust reversers for ground use only. Standard fuel capacity 13,927 litres (3,679 US gallons, 3,063 Imp gallons), ER 18,204 litres (4,809 US gallons, 4,004 Imp gallons).

ACCOMMODATION: Typical two-class seating for 100 passengers in five-abreast arrangement; cabin interior based on that of MD-90, including larger overhead baggage bins. Underfloor cargo volume standard 24.35 m³ (860 cu ft), ER 18.23 m³ (644 cu ft).

AVIONICS: *Flight:* Honeywell flight management system (FMS), inertial reference system (IRS), digital flight guidance system (DFGS), digital air data computer and wind shear detection system.

Instrumentation: EFIS cockpit.

DIMENSIONS, EXTERNAL:

Wing span	28.44 m (93 ft 3½ in)
Wing aspect ratio	8.70
Length overall	36.36 m (119 ft 3½ in)
Height overall	8.60 m (28 ft 2½ in)
Wheel track	4.88 m (16 ft 0 in)
Wheelbase	16.15 m (53 ft 0 in)

AREAS:

Wings, gross	92.97 m² (1,000.7 sq ft)

WEIGHTS AND LOADINGS (S: standard, ER: with extended-range tank):

Operating weight empty: S	30,073 kg (66,300 lb)
ER	30,844 kg (68,000 lb)
Max T-O weight: S	51,710 kg (114,000 lb)
ER	54,885 kg (121,000 lb)
Max ramp weight: S	52,165 kg (115,000 lb)
ER	55,340 kg (122,000 lb)
Space-limited payload: S, ER	10,700 kg (23,590 lb)
Max zero-fuel weight: S	43,545 kg (96,000 lb)
ER	44,679 kg (98,500 lb)
Max landing weight: S	46,265 kg (102,000 lb)
ER	49,895 kg (110,000 lb)
Max wing loading: S	556.2 kg/m² (113.9 lb/sq ft)
ER	590.4 kg/m² (120.9 lb/sq ft)
Max power loading: S	314.39 kg/kN (3.08 lb/lb st)
ER	333.70 kg/kN (3.27 lb/lb st)

PERFORMANCE (estimated):

Max level speed: S, ER
438 kts (811 km/h, 504 mph) (Mach 0.76)

FAA T-O field length at max T-O weight, S/L, 30°C:

S	1,951 m (6,400 ft)
ER	2,012 m (6,600 ft)

FAA landing field length at max landing weight, S/L:

S, ER	1,564 m (5,130 ft)

Range, international reserves:

S	1,500 n miles (2,778 km, 1,726 miles)
ER	1,900 n miles (3,518 km; 2,186 miles)

UPDATED

MCDONNELL DOUGLAS MD-XX

TYPE: Advanced technology medium-range airliner.

PROGRAMME: Preliminary studies begun May 1991. Possible launch 1997 or later, first deliveries before 2002.

CURRENT VERSIONS: Single-aircraft programme to replace existing narrow body aircraft through 6 per cent lower seat-mile costs, twin-aisle comfort and lower deck container capability features, and to replace early small wide-body aircraft through 10 per cent lower trip costs and wider aisles. Initial version to seat 222 passengers (equivalent to Boeing 757) and 204 passengers (equivalent to Boeing 767).

DESIGN FEATURES: Transcontinental, 200- to 220-passenger transport, later stretch up to 295 seats exceeds Boeing 767 capacity by at least 10 per cent, advanced aerofoil and high-aspect ratio wing technologies reduce drag by 14 per cent from current airliners; Mach 0.8 cruise; range 3,000 n miles (5,556 km, 3,452 miles); extended-range options up to 5,500 n miles (10,186 km, 6,329 miles), fuselage cross-section twin-aisle oval 5.18 m (17 ft 0 in) wide, 5.41 m (17 ft 9 in) high, two LD2 containers side by side in underfloor cargo compartments. Five-year NASA-Douglas study on advanced composite transport will produce an initial composite wing box element of MD-XX size in 1995, main objective is cost reduction, fly-by-wire signalling for control, sensor and data distribution.

POWER PLANT: Two wing-mounted advanced high bypass engines such as P & W Advanced Ducted Propeller (ADP).

DIMENSIONS, EXTERNAL (provisional):

Wing span	44.98 m (147 ft 7 in)
Wing aspect ratio	11.14
Length: fuselage	43.79 m (143 ft 8 in)
overall	44.96 m (147 ft 6 in)
Height overall	14.76 m (48 ft 5 in)
Tailplane span	13.36 m (43 ft 10 in)
Wheel track	7.92 m (26 ft 0 in)

AREAS (provisional):

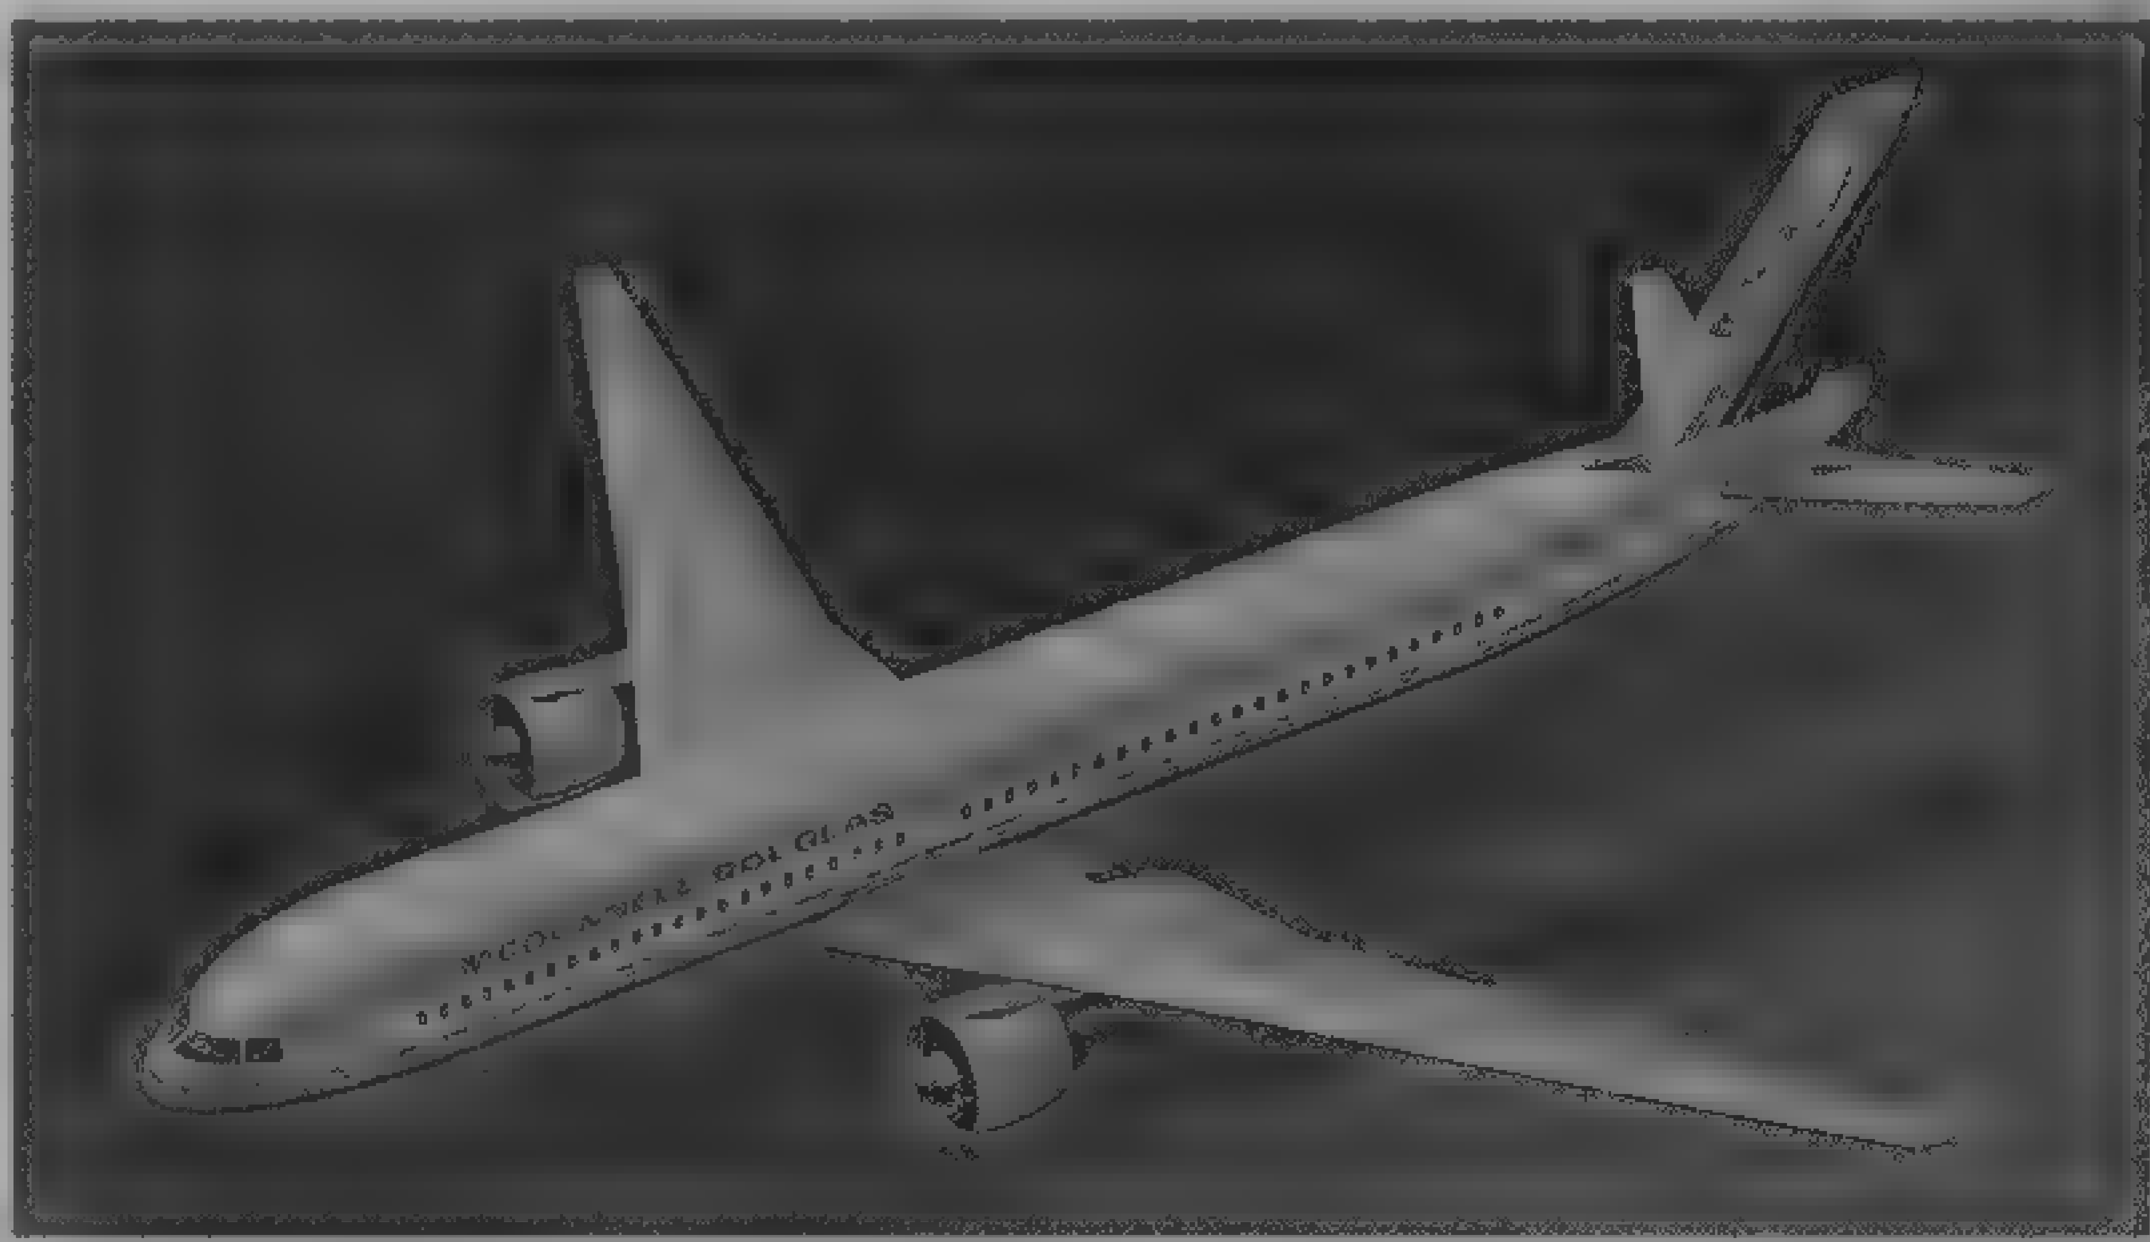
Wings, gross	181.6 m² (1,955.0 sq ft)
Vertical tail surfaces (total)	37.2 m² (400.0 sq ft)
Horizontal tail surfaces (total)	35.7 m² (384.0 sq ft)

UPDATED

MCDONNELL DOUGLAS MD-11

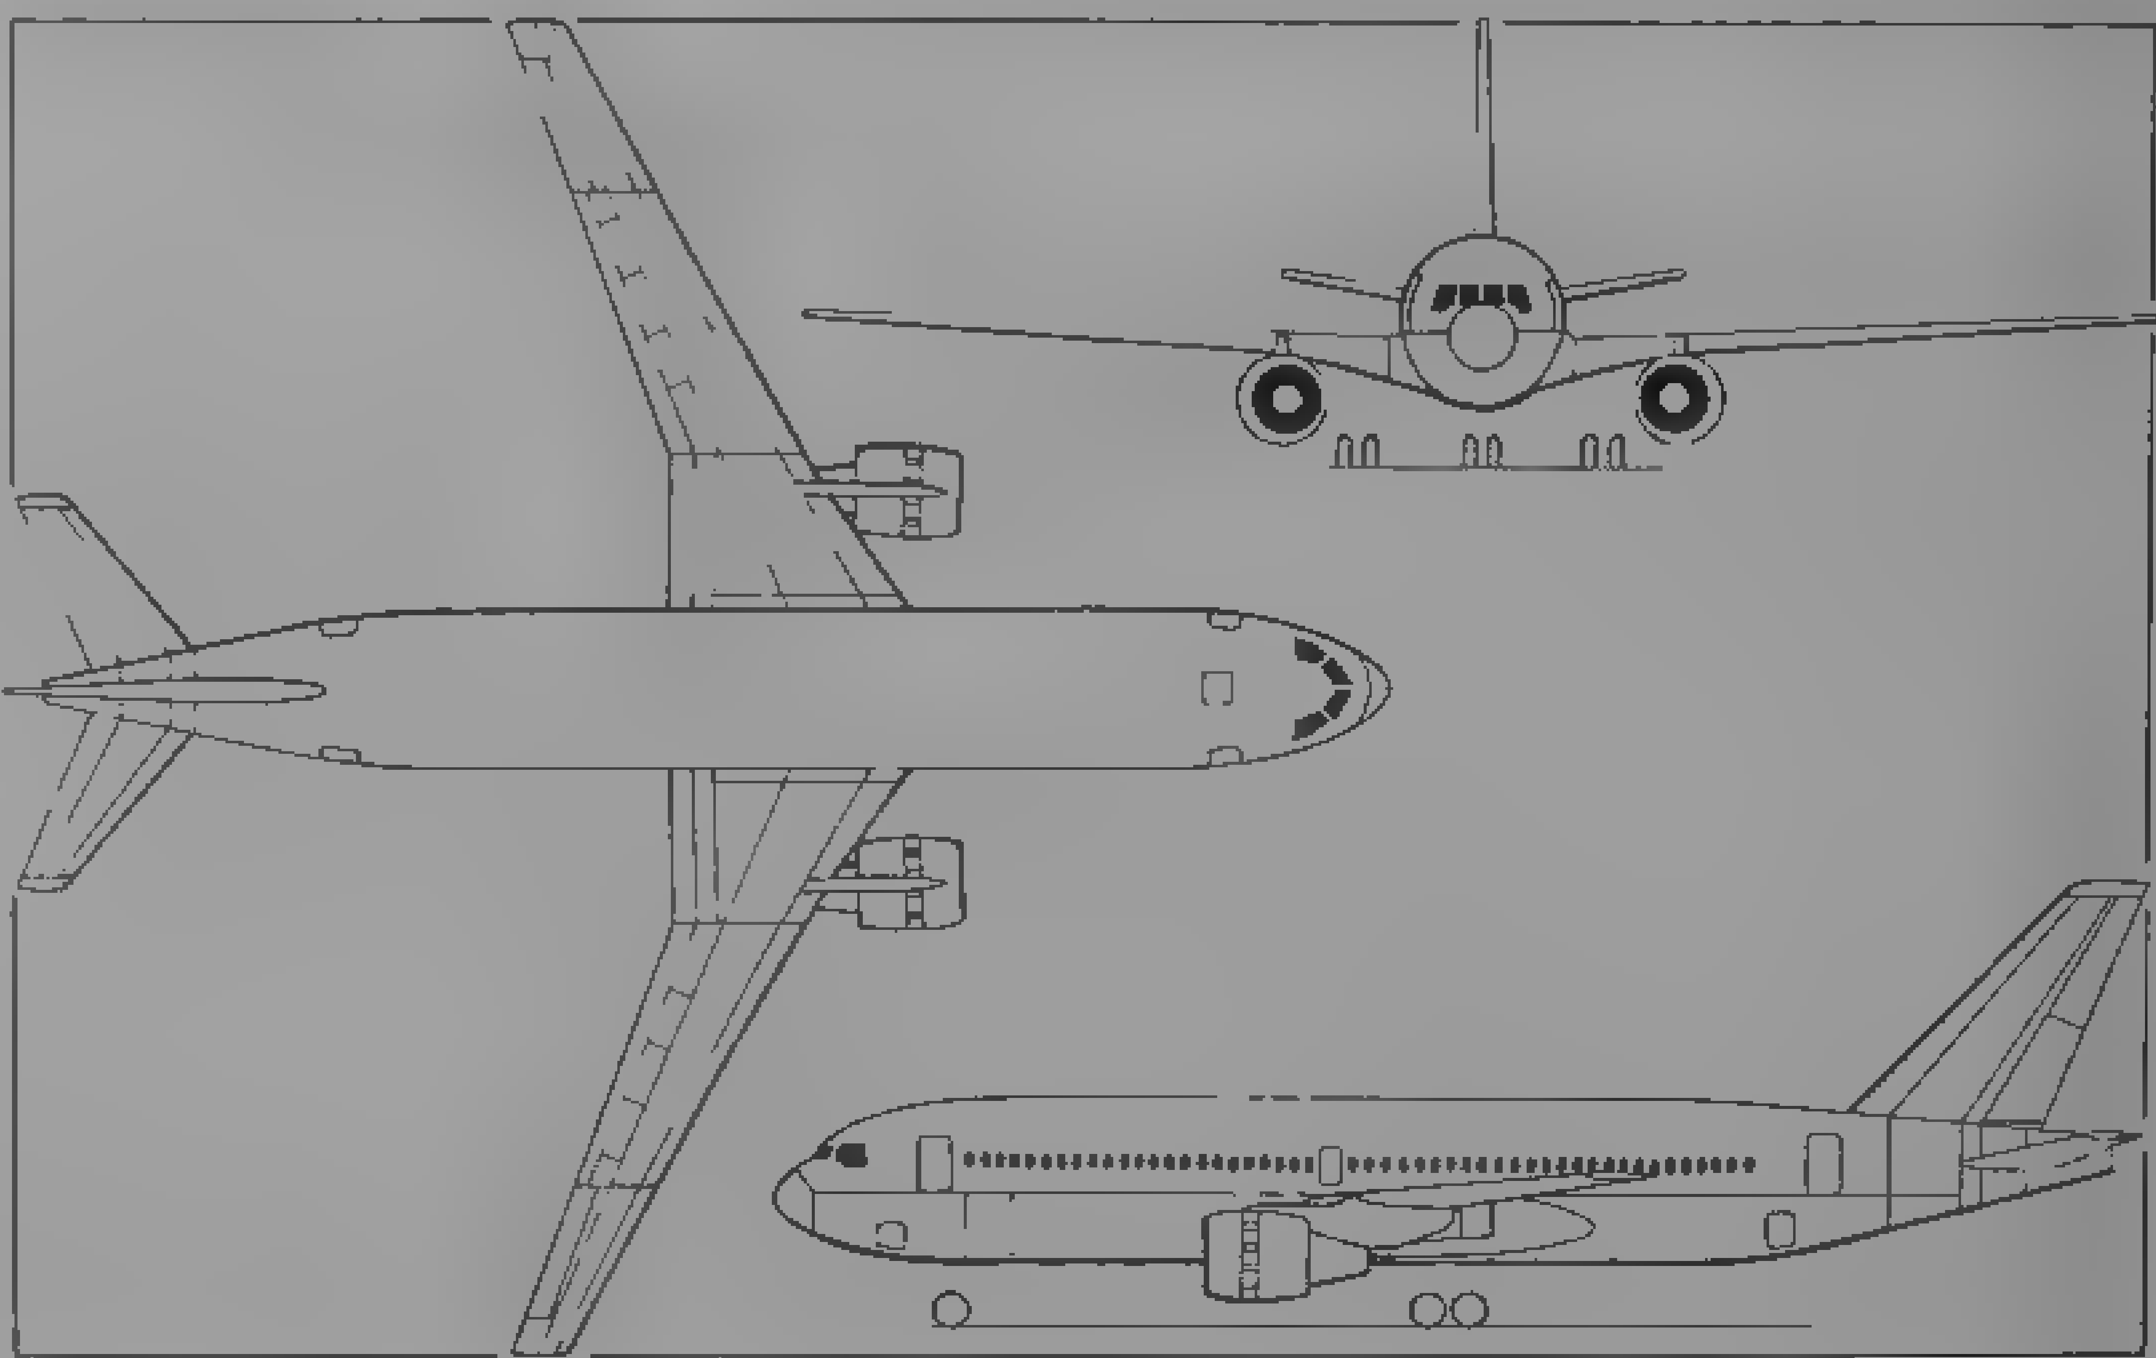
TYPE: Medium/long-range passenger and freight follow-on to DC-10.

PROGRAMME: Revealed at Paris Air Show 1985. British Caledonian ordered nine 3 December 1986; official programme launch 30 December 1986; five aircraft in flight test programme (four with GE engines, one with P&W), first flight (N111MD) 10 January 1990 powered by CF6s, first flight of third prototype powered by P&W PW4460s, 26 April 1990; certificated 8 November 1990; first delivery to Finnair 29 November 1990, entering service 20 December. Deliveries totalled three in 1990, 31 in 1991, 42 in 1992, 36



Artist's impression of McDonnell Douglas MD-XX advanced technology medium-range airliner

1995



McDonnell Douglas MD-XX provisional drawing (*Jane's/James Goulding*)

1995

in 1993 and 17 in 1994; 100th MD-11 delivered 30 June 1993.

Certification with R R Trent 650 discontinued.

CURRENT VERSIONS: **MD-11**: Standard passenger version for 298 passengers in three-class layout, maximum range 7,000 n miles (12,964 km; 8,055 miles) with maximum optional T-O weight. Planned production of all variants declined to about two per month in 1993; expected to increase again from 1995. *Detailed description applies to improved MD-11, MD-11F, MD-11 Combi and MD-11 convertible Freighter.*

MD-11 Performance Improvement Programme (PIP): Continuous improvement programme aimed at weight and drag reduction and extended range under way since 1990, resulting in recovery and extension of MD-11's design range. First delivery November 1990 with initial choice of gross weights between 273,289 kg (602,500 lb) and 276,691 kg (610,000 lb), range shortfall 440 n miles (815 km; 506 miles) with GE engines and 710 n miles (1,315 km; 817 miles) with P&W engines. Successive drag reduction, weight saving and fuel consumption and engine installation improvements, introduced in stages by December 1994, included the following.

Weight reduction: Airframe weight reduced progressively by 1,020 kg (2,250 lb) by changes in cargo handling system, tailplane structure, composites centre engine inlet, cargo hold changes and new flooring materials.

T-O weight increases: Maximum T-O weight increased to 280,320 kg (618,000 lb) in January 1991; further optional increase to 283,720 kg (625,500 lb) in July 1993.

Drag reduction: Phase I, introduced before first delivery, saved 0.7 per cent drag by means of splitter plate preventing turbulence forming behind blunt wing trailing-edge. Phase II drag reduction, available from January 1992, saved another 1.5 per cent drag by sealing outboard slat gaps and drooping outboard ailerons by 4°. Phase III, introduced September 1993, eliminated another 0.1 per cent drag by applying endplates on wing adjacent ailerons and adding fillet to wing-mounted engine pylons. Modification of windscreen wipers and windscreen introduced December 1994 cuts another 0.3 per cent. Phase IV, introduced February 1995, eliminates further 1.2 per cent drag by means of a re-rigged elevator (to reduce incidence and produce a more cambered aerofoil), a diverter fillet around base of the centre engine inlet structure, redesign of flap hinge-fairing and installation of wing and undercarriage door seals. Cumulative range improvement of all four phases extends range to more than 6,911 n miles (12,800 km; 7,953 miles) with 29,000 kg (63,934 lb) payload.

Added fuel: Auxiliary fuel tanks available from April 1992; one or two 7,472 litre (1,974 US gallon; 1,644 Imp gallon) tanks can be mounted in rear of forward underfloor cargo compartment, displacing two or four LD3 cargo containers; tanks can be removed through normal cargo door.

T-O distance: Reduced by up to 137 m (450 ft) in order to accommodate increased T-O weight by deflecting inboard and outboard ailerons with flaps at take-off.

Engine improvements: Internal improvements by General Electric in the CF6-80C2 engine, introduced by mid-1993, have saved some 1.5 per cent fuel consumption, equivalent to about 1,360 kg (3,000 lb) of payload.

P&W applied a three-phase engine and intake improvement sequence, introduced in June 1992 and November 1993, which together gave 2.7 per cent improvement; in addition, P&W has certificated an optional thrust increase to 275.8 kN (62,000 lb st). Total range increase for these improvements is 600 n miles (1,111 km; 690 miles) for GE powered aircraft and 690 n miles (1,278 km; 794 miles) for PW-powered aircraft.

MD-11 Combi: Mixed cargo/passenger version for four to 10 cargo pallets and 168 to 240 passengers; ranges from 5,180 n miles (9,593 km; 5,961 miles) to 6,860 n miles (12,705 km; 7,894 miles). Main deck cargo door at rear on port side. Certificated April 1992 to latest FAA Class C smoke and fire containment requirements.

MD-11CF: Convertible freighter; launched August 1991 with order from Martinair-Holland (four firm orders for delivery 1994 and 1995, one on option). Main deck cargo door at front on port side. Certification due 1994.

MD-11F: All-freight version.

MD-11ER: Extended-range version launched February 1994; maximum T-O weight increased to 285,989 kg (630,500 lb) and fuel capacity increased, offers either 480 n miles (889 km; 552 miles) greater range or 2,721 kg (6,000 lb) more payload, will be offered in passenger, Combi, convertible or all-freight versions; drag reduction and weight saving will reduce fuel burn by 1.5 per cent, intended to provide lower costs on very long routes with lower passenger traffic; Douglas claims MD-11ER costs 26 per cent less to operate than Boeing 747-400. MD-11ER extends MD-11 range with 298 passengers from 7,000 n miles (12,964 km; 8,055 miles) to 7,240 n miles (13,408 km; 8,331 miles), which is claimed to be very slightly greater than Boeing 747-400 with 421 passengers; first deliveries early 1996.

Three further potential variants were being studied in early 1995:

MD-11LR: Long-range version with 3.66 m (12 ft) wingtip extensions, new aileron segment, modified low-speed ailerons, revised trailing-edge, revised wheels, tyres, brakes and anti-skid system, four-wheel centre landing gear, uprated engines and tip extensions to horizontal and vertical tail surfaces; target range 7,900 to 8,000 n miles (14,631 to 14,816 km; 9,091 to 9,206 miles) with about 300 passengers in three-class arrangement.

MD-11 'Simple Stretch': 6.70 m (22 ft) fuselage stretch, maximum T-O weight 278,950 kg (615,000 lb), range 5,400 n miles (10,000 km; 6,213 miles) with 365 passengers.

MD-11 Twinjets: Twin-engined derivatives, could include medium-range, stretched medium-range and long-range versions. Medium-range version would have two 311.4 kN (70,000 lb st) class engines, wingtip extensions as for MD-11LR, fuselage shortened by about 4.87 m (16 ft) forward of wing, centre landing gear eliminated and vertical tail/centre engine nacelle structure replaced by new vertical tail surface of composites construction; empty weight 118,975 kg (262,300 lb), maximum T-O weight 227,700 kg (502,000 lb); design range 5,890 n miles (10,908 km; 6,778 miles) with 264 passengers in three-class arrangement. Long-range twin would have 422.6 kN (95,000 lb st) class engines and additional fuel capacity; empty weight 131,815 kg (290,600 lb), maximum T-O weight 277,600 kg (612,000 lb), design range 7,550 n miles (13,982 km; 8,688 miles). Stretched medium version would have 5.59 m (18 ft 4 in) plug forward of wing and 5.18 m (17 ft 0 in) plug aft of wing, design range 5,850 n miles (10,834 km; 6,732 miles) with 351 passengers.

CUSTOMERS: At 1 January 1995, 129 MD-11s had been delivered to 20 operators.

DESIGN FEATURES: Compared with DC-10, MD-11 has winglets above and below each wingtip, tailplane has advanced cambered aerofoil, modified trailing-edge camber, reduced sweepback and 7,571 litre (2,000 US gallon; 1,665 Imp gallon) fuel trim tank, extended tailcone of low-drag chisel profile; two-crew all-digital flight deck, restyled interior, choice of GE CF6-80C2D1F and P&W PW4460 engines.

Wing has Douglas aerofoil section; sweepback at quarter-chord 35°, dihedral 6°; incidence at root 5° 51′, tailplane sweepback 33°.

FLYING CONTROLS: Ailerons powered by Parker Hannifin actuators, electrohydraulically actuated variable incidence tailplane with slotted elevators in two sections each side powered by Parker Hannifin and Teijin Seiki actuators; inboard all-speed ailerons and outboard low-speed ailerons droop with flaps on take-off, dual section rudder split into vertical segments, near full-span leading-edge slats, double-slotted trailing-edge flaps with offset external hinges; five spoilers in groups of four and one on each wing. Cat. IIIb automatic landing with ground roll control (certificated April 1991) standard.

STRUCTURE: Composites used in virtually all control surfaces, engine inlets and cowlings, and wing/fuselage fillets; wing has two-spar structural box with chordwise ribs and skins with spanwise stiffeners; upper wing et of ribs, spars and stiffened aluminium alloy skin with carbonfibre trailing-edge; lower winglet carbonfibre, inboard ailerons have metal structure with composites skin; outboard ailerons all-composites, inboard flaps composites-skinned metal,

1994

outboard flaps all composites, spoilers aluminium honeycomb and composites skin, tailplane has CFRP trailing-edge, elevators CFRP.

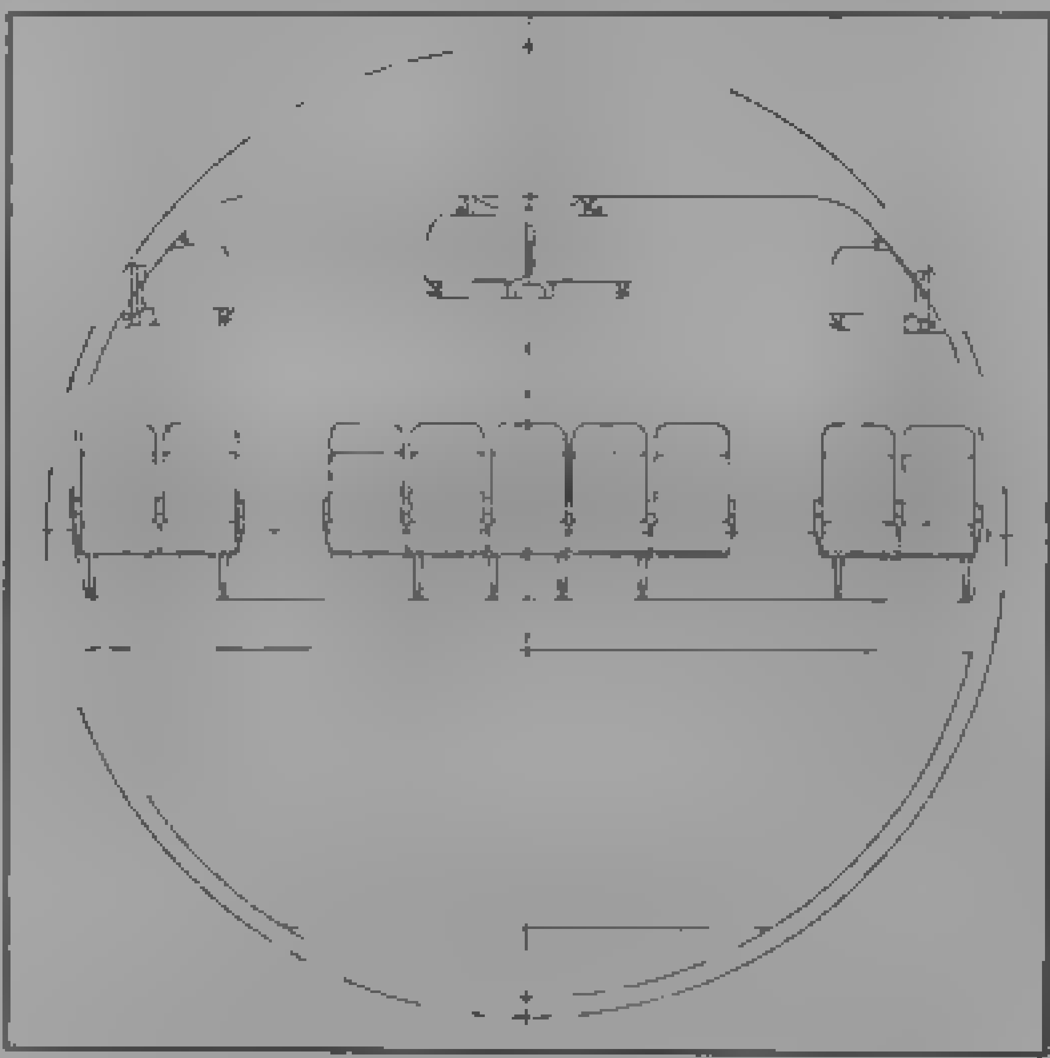
Rear engine inlet duct and fan cowl doors, and nose cowl outer barrels on wing-mounted engines, are of composites construction. Inner surfaces of engine nacelles are acoustically treated.

Suppliers include Aermacchi (fin, rudder, fuselage panels, winglets), AP Precision Hydraulics (centreline and nose landing gear), Bendix (mainwheels and carbon brakes), CASA (horizontal tail surfaces), General Dynamics Convair Division (fuselage sections until end 1995), Embraer (outboard flap sections), Fischer GmbH (composite flap hinge fairings), Pneumo Abex Corporation (main landing gear), Rohr Industries (engine pylons), Honeywell (advanced flight deck and avionics), and Westland Aerospace (flap vane and inlet duct extension rings).

LANDING GEAR: Hydraulically retractable tricycle type, with additional twin-wheel main unit mounted on the fuselage centreline; heaviest proposed variants might have four-wheel centreline bogie; nosewheel and centreline units retract forward, main units inward into fuselage. Twin-wheel steerable nose unit (±70°). Main gear has four-wheel bogies. Oleo-pneumatic shock-absorbers in all units. Loral nosewheels and Goodyear tyres size 40 × 15.5-16, pressure 13.44 bars (195 lb/sq in). Main and centreline units have Bendix wheels and Goodyear tyres size 54 × 21-24, pressure 13.79 bars (200 lb/sq in). Bendix carbon brakes with air convection cooling. Loral anti-skid system. Minimum ground turning radius about nosewheel 26.67 m (87 ft 6 in), about wingtip 35.90 m (117 ft 9½ in).

POWER PLANT: Three Pratt & Whitney PW4460 turbofans, each originally rated at 266.9 kN (60,000 lb st), or three General Electric CF6-80C2D1F turbofans, each rated at 273.57 kN (61,500 lb st). P&W thrust optionally increased to 275.8 kN (62,000 lb) to improve field performance; two engines mounted on underwing pylons, the third above the rear fuselage aft of the fin torsion box. Refuelling point in leading-edge of each wing. Standard fuel capacity: MD-11 152,108 litres (40,183 US gallons; 33,459 Imp gallons), MD-11F and Combi 146,305 litres (38,650 US gallons; 32,182 Imp gallons); one or two 7,472 litre (1,974 US gallon; 1,643 Imp gallon) tanks can be added in cargo hold.

ACCOMMODATION: Crew of two, plus two observer seats. Standard class seating for 250, two-class for 298 and



Cabin cross-section of MD-11 in economy layout. Aisle width 48.3 cm (1 ft 7 in); height 241.3 cm (7 ft 11 in); seat width 45.7 cm (1 ft 6 in), overall width, two seats 106.7 cm (3 ft 6 in), five seats 259.1 cm (8 ft 6 in). Exterior diameter 6.02 m (19 ft 9 in)
1994

all-economy for up to 410. Combi carries 214 passengers. Crew door and three passenger doors each side, all eight of which open sliding inward and upward. Two rear doors are deactivated in Combi configuration. Two freight holds in lower deck, forward and aft of wing, and one bulk cargo compartment in rear fuselage. Forward freight hold is heated and ventilated; rear freight hold heated only. MD-11 Combi has a lower deck cargo door in centre compartment on starboard side of fuselage for loading of pallets, an upward-opening main deck cargo door on port side at rear of cabin. MD-11F/CF have port side forward main deck cargo door.

SYSTEMS: Air conditioning system includes three AiResearch air bearing air-cycle units with two automatic digital pressure controllers and electromanual back-up. Cabin maximum pressure differential 0.59 bar (8.6 lb/sq in). Three independent hydraulic systems for operation of flight controls and braking, with motor/pump interconnects to allow one system to power another. Electrical system comprises three 400 Hz, 100/120 kVA integrated drive generators, one per engine; one 90 kVA generator in APU, 50 Ah battery, four transformer-rectifiers to convert AC power to DC; and 25 kVA drop-out air-driven emergency generator. Pneumatic system, maximum controlled pressure 3.17 bars (46 lb/sq in) at 230°C, supplies air conditioning, engine bleed air anti-icing for wing (outer slats) and tailplane leading-edges, galley vent jet pump, and cargo compartment floor heating. EROS plumbed gaseous oxygen system for crew; chemical oxygen generators with automatically deploying masks for passengers. Portable oxygen cylinders for attendants and first aid. De-icing for windscreens, angle of attack sensors, TAT probe and static port plate. AlliedSignal TSCP700-4E APU.

AVIONICS: *Flight*: Avionics integrator, Honeywell, responsible for flight guidance/flight deck system consisting of 44 line-replaceable units. These include aircraft system controllers (ASC) that perform flight engineer control and monitoring functions, providing automated hydraulic, electrical, environmental and fuel systems, laser inertial reference system (IRS) for navigation, digital air data computer (DADC). Flight control computer includes autothrottle and longitudinal stability augmentation, windshear detection and guidance.

Instrumentation: Six-tube EFIS and systems displays, 'dark cockpit' philosophy with lights only showing to indicate abnormal states; no need to look on overhead panels to check systems status. hydraulic, electrical, environmental and fuel systems segregated and each system configured in normal and abnormal conditions by a pair of computers.

DIMENSIONS, EXTERNAL:

Wing span	51.77 m (169 ft 10 in)
Wing chord: at root	10.71 m (35 ft 1¾ in)
at tip	2.73 m (8 ft 11½ in)
Wing aspect ratio	7.91
Length overall: with PW4460	61.24 m (200 ft 11 in)
with CF6-80	61.37 m (201 ft 4 in)
Fuselage: Length	58.65 m (192 ft 5 in)

1995

McDONNELL DOUGLAS MD-12

TYPE: High-capacity long-range airliner

PROGRAMME: Definitive four-engined layout announced April 1992, development delayed following failure to conclude arrangement with Taiwan Aerospace and prolonged downturn profitability in airline industry; new risk-sharing partners or partner group being sought, low level of development activity by 1994.

CURRENT VERSIONS: Initially offered in Long-Range, High Capacity, Freight and Combi versions; later to be offered in Stretch Medium Range, Stretch Long Range and Twin Engined versions

CUSTOMERS: No firm customers announced by mid-1995

DESIGN FEATURES: Full length two-deck fuselage seating up to 579 passengers in three classes; range would allow New York to Taipei or Singapore to Zurich or Los Angeles to Bangkok non-stop. Wing of advanced technology with 35° sweep, wing span maintains operational clearance with current taxiway separation standards, seat mile costs to be 15 per cent less than those of current largest airliner

FLYING CONTROLS: Fly-by-wire control system with all-glass cockpit; normal ailerons assisted by outboard [illegible] panels, four elevator sections, rudders divided into fore and aft and upper and lower panels; total seven spoilers per wing for lateral control, airbrakes and lift dumping; six leading-edge slat and three flap sections per wing

LANDING GEAR: Five main legs each to carry one four-wheel bogie, inner legs retract into fuselage, outers into wing and [illegible], twin-wheel nose leg

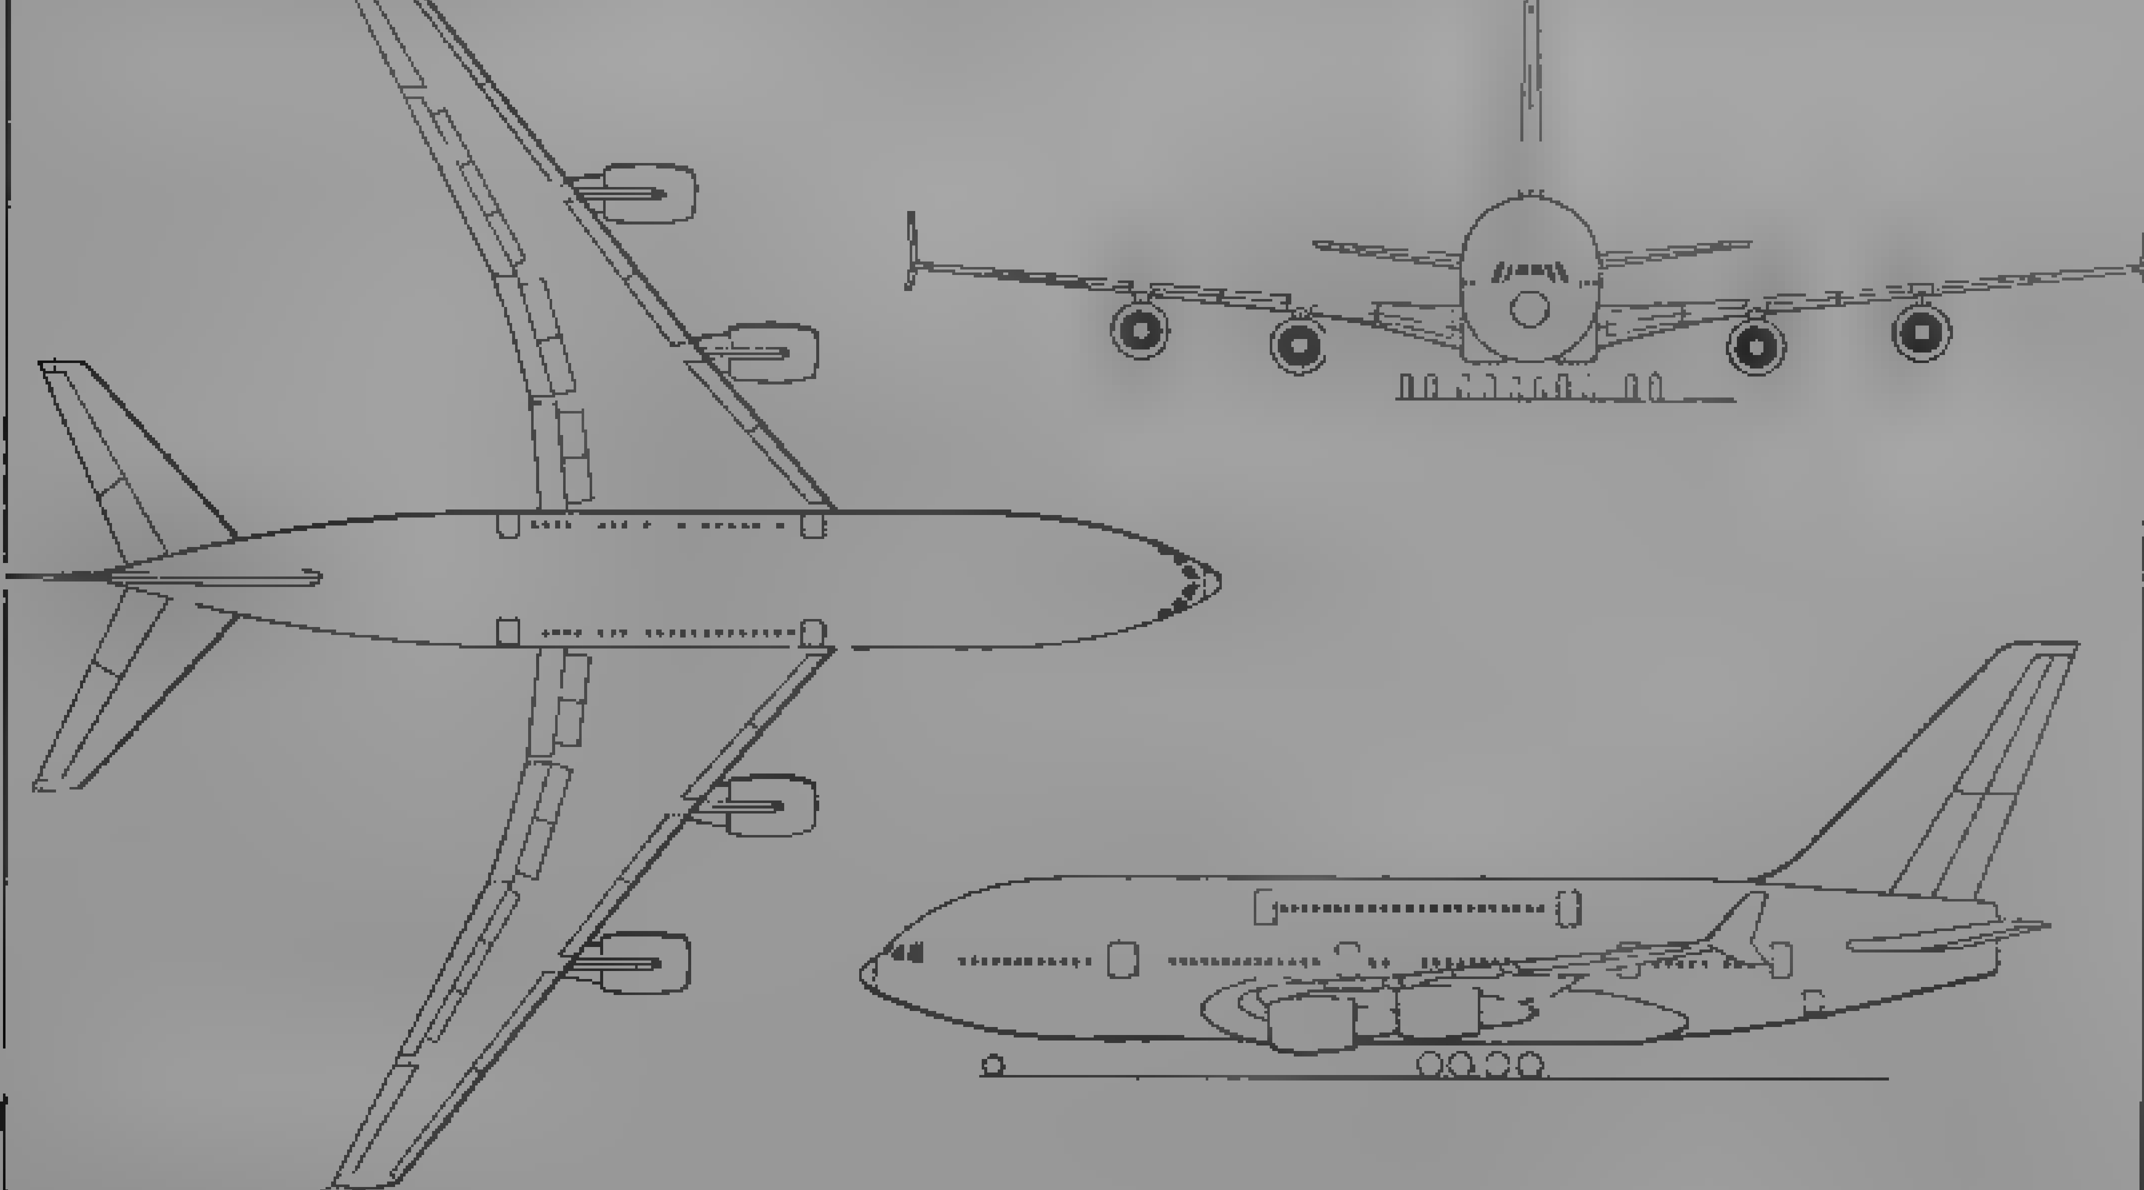
POWER PLANT: Four turbofans, choice of GE CF6-80C2D1F (273 6 kN, 61,500 lb st each) or Pratt & Whitney PW4462 (275 8 kN, 62,000 lb st each) or Rolls-Royce Trent 764 (284 7 kN, 64,000 lb st each)

ACCOMMODATION: Two-pilot flight deck on main deck level possible cross-qualifying with MD-11, crew rest compartment at front end of main upper decks, cabin crew rest area at aft end of upper deck, main deck has two or three aisles; upper deck has two aisles. Long Range interior seats 481 passengers in three-class layout, including 176 economy class on shortened upper deck plus 24 first class, 90 business class and 191 economy class on main deck; High Capacity version seats as many as 579 passengers with 107 business class and 93 economy class on full-length upper deck plus 30 first class and 349 economy class on main deck. Combi carries maximum of nine freight pallets on main deck and 428 passengers. Freighter accommodates cargo on both main and upper decks, underfloor freight compartments hold two LD3 containers abreast, eight passenger doors on main deck and four escape doors on upper deck, one stairway standard and second available for High Capacity.

DIMENSIONS, EXTERNAL:
  Wing span 69 80 m (229 ft 0 in)
  Wing aspect ratio 7 76
  Length: fuselage 61 32 m (201 ft 2 in)
    overall 63 93 m (209 ft 9 in)
  Height overall 23 32 m (76 ft 6 in)
  Tailplane span 25 12 m (82 ft 5 in)
  Wheel track 11 48 m (37 ft 8 in)
  Wheelbase 26 82 m (88 ft 0 in)

DIMENSIONS, INTERNAL:
  Cabin: Main deck width at floor 6 71 m (22 ft 0 in)
    Upper deck width at shoulder 5 33 m (17 ft 6 in)
  Underfloor freight volume 139 3 m³ (4,920 cu ft)
  Main deck freight volume 538 9 m³ (19,030 cu ft)
  Upper deck freight volume 198 2 m³ (7,000 cu ft)

AREAS:
  Wings, gross 628.1 m² (6,761 0 sq ft)
  Vertical tail surfaces (total) 108 7 m² (1,170 0 sq ft)
  Horizontal tail surfaces (total) 140.3 m² (1,510.0 sq ft)



Four-engined two-deck (short upper deck version) McDonnell Douglas MD-12, announced in April 1992 *(Jane's/Mike Keep)*

1993

WEIGHTS AND LOADINGS (LR Long Range, HC High Capacity, C Combi, F Freighter):

Operating weight empty: LR	200,490 kg (442,000 lb)
HC	208,655 kg (460,000 lb)
C	209,105 kg (461,000 lb)
F	191,870 kg (423,000 lb)
Weight limited payload: F only	143,790 kg (317,000 lb)
Max T-O weight: LR, HC, C, F	463,570 kg (1 022,000 lb)
Max zero-fuel weight: LR, HC	290,300 kg (640,000 lb)
C	297,100 kg (655,000 lb)
F	328,855 kg (725,000 lb)
Max landing weight: LR, HC	308,445 kg (680,000 lb)
C	315,245 kg (695,000 lb)
F	347,000 kg (765,000 lb)
Max wing loading	738 0 kg/m² (151 2 lb/sq ft)

PERFORMANCE (estimated):

Cruising Mach number	0 85
FAA T-O field length (ISA + 30°C)	3,170 m (10,400 ft)
FAA landing field length (S/L):	
LR, HC	2,683 m (8,800 ft)
C	2 744 m (9 000 ft)
F	2 926 m (9,600 ft)
Design range (FAA international reserves and full passenger payload; freight payload on C and F at 136 kg/m³, 8 5 lb/cu ft):	
LR	8 090 n miles (14 982 km, 9 309 miles)
HC	7,130 n miles (13,204 km, 8,205 miles)
C	6 360 n miles (11 778 km; 7,319 miles)
F	5 000 n miles (9,260 km, 5,753 miles)

UPDATED

MCDONNELL DOUGLAS HIGH-SPEED COMMERCIAL TRANSPORT

Douglas study suggests as much as 20 per cent of traffic demand in 2010 could be met by High Speed Commercial Transports. In-house and NASA contract research under way, $8 million five year NASA Langley study contract awarded 1991, certification not before 2005, potential sales, 500 to 1,500; main operating areas Pacific Rim and North Atlantic. Douglas also member of international SST study group (see Supersonic Airliner Studies in International section) formed March 1990. Current Douglas research focusing on Mach 2.4 aircraft with range of more than 5 500 n miles (10,186 km, 6,329 miles) carrying 300 passengers in three classes, would fly over land at Mach 0.95, target dates are first flight 2003, certification no earlier than 2005 and in service 2006. Each HSCT would probably cost two to three times as much as a 300-passenger subsonic airliner

Merlin now produces a variant of the Macair Merlin light aircraft, previously produced by Macair Industries Inc of Baldwin, Ontario, Canada (which see in 1990-91 *Jane's*)

MERLIN MERLIN

TYPE: Side by side two-seat light aircraft

CURRENT VERSIONS: Available as floatplane, agricultural sprayer, or as light attack aircraft with two wing-mounted 5 56 mm machine guns and/or a fuselage-mounted pod with seven 70 mm rockets

CUSTOMERS: About 130 civil versions sold

DESIGN FEATURES: Strut-braced high wing full-span flaperons, tailplane with separate elevator

LANDING GEAR: Non-retractable mainwheels and tailwheel

POWER PLANT: One 74 6 kW (100 hp) Canadian Automotive (CAM) 100 engine, driving a two- or three-blade propeller

DIMENSIONS, EXTERNAL:

Wing span	9 75 m (32 ft 0 in)
Length overall	6 10 m (20 ft 0 in)
Height overall	1 85 m (6 ft 1 in)

PERFORMANCE:

Max level speed	104 kts (193 km/h, 120 mph)
Stalling speed	34 kts (63 km/h, 39 mph)
T-O distance	46 m (150 ft)
Landing distance	70 m (200 ft)
Max range	417 n miles (772 km, 480 miles)

VERIFIED

MOLLER M200/M400 SKYCAR

TYPE: Unorthodox fan-lift light aircraft.

PROGRAMME: Company formed 1983 to develop Volantor VTOL aircraft, including high power/weight ratio engines and three-axis stabilisation; prototypes called Discojet, XM-4 and 200X were saucer-shaped with multiple lift fans and centrally mounted cockpit, 200X made 150 flights from 1987 onwards, powered by eight 37.3 kW (50 hp) Wankel engines, design patented May 1992. Development in 1992-94 concentrated on own twin-rotor rotary engine weighing only 29.5 kg (65 lb); first flight of prototype scheduled for mid-1996 followed by FAA certification in 1997.

CURRENT VERSIONS: **M200**: Two-seat, five-fan version.

M400: Four-seat, four-fan version, *as described*.

CUSTOMERS: Total 88 expressions of interest.

COSTS: Development has cost $38 million, unit cost $995,000.

FLYING CONTROLS: Two sets of cascading vanes at rear of each duct vector thrust vertically for take-off, hover and landing; in horizontal flight, vanes move concurrently to act as elevators and differentially as ailerons; four servo motors power each set of vanes. Full time fly-by-wire provides stability augmentation, controlled by sensors and input from pilot's dual joysticks.

POWER PLANT: Eight 89.5 kW (120 hp) Moller MR 530 HT twin-rotor rotary engines mounted in pairs in four ducts and driving independent contrarotating fans.

AVIONICS: EFIS flight instrumentation.

DIMENSIONS, EXTERNAL:
Length overall: 5.49 m (18 ft 0 in)
Max width: 2.74 m (9 ft 0 in)
Height overall: 1.83 m (6 ft 0 in)

WEIGHTS AND LOADINGS:
Payload with max fuel: 335 kg (740 lb)
Design max T-O weight: 1,088 kg (2,400 lb)

PERFORMANCE (estimated):
Max level speed: 339 kts (627 km/h; 390 mph)
Cruising speed: 304 kts (563 km/h; 350 mph)
Max rate of climb at S/L: 2 377 m (7,800 ft)/min
Service ceiling: 9,140 m (30,000 ft)
T-O and landing area diameter: 10.7 m (35 ft)
Max range: 782 n miles (1,448 km; 900 miles)

Montana Coyote two-seat STOL homebuilt *1993*

MONTANA COYOTE

TYPE: Two-seat STOL homebuilt.

PROGRAMME: First flown in Spring 1991, kits available since Summer 1991. Building time 600 to 800 hours.

COSTS: Kit $16,500, including basic VFR and engine instruments, prewelded components, fuel and brake systems, hardware and covering; does not include engine, propeller and paint.

STRUCTURE: Wooden wings, and 4130 steel tube fuselage, rudder and elevators, Dacron covered. Flaps and ailerons have aluminium alloy skins bonded to foam core. Wingtips, cowlings, seats, instrument panel, spinner and fuel tank of GFRP.

LANDING GEAR: Non-retractable tailwheel type, with brakes. Optional floats, amphibious floats and wheel/skis.

POWER PLANT: One engine of 74.5 to 149 kW (100 to 200 hp), weighing 159 kg (350 lb) or under. Fuel capacity 151 litres (40 US gallons; 33.3 Imp gallons).

DIMENSIONS, EXTERNAL:
Wing span: 11.58 m (38 ft 0 in)
Wing aspect ratio: 8.71
Length overall: 7.62 m (25 ft 0 in)
Height overall: 1.98 m (6 ft 6 in)
Propeller diameter: 1.88 m (6 ft 2 in)

AREAS:
Wings, gross: 5.40 m² (165.75 sq ft)

WEIGHTS AND LOADINGS:
Weight empty: 408-476 kg (900-1,050 lb)
Baggage capacity: 72.5 kg (160 lb)
Max T-O weight: 839 kg (1,850 lb)
Max wing loading: 54.49 kg/m² (11.16 lb/sq ft)

PERFORMANCE:
Max level speed: 104 kts (193 km/h; 120 mph)
Max cruising speed at 1,525 m (5,000 ft): 87 kts (161 km/h; 100 mph)
Econ cruising speed at 1,525 m (5,000 ft): 82 kts (153 km/h; 95 mph)
Stalling speed, power off: 31 kts (57 km/h; 35 mph)
Max rate of climb at S/L: 381 m (1,250 ft)/min
Service ceiling: 4,575 m (15,000 ft)
T-O and landing run: 107 m (350 ft)
Range: 434 n miles (804 km; 500 miles)
Endurance: 6 h
g limits: +5/−2

Original Mooney company formed in Wichita, Kansas, 1948, produced single-seat M-18 Mite until 1952, later history recorded in 1987-88 *Jane's*. Alexandre Couvelaire, President of Euralair/Avialair Paris, France, and Michel Seydoux, President of MSC, jointly acquired Mooney in 1985. Mooney and Aerospatiale (Socata) announced joint development of TBM 700 June 1987 (see under Socata in French section), but Mooney withdrew in Spring 1991. Total of 10,039 aircraft of all models produced by end of 1994, 71 of which delivered in 1994.

UPDATED

MOONEY M20J MSE

TYPE: Four-seat touring aircraft.

PROGRAMME: First flight of original Mooney 201 June 1976, certificated September 1976; improved 201 SE (Special

Mooney MSE four-seat light aircraft (Textron Lycoming IO-360-A3B6D engine) *1995*

Edition) followed by modified 205; MSE version introduced August 1990

CURRENT VERSIONS: **MSE**: Standard version, *to which detailed description applies*

CUSTOMERS: Total of more than 1,850 Mooney 201/205s delivered by January 1995

COSTS: Basic $149,725; typically equipped with IFR avionics $211,135 (1995)

DESIGN FEATURES: High-efficiency touring aircraft, originally designed by Mooney brothers, wing section NACA $63_2$182-215 at root, 64$_1$181 412 at tip, dihedral 5° 30′, incidence 2° 30′ at root, 1° at tip; wing swept forward 2° 29′

FLYING CONTROLS: Manually operated, sealed gap, differentially operated ailerons, fin and tailplane integral so that both tilt, varying tailplane incidence for trimming, no trim tabs, electrically actuated single-slotted flaps.

STRUCTURE: Single-spar wing with auxiliary spar out to mid-position of flaps, wing and tail surfaces covered with stretch formed wraparound skins. Steel tube cabin section covered with light alloy skin, semi-monocoque rear fuselage with extruded stringers and sheet metal frames

LANDING GEAR: Electrically retractable levered suspension tricycle type with airspeed safety switch bypass. Nosewheel retracts rearward, main units inward into wings. Rubber disc shock absorbers in main units. Cleveland mainwheels, size 6.00-6, and steerable nosewheel, size 5.00-5. Tyre pressure, mainwheels 2.07 bars (30 lb/sq in), nosewheel 3.38 bars (49 lb/sq in). Cleveland hydraulic single-disc brakes on mainwheels. Parking brake

POWER PLANT: One 149 kW (200 hp) Textron Lycoming IO-360-A3B6D flat-four engine, driving a McCauley B2D34C214/90DHB-16 two-blade constant-speed metal propeller. Two integral fuel tanks in wings, with combined usable capacity of 242 litres (64 US gallons, 53.3 Imp gallons). Refuelling points in wing upper surface. Oil capacity 7.5 litres (2 US gallons, 1.7 Imp gallons)

ACCOMMODATION: Cabin accommodates four persons in pairs on individual vertically adjustable seats with reclining back, armrests, lumbar support and headrests. Dual controls standard. Overhead ventilation system. Cabin heating and cooling system, with adjustable outlets and illuminated control. One-piece wraparound windscreen. Tinted Plexiglas windows. Rear seats removable for freight stowage. Rear seats fold forward for carrying cargo. Single door on starboard side. Compartment for 54 kg (120 lb) baggage behind cabin, with access from cabin or through door on starboard side

SYSTEMS: Hydraulic system for brakes only. Electrical system includes 70 A alternator, 24 V 10 Ah battery, voltage regulator and warning lights, together with protective circuit breakers. Windscreen defrosting system standard

AVIONICS: Choice of four 'required option' Bendix/King IFR avionics packages available: K200 without DME, K 300 with DME, K 400 with RNav/DME and K 500 with EFIS/GPS/RNav/DME.

Flight: Optional avionics include Bendix/King KAP 100, KAP 150 or KFC 150 autopilot/flight control systems. KR 87-15 ADF with KI 227-00 indicator, KI 227-01 slaved ADF, KI 229 RMI, KRA-10A-00 radar altimeter and KT 71-00 Mode C digital transponder; B F Goodrich WX-900, WX-1000 or WX-1000+ Stormscope

Instrumentation: Standard blind-flying instruments

EQUIPMENT: Standard equipment includes FT101A fuel management system, fuel sight gauges in wings, two electric fuel quantity gauges, electric OAT gauge, CHT and EGT gauges, alternate static source, and panel/cabin lighting, navigation lights, landing/taxi light, three high-intensity strobe lights, grey tinted windscreen and cabin windows, seat belts and shoulder harnesses for all seats, assist straps and baggage straps, hatshelf and coat hook, multiple cabin fresh air vents, cargo tiedowns, wing jackpoints and external tiedowns, towbar, fuel tank quick drains and fuel sampler cup, auxiliary power plug, heated pitot tube, epoxy polyimide anti-corrosion treatment, and overall external polyurethane paint finish. Optional equipment includes electric trim system, leather seats, leather-wrapped control wheels, export altimeter with millibar subscale, co-pilot's toe brakes and custom paint

DIMENSIONS, EXTERNAL:

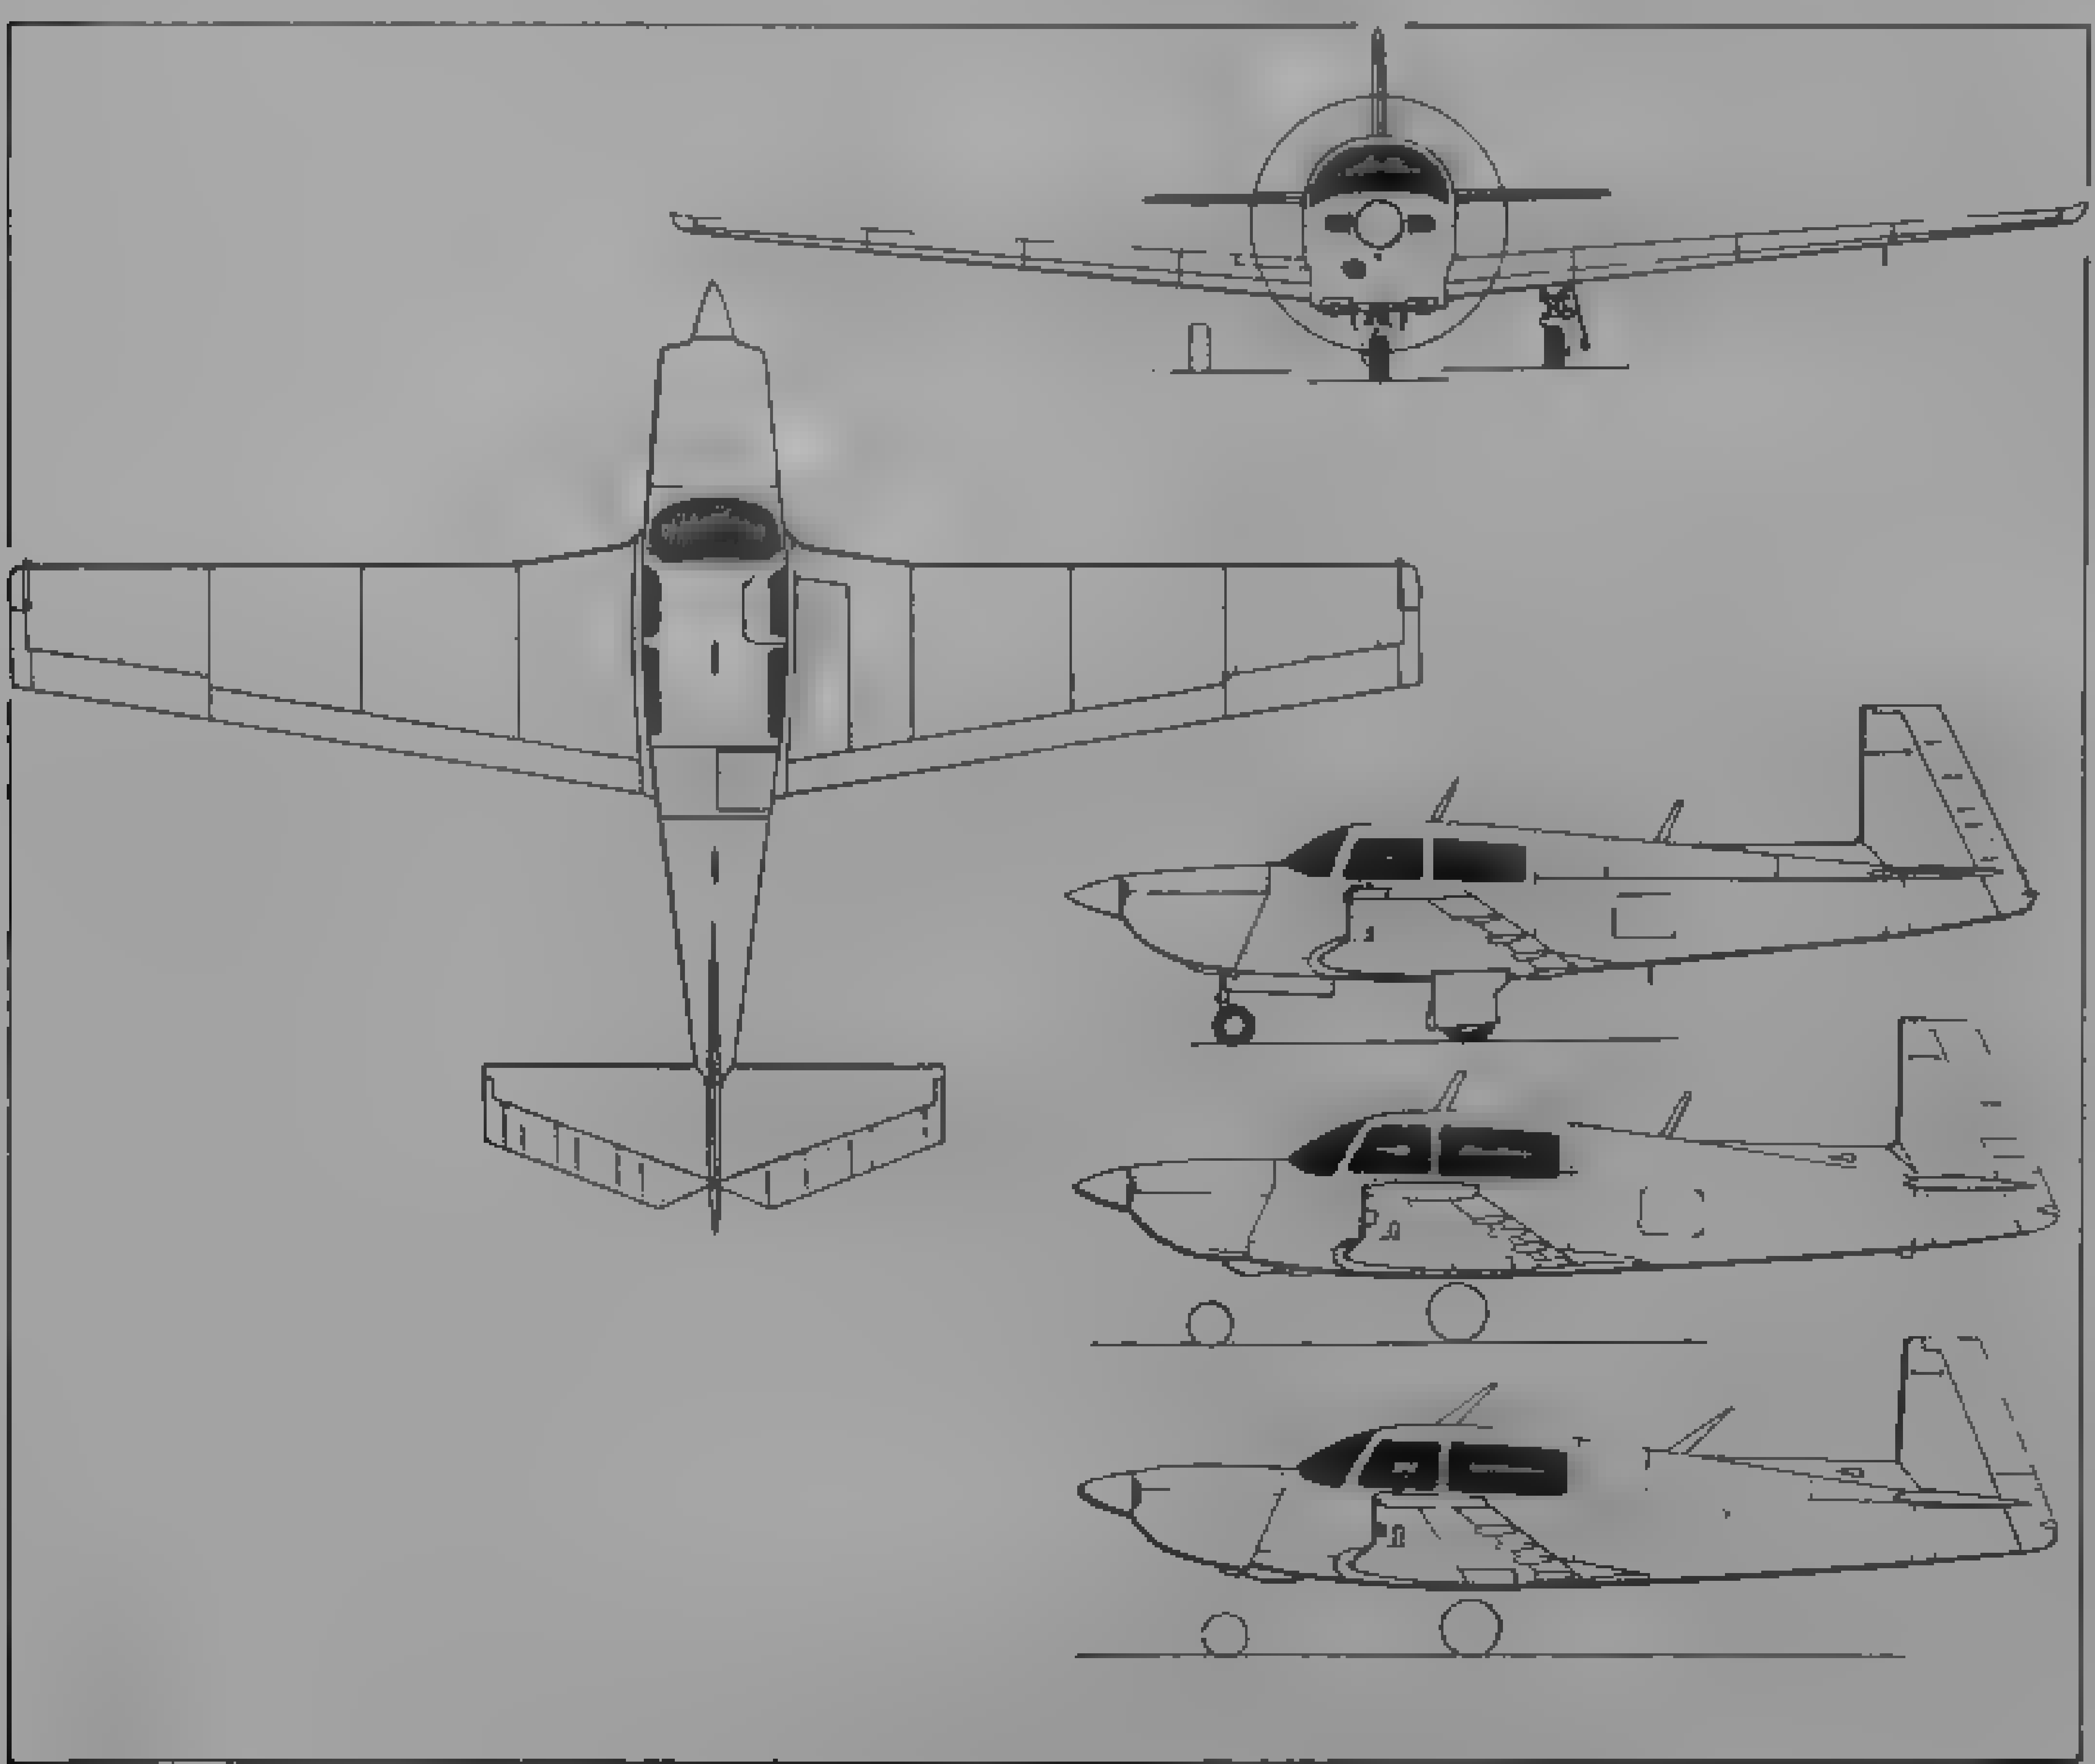
Mooney Ovation four-seat light aircraft (Teledyne Continental IO-550-G5B engine) *(Bob Grimstead)* 1995



Mooney MSE four-seat touring aircraft, with additional side views of TLS (centre) and Ovation (bottom) *(Jane's/Dennis Punnett)* 1995

MOONEY M20R OVATION

TYPE: Four-seat touring aircraft

PROGRAMME: Prototype (N20XR) rolled out April 1994; first flight May 1994, FAA certification July 1994

CUSTOMERS: Total 31 ordered by early November 1994, including 10 for export from customers in France, Germany, Paraguay, South Africa, Switzerland, Thailand and UK. 21 delivered by end of 1994, production rate 25 per year

COSTS: Basic $215,750 or $281,555, typically equipped with IFR avionics (1995)

DESIGN FEATURES: Combines airframe of TLS with normally aspirated flat six engine. Completely restyled instrument panel, seats and cabin interior with sandwich-core rigid trim/soundproofing panels and leather and wool fabric upholstery

POWER PLANT: One 224 kW (300 hp) Teledyne Continental IO-550-G5B flat-six engine, derated to 209 kW (280 hp), driving a McCauley three-blade constant-speed metal propeller. Usable fuel 337 litres (89 US gallons; 74 Imp gallons)

AVIONICS: As Mooney MSE

DIMENSIONS, EXTERNAL: As Mooney TLS except:

Length overall	8.17 m (26 ft 9¾ in)
Propeller diameter	1.85 m (6 ft 1 in)

WEIGHTS & LOADINGS:

Weight empty	1,029 kg (2,268 lb)
Max usable fuel	242 kg (534 lb)
Max T-O weight	1,528 kg (3,368 lb)
Max landing weight	1,451 kg (3,200 lb)
Max wing loading	94.1 kg/m² (19.26 lb/sq ft)
Max power loading	7.32 kg/kW (12.03 lb/hp)

PERFORMANCE (at max T-O weight, ISA, except where indicated)
Max cruising speed 190 kts (352 km/h; 219 mph)
Stalling speed
flaps and wheels up 66 kts (123 km/h; 76 mph)
flaps and wheels down 59 kts (110 km/h, 68 mph)
Max rate of climb at S/L 366 m (1,200 ft)/min
Service ceiling 6,100 m (20,000 ft)
Range, with reserves, at 2,745 m (9,000 ft)
1,130 n miles (2,092 km, 1,300 miles)

UPDATED

MOONEY M20M TLS

TYPE: Four-seat turbocharged light aircraft

PROGRAMME: Announced 2 February 1989 as TLS (Lycoming Sabre); certificated 1989

CUSTOMERS: 19 produced in 1994

COSTS: Basic $255,750, typically equipped with IFR avionics $334,830 (1995)

DESIGN FEATURES: Stretched fuselage; turbocharged and intercooled engine

POWER PLANT: One 201 kW (270 hp) turbocharged Textron Lycoming TIO-540-AF1A flat six engine, driving a McCauley three-blade metal propeller. Two integral fuel tanks in inboard wing leading-edges, with a combined capacity of 363 litres (96 US gallons, 80 Imp gallons), of which 337 litres (89 US gallons, 74 Imp gallons) are usable. Two-piece nose cowling is of composite glassfibre/graphite construction

ACCOMMODATION: All seats have centre and side armrests (removable in rear seats) and European-style headrests. Rear seats moved aft by 10 cm (4 in) to increase legroom. Pilot and co-pilot seats have inertia reel shoulder harnesses.

SYSTEMS: Dual 70 Ah 28 V alternators. 24 V 10 Ah batteries. oxygen system, capacity 3 26 m³ (115 cu ft), with masks and overhead outlets, standard

AVIONICS: As Mooney MSE

EQUIPMENT: Standard equipment includes attitude indicator, IFR directional gyro, fuel flow indicator, annunciator panel with press-to-test, electric/manual elevator trim and electric rudder trim with console- or panel-mounted LED indicators, avionics master switch, forward centre console, console-mounted chart holder, pilot's and co-pilot's map lights, high-speed electric starter, dual batteries console-mounted weight-and-balance computer, chrome-plated collapsible towbar, cigarette lighter and ashtrays, cabin, baggage door and ignition locks, and speedbrakes

Specifications as Mooney MSE except

ASSOCIATE ADMINISTRATOR: Dr Wesley Harris
DIRECTOR FOR AERONAUTICS: Cecil C Rosen

NASA budget request for FY96 is $14 260 million, however, $5 billion spending cut expected by end of FY00, at which time prime NASA concerns will be R&D rather than operationally driven, staff total of 24,731 to be reduced to 21,100 by 1999, operates fleet of about 110 aircraft, comprising 33 dedicated to research and 70 to programme support, flies typical 29,000 hours per year, including 24,600 for R&D and programme support; employs 137 pilots, including 45 astronauts. Most aircraft carry civilian registrations between N400NA and N999NA, assigned according to base. Main operating bases are

Ames Research Center, Moffett Field, California (N700-799NA)

Dryden Flight Research Facility, Edwards AFB, California (N800-899NA)

Langley Research Center, Hampton, Virginia (N500-599NA)

Lewis Research Center, Cleveland, Ohio (N600-699NA)

Other significant aircraft operations bases are

Johnson Space Center, Houston, Texas (N900-999NA)

Wallops Flight Facility, Wallops Island, Virginia (N400-499NA)

UPDATED

REUSABLE LAUNCH VEHICLE (X-33)

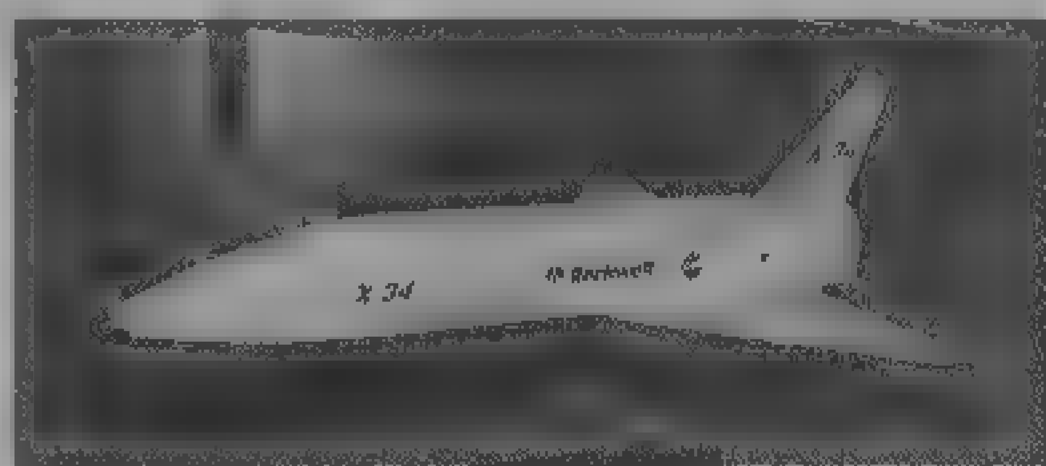
Joint NASA/industry project to develop single-stage-to-orbit technology demonstrator reusable launch vehicle (RLV), paving way for orbital RLV with capability to carry 18,000 kg (39,683 lb) payload. Industry briefed on funding by NASA at Marshall Space Flight Center on 19 October 1994, when Co-operative Agreement Notice (CAN) issued; deadline for initial response from interested agencies 2 November, with proposals due for submission on or by 6 January 1995. NASA to reduce initial three definition teams to one (possibly two) for development and flight test stage through 1999. During period FY95 to FY99 NASA plans to allocate $660 million to X 33 project, though intent is for any follow on RLV to be privately financed, with government commitment limited to guaranteeing to buy agreed number of launches

Three teams selected by NASA in March 1995 for 15 month concept definition and design phase. McDonnell Douglas and Boeing teamed to compete for work, with McDonnell drawing on VTOL experience gained with DC-X subscale flight demonstrator project tested in 1993-94, though X-33 effort starts with 'clean sheet of paper'. Lockheed Martin formed partnership arrangement with Rocketdyne and Rohr, design leadership vested in Lockheed Martin Skunk Works at Palmdale, California, which currently studying lifting-body design. Rockwell team includes Northrop Grumman and Orbital Sciences Corporation

NEW ENTRY

REUSABLE LAUNCH VEHICLE (X-34)

Joint NASA/industry project for small RLV with capability to deliver 544 to 1,134 kg (1,200 to 2,500 lb) payload into low Earth orbit. Co-operative Agreement Notice issued 19 October 1994, with target dates for response from industry identical to those of X 33 project. By late October 1994, at least 16 companies had developed concepts for X-34, with others expected. NASA has earmarked budget of $70 million for development and testing of system and chosen (in March 1995) Orbital Sciences Corporation/Rockwell consortium to participate in joint programme, industry contributing further $100 million. Studies in 1995 considering alternative approaches of 35,000 kg (77,162 lb) X 34A carried by specially modified Lockheed L 1011 TriStar, and larger, 50,000 kg (110,230 lb) X 34A fitted on top of Boeing 747. Targets include suborbital tests in late 1997; first orbital launch in 1998, and two test missions in 1998 and 1999



Model of X-34 proposed by OSC/Rockwell *(Paul Jackson)* *1995*

NEW ENTRY

NASA TRIALS PROGRAMMES

Recent developments summarised hereunder

Boeing 747SP: Engineering work under way to build Stratospheric Observatory For Infra-Red Astronomy (SOFIA) with 2 50 m (98 in) telescope, to replace Lockheed C-141A (NASA 714), partner is German Ministry of Science (BMFT); cruise altitude 12,500 to 13,700 m (41 000 to 45,000 ft) to fly 120 sorties (8 hours each) per year for 20 years

Boeing 757: Transport Systems Research Vehicle at Langley; being prepared for fly-by-light and power-by-wire systems trials in 1998-99; will also be used to evaluate aircraft safety, operating efficiency and compatibility with future air traffic control systems and participate in NASA's Advanced Subsonic Transport and High-Speed Research projects

Lockheed Martin C-130B Hercules: Earth Resources Aircraft Program operates C-130B (N707NA/58 0712) to

acquire data for Earth research, carries variety of sensors for Federal, state, university and industrial investigations.

Lockheed Martin EC 130Q Hercules. Two (including N427NA) ex-US Navy delivered to Wallops in December 1991 for modification to remote sensing platforms, replacing NP-3A Orion (NASA428).

Lockheed SR-71 Two SR 71As (NASA832/64 17971 and NASA844/64-17980) and one SR 71B (NASA831/64-17956) acquired in 1991 in support of high-speed research and support to X 30 NASP, one SR 71A (NASA832) since returned to USAF operational inventory. Flights include crew proficiency in NASA831; began series of high altitude ultraviolet spectronomy missions March 1993; available for hire by commercial customers at up to $200,000 per sortie. SR 71 under consideration as possible launch vehicle for HERA/M57A1 missile target for ABM proving trials.

Lockheed Martin F-16XL: Acquired two aircraft, 1991 92, for advanced research into laminar flow with applications in High-Speed Civil Transport (HSCT) programme (See Lockheed Martin entry, this edition.) First (single-seat) aircraft (NASA849/75-0749) flown at Dryden from 3 May 1990 before transfer to Langley in April 1993, to test high-lift devices for HSCT from 1995-96, smoke-generation device in wings, laser scanner; video cameras in fuselage spine. Second (two seat) (NASA848/75-0747) for trials 1992 96 at Dryden, first flight 29 September 1992 with passive (no suction) glove on starboard wing, due to begin trials with active titanium glove on port wing. Year-long laminar flow test project set to start by October 1995 as part of High Speed Research programme, between 45 and 60 flights anticipated, with laminar-flow demonstrations commencing one month after first flight of modified aircraft. First F-16XL recently engaged in supersonic-boom experiment, functioning as probe to fly in wake of SR-71 and study shockwave boundary.

McDonnell Douglas F-15A. (NASA835/71-0287) Used as testbed for integrated digital electronic engine and flight control systems, demonstrated first self-repairing flight control systems. Currently flown in programme to improve engine performance, fuel efficiency and lifetime (performance seeking controls), and for studies of engine-only control research. Goals include landing on engine controls only (aerodynamic surfaces locked); made first touch-and-go landing with aerodynamic controls locked and using thrust vectoring for pitch attitude and lateral control in April 1993.

McDonnell Douglas F/A-18: Includes F/A-18A High Angle of Attack Research Vehicle (HARV) (NASA840/161251) with thrust vectoring system, first flight 16 January 1991 at Dryden, first flight with vectoring 15 July 1991, reached 70° AoA in sustained flight 1992; trials continued to 1994, initially with inlet-mounted pressure sensor and new programmable Ada software for quadruplex digital FCS, addition of vortex-flow nose strakes, late 1994, strakes 1 22 m (4 ft 0 in) long and 0.15 m (6 in) wide, hinged on lower edges and rotated outwards in flight to control nose vortices. F/A-18B Systems Research Aircraft (SRA) N845NA began tests in late 1993 under Navy Fiber Optic Control System Integration (FOCSI) programme with fly-by-light control system duplicating existing wiring. Fresh series of fly-by-light control tests begun July 1994, based on experience gained with FOCSI programme, expected to lead to Fly-by-light Aircraft Closed-loop Tests (FACT) project in fourth quarter of 1995 with objective of bringing fibre optics into critical paths of flight control system.

Northrop Grumman YF-23: Initially for non-flying research at Dryden into loads calibration techniques, both prototypes received late 1993, minus engines, flight control computers and some avionics. First prototype (87 0800) expected to join trials fleet and was being restored to flight status in closing stages of 1994.

Rockwell OV-10A: Entered service at Langley April 1993 for wake vortex studies (N524NA/68-3799). Benchmark tests undertaken at Memphis International Airport from Autumn 1994 at start of expected year long assessment of wake vortex behaviour and decay in joint NASA/FAA study; futher tests to follow at other locations. NASA also intended to launch advanced studies by flying OV 10 in trail behind C-130 from January 1995.

Rockwell/DASA X-31 NASA acquired both aircraft, April 1992, based at Dryden in international test programme, achieved 74° AoA in sustained flight, 29 April 1993. Air combat trials against F A 18A Hornet began November 1993, introduced GEC-Marconi Viper symbology displaying pilot's helmet from 6 January 1994. Trials completed February 1994; in 94 close combats, demonstrated 9 6 1 kill ratio

One of the two X-31s was destroyed near Edwards AFB, California in January 1995

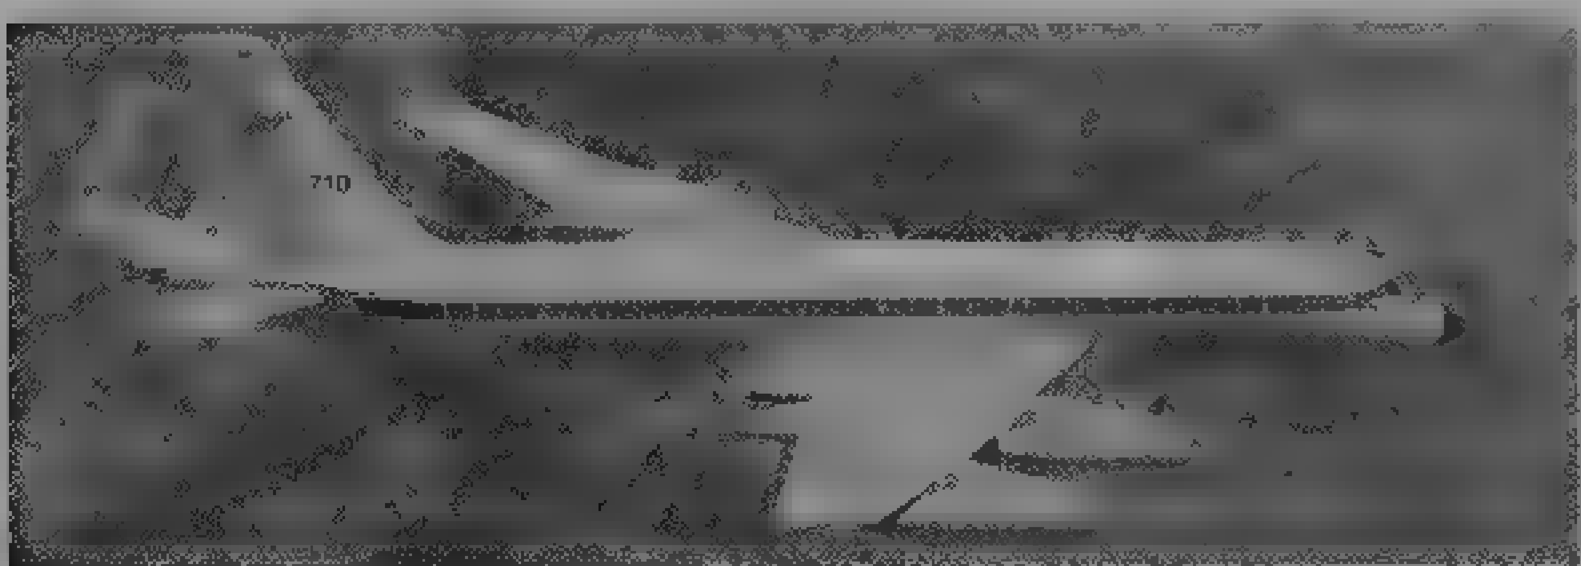
1995

HIGH AoA THRUST VECTORING COMPARISONS

Comparison of performances by NASA's X 31 and F/A 18 HARV and the USAF/Lockheed Martin F 16D MATV (which see under Lockheed Martin), compiled April 1994

Aircraft	F/A-18 HARV	X-31	F-16D MATV
First flight	16 January 1991	11 October 1990	2 July 1993
Registration	N840NA	164584/164585	86-0048
Typical gross weight	15,876 kg (35,000 lb)	6,622 kg (14,600 lb)	11,521 kg (25,400 lb)
Power plant	GE F404	GE F404	GE F110
Number, thrust	2 × 71 17 kN (16,000 lb st)	1 × 71 17 kN (16,000 lb st)	1 × 124.55 kN (28,000 lb st)
Wing reference area	37 16 m² (400.0 sq ft)	21.02 m² (226 3 sq ft)	27 87 M² (300.0 sq ft)
Thrust weight ratio[1]	0.48	0 57	0 46
Wing loading (typical)	427 2 kg/m² (87 5 lb/sq ft)	314 9 kg/m² (64.5 lb/sq ft)	413 5 kg/m² (8 47 lb/sq ft)
Max load factor	+5 4 *g*/+4 3 *g*	+6 *g*	+8 *g*
VMO/MMO	450 kts/M 0.9	485 kts/M 0.9-1 25	435 kts/M 0 95
Max speed for full AoA	n/a (g limited)	265 kts (491 km/h, 305 mph)	250 kts (463 km/h, 288 mph)
TV effective deflection	12.5°	12-15°	18°
TV side force[2]	1,633 kg (3 600 lb)	998 kg (2,200 lb)	1,633 kg (3,600 lb)[3]
TV moment arm	6.25 m (20 ft 6 in)	5 38 m (17 ft 8 in)	5 33 m (17 ft 6 in
TV moment[1]	10,203 kgm (73,800 ft-lb)	5,378 kgm (38,900 ft-lb)	8,710 kgm (63,000 ft-lb)
Elevator area	8 18 m² (88 0 sq ft)	2.93 m² (31.6 sq ft)	5 92 m² (63 7 sq ft)
Elevator moment arm	5.03 m (16 ft 6 in)	2.34 m (7 ft 8 in)	4 85 m (15 ft 11 in)
Canard area	n/a	1.00 m² (10.7 sq ft)	n/a
Canard moment arm	n/a	4 88 m (16 ft 0 in)	n/a
Tail volume coefficient[4]	0.31	0.15	0.30
Max AoA	unlimited	70°	unlimited
Max stabilised AoA	70°	70°	86°
Max AoA for Ps=0[5]	30°	45-50°	30-35°
Post stall pitch rate	≈40°/s	40°/s	45°/s
Roll rate at cruise	140°/s	240°/s	220°/s
Roll at post stall	40°/s	48°/s	50°/s

Notes: [1] At typical gross weight, M 0.2 at 6,100 m (20,000 ft)
[2] At 6,100 m (20,000 ft)
[3] Limited to 1,690 kg (3,725 lb) by engine mountings
[4] (Control surface area multiplied by moment arm) ÷ (wing area multiplied by MAC)
[5] At 6,100 m (20,000 ft), aircraft energy is constant



Convair 990-30 N810NA (ex N710NA) is a testbed for brakes and landing gear on both space shuttles and conventional aircraft

1995

against Hornet when using post-stall flight capability. Two sorties in March 1994 demonstrated thrust vectoring for yaw control after electronic flight control system modified to simulate removal of vertical tail. First aircraft destroyed near Edwards AFB 19 January 1995, suspected cause pilot icing. Prior to that, recent test activity had included use of tail-less flight capability to demonstrate thrust vectoring for power approach, carrier suitability and ground attack for JAST project, and further air combat evaluations against USAF F-15Ds and F-16Ds plus USN F-14s. Air combat tests due to end January 1995 and Rockwell/DASA seeking funds for follow-on test activity at time of accident.

Sikorsky JUH-60A: Acquired in 1991 as Rotorcraft Aircrew Systems Concept Airborne Laboratory (RASCAL NASA750); investigating increased agility for helicopters and improving automatic terrain-avoidance, heavily instrumented rotor blades. NASA won Boeing contract, January 1994, for three year test of fly-by-wire trials in RASCAL, intended to demonstrate technology for manoeuvrability exceeding RAH-66 Comanche capabilities.

Tupolev Tu-144. Late model Tu-144D to be used by NASA as test vehicle for High-speed Research (HSR) programme, following adaptation by Tupolev under three year, $8 million contract with NASA and HSR team that includes Boeing, McDonnell Douglas, Rockwell, General Electric and Pratt & Whitney. Modification includes substitution of Kuibyshev KKBM NK 25 turbofan engines in place of original NK-144 power plants, plus fitment of airborne data sensor equipment. Langley Research Center responsible for management of programme, which initially calls for about 35 test flights commencing mid-1995 in Russia, later flights could be undertaken in USA. Project objectives include study of external and internal fuselage temperatures, thermal effects, noise levels, boundary-layer measurement, handling qualities and evaluation of close coupled inlet structures.

NORTHROP GRUMMAN

NORTHROP GRUMMAN CORPORATION

1840 Century Park East, Los Angeles, California 90067
Telephone: 1 (310) 553 6262
Fax: 1 (310) 552 3109/3104/4561
CHAIRMAN, PRESIDENT AND CEO: Kent Kresa

Acquisition of Grumman by Northrop completed 1 May 1994 and new corporation formed 18 May. Combined Northrop Grumman workforce more than 45 000 at time of takeover; reduced to about 41,000 by mid-1995. Northrop Grumman subsequently completed acquisition of Vought Aircraft Company, with $130 million purchase of Carlyle Group's 51 per cent interest, in August 1994. Vought workforce numbered 5,200 in Dallas area.

Northrop company formed 1939 to produce military aircraft; activities extended to missiles, target drones, electronics, space technology, communications, support services and commercial products; name changed from Northrop Aircraft Inc to Northrop Corporation in 1959. Reorganisation in wake of Grumman purchase resulted in creation of five divisions (B-2, Military Aircraft, Commercial Aircraft, Electronics and Systems Integration, and Data Systems and Services) plus Advanced Technology and Development Center.

Grumman Aircraft Engineering Corporation incorporated 6 December 1929; Grumman Corporation formed as small holding company 1969 for Grumman Aerospace Corporation, Grumman Allied Industries Inc and Grumman Data Systems Corporation. Ten operating divisions created February 1985 (see 1990-91 and earlier editions), followed by further reorganisations in 1987-88. Corporate structure consolidated into four operating groups in 1991, falling to three (Aerospace and Electronics, Data Systems and Services, and Allied: see 1993-94 edition) on 1 January 1993. Consolidation plan, finalised January 1994, required Grumman Corporation to shed one-third of worldwide capacity and abandon independent design and development of aircraft. Grumman Corporation employees totalled 16,700 at time of takeover.

Northrop Grumman divisional responsibilities allocated as follows.

Advanced Technology and Development Center intended to generate new military business, new non-traditional business and maintain technology base in support of core competencies.

B-2 Division is prime contractor for advanced technology stealth bomber and functions as depot for B-2 Spirit, plus centre for special projects.

Military Aircraft Division is responsible for ongoing military aircraft programmes and their derivatives; intercompany work orders for modification and assembly of aircraft (E-2C Hawkeye and E-8C Joint STARS); production of fuselage sections for McDonnell Douglas F/A-18, upgrade programmes for F-5 (Tiger IV) and T-38, and builds UAVs including BQM-74 and International Chukar III. Also responsible for Northrop Worldwide Aircraft Services Inc (NWASI), Lawton, Oklahoma, which provides technical assistance and support to US armed forces and customs service.

Commercial Aircraft Division produces commercial aircraft structures including major subassemblies and components for Boeing 747 (principal subcontractor), 757, 767, 777, Gulfstream IV/V, Raytheon Hawker 800, Airbus A340 and Fokker 100. Also manages residual ground transportation programmes.

Electronics and Systems Integration Division tasked with continuation of ongoing programmes, derivatives and upgrades to existing programmes (including EF-111A and EA-6B) as well as new electronic, battle management and system integration projects. Current work includes production of strategic and tactical navigation and guidance equipment, passive sensor and tracking systems, electronic countermeasures equipment (including AN/ALQ-135 internal countermeasures for USAF F-15 and AN/ALQ-162 for joint service use), rate and rate-integrating gyros and strapdown guidance systems. Also has overall programme responsibility for E-2C and E-8C.

Data Systems and Services Division, based in Bethpage, New York, continues existing Grumman activity and will incorporate the Northrop Information Services Center and services business of NWASI.

UPDATED

ADVANCED TECHNOLOGY AND DEVELOPMENT CENTER

8900 East Washington Boulevard, Pico Rivera, California 90660-3737
CORPORATE VICE-PRESIDENT AND GENERAL MANAGER:
Richard J. DeLust

Established 1991 to develop concepts and business for Military Aircraft and Electronic and Systems Divisions. Key centre for ASTOVL/CTOL design effort under Advanced Research Projects Agency X-32 programme and for Joint Advanced Strike Technology (JAST) project in concert with McDonnell Douglas and British Aerospace.

UPDATED

COMMON AFFORDABLE LIGHTWEIGHT FIGHTER (CALF) and JAST

TYPE: Strike-fighter technology demonstrator.

PROGRAMME: US Department of Defense designation X-32 allocated for technology demonstrator phase of Advanced Research Projects Agency (ARPA) programme. CALF initially launched as STOVL Strike Fighter (SSF) to provide US Navy/Marine Corps with replacement for F/A-18 Hornet and AV-8B Harrier II, later expanded to include USAF F-16 Fighting Falcon replacement candidate, with vertical lift system eliminated in favour of additional fuel to produce longer ranged, conventional take-off aircraft. Northrop Grumman last of four teams to emerge, entering X-32 programme in 1994, after securing ARPA agreement to participate at own expense, and offered lift-plus-lift/cruise propulsion concept; other teams headed by Boeing, Lockheed Martin and McDonnell Douglas. Northrop Grumman partnered by Pratt & Whitney and Rolls-Royce engine manufacturers. Congressional pressure in Autumn 1994 resulted in CALF project merging with Joint Advanced Strike Technology (JAST) programme (see US Navy entry). Northrop Grumman JAST study awards totalled $30 million by mid-1995.

NEW ENTRY

B-2 DIVISION

8900 East Washington Boulevard, Pico Rivera, California 90660-3737
Telephone: 1 (310) 942 3000
CORPORATE VICE-PRESIDENT AND GENERAL MANAGER:
Ralph D. Crosby Jr

Activities of B-2 Division continue unchanged under new corporate structure.

VERIFIED

NORTHROP GRUMMAN B-2 SPIRIT

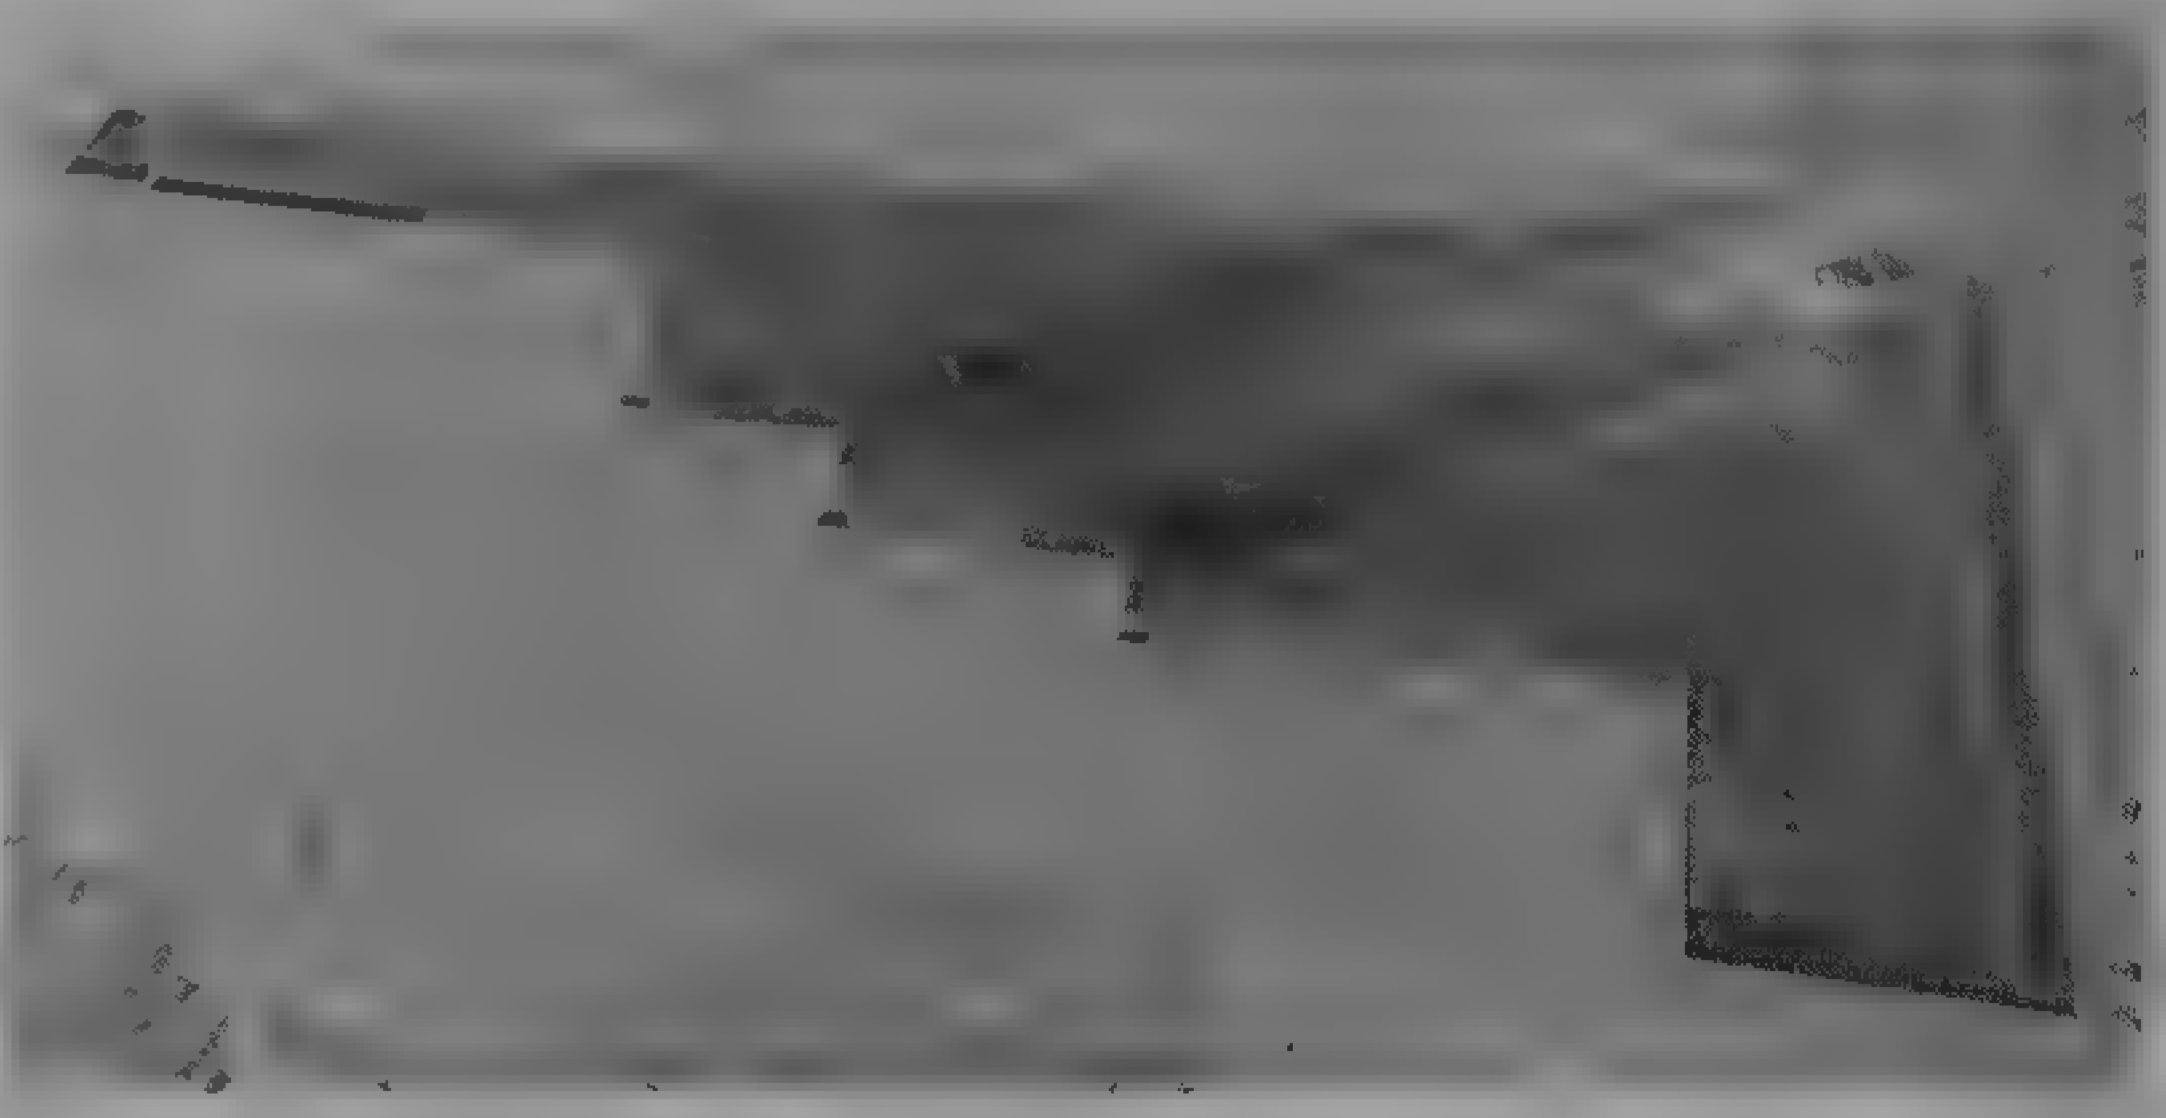
TYPE: Low-observable strategic penetration bomber.

PROGRAMME: Development of high level bomber started 1978, contract placed by USAF Aeronautical Systems Division October 1981, design modified for low-altitude operation 1983, KC-135 testbed for B-2 avionics flying at Edwards AFB since January 1987, six B-2s assigned to trials: all but first will be refurbished for operational service; two static airframes also funded, of which structural test airframe exceeded ultimate (150 per cent) load test before fracture at 161 per cent December 1992; by 1995, durability test airframe had completed second simulated lifetime of 20,000 hours/30 years; 4,000 hour test programme planned, of which 26 per cent concerned with low observables (LO) testing ends 1997.

Boeing completed work with delivery of outboard wing sections for 21st aircraft on 3 May 1994 and then began storage of tooling. Vought followed suit shortly after with completion of final intermediate section. However, follow-on procurement not ruled out, with Northrop Grumman submitting cost estimates to USAF for additional 20 B-2As, pending outcome of force requirement study presented to Congress at beginning of May 1995; study cost $125 million, including funds to preserve B-2 manufacturing facilities for 12 months.

Conventional weapons capability to be expanded following trials of GPS Aided Munition (GAM). Testing of 2,000 lb class weapon begun 23 November 1994 with F-4D of Tracor Flight Systems dropping first device at China Lake, California. Trials of associated GPS Aided Targeting System (GATS) stores management software on KC-135 began later in November. GATS/GAM package will bestow ability to deliver weapon to within 6 m (20 ft) of target. Total of 28 GAMs contracted for test programme, with further F-4 drops preceding B-2 trials in 1995 as prelude to start of full system testing with new software in August 1995.

GATS/GAM combination scheduled for deployment with 509th Bomb Wing by July 1996, with $25 million funding appropriated for purchase of 128 bombs, allowing



Northrop Grumman B-2A Spirit (four General Electric F118 turbofans)

1993

eight B-2As to be equipped with 16 GAMs each. Ultimately, GAM to be replaced by Joint Direct Attack Munition (JDAM). Production JDAM scheduled for release to service in 1999 and is key element in USAF proposals to use B-2A for long-range conventional bombing missions.

Duties and achievements of development batch B-2A Spirits are detailed below.

AV-1/82-1066: Rolled out USAF Plant 42 at Palmdale 22 November 1988, first flight (and delivery to Edwards AFB) 2 hours 20 minutes on 17 July 1989; first flight refuelling (from KC-10A) 8 November 1989. Block 1 of test programme, up to 13 June 1990, comprised 67 hours in 16 flights, covering aerodynamic performance and airworthiness. Block 2 LO testing began on 17th flight, 23 October 1990, after lay-up for preparation; further LO modifications late 1992, trials completed and placed in storage by March 1993, 81 sorties and 352.6 flying hours, to remain in trials configuration.

AV-2/82-1067: First flight, Palmdale to Edwards, 19 October 1990; envelope expansion; flutter, loads, landing gear and weapons bay door tests, 133 sorties and 686 hours to December 1994. Non-standard LO configuration plans for use as permanent testbed reversed in April 1993, and aircraft to be refurbished for USAF.

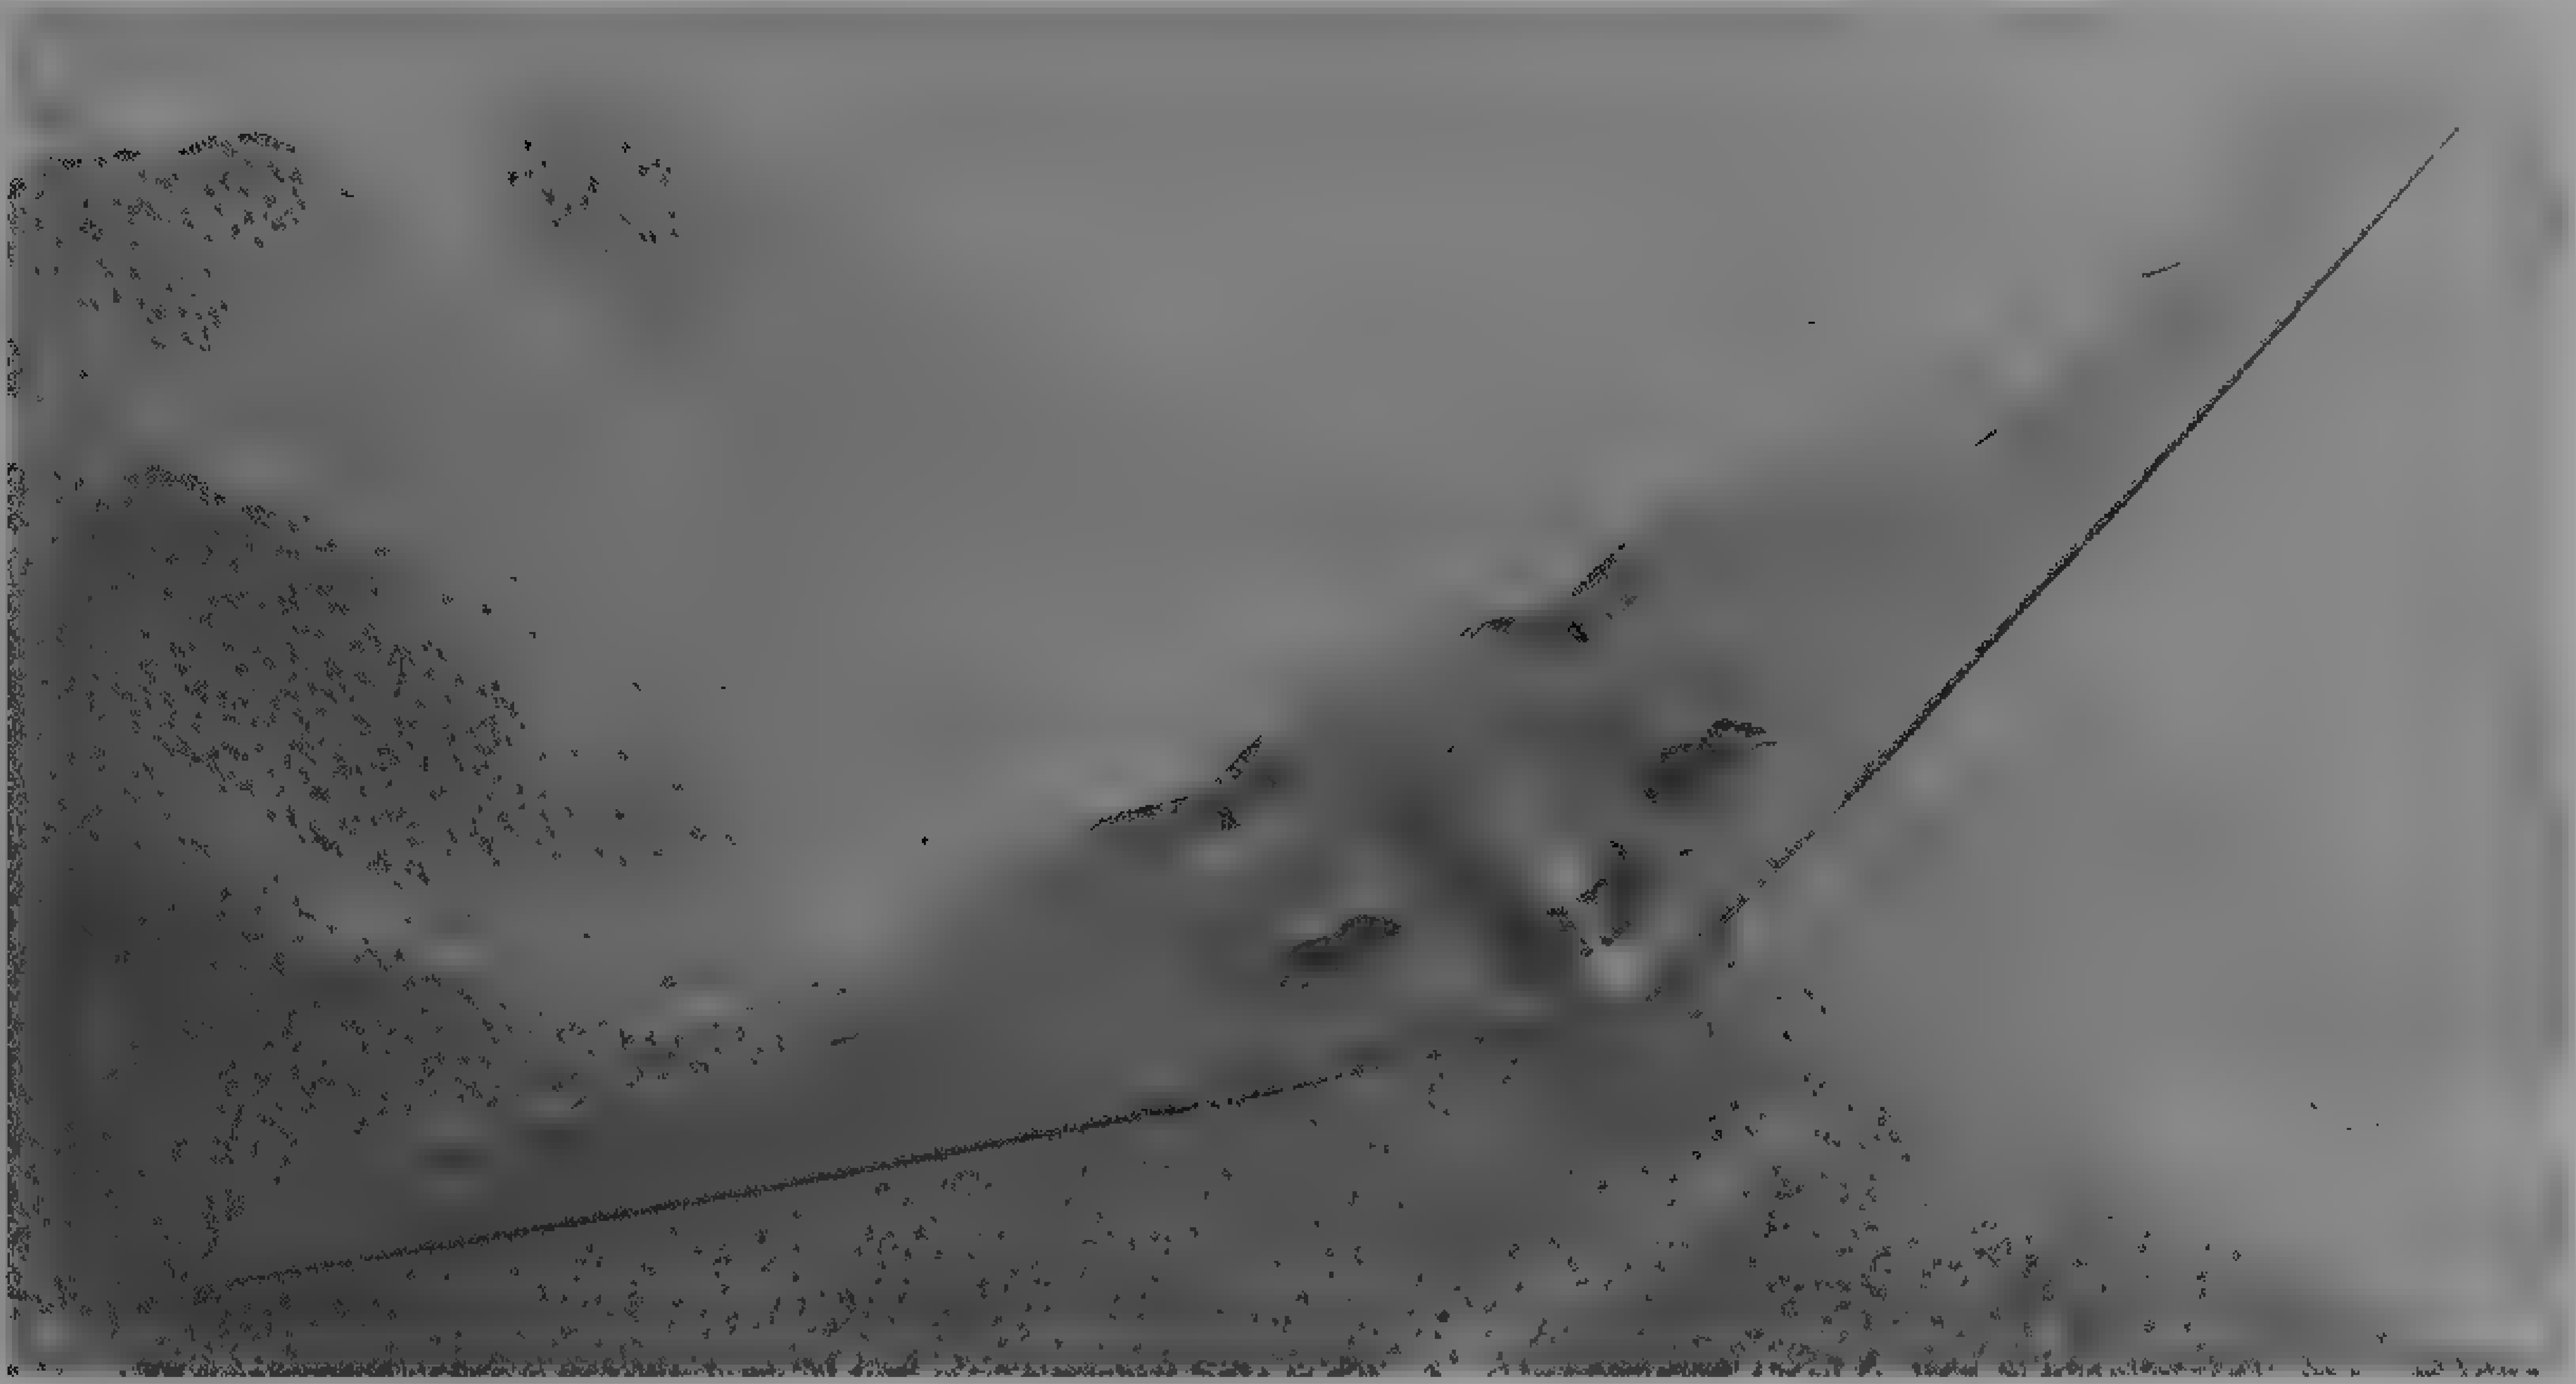
AV-3/82-1068: Flew 18 June 1991, first with full mission avionics, including AN/APQ-181 radar, navigation and, from February 1993, ZSR-63 defensive avionics; first B-2 terrain-following radar trials began November 1993, 120 sorties and 617 hours to December 1994.

AV-4/82-1069: Avionics, LO and weapon testing; flew 17 April 1992, made first B-2 bomb drop on 3 September 1992 (inert 2,000 lb Mk 84 from 6,100 m; 20,000 ft) and all subsequent bombing trials; 74 sorties and 293 hours to December 1994, avionics and armament trials.

AV-5/82-1070: Weapons, LO and climatic testing, flown 5 October 1992, received LO improvements in early 1993, 17 sorties and 71 hours to December 1994, including initial trials in 1994 of ZSR-63 defensive avionics system.

AV-6/82-1071: Flown 2 February 1993, for operational (avionics and weapons) testing (this first occasion on which new B-2 not delivered to Edwards on first flight), six months of ground testing, 58 sorties and 237 hours to December 1994.

Total 555 sorties/2,630 hours up to 1 June 1995 by Edwards-based B-2 fleet, including first night flight on 4 June 1992 and first night refuelling on 2 July 1992. All development aircraft operated by 6520th Test Squadron of 6510th TW, Edwards AFB (redesignated 420th TS/412th



Development batch B-2A Spirit during trials from Edwards AFB, California

1995

TW on 2 October 1992). First service delivery to 509th BW, 17 December 1993, named Spirit, February 1994, production ends 1998

CURRENT VERSIONS: **B-2A Block 10**: Nos 2 to 16: initial ability to carry B83 or Mk 84 weapons (see Armament paragraph of this entry) and deploy in two- or three-aircraft cells from Whiteman AFB, recover at post-strike base and return to Whiteman. Upgrading to Block 20 commencing 1996.

B-2A Block 20: Nos. 17 to 19 and retrofits; as above plus partial terrain-following, GATS (GPS-Aided Targeting System); limited AGM-137 capability, or up to 36 CBUs or 16 Joint Direct Attack Munitions (only four releasable per target), basic deployable mission planning capability for multi-aircraft deployments to forward bases. For upgrading to Block 30 at Northrop, Palmdale, from 1997, completion by mid 2000.

B-2A Block 30: Nos. 20 and 21 and retrofits, deliveries from late 1997 — first version with full LO features; weapons system as above, plus up to 80 Mk 82, 36 M117 or 80 Mk 62 bombs, full JDAM launch capability, completely automated mission planning, usable at Whiteman AFB, at forward bases or whilst airborne, Milstar satellite communications.

CUSTOMERS: USAF originally wanted 133 B-2s including first development aircraft, but budget cuts reduced this to 75 production articles by 1991. Six (five eventually for USAF) funded 1982, followed by further three whilst programme still 'black' (FY88), three in FY89, two in FY90 and two in FY91, for total of 16 (15 USAF); programme frozen by Congress October 1991, at 16 B-2s for delivery before end 1995. USAF continued to seek minimum of 20 operational bombers, including one with conditional FY92 funds and four requested for FY93, all 20 are now funded. 509th Bomb Wing formed 1 April 1993 at Whiteman AFB Missouri, where extensive, purpose designed facilities built. 393rd Bomb Squadron formed 27 August 1993 and received first aircraft, 88-0329 (eighth B-2), 17 December 1993, from 1996, second element to be 715th Bomb Squadron, each squadron with eight aircraft. (Wing also has 13 T-38 Talon jet trainers for proficiency flying.) Further three B-2s delivered in 1994. By June 1995 six B-2s at Whiteman had generated 600 hours, two more aircraft due by end of 1995.

First operational munitions delivered by 393rd Bomb Squadron instructor crew on Utah Test and Training Range during mission on 20 September 1994 when two inert Mk 84 2,000 lb bombs released manually from 30,000 ft. Four B-2As scheduled for delivery in 1995.

Production aircraft comprise:

AV-7/88-0328: *Spirit of Texas*. Leased from USAF by Northrop for electromagnetic compatibility and emissions testing (completed August 1993) prior to first flight, to 393rd BS/509th BW, 25 September 1994.

AV-8/88-0329: *Spirit of Missouri*; first delivery, 393rd BS/509th BW 17 December 1993.

AV-9/88-0330: *Spirit of California*; first flown 24 January 1994, accepted by USAF at Palmdale but held there pending resolution of low-observable anomaly concerning coating of tailpipes, eventually delivered to 393rd BS/509th BW 17 August 1994. First B-2A overseas mission, Whiteman-Paris/le Bourget-Whiteman, 10/11 June 1995.

AV-10/88-0331: *Spirit of South Carolina*, delivered in first half of 1995.

AV-11/88-0332: *Spirit of Washington*, to 393rd BS/509th BW 29 October 1994.

AV-12/88-0333: *Spirit of Kansas*; delivered in first half of 1995.

AV-13 to AV-16: Block 10.

AV-17 to AV-19: Block 20: delivery from July 1996.

AV-20 and AV-21: Block 30: delivery from late 1997.

Accepted shortfalls in initial service aircraft include absence of terrain following radar and radar warning receiver. Oklahoma City Air Logistics Center is primary B-2 depot facility.

COSTS: $2 billion contract to start B-2 production 19 November 1987, programme cost $64,700 million (then-year prices) for 75 aircraft. By 1993, estimated $44,400 million for 20 B-2s, unit programme cost (21 aircraft) $2,114 million each, or flyaway, $837.5 million per aircraft. Programme capped at $45 billion, but overrun predicted in 1994 financial examination, by September 1994, disbursements totalled $39,639 million. For follow-on production (if ordered), Northrop Grumman offering 20 aircraft in $13.6 billion programme, or $570 million per unit.

DESIGN FEATURES: Blended flying wing, with straight leading-edges, swept at 33°, centre and tip sections have sharp strongly under-cambered fixed leading-edges; two dielectric panels underwing outboard of flight deck cover dual radar antennae, 'double-W' trailing-edge incorporating elevons and drag rudders outboard of engines, two side by side weapons bays in lower centrebody each have small drop-down spoiler panels ahead of doors, generating vortexes to ensure clean weapon release; engines fed by S-shaped air ducts; irregular-shaped air intakes feed engines, with three-pointed splitter plates ahead of inlets which remove boundary layer and provide secondary air flow for cooling and IR emissions control, upper lip of intake has single point; two auxiliary air inlet doors mounted on top of intake trunks remain open on ground

1991

and in slow-speed flight two V-shaped overwing exhausts set well forward of trailing-edge, titanium on wing surface behind engine outlet, wingtips and leading-edges have dielectric covering of aerofoil section to mask radar-dissipating sawtooth construction

Total 80,000 hours of testing aircraft's components include 24,000 hours wind tunnel tests, 44,000 hours avionics testing and 6,000 hours full-scale 'plastic bird' control system tests flight testing to total 4,000 hours with six aircraft; all locations in airframe stored in CAD/CAM three-dimensional database used for machine tool, robot and tooling reference, prototype built on production tooling to accuracy of ±6.3 mm (¼ in) from tip to tip, nearly 900 new materials and processes developed; currently over 4,000 subcontractors throughout USA

FLYING CONTROLS: Four control surfaces on each outer body/wing section, totalling approximately 15 per cent of wing area combining aileron, elevator, rudder and flap functions, two inner pairs act in unison as elevons for slow-speed flight control, outboard elevon pair employed in normal flight, outermost surfaces, split horizontally, function as fast-moving drag rudders and speed-brakes, remaining partly deployed at most times (latter set at ±45° on landing approach), for normal flight, lower halves of drag rudders deploy to 90°, followed by upper halves to extent required to execute manoeuvre, no high-lift devices, beaver tail behind centre fuselage acts as pitch-axis trimming surface and, with elevons, as gust alleviation system; elevons deflect at up to 100°/s, four groups of four pressure sensors around nose section indicate quadruplex full fly-by-wire flying control system

STRUCTURE: Mostly of composites (extensively graphite/epoxy), radar-absorbent honeycomb structure and skin, outer skin of materials and coatings designed to reduce radar reflection and heat radiation. Northrop Grumman builds forward centre-section including cockpit, integrates and assembles aircraft, Boeing Military Airplanes produces aft centre-section and outboard sections; Vought produces intermediate fuselage sections and aluminium and titanium structural components and composites parts, nationwide workforce is 15,000 directly involved with production, of whom 10,000 employed by Northrop Grumman

LANDING GEAR: Tricycle type, adapted from Boeing 757/767. Inward retracting four wheel main bogies have large trapezoidal door of thick cross-section. Rearward retracting two-wheel nose unit has small door with sawtooth edges and large rear door, also used for crew access. Two landing lights on nosewheel leg. Landing gear limiting speed 224 knots (415 km/h, 258 mph)

POWER PLANT: Four 84.5 kN (19,000 lb st) General Electric F118-GE-110 non-afterburning turbofans mounted in pairs within wing structure, each side of weapons bay. In-flight refuelling receptacle in centrebody spine. Initially fuelled by JP-4; conversion to JP-8 due by March 1996. Development of contrail management system due by December 1996, reportedly involving regulation of exhaust temperatures, rather than mixing chlorofluoro-sulfonic acid with exhaust gases, as previously understood

ACCOMMODATION: Two crew, with upward-firing ejection seats, pilot to port, mission commander/instructor pilot to starboard. Provision for third member. Both forward positions have conventional control columns. Flight, engine, sensor and systems information presented on nine-tube EFIS display. Either crew member capable of flying complete mission, although data entry panels biased towards weapon systems officer on starboard seat. Four flight deck windows.

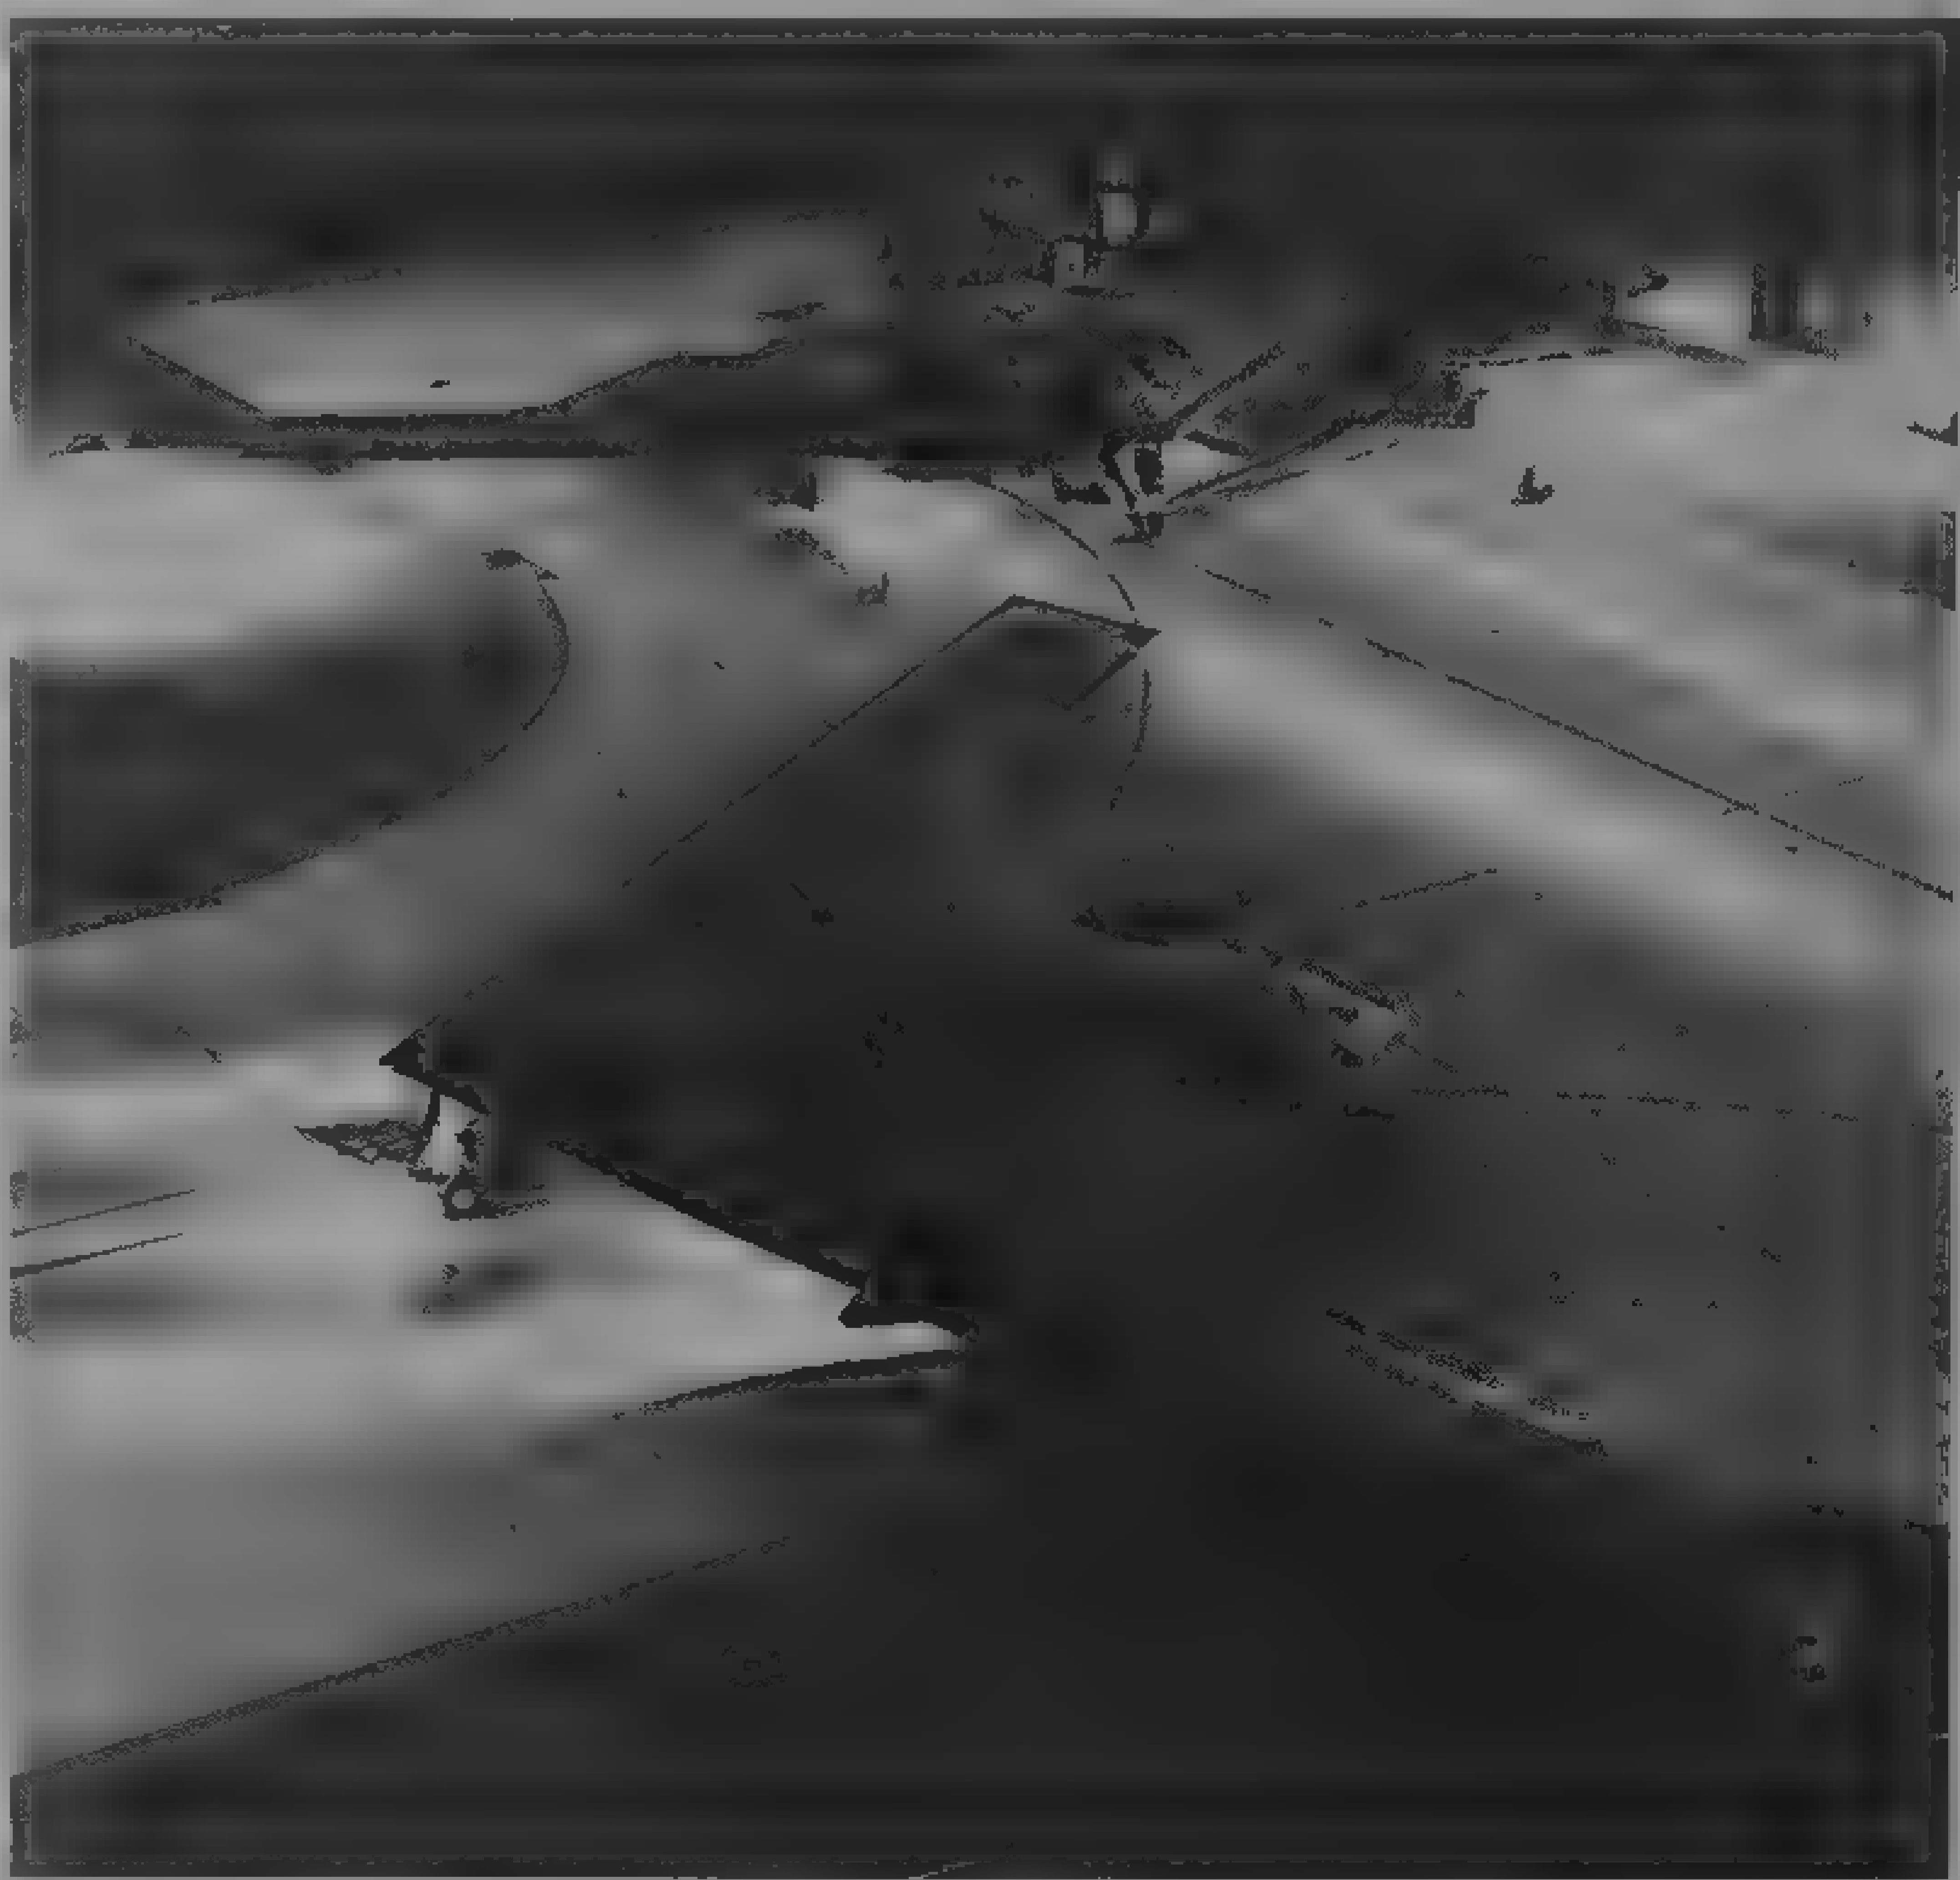
SYSTEMS: Hydraulic system for flying controls operates at 276 bars (4,000 lb/sq in). AlliedSignal APU outboard of port engine bay, covered by triangular door flush with wing surface

AVIONICS: *Comms:* Rockwell Collins VLF/LF receiver, ICS-150X intercom; Milstar satellite communications from Block 30

Radar: Hughes AN/APQ-181 low-probability-of-intercept (LPI) J-band covert strike radar, having 21 modes including terrain-following and terrain-avoidance

Flight: Rockwell Collins TCN-250 Tacan and VIR-130A ILS

Instrumentation: Hughes GPS-Aided Targeting System (GATS) from Block 20, involving synthetic aperture mode on radar to establish GPS positional error of target for accurate high-level bombing. 4× zoom magnification available on radar picture



Dawn mission launch by two development batch B-2As

1994

Mission: Unspecified, but crew workload eased by three-position selector switch in cockpit to activate/deactivate appropriate equipment for 'take-off' (transfer mission data tape, checklist and appropriate flight controls mode), 'go to war' (flight controls in stealthy mode, weapons ready and radio emitters switched off) and 'land' (reactivate systems and perform checklist).

Self defence: Loral Federal Systems AN/APR 50 RWR, Northrop Grumman ZSR 63 defensive aids equipment (role unspecified but reportedly involves active cancellation of radar returns).

ARMAMENT: Boeing rotary launcher assembly (RLA) in each of two side by side weapons bays in lower centrebody, detachable for loading at weapons dump with up to eight large stores each. Total capacity of 16 AGM-129 ACMs. Alternative weapons include 16 B61 tactical/strategic or 16 B83 strategic free-fall nuclear bombs, 80 Mk 82 500 lb bombs; 16 Joint Direct Attack Munitions; 16 Mk 84 2,000 lb bombs, 36 M117 750 lb fire bombs, 36 CBU-87/89/97/98 cluster bombs, and 80 Mk 36 560 lb or Mk 62 sea mines. Stores of 1,000 lb and below held in four (two per weapons bay) bomb rack assemblies (BRA).

DIMENSIONS, EXTERNAL

Wing span	52.43 m (172 ft 0 in)
Length overall	21.03 m (69 ft 0 in)
Height overall	5.18 m (17 ft 0 in)
Wheel track	12.20 m (40 ft 0 in)

AREAS (estimated)

Lower surface	over 464.5 m² (5,000 sq ft)

WEIGHTS AND LOADINGS

Weight empty	45,360-49,900 kg (100,000-110,000 lb)
Max weapon load	18,144 kg (40,000 lb)
Max internal fuel capacity	81,650-90,720 kg (180,000-200,000 lb)
Normal T-O weight	152,635 kg (336,500 lb)
Max T-O weight	170,550 kg (376,000 lb)
Max wing loading	367.2 kg/m² (75.2 lb/sq ft)
Max power loading	504.53 kg/kN (4.95 lb/lb st)

PERFORMANCE

Approach speed	140 kts (259 km/h; 161 mph)
Service ceiling	15,240 m (50,000 ft)

Range with eight AGM-129s and eight B83 bombs, totalling 16,919 kg (37,300 lb), at max T-O weight:

hi-hi-hi	6,300 n miles (11,667 km, 7,250 miles)
hi-lo-hi (1,000 n miles, 1,852 km, 1,151 miles at low level)	4,400 n miles (8,149 km, 5,063 miles)

Range with eight AGM-129s and eight B61 bombs, totalling 10,886 kg (24,000 lb), at 162,386 kg (358,000 lb) T-O weight:

hi-hi-hi	6,600 n miles (12,223 km, 7,595 miles)
hi-lo-hi (1,000 n miles, 1,852 km, 1,151 miles at low level)	4,500 n miles (8,334 km, 5,178 miles)

Range with one aerial refuelling: over 10,000 n miles (18,520 km, 11,508 miles)

MILITARY AIRCRAFT DIVISION

One Northrop Avenue, Hawthorne, California 90250
Telephone: 1 (310) 332 1000
Fax: 1 (310) 332 3396
CORPORATE VICE-PRESIDENT AND GENERAL MANAGER:
Wallace C. Solberg

Former Northrop Aircraft Division is principal subcontractor for F/A-18 (see McDonnell Douglas) and produced Boeing 747 main fuselage, upper deck, cargo door and passenger doors (over 1,000 shipsets since 1966). Boeing 747 and other civilian work assigned to separate operating division from 2 January 1993. Research projects involve advanced structure and manufacturing technologies. Under new combined structure, assumed responsibility for both JPATS candidates (Northrop/Embraer Super Tucano and Grumman/Agusta S.211A), F-14 Tomcat, unmanned vehicles (aerial targets) and aircraft work of Northrop Worldwide Aircraft Services. Also builds airframe for E-2C Hawkeye and remanufactures Boeing 707s selected for E-8C Joint-STARS conversion. Continues modification work and support of Northrop F-5, T-38, Grumman A-6 Intruder and Fairchild A-10, and is offering avionics and structural upgrades for the F-5 (Tiger IV) and T-38.

UPDATED

NORTHROP GRUMMAN/EMBRAER EMB-312HJ SUPER TUCANO

TYPE: Turboprop primary trainer

PROGRAMME: Northrop Grumman teamed with Embraer to offer latter's Super Tucano (see Brazilian section) as next-generation trainer for USAF (which see for programme details) and USN in JPATS competition. Basic Tucano considerably modified with fuselage stretch, uprated 1,193 kW (1,600 shp) P&WC PT6A-68/1 turboprop, five-blade propeller; pressurised cockpit with rear-hinged canopy, new avionics and systems; airbrake and other changes. Two prototypes under test. Rejected in favour of Raytheon/Pilatus PC-9.

UPDATED

NORTHROP GRUMMAN/AGUSTA S.211A

TYPE: Primary jet trainer

PROGRAMME: Northrop Grumman offered licence-built version of Italian Agusta S.211 (which see for further details) to meet JPATS requirement (see USAF entry). Missionisation changes include more powerful 14.19 kN (3,190 lb st) P&WC JT15D-5C; new, high-lift supercritical aerofoil, reinforced landing gear, lowered (5 cm, 2 in) cockpit floor and provision for wider range of crew sizes, new Rockwell Collins avionics, and Microtecnica (Hamilton Standard) environmental systems. Two production S.211A aircraft are flying. Rejected in favour of Raytheon/Pilatus PC-9.

Telephone: 1 (516) 575 5119
Fax: 1 (516) 575 2164
SENIOR VICE-PRESIDENT AND GENERAL MANAGER:
John E. Harrison

This Division combines the activities of the former Northrop Electronics Systems Division with the Electronics and Space divisional activities of Grumman Aircraft programme responsibilities include the E-2C Hawkeye, E-8C Joint-STARS, and integrated electronic systems for the EA-6B Prowler and EF-111 Raven.

UPDATED

NORTHROP GRUMMAN HAWKEYE

US Navy designations: E-2C and TE-2C
Israel Defence Force name: Daya (Kite)

TYPE: Shipborne and land-based airborne early warning and control aircraft.

PROGRAMME: First flight of first of three prototypes 21 October 1960; total 59 production E-2As, of which 51 updated to E-2B by end 1971 apart from two TE-2A trainers and two converted to E-2C prototypes (see earlier *Jane's*); first flight of E-2C prototype 20 January 1971; production started mid-1971, first flight production aircraft 23 September 1972, total 177 ordered, of which 170 delivered at start of 1995, production rate, six per year. AN/APS-145 radar replaces AN/APS-120, AN/APS-125, AN/APS-138 and AN/APS-139 in new-built E-2Cs.

Evaluation of Grumman/Martin Marietta AN/APS-145 began 1986, radar tracks more than 2,000 targets and operates at longer ranges, has improved jamming resistance and sharper fully automated/optimised overland detection. AN/APS-145 radar and new main operator displays, IFF, mission computer processor, JTIDS tactical software and upgraded engines form core of current Update Development Program (Groups I and II), which fully developed and delivered in new production aircraft from October 1991. Second production Group I aircraft (163535 – 123rd E-2C; 102nd USN E-2C) set 20 (broke 14 and established six new) records for time-to-height, altitude and 100 km closed circuit, 17-19 December 1991.

USN previously considered Advanced Tactical Support (ATS) aircraft programme, including an AEW configuration, to replace E-2C; ATS plans cancelled 1991 and USN considering launch of E-X programme for follow-on AEW, although no funding apparently available in defence budgets prior to 2000.

CURRENT VERSIONS: **E-2B**: Withdrawn from USN service.

E-2C: Current service and production version (*as detailed*).

TE-2C: Training model, based on E-2C.

E-2T: Proposed conversion of E-2B for Taiwan with AN/APS-138 radar and electronic warfare upgrades was abandoned. Designation then allocated to new-build E-2C for Taiwan.

CUSTOMERS: US Navy orders for E-2C totalled 139 by FY92, of which all delivered by March 1994. Target of 175 cut to 145 in early 1991 and to 139 in January 1992 (excluding two prototypes). Further procurement authorised December 1994, when Northrop Grumman awarded $122.5 million contract for start-up of new assembly line at St Augustine, Florida. Initial orders for seven Group II aircraft (four with FY95 funds, three with FY96 funds) and further contracts expected. Current US Navy programme status as under:

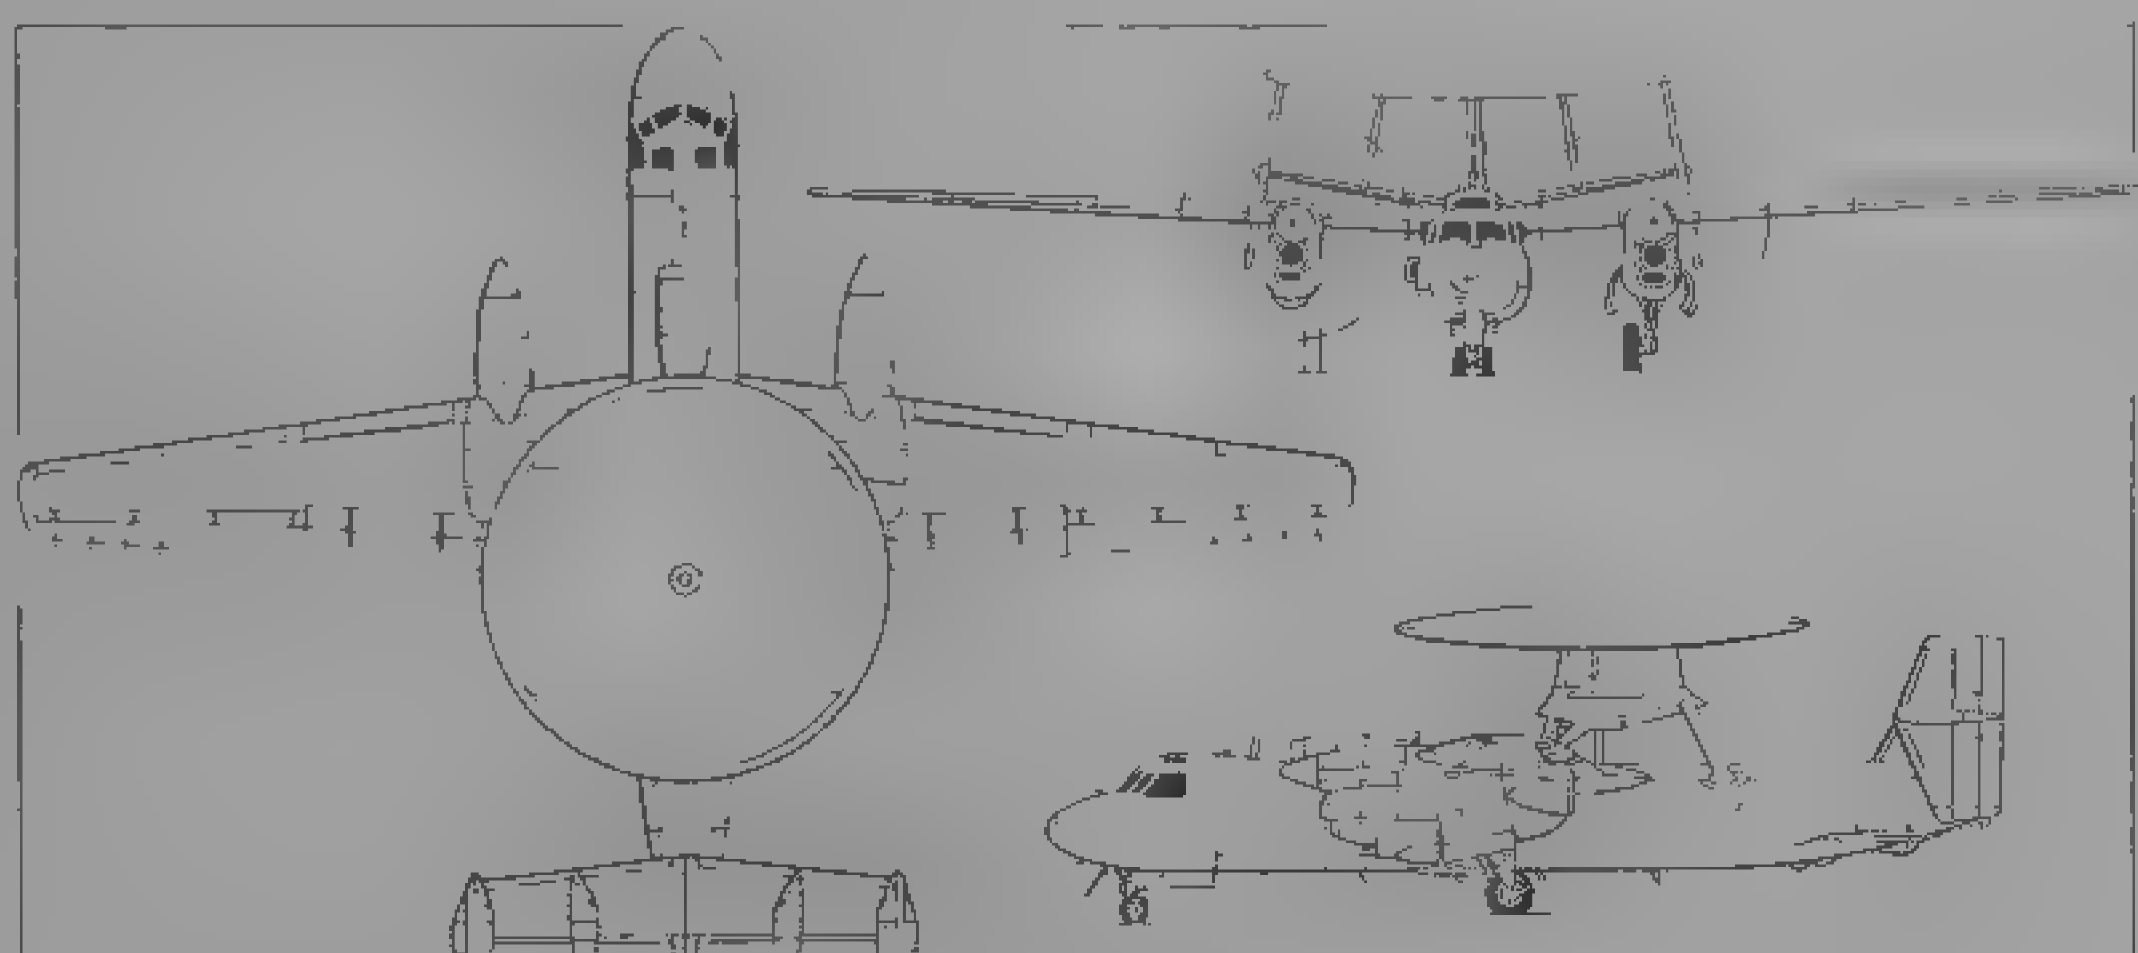
Variant	Qty	First aircraft
E-2C 'Group 0'	100	158638
E-2C Group I	18	163029
E-2C Group II	28	164108
Total	**146**	

Major retrofit programme for USN and FMS aircraft was planned, including upgrade of all 18 Group I and minimum of 36 older ('Group 0') aircraft to Group II standard from FY95. Instead, 1994 defence review established new E-2Cs more economical than retrofit.

In December 1994, company received $155 million contract to upgrade E-2C mission computer. New equipment to be based on Raytheon's Model 940, itself a modification of Digital Equipment Corporation 2100 Model A500MP processing system, which is same family of hardware used by E-8C Joint-STARS.

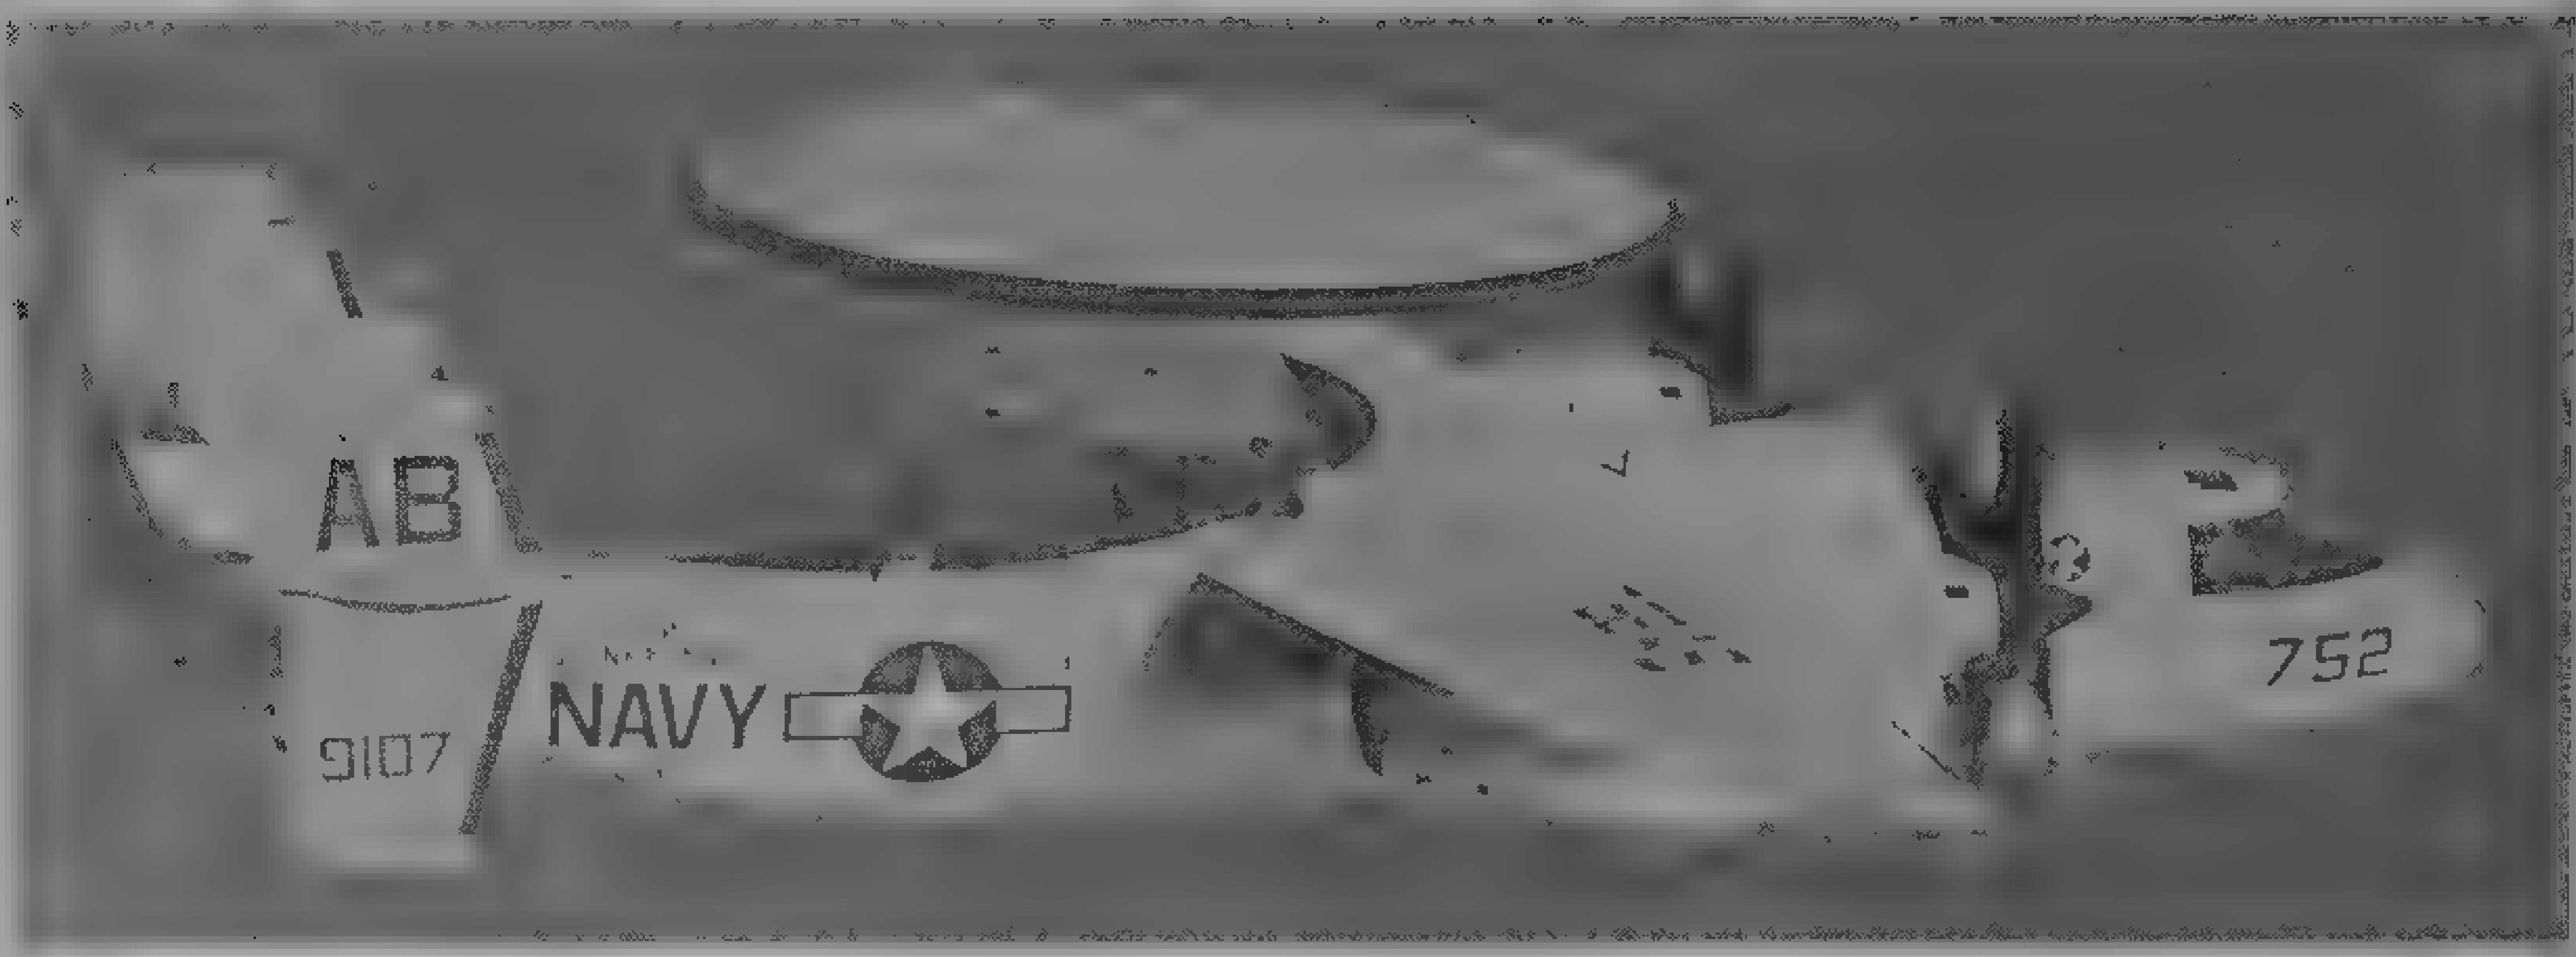
E-2C entered service with VAW-123 at NAS Norfolk, Virginia, November 1973 and went to sea on board USS *Saratoga* late 1974; E-2C issued to 18 other squadrons, including two of Naval Reserve, two TE-2C in service, including 158639 assigned to JTIDS development. Current squadrons are VAW-112, 113, 115 to 117 at Miramar, California, VAW-120 to 126 with VAW-78 of Reserves at Norfolk, Virginia. VAW-120 is training unit. Miramar is base of first Group II squadron, VAW-113, June 1992. VAW-113 first operational evaluation cruise on USS *Carl Vinson*, 1993. Group II aircraft also issued to VAW-110 (disbanded September 1994), 112, 116 and 117. Final two of original 139 E-2Cs delivered to USN in 1994. US Navy transferred two Group 0 aircraft to US Coast Guard (operations with CG Air Wing 1 at St Augustine, Florida, began January 1987) and two to US Customs Service for anti-narcotics operations; USCS aircraft to USCG in August 1989 and all returned to USN on 23 October 1991 (due to rotations, nine different aircraft used).

See table for exports. Singaporean aircraft with AN/APS-138 radar; Taiwan originally required E-2T (converted E-2B with AN/APS-138 radar) before confirming E-2C in 1993. France signed Letter of Offer and



Northrop Grumman E-2C Hawkeye twin-turboprop airborne early warning and control aircraft *(Jane's/Dennis Punnett)*

1983



Northrop Grumman E-2C Hawkeye early warning and control aircraft of the US Navy

1995

Acceptance (LOA) in June 1995 for two aircraft to be delivered for aircrew training in fourth quarter of 1997, eventually expected to obtain total of four. Fourth Taiwanese E-2C, completed in November 1994, is final Hawkeye built at Calverton, subsequent production at St Augustine.

COSTS: $59 million, flyaway, USN FY92. Total cost of French procurement of two aircraft approximately $562 million including logistics support. $122.5 million awarded December 1994 for production start-up for seven new E-2Cs.

DESIGN FEATURES: Details here apply to E-2C. Hawkeye can cover naval task force in all weathers flying at 9,150 m (30,000 ft) and can detect and assess approaching aircraft in excess of 300 n miles (556 km; 345 miles); AN/APS-145 has total radiation aperture control antenna (TRAC-A) to reduce sidelobes to offset jamming; radar sweeps six million cubic mile envelope and simultaneously monitors surface ships; long-range, automatic target track initiation and high-speed processing enable each E-2C to track more than 2,000 targets simultaneously and automatically and control more than 40 intercepts. Randtron Systems AN/APA-171 antenna housed in 7.32 m (24 ft) diameter radome, rotating at 5 to 6 rpm above the fuselage; antenna arrays in rotodome provide radar sum and difference signals and IFF.

AN/APS-139 and Allison T56-427 engines form **Group I** update; first operational aircraft (163538) delivered to VAW-112 on 8 August 1989; 18 built. AN/APS-139 can detect cruise missiles at ranges exceeding 100 n miles (185 km; 115 miles), also monitors maritime traffic; radar coverage extended by AN/ALR-73 passive detection system (PDS), detecting electronic emitters at twice radar detection range; more detailed description in 1979-80 *Jane's*. AN/APS-145 in **Group II** aircraft from December 1991; other enhancements give Group II 96 per cent expansion in radar volume, 400 per cent extra target tracking capability, 40 per cent more radar and identification range and 960 per cent increase in numbers of targets displayed. Group II added JTIDS in 1993-94, also has GPS.

Conventional airframe with nose-tow catapult attachment, arrester hook and tail bumper; parts of tail made of composites to reduce radar reflection; wings fold hydraulically on skewed hinges to lie parallel to fuselage; wing incidence 4° at root, 1° at tip.

FLYING CONTROLS: Fully powered with artificial feel; tailplane has 11° dihedral; four fins and three double-hinged rudders; long-span ailerons droop automatically when hydraulically operated Fowler flaps are extended; autopilot provides autostabilisation or full flight control.

STRUCTURE: Wing centre section has three beams, ribs and machined skins; hinged leading-edge provides access to flying and engine controls. Fuselage conventional light metal. Composites used in parts of tail.

LANDING GEAR: Hydraulically retractable tricycle type. Pneumatic emergency extension. Steerable nosewheel unit retracts rearward. Mainwheels retract forward and rotate to lie flat in bottom of nacelles. Twin wheels on nose unit only. Oleo-pneumatic shock absorbers. Mainwheel tyres size 36 × 11 Type VII 24 ply, pressure 17.9 bars (260 lb/sq in) on ship, 14.5 bars (210 lb/sq in) ashore. Hydraulic brakes. Hydraulically operated retractable tailskid. A frame arrester hook under tail.

POWER PLANT: Two 3,803 kW (5,100 ehp) Allison T56-A-427 turboprops, driving Hamilton Standard Type 54460-1 four-blade fully feathering reversible-pitch constant-speed propellers. These have foam filled blades which have a steel spar and glassfibre shell. T56-A-427 engines provide 15 per cent improvement in efficiency, compared with 425 installed prior to 1989. Israeli Hawkeyes fitted locally with fixed in-flight refuelling probes, first aircraft (941) seen 1993.

ACCOMMODATION: Normal crew of five, consisting of pilot and co-pilot on flight deck, plus ATDS Combat Information Center (CIC) staff of combat information centre officer, air control officer and radar operator. Downward hinged door with built in steps, on port side of centre-fuselage and three overhead escape hatches.

SYSTEMS: Pneumatic boot de-icing on wings, tailplane and fins. Spinners and blades incorporate electric anti-icing.

AVIONICS: *Comms:* AN/AIC-14A intercom.

Radar: Lockheed Martin AN/APS-145 advanced radar processing system (ARPS) with fully automatic overland/overwater detection capability, Randtron AN/APA-171 rotodome (radar and IFF antennae).

Flight: Litton AN/ASN-92 CAINS carrier aircraft inertial navigation system. GPS, AN/ASN-50 heading and attitude reference system, Collins AN/ARA-50 UHF ADF, AN/ASW-25B ACLS, GEC Marconi standard central air data computer, ASM-400 in-flight performance monitor, Honeywell AN/APN-171(V) radar altimeter.

Mission: Hazeltine AN/APA-172 control indicator group with Loral enhanced (colour) main display units, Litton OL-77/ASQ computer programmer (L-304) with Loral enhanced high-speed processor, Hazeltine IFF detector processor. Litton AN/ALR-73 passive detection system, AN/ARC-158 UHF datalink, AN/ARQ-34 HF datalink and JTIDS Class 2 HP terminal.

DIMENSIONS, EXTERNAL:

Wing span	24.56 m (80 ft 7 in)
Wing chord: at root	3.96 m (13 ft 0 in)
at tip	1.32 m (4 ft 4 in)
Wing aspect ratio	9.28
Width, wings folded	8.94 m (29 ft 4 in)
Length overall	17.60 m (57 ft 8¾ in)
Height overall	5.58 m (18 ft 3¾ in)
Diameter of rotodome	7.32 m (24 ft 0 in)
Tailplane span	7.99 m (26 ft 2½ in)
Wheel track	5.93 m (19 ft 5¼ in)
Wheelbase	7.06 m (23 ft 2 in)
Propeller diameter	4.11 m (13 ft 6 in)

AREAS:

Wings, gross	65.03 m² (700.0 sq ft)
Ailerons (total)	5.76 m² (62.0 sq ft)
Trailing-edge flaps (total)	11.03 m² (118.75 sq ft)
Fins, incl rudders and tabs	
outboard (total)	10.25 m² (110.36 sq ft)
inboard (total)	4.76 m² (51.26 sq ft)
Tailplane	11.62 m² (125.07 sq ft)
Elevators (total)	3.72 m² (40.06 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	18,363 kg (40,484 lb)
Max fuel (internal, usable)	5,624 kg (12,400 lb)
Max T-O weight	24,687 kg (54,426 lb)
Max wing loading	379.6 kg/m² (77.75 lb/sq ft)
Max power loading	3.25 kg/kW (5.34 lb/ehp)

PERFORMANCE (at max T-O weight):

Max level speed	338 kts (626 km/h; 389 mph)
Max cruising speed	325 kts (602 km/h; 374 mph)
Cruising speed (ferry)	259 kts (480 km/h; 298 mph)
Approach speed	103 kts (191 km/h; 119 mph)
Stalling speed (landing configuration)	75 kts (138 km/h; 86 mph)
Service ceiling	11,275 m (37,000 ft)
Min T-O run	564 m (1,850 ft)
T-O to 15 m (50 ft)	793 m (2,600 ft)
Min landing run	439 m (1,440 ft)
Ferry range	1,541 n miles (2,854 km; 1,773 miles)
Time on station, 175 n miles (320 km; 200 miles) from base	4 h 24 min
Endurance with max fuel	6 h 15 min

UPDATED

NORTHROP GRUMMAN E-8 JOINT-STARS

TYPE: Long-range radar reconnaissance aircraft, programme name, Joint Surveillance Target Attack Radar System (Joint-STARS).

PROGRAMME: Full-scale development contract to Grumman, 27 September 1985; two Boeing 707-328Cs purchased from American Airlines and Qantas as EC-18C testbeds, later redesignated E-8A; first aircraft for modification reached Boeing Military Airplanes, Wichita, January 1986; delivered to Grumman Melbourne Systems Division, Florida, 31 July 1987; second aircraft to Wichita June 1986, for delivery to Grumman Autumn 1988; first flight in full Joint STARS configuration (86-0416, N770JS) 22 December 1988; first flight of second aircraft (86-0417/N8411) 31 August 1989; first instantaneous transmission to ground station August 1989; European trials February-March 1990 (N770JS) and September 1990 (86-0417); original requirement for 22 new build aircraft and 100 ground stations, amended to 20 second-hand Boeing 707s; IOC planned in 1997 with five aircraft, but emergency interim capability achieved for Gulf War against Iraq 1991. Low rate initial production advanced procurement contract signed by USAF 24 April 1992; progress review, May 1993, authorised first six production aircraft at two per year; further review then to consider outstanding 12.

Airframe modifications now at Northrop Grumman Lake Charles following Boeing's withdrawal from programme, avionics installation at Melbourne; first E-8C (90-0175/N526SJ) completed December 1993 and made first flight 25 March 1994, at which time four more with Grumman and three unmodified airframes in storage with USAF; further 10 conversion subjects to be sought after 1996. Deliveries to begin in 1996.

NATO considering integrated Joint-STARS force; planning group established December 1992, programme office established November 1994, short European tour by second E-8A in October 1994 for demonstration to Belgium, France, Germany and UK; requirement for up to 12 Joint-STARS to be based at Geilenkirchen, alongside E-3A

First production Northrop Grumman E-8C Joint-STARS aircraft, to be used as a permanent testbed

1994

Se.t.ty AWACS unit, may use Airbus or similar aircraft as avionics platform. Further interest expressed by Japan (possibly four aircraft), South Korea (four) and Saudi Arabia (up to six). Grumman teamed with BAe in 1993 to offer Joint-STARS to UK in satisfaction of SR(L/A) 925 (ASTOR) requirement

Multi-Stage Improvement Program (MSIP) formulated by 1994 and first phase funded, involves TADIL-J datalink with dedicated operator's position for monitoring of air threats, followed by 'End Game' radar- and IR countermeasures. Phase 2 options include satellite communications, improved data modem and automatic target recognition, to be launched in 1996

CURRENT VERSIONS: **E-8A**: Two development aircraft, as above. Fitted with consoles for 10 operators, Pratt & Whitney JT3D-3B engines. First operational mission, 14 January 1991 with 4411th J STARS Squadron (Provisional), USAF from Saudi Arabia, six ground station modules also deployed, flew 49 missions/534 6 hours up to end of conflict. Returned to Grumman for completion of performance testing in 100 sorties and several thousand hours of ground testing. Both accepted by USAF December 1993, for trials at Edwards AFB. To be eventually upgraded as E-8Cs

E-8B: Originally proposed production version, based on new-built airframe, F108 turbofan engines; 15 operator consoles. One prototype, 88-0322, flown 12 June 1990 in 'green' state (avionics not installed), overtaken by decision to use second-hand Boeing 707 airframes, delivered to USAF 3 October 1991 for storage at Davis-Monthan AFB, Arizona; bartered with Omega Air, 1993, for five used 707s and currently in civilian use as N707UM

JOINT STARS PROCUREMENT

90	E-8C	1	90-01[illegible]
94	E-8C	1	
95	E-8C	2	
Total		**6 (+1*)**	

*New-build, not delivered

Operator stations aboard E-8 Joint STARS

1995

E-8C: Production version. 18 operator consoles (17 operations, one navigation/self-defence). Initial two aircraft to Lake Charles for conversion May-June 1992. First E-8C, completed in March 1994, is permanent testbed, not for delivery to USAF. *Data apply to this version.* Further details in 1994-95 *Jane's Battlefield Surveillance Systems*

CUSTOMERS: US Air Force and US Army (aircraft operated by USAF). First E-8C funded in FY90, second in FY94, two in FY95 and request for two in FY96, total 20 expected including two upgraded E-8As and one E-8C permanent testbed. To be based at Robins AFB, Georgia

COSTS: $657 million (1985) full-scale development, $523 million award to Grumman November 1990 for conversion of first E-8C. Estimated programme cost (1994) $8,560 million including ground stations. First (two aircraft) advance procurement contract $125 million (April 1992). Northrop Grumman secured $254 million contract in July 1994 for completion of second pair, with $440 million appropriation for two more in FY95 budget

DESIGN FEATURES: Boeing 707-320C airliner converted with 7.32 m (24 ft) antenna covered by a 'canoe' fairing under forward fuselage, immediately behind nosewheel, for phased-array SLAR

STRUCTURE, FLYING CONTROLS, LANDING GEAR: As, or similar to commercial Boeing 707, last described in 1980-81 *Jane's*

POWER PLANT: Four 80.1 kN (18,000 lb st) Pratt & Whitney JT3D-3B turbojets. See Weights and Loadings for fuel

SYSTEMS: As Boeing 707, additional electronic generating capacity. World Auxiliary Power Company APU

AVIONICS: *Comms*: Telephonics multiple intercom net control system

Radar: Norden AN/APY-3 multimode side-looking phased-array I-band radar, scanned electronically in azimuth and steered mechanically in elevation from either side of aircraft. Synthetic aperture (SAR) mode used to detect stationary objects, such as parked tanks, up to 81 to 95 n miles (150 to 175 km; 93 to 109 miles) behind front line. Can interleaf Doppler mode to detect moving targets. Coverage, 1 million km² (386,100 sq miles) in 8 hour sortie, cruising at 9,145 to 12,200 m (30,000 to 40,000 ft)

Flight: Litton INS, Collins flight management system

Mission: Five Raytheon Model 920/866 supermini computers per aircraft, Ceridian Data Inc programmable signal processors (three), Interstate Electronics graphic displays, Raytheon Model AXP 3000/500 workstations, Orbit International workstation keyboards, Miltope message printers, Cubic Defense Systems surveillance and control datalink, JTIDS for Tacan operation and TADIL-J generation and processing. Satellite communications link, Magnavox encrypted UHF radios (12), two encrypted HF radios, three encrypted VHF radios with SINCGARS (Single Channel Ground and Airborne Radio System) provision. Radar data can be transmitted instantaneously to ground stations, or attacks by aircraft and ground forces directed via JTIDS datalink

ARMAMENT: Nil

DIMENSIONS, EXTERNAL (abbreviated):

Wing span	44.42 m (145 ft 9 in)
Length overall	46.61 m (152 ft 11 in)
Height overall	12.95 m (42 ft 6 in)

WEIGHTS AND LOADINGS:

Weight empty	[illegible]564 kg (171,000 lb)
Max fuel load	70,307 kg (155,000 lb)
Max T-O weight	152,407 kg (336,000 lb)

PERFORMANCE:

Max operating Mach number (M_{MO})	0.84
Service ceiling	12,800 m (42,000 ft)
Endurance: internal fuel	11 h
with one in-flight refuelling	20 h

COMMERCIAL AIRCRAFT DIVISION

PO Box 655907, Dallas, Texas 75265-5907
Telephone: 1 (214) 266 2011
Fax: 1 (214) 266 576

Division activities include commercial aircraft and ground transportation. Programmes include subassemblies and/or component manufacture for Boeing 747 (fuselages), Boeing 757, 767, 777, McDonnell Douglas C-17A (ailerons, elevators and rudders), Tay turbofan nacelles and thrust reversers for Gulfstream IV, development and manufacture of wings for Gulfstream V, engine nacelles and thrust reversers for Fokker 100, and former Grumman/Piaggio partnership of March 1994 to promote and possibly manufacture P.180 Avanti in North America.

Commercial Aircraft Division also includes Vought Aircraft Company which was acquired by Northrop Grumman on 31 August 1994. Vought had teamed with FMA of Argentina to offer IA 63 Pampa 2000 for USAF/USN JPATS programme, but this contender eliminated from competition in November 1994.

PEREGRINE

PEREGRINE FLIGHT INTERNATIONAL

Minden Airport, Minden, Nevada

Peregrine has acquired design, manufacture and marketing rights for the civilian version of Bede BD-10; military market continues to be pursued by Bede (which see). Fox Aircraft, a subsidiary of Peregrine, assists home constructors to complete their BD-10s, one completed and two more being assembled by early 1995.

NEW ENTRY

PEREGRINE FALCON

TYPE: Tandem two-seat supersonic aircraft, factory or homebuilt.

PROGRAMME: Design began as Bede BD-10 in 1983; construction of prototype started 1989 and first flight 8 July 1992 (N2BD); construction of production kits/aircraft began 1992, initial kit deliveries began August 1993. Peregrine International was carrying out flight envelope trials on development aircraft at high airspeed/high Mach when fatal crash occurred on 30 December 1994, reportedly due to flutter of port horizontal stabiliser at nearly 400 knots (740 km/h; 460 mph) IAS. Stabiliser redesigned.

CURRENT VERSIONS: **PJ-1**: Original aircraft, lost in accident.

PJ-2: Factory built upgraded version for certification in Experimental category, tail section strengthened and fins toed out 2°. Flown 21 June 1995, but crashed fatally 4 August 1995.

PJ-3: Projected version certified to FAR Pt 23.

CUSTOMERS: Total 45 ordered by early 1995, nine aircraft being constructed at March 1995, including five for projected Peregrine Falcon Jet Demonstration Team.

COSTS: $1.4 to 1.6 million (1995).

DESIGN FEATURES: Supersonic flight. Wings with leading-edge sweepback, twin fins.

FLYING CONTROLS: Non-boosted controls, using push-pull rods; sidestick controller for low-speed flying and centre floor-mounted stick for high-speed flight; dual controls, tailplane and elevators, twin rudders, double-slotted flaps.

STRUCTURE: 60 per cent metal, 40 per cent composites, aluminium alloy and aluminium honeycomb/aluminium or GFRP skin sandwich construction.

LANDING GEAR: Retractable tricycle type, electrical/mechanical actuation; all wheels retract aft, oleo-pneumatic shock absorbers in all units. Cleveland wheels and brakes.

POWER PLANT: One 13.12 kN (2,950 lb st) General Electric CJ610 turbojet; alternative GE J85 engine. Eventually to be available with Williams Rolls FJ44 turbofan. Fuel in five centre-fuselage cells, total capacity 1,132 litres (299 US gallons; 249 Imp gallons). Single refuelling point in top of fuselage. Oil capacity 7.6 litres (2 US gallons; 1.7 Imp gallons).

ACCOMMODATION: Two persons in tandem.

SYSTEMS: No hydraulics. Electrically de-iced engine inlets. Cockpit pressurisation system.

AVIONICS: Weather radar; EFIS.

DIMENSIONS, EXTERNAL:	
Wing span	6.55 m (21 ft 6 in)
Wing aspect ratio	4.72
Length overall	8.79 m (28 ft 10 in)
Height overall	2.46 m (8 ft 1 in)
AREAS:	
Wings, gross	9.10 m² (98.0 sq ft)
WEIGHTS AND LOADINGS:	
Weight empty	1,021 kg (2,250 lb)
Max T-O weight	2,014 kg (4,440 lb)
Max wing loading	221.2 kg/m² (45.3 lb/sq ft)
Max power loading (CJ610)	153.6 kg/kN (1.50 lb/lb st)
PERFORMANCE (estimated, at max T-O weight except where indicated):	
Max level speed	Mach 1.4
Max cruising speed at 13,715 m (45,000 ft)	Mach 0.91
(Tested in 1994 to Mach 0.86 at 9,150 m, 30,000 ft)	
Stalling speed	53-98 kts (97-181 km/h; 60-112 mph)
Max rate of climb at S/L	9,150 m (30,000 ft)/min
Service ceiling	13,715 m (45,000 ft)
T-O at 1,270 kg (2,800 lb) AUW	183 m (600 ft)
Landing run at 953 kg (2,100 lb) AUW	458 m (1,500 ft)
g limit	+8

PRESIDENT Frank N Piasecki
VICE-PRESIDENTS
Donald N Meyers (Engineering)
Frederick W Piasecki (Technology)
John W Piasecki (Contracts)
DIRECTOR, MILITARY REQUIREMENTS: Joseph P Cosgrove

Formed in 1955 by Frank Piasecki, former Chairman of the Board and President of Piasecki Helicopter Corporation, now Helicopters Division, Boeing Defense and Space Group

Piasecki vectored thrust combat agility demonstrator (VTCAD): US Army has awarded modifications to initial contract to develop further a compound helicopter incorporating Piasecki Vectored Thrust Ducted Propeller (VTDP) concept. Follow-on activities include airframe interface design, pilot controls simulation, and cost-effectiveness analysis for both AH-64 Apache and AH-1W SuperCobra attack helicopters. Design, fabrication and ground test of a full scale VTDP are included. Programme objectives are increased maximum level flight speed to over 200 knots (370 km/h, 230 mph), 50 per cent improvement in longitudinal acceleration and deceleration capability in level flight, 50 per cent decrease in turn and pull-up radii at speeds in excess of 95 knots (176 km/h, 109 mph), and handling qualities at least as good as those of the baseline AH-64A/AH-1W. Additional AH-1W design activities are part of a separate USN contract

PZL Świdnik W-3A Sokół Piasecki assisted Świdnik in FAA certification, awarded in May 1993. Piasecki has exclusive sales agreement for W-3A in the Americas and Pacific Rim countries. W-3A Sokół complies with FAR Pt 29 and is certificated for full IFR operations; it is equipped with a rotor monofilar vibration absorber, turbine inlet particle separator, dual batteries, US instrumentation, and PZL Rzeszów turboshaft engines rated at 746 kW (1,000 shp) maximum continuous and 857 kW (1,150 shp) OEI for 2½ minutes. It has been tested for high-intensity electromagnetic field effects and flight into known icing. See Polish section for full description

PIPER

PIPER AIRCRAFT CORPORATION

2926 Piper Drive, Vero Beach, Florida 32960
Telephone: 1 (407) 567 4361
Fax: 1 (407) 778 2144

PRESIDENT AND CHIEF EXECUTIVE OFFICER
Charles (Chuck) M Suma
VICE-PRESIDENT, PRODUCT SERVICES: Werner Hartlieb
VICE-PRESIDENT, MANUFACTURING: George (Buddy) Watson
DIRECTOR OF ENGINEERING: Elliott Nichols
MARKETING MANAGER: Kimberley Von Hagen

Piper purchased by Lear Siegler Inc effective 1 March 1984; Lock Haven and Piper facilities in Pennsylvania closed second half 1984; Lakeland, Florida, plant phased out October 1985. Activities concentrated at Vero Beach and new 12,075 m² (130,000 sq ft) plant completed October 1986 for Cheyenne IIIA and 400 production (transferred from Lakeland)

Company acquired by M Stuart Millar 12 May 1987 and became subsidiary of Romeo Charlie Inc; LoPresti Piper Advanced Engineering Group set up as subsidiary December 1987; Piper North Corporation subsidiary formed November 1989 at Lock Haven to re-establish aircraft manufacturing at former headquarters under loan guarantee agreement with Commonwealth of Pennsylvania. Increasing cash flow problems in second half of 1990 resulted in closure of both subsidiaries and reduced production. Sale of type certificates and manufacturing rights for number of out-of-production models were negotiated August 1990 and March 1991. Aerospatiale (Socata) negotiations to buy Piper finally broken off 22 March 1991, reportedly because of product liability uncertainties

Voluntarily filed for protection under Chapter 11 of US Bankruptcy Code July 1991, after several abortive bids from would-be purchasers; in July 1995, US Bankruptcy Court approved new reorganisation plan under which Piper's assets were bought for $95 million by Newco Pac Inc, a new company jointly owned by Philadelphia-based investment firm Dimeling, Schreiber and Park, Teledyne Continental Motors (which was Piper's largest creditor) and the remaining creditors.

During 1994, Piper delivered 132 aircraft, a substantial increase over previous year; estimates for 1995 were for 174 aircraft and for 1996, 202 aircraft. Workforce increased to 410 by end of 1994, with total of 540 expected by December 1995

UPDATED

Piper PA-28-161 Warrior III four-seat tourer/trainer
1995

PIPER PA-28-161 WARRIOR III

TYPE: Four-seat light aircraft and trainer

PROGRAMME: Design began June 1972, as replacement for Cherokee 140 series; first flight of prototype PA 28-151 17 October 1972; FAA certification 9 August 1973. PA 28-161 Warrior II first flown 27 August 1976; two-four-seat Cadet trainer version introduced April 1988, but no longer in production. Warrior III introduced late 1994

CUSTOMERS: Eight Warrior IIs and one Warrior III delivered in 1994; total of 23 planned for production in 1995

COSTS: Standard equipped price $128,500 (1995)

DESIGN FEATURES: NACA 65_2-415 wing section on inboard panels, Mod No. 5 of NACA TN 2228 on leading-edge of outboard panels; dihedral 7°, incidence 2° at root, -1° at tip; sweepback at quarter-chord 5°

FLYING CONTROLS: Mechanical, combined anti-servo and trim tab on all-moving tailplane; four-position manually operated flaps.

STRUCTURE: Conventional light alloy, with semi-monocoque fuselage, single-spar wings and ribbed light alloy skins on fin and tailplane; glassfibre nose cowl and wing/tailplane/fin tips.

LANDING GEAR: Non-retractable tricycle type. Steerable nosewheel. Piper oleo-pneumatic shock absorbers; single wheel on each unit. Cleveland wheels with 4 ply tyres size 6.00-6 on main units, pressure 1.65 bars (24 lb sq in). Cleveland nosewheel and 4 ply tyre size 5.00-5, pressure 1.65 bars (24 lb sq in). Cleveland disc brakes. Parking brake. Glassfibre wheel fairings standard

POWER PLANT: One 119 kW (160 hp) Textron Lycoming O-320-D3G flat-four engine, driving a Sensenich 74DM6-0-60 two-blade fixed-pitch metal propeller. Fuel in two wing tanks, with total capacity of 189 litres (50 US gallons, 41.6 Imp gallons), of which 181.5 litres (48 US gallons, 40 Imp gallons) are usable. Refuelling point on upper surface of each wing. Oil capacity 7.5 litres (2 US gallons, 1.7 Imp gallons)

ACCOMMODATION: Four persons in pairs in enclosed cabin. Individual adjustable front seats with seat belts and shoulder harnesses; bench type rear seat with seat belts and shoulder harnesses. Dual controls standard. Large door on starboard side. Baggage compartment at rear of cabin, with volume of 0.68 m³ (24 cu ft) and capacity of 91 kg (200 lb). External baggage door on starboard side. Heating, ventilation and windscreen defrosting standard.

SYSTEMS: Hydraulic system for brakes only. Electrical system powered by 28 V 60 A engine-driven alternator. 24 V 10 Ah battery standard

AVIONICS: Standard Bendix/King package as described below; Advanced Training Group IFR package optional.

Comms: Single Bendix/King KX-155-39 transceiver with audio amplifier and broadband antenna; KT 76A transponder; avionics master switch, Telex 100T noise-cancelling microphone, headset and intercom with microphone buttons; cabin speaker and microphone jacks, ELT

Flight: Single KX-155-39 nav receiver with VOR antenna. KI-203 VOR/LOC indicator/converter; Narco AR 850 altitude reporter

Instrumentation: Piper true airspeed indicator, magnetic compass, sensitive altimeter, directional gyro, rate of turn indicator, rate of climb indicator, OAT gauge, digital ammeter, annunciator panel with push-to-test, recording tachometer, three-way oil temperature/pressure and fuel quantity gauges and vacuum gauge

EQUIPMENT: Standard equipment includes engine hour recorder, alternate static source, colour co-ordinated control wheels, internally lit rocker switches, external power receptacle, electrical engine primer system, instrument panel lighting package, cabin dome light, navigation lights, landing/taxi light, wingtip strobe lights, pilot's and co-pilot's vertically adjustable seats in fabric and vinyl with magazine storage pockets on backs, rear bench seat, four floor-mounted cabin fresh air vents, vinyl cabin side panels, wall-to-wall carpet and headliner, crew armrests, pilot's storm window, two sun visors, two map pockets, 'Quietised' soundproofing, carpeted baggage

compartment with security straps, tiedown points, jack pads, static discharge wicks, and Du Pont Imron polyurethane exterior paint in base colour with two contrasting trim stripes, heated pitot head with annunciator, foreign certification gross weight kit and rpm reduction kit optional.

DIMENSIONS, EXTERNAL

Wing span	10.67 m (35 ft 0 in)
Wing chord: at root	1.60 m (5 ft 3 in)
at tip	1.07 m (3 ft 6¼ in)
Wing aspect ratio	7.21
Length overall	7.25 m (23 ft 9⅜ in)
Height overall	2.22 m (7 ft 3½ in)
Tailplane span	3.96 m (12 ft 11¾ in)
Wheel track	3.05 m (10 ft 0 in)
Wheelbase	2.03 m (6 ft 8 in)
Propeller diameter	1.88 m (6 ft 2 in)
Propeller ground clearance	0.21 m (8¼ in)
Cabin door: Height	0.89 m (2 ft 11 in)
Width	0.91 m (3 ft 0 in)
Baggage door: Height	0.51 m (1 ft 8 in)
Max width	0.56 m (1 ft 10 in)
Height to sill	0.71 m (2 ft 4 in)

DIMENSIONS, INTERNAL

Cabin: Length (instrument panel to rear bulkhead)	2.49 m (8 ft 2 in)
Max width	1.05 m (3 ft 5¼ in)
Max height	1.14 m (3 ft 8¾ in)
Floor area	2.28 m² (24.5 sq ft)
Volume (incl baggage area)	3.00 m³ (106.0 cu ft)

AREAS

Wings, gross	15.8 m² (170.0 sq ft)
Ailerons (total)	1.23 m² (13.2 sq ft)
Trailing-edge flaps (total)	1.36 m² (14.6 sq ft)
Fin	0.69 m² (7.4 sq ft)
Rudder	0.38 m² (4.1 sq ft)
Tailplane, incl tab	2.46 m² (26.5 sq ft)

WEIGHTS AND LOADINGS

Weight empty	676 kg (1,491 lb)
Max T-O weight	1,110 kg (2,447 lb)
Max wing loading	70.28 kg/m² (14.39 lb/sq ft)
Max power loading	9.31 kg/kW (15.29 lb/hp)

PERFORMANCE (at max T-O weight, ISA, except where indicated):

Max level speed	127 kts (235 km/h; 146 mph)
Max cruising speed	126 kts (233 km/h; 145 mph)
Econ cruising speed	118 kts (218 km/h; 136 mph)
Stalling speed:	
flaps up	50 kts (93 km/h; 58 mph)
flaps down	44 kts (82 km/h; 51 mph)
Max rate of climb at S/L	196 m (644 ft)/min
Service ceiling	3,355 m (11,000 ft)
T-O to 15 m (50 ft)	503 m (1,650 ft)
Landing from 15 m (50 ft)	354 m (1,160 ft)

NEW ENTRY

PIPER PA-28-181 ARCHER III

TYPE: Four-seat light aircraft.

PROGRAMME: Introduced (as Cherokee Challenger) 9 October 1972 as successor to Cherokee 180; Archer introduced 1974; PA-28-181 Archer II launched 1976, and in 1978 introduced the tapered wings of Warrior II; Archer III 1994 with axisymmetric engine inlets, redesigned windscreen and cabin side windows, and interior restyling and improvements.

CUSTOMERS: 19 Archer IIs delivered in 1993, nine Archer IIs and 10 Archer IIIs in 1994; total of 40 planned for 1995.

COSTS: Standard, equipped $149,600 (1995).

Description of the Warrior III applies also to Archer III except as follows:

LANDING GEAR: Tyres size 6.00-6, 4 ply rating, on all three wheels. Mainwheel tyre pressure 1.65 bars (24 lb/sq in), nosewheel 1.24 bars (18 lb/sq in). Cleveland high-capacity disc brakes. Parking brake. Wheel speed fairings standard.

POWER PLANT: One 134 kW (180 hp) Textron Lycoming O-360-A4M flat-four engine, driving a Sensenich 76EM8S5-0-62 two-blade fixed-pitch metal propeller. Fuel in two tanks in wing leading-edges, with total capacity of 189 litres (50 US gallons; 41.6 Imp gallons), of which 181.5 litres (48 US gallons; 40 Imp gallons) are usable. Oil capacity 7.5 litres (2 US gallons; 1.7 Imp gallons).

ACCOMMODATION: Four persons in pairs in enclosed cabin. Individual adjustable front seats, with dual controls; individual rear seats. Large door on starboard side. Baggage compartment at rear of cabin, with volume of 0.74 m³ (26 cu ft) and capacity of 90 kg (200 lb); door on starboard side. Rear seats removable to provide 1.25 m³ (44 cu ft) cargo space. Accommodation heated and ventilated. Windscreen defrosting.

SYSTEMS: 28 V 60 A alternator.

EQUIPMENT: Standard equipment generally as for Warrior III except polished propeller spinner, illuminated side-mounted OAT gauge, overhead switch panel, EGT gauge, flush locking fuel caps, overhead vent fan system, restyled windscreen and window lines with tinted transparencies, full chemical corrosion protection, choice of four interior colours with suede cloth headliner, wool carpeting and Hobnail side panels, passenger armrests and headrests. Additional options include Piper Aire air conditioning, carburettor ice detector, second altimeter and leather seats.

Piper PA-28-181 Archer III, showing new axisymmetric engine inlets *1995*

DIMENSIONS, EXTERNAL AND INTERNAL:

As for Warrior III except:	
Tailplane span	3.92 m (12 ft 10¼ in)
Wheelbase	2.00 m (6 ft 7 in)
Propeller diameter	1.93 m (6 ft 4 in)
Cabin: Width	1.06 m (3 ft 5¾ in)
Height	1.14 m (3 ft 9 in)
Baggage compartment volume, incl hatshelf	0.74 m³ (26.0 cu ft)

AREAS: As for Warrior III

WEIGHTS AND LOADINGS:

Weight empty	743 kg (1,639 lb)
Max T-O weight	1,156 kg (2,550 lb)
Max ramp weight	1,160 kg (2,558 lb)
Max wing loading	73.23 kg/m² (15.00 lb/sq ft)
Max power loading	8.62 kg/kW (14.17 lb/hp)

PERFORMANCE (at max T-O weight):

Max level speed	129 kts (239 km/h; 148 mph)
Cruising speed:	
75% power at 2,440 m (8,000 ft)	129 kts (239 km/h; 148 mph)
65% power at 3,660 m (12,000 ft)	125 kts (231 km/h; 144 mph)
55% power at 3,810 m (12,500 ft)	111 kts (206 km/h; 128 mph)
Stalling speed:	
flaps up	57 kts (106 km/h; 66 mph) CAS
flaps down	52 kts (97 km/h; 60 mph) CAS
Max rate of climb	203 m (667 ft)/min
Service ceiling	4,035 m (13,240 ft)
T-O run	266 m (870 ft)
T-O to 15 m (50 ft)	369 m (1,210 ft)
Landing from 15 m (50 ft)	424 m (1,390 ft)
Landing run	282 m (925 ft)
Range, allowances for taxi, T-O, climb and descent, and 45 min reserves at max range power:	
75% power at 2,440 m (8,000 ft)	520 n miles (963 km; 598 miles)
65% power at 3,660 m (12,000 ft)	565 n miles (1,046 km; 650 miles)
55% power at 3,810 m (12,500 ft)	580 n miles (1,074 km; 667 miles)

NEW ENTRY

PIPER PA-28R-201 ARROW

TYPE: Four-seat light aircraft.

PROGRAMME: Derived from Cherokee Archer II, but with retractable landing gear, more powerful engine and untapered wings of 1975 PA-28-180 Archer; PA-28R-201 Arrow III with tapered wings first flown 16 September 1975, first production aircraft 7 January 1977; new Arrow IV and Turbo Arrow IV models introduced 1979 with all-moving T tails, these subsequently discontinued and earlier low tail model restored to production.

CUSTOMERS: One Arrow delivered during 1994; total of three planned for 1995.

Description of Archer III applies also to Arrow except as follows:

COSTS: Standard, equipped $186,900 (1995).

LANDING GEAR: Tricycle type, retracted hydraulically with an electrically operated pump supplying the hydraulic pressure. Main units retract inward into wings, nose unit rearward. All units fitted with oleo-pneumatic shock-absorbers. Mainwheels and tyres size 6.00-6, 6 ply rating, pressure 2.07 bars (30 lb/sq in). Nosewheel and tyre size 5.00-5, 4 ply rating, pressure 1.86 bars (27 lb/sq in). High-capacity dual hydraulic disc brakes and parking brake.

POWER PLANT: Arrow: One 149 kW (200 hp) Textron Lycoming IO-360-C1C6 flat-four engine, driving a McCauley two-blade constant-speed metal propeller. Fuel tanks in wing leading-edges with total capacity of 291 litres (77 US gallons; 64 Imp gallons), of which 273 litres (72 US gallons; 60 Imp gallons) are usable. Oil capacity 7.5 litres (2 US gallons; 1.7 Imp gallons).

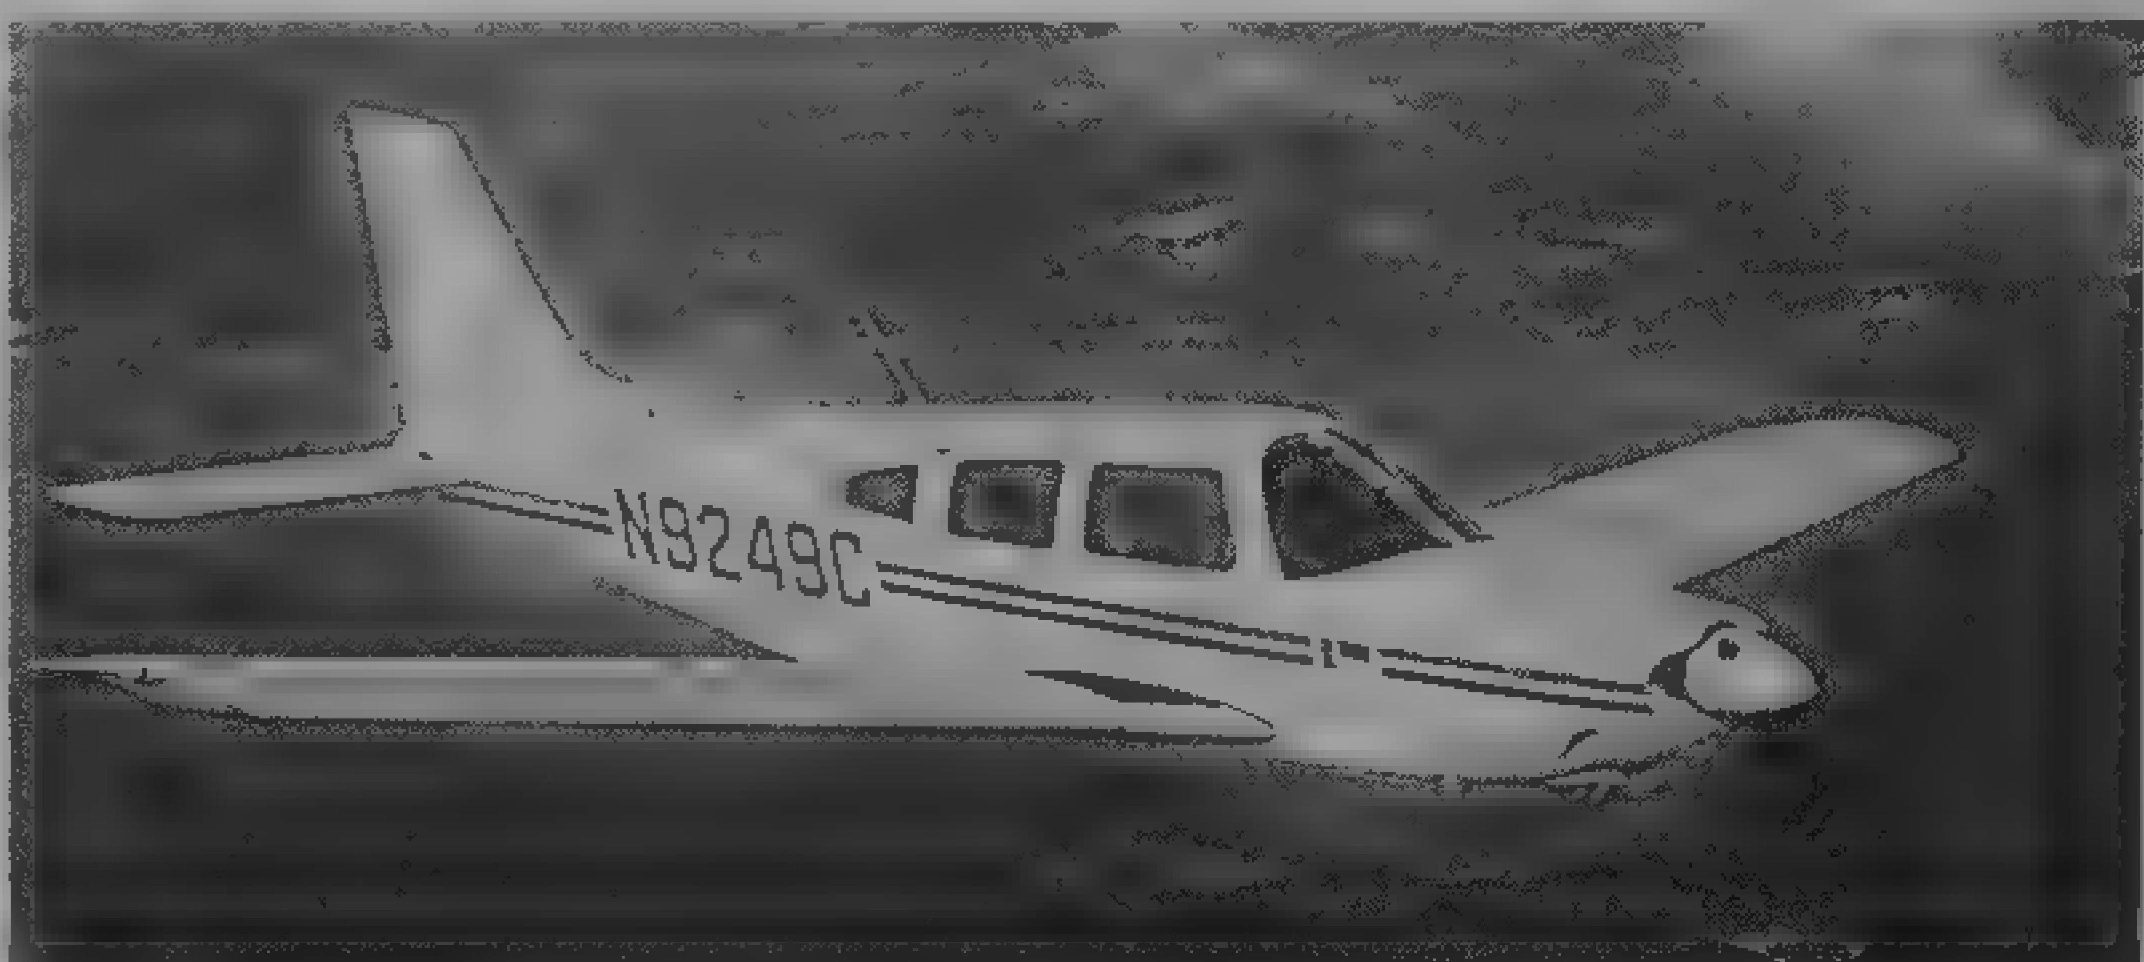
SYSTEMS: Generally as for Archer III and Warrior III except for electrohydraulic system for landing gear actuation.

DIMENSIONS, EXTERNAL:

Wing span	10.80 m (35 ft 5 in)
Wing aspect ratio	7.38
Length overall	7.52 m (24 ft 8 in)
Height overall	2.39 m (7 ft 10¼ in)
Wheel track	3.19 m (10 ft 5½ in)
Wheelbase	2.39 m (7 ft 10¼ in)

WEIGHTS AND LOADINGS:

Weight empty	816 kg (1,798 lb)
Max T-O weight	1,247 kg (2,750 lb)
Max wing loading	78.98 kg/m² (16.18 lb/sq ft)
Max power loading	8.37 kg/kW (13.75 lb/hp)



Piper PA-28R-201 Arrow *1995*

PERFORMANCE

Max level speed	152 kts (282 km/h, 175 mph)
Cruising speed at optimum altitude	
75% power	143 kts (265 km/h, 165 mph)
65% power	138 kts (256 km/h, 159 mph)
Stalling speed	
flaps up	60 kts (112 km/h, 69 mph)
flaps down	55 kts (102 km/h, 64 mph)
Max rate of climb at S/L	253 m (831 ft)/min
Service ceiling	4,935 m (16,200 ft)
T-O to 15 m (50 ft)	488 m (1,600 ft)
Landing from 15 m (50 ft)	465 m (1,525 ft)
Range, allowances for start, T-O, climb and descent, and 45 min reserves	
75% power	725 n miles (1,342 km, 834 miles)
65% power	770 n miles (1,426 km, 886 miles)

NEW ENTRY

PIPER PA-32R-301 SARATOGA IIHP

TYPE: Six-seat light tourer/business aircraft.

PROGRAMME: Saratoga family of fixed and retractable landing gear light aircraft announced 17 December 1979 to replace earlier PA-32 Cherokee SIX 300 and T-tail Lance series; fixed gear models now out of production. Saratoga IIHP introduced in Autumn 1993, featuring axisymmetric engine inlets, aerodynamic clean-up and interior improvements and restyling.

CUSTOMERS: 28 delivered in 1993, and 20 in 1994; total of 27 planned for 1995.

COSTS: Standard, equipped $314,200 (1995).

FLYING CONTROLS: Mechanical; combined anti-servo and trim tab on all-moving tailplane; rudder trim; four-position electrically actuated flaps with preselect.

STRUCTURE: Conventional light alloy, with semi-monocoque fuselage, single-spar wings and ribbed light alloy skins on fin and tailplane; glassfibre nose cowl and wing/tailplane/fin tips.

LANDING GEAR: Hydraulically retractable tricycle type with single wheel on each unit. Main units retract inward, nosewheel aft. Emergency free-fall extension system. Piper oleo-pneumatic shock-absorbers. Steerable nosewheel. Mainwheels and tyres size 6.00-6, 8 ply rating, pressure 2.62 bars (38 lb/sq in). Nosewheel and tyre size 5.00-5, 6 ply rating, pressure 2.41 bars (35 lb/sq in).

POWER PLANT: One 224 kW (300 hp) Textron Lycoming IO-540-K1G5 flat-six engine, driving a Hartzell blade constant-speed metal propeller. Two fuel tanks in each wing with combined capacity of 405 litres (107 US gallons, 89 Imp gallons), of which 386 litres (102 US gallons, 85 Imp gallons) are usable. Refuelling points on wing upper surface. Oil capacity 11.5 litres (3 US gallons, 2.5 Imp gallons).

ACCOMMODATION: Enclosed cabin seating six people, rear four in club arrangement. Two forward-hinged doors, one on starboard side forward, overwing, and one on port side at rear end of cabin. Space for 45 kg (100 lb) baggage at rear of cabin, with external baggage/utility door on port side. Additional baggage space, capacity 45 kg (100 lb), between engine fireproof bulkhead and instrument panel, with external door on starboard side. Pilot's storm window. Accommodation heated and ventilated. Windscreen defroster standard.

SYSTEMS: Electrically driven hydraulic pump for landing gear actuation. Electrical system includes 14 V 90 A engine-driven alternator and 12 V 35 Ah battery. Standby vacuum system standard.

AVIONICS: Standard Bendix/King IFR package.

Comms: Dual KX-165-21 combined nav/com transceivers with broadband antennas, KMA-24-03 audio selector panel with lights, KT-71 digital transponder, Nav 1/GPS switching/ground clearance system, avionics master switch, Telex 100T headset, cabin speaker with microphone jacks, pilot's and co-pilot's control wheel microphone buttons, and ELT.

Flight: Dual KX 165-21 combined nav/com receivers with dual glide slope receivers and VOR/LOC converters, marker beacon receiver; KI-525A-01 VOR/LOC/GS/HSI, KI 206 VOR/LOC indicator, KN-62A DME, KR-87 digital ADF with KI 227-01 slaved indicator and KA 44B antenna, KLN 90A GPS, KFC-150 autopilot/flight director with KI 256 flight command indicator, HSI-525A-01 flight computer, KC-192 annunciator/controller and KCS-55A slaved compass system; and Narco AR 850 altitude reporter.

Instrumentation: Piper true airspeed indicator, illuminated magnetic compass, sensitive altimeter (with second optional) ADI, HSI, rate of turn indicator, rate of climb indicator, OAT gauge, digital ammeter, annunciator panel with push-to-test, recording tachometer, manifold pressure/fuel flow gauge, oil pressure gauge, oil temperature gauge, dual fuel quantity gauges, fuel quantity sight gauges, CHT gauge, EGT gauge and vacuum gauge.

EQUIPMENT: Standard equipment includes engine hour recorder, alternate static source, electric clock, dual control wheels, heavy duty brake system with dual toe brakes, internally lit rocker switches, heated pitot head, resettable circuit breakers in CB panel, standby electric vacuum pump, electric emergency fuel pump, external power receptacle, instrument panel lighting package, avionics dimming, map lights, four cabin reading lights, forward baggage compartment light, two cabin door lights, navigation lights, landing/taxi light, wingtip strobe lights, wingtip recognition lights, pilot's and co-pilot's vertically adjustable all-leather seats, pilot's vent window, sun visors, two map pockets, four all-leather passenger seats with headrests, shoulder harnesses, seat belts, and quick-release facility, fold-down armrests (fifth and sixth seats), refreshment console, executive writing table, six overhead and four floor-mounted cabin fresh air vents, cabin air exhaust vents, tinted windscreen and cabin windows, folding shades on passenger windows, choice of four interior colours with suede cloth headliner, Hobnail fabric side panels, wool carpeting, super 'Quietised' soundproofing, lockable baggage compartments with security straps, utility door for rear baggage access and cargo loading, tie-down points, jack pads, stowable towbar, static discharge wicks, and Du Pont Imron polyurethane exterior paint in single or two-tone base colour with choice of trim colours. Piper Aire air conditioning system optional.

Piper PA-32R-301 Saratoga IIHP *1995*

DIMENSIONS, EXTERNAL

Wing span	11.02 m (36 ft 2 in)
Wing aspect ratio	7.34
Length overall	8.23 m (27 ft 0 in)
Height overall	2.59 m (8 ft 6 in)
Tailplane span	3.94 m (12 ft 11 in)
Wheel track	3.39 m (11 ft 1½ in)
Wheelbase	2.43 m (7 ft 11½ in)
Cabin door (fwd, stbd): Height	0.89 m (2 ft 11 in)
Width	0.91 m (3 ft 0 in)
Cabin door (rear, port): Height	0.72 m (2 ft 4½ in)
Width	0.71 m (2 ft 4 in)
Baggage door (fwd): Height	0.41 m (1 ft 4 in)
Width	0.56 m (1 ft 10 in)
Baggage/utility door (fwd): Height	0.52 m (1 ft 8½ in)

Normal cruise power	740 n miles (1,370 km, 851 miles)
Econ cruise power	800 n miles (1,481 km, 920 miles)
Long-range cruise power	860 n miles (1,592 km, 989 miles)

NEW ENTRY

PIPER PA-34-220T SENECA IV

TYPE: Six-seat twin-engined light aircraft and multi-engine trainer.

PROGRAMME: Original PA-34 Seneca announced 23 September 1971; redesignated Seneca II from 1975; improved Seneca III with more powerful counter-rotating (C/R) engines introduced 15 February 1981; Seneca IV with axisymmetric engine inlets, aerodynamic refinements and interior improvements and restyling introduced in 1994.

CUSTOMERS: Five Seneca IIIs delivered in 1993, and 24 Seneca IVs in 1994; total of 32 planned for production in 1995.

COSTS: Standard equipped price $439,900 (1995).

DESIGN FEATURES: Cantilever low-wing monoplane; dihedral 7°. Frise ailerons.

FLYING CONTROLS: Mechanical; one-piece all-moving horizontal tail with combined anti-balance and trim tab; anti-servo tab in rudder; wide-span electrically operated slotted flaps.

STRUCTURE: Conventional light alloy, with semi-monocoque fuselage, single-spar wings; glassfibre wingtips.

LANDING GEAR: Hydraulically retractable tricycle type. Main units retract inward, nose unit forward. Oleo-pneumatic shock-absorbers. Steerable nosewheel. Emergency free-fall extension system. Mainwheels and tyres size 6.00-6, 8 ply rating, pressure 3.79 bars (55 lb/sq in); nosewheel and tyre size 6.00-6, 6 ply rating, pressure 2.76 bars (40 lb/sq in). Nosewheel safety mirror. High-capacity disc brakes. Parking brake.

POWER PLANT: One 164 kW (220 hp) Teledyne Continental TSIO-360-KB and one 164 kW (220 hp) LTSIO-360-KB flat-six turbocharged counter-rotating engine, each driving a McCauley three-blade constant-speed fully feathering metal propeller. Propeller synchrophasers standard. Fuel in four tanks in wings, with a total capacity of 485 litres (128 US gallons, 106.6 Imp gallons), of which 466 litres (123 US gallons; 102.4 Imp gallons) are usable. Oil capacity 7.5 litres (2 US gallons, 1.7 Imp gallons). Glassfibre engine cowlings.

ACCOMMODATION: Enclosed cabin, seating six people in pairs on individual seats with 0.25 m (10 in) centre aisle. Dual controls standard. Pilot's storm window. Two forward-hinged doors, one on starboard side at front, the other on port side at rear. Large utility door adjacent rear cabin door provides an extra wide opening for loading bulky items. Passenger seats easily removable to provide different seating/baggage/cargo combinations. Space for 45 kg (100 lb) baggage at rear of cabin, and for 45 kg (100 lb) in nose compartment with external door on port side. Cabin heated and ventilated. Windscreen defrosters standard.

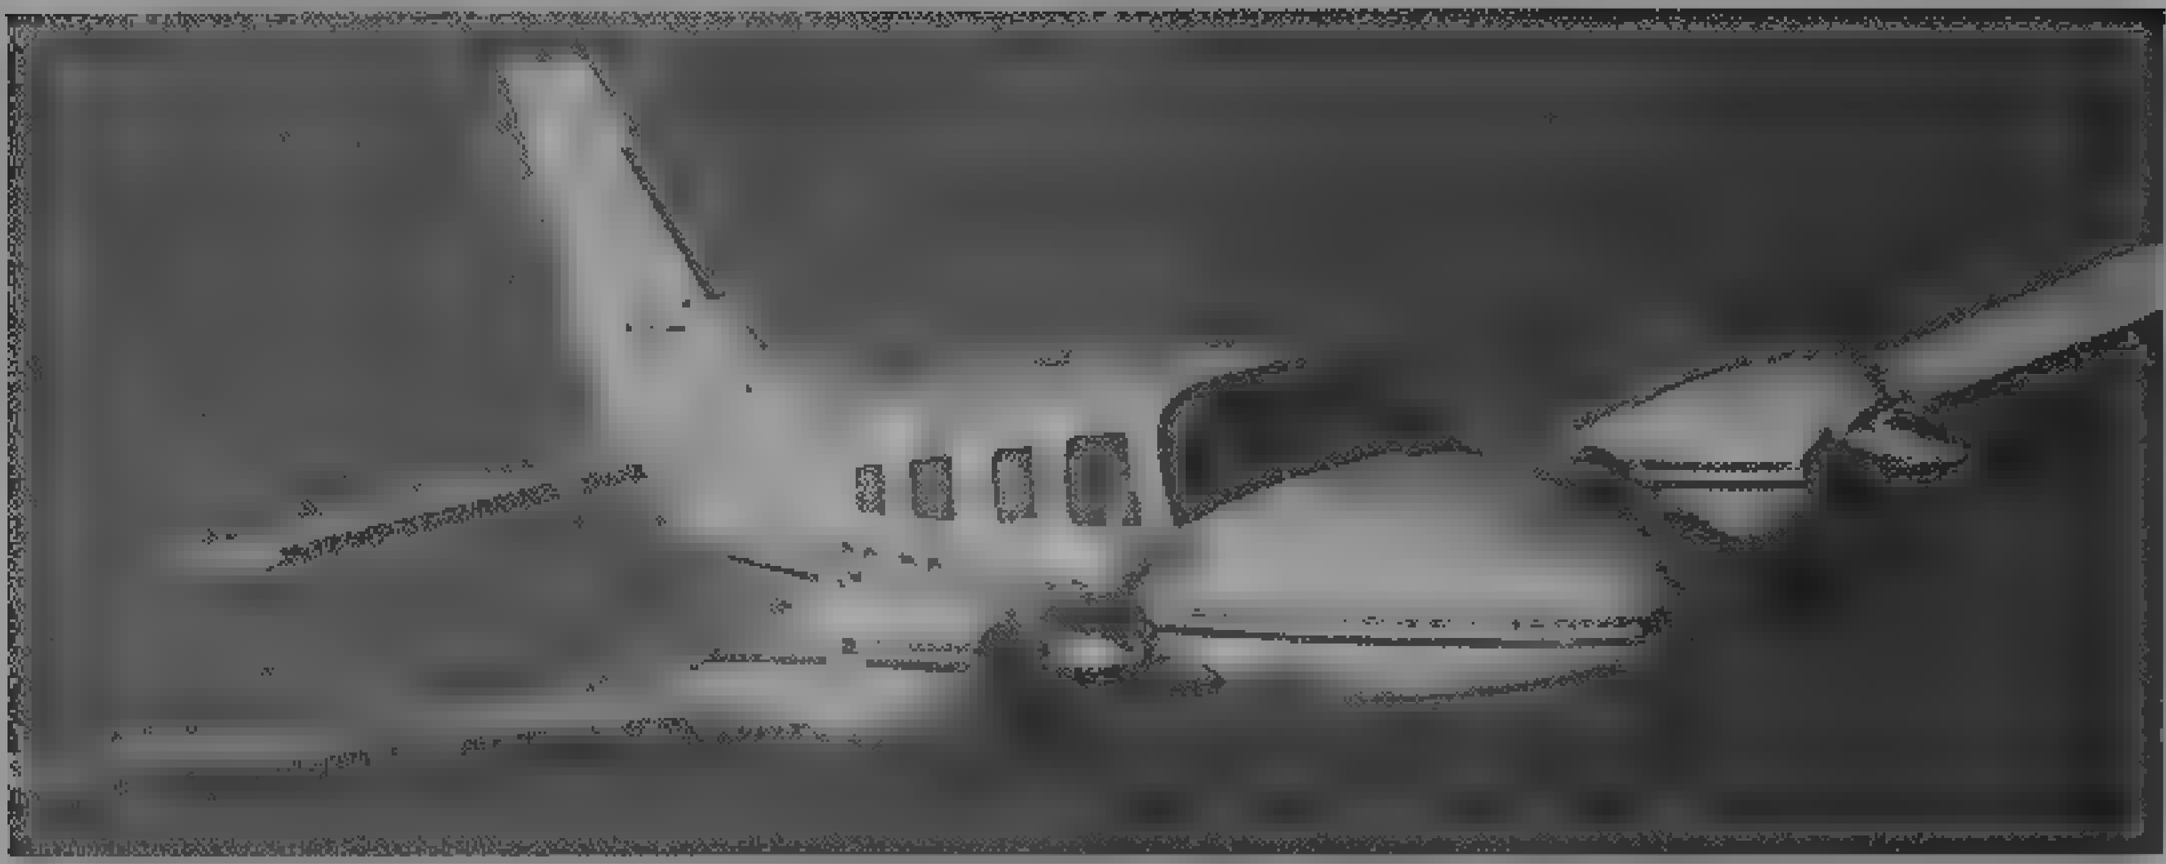
SYSTEMS: Electrohydraulic system for landing gear actuation. Electrical system powered by two 28 V 90 A alternators, 24 V 35 Ah battery. Pneumatic de-icing boots on wing, tailplane and fin leading edges.

AVIONICS: Standard Bendix/King IFR package.

Comms: Dual KX-165-25 combined nav/com transceivers with broadband antennae, KMA-24-03 audio selector panel with lights, KT-17 digital transponder, Nav 1/GPS switching/ground clearance system, Telex 100T headset, cabin speaker with microphone jacks, pilot's and co-pilot's control wheel microphone buttons, pilot's transponder ident button, and ELT.

Radar: Provision in nose and on instrument panel for weather radar installation; Bendix/King RDR 2000 vertical profile radar optional.

Flight: Dual KX 165-25 combined nav/com receivers with dual glide slope receivers and VOR/LOC converters, marker beacon receiver; KI-525A-07 VOR/LOC/GS indicator, KN-62A DME, KR 87 digital ADF with KI-227-01 slaved indicator and KA 44B antenna, KLN 90A GPS, KFC 150 autopilot/flight director with KI 256 flight



Piper PA-34-220T Seneca IV

1995

command indicator KI-525A-07 flight computer, KC 192 annunciator/controller and KCS-55A slaved compass system, and Narco AR-850 altitude reporter

Instrumentation Piper true airspeed indicator, magnetic compass, sensitive altimeter, ADI, HSI, rate of turn indicator, rate of climb indicator, illuminated OAT gauge digital ammeter annunciator panel with push-to-test recording tachometer, dual manifold pressure gauges three way oil pressure temperature and CHT gauge, dual fuel quantity gauges and vacuum gauge with warning indicator. Pilot's 7.5 cm (3 in) instrument pane optional

EQUIPMENT: Standard equipment as listed for Saratoga HP, plus emergency landing gear extension system, cabin dome light, pilot's storm window, sun visors with power setting table and checklist, chemical corrosion protection flush fuel caps and nose gear safety mirror. Piper Aire air conditioning system, built in oxygen system and foreign certification gross weight kit optional

DIMENSIONS, EXTERNAL

Wing span	11.85 m (38 ft 10¾ in)
Wing aspect ratio	7.25
Wing chord, constant	1.60 m (5 ft 3 in)

NEW ENTRY

PIPER PA-44-180 SEMINOLE

TYPE: Twin-engined four-seat light aircraft and multi-engine trainer

PROGRAMME: Prototype first flown May 1976, production version announced 21 February 1978, two versions Seminole and Turbo Seminole, produced until 1982, normally aspirated Seminole restored to production in 1988, suspended in 1990 and restored again in 1995

COSTS: Standard, equipped $288,900 (1995)

DESIGN FEATURES: Cantilever low-wing monoplane; T tail

FLYING CONTROLS: Mechanical, all-moving tailplane with full-span tab, rudder anti-servo tab, plain ailerons and four position manually operated flaps

STRUCTURE: Conventional light alloy, with semi-monocoque fuselage, single-spar wings

LANDING GEAR: Hydraulically retractable tricycle type. Free-fall emergency extension system. Piper oleo-pneumatic shock-absorbers. Mainwheels and tyres size 6.00-6, 8 ply with tubes. Steerable nosewheel with tyre size 5.00-5, 6 ply, with tube. Dual toe-operated high-capacity disc brakes. Heavy-duty brakes and tyres optional

POWER PLANT: Two 134 kW (180 hp) Textron Lycoming flat-four counter-rotating engines (one O-360-A1H6 and one LO-360-A1H6), each driving a Hartzell two-blade constant-speed fully feathering metal propeller. One bladder-type fuel tank in each engine nacelle, with total capacity of 416 litres (110 US gallons; 91.5 Imp gallons), of which 409 litres (108 US gallons; 90 Imp gallons) are usable. Refuelling point on upper surface of each nacelle. Oil capacity 11.5 litres (3 US gallons, 2.5 Imp gallons)

ACCOMMODATION: Cabin seats four in two pairs of individual seats. Dual controls standard. Emergency exit on port side. Pilot's storm window. Baggage compartment at rear of cabin, capacity 91 kg (200 lb). Accommodation heated and ventilated. Windscreen defrosters

SYSTEMS: Electrohydraulic system for landing gear actuation and brakes. Electrical system includes two engine-driven 14 V 70 A alternators and 12 V 35 Ah battery. Janitrol combustion heater of 45,000 BTU capacity. Dual vacuum systems standard

AVIONICS: Standard Bendix/King package as described below; De luxe IFR avionics package optional

Comms: Single Bendix/King KX 155 transceiver with broadband antenna, KT 76A transponder, avionics master switch, Telex 100T microphone and headset; Telex Procom passenger intercom with microphone buttons; cabin speaker and microphone jacks.

Flight: Single KX 155 nav receiver with VOR antenna, KI 203 VOR/LOC indicator/converter, Narco AR 850 altitude reporter

Instrumentation: Artificial horizon, directional gyro, Piper true airspeed indicator, illuminated magnetic compass, sensitive altimeter, rate of turn indicator, rate of climb indicator, OAT gauge, dual ammeters, annunciator panel with push-to-test and dual tachometers, dual manifold pressure/oil temperature/oil pressure/CHT and EGT gauges, dual fuel/pressure quantity gauges

EQUIPMENT: Metal instrument panel, engine hour recorders, alternate static source, heated pitot head, dual control wheels, instrument panel lights and overhead blue lighting, avionics dimming, dome light, navigation lights, landing/taxi light, wingtip strobe lights, pilot's and co-pilot's vertically adjustable seats in fabric and vinyl, two reclining rear passenger seats, four floor mounted cabin fresh air vents, vinyl cabin side panels, wall-to-wall carpet and headliner, crew armrests, pilot's storm window, two sun visors, two map pockets, 'Quietised' soundproofing, baggage compartment with security straps, tiedown points, jack pads, nose gear safety mirror, static discharge wicks, and Du Pont Imron polyurethane exterior paint in white base colour with two contrasting trim stripes

DIMENSIONS, EXTERNAL

Wing span	11.7 m (38 ft 7¼ in)

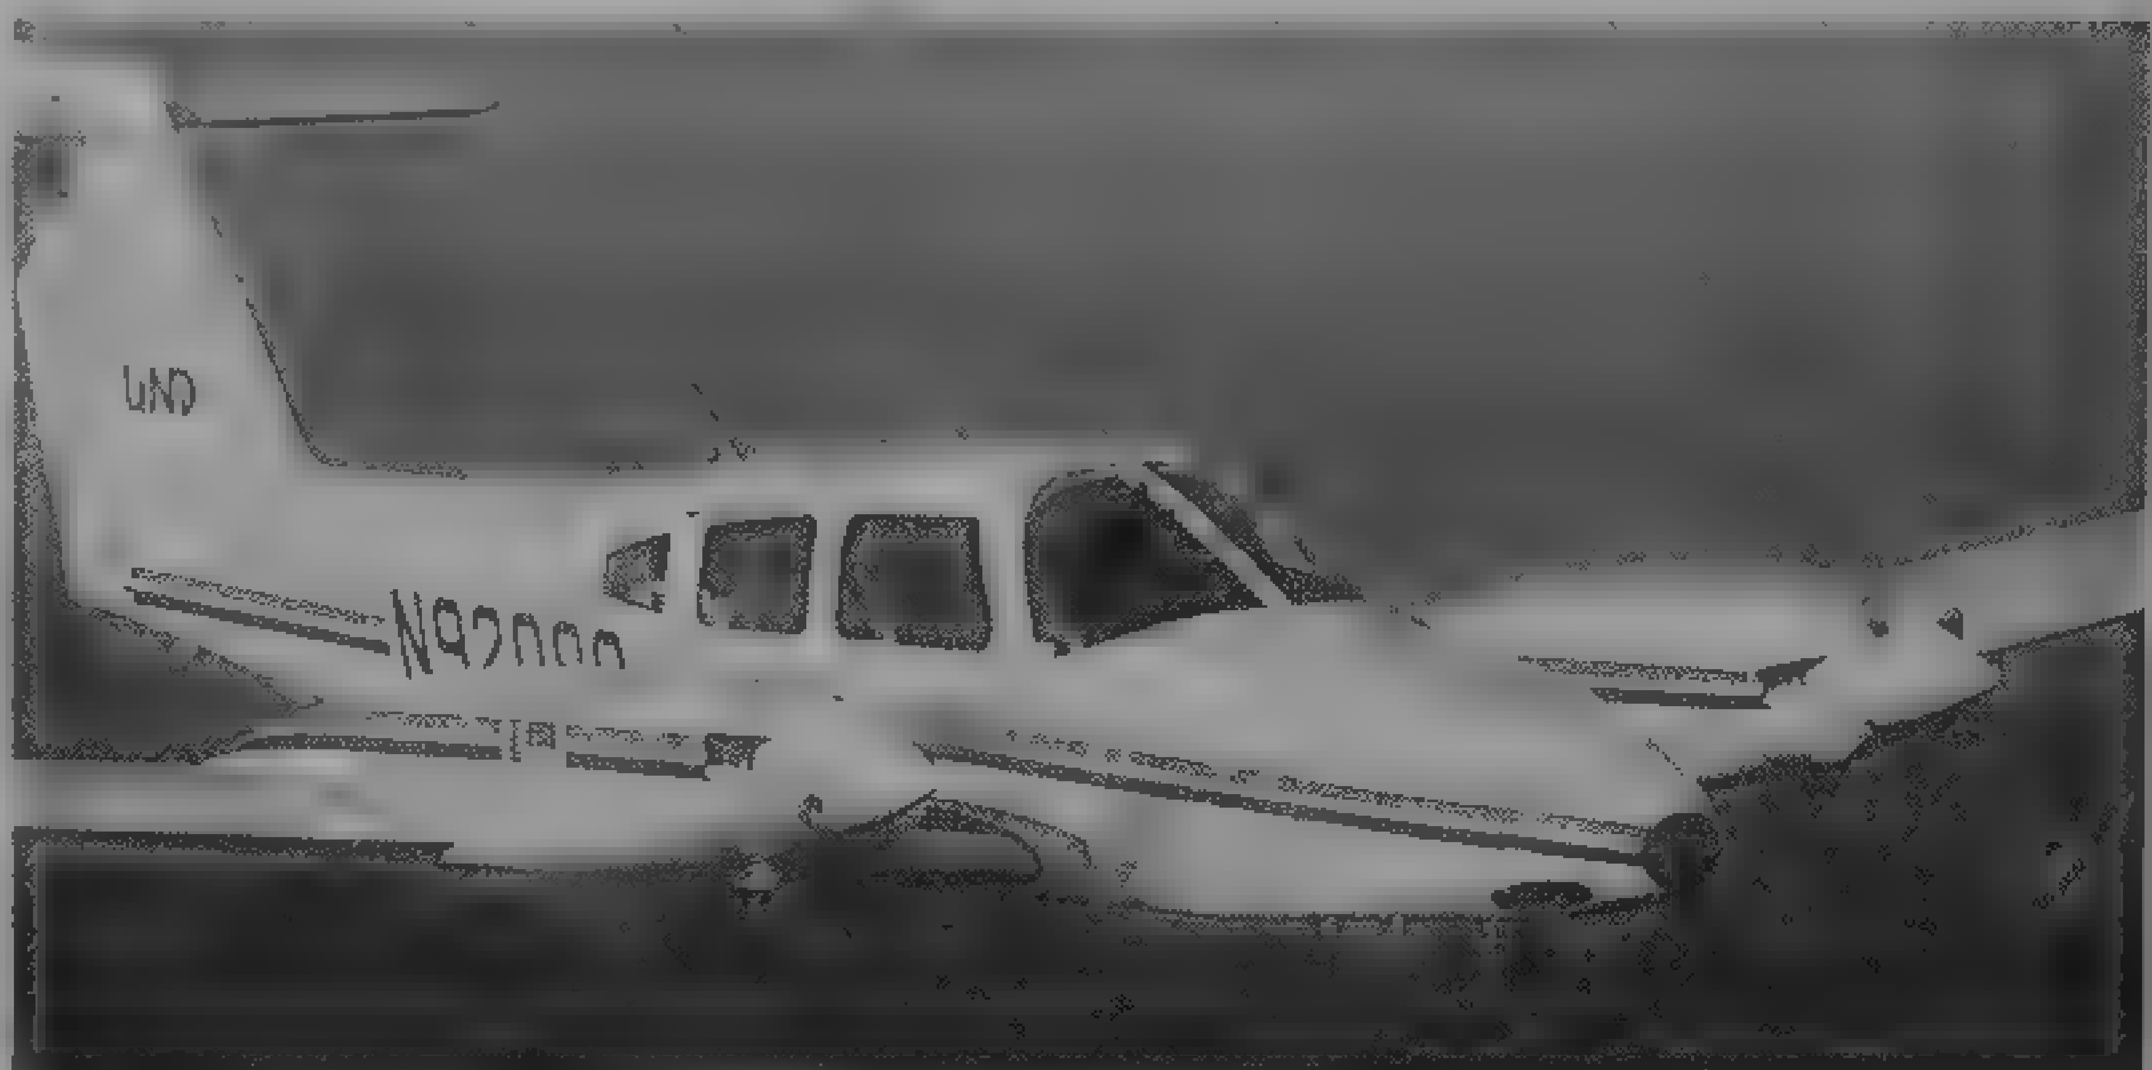
Cruising range	751 n miles (1,390 km, 864 miles)

NEW ENTRY



Piper PA-44-180 Seminole

1995

PIPER PA-46-350P MALIBU MIRAGE

TYPE: Six-seat light business transport

PROGRAMME: Announced November 1982. FAA certification of original PA-46-310P Malibu received September 1988, production deliveries began November 1983; 402 built before replaced by PA-46-350P Malibu Mirage October 1988, combined deliveries in excess of 550 by early 1995

CUSTOMERS: 28 delivered in 1994

COSTS: Standard, equipped $679,900 (1995)

DESIGN FEATURES: Textron Lycoming TIO-540-AE2A introduced on Malibu Mirage, other changes include dual 70 A 28 V alternators, split bus electrical system, redesigned flight deck, additional options include computerised fuel management system and pilot's electrically heated windscreen. Wing dihedral 4° 30'. Improvements introduced on 1995 model include pilot's heated glass windscreen, inflatable lumbar support on pilot/co-pilot's seats, colour co-ordinated control wheels and restyled interior trim, cabinetry and seats.

FLYING CONTROLS: Conventional ailerons, horn balanced elevators and rudder, trim tab in elevator, electrically operated trailing-edge flaps

STRUCTURE: Cantilever high aspect ratio all metal wings, light alloy fuselage, fail-safe construction in pressurised area, light alloy tail surfaces

LANDING GEAR: Hydraulically retractable tricycle type with single wheel on each unit, main units retract inward into wingroots, nosewheel rearward, rotating 90° to lie flat under baggage compartment

POWER PLANT: One 261 kW (350 hp) Textron Lycoming TIO-540-AE2A turbocharged and intercooled flat-six engine, driving a Hartzell two-blade constant-speed propeller. Fuel system capacity 462 litres (122 US gallons; 101.6 Imp gallons), of which 454 litres (120 US gallons; 100 Imp gallons) are usable. Oil capacity 11.5 litres (3 US gallons, 2.5 Imp gallons)

ACCOMMODATION: Pilot and five passengers in pressurised, heated and ventilated cabin, unpressurised baggage compartment in nose, and pressurised space at rear of cabin, each with capacity of 45 kg (100 lb)

SYSTEMS: Pressurisation maximum differential 0.38 bar (5.5 lb/sq in), to provide a cabin altitude of 2,400 m (7,900 ft) to a height of 7,620 m (25,000 ft). Hydraulic system pressure 107 bars (1,550 lb/sq in). Dual engine driven vacuum pumps standard. Standard electrical system has two 70 A/28 V alternators, 24 V 10 Ah battery; full icing protection optional

Piper PA-46-350P Malibu Mirage pressurised, single piston-engined aircraft *1994*

AVIONICS: Standard Bendix/King IFR avionics package

DIMENSIONS, EXTERNAL

Wing span	13.11 m (43 ft 0 in)
Wing aspect ratio	10.57
Length overall	8.72 m (28 ft 7¼ in)
Height overall	3.51 m (11 ft 6 in)
Tailplane span	4.42 m (14 ft 6 in)
Wheel track	3.75 m (12 ft 3½ in)
Wheelbase	2.44 m (8 ft 0 in)
Propeller diameter	2.03 m (6 ft 8 in)
Passenger door (port, rear):	
Height	1.17 m (3 ft 10 in)
Width	0.61 m (2 ft 0 in)
Baggage door (port, nose):	
Height	0.58 m (1 ft 11 in)
Width	0.48 m (1 ft 7 in)

DIMENSIONS, INTERNAL

Cabin: Length, instrument panel to rear pressure bulkhead	3.76 m (12 ft 4 in)
Max width	1.26 m (4 ft 1½ in)
Max height	1.19 m (3 ft 11 in)
Baggage compartment volume:	
nose	0.37 m³ (13.0 cu ft)
rear cabin	0.57 m³ (20.0 cu ft)

AREAS

Wings, gross	16.26 m² (175.0 sq ft)

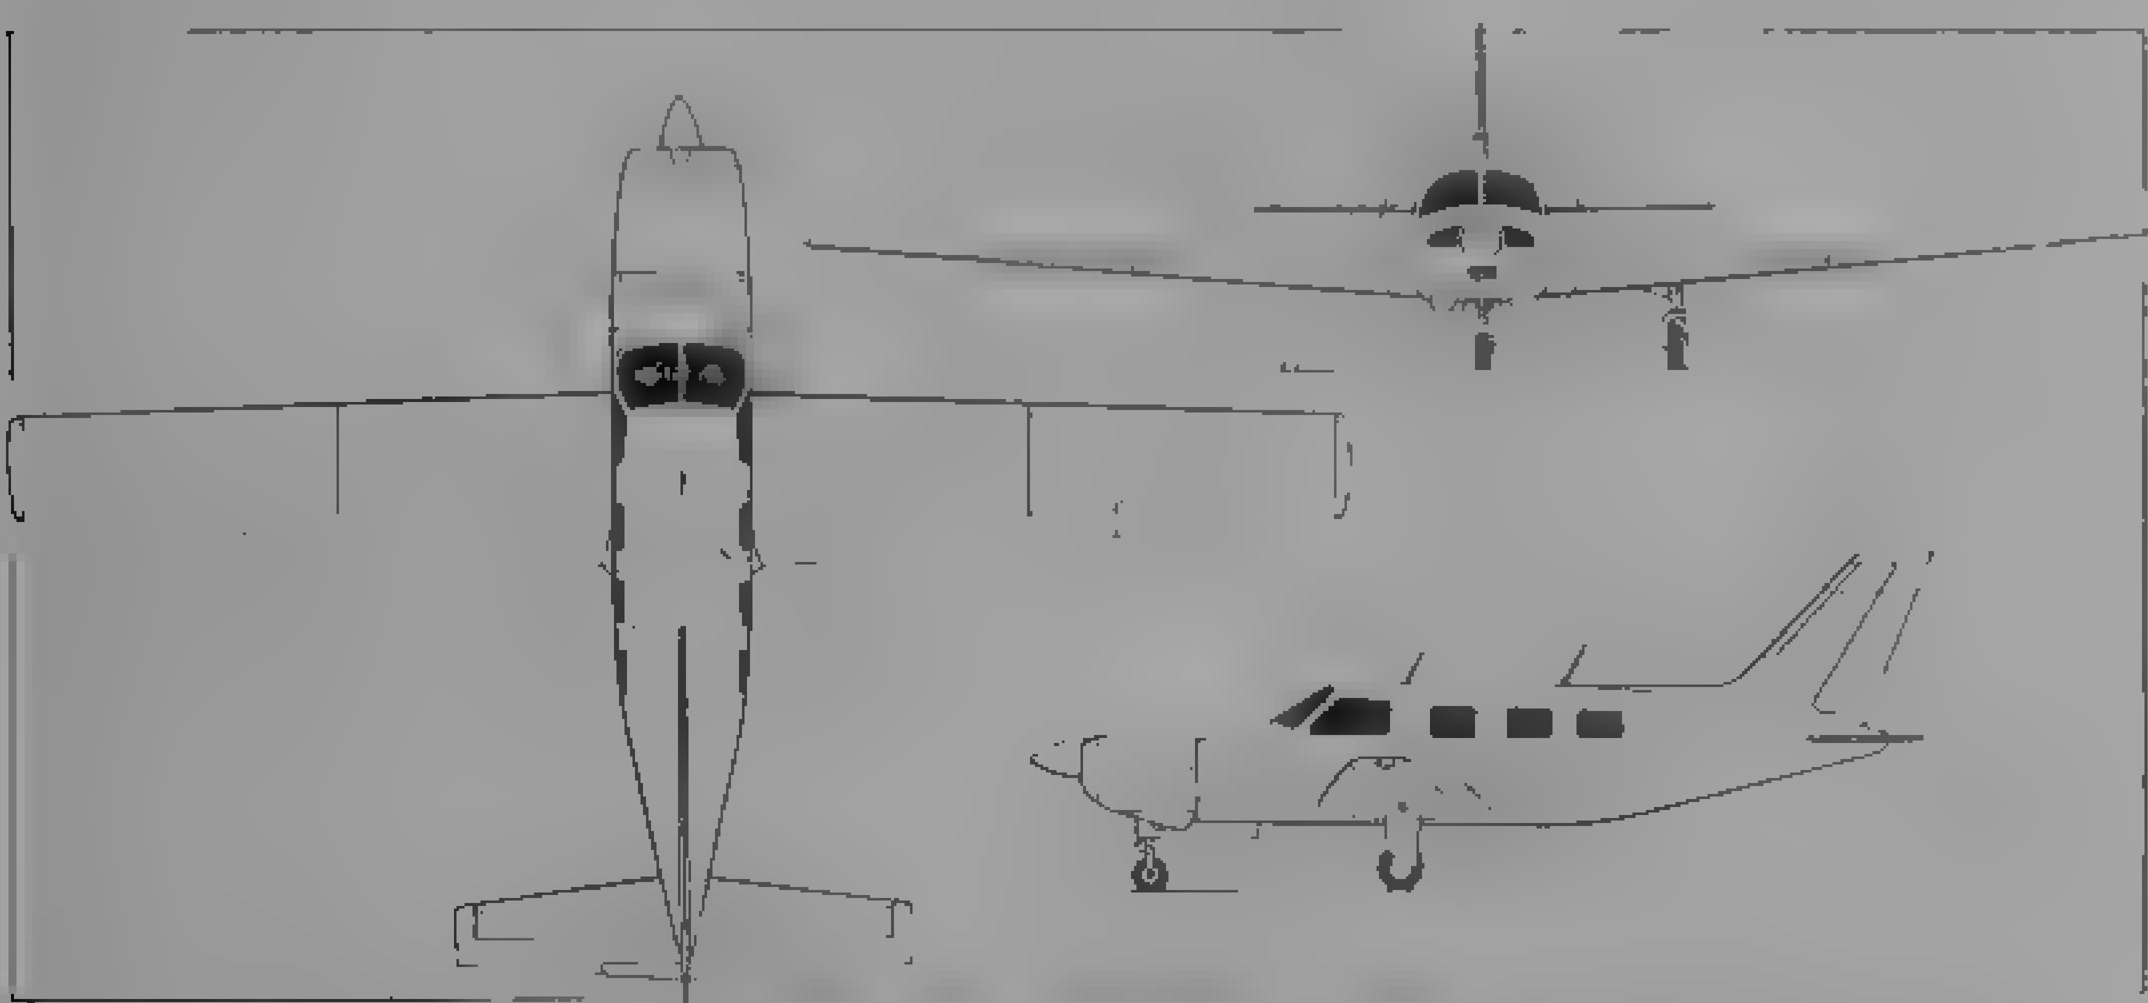
WEIGHTS AND LOADINGS

Weight empty, standard	1,382 kg (3,048 lb)
Useful load	576 kg (1,270 lb)
Max T-O weight	1,950 kg (4,300 lb)
Max ramp weight	1,958 kg (4,318 lb)
Max zero-fuel weight	1,860 kg (4,100 lb)
Max landing weight	1,860 kg (4,100 lb)
Max wing loading	119.9 kg/m² (24.6 lb/sq ft)
Max power loading	7.47 kg/kW (12.3 lb/hp)

PERFORMANCE

Max level speed at mid-cruise weight	232 kts (430 km/h, 267 mph)
Cruising speed at optimum altitude, mid-cruise weight:	
high-speed cruise power	225 kts (417 km/h, 259 mph)
normal cruise power	215 kts (398 km/h, 247 mph)
econ cruise power	199 kts (369 km/h, 229 mph)
long-range cruise power	168 kts (311 km/h, 193 mph)
Stalling speed:	
flaps and wheels up	71 kts (132 km/h, 82 mph)
flaps and wheels down	60 kts (111 km/h, 69 mph)
Max rate of climb at S/L	371 m (1,218 ft)/min
Max certificated ceiling	7,620 m (25,000 ft)
T-O run	467 m (1,530 ft)
T-O to 15 m (50 ft)	724 m (2,375 ft)
Landing from 15 m (50 ft)	599 m (1,964 ft)
Landing run	311 m (1,018 ft)
Range with max fuel, allowances for start, T-O, climb and descent, plus 45 min reserves, at optimum altitude:	
high-speed cruise power	990 n miles (1,833 km, 1,139 miles)
normal cruise power	1,056 n miles (1,956 km; 1,215 miles)
econ cruise power	1,184 n miles (2,193 km, 1,362 miles)
long-range cruise power	1,450 n miles (2,685 km, 1,668 miles)

UPDATED



Piper PA-46-350P Malibu Mirage (Textron Lycoming TIO-540-AE2A) *(Jane's/Dennis Punnett)* *1990*

OTHER AIRCRAFT

Piper delivered final batch of 24 **PA-18-150 Super Cubs** during 1994, and has announced that no further production will take place. See 1990-91 and earlier editions of *Jane's* for a full description. No examples of the **PA-42-720 Cheyenne IIIA** and **PA-42-1000 Cheyenne 400** twin-turboprop business aircraft have been manufactured for several years, and none is planned for 1995. Descriptions of both aircraft in 1994-95 and earlier editions of *Jane's*.

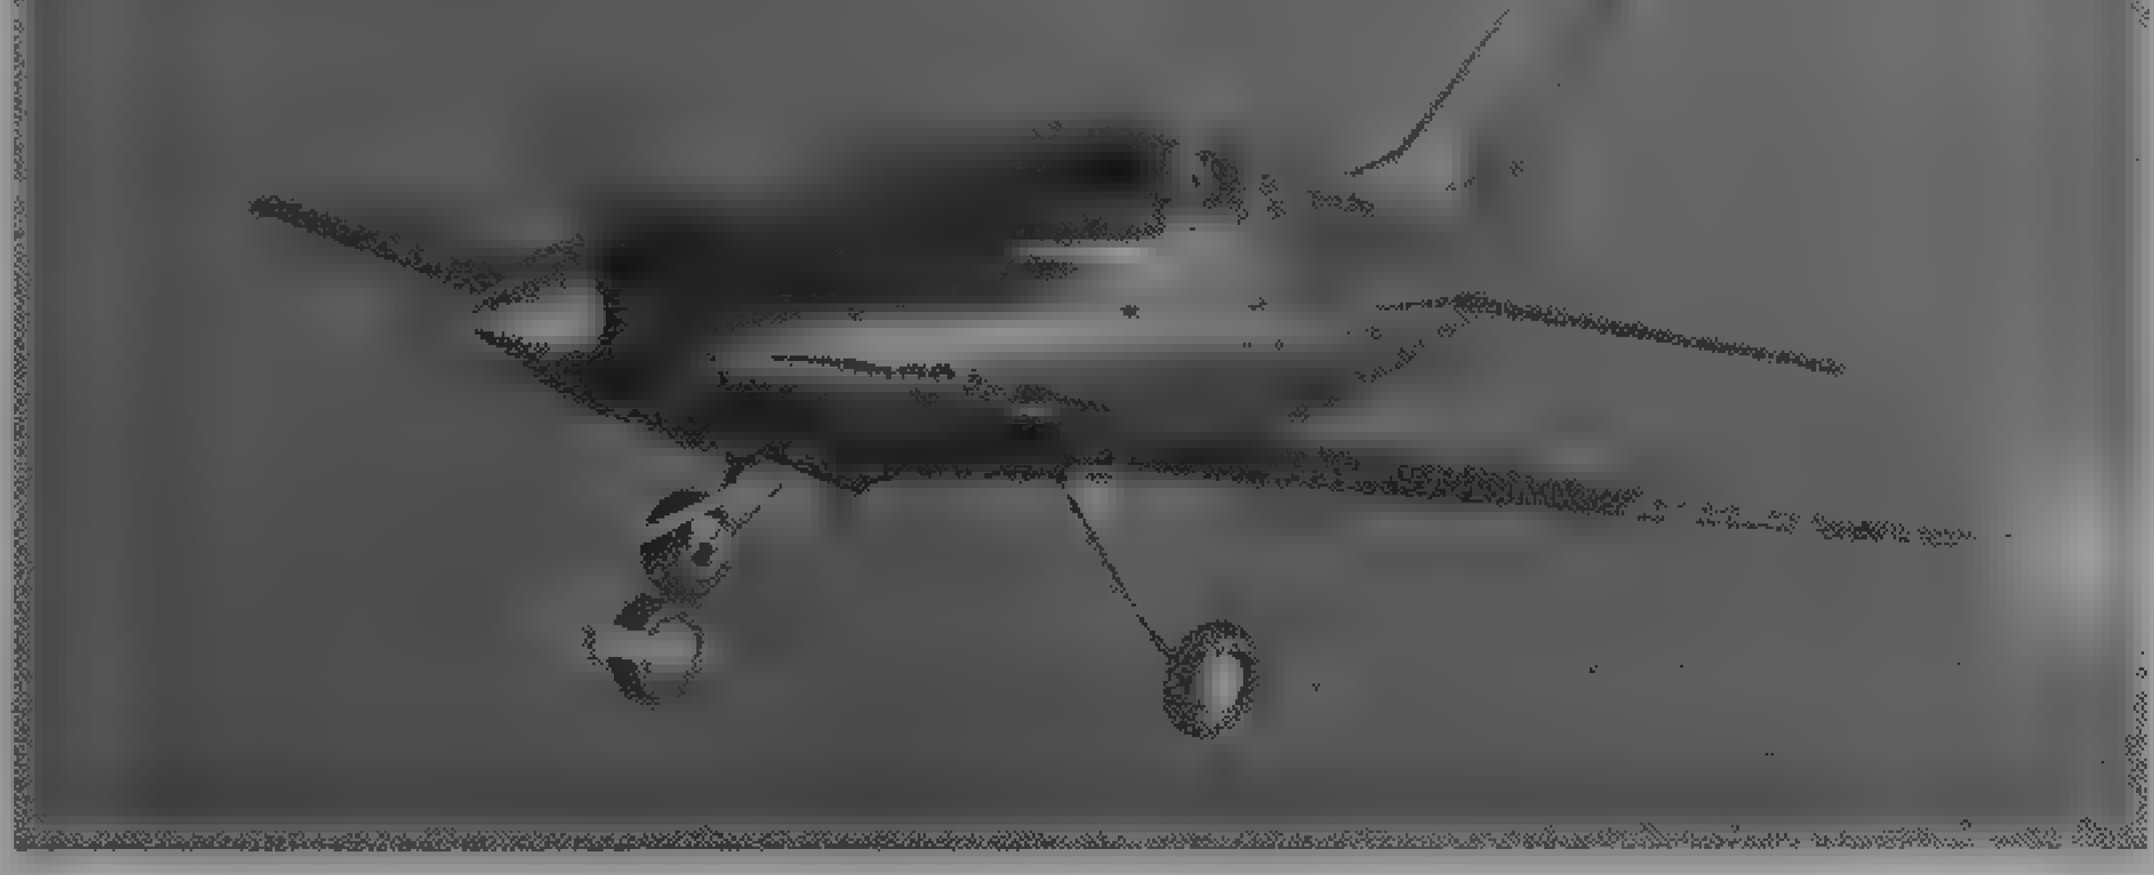
QUESTAIR SPIRIT

TYPE: Side by side two-seat or 2+1 three-seat sporting and cross-country homebuilt

PROGRAMME: Construction of prototype began in 1990; first flight February 1991. Claimed as "fastest fixed-gear aircraft in the world" in Spring 1994 after flight by prototype at TAS of 230 knots (426 km/h; 264 mph) at 7,620 m (25,000 ft). Kits are available, with engine included at customer's request

COSTS: Kit: $29,900 (1995).

DESIGN FEATURES: Non-retractable landing gear derivative of Venture, powered by Teledyne Continental IO-360 engine but with Textron Lycoming O-360 as optional power plant.



Questair Spirit two/three-seat sporting and cross-country monoplane *1993*

LANDING GEAR: Non-retractable tricycle type
POWER PLANT: One 156.6 kW (210 hp) Teledyne Continental IO-360-ES flat-six engine, driving a McCauley three-blade propeller. Alternatively 134 kW (180 hp) Textron Lycoming O-360. Fuel capacity 212 litres (56 US gallons; 46.6 Imp gallons)

DIMENSIONS, EXTERNAL:

Wing span	8.38 m (27 ft 6 in)
Wing aspect ratio	10.43
Length overall	4.95 m (16 ft 3 in)
Height overall	2.34 m (7 ft 8 in)
Propeller diameter	1.73 m (5 ft 8 in)

AREAS:

Wings, gross	6.74 m² (72.50 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	465 kg (1,025 lb)
Max T-O weight	771 kg (1,700 lb)
Max wing loading	114.5 kg/m² (23.45 lb/sq ft)
Max power loading	4.92 kg/kW (8.10 lb/hp)

PERFORMANCE:

Max level speed at 2,135 m (7,000 ft)	195 kts (361 km/h, 225 mph)
Max cruising speed at 2,135 m (7,000 ft)	185-195 kts (343-361 km/h, 213-225 mph)
Stalling speed	56 kts (104 km/h, 65 mph)
Max rate of climb at S/L	457-610 m (1,500-2,000 ft)/min
Range, with reserves	1,030 n miles (1,907 km, 1,185 miles)
Endurance	6 h 10 min
g limits	+6/-3

VERIFIED

RANS S-7 COURIER

TYPE: Two-seat STOL homebuilt
PROGRAMME: Offering standard kits (300 to 500 working hours to assemble) or a quick-build kit (150 working hours approximately). Prototype first flew October 1985. Estimated building time from kit is 500 to 700 working hours. Type certification by FAA April 1995
CUSTOMERS: 147 built by 1995
COSTS: Kit: $12,600; production aircraft, $24,000
DESIGN FEATURES: Follows general configuration of Coyote (see 1992-93 *Jane's*), fitted with dual controls and suited to training, recreational flying, agricultural spraying and similar duties. Wings fold rearwards for stowage
FLYING CONTROLS: Conventional control, with four-position flaps
STRUCTURE: Fabric covered, with aluminium alloy wings, and welded 4130 steel fuselage and tail unit. Glassfibre engine cowling
LANDING GEAR: Non-retractable tailwheel type. Optional floats and skis
POWER PLANT: One 48.5 kW (65 hp) Rotax 582, with 2.58:1 reduction gear. Optional 67 kW (90 hp) AMW 636 or 58.2 kW (78 hp) Rotax 912. Fuel capacity 56.8 litres (15 US gallons; 12.5 Imp gallons) in two wing tanks

DIMENSIONS, EXTERNAL:

Wing span	8.92 m (29 ft 3 in)
Wing aspect ratio	5.67
Length overall	6.40 m (21 ft 0 in)
Height overall	1.91 m (6 ft 3 in)
Propeller diameter	1.73 m (5 ft 8 in)

AREAS:

Wings, gross	14.03 m² (151.0 sq ft)

WEIGHTS AND LOADINGS:

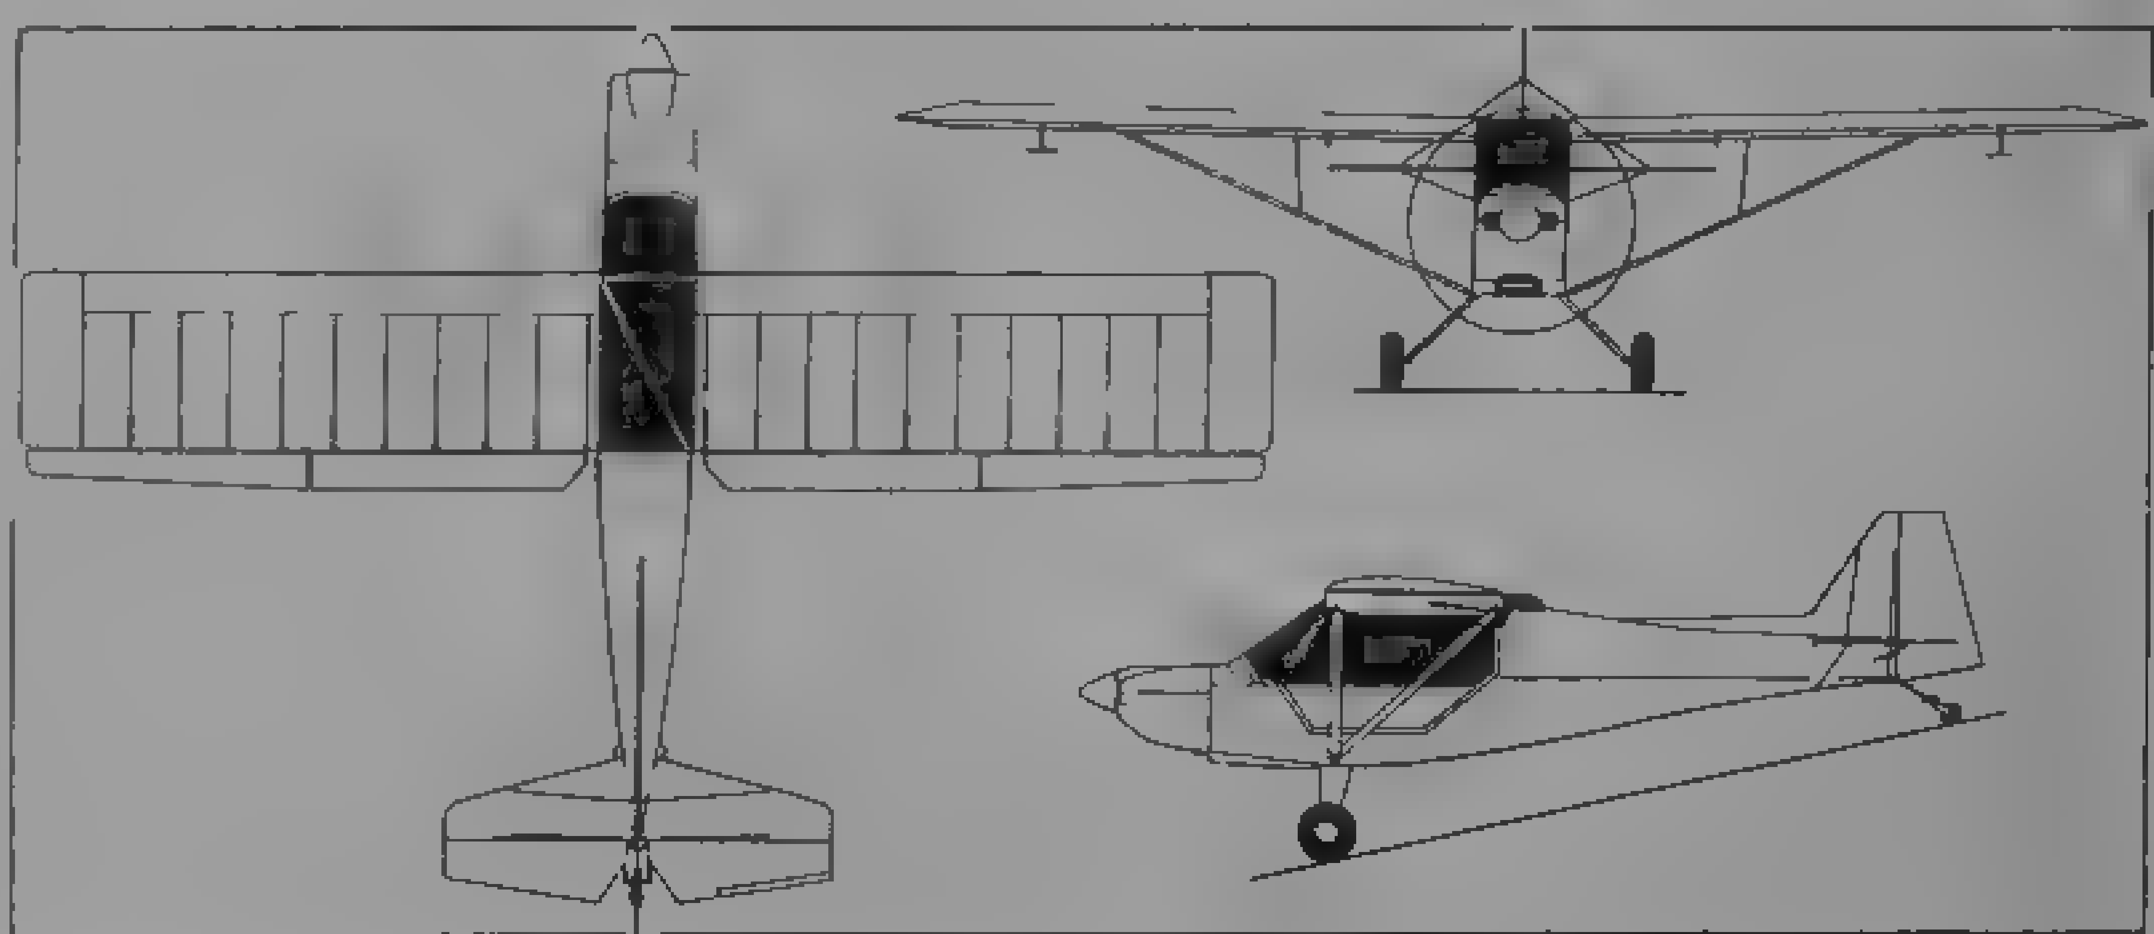
Weight empty, equipped (approx): Rotax 582	236 kg (520 lb)
Rotax 912	272 kg (600 lb)
Max T-O weight: Rotax 582	465 kg (1,025 lb)
Rotax 912	544 kg (1,200 lb)
Max wing loading	38.80 kg/m² (7.95 lb/sq ft)
Max power loading: Rotax 582	11.24 kg/kW (18.46 lb/hp)
Rotax 912	9.36 kg/kW (15.38 lb/hp)

PERFORMANCE (two persons, at 420 kg, 925 lb):

Never-exceed speed (VNE)	104 kts (193 km/h, 120 mph)
Cruising speed: Rotax 582	69 kts (129 km/h; 80 mph)
Rotax 912	91 kts (169 km/h, 105 mph)
Stalling speed, power off: flaps up	31 kts (57 km/h, 35 mph)
flaps down	26 kts (49 km/h; 30 mph)
Max rate of climb at S/L: Rotax 582	229 m (750 ft)/min
Rotax 912	366 m (1,200 ft)/min
Service ceiling: Rotax 582	4,115 m (13,500 ft)
Rotax 912	5,180 m (17,000 ft)

Rans S-7 Courier kit-built aircraft

1995



Rans S-7 Courier (Rotax or AMW engine)

T-O run	54 m (175 ft)
Landing run to safe turn speed	93 m (303 ft)
Range	434 n miles (804 km; 500 miles)
Endurance: Rotax 582	2 h 30 min
Rotax 912	3 h 50 min
g limits	+6/–3

UPDATED

RANS S-15 PURSUIT II

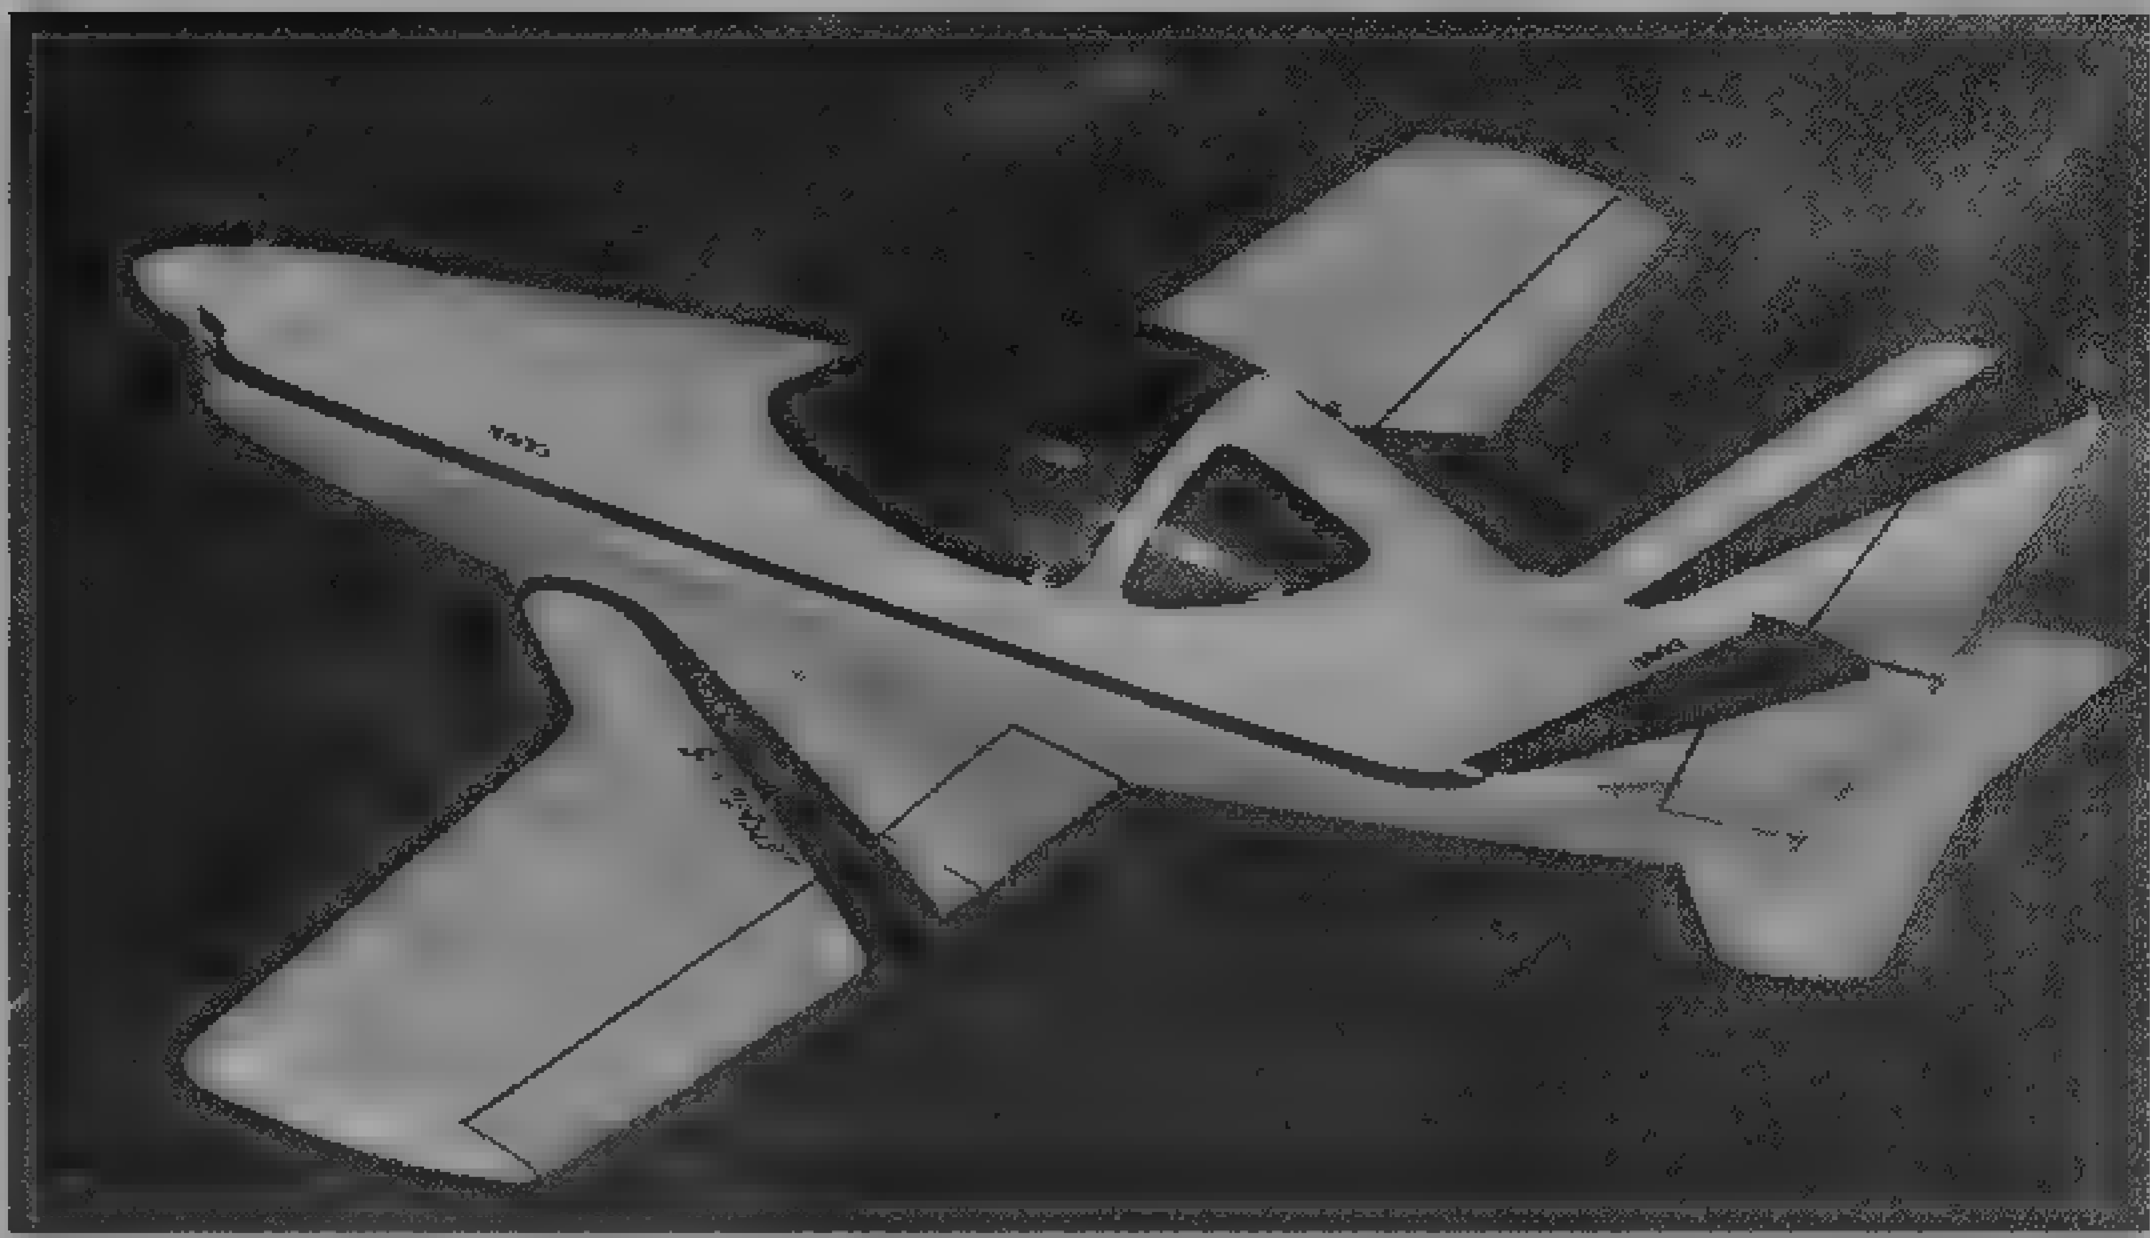
TYPE: Four-seat kit built.
PROGRAMME: Prototype under construction in 1995.
DESIGN FEATURES: Composites construction; retractable tricycle landing gear; twin tailfins.
POWER PLANT: One 59.7 kW (80 hp) Rotax 912 or 145.5 kW (195 hp) Textron Lycoming IO-360 piston engine.
DIMENSIONS, EXTERNAL:

Wing span	6.76 m (22 ft 2 in)
Length overall	5.49 m (18 ft 0 in)
Height overall	1.76 m (5 ft 9¼ in)

NEW ENTRY

RANS S-16

TYPE: Two-seat kit-built.
PROGRAMME: First flight and initial deliveries due 1995.
CUSTOMERS: Deposits received in 1995 for some of initial batch of 50 aircraft.
COSTS: $23,000 per kit, including Rotax engine (1995).
DESIGN FEATURES: Composites construction; conventional configuration low-wing monoplane.



Model of Rans S-15 Pursuit II *1995*

POWER PLANT: One 59.7 kW (80 hp) Rotax 912 piston engine, alternative power plants under consideration.

Raytheon Aircraft Company (RAC) formed 15 September 1994, combining Raytheon Company subsidiaries Beech Aircraft Corporation and Raytheon Corporate Jets Inc. Beech Aircraft Corporation founded 1932 by Walter and Olive Ann Beech, became wholly owned subsidiary of Raytheon 8 February 1980. Raytheon acquired British Aerospace's Corporate Jets division 6 August 1993, founded Raytheon Corporate Jets, headquartered in Little Rock, Arkansas, with responsibility for design, development, production, marketing and support of Hawker family of corporate jets. RAC builds civil and military aircraft, missile targets, and components for aircraft and missiles; Salina division supplies all wings, nonmetallic interior components, ventral fins, nosecones and tailcones used in Wichita piston-engined and turboprop Beechcraft production and builds major subassemblies for the Beechjet. Additional Wichita products include subcontracted composites and metal winglets and composite landing gear doors for McDonnell Douglas C-17.

Second prototype Beech Mk II, as selected for JPATS programme *1995*

Completion work on British Aerospace Airbus manufactured Hawker 800 and 1000 business jets performed by Little Rock division but being transferred to Wichita, final assembly of these models also due to be transferred from UK to new 17,190 m² (185,000 sq ft) plant at Wichita beginning last quarter of 1995 and finalised by 1997, Little Rock will continue to provide custom interiors, avionics, sales and customer support services for Hawker models, aircraft painting services for Hawkers and Beechcraft 1900Ds and Beechjets, and refurbishment and depot service work on military aircraft formerly performed by Beech Aerospace Services Inc in Selma, Alabama. Beechcraft and Hawker product names are retained.

Wholly owned subsidiaries include Beech Aerospace Services Inc (BASI) of Madison, Mississippi (worldwide logistic support for US Army/Air Force/Navy C-12s, Army U-21s and Beech MQM-107 targets, and of US Navy T-34C and T-44 trainers in the USA); Beech Acceptance Corporation Inc (business aircraft retail financing and leasing), Travel Air Insurance Company Ltd, Bermuda (aircraft liability insurance), and United Beechcraft Inc (marketing support to parent company).

In early 1995 RAC had 10,645 employees worldwide and occupied 380,902 m² (4,100,000 sq ft) of plant area at its two major facilities in Wichita, production rate adjustments and consolidation of facilities, announced in late 1994, resulted in personnel reduction of 940 at RAC divisions in the UK and USA during 1995.

Total production by RAC exceeded 51,000 at start of 1995. Deliveries during 1994 totalled 361, valued at $1.72 billion, comprising 103 Bonanzas, 31 Barons, 35 King Airs, 59 Super King Airs (including RC-12s), 50 1900Ds, three Starships, 22 Beechjet 400As, 37 Jayhawks, 16 Hawker 800s and five Hawker 1000s.

[3]Six others leased to customers
[4]Includes first four 400As
[5]Includes 4 RC-12N

HAWKER

Hawker 800 and 1000 business jets built in UK: refer to Raytheon entry in UK section.

NEW ENTRY

BEECH

Beech name continues to be used to market aircraft detailed below.

NEW ENTRY

BEECH Mk II

TYPE: Primary trainer (modified Pilatus PC-9).
PROGRAMME: For participation in USAF/USN Joint Primary Aircraft Training System competition (see USAF entry, this section), Beech received two standard PC-9s from Pilatus, one of which (N26BA) converted as engineering

development prototype and completed more than 260 hours' flight testing to reduce programme risk and develop engineering design baseline Followed by two Beech built production prototypes (Beech designation PD373), first flights December 1992 (N8284M) and July 1993 (N209BA). PT 2 used to complete flight test programme and evaluate systems performance, PT-3 incorporated several improvements and was principal aircraft for USAF/USN flight evaluation, three aircraft had completed 500 hours of flight testing by February 1995

Main changes from standard PC-9 are upgraded engine, pressurised cockpit, zero/zero seats, birdproof canopy, single-point refuelling and Bendix/King customised avionics, further details under Pilatus entry in Swiss section Selection as JPATS winner announced 22 June 1995, subject to Defense Acquisition Board approval in August, initial contract expected for 141 aircraft, first flight in December 1998, IOC with USAF 1999, IOC with USN 2002

UPDATED

Beechcraft F33 Bonanza four/five-seat executive aircraft of Ivory Coast Air Force; aerobatic F33C version recently discontinued *(SIRPA-Air)*

1995

BEECHCRAFT BONANZA F33A

TYPE: Four/five-seat single-engined executive and training aircraft.

PROGRAMME: First flight 14 September 1959, known as Debonair until 1967, 1985 model introduced cargo door, three-blade propeller, super soundproofing and full IFR avionics F33C aerobatic version (see 1994-95 *Jane's*) discontinued for 1995

CURRENT VERSIONS: **F33A**: Similar to V35B Bonanza (1984-85 *Jane's*), but with conventional vertical fin and tailplane. Certificated in Utility category

CUSTOMERS: F33A special order trainers include Lufthansa (three), Singapore International Airlines (four) and Airline Training Centre Total 3,338 Bonanza 33s built by early 1995, including 50 in 1993 and 17 in 1994

DESIGN FEATURES: Beech modified NACA 23016.5 wing section at root, modified 23012 at tip; dihedral 6°, incidence 4° at root and 1° at tip

FLYING CONTROLS: Mechanical, electrically actuated trim tab in each elevator; ground adjustable tabs in ailerons and rudder, single-slotted, three-position light alloy flaps

STRUCTURE: Conventional light alloy, with two-spar wing torsion box and stressed-skin tail surfaces

LANDING GEAR: Electrically retractable tricycle type, with steerable nosewheel. Mainwheels retract inward into wings, nosewheel rearward Beech oleo-pneumatic shock absorbers in all units. Cleveland mainwheels, size 6.00-6, and tyres, size 7.00-6, pressure 2.28 to 2.76 bars (33 to 40 lb/sq in) Cleveland nosewheel and tyre, size 5.00-5, pressure 2.76 bars (40 lb/sq in) Cleveland ring disc hydraulic brakes. Parking brake. Magic Hand landing gear system optional

POWER PLANT: One 212.5 kW (285 hp) Teledyne Continental IO-520-BB flat-six engine, driving a McCauley three-blade constant-speed metal propeller. Manually adjustable engine cowl flaps Two standard fuel tanks in wing leading-edges, with total usable capacity of 280 litres (74 US gallons; 61.6 Imp gallons) Refuelling points above tanks. Oil capacity 11.5 litres (3 US gallons, 2.5 Imp gallons)

ACCOMMODATION: Enclosed cabin with four individual seats in pairs as standard, plus optional forward-facing fifth seat Baggage compartment and hatshelf aft of seats. Passenger door and baggage compartment door on starboard side Heater standard Large cargo door, on starboard side of fuselage

SYSTEMS: Optional 12,000 BTU refrigeration type air conditioning system comprises evaporator located beneath pilot's seat, condenser on lower fuselage, and engine-mounted compressor. Air outlets on centre console, with two-speed blower Electrical system supplied by 28 V 60 A alternator, 24 V 15.5 Ah battery, a 100 A alternator is available as an option, as is a standby generator Hydraulic system for brakes only Pneumatic system for instrument gyros and refrigeration type air conditioning system optional Oxygen system and electric propeller de-icing optional

AVIONICS: *Comms* Bendix/King KX 155 760-channel com transceiver, KT 70 Mode S transponder; microphone, headset and cabin speaker

Flight Bendix/King KX 155 200-channel nav/glide slope receiver/converter with KI 209 VOR/ILS indicator, KI 208 VOR/LOC indicator, KR 87 ADF with 227 00 indicator, KN 63 DME with KDI 572 indicator. DME hold and nav 1/nav 2 switching, KEA 130A encoding altimeter, KMA 24 03 audio control/marker beacon receiver Bendix/King KLN 88 Loran C and BFGoodrich WX-1000 Stormscope optional. Bendix/King KFC 150 autopilot and yaw damper optional

A wide range of optional avionics is available, including Bendix/King KFC 150 autopilot, yaw damper, KLN 88 Loran C and Foster WX-1000 Stormscope

EQUIPMENT: Standard equipment includes LCD digital chronometer, EGT and OAT gauges, rate of climb indicator, turn co-ordinator, 3 in horizon and directional gyros, four fore and aft adjustable and reclining seats, armrests, headrests, single diagonal strap shoulder harness with inertia reel for all occupants, pilot's storm window, sun visors, ultraviolet-proof windscreen and windows, large cargo door, emergency locator transmitter, stall warning device, alternate static source, heated pitot, rotating beacon, three light strobe system, carpeted floor, super soundproofing, control wheel map lights, electroluminescent subpanel lighting, landing light, taxi light, full flow oil filter, three-colour polyurethane exterior paint, external power socket, static wicks and towbar

Optional equipment includes dual controls, co-pilot's wheel brakes, air conditioning, fifth seat, fresh air vent blower and ground com switch

Max ramp weight	1,548 kg (3,412 lb)
Max wing loading	91.8 kg/m² (18.8 lb/sq ft)
Max power loading	7.26 kg/kW (11.93 lb/hp)

PERFORMANCE (at max T-O weight, ISA, except cruising speeds at mid-cruise weight):

Max level speed at S/L	182 kts (338 km/h, 209 mph)
Cruising speed: 75% power at 1,830 m (6,000 ft)	172 kts (319 km/h, 198 mph)
65% power at 3,050 m (10,000 ft)	160 kts (297 km/h, 184 mph)
55% power at 3,660 m (12,000 ft)	145 kts (269 km/h, 167 mph)
45% power at 2,440 m (8,000 ft)	136 kts (253 km/h, 157 mph)
Stalling speed, power off:	
flaps up	64 kts (118 km/h, 74 mph) IAS
30° flap	51 kts (94 km/h, 59 mph) IAS
Max rate of climb at S/L	353 m (1,157 ft)/min
Service ceiling	5,440 m (17,850 ft)
T-O run	305 m (1,000 ft)
T-O to 15 m (50 ft)	530 m (1,740 ft)
Landing from 15 m (50 ft)	396 m (1,300 ft)
Landing run	232 m (760 ft)
Range with max usable fuel, allowances for engine start, taxi, T-O, climb and 45 min reserves at 45% power:	
75% power at 1,830 m (6,000 ft)	715 n miles (1,325 km, 823 miles)
65% power at 3,050 m (10,000 ft)	810 n miles (1,501 km, 932 miles)
55% power at 3,660 m (12,000 ft)	860 n miles (1,593 km, 990 miles)
45% power at 2,440 m (8,000 ft)	889 n miles (1,648 km, 1,023 miles)

UPDATED

BEECHCRAFT BONANZA A36

TYPE: Four/six-seat, single-engined business and utility aircraft

PROGRAMME: Developed from Bonanza V35B, but with vertical fin, current A36 introduced 3 October 1983, succeeding model powered by 212.5 kW (285 hp) Continental IO-520-BB, certificated in FAA Utility category

CURRENT VERSIONS: **Bonanza A36**: Standard version, *as described in detail*

Bonanza A36AT (Airline Trainer): Certificated 1991 for use in Europe, modifications to propeller, engine and exhaust systems to reduce external noise; flyover sound level 71.8 dBA; Teledyne Continental IO-550-B, limited to 216 kW (290 hp) at 2,550 rpm, driving Hartzell three-blade constant-speed propeller; special exhaust silencers, additional engine cooling louvres, four seats

CUSTOMERS: Include Saudi Arabian Airlines (four in April 1985 for pilot training, Finnair Training Centre at Pori, Finland (three), in 1987, Japan Air Lines (five) in 1990, Lufthansa (12 A36ATs, to replace F33As) in 1991, Japan Air Lines (23); RLS Netherlands (eight A36ATs) in 1991, and All Nippon Airways (20, delivered 1992-94). Total 3,337 Bonanza 36s delivered by early 1995, including 60 in 1993 and 72 in 1994

DESIGN FEATURES: Structure as for F33A, but fuselage 0.25 m (10 in) longer; cabin volume increased by 0.54 m³ (18.9 cu ft); baggage volume increased by 0.28 m³ (10 cu ft); large double freight doors starboard side aft of wing, current model has improved instrument panel controls, lighting and systems; options same as for F33A, plus instrument post lights or internal instrument lighting, courtesy lights for entrance and step; co-pilot's vertically adjusting seat, refrigeration-type air conditioning

FLYING CONTROLS: As for F33A Dual controls standard

STRUCTURE: As for F33A, with addition of two vortex generators on wings

LANDING GEAR: As for F33A, new landing gear warning system introduced in 1989

POWER PLANT: One 224 kW (300 hp) Teledyne Continental IO-550-B flat-six engine, driving a McCauley three-blade constant speed propeller (Lufthansa aircraft derated to 212.5 kW; 285 hp and have smaller propeller). The engine is equipped with an altitude-compensating fuel pump which automatically makes the fuel/air mixture leaner and richer during climb and descent respectively Fuel capacity as for F33A

ACCOMMODATION: Enclosed cabin seating four to six persons on individual seats. Pilot's seat is vertically adjustable. Dual controls standard Two rear removable seats and two folding seats permit rapid conversion to utility configuration. Optional club seating with rear-facing third and fourth seats, executive writing desk, refreshment cabinet, headrests for third and fourth seats, reading lights and fresh air outlets for fifth and sixth seats. Double doors of bonded aluminium honeycomb construction on starboard side facilitate loading of cargo. As an air ambulance, one stretcher can be accommodated with ample room for a medical attendant and/or other passengers Extra windows provide improved view for passengers. Stowage for 181 kg (400 lb) of baggage.

SYSTEMS: Electrical system as for F33A Hydraulic system for brakes only Pneumatic system for instrument gyros, and refrigeration type air conditioning system, optional

AVIONICS: Standard equipment generally as for F33A, but wide range of optional avionics available. Optional ground communication switch permitting use of one com radio without turning on battery master switch

EQUIPMENT: Optional equipment as detailed for F33A Bonanza

DIMENSIONS, EXTERNAL: As for F33A except

Length overall	8.38 m (27 ft 6 in)
Height overall	2.62 m (8 ft 7 in)
Wheelbase	2.39 m (7 ft 10½ in)

Beechcraft A36 Bonanza four/six-seat cabin monoplane

1995

Propeller diameter: A36 — 2.03 m (6 ft 8 in)
A36AT — 1.93 m (6 ft 4 in)
Rear passenger/cargo door: Height — 0.89 m (2 ft 11 in)
Width — 1.14 m (3 ft 9 in)

DIMENSIONS, INTERNAL:
Cabin, aft of firewall:
Length, incl extended baggage compartment — 3.84 m (12 ft 7 in)
Max width — 1.07 m (3 ft 6 in)
Max height — 1.27 m (4 ft 2 in)
Volume — 3.85 m³ (135.9 cu ft)

AREAS: As for F33A

WEIGHTS AND LOADINGS:
Weight empty, standard:
A36, A36AT — 1,041 kg (2,295 lb)
Max T-O weight: A36 — 1,655 kg (3,650 lb)
A36AT — 1,633 kg (3,600 lb)
Max ramp weight: A36 — 1,661 kg (3,663 lb)
A36AT — 1,639 kg (3,613 lb)
Max wing loading: A36 — 98.6 kg/m² (20.2 lb/sq ft)
A36AT — 97.16 kg/m² (19.9 lb/sq ft)
Max power loading: A36 — 7.40 kg/kW (12.17 lb/hp)
A36AT — 7.59 kg/kW (12.46 lb/hp)

PERFORMANCE (at max T-O weight, ISA, unless specified otherwise):
Max level speed (min weight) — 184 kts (340 km/h, 212 mph)
Max cruising speed (mid-cruise weight):
2,500 rpm at 1,830 m (6,000 ft) — 176 kts (326 km/h, 202 mph)
2,300 rpm at 2,440 m (8,000 ft) — 167 kts (309 km/h, 192 mph)
2,100 rpm at 1,830 m (6,000 ft) — 160 kts (296 km/h, 184 mph)
2,100 rpm at 3,050 m (10,000 ft) — 153 kts (283 km/h, 176 mph)
Stalling speed, power off:
flaps up — 68 kts (126 km/h; 78 mph) IAS
30° flap — 59 kts (109 km/h, 68 mph) IAS
Max rate of climb at S/L — 368 m (1,208 ft)/min
Service ceiling — 5,640 m (18,500 ft)
T-O run: flaps up: A36 — 360 m (1,182 ft)
A36AT — 450 m (1,476 ft)
12° flap: A36 — 296 m (971 ft)
A36AT — 402 m (1,316 ft)
T-O to 15 m (50 ft):
flaps up: A36 — 640 m (2,100 ft)
A36AT — 662 m (2,170 ft)
12° flap: A36 — 583 m (1,913 ft)
A36AT — 618 m (2,025 ft)
Landing from 15 m (50 ft) — 442 m (1,450 ft)
Landing run — 280 m (920 ft)
Range with max usable fuel, with allowances for engine start, taxi, T-O, climb and 45 min reserves at econ cruise power: 2,500 rpm at 3,660 m (12,000 ft) — 875 n miles (1,621 km, 1,008 miles)
2,300 rpm at 3,660 m (12,000 ft) — 903 n miles (1,672 km, 1,039 miles)
2,100 rpm at 1,830 m (6,000 ft) — 914 n miles (1,694 km; 1,052 miles)

UPDATED

BEECHCRAFT TURBO BONANZA B36TC

TYPE: Turbocharged version of A36 Bonanza

PROGRAMME: Certificated as A36TC 7 December 1978, 271 A36TCs delivered, improved B36TC introduced 1982

CUSTOMERS: Total of 555 delivered by early 1995, including 10 in 1993 and 14 in 1994

DESIGN FEATURES: Compared with A36TC, B36TC has greater span, wing section NACA 23010.5 at tip, 0° incidence at tip; greater fuel capacity

Data below summarise differences from A36TC

POWER PLANT: One 223.7 kW (300 hp) Teledyne Continental TSIO-520-UB turbocharged flat-six engine, driving a three-blade constant-speed metal propeller. Fixed engine cowl flaps. Two fuel tanks in each wing leading-edge, with total usable capacity of 386 litres (102 US gallons, 85 Imp gallons). Refuelling points above tanks. Oil capacity 11.5 litres (3 US gallons; 2.5 Imp gallons)

SYSTEMS: Air conditioning optional

AVIONICS: As for A36

EQUIPMENT: As for A36, except EGT gauge not available. Turbine inlet temperature gauge is standard

DIMENSIONS, EXTERNAL: As for A36, except:
Wing span — 11.53 m (37 ft 10 in)
Wing chord at tip — 0.91 m (3 ft 0 in)
Wing aspect ratio — 7.61
Propeller diameter — 1.98 m (6 ft 6 in)

DIMENSIONS, INTERNAL: As for A36

AREAS:
Wings, gross — 17.47 m² (188.1 sq ft)

WEIGHTS AND LOADINGS:
Weight empty, standard — 1,104 kg (2,433 lb)
Max T-O and landing weight — 1,746 kg (3,850 lb)
Max ramp weight — 1,753 kg (3,866 lb)
Max wing loading — 100.1 kg/m² (20.5 lb/sq ft)
Max power loading — 7.81 kg/kW (12.8 lb/hp)

PERFORMANCE (at max T-O weight, ISA, except speeds are at mid-cruise weight):
Max level speed at 6,700 m (22,000 ft) — 213 kts (394 km/h, 245 mph)
Cruising speed at 7,620 m (25,000 ft):
79% power — 200 kts (370 km/h, 230 mph)
75% power — 195 kts (361 km/h, 224 mph)
69% power — 188 kts (348 km/h, 216 mph)
56% power — 173 kts (320 km/h, 199 mph)
Stalling speed, power off:
flaps up — 65 kts (120 km/h, 75 mph) IAS
30° flap — 57 kts (106 km/h, 66 mph) IAS
Max rate of climb at S/L — 321 m (1,053 ft)/min
Service ceiling — over 7,620 m (25,000 ft)
T-O run, 15° flap — 311 m (1,020 ft)
T-O to 15 m (50 ft), 15° flap — 649 m (2,130 ft)
Landing run — 298 m (976 ft)
Range at 7,620 m (25,000 ft) with max fuel, allowances for engine start, taxi, T-O, cruise climb, descent, and 45 min reserves at 50% power:
79% power — 956 n miles (1,770 km, 1,100 miles)
75% power — 984 n miles (1,822 km, 1,132 miles)
69% power — 1,022 n miles (1,893 km, 1,176 miles)
56% power at 6,100 m (20,000 ft) — 1,092 n miles (2,022 km, 1,256 miles)

UPDATED

BEECHCRAFT BARON 58

TYPE: Four/six seat, dual control, twin-engined business aircraft

PROGRAMME: Developed from Baron D55, certificated in FAA Normal category 19 November 1969

CUSTOMERS: Include All Nippon Airways (12 ordered 1992, six for delivery 1993 and six for 1994), Indonesian Civil Flying Academy, Java (four), Centre National de Formation Aviation Civile of M'Vengue, Gabon (three), US FAA staff pilot proficiency training programme (eight), Lufthansa pilot training (19), Air France (three), Japan Air Lines (three), Singapore Airlines (two), and Seneca College, Toronto, Canada (two), all for pilot training. 1992 deliveries totalled 28 (21 domestic and seven international). Total 2,375 Baron 58s delivered by early 1995 including 34 in 1993 and 31 in 1994

DESIGN FEATURES: Changes from Baron 55 include forward cabin extended by 25.4 cm (10 in), wheelbase extended forward, double passenger/cargo doors starboard side, extended propeller hubs, redesigned nacelles for better cooling, and fourth window on each side.

Wing section NACA 23015.5 at root, 23010.5 at tip, dihedral 6°; incidence 4° at root and 0° at tip

FLYING CONTROLS: Manually operated trim tabs in elevators, rudder and port aileron, electrically operated single-slotted flaps

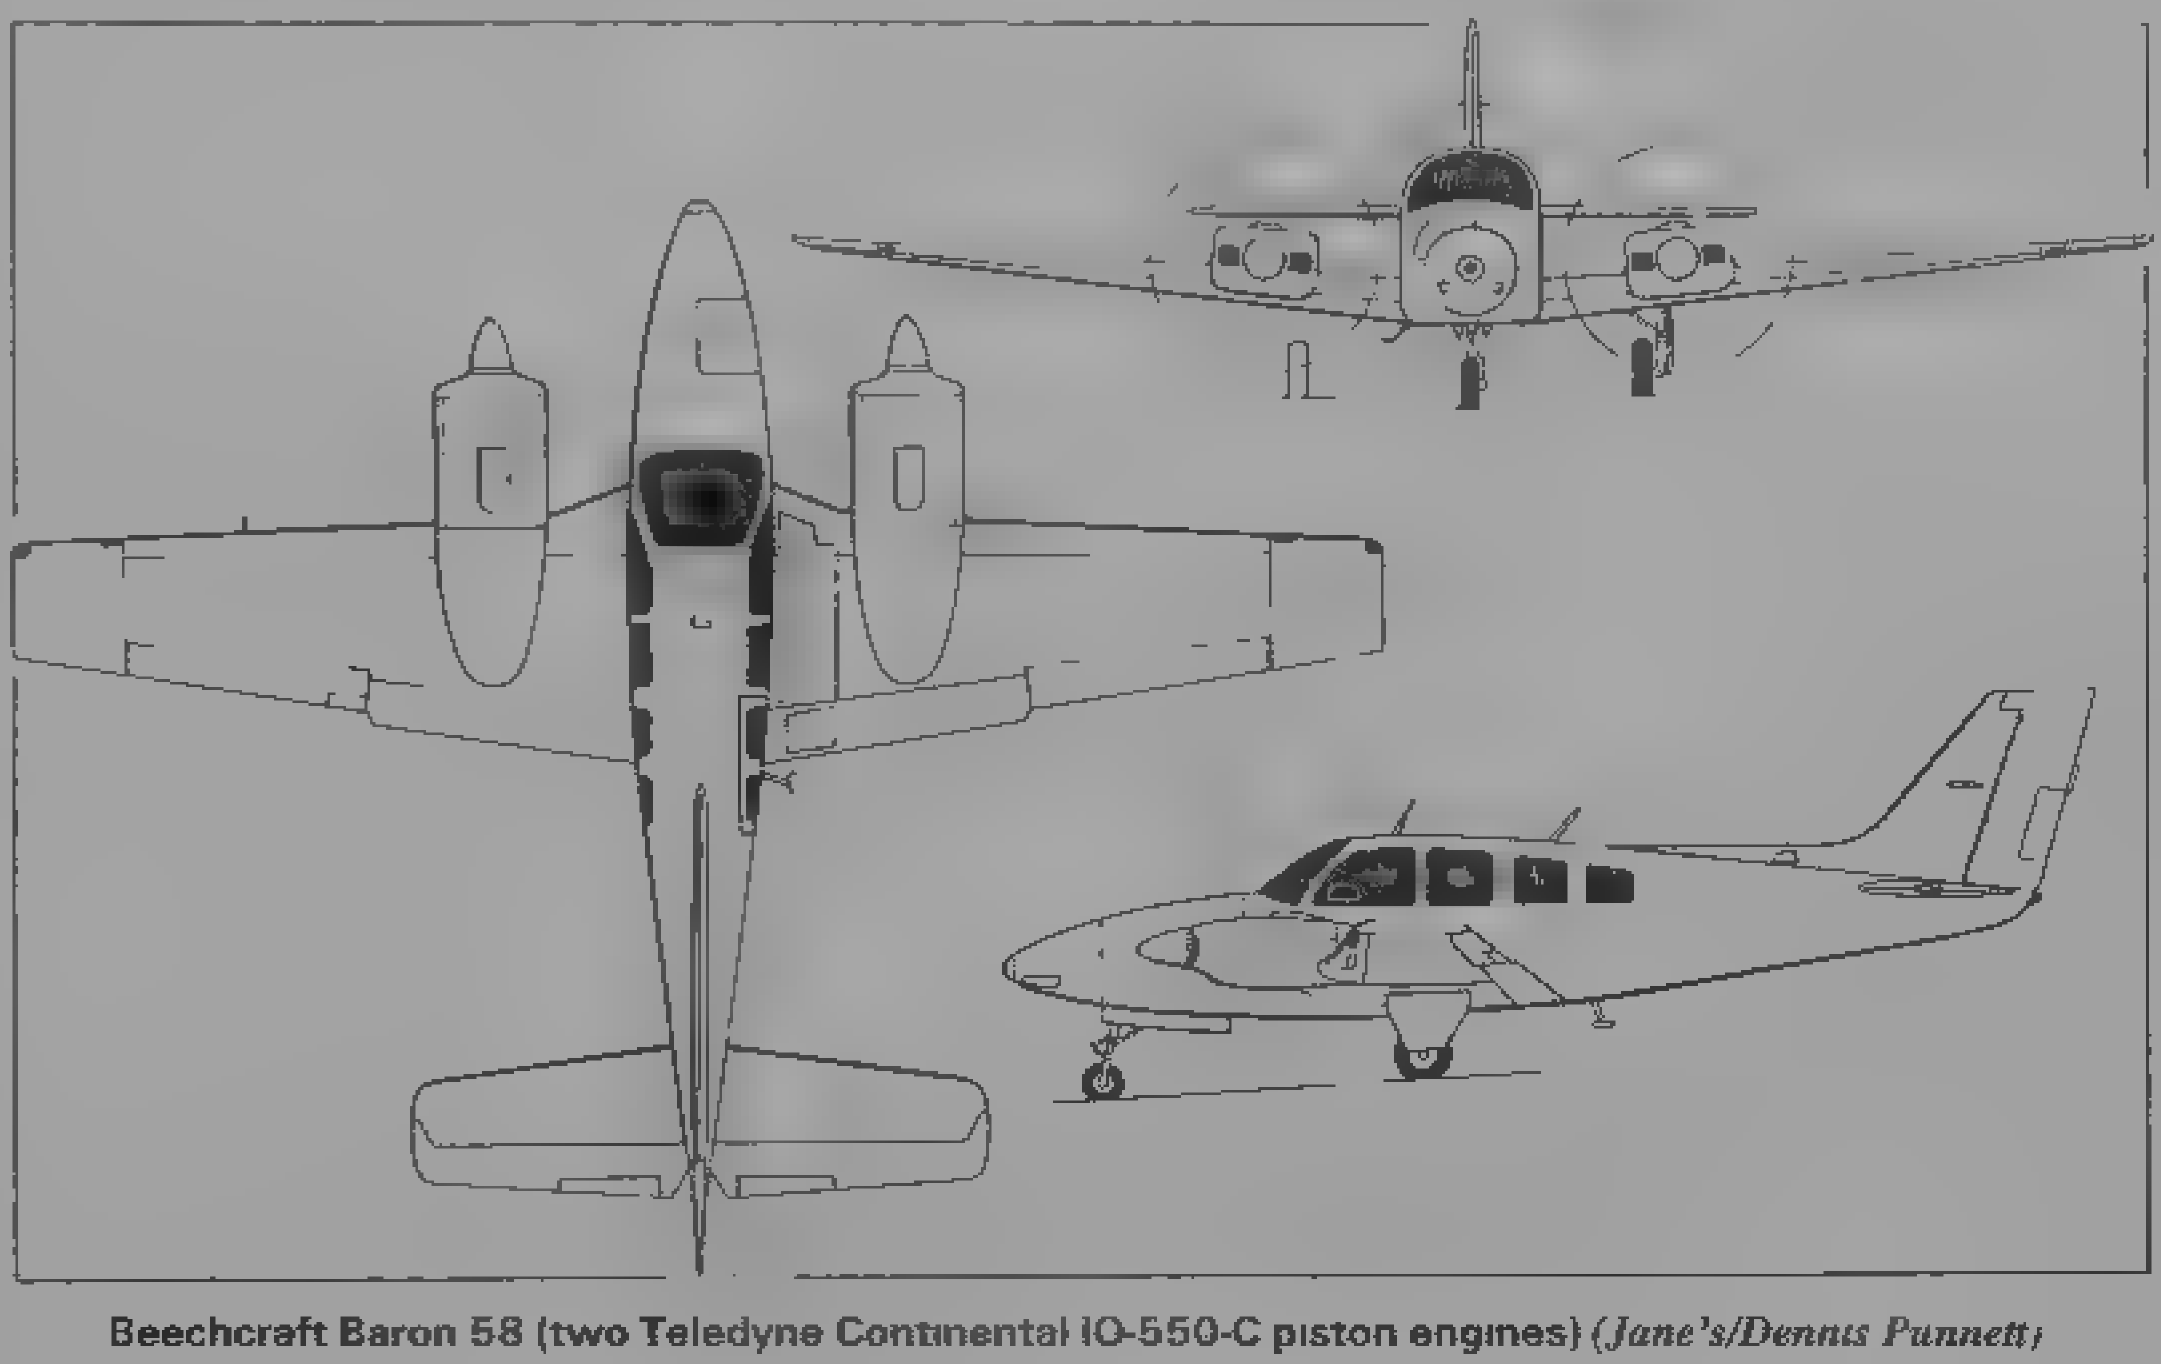
STRUCTURE: Light alloy with two-spar wing box, elevators have smooth magnesium alloy skins

LANDING GEAR: Electrically retractable tricycle type. Main units retract inward into wings, nosewheel aft. Beech oleo-pneumatic shock-absorbers in all units. Steerable nosewheel with shimmy damper. Cleveland wheels, with mainwheel tyres size 6.50-8, pressure 3.59 to 3.96 bars (52 to 56 lb/sq in). Nosewheel tyre size 5.00-5, pressure 3.79 to 4.14 bars (55 to 60 lb/sq in). Cleveland ring disc hydraulic brakes. Heavy-duty brakes optional. Parking brake. New warning system introduced in 1989

POWER PLANT: Two 224 kW (300 hp) Teledyne Continental IO-550-C flat-six engines, each driving a McCauley three-blade constant-speed fully feathering metal propeller. The standard fuel system has a usable capacity of 514 litres (136 US gallons, 113 Imp gallons), with optional usable capacity of 628 litres (166 US gallons, 138 Imp gallons). Optional 'wet wingtip' installation also available increasing usable capacity to 734 litres (194 US gallons, 161.5 Imp gallons)

ACCOMMODATION: Standard model has four individual seats in pairs in enclosed, soundproofed, heated and ventilated cabin, with door on starboard side. Single diagonal strap shoulder harness with inertia reel standard on all seats. Pilot's vertically adjusting seat is standard. Co-pilot's vertically adjusting seat, folding fifth and sixth seats, or club seating comprising folding fifth and sixth seats and aft facing third and fourth seats, are optional. Executive writing desk available as option with club seating. Baggage compartment in nose, capacity 136 kg (300 lb). Double passenger/cargo doors on starboard side of cabin provide access to space for 181 kg (400 lb) of baggage or cargo behind the third and fourth seats. Pilot's storm window. Openable windows adjacent the third and fourth seats are used for ground ventilation and as emergency exits. Windscreen defrosting standard

SYSTEMS: Cabin heated by Janitrol 50,000 BTU heater, which serves also for windscreen defrosting. Oxygen system of



Beechcraft Baron 58 (two Teledyne Continental IO-550-C piston engines) *(Jane's/Dennis Punnett)*

1993

Beechcraft Baron 58 four/six-seat cabin monoplane

1995

1.41 m³ (49.8 cu ft) or 1.87 m³ (66 cu ft) capacity optional. Electrical system includes two 28 V 60 A engine-driven alternators with alternator failure lights and two 12 V 25 Ah batteries. Two 100 A alternators optional. Hydraulic system for brakes only. Pneumatic pressure system for air-driven instruments, and optional wing and tail unit de-icing system. Oxygen system, cabin air conditioning and windscreen electric anti-icing optional.

AVIONICS: *Comms*: Bendix/King KX 155-09 760-channel com transceiver with audio amplifier, microphone, headset and cabin speaker. Optional avionics by Bendix/King or Collins to customer requirements. Emergency locator transmitter.

Radar: Bendix/King weather radar optional.

Flight: Bendix/King KX 155 200-channel nav receiver with KI 208 VOR/LOC converter/indicator, KR 87 ADF with KI 227-00 indicator, combined loop/sense antenna, nav and com antennae. Goodrich Stormscope optional.

Instrumentation: Blind-flying instruments, outside air temperature gauge, sensitive altimeter, turn co-ordinator, EGT and CHT gauges and synchroscope. Optional true airspeed indicator, engine and flight hour recorders and instantaneous vertical speed indicator.

EQUIPMENT: Standard equipment includes pilot's storm window, sun visors, ultraviolet-proof windscreen and cabin windows, armrests, adjustable rudder pedals (retractable on starboard side), heated pitot head, instrument panel floodlights, map light, lighted trim tab position indicator, navigation and position lights, steerable taxi light, dual landing lights, heated fuel vents, heated fuel and stall warning vanes and external power socket.

Options include alternate static source, internally illuminated instruments, digital beacon, strobe lights, electric windscreen anti-icing, wing ice detection light, static wicks, cabin club seating, cabin fire extinguisher, ventilation blower and super soundproofing.

DIMENSIONS, EXTERNAL:

Wing span	11.53 m (37 ft 10 in)
Wing chord: at root	2.13 m (7 ft 0 in)
at tip	0.90 m (2 ft 11½ in)
Wing aspect ratio	7.19
Length overall	9.09 m (29 ft 10 in)
Height overall	2.97 m (9 ft 9 in)
Tailplane span	4.85 m (15 ft 11 in)
Wheel track	2.92 m (9 ft 7 in)
Wheelbase	2.72 m (8 ft 11 in)
Propeller diameter	1.98 m (6 ft 6 in)
Rear passenger/cargo doors:	
Max height	0.89 m (2 ft 11 in)
Width	1.14 m (3 ft 9 in)
Baggage door (fwd): Height	0.56 m (1 ft 10 in)
Width	0.64 m (2 ft 1 in)

DIMENSIONS, INTERNAL:

Cabin, incl rear baggage area:	
Length	3.84 m (12 ft 7 in)
Max width	1.07 m (3 ft 6 in)
Max height	1.27 m (4 ft 2 in)
Floor area	3.72 m² (40.0 sq ft)
Volume	3.85 m³ (135.9 cu ft)
Baggage compartment: fwd	0.51 m³ (18.0 cu ft)

AREAS:

Wings, gross	18.51 m² (199.2 sq ft)
Ailerons (total)	1.06 m² (11.40 sq ft)
Trailing-edge flaps (total)	1.98 m² (21.30 sq ft)
Fin	1.46 m² (15.67 sq ft)
Rudder, incl tab	0.81 m² (8.75 sq ft)
Tailplane	4.95 m² (53.30 sq ft)
Elevators, incl tabs	1.84 m² (19.80 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	1,619 kg (3,570 lb)
Max T-O weight	2,495 kg (5,500 lb)
Max landing weight	2,449 kg (5,400 lb)
Max ramp weight	2,506 kg (5,524 lb)
Max wing loading	143.4 kg/m² (27.6 lb/sq ft)
Max power loading	5.60 kg/kW (9.2 lb/hp)

PERFORMANCE (at max T-O weight, ISA, except cruising speeds at average cruise weight):

Max level speed at S/L	208 kts (386 km/h; 239 mph)
Max cruising speed, 2,500 rpm at 1,525 m (5,000 ft)	203 kts (376 km/h; 234 mph)
Cruising speed, 2,500 rpm at 3,050 m (10,000 ft)	198 kts (367 km/h; 228 mph)
Econ cruising speed, 2,100 rpm at 3,660 m (12,000 ft)	163 kts (302 km/h; 188 mph)
Stalling speed, power off:	
flaps up	84 kts (156 km/h; 97 mph) IAS
flaps down	75 kts (139 km/h; 86 mph) IAS
Max rate of climb at S/L	529 m (1,735 ft)/min
Rate of climb at S/L, OEI	119 m (390 ft)/min
Service ceiling	6,306 m (20,688 ft)
Service ceiling, OEI	2,220 m (7,284 ft)
T-O run	427 m (1,400 ft)
T-O to 15 m (50 ft)	701 m (2,300 ft)
Landing from 15 m (50 ft)	747 m (2,450 ft)
Landing run	434 m (1,425 ft)

Range with 734 l (194 US gallons; 161.5 Imp gallons) usable fuel, with allowances for engine start, taxi, T-O, climb and 45 min reserves at econ cruise power:

max cruising speed (power/altitude settings as above)	1,150 n miles (2,130 km; 1,323 miles)
cruising speed (power/altitude settings as above)	1,411 n miles (2,613 km; 1,624 miles)
econ cruising speed (power/altitude settings as above)	1,575 n miles (2,917 km; 1,812 miles)

UPDATED

BEECHCRAFT KING AIR C90B and C90SE

TYPE: Six/10-seat turboprop pressurised business twin.

PROGRAMME: C90B announced at NBAA show at Houston October 1991; superseded King Air 90, A90, B90, C90, C90-1, C90A; introduced four-blade McCauley propellers, special interior soundproofing, updated and redesigned interior, updated cockpit features and interior noise and vibration levels substantially reduced.

CURRENT VERSIONS: **C90B**: Standard version from 1991; *detailed description applies to this version*.

C90SE (Special Edition): Announced 18 February 1994; Hartzell three-blade propellers, standard Bendix/King CNI-5000 avionics package; first flight (N15599, 1,367th 90/A90/B90/C90) mid-July 1994; first delivery, TG-RWC to Guatemalan customer, October 1994. Weight empty 2,914 kg (6,425 lb). T-O run 574 m (1,885 ft), T-O to 15 m (50 ft) 785 m (2,577 ft), landing from 15 m (50 ft) 745 m (2,443 ft); landing run 427 m (1,401 ft).

CUSTOMERS: 35 C90Bs and C90SEs delivered during 1994; total 1,386 commercial and 226 military King Air 90/A90/B90/C90/C90-1/C90A/C90B/C90SE delivered by end of 1994. Recent customers include former World Motor Racing Champion Alain Prost, who took delivery of a C90B in Spring 1995.

COSTS: C90SE $1.696 million (1994).

DESIGN FEATURES: Wing section NACA 23014.1 (modified) at root, 23016.22 (modified) at outer end of centre-section, 23012 at tip; dihedral 7°, incidence 4° 48′ at root, 0° at tip; tailplane 7° dihedral.

FLYING CONTROLS: Trim tabs on port aileron, in both elevators and rudders, single-slotted aluminium flaps.

STRUCTURE: Generally light alloy; magnesium ailerons.

LANDING GEAR: Hydraulically retractable tricycle type. Nosewheel retracts rearward, mainwheels forward into engine nacelles. Mainwheels protrude slightly beneath nacelles when retracted, for safety in a wheels-up emergency landing. Fully castoring steerable nosewheel with shimmy damper. Beech oleo-pneumatic shock absorbers. Goodrich mainwheels with tyres size 8.50-10, pressure 3.79 bars (55 lb/sq in). Goodrich nosewheel with tyre size 6.50-10, pressure 3.59 bars (52 lb/sq in). Goodrich heat-sink and air cooled multidisc hydraulic brakes. Parking brake. Minimum ground turning radius 10.82 m (35 ft 6 in).

POWER PLANT: Two 410 kW (550 shp) Pratt & Whitney Canada PT6A-21 turboprops, each driving a McCauley four-blade constant-speed fully feathering propeller. Propeller auto ignition system, environmental fuel drain collection system, magnetic chip detector, automatic propeller feathering and propeller synchrophaser standard. Fuel in two tanks in engine nacelles, each with usable capacity of 231 litres (61 US gallons; 50.8 Imp gallons), and auxiliary bladder tanks in outer wings, each with capacity of 496 litres (131 US gallons; 109 Imp gallons). Total usable fuel capacity 1,454 litres (384 US gallons; 320 Imp gallons). Refuelling points in top of each engine nacelle and in wing leading edge outboard of each nacelle. Oil capacity 13.2 litres (3.5 US gallons; 2.9 Imp gallons) per engine.

ACCOMMODATION: Two seats side by side in cockpit with dual controls standard. Normally, four reclining seats in main cabin, in two pairs facing each other fore and aft. Standard furnishings include cabin forward partition, with fore and aft partition curtain and coat rack, hinged nose baggage compartment door seat belts and inertia reel shoulder harness for all seats. Optional arrangements seat up to eight persons, with lateral tracking chairs, and refreshment cabinets. Baggage racks at rear of cabin on starboard side, with optional toilet on port side. Door on port side aft of wing with built in airstairs. Emergency exit on starboard side of cabin. Entire accommodation pressurised, heated and air conditioned. Electrically heated windscreen, windscreen defroster and windscreen wipers standard

SYSTEMS: Pressurisation by dual engine bleed air system with pressure differential of 0 34 bar (5 0 lb/sq in). Cabin heated by 45,000 BTU dual engine bleed air system and auxiliary electrical heating system. Hydraulic system for landing gear actuation. Electrical system includes two 28 V 250 A starter/generators, 24 V 45 Ah air cooled Ni/Cd battery with failure detector. Oxygen system, 0.62 m³ (22 cu ft), 1 39 m³ (49 cu ft) or 1 81 m³ (64 cu ft) capacity, optional. Vacuum system for flight instruments. Automatic pneumatic de-icing of wing/fin/tailplane leading-edges standard. Engine and propeller anti icing systems standard. Engine fire detection and extinguishing system optional

AVIONICS: Standard Collins Pro Line II package in sectional instrument panel. Bendix/King Silver Crown and Gold Crown packages optional

Comms: Dual VHF 22A transceivers with CTL-22 controls; dual TDR-90 transponders, dual DB systems Model 415 audio systems; dual Flite-Tronics PC-250 inverters edgelight radio panel, ELT, avionics master switch gnd and clearance switch on com 1, control wheel push-to talk switches; dual hand microphones, dual Telex headsets

Radar: WXR-270 colour weather radar

Flight: Dual VIR-32 VOR/LOC/GLS/MKR receivers with CTL-32 controls, ADF-60A with CTL 62 control, DME-42 with IND-42 indicator, RMI-30 dual MCS-65 compass systems. Goodrich WX-1000+ Stormscope optional. APS-65 autopilot/flight director with ADI-84 FDI and EFD-74 EHSI

Instrumentation: ALT-50A radio altimeter; pilot's United 5506-S encoding altimeter; dual 2 in electric turn and bank indicator's; co-pilot's 7 5 cm (3 in) horizon indicator, co-pilot's HSI. Bendix King KFC 150 autopilot and yaw damper optional.

Dual blind-flying instrumentation with dual instantaneous VSIs, standby magnetic compass, OAT gauge, LCD digital chronometer clock, vacuum gauge, de-icing pressure gauge, cabin rate of climb indicator; cabin altitude and differential pressure indicator, flight hour recorder, automatic solid-state warning and annunciator panel

EQUIPMENT: Standard equipment includes pilot and co-pilot's four-way adjustable seats with shoulder harness and lap belts, dual cockpit speakers, adjustable sun visors; map pocket; fresh air outlets; oxygen outlets with overhead mounted diluter demand masks with microphones; four fully adjustable cabin seats in club arrangement with removable headrests; removable low-profile toilet with shoulder harness, lap belt, two cabin tables, cabin fire extinguisher, internal corrosionproofing, wing ice lights, dual landing lights, nosewheel taxi light, flush position lights, dual rotating beacons, primary and secondary instrument lighting systems, rheostat-controlled white cockpit lighting; wingtip recognition lights, wingtip and tail strobe lights, and vertical tail illumination lights

Optional equipment includes electric flushing toilet, engine fire detection system, 1 81 m³ (64 cu ft) oxygen bottle, cabinet with three drawers and stereo tape deck storage; pilot to-cabin paging with four stereo speakers, and passenger stereo headsets

DIMENSIONS, EXTERNAL:

Wing span	15 32 m (50 ft 3 in)
Wing chord, at root	2 15 m (7 ft 0½ in)
at tip	1 07 m (3 ft 6 in)
Wing aspect ratio	8 59
Length overall	10 82 m (35 ft 6 in)
Height overall	4 34 m (14 ft 3 in)
Tailplane span	5 26 m (17 ft 3 in)
Wheel track	3 89 m (12 ft 9 in)
Wheelbase	3 73 m (12 ft 3 in)
Propeller diameter	2 29 m (7 ft 6 in)
Propeller ground clearance	0 34 m (1 ft 1½ in)
Passenger door: Height	1 30 m (4 ft 3½ in)
Width	0 69 m (2 ft 3 in)
Height to sill	1 22 m (4 ft 0 in)

DIMENSIONS, INTERNAL:

Total pressurised length	5 43 m (17 ft 10 in)
Cabin: Length	3 86 m (12 ft 8 in)
Max width	1 37 m (4 ft 6 in)
Max height	1 45 m (4 ft 9 in)
Floor area	6 50 m² (70 0 sq ft)
Volume	8 88 m³ (313 6 cu ft)
Baggage compartment, rear	1 51 m³ (53 5 cu ft)

AREAS:

Wings, gross	27 3. m² (293 94 sq ft)
Ailerons (total)	1 29 m² (13 90 sq ft)
Trailing-edge flaps (total)	2.72 m² (29 30 sq ft)
Fin	2.20 m² (23.67 sq ft)
Rudder, incl tab	1.30 m² (14 00 sq ft)
Tailplane	4 39 m² (47 25 sq ft)
Elevators, incl tabs (total)	1 66 m² (17 87 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	3,028 kg (6,675 lb)
Max T-O weight	4,581 kg (10,100 lb)
Max ramp weight	4,608 kg (10,160 lb)
Max landing weight	4,354 kg (9,600 lb)
Max wing loading	167 7 kg/m² (34 4 lb/sq ft)
Max power loading	5 59 kg/kW (9 2 lb/shp)

PERFORMANCE (at max T-O weight except where indicated):

Max cruising speed at AUW of 3,855 kg (8,500 lb)

at 3,660 m (12,000 ft)	242 kts (448 km/h, 278 mph)
at 4,880 m (16,000 ft)	247 kts (457 km/h, 284 mph)
at 6,400 m (21,000 ft)	243 kts (450 km/h, 280 mph)

Stalling speed, power off

wheels and flaps up	88 kts (163 km/h, 101 mph) IAS
wheels and flaps down	78 kts (144 km/h, 90 mph) IAS
Max rate of climb at S/L	610 m (2,003 ft)/min
Rate of climb at S/L, OEI	151 m (494 ft)/min
Service ceiling	8 810 m (28,900 ft)
Service ceiling, OEI	3,990 m (13,100 ft)
T-O run	620 m (2 033 ft)
T-O to 15 m (50 ft)	826 m (2,710 ft)
Accelerate/stop distance	1,113 m (3,650 ft)
Landing from 15 m (50 ft) at max landing weight, with propeller reversal	698 m (2,290 ft)
Landing run at max landing weight, with propeller reversal	384 m (1 260 ft)

Range with max fuel at max cruising speed, incl allowance for starting, taxi, take-off, climb, descent and 45 min reserves at max range power, ISA, at

6,400 m (21,000 ft)	1 075 n miles (1,991 km, 1,237 miles)

Beechcraft King Air C90SE

1995

BEECHCRAFT SUPER KING AIR B200

Swedish Air Force designation: Tp 101

TYPE: Twin turboprop pressurised passenger, cargo or business light transport

PROGRAMME: Design of Super King Air 200 began October 1970; first flight (c/n BB1) 27 October 1972, certificated FAR Pt 23 plus icing requirements of FAR Pt 25, 14 December 1973, design of B200 (prototype c/n BB343) began March 1980; production started May 1980; FAA certification 13 February 1981; on sale March 1981

CURRENT VERSIONS: **Super King Air B200**: Basic version *detailed description applies to B200*

Super King Air B200C: As B200 but with 1 32 × 1.32 m (4 ft 4 in × 4 ft 4 in) cargo door

Super King Air B200SE (Special Edition) Announced October 1994, certification scheduled for mid 1995, three blade propellers, standard Collins EFIS-84 avionics package with APS-65H autopilot

Super King Air B200T: Standard provision for removable tip tanks, adding total 401 litres (106 US gallons; 88.25 Imp gallons), making total 2,460 litres (650 US gallons, 541 Imp gallons) Span without tip tanks 16 92 m (55 ft 6 in)

Super King Air B200CT: Combines tip tanks and cargo door as standard

Maritime patrol B200T: Described separately

C/RC/UC-12: Military versions; described separately

Super King Air 300LW: Described separately

Super King Air 350: Described separately

CUSTOMERS: French Institut Géographique National acquired two B200T fitted with twin Wild RC-10 Superaviogon camera installations and Doppler navigation in February 1977, maximum endurance 10 3 hours, high flotation landing gear; special French certification for maximum T-O weight 6,350 kg (14,000 lb) and maximum landing weight 6,123 kg (13,500 lb). Egyptian government acquired one Super King Air in 1978 for water, uranium and other natural resources exploration over Sinai and Egyptian deserts as follow-up to satellite surveys, fitted with remote sensing gear, specialised avionics and special cameras. Navaid checking versions of Super King Air used by Taiwan government (one) and Malaysian government (two). Special missions Super King Air delivered to Taiwan Ministry of Interior May 1979; Royal Hong Kong Auxiliary Air Force (now Government Air Service) (two) 1986 and 1987, four Super King Air 200s operated by Swedish Air Force since 1989 as **Tp 101**. Total of 35 Super King Air B200s delivered in 1993, 23 in 1994. Deliveries by early 1995 totalled more than 1,590 for commercial and private orders, plus 345 military versions (described separately) to US armed forces and foreign customers. 1 500th commercial model 200 flown February 1995

COSTS: B200 SE $2.995 million (1995); B200 $3 57 million (1995)

DESIGN FEATURES: Pratt & Whitney Canada PT6A-41 turboprops of Super King Air 200 replaced by 634 kW (850 shp) P&WC PT6A-42s for better cruise and altitude performance, maximum zero-fuel weight raised by 272 kg (600 lb); cabin pressure differential increased from 0 41 bar (6.0 lb/sq in) to 0 44 bar (6.5 lb/sq in). Wing aerofoil NACA 23018 to 23016.5 over inner wing, 23012 at tip dihedral 6°; incidence 3° 48′ at root, −1° 7′ at tip, swept vertical and horizontal tail

FLYING CONTROLS: Trim tabs in port aileron and both elevators, anti-servo tab in rudder; single slotted trailing edge flaps, fixed tailplane

STRUCTURE: Two-spar light alloy wing safe-life semi-monocoque fuselage

LANDING GEAR: Hydraulically retractable tricycle type, with twin wheels on each main unit. Single wheel on steerable nose unit, with shimmy damper. Main units retract forward, nosewheel rearward. Beech oleo-pneumatic shock absorbers. Goodrich mainwheels and tyres size 18 × 5 5, pressure 7 25 bars (105 lb/sq in). Oversize and/or 10 ply mainwheel tyres optional. Goodrich nosewheel size 6 50 × 10, with tyre size 22 × 6.75 10, pressure 3 93 bars (57 lb/sq in). Goodrich hydraulic multiple-disc brakes. Parking brake

POWER PLANT: Two 634 kW (850 shp) Pratt & Whitney Canada PT6A-42 turboprops, each driving a Hartzell three-blade constant-speed reversible-pitch metal propeller with autofeathering and synchrophasing. Bladder fuel cells in each wing, with main system capacity of 1 461 litres (386 US gallons; 321 5 Imp gallons) and auxiliary system capacity of 598 litres (158 US gallons; 131 5 Imp gallons). Total usable fuel capacity 2,059 litres (544 US gallons; 453 Imp gallons). Two refuelling points in upper surface of each wing. Wingtip tanks optional, providing an additional 401 litres (106 US gallons; 88.25 Imp gallons) and raising maximum usable capacity to 2,460 litres (650 US gallons,

Beechcraft Super King Air B200 14-passenger pressurised transport

1995

541 Imp gallons). Oil capacity 29.5 litres (7.8 US gallons, 6.5 Imp gallons).

ACCOMMODATION: Pilot only, or crew of two side by side, on flight deck, with full dual controls and instruments as standard. Six cabin seats standard, each equipped with seat belts and inertia reel shoulder harness; alternative layouts for a maximum of 13 passengers in cabin and 14th beside pilot. Partition with sliding door between cabin and flight deck, and partition at rear of cabin. Door at rear of cabin on port side, with integral airstair. Large cargo door optional. Inward-opening emergency exit on starboard side over wing. Lavatory and stowage for up to 249 kg (550 lb) baggage in rear fuselage. Maintenance access door in rear fuselage, radio compartment access doors in nose. Cabin is air conditioned and pressurised, with radiant heat panels to warm cabin before engine starting.

SYSTEMS: Cabin pressurisation by engine bleed air, with a maximum differential of 0.44 bar (6.5 lb/sq in). Cabin air conditioner of 34,000 BTU capacity. Auxiliary cabin heating by radiant panels standard. Oxygen system for flight deck, and 0.62 m^3 (22 cu ft) oxygen system for cabin, with automatic drop down face masks; standard system of 1.39 m^3 (49 cu ft), 1.81 m^3 (64 cu ft) or 2.15 m^3 (76 cu ft) optional. Dual vacuum system for instruments. Hydraulic system for landing gear retraction and extension, pressurised to 171 to 191 bars (2,475 to 2,775 lb/sq in). Separate hydraulic system for brakes. Electrical system has two 250 A 28 V starter/generators and a 24 V 45 Ah air-cooled Ni/Cd battery with failure detector. AC power provided by dual 250 VA inverters. Engine fire detection system standard, engine fire extinguishing system optional. Pneumatic de-icing of wings and tailplane standard. Anti-icing of engine air intakes by hot air from engine exhaust; electrothermal anti-icing for propellers.

AVIONICS: Standard Collins Pro Line II and optional Bendix/King Gold Crown packages generally as for King Air C90B except:

Comms: Cockpit-to-cabin paging standard. Bendix/King KHF 950 or Collins HF 230 HF transceiver, Fairchild A 100A cockpit voice recorder and Wulfsberg Flitefone optional.

Radar: Bendix/King RDS 84VP colour weather radar optional.

Flight: Dual DME-30; dual RMI 30 standard. Options include Foster LNS 616B RNAV/Loran C and Bendix/King KNS 660 RNAV/VLF/Omega. Collins 12.5 cm (5 in) FCS, Honeywell SPZ-4000 autopilot with 10 or 12.5 cm (4 or 5 in) flight director systems and Fairchild 17M-700-274 flight data recorder optional.

Instrumentation: Pilot's ALT 80A encoding altimeter, dual maximum allowable airspeed indicators, and flight director standard. Options include Collins EFIS-85B or Honeywell EDZ-605 three-tube EFIS, and Bendix/King CC-2024C or Collins DCP-270 radar checklist.

EQUIPMENT: Standard/optional equipment generally as for King Air C90B except fluorescent cabin lighting, one-place couch with storage drawers, flushing toilet (B200) or chemical toilet (B200C), cabin radiant heating, cockpit/cabin partition with sliding doors, and airstair door with hydraulic snubber and courtesy light, standard. FAR Pt 135 operational configuration includes cockpit fire extinguisher and 2.15 m^3 (76 cu ft) oxygen bottle with cockpit oxygen pressure indicator as standard. A range of optional cabin seating and cabinetry configuration is available, including quick-removable fold-up seats.

DIMENSIONS, EXTERNAL:

Wing span	16.61 m (54 ft 6 in)
Wing chord, at root	2.18 m (7 ft 1¼ in)
at tip	0.90 m (2 ft 11⅜ in)
Wing aspect ratio	9.80

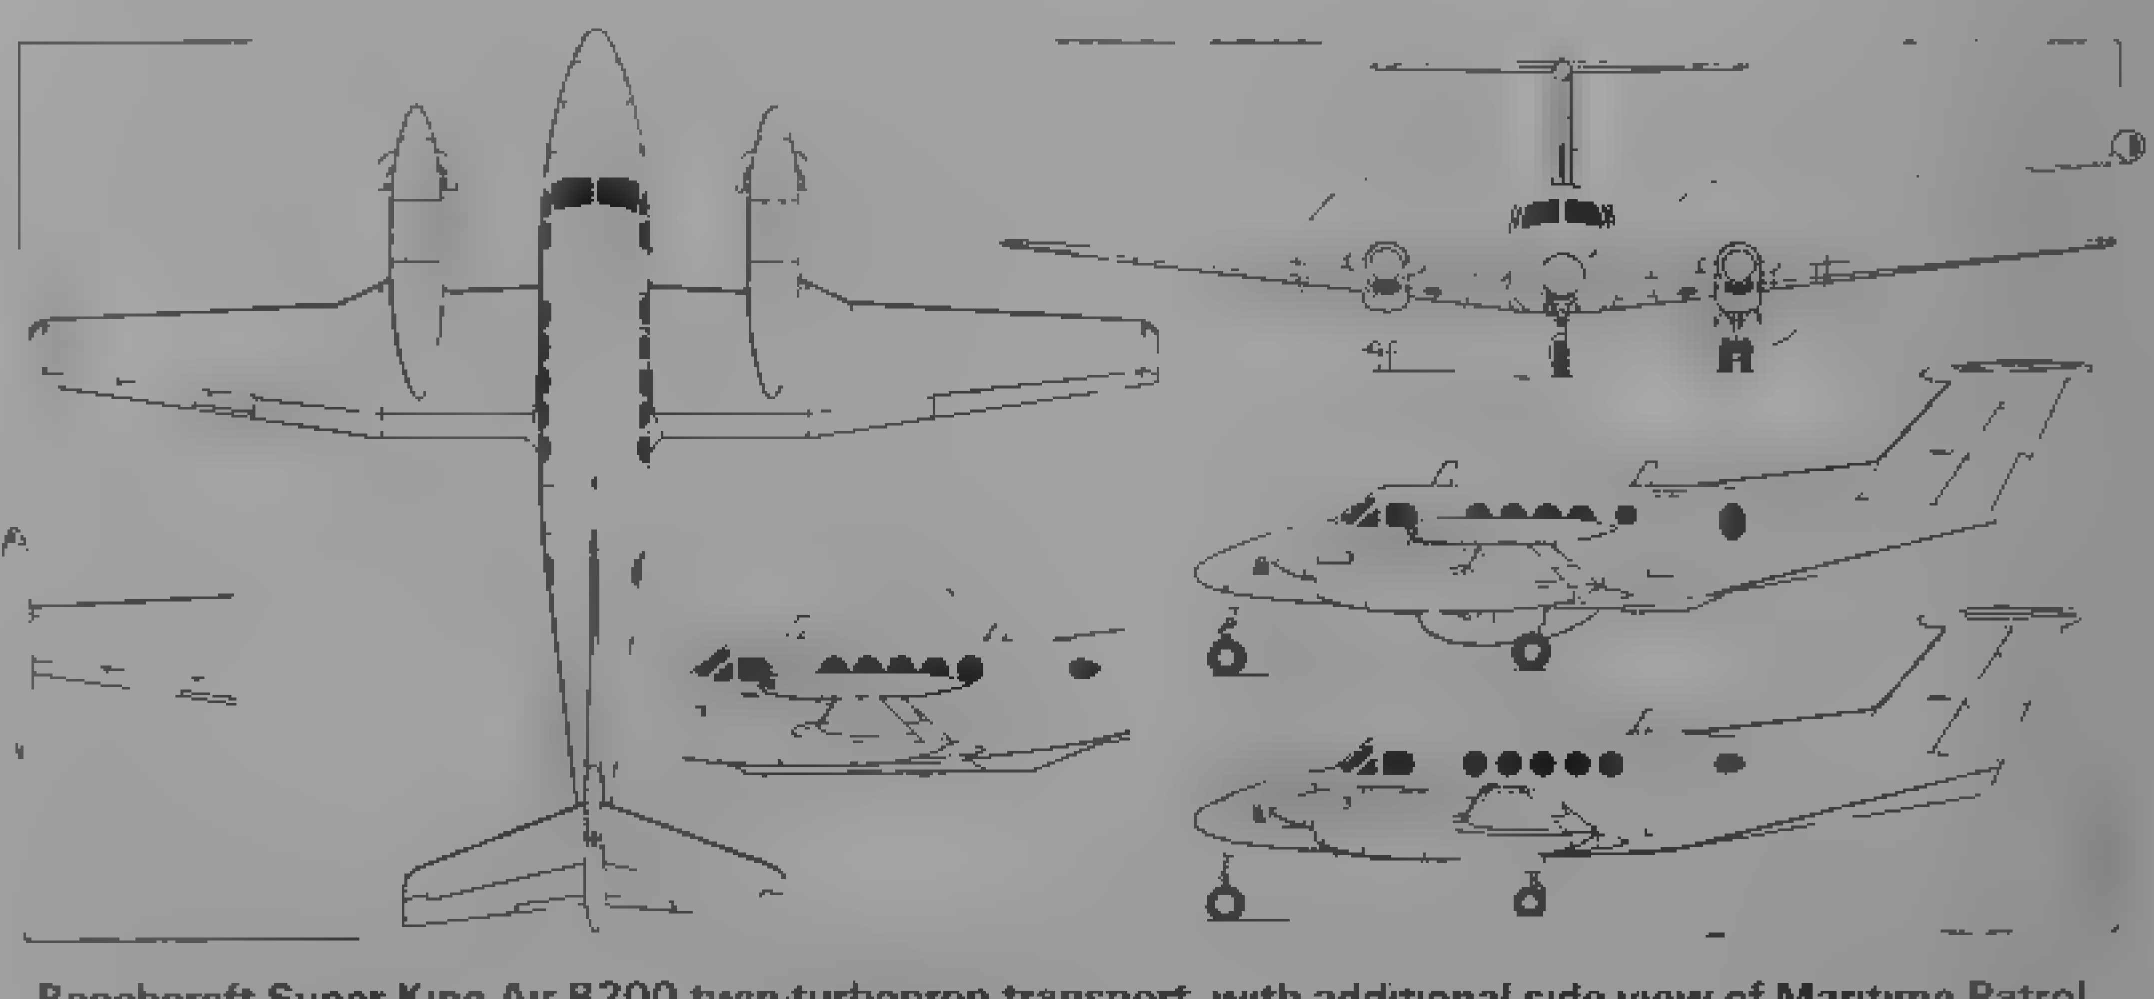
Ailerons (total)	1.67 m^2 (18.0 sq ft)
Trailing-edge flaps (total)	4.17 m^2 (44.9 sq ft)
Fin	3.46 m^2 (37.2 sq ft)
Rudder, incl tab	1.40 m^2 (15.1 sq ft)



Beechcraft Super King Air B200 twin-turboprop transport, with additional side view of Maritime Patrol B200T (centre right); scrap views of wingtip tanks and centre-fuselage of photo survey aircraft for IGN *(Jane's/Dennis Punnett)*

1993

Tailplane	4.52 m² (48.7 sq ft)
Elevators, incl tabs (total)	1.79 m² (19.3 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	3,675 kg (8,102 lb)
Max fuel	1,653 kg (3,645 lb)
Max T-O and landing weight	5,670 kg (12,500 lb)
Max ramp weight	5,710 kg (12,590 lb)
Max zero-fuel weight	4,990 kg (11,000 lb)
Max wing loading	201.6 kg/m² (41.3 lb/sq ft)
Max power loading	4.47 kg/kW (7.35 lb/shp)

PERFORMANCE (at max T-O weight ISA, except where indicated):

Never-exceed speed (VNE) 259 kts (480 km/h, 298 mph) IAS
Max operating Mach number 0.52
Max level speed at 7,620 m (25,000 ft), average cruise weight 294 kts (545 km/h, 339 mph)
Max cruising speed at 7,620 m (25,000 ft), average cruise weight 289 kts (536 km/h; 333 mph)
Econ cruising speed at 7,620 m (25 000 ft), average cruise weight. normal cruise power 282 kts (523 km/h, 325 mph)
Stalling speed:
flaps up 99 kts (183 km/h, 114 mph) IAS
flaps down 75 kts (139 km/h, 86 mph) IAS
Max rate of climb at S/L 747 m (2,450 ft)/min
Rate of climb at S/L, OEI 226 m (740 ft)/min
Service ceiling over 10,670 m (35,000 ft)
Service ceiling, OEI 6,675 m (21,900 ft)
T-O run, 40% flap 566 m (1,856 ft)
T-O to 15 m (50 ft), 40% flap 786 m (2,579 ft)
Landing from 15 m (50 ft):
without propeller reversal 867 m (2,845 ft)
with propeller reversal 632 m (2,074 ft)
Landing run 536 m (1,760 ft)
Range with max fuel, allowances for start, taxi, climb, descent, and 45 min reserves at max range power, ISA
max cruise power at:
5,485 m (18,000 ft) 1,190 n miles (2,204 km; 1,369 miles)
8,230 m (27,000 ft) 1,550 n miles (2,871 km, 1,784 miles)
9,450 m (31,000 ft) 1,750 n miles (3,241 km, 2,014 miles)
10,670 m (35,000 ft) 1,965 n miles (3,639 km, 2,261 miles)
econ cruise power at:
5,485 m (18 000 ft) 1,517 n miles (2,809 km; 1,746 miles)
8,230 m (27,000 ft) 1,860 n miles (3,445 km; 2,140 miles)
9,450 m (31 000 ft) 1,974 n miles (3,656 km, 2,272 miles)

UPDATED

BEECHCRAFT MARITIME PATROL B200T

TYPE: Maritime patrol or multimission aircraft.

PROGRAMME: Maritime Patrol 200T announced 9 April 1979; current version B200T for surface and subsurface monitoring of exclusive economic zones, pollution detection, inspecting offshore installations, search and rescue, special missions include aerial photography, environmental and ecological research, airways and ground-based navaid checking, target towing, ambulance flying.

CUSTOMERS: Japan Maritime Safety Agency (17), Algerian Ministry of Defence (two), Peruvian Navy (five), Puerto Rico (one), Uruguayan Navy (one), Germany (one), France (three), University of Wyoming (one). Malaysian Air Force (four), replacing Lockheed Martin C-130H-MPs with No. 16 Squadron at Subang.

DESIGN FEATURES: Modifications from standard Super King Air B200 include new outboard wings with provision for tip tanks, strengthened landing gear two bubble observation windows at rear, hatch for dropping survival equipment, 360° radome under fuselage, standard avionics include VLF/GPS coupled to autopilot to allow programmed search patterns integrated avionics, displays and controls, optional wingtip ESM antennae and FLIR.

LANDING GEAR: Strengthened to cater for higher operating weights.

POWER PLANT: As for Super King Air B200, including removable wingtip tanks which increase maximum usable fuel capacity by 401 litres (106 US gallons, 88.25 Imp gallons) to a total of 2,460 litres (650 US gallons, 541 Imp gallons).

AVIONICS: Standard items as listed under Design Features. Optional avionics include ESM integrated with GPS, VHF-AM/FM com, HF and UHF com, LLLTV, sonobuoys and processor, OTPI, multispectral scanner, tactical navigation computer, and three alternative search radar systems, all with 360° scan and weather avoidance capability and integrated with nav.

DIMENSIONS, EXTERNAL: As for Super King Air B200, except:

Wing span over tip tanks	17.25 m (56 ft 7 in)
Wing aspect ratio	10.35

DIMENSIONS, INTERNAL: As for Super King Air B200, except:

Cabin: Length (excl flight deck)	5.08 m (16 ft 8 in)

WEIGHTS AND LOADINGS (N: Normal category, R: Restricted category):

Weight empty: N, R	3,744 kg (8,255 lb)
Max T-O weight: N	5,670 kg (12,500 lb)
R	6,804 kg (15,000 lb)
Max landing weight: N	5,670 kg (12,500 lb)
R	6,123 kg (13,500 lb)

PERFORMANCE (at max Normal T-O weight, except where indicated):

Max cruising speed, AUW of 4,990 kg (11,000 lb) at 4,265 m (14,000 ft) 265 kts (491 km/h; 305 mph)
Typical patrol speed 140 kts (259 km/h; 161 mph)
Range with max fuel, patrolling at 227 kts (420 km/h, 261 mph) at 825 m (2,700 ft), 45 min reserves 1,790 n miles (3,317 km; 2,061 miles)
Typical endurance at 140 kts (259 km/h; 161 mph), at 610 m (2,000 ft), 45 min reserves 6 h 36 min
Max time on station, with wingtip fuel tanks 9 h

UPDATED

BEECHCRAFT SUPER KING AIR 200/B200 (MILITARY VERSIONS)

US basic military designation: C-12

TYPE: Military versions of Super King Air 200/B200.

PROGRAMME: US Army procured first three Super King Airs designated RU-21Js in 1971; US Army ordered 60 military passenger-carrying Super King Airs designated C-12A beginning FY73, worldwide deployment began July 1975.

CUSTOMERS: Total of 358 ordered by US armed forces by early 1994, of which 345 delivered. Further eight exports (16) and Israel (five in early 1985). Wing span (over tip tanks) 16.92 m (55 ft 6 in).

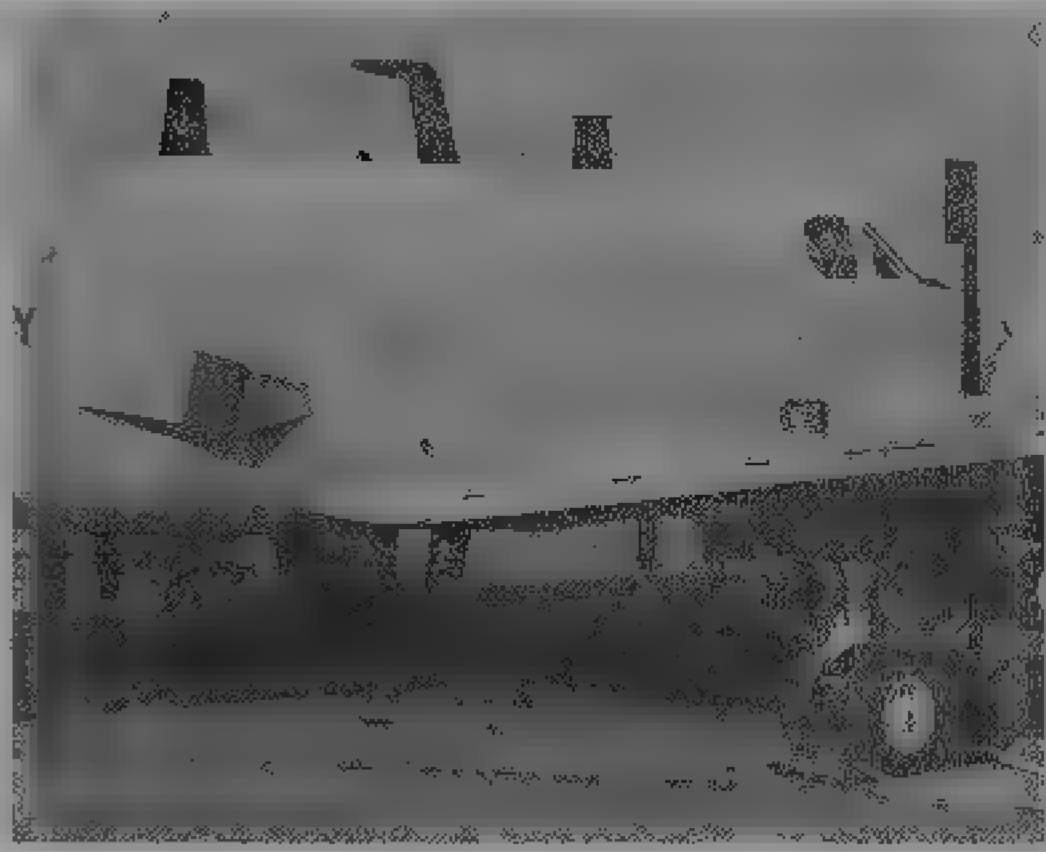
CURRENT VERSIONS: **C-12A**: Initial A200 version, powered by 559 kW (750 shp) P&WC PT6A-38 turboprops with Hartzell three-blade fully feathering reversible-pitch propellers, auxiliary tanks. Total 91 delivered (US Army 60; US Air Force 30; Greek Air Force one); entered service July 1975, details in 1980-81 *Jane's*. See C-12C and C-12E for C-12A re-engining.

UC-12B: US Navy/Marine Corps version (Model A200C) with 634 kW (850 shp) PT6A-41 turboprops, cargo door, high flotation landing gear. US Navy (49), US Marines (17), delivered by May 1982 for various base communications flights.

C-12C: As C-12A, but with PT6A-41 turboprops. Deliveries (US Army 14) complete. US Army C-12A fleet re-engined as C-12Cs: five civilianised 1989 for covert operations.

C-12D: Model A200CT. As US Army C-12C but cargo door, high flotation landing gear and provision for tip tanks. US Army (24), US Air Force (six); additional 21 built but converted to RC-12 before delivery to US Army

RC-12D Improved Guardrail V: Model A200CT. US Army special mission version, carries AN/USD-9 Improved Guardrail remote-controlled communications intercept and direction finding system with direct reporting to tactical commanders at corps level and below, aircraft survivability equipment (ASE) system, Carousel IV-E INS and Tacan system, radio datalink, AN/ARW-83(V)5 airborne relay with antennae above and below wings, wingtip ECM pods, associated equipment includes AN/TSQ-105(V)4 integrated processing facility, AN/ARM-63(V)4 AGE flightline van and AN/TSC-87 tactical commander's terminal. System prime contractor ESL Inc. US Army had 13 RC-12D Improved Guardrail Vs converted from C-12Ds, with deliveries starting in Summer 1983, one to HQ Forces Command at Fort McPherson, Georgia, remainder to 1st Military Intelligence Battalion, Wiesbaden, Germany, and 2nd MIB at Stuttgart, Germany. German based aircraft reassigned to US based units in late 1991, currently with 15th MIB at Robert Grey AAF, Texas, 304th MIB, Libby AAF, Arizona, MIB (LI), Panama; and AAESA Lakehurst, New Jersey. Five new-build aircraft to Israel. Wing span (over ECM pods) 17.63 m (57 ft 10 in).



Self-protection measures on Beechcraft RC-12K include flare dispenser at rear of engine cowling (above wing) and chaff dispenser on fuselage side *(Paul Jackson)* 1995

Beechcraft UC-12M operational support aircraft of the US Navy *(Paul Jackson)* 1995

Beechcraft RC-12N Guardrail Common Sensor of the US Army

1993

C-12E Designation of 29 US Air Force C-12As retrofitted with PT6A-42 turboprops, two crew plus nine passengers. Assigned to various embassies

C-12F: Operational support aircraft (OSA), similar to Model B200C with PT6A-42 engines, payload choices include two crew and eight passengers, more than 1,043 kg (2,300 lb) freight, two litter patients plus attendants, cargo floor standard. First delivery May 1984. US Air Force purchased 40 after initial five-year lease; US Army National Guard (20 ordered FY85-87), Air National Guard (six ordered FY84). US Army Reserve (15 ordered FY94, with options for up to 14 more)

UC-12F: US Navy equivalent of USAF C-12F with PT6A-42 turboprops. US Navy received first of 12 in 1986; two modified with surface search radar and operator's console to **RC-12F** Range Surveillance Aircraft (RANSAC) for Pacific Missile Range Facilities, Barking Sands, Hawaii

RC-12G: US Army special mission aircraft, based on A200CT, similar to RC-12D but maximum T-O weight increased to 6,804 kg (15,000 lb). Provides real-time intelligence support to field commanders; two crew. Mission equipment contractor Sanders Associates. Three delivered in 1985 after conversion from C-12D; currently with MIB (LI), in Panama

RC-12H Guardrail Common Sensor (Minus): US Army special mission aircraft, similar to RC-12D but maximum T-O weight increased to 6,804 kg (15,000 lb); system contractor ESL Inc. Six delivered in 1988 to 3rd Military Intelligence Battalion, Pyongtaek, South Korea

C-12J: Variant of Beechcraft 1900C (see 1991–92 *Jane's*)

RC-12K Guardrail Common Sensor: Similar to RC-12D except 820 kW (1,100 shp) PT6A-67 turboprops and maximum T-O weight 7,257 kg (16,000 lb). US Army ordered nine in October 1985, of which eight replaced RC-12Ds in 1st MIB, May 1991, one retained by Beech for RC-12N conversion; further two (4X-FSF and FSG) delivered to Israel in May-June 1991

C-12L: Three RU-21Js (71-21058 to 21060) stripped of Guardrail equipment in 1979 for transport duties but not redesignated until mid-1980s

UC-12M: US Navy designation of C-12F but with unique cockpit instruments, lighting and voice communications. Twelve delivered from 1987; two conversions with surface search radar and operator's console to **RC-12M** RANSAC, ordered 1988 for Pacific Missile Test Center, Point Mugu

RC-12N Guardrail Common Sensor: Generally similar to RC-12K, but equipped with dual EFIS and aircraft survivability equipment/avionics control system (ASE/ACS). ASE suite includes AN/APR-39 radar warning receiver, AN/APR-44 radar warning system, AN/ALQ-136, AN/ALQ-156 and AN/ALQ-162 countermeasure sets chaff/flare and M130 dispensers. Avionics suite includes AN/ARC-186 or AN/ARC-201 VHF-FM radio, AN/ARC-164 Have Quick II UHF-AM radio; AN/APX-100 IFF transponder; three KY-58 and one KIT-1A secure communications systems, Carousel IV INS, AN/ASN-149 GPS receiver. Prototype converted from RC-12K, 15 converted by ESL Inc delivered 1992-93 to 224th MIB and 304th MIB, further 12 being converted for later delivery as RC-12P (which see)

RC-12P Guardrail Common Sensor: Raytheon is modifying 12 RC-12Ns to RC-12P configuration. RC-12P has identical avionics and power plant but different mission equipment (including datalink capability), fibre optic cabling, smaller, lighter wing pods and increased T-O weight of 7,484 kg (16,500 lb). First batch of seven modified under subcontract from ESL Inc. for delivery late 1994 and 1995, but none yet reported in service; second batch of five will be converted under direct contract from US Army and will be delivered between September 1995 and June 1996

RC-12Q Direct Air Satellite Relay: Three RC-12Ps to be modified by ESL Inc and Loral during 1995-96, for delivery in 1997

CUSTOMERS: See table and under Current Versions above

UPDATED

BEECHCRAFT SUPER KING AIR 300LW

TYPE: Lightweight version of Super King Air 300 (1991-92 *Jane's*)

PROGRAMME: Announced September 1988 for European market; became sole 300 series aircraft on offer from October 1991, when production certificate for basic Super King Air 300 expired

CURRENT VERSIONS: **Super King Air 300LW**: Basic version, special European certification maximum T-O weight of 5,670 kg (12,500 lb) to limit airways user fees, maximum ramp weight 5,715 kg (12,600 lb); otherwise similar to 300

CUSTOMERS: 35 delivered by end of 1994, including eight in 1993 and five in 1994

DESIGN FEATURES: Two PT6A-60A turboprops, 'pitot cowl' engine intakes, aerodynamically faired exhausts; wing leading-edges extended 12.7 cm (5 in) forward, propellers moved forward 13.2 cm (5.2 in); hydraulically actuated landing gear, interior equipment changes

LANDING GEAR: Hydraulically retractable tricycle type. Goodrich mainwheels and tyres size 19 × 6.75-8, pressure 6.20 bars (90 lb/sq in) at maximum T-O weight. Goodrich nosewheel and tyre size 22 × 6.75-10, pressure 3.79 to 4.13 bars (55 to 60 lb/sq in)

POWER PLANT: Two 783 kW (1,050 shp) Pratt & Whitney Canada PT6A-60A turboprops, each driving a Hartzell four-blade constant-speed fully feathering reversible-pitch metal propeller. Bladder cells and integral tanks in each wing, with total capacity of 1,438 litres (380 US gallons; 316.5 Imp gallons), auxiliary tanks inboard of engine nacelles, capacity 601 litres (159 US gallons; 132.5 Imp gallons). Total fuel capacity 2,039 litres (539 US gallons; 449 Imp gallons). No provision for wingtip tanks. Oil capacity 30.2 litres (8 US gallons; 6.66 Imp gallons)

ACCOMMODATION: As for B200, except for additional emergency exit on port side, opposite starboard emergency exit and of the same dimensions. Pilot and co-pilot storm windows standard. Cabin features single-piece upper sidewall panels, indirect overhead lighting system with rheostat controls, stereo system with graphic equaliser and overhead speakers, larger executive tables incorporating magnetic game boards, seats with inflatable lumbar support adjustment, fore and aft, reclining and lateral tracking movement as standard. Crew seats have 2.5 or 5° tilt positions. Emergency exit lighting standard. Electric heating on ground standard. Optional radiant heat panels of B200 not available

SYSTEMS: As for B200, except for automatic bleed air type heating and 22,000 BTU cooling system with high-capacity ventilation system, 2.18 m³ (77 cu ft) oxygen system standard, hydraulic landing gear retraction and extension, two 300 A 28 V starter/generators with triple bus electrical distribution system

AVIONICS: Generally as for B200

EQUIPMENT: Generally as for B200

DIMENSIONS, EXTERNAL: As for B200 except:

Length overall	13.36 m (43 ft 10 in)
Height overall	4.37 m (14 ft 4 in)
Propeller diameter	2.67 m (8 ft 9 in)
Propeller ground clearance	0.25 m (10 in)
Emergency exit (each side of cabin, above wing):	
Height	0.66 m (2 ft 2 in)
Width	0.50 m (1 ft 7¾ in)

WEIGHTS AND LOADINGS:

Weight empty	3,878 kg (8,550 lb)
Max baggage weight	249 kg (550 lb)
Max T-O and landing weight	5,670 kg (12,500 lb)
Max ramp weight	5,715 kg (12,600 lb)
Max zero-fuel weight	5,216 kg (11,500 lb)
Max wing loading	201.6 kg/m² (41.3 lb/sq ft)
Max power loading	3.62 kg/kW (5.95 lb/shp)

PERFORMANCE (at max T-O weight, ISA):

Never-exceed speed (V_{NE})	259 kts (480 km/h; 298 mph) IAS
Max operating Mach number (M_{MO})	0.58
Max level and max cruising speed	317 kts (587 km/h; 365 mph)
Econ cruising speed	309 kts (573 km/h; 356 mph)
Stalling speed: flaps up	95 kts (176 km/h; 110 mph)
flaps down	78 kts (145 km/h; 90 mph)
Max rate of climb at S/L	999 m (3,277 ft)/min
Rate of climb at S/L, OEI	327 m (1,074 ft)/min
Max certificated ceiling	10,670 m (35,000 ft)
Service ceiling, OEI	7,882 m (25,855 ft)
T-O run, 40% flap	421 m (1,381 ft)
T-O to 15 m (50 ft), 40% flap	514 m (1,686 ft)
Accelerate/stop distance, 40% flap	1,067 m (3,500 ft)
Landing from 15 m (50 ft)	784 m (2,570 ft)
Landing run, without propeller reversal	393 m (1,289 ft)

Range with max fuel, allowances for start, taxi, T-O, climb, descent and 45 min reserves at max range power:

max cruise power at:	
5,485 m (18,000 ft)	960 n miles (1,778 km; 1,105 miles)
7,315 m (24,000 ft)	1,156 n miles (2,141 km; 1,330 miles)
8,535 m (28,000 ft)	1,333 n miles (2,469 km; 1,534 miles)
10,670 m (35,000 ft)	1,744 n miles (3,230 km; 2,007 miles)
max range power at:	
5,485 m (18,000 ft)	1,335 n miles (2,472 km; 1,536 miles)
8,535 m (28,000 ft)	1,780 n miles (3,297 km; 2,048 miles)
10,670 m (35,000 ft)	2,086 n miles (3,863 km; 2,400 miles)

UPDATED

Beechcraft C-12D of US Army in low-profile civilian-type colour scheme *(Paul Jackson)*

1995

BEECHCRAFT SUPER KING AIR 350

TYPE: Eight/12-passenger turboprop business aircraft.

PROGRAMME: Replaced Super King Air 300 (1991-92 *Jane's*); first flight (N120SK) September 1988, introduced at NBAA Convention 1989; certificated to FAR Pt 23 (commuter category), first delivery 6 March 1990.

CURRENT VERSIONS: **Super King Air 350**: Basic version, *as described in detail*.

Super King Air 350C: Has 132 × 132 cm (52 × 52 in) freight door with built-in airstair passenger door.

Super King Air 350 Special Missions: Versions available for aerial photography and airways and ground-based navaid checking.

RC-350 Guardian: Elint version, converted from 350 prototype 1991 by Beech Aircraft Corporation; mission avionics include Raytheon AN/ALQ-142 ESM, Watkins-Johnson 9195C communications interceptor, Honeywell laser INS, GPS receiver and Cubic secure digital datalink; can loiter on station at 10 670 m (35,000 ft) for more than 6 hours; can locate/monitor radar emitters in 20 MHz to 18 GHz range, and intercept communications within 20 to 1,400 MHz bandwidths. Wingtip pods house AN/ALQ-142 antennae; underfuselage bulge contains antenna for comint system.

CUSTOMERS: Total 130 Super King Air 350s and 350Cs delivered by end of 1994; first 350C delivery in 1990 to Rossing Uranium, Namibia; 14 Super King Air 350 deliveries 1993, 24 in 1994. Recent customers include DFS Deutsche Flugsicherung GmbH, which operates two Super King Air 350s equipped with automatic flight inspection systems for en route and precision navaid inspections throughout Germany, and Civil Aeronautics Administration of the Republic of China, with one aircraft on similar duties.

DESIGN FEATURES: Compared with Super King Air 300, fuselage stretched 0.86 m (2 ft 10 in) by plugs 0.37 m (1 ft 2½ in) forward of main spar and 0.49 m (1 ft 7½ in) aft; wing span increased by 0.46 m (1 ft 6 in) with NASA winglets 0.61 m (2 ft 0 in) high; two additional cabin windows each side; double club seating for eight passengers, optionally two more seats in rear of cabin, one passenger on toilet seat and one in co-pilot seat if operating single-crew, making maximum 12 passengers, certified for maximum 17 occupants including crew. Can depart with full payload and full tanks.

FLYING CONTROLS: Automatic cable tensioner in aileron circuit and larger elevator bobweight, larger rudder anti-servo tab, ailerons and rudder cleaned up.

POWER PLANT: As for 300LW.

DIMENSIONS, EXTERNAL: As for 300LW except:
Wing span over winglets 17.65 m (57 ft 11 in)
Wing aspect ratio 10.79
Length overall 14.22 m (46 ft 8 in)

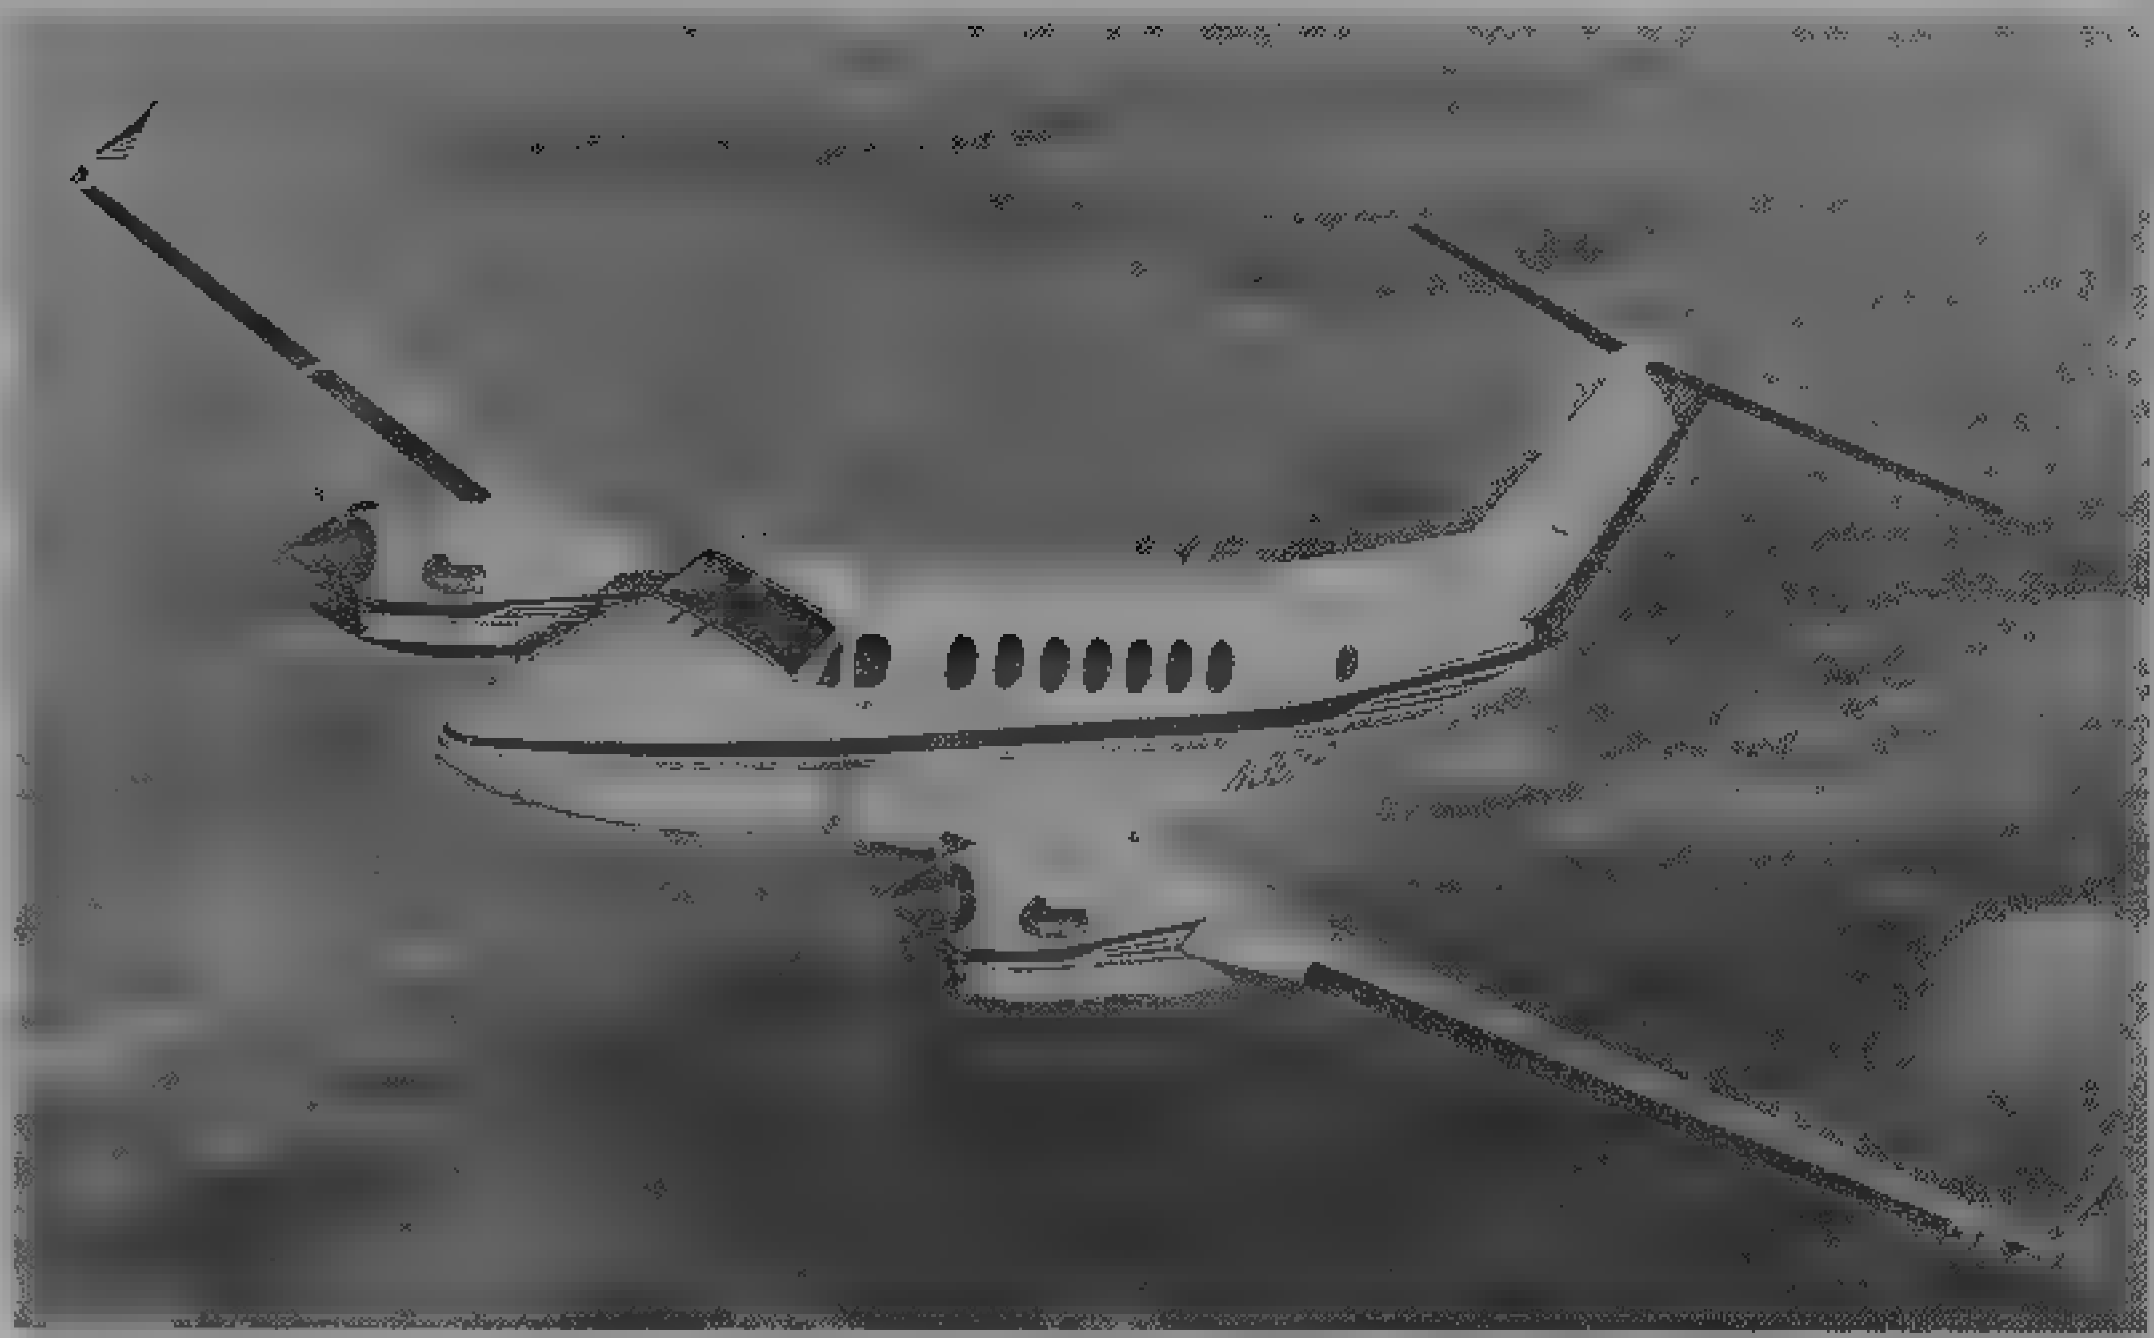
DIMENSIONS, INTERNAL:
Cabin, excl cockpit: Length 5.94 m (19 ft 6 in)
Max width 1.37 m (4 ft 6 in)
Height 1.45 m (4 ft 9 in)

AREAS:
Wings, gross 28.80 m² (310.0 sq ft)

WEIGHTS AND LOADINGS:
Weight empty 4,111 kg (9,062 lb)
Max fuel weight 1,638 kg (3,611 lb)
Max T-O and landing weight 6,804 kg (15,000 lb)
Max ramp weight 6,849 kg (15,100 lb)
Max zero-fuel weight 5,670 kg (12,500 lb)
Max wing loading 236.3 kg/m² (48.4 lb/sq ft)
Max power loading 4.34 kg/kW (7.14 lb/shp)

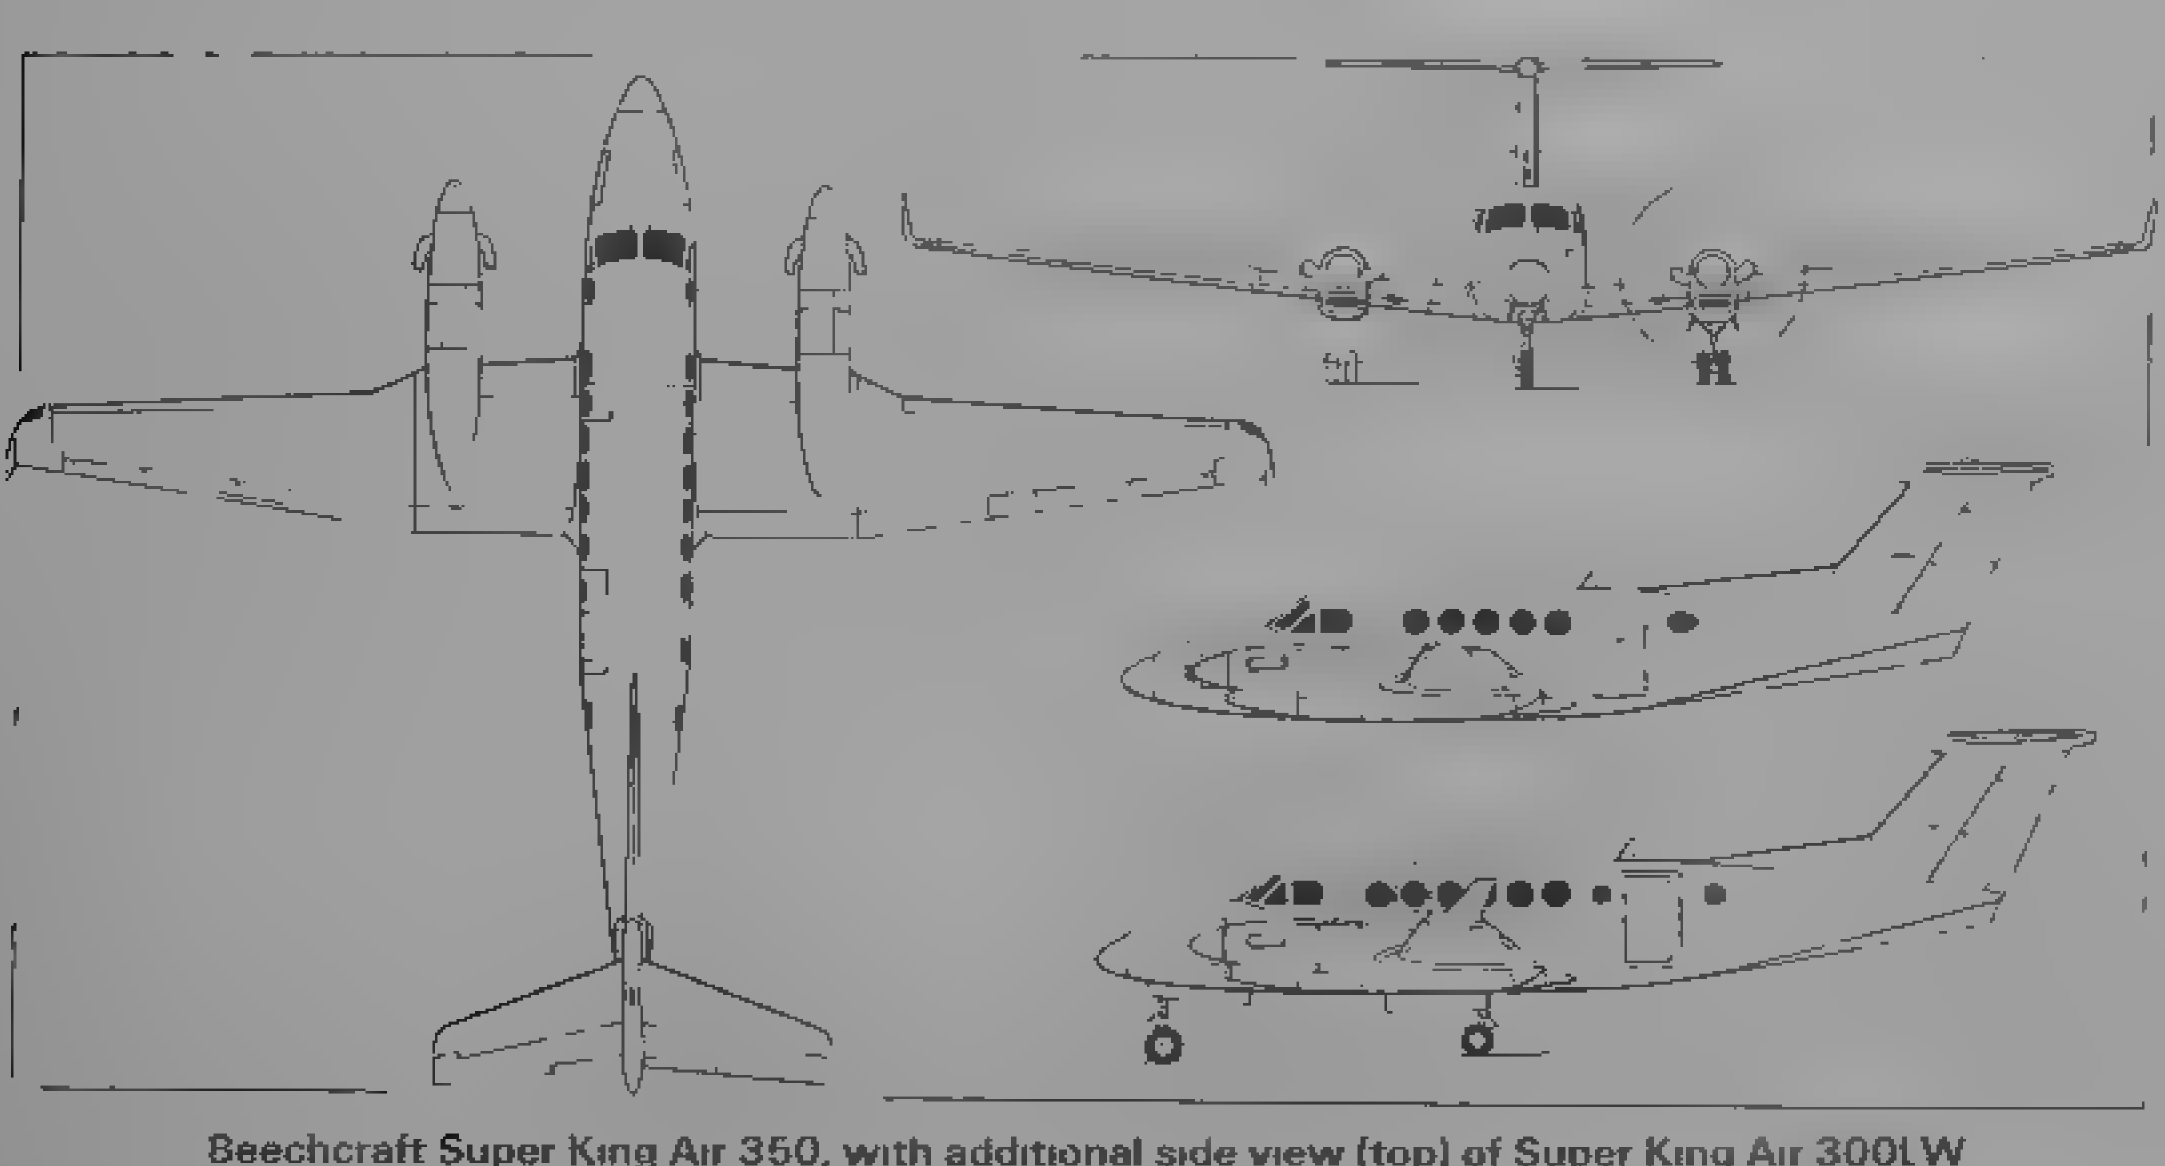
PERFORMANCE (at max T-O weight, ISA, except where indicated):
Max level speed 315 kts (584 km/h; 363 mph)
Max cruising speed, AUW of 5,896 kg (13,000 lb) at:
7,315 m (24,000 ft) 311 kts (576 km/h; 358 mph)
10,670 m (35,000 ft) 290 kts (537 km/h; 334 mph)
Cruising speed, normal cruising power, AUW of 5,896 kg (13,000 lb) at:
7,315 m (24,000 ft) 301 kts (558 km/h; 347 mph)
10,670 m (35,000 ft) 281 kts (521 km/h; 324 mph)
Cruising speed, max range power, AUW of 5,896 kg (13,000 lb) at:
5,485 m (18,000 ft) 210 kts (389 km/h; 242 mph)
10,670 m (35,000 ft) 240 kts (445 km/h; 276 mph)
Stalling speed at max landing weight, flaps and wheels down 81 kts (150 km/h; 94 mph)
Max rate of climb at S/L 832 m (2,731 ft)/min
Rate of climb at S/L, OEI, AUW of 6,350 kg (14,000 lb) 236 m (775 ft)/min
Service ceiling above 10,670 m (35,000 ft)
Service ceiling, OEI 6,555 m (21,500 ft)
T-O balanced field length 1,006 m (3,300 ft)
Landing from 15 m (50 ft) 802 m (2,631 ft)
Landing run 408 m (1,338 ft)
Range with 2,040 l (539 US gallons; 449 Imp gallons) usable fuel, allowances for start, T-O, climb and descent plus 45 min reserves:
max cruising power at:
5,485 m (18,000 ft) 1,067 n miles (1,976 km; 1,228 miles)
7,315 m (24,000 ft) 1,252 n miles (2,319 km; 1,441 miles)
8,535 m (28,000 ft) 1,407 n miles (2,606 km; 1,619 miles)
10,670 m (35,000 ft) 1,724 n miles (3,193 km; 1,984 miles)
normal cruising power, allowances as above:
5,485 m (18,000 ft) 1,085 n miles (2,009 km; 1,249 miles)
7,315 m (24,000 ft) 1,308 n miles (2,422 km; 1,505 miles)
8,535 m (28,000 ft) 1,474 n miles (2,730 km; 1,696 miles)
10,670 m (35,000 ft) 1,771 n miles (3,280 km; 2,038 miles)
max range power, allowances as above:
5,485 m (18,000 ft) 1,421 n miles (2,632 km; 1,635 miles)
8,535 m (28,000 ft) 1,756 n miles (3,252 km; 2,021 miles)
10,670 m (35,000 ft) 1,894 n miles (3,508 km; 2,180 miles)
NBAA VFR range, four passengers, 30 min reserves 2,030 n miles (3,761 km; 2,337 miles)

UPDATED



Beechcraft Super King Air 350 eight/12-passenger turboprop business aircraft

1995



Beechcraft Super King Air 350, with additional side view (top) of Super King Air 300LW (*Jane's/Dennis Punnett*)

1992

BEECHCRAFT 1900D

TYPE: Twin-turboprop regional transport, development of 1900C (1991-92 *Jane's*).

PROGRAMME: Announced at US Regional Airlines Association meeting 1989; prototype (N5584B) first flight 1 March 1990; certification to FAR Pt 23 Amendment 34 received March 1991, full certification with supplements received and deliveries (to Mesa Airlines) began, November 1991; replaced earlier 1900C in current product line.

CUSTOMERS: Total 45 delivered in 1993, 50 in 1994. 87 ordered during 1994, including Mesa Airlines (40 in November 1994 in addition to 78 previously ordered, for delivery during 1996-97); two delivered to Air Creebec of Canada in January 1995. Total 145 of D version delivered by April 1995.

COSTS: $4.775 million (1995).

DESIGN FEATURES: Flat floor with stand-up headroom; cabin volume increased by 28.5 per cent compared to 1900C; winglets add better hot and high performance; tailplane and fin swept, each tailplane carries small fin (tailet) on underside near tip; auxiliary horizontal fixed tail surface (stabilon) each side of rear fuselage improve centre of gravity range; twin ventral strakes improve directional stability and turbulence penetration; small horizontal vortex generator on fuselage ahead of wingroots.

Wing aerofoil NACA 23018 (modified) at root, 23012 (modified) at tip; dihedral 6°; incidence 3° 29′ at root, −1° 4′ at tip; no sweepback at quarter-chord.

FLYING CONTROLS: Mechanical, with automatic cable tensioner in aileron circuit; trim tabs in elevators, rudder and port aileron; primary and secondary controls routed separately to improve protection from possible engine-failure damage; single-slotted trailing-edge flaps in two sections on each wing.

STRUCTURE: Wing has continuous main spar with fail-safe structure riveted and bonded; fuselage pressurised and mainly bonded.

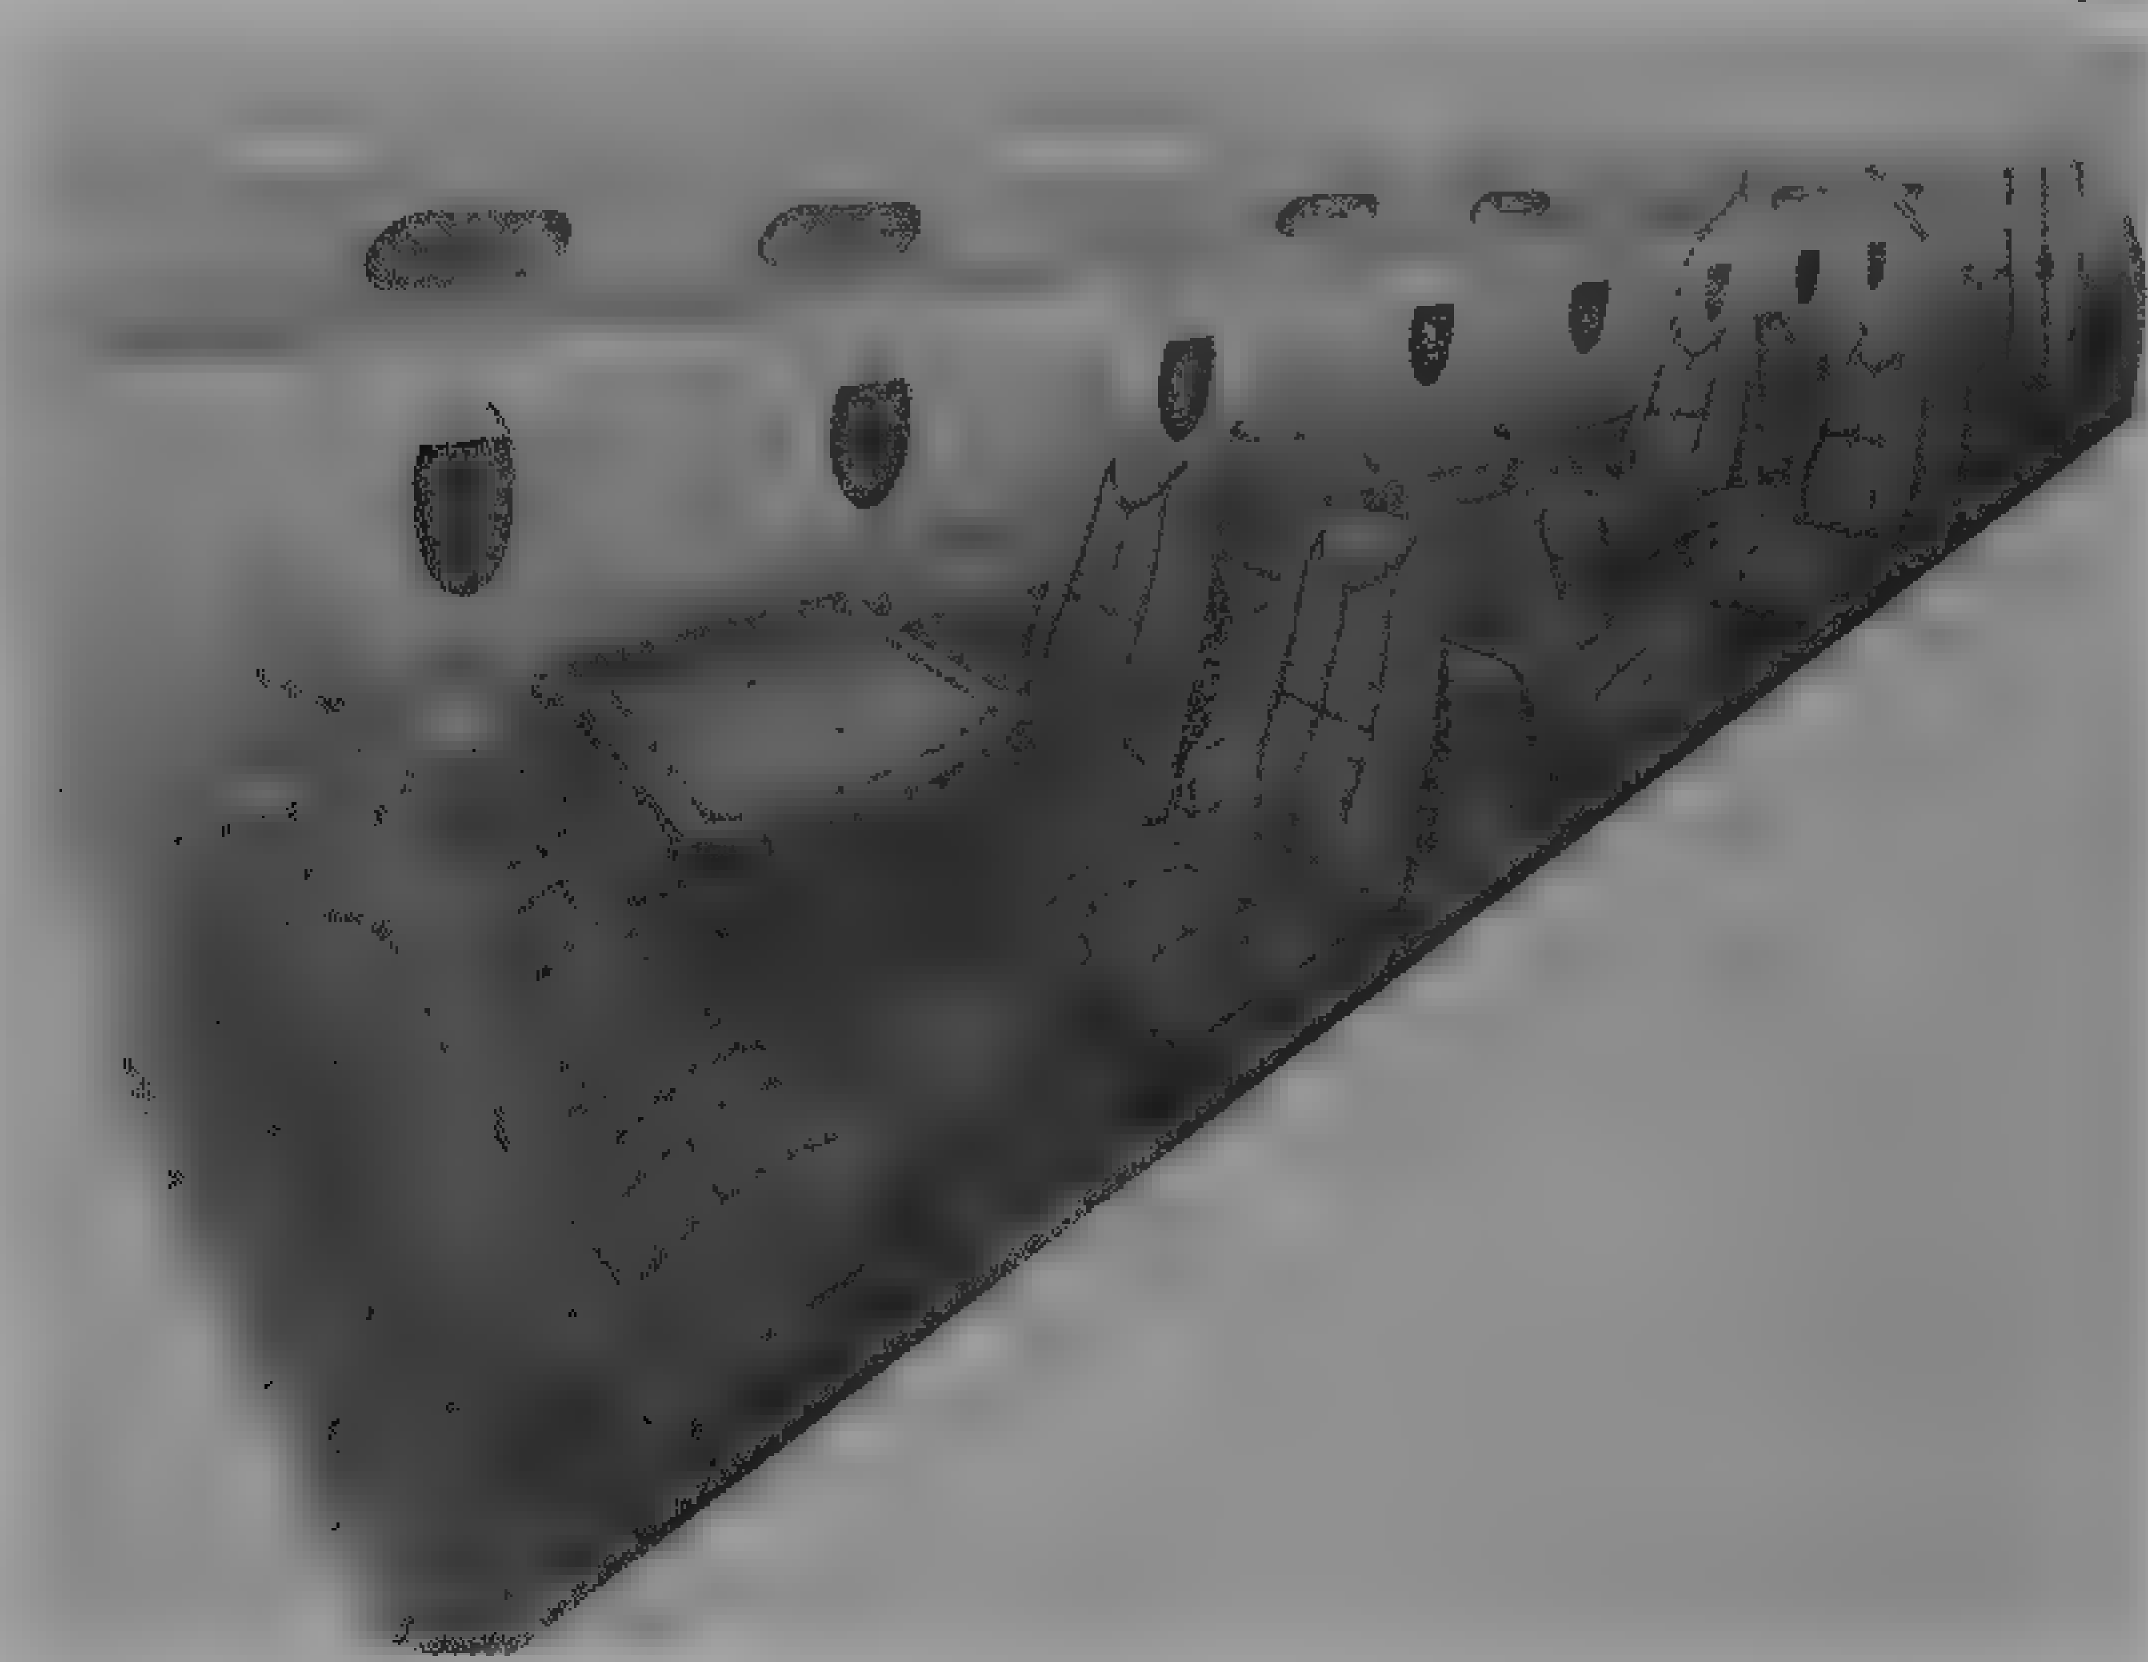
LANDING GEAR: Hydraulically retractable tricycle type; main units retract forward and nose unit rearward. Beech oleo-pneumatic shock-absorber in each unit. Twin Goodyear wheels on each main unit, size 6.50 × 10, with Goodyear tyres size 22 × 6.75-10 (tubeless, 10 ply rating), pressure 6.07 bars (88 lb/sq in). Goodyear steerable nosewheel size 6.60 × 8, with Goodyear tyres size 22 × 6.75-8 (tubeless, 10 ply rating), pressure 6.07 bars (88 lb/sq in). Multiple-disc hydraulic brakes. Optional Beech Hydro-Aire anti-skid units, power steering and brake de-icing. Ground turning radius based on wingtip clearance 12.55 m (41 ft 2 in).

POWER PLANT: Two Pratt & Whitney Canada PT6A-67D turboprops, each flat rated at 954 kW (1,279 shp) and driving a Hartzell four-blade constant-speed fully feathering reversible-pitch composite propeller. Wet wing fuel storage with a total capacity of 2,528 litres (668 US gallons; 556 Imp gallons), of which 2,519 litres (665 US gallons; 554 Imp gallons) usable. Refuelling point in each wing leading-edge, inboard of engine nacelle. Oil capacity (total) 29.5 litres (7.8 US gallons; 6.5 Imp gallons).

ACCOMMODATION: Crew of one (FAR Pt 91) or two (FAR Pt 135) on flight deck, with standard accommodation in cabin of commuter version for 19 passengers in single airline-standard seats on each side of centre aisle. Forward

Beechcraft 1900D of Canadian operator Air Creebec

1995



Optional executive interior for Beech 1900D

1995

carry-on baggage lockers, underseat baggage stowage, rear baggage compartment. Forward door, incorporating airstairs, on port side. Upward-hinged rear cargo door, also on port side. Three emergency exits over wing (two starboard, one port). Accommodation air conditioned, heated, ventilated and pressurised. Executive and corporate shuttle options seat between 10 and 18 passengers with options for forward and rear compartments, combination lavatory/passenger seat and two beverage bars at cabin compartment division. Club, double club and triple club seating optional. Customised interiors to customer's choice.

SYSTEMS: Bleed air cabin heating and pressurisation, maximum differential 0.35 bar (5.1 lb/sq in). Air cycle and vapour cycle air conditioning. Hydraulic system, pressure 207 bars (3,000 lb/sq in), for landing gear actuation. Electrical system includes two 300 A engine-driven starter/generators and one 34 Ah Ni/Cd battery. Constant flow oxygen system of 4.3 m³ (152 cu ft) capacity standard. Engine inlet screen anti-ice protection, exhaust heated engine inlet lips, fuel vent heating, electric propeller and windscreen de-icing systems standard. Brake de-icing optional. Pneumatic de-icing boots on wings, tailplane, tailets and stabilons.

AVIONICS: *Comms:* Collins Pro Line II digital technology radios, cabin briefer, cockpit voice recorder.

Flight: Dual flight directors, flight data recorder. Dual Loran optional.

Instrumentation: Collins EFIS-84 four-tube EFIS. Primary display consists of multicolour CRT panels, remote display processor unit and system control units. CRT displays provide conventional electronic attitude director indicator (EADI) and electronic horizontal situation indicator (EHSI) functions.

DIMENSIONS, EXTERNAL:

Wing span over winglets	17.67 m (57 ft 11⅝ in)
Wing chord: at root	2.18 m (7 ft 1⅝ in)
at tip	0.91 m (2 ft 11⅞ in)
Wing aspect ratio	10.85
Length overall	17.63 m (57 ft 10 in)
Height overall	4.72 m (15 ft 6 in)
Tailplane span	5.63 m (18 ft 5¾ in)
Wheel track	5.23 m (17 ft 2 in)
Wheelbase	7.25 m (23 ft 9⅖ in)
Propeller diameter	2.78 m (9 ft 1½ in)
Propeller ground clearance	0.35 m (1 ft 1⅜ in)
Distance between propeller centres	5.23 m (17 ft 2 in)
Passenger door: Height	1.63 m (5 ft 4⅕ in)
Width	0.64 m (2 ft 1⅕ in)
Cargo door: Height	1.45 m (4 ft 9 in)
Width	1.32 m (4 ft 4 in)
Emergency exits (each): Height	0.80 m (2 ft 7⅖ in)
Width	0.51 m (1 ft 8 in)

DIMENSIONS, INTERNAL:

Cabin, incl flight deck and rear baggage compartment:

Length	12.03 m (39 ft 5⅔ in)
Max width	1.37 m (4 ft 6 in)
Max height	1.80 m (5 ft 10¾ in)
Floor area	15.28 m² (164.5 sq ft)
Pressurised volume	26.0 m³ (918 cu ft)
Volume of passenger cabin	18.12 m³ (640 cu ft)
Baggage space, cabin: forward	0.48 m³ (17.0 cu ft)
underseat	0.91 m³ (32.0 cu ft)
rear	4.95 m³ (175 cu ft)

AREAS:

Wings, gross	28.80 m² (310.0 sq ft)
Ailerons (total)	1.67 m² (18.0 sq ft)
Trailing-edge flaps (total)	4.17 m² (44.9 sq ft)
Fin	4.86 m² (52.3 sq ft)
Rudder (incl tab)	1.40 m² (15.1 sq ft)
Tailets (total)	0.63 m² (6.8 sq ft)
Tailplane	6.32 m² (68.0 sq ft)
Elevator (incl tab)	1.79 m² (19.3 sq ft)
Stabilons (total)	1.44 m² (15.5 sq ft)

WEIGHTS AND LOADINGS:

Weight empty (typical)	4,815 kg (10,615 lb)
Max fuel (usable)	2,022 kg (4,458 lb)
Max baggage	939 kg (2,070 lb)
Max ramp weight	7,738 kg (17,060 lb)
Max T-O weight	7,688 kg (16,950 lb)
Max landing weight	7,530 kg (16,600 lb)
Max zero-fuel weight	6,804 kg (15,000 lb)
Max wing loading	266.9 kg/m² (54.68 lb/sq ft)
Max power loading	4.03 kg/kW (6.63 lb/shp)

PERFORMANCE (at max T-O weight except where indicated):

Max cruising speed at AUW of 6,804 kg (15,000 lb):

at 2,440 m (8,000 ft)	276 kts (511 km/h; 318 mph)
at 4,875 m (16,000 ft)	288 kts (533 km/h; 331 mph)
at 7,620 m (25,000 ft)	278 kts (515 km/h; 320 mph)

T-O speed, T-O flap setting: 105 kts (195 km/h; 121 mph) IAS

Approach speed at max landing weight: 117 kts (217 km/h; 135 mph)

Stalling speed at max T-O weight:

wheels and flaps up: 101 kts (187 km/h; 116 mph)

wheels down, T-O flap setting: 90 kts (167 km/h; 104 mph)

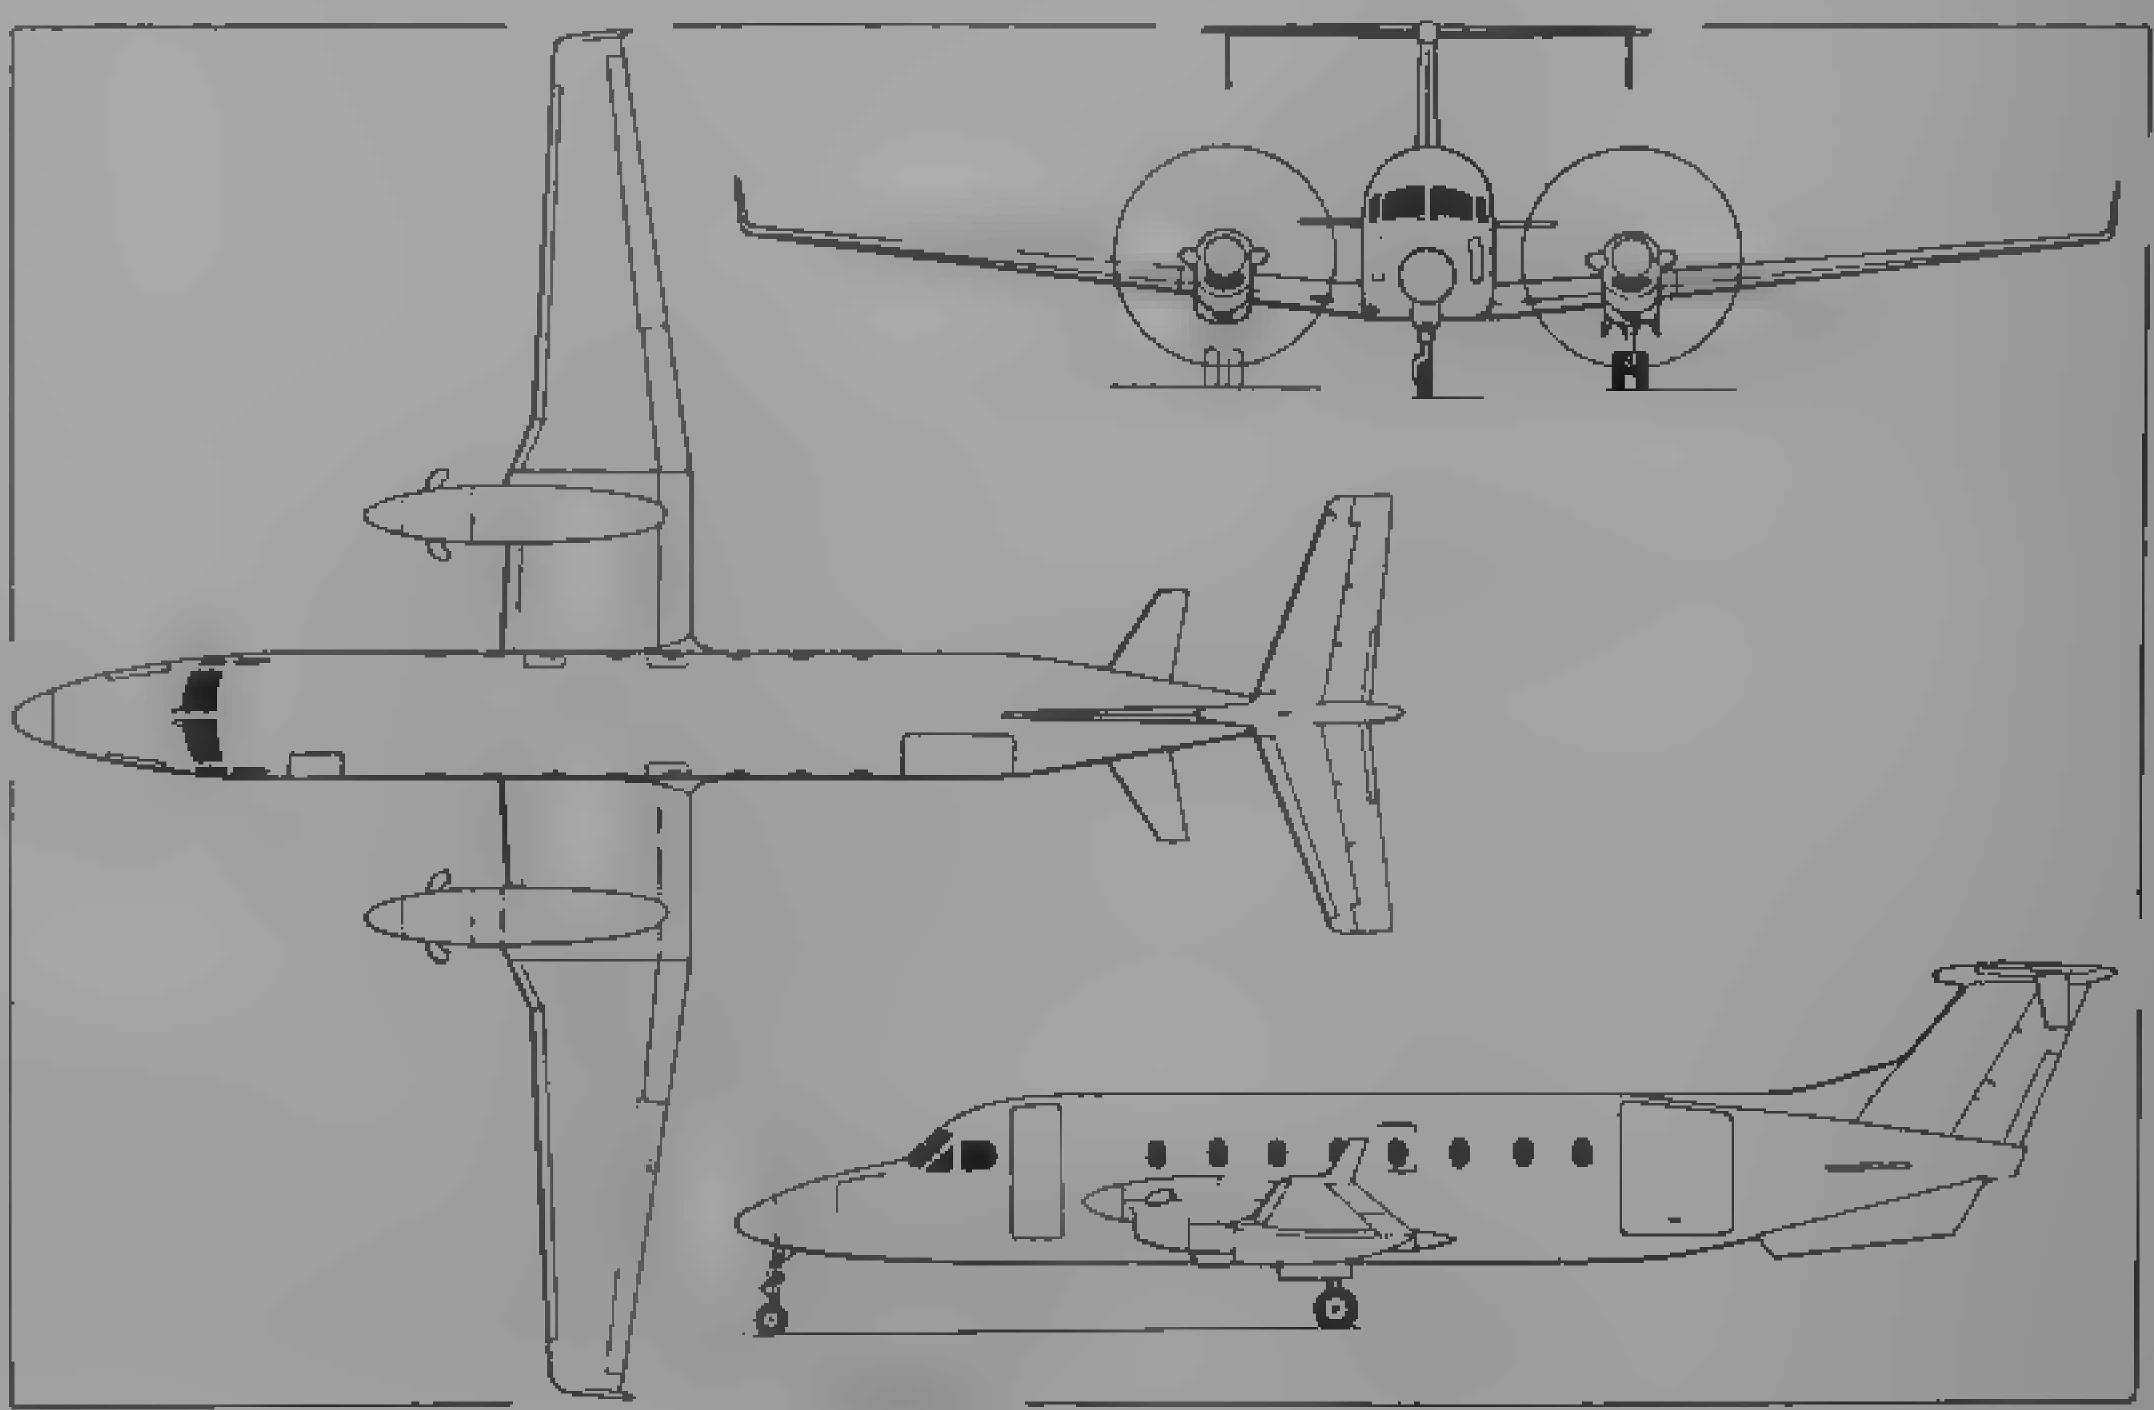
Stalling speed at max landing weight, wheels and flaps down: 84 kts (156 km/h; 97 mph)

Max rate of climb at S/L	800 m (2,625 ft)/min
Rate of climb at S/L, OEI	192 m (630 ft)/min
Service ceiling	10,058 m (33,000 ft)
Service ceiling, OEI	5,181 m (17,000 ft)
T-O field length, T-O flap setting	1,139 m (3,737 ft)

Landing from 15 m (50 ft) at max landing weight: 844 m (2,770 ft)

Range with 10 passengers, at long-range cruise power, with allowances for starting, taxi, T-O, climb and descent, with reserves (45 min hold at 1,525 m; 5,000 ft): 1,500 n miles (2,778 km; 1,726 miles)

UPDATED



Beechcraft 1900D regional transport *(Jane's/Dennis Punnett)*

1992

BEECHCRAFT 2000 STARSHIP 1

TYPE: Twin-turboprop business aircraft.

PROGRAMME: Basic certification granted 14 June 1988, full certification for two-crew operation gained December 1989, followed by FAA crew determination study, single-pilot certification requiring functioning autopilot and flight management system granted May 1990; first flight of first full production aircraft (N2000S c/n NC 4) 25 April 1989, used for demonstration flights. Starship 2000A version announced at NBAA Convention October 1991, certificated by FAA April 1992. Production ceased early 1995 with 53rd aircraft; sales have not matched production. *Abbreviated entry follows, full details in 1994-95 and earlier Jane's.*

CURRENT VERSIONS: **Starship 2000.** Initial production model.

Starship 2000A. Improved version from c/n NC-21, six-passenger interior with increased passenger/baggage space and roomier aft toilet.

CUSTOMERS: Total of 31 in use by customers, including one in Europe, by early 1995, three delivered in 1994.

COSTS: $4.3 million (1995).

DESIGN FEATURES: Pusher turboprops with propellers aft of wing, almost cylindrical cabin section mounted far forward of engines and propellers to reduce cabin noise, engines mounted close together reduce yaw moment under asymmetric thrust.

FLYING CONTROLS: Pitch axis control by elevators on foreplane and elevons on main wing, directional control and yaw stabilisation through wingtip fins, called tipsails, and rudders, electrically actuated foreplane moved from 30° cruise sweep setting to 4° forward sweep as centre of lift moves when wing-mounted Fowler trailing-edge flaps are extended.

STRUCTURE: Wing is continuous tip to tip structure of Nomex honeycomb and graphite epoxy monocoque, semi-monocoque and honeycomb sandwich with spars bonded to upper and lower skin assemblies.

LANDING GEAR: Retractable tricycle type, hydraulically operated with emergency extension.

POWER PLANT: Two Pratt & Whitney Canada PT6A-67A turboprops, each flat rated at 895 kW (1,200 shp) and driving a McCauley five-blade fully feathering and reversible-pitch metal pusher propeller. Fuel, total usable capacity 2,139 litres (565 US gallons, 470 Imp gallons), contained in integral wing tanks with flush refuelling point in upper surface of each wing; optional tank, capacity 322 litres (85 US gallons, 71 Imp gallons) in each engine nacelle.

AVIONICS: Collins integrated avionics package comprising 12 colour and two monochrome CRT displays in 'all glass' cockpit.

DIMENSIONS, EXTERNAL:

Wing span (reference)	16.60 m (54 ft 4¾ in)
Wing aspect ratio	10.53
Foreplane span: sweptforward	7.82 m (25 ft 8 in)
sweptback	6.69 m (21 ft 11½ in)
Length overall	14.05 m (46 ft 1 in)
Fuselage: Length	13.67 m (44 ft 10 in)
Diameter (constant section)	1.78 m (5 ft 10 in)
Height overall	3.94 m (12 ft 11 in)

DIMENSIONS, INTERNAL:

Cabin, excl flight deck: Length	5.08 m (16 ft 8 in)
Max width	1.68 m (5 ft 6 in)
Max height	1.61 m (5 ft 3½ in)
Floor area	5.94 m² (64.0 sq ft)
Volume (between pressure bulkheads)	13.08 m³ (462 cu ft)

AREAS:

Wings, gross	26.09 m² (280.9 sq ft)

WEIGHTS AND LOADINGS:

Weight empty, equipped	4,590 kg (10,120 lb)
Max baggage weight	311 kg (685 lb)
Max payload	1,125 kg (2,480 lb)
Max T-O weight	6,758 kg (14,900 lb)
Max zero-fuel weight	5,715 kg (12,600 lb)

PERFORMANCE (at max T-O weight, ISA, except where indicated):

Max limiting Mach number	0.60
Max cruising speed:	
at 7,620 m (25,000 ft)	335 kts (620 km/h, 385 mph)
at 10,670 m (35,000 ft)	318 kts (589 km/h, 366 mph)
Econ cruising speed at 11,280 m (37,000 ft)	279 kts (517 km/h, 321 mph)
Max rate of climb at S/L	838 m (2,748 ft)/min
Service ceiling	10,910 m (35,800 ft)
Range at 10,670 m (35,000 ft), max usable fuel, with reserves, econ cruise power	1,514 n miles (2,804 km, 1,742 miles)

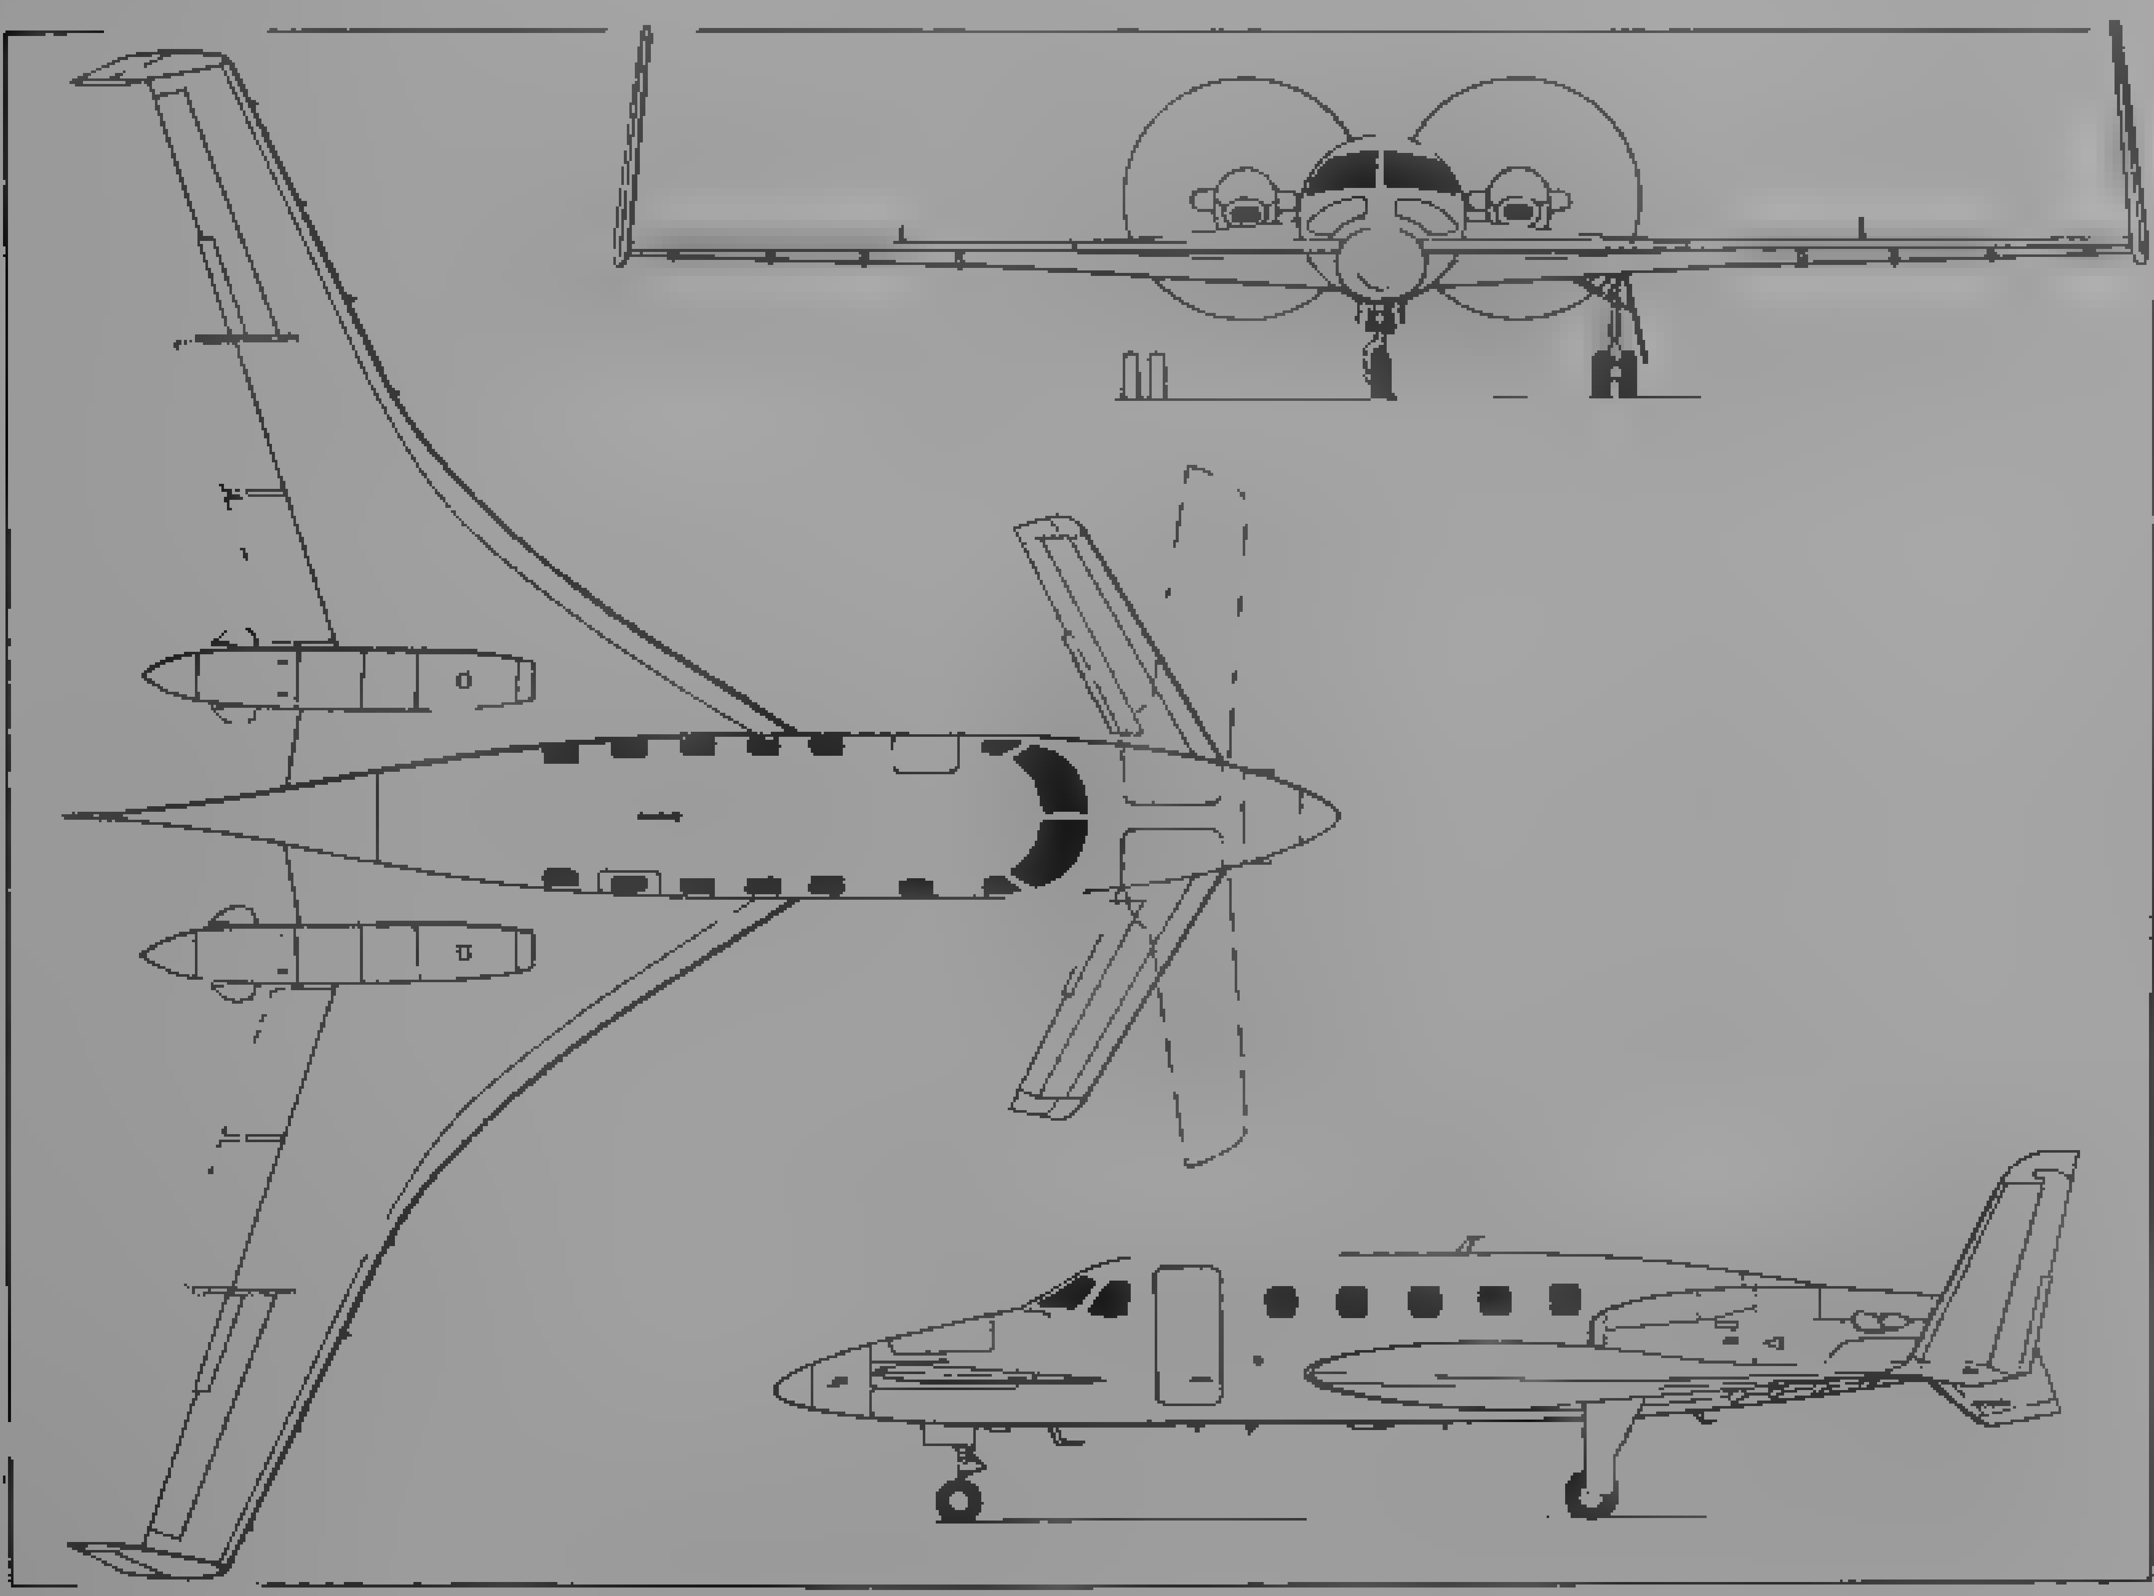
Beechcraft 2000A Starship (two 1,200 shp PT6A-67A turboprops) 1995



Beechcraft 2000A Starship 1 six/seven-passenger business aircraft (*Jane's/Dennis Punnett*) 1985

BEECHCRAFT 400A BEECHJET

US Air Force designation: T-1A Jayhawk

JASDF designation: T-400

TYPE: Twin-turbofan business aircraft and military trainer.

PROGRAMME: Beech acquired rights to Diamond II from Mitsubishi Heavy Industries and Mitsubishi Aircraft International, December 1985, made improvements to aircraft and renamed it Beechjet 400. First Beech assembled Beechjet rolled out 19 May 1986. During 1989, Beech moved entire manufacturing operation to Wichita. Announced new Beechjet 400A November 1989, featuring certification to 13,715 m (45,000 ft), larger and more comfortable cabin, all Collins avionics with digital EFIS, customer deliveries began November 1990.

CURRENT VERSIONS: **Beechjet 400:** Initial production version (64 built, see earlier *Jane's*), superseded by 400A.

Beechjet 400A. Announced at 1989 NBAA show, production 400A first flight 22 September 1989, FAA certification received 20 June 1990; deliveries began November 1990. Also certificated by July 1993 in Australia, Canada, France, Germany, Italy and UK; Brazilian and Pakistani type approval April 1994.

Beechjet T-1A Jayhawk. US Air Force selected McDonnell Douglas, Beechcraft and Quintron to supply Tanker Transport Training System (TTTS) on 21 February 1990, including requirement for 180 Beechjet 400Ts, valued at $755 million and designated T-1A Jayhawk, represents missionised version of 400A, sharing many components and characteristics with commercial counterpart; differences include cabin-mounted avionics, increased air conditioning capability, greater fuel capacity with single-point refuelling and strengthened windscreen and leading-edges for low-level birdstrike protection. First production aircraft (90-0400) delivered 17 January 1992; deliveries scheduled at approximately three per month until May 1997.

IOC for USAF Jayhawks January 1993, for Air Education and Training Command Specialised Undergraduate Pilot Training (SUPT) programme at Reese AFB (52nd FTS/64th FTW) where establishment of 41 received by October 1993. Second recipient was 99th FTS/12th FTW at Randolph AFB, Texas, where 16 delivered for instructor training in 1993, third unit was 86th FTS/47th FTW at Loughlin AFB, Texas, from late 1993 with training courses beginning May 1994; further two operators to be 71st FTW at Vance AFB, Oklahoma, (first aircraft December 1994) and 14th FTW at Columbus AFB, Mississippi, where training scheduled to begin in September 1995 and September 1996, respectively. T-1A used for training crews for KC-10, KC-135, C-5 and C-17. Jayhawk fleet had accumulated more than 52,000 flight hours by September 1994.

Beechjet 400T T-400: JASDF version, featuring thrust reversers, long-range inertial navigation and direction-finding systems, interior changes. Meets TC-X trainer requirement; three, three, two and one ordered in 1992-95, first (41-5051) delivered 31 January 1994.

CUSTOMERS: Total 104 civil 400A delivered by end of 1994. US Air Force 180 T-1As ordered, of which 28 delivered in 1992, 33 in 1993 and cumulative total of 100 by January 1995, 113 by June 1995. JASDF (nine ordered; six delivered in 1994, two in 1995 and one in 1996).

BEECHCRAFT T-1A JAYHAWK FUNDING

FY	Lot	Qty	First Aircraft	Delivery
89	—	1	89-0284	1991
90	1	14	90-0400	1992
91	2	28	91-0075	1992-93
92	3	34	92-0330	1993-94
93	4	36	93-0621	1994-95
94	5	35	94-0114	1995-96
95	6	32		1996-97
Total		180		

COSTS: Jayhawk programme cost $1.3 billion, Beech contracts for 180 aircraft, $755 million. Civil 400A quoted at $5.4 million in early 1995.

DESIGN FEATURES: Swept wing has computer designed three-dimensional Mitsubishi MAC510 aerofoil thickness/chord ratio 13.2 per cent at root, 11.3 per cent at tip; dihedral 2° 30'; incidence 3° at root, -3° 30' at tip; sweepback 20° at quarter-chord. Features of Beechjet 400A include increased payload and certificated ceiling, greater cabin volume achieved by moving rear-fuselage fuel tank forward under floor (balanced by moving toilet to rear of cabin), improved soundproofing, and emergency door moved one window forward to facilitate forward club seating.

Beechcraft T-1A Jayhawk Tanker Transport Training System aircraft

1995

T-1A Jayhawk features include student pilot in left seat, instructor on right and pupil/observer behind instructor, more bird-resistant windscreen and leading-edges, fewer cabin windows, strengthened wing carry-through structure and engine attachment points to meet low-level flight stresses, rails for four passenger seats in cabin for personnel transport, avionics relocated from nose to rack in cabin to facilitate nose installation of air conditioning, emergency door moved forward to position opposite main cabin door to allow straight-through egress, improved brakes, additional fuel tank, single-point pressure refuelling, Rockwell Collins five-tube EFIS, digital autopilot, weather radar, central diagnostic and maintenance system, Tacan with air-to-air capability.

FLYING CONTROLS: Variable incidence tailplane and elevators for pitch axis, lateral control by small ailerons and almost full semi-span, narrow chord spoilers used also as airbrakes and lift dumpers, narrow chord Fowler type flaps, double-slotted inboard and single-slotted outboard, occupy most of trailing-edges and are hydraulically actuated, mid-span leading-edge fences on wing, small horizontal strakes on fuselage at base of fin, small ventral fin.

STRUCTURE: Wings include integrally machined metal upper and lower skins joined to two box spars forming integral fuel tank, tailplane and fin similar. Wing, fuselage and tail unit certificated fail-safe for unlimited life (with periodic inspections and maintenance).

LANDING GEAR: Retractable tricycle type, with single wheel and oleo-pneumatic shock-absorber on each unit. Hydraulic actuation, controlled electrically. Emergency free-fall extension. Nosewheel, which is steerable by rudder pedals, retracts forward, mainwheels retract inward into fuselage. Goodyear wheels and tyres, Aircraft Braking Systems brakes.

POWER PLANT: Two Pratt & Whitney Canada JT15D-5 turbofans, each rated at 13.19 kN (2,965 lb st) for take-off. Rohr thrust reversers optional on 400A, but not fitted to T-1A. Total usable fuel capacity: 400A 2,775 litres (733 US gallons, 610.3 Imp gallons); 400T 2,998 litres (792 US gallons, 656 Imp gallons). One refuelling point in top of each wing, and one in rear fuselage for fuselage tank, capacity 1,158 litres (305.8 US gallons, 254.6 Imp gallons). (T-1A, single-point refuelling.) Oil capacity 7.7 litres (2 US gallons; 1.7 Imp gallons).

ACCOMMODATION: Crew of two on flight deck of 400A, T-1A has seats for trainee pilot, co-pilot/instructor and observer. Standard double club layout of 400A seats eight passengers in pressurised cabin, with eight tracking, reclining seats in facing pairs, each with integral headrest, armrest and shoulder harness. Fold-out writing table between each pair of seats. Private flushing lavatory at rear with sliding doors and optional lighted vanity unit and hot water supply. With seat belts, this compartment can serve as an additional passenger seat. Interior options include substitution of carry-on baggage compartment, volume 0.34 m³ (12.0 cu ft), for one of the forward club seats, and hot and cold service refreshment centre with integral stereo entertainment system. Independent temperature control for flight deck and cabin heating systems standard. In-flight telephone optional. Rear baggage compartment with external access; capacity 204 kg (450 lb). Optional four passenger seats in main cabin of T-1A. The 400T has an aft club arrangement with swivel chairs.

SYSTEMS: Pressurisation system, with normal differential of 0.63 bar (9.1 lb/sq in). Back-up pressurisation system, using engine bleed air, for use in emergency. Hydraulic system, pressure 103.5 bars (1,500 lb/sq in), for actuation of flaps, landing gear and other services. Each variable volume output engine-driven pump has a maximum flow rate of 14.76 litres (3.9 US gallons, 3.25 Imp gallons)/min and one pump can actuate all hydraulic systems. Reservoirs capacity 4.16 litres (1.1 US gallons, 0.9 Imp gallon), pressurised by filtered engine bleed air at 1.03 bars (15 lb/sq in). All systems are, wherever possible, of modular conception; for example, entire hydraulic installation can be removed as a single unit. Stick shaker as back-up stall warning device.

AVIONICS: *Instrumentation:* Standard avionics include pilot's integrated Collins Pro Line 4 EFIS featuring three-tube (optional four-tube) colour CRT primary flight display (PFD) and multifunction display (MFD) units mounted side by side, and control/display unit. PFD displays airspeed, altitude, vertical speed, flight director, attitude and horizontal situation information, while MFD displays navigation, radar, map, checklist and fault annunciation information. Smaller, single or dual CRTs mounted on central console function as independent navigation sensor displays or back-up displays for main CRTs. EFIS installation features strapdown attitude/heading referencing system, electronic map navigation display, airspeed trend information and V-speeds on Mach airspeed display, and solid state Doppler turbulence detection radar.

DIMENSIONS, EXTERNAL:

Wing span	13.25 m (43 ft 6 in)
Wing aspect ratio	7.83
Length overall	14.75 m (48 ft 5 in)
Fuselage: Length	13.15 m (43 ft 2 in)
Max width	1.68 m (5 ft 6 in)
Max depth	1.85 m (6 ft 1 in)
Height overall	4.24 m (13 ft 11 in)
Tailplane span	5.00 m (16 ft 5 in)
Wheel track	2.84 m (9 ft 4 in)
Wheelbase	5.86 m (19 ft 3 in)
Crew/passenger door: Height	1.27 m (4 ft 2 in)
Width	0.71 m (2 ft 4 in)

DIMENSIONS, INTERNAL:

Cabin:	
Max length, incl flight deck	6.37 m (20 ft 11 in)
Length, excl flight deck	4.78 m (15 ft 8 in)
Max width	1.50 m (4 ft 11 in)
Max height	1.45 m (4 ft 9 in)
Volume: incl flight deck	11.32 m³ (400 cu ft)
excl flight deck	8.64 m³ (305 cu ft)
Baggage compartment volume	0.75 m³ (26.4 cu ft)

AREAS:

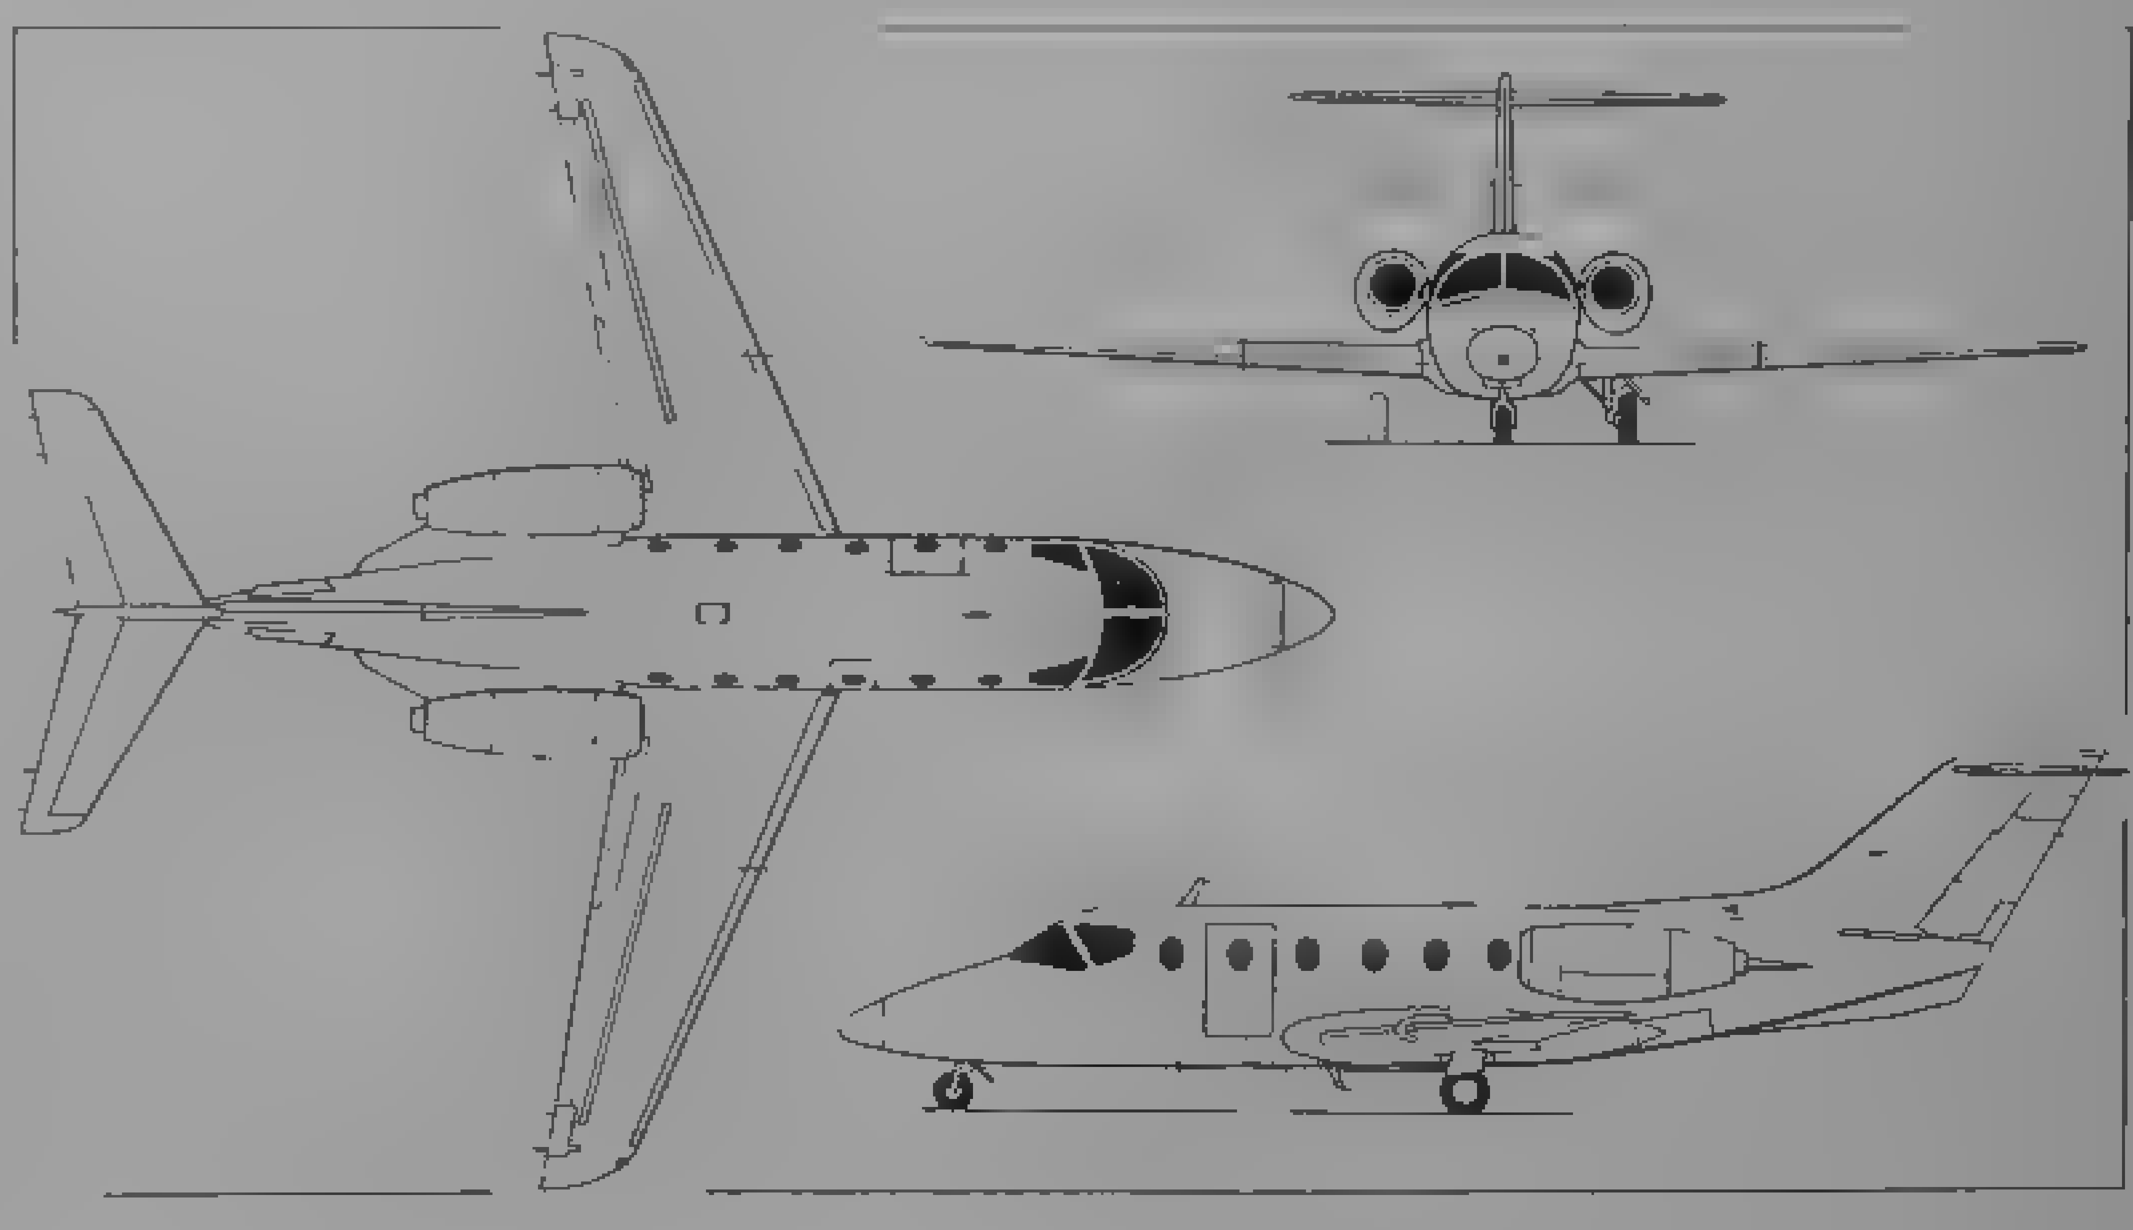
Wings, net	22.43 m² (241.4 sq ft)
Trailing-edge flaps (total)	4.22 m² (45.4 sq ft)
Spoilers (total)	0.57 m² (6.2 sq ft)
Fin, incl dorsal fin	5.91 m² (63.6 sq ft)
Rudder, incl yaw damper	0.99 m² (10.7 sq ft)
Tailplane	5.25 m² (56.5 sq ft)
Elevators, incl tab	1.55 m² (16.7 sq ft)

WEIGHTS AND LOADINGS:

Basic operating weight, incl crew, avionics and interior fittings	4,833 kg (10,655 lb)
Max fuel weight	2,228 kg (4,912 lb)
Max T-O weight	7,303 kg (16,100 lb)
Max ramp weight	7,393 kg (16,300 lb)
Max zero-fuel weight	5,896 kg (13,000 lb)
Max landing weight	7,121 kg (15,700 lb)
Max power loading	284.26 kg/kN (2.78 lb/lb st)

PERFORMANCE (at max T-O weight, ISA, except where indicated):

Max limiting Mach number	0.78
Max level speed at 8,230 m (27,000 ft)	468 kts (867 km/h, 539 mph)
Typical cruising speed at 12,500 m (41,000 ft)	450 kts (834 km/h, 518 mph)



Beechcraft Beechjet 400A (two P&WC JT15D-5 turbofans) *(Jane's/Dennis Punnett)*

1989

Long-range cruising speed at 12,500 m (41,000 ft)
392 kts (726 km/h, 451 mph)
Stalling speed, flaps down, idling power
93 kts (173 km/h; 107 mph) CAS
Max operating altitude: 400A 13,715 m (45,000 ft)
T-1A/T400 12,500 m (41,000 ft)
FAA (FAR 25) T-O to 10.7 m (35 ft), at S/L, ISA
1,159 m (3,802 ft)
FAA landing distance from 15 m (50 ft) at S/L, ISA, max landing weight 1,072 m (3,514 ft)
Range with four passengers, max fuel, ISA, zero wind, with allowance for climb and descent, long range cruise power, NBAA VFR reserves
1,805 n miles (3,343 km, 2,077 miles)

UPDATED

RAYTHEON PD 374

TYPE: Six-seat twin-turbofan business aircraft.

PROGRAMME: Design started early 1994 and approved early 1995; brief details revealed June 1995; to be launched at NBAA convention September 1995 to compete with Cessna CitationJet. First type to have Raytheon brand name.

DESIGN FEATURES: Sweptback low wing, rear-mounted engines; T tail.

FLYING CONTROLS: Fly-by-light system with fibre optic signalling.

STRUCTURE: Composites fuselage, all-metal wing.

LANDING GEAR: Retractable tricycle type.

POWER PLANT: Two 10.23 kN (2,300 lb st) class Williams International FJ44-2 turbofans, pylon mounted on sides of rear fuselage.

Beechjet 400As used by UND Aerospace for training China Airlines pilots

1995

AVIONICS: Collins EFIS suite, including flat panel displays.

New 24,620 m² (265,000 sq ft) plant for R44 production completed 1994; planned to work up to 800 employees when R44 in full production.

UPDATED

ROBINSON R22 BETA

TYPE: Two-seat light helicopter.

PROGRAMME: Design began 1973, first flight 28 August 1975, first flight of second R22 early 1977, FAA certification 16 March 1979, UK certification June 1981, deliveries began October 1979; R22 Alpha certificated October 1983, R22 Beta 5 August 1985.

CURRENT VERSIONS: **R22 Beta**: Standard version from c/n 501 onwards; increased horsepower; 89 delivered in 1994. *Main description applies to this version except where indicated.*

R22 Mariner: Has floats and ground wheels; first delivered for operation from tuna fishing boats off Mexico and Venezuela; 18 delivered in 1994.

R22 Police: Special communications and other equipment including removable port-side controls, 70 A alternator, searchlight, loudspeaker, siren and transponder.

R22 IFR: Equipped with flight instruments and radio to allow training for helicopter IFR flying (see under Avionics); four delivered in 1994.

External load R22: Hook kit certificated for 181 kg (400 lb) produced by Classic Helicopter Corporation, Boeing Field, Seattle, Washington; weighs 2.3 kg (5 lb); used for slung load training; never-exceed speed with load in place limited to 75 knots (139 km/h, 86 mph).

R22 Agricultural: Equipped with Apollo Helicopter Services DTM 3 spray system, FAA approved December 1991. Low-drag belly tank contains 151 litres (40 US gallons; 33.3 Imp gallons); boom length 7.31 m (24 ft 0 in); tank frame attached to landing gear mounting points with four bolts and wing nuts; installation of entire system requires no tools and can be completed by one person in approximately 5 minutes. System cost $6,000 (1992) including installation kit.

CUSTOMERS: Total production 2,506 by early 1995, including 222 delivered in 1992, 135 in 1993 and 111 (89 Betas, 18 Mariners and four IFRs) in 1994. Further 31 ordered January 1995.

COSTS: $115,850 for basic R22 Beta.

DESIGN FEATURES: Horizontally mounted piston engine drives transmission through multiple V belts and sprag-type overrunning clutch; main and tail gearboxes use spiral bevel gears; maintenance-free flexible couplings of proprietary manufacture used in both main and tail rotor drives. Two-blade semi-articulated main rotor, with tri-hinged underslung rotor head to reduce blade flexing, rotor vibration and control force feedback, and an elastic teeter hinge stop to prevent blade-boom contact when starting or stopping rotor in high winds; blade section NACA 63-015 (modified); two-blade tail rotor on port side; rotor brake standard.

FLYING CONTROLS: All mechanical; cyclic stick mounted between pilots with handgrips on swing arm for comfortable access from either seat.

STRUCTURE: All-metal bonded blades with stainless steel spar and leading-edge, light alloy skin and light alloy honeycomb filling; cabin section of steel tube with metal and plastics skinning; fail monocoque tailboom.

LANDING GEAR: Welded steel tube and light alloy skid landing gear, with energy absorbing crosstubes. Twin float/skid gear on Mariner with additional tailplane surface on lower tip of fin.

POWER PLANT: One 119 kW (160 hp) Textron Lycoming O-320-B2C flat-four engine (derated to 97.5 kW, 131 hp for T-O), mounted in the lower rear section of the main fuselage, with cooling fan. Light alloy main fuel tank in upper rear section of the fuselage on port side, usable capacity 72.5 litres (19.2 US gallons; 16 Imp gallons). Optional auxiliary fuel tank, capacity 39.75 litres (10.5 US gallons, 8.7 Imp gallons). Oil capacity 5.7 litres (1.5 US gallons, 1.25 Imp gallons).

ACCOMMODATION: Two seats side by side in enclosed cabin, with inertia reel shoulder harness. Curved two-panel windscreen. Removable door, with window, on each side. Police version has observation doors with bubble windows, which are also available as options on other models. Baggage space beneath each seat. Cabin heated and ventilated.

SYSTEMS: Electrical system, powered by 12 V DC alternator, includes navigation, panel and map lights, dual landing lights, anti-collision light and battery. Second battery optional.

AVIONICS: *Comms*: Bendix/King KY 197 VHF com radio, Bendix/King KCS 55A HSI, KR 87 ADF, KX 165 nav/com digital display radio, KT 76A transponder.

Flight: KR 22 marker beacon receiver, KN 53 nav receiver, Apollo II Bendix/King or Northstar Loran C, and KR 87 ADF. IFR trainer avionics include Bendix/King KN 63 DME.

Instrumentation: AIM 305-1 ALD VF artificial horizon, Bendix/King KEA 129 encoding altimeter, Astronautics DC turn indicator, rate of climb indicator, sensitive altimeter, quartz clock, hour meter, low rotor rpm warning horn, temperature and chip warning lights for main gearbox and chip warning light for tail gearbox.

DIMENSIONS, EXTERNAL:

Main rotor diameter	7.67 m (25 ft 2 in)
Tail rotor diameter	1.07 m (3 ft 6 in)
Main rotor blade chord	0.18 m (7.2 in)
Distance between rotor centres	4.39 m (14 ft 5 in)

Robinson R22 Mariner

1995

Robinson R22 Beta two-seat helicopter

1995

Length overall (rotors turning) 8.76 m (28 ft 9 in)
Fuselage: Length 6.30 m (20 ft 8 in)
Max width 1.12 m (3 ft 8 in)
Height overall 2.67 m (8 ft 9 in)
Skid track 1.93 m (6 ft 4 in)

DIMENSIONS, INTERNAL:
Cabin: Max width 1.12 m (3 ft 8 in)

AREAS:
Main rotor blades (each) 0.70 m² (7.55 sq ft)
Tail rotor blades (each) 0.037 m² (0.40 sq ft)
Main rotor disc 46.21 m² (497.4 sq ft)
Tail rotor disc 0.89 m² (9.63 sq ft)
Fin 0.21 m² (2.28 sq ft)
Stabiliser 0.14 m² (1.53 sq ft)

WEIGHTS AND LOADINGS:
Weight empty (without auxiliary fuel tank) 379 kg (835 lb)
Fuel weight: standard 52 kg (115 lb)
auxiliary 28.6 kg (63 lb)
Max T-O and landing weight 621 kg (1,370 lb)
Max zero-fuel weight 569 kg (1,255 lb)
Max disc loading 13.43 kg/m² (2.75 lb/sq ft)

PERFORMANCE (at max T-O weight, ISA):
Never-exceed speed (VNE) without sling load 102 kts (190 km/h, 118 mph)
Max level speed 97 kts (180 km/h, 112 mph)
Cruising speed, 75% power at 2,440 m (8,000 ft) 96 kts (177 km/h, 110 mph)
Econ cruising speed 82 kts (153 km/h, 95 mph)
Max rate of climb at S/L 366 m (1,200 ft)/min
Rate of climb at 1,525 m (5,000 ft) 323 m (1,060 ft)/min
Service ceiling 4,265 m (14,000 ft)
Hovering ceiling IGE 2,125 m (6,970 ft)
Range with auxiliary fuel and max payload, no reserves 319 n miles (592 km; 368 miles)
Endurance at 65% power, auxiliary fuel, no reserves 3 h 20 min

ROBINSON R44 ASTRO

TYPE: Four-seat light helicopter.

PROGRAMME: Development began 1986; first flight 31 March 1990; prototype (N44RH) and second aircraft had flown more than 200 hours by end January 1992, first flight of third R44 March 1992, certification completed 10 December 1992.

CUSTOMERS: $15,000 deposits for 36 taken on first day of sales 22 March 1992, orders 180 in early 1994; 31 delivered in 1993, 106 in 1994. Further 24 ordered in January 1995.

COSTS: Standard price $255,000 (1995).

DESIGN FEATURES: New design incorporating some proven concepts of R22, designed to requirements of FAR Pt 27; features for comfort and safety include electronic throttle governor to reduce pilot workload by controlling rotor and engine rpm during normal operations, rotor brake, advanced warning devices, automatic clutch engagement to simplify and reduce start-up procedure and reduce chance of overspeed, T-bar cyclic control, and crashworthy features including energy-absorbing landing gear and lap/shoulder strap restraints designed for high forward g loads. High reliability and low maintenance, patented rotor design with tri-hinge (see R22), low noise levels.

FLYING CONTROLS: Conventional, with Robinson central cyclic stick; rpm governor; rotor brake standard; left-hand collective lever and pedals removable.

LANDING GEAR: Fixed skids.

POWER PLANT: One 194 kW (260 hp) Textron Lycoming O-540 flat-six engine, derated to 165 kW (225 hp) at T-O, 153 kW (205 hp) continuous.

ACCOMMODATION: Four persons seated 2 + 2. Concealed baggage compartments. Dual controls.

SYSTEMS: Heating and ventilation.

AVIONICS: Wide selection of optional avionics and instruments.

Comms: Bendix/King KY 197 VHF radio with intercom for all four occupants.

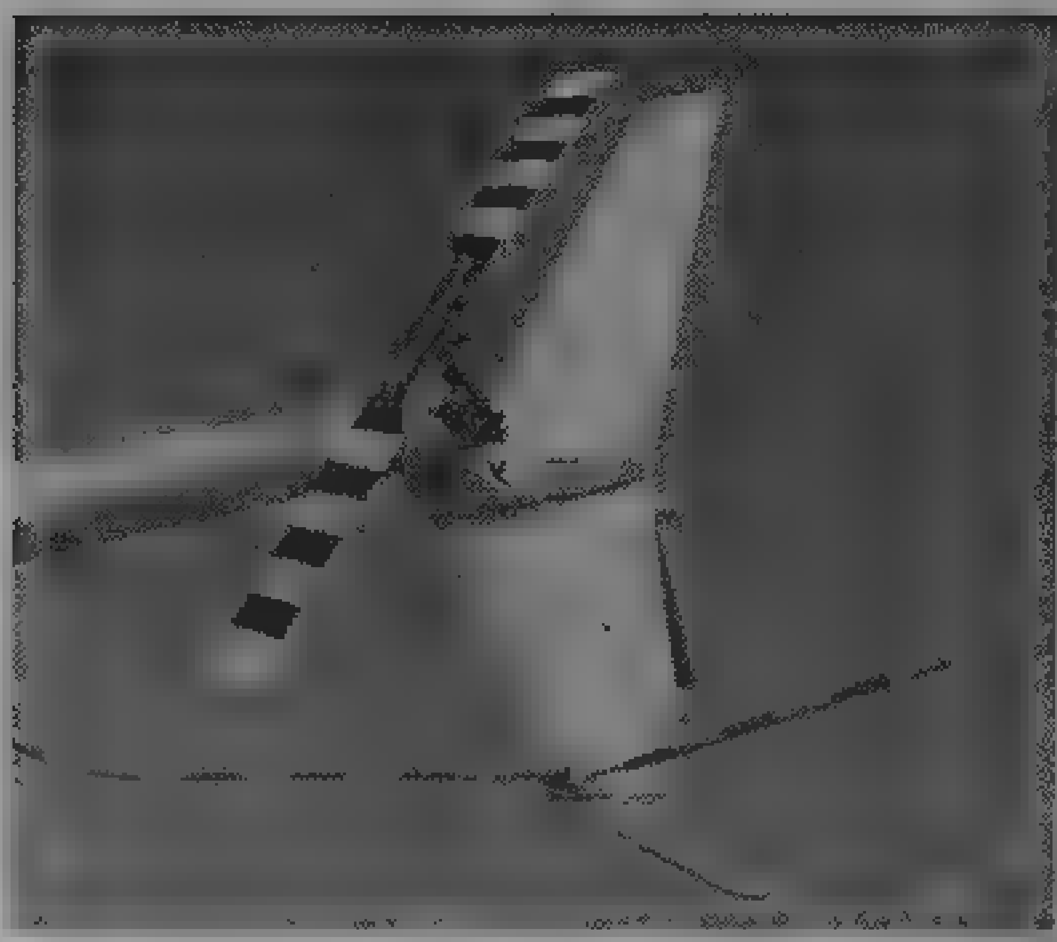
EQUIPMENT: Standard equipment includes auxiliary fuel system, heater.

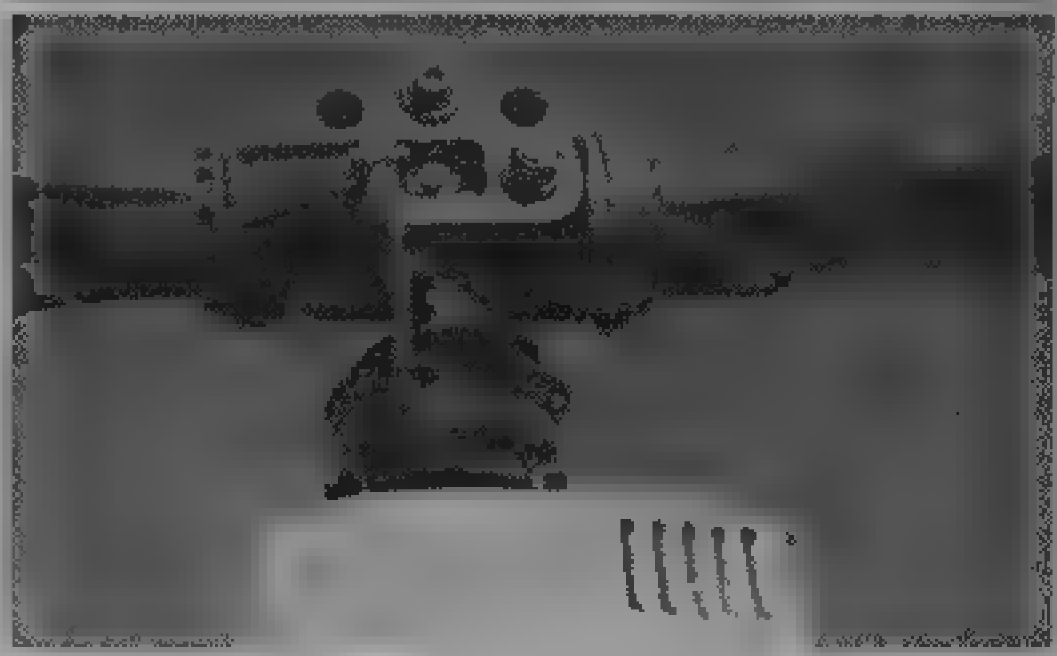
DIMENSIONS, EXTERNAL:
Main rotor diameter 10.06 m (33 ft 0 in)
Tail rotor diameter 1.47 m (4 ft 10 in)
Height overall 3.28 m (10 ft 9 in)
Skid track 2.18 m (7 ft 2 in)

DIMENSIONS, INTERNAL:
Cabin: Max width 1.28 m (4 ft 2½ in)

AREAS:
Main rotor disc 79.46 m² (855.3 sq ft)
Tail rotor disc 1.70 m² (18.35 sq ft)

WEIGHTS AND LOADINGS:
Weight empty, standard 635 kg (1,400 lb)
Fuel weight: standard 86 kg (190 lb)
auxiliary 50 kg (110 lb)
Max T-O and landing weight 1,088 kg (2,400 lb)
Max disc loading 13.70 kg/m² (2.81 lb/sq ft)





Robinson R44 main and tail rotors. Tri-hinged main rotor eliminates lag hinges, dampers and hydraulic struts

1994

PERFORMANCE (at max T-O weight, ISA, except where indicated):
Cruising speed, 75% power 113 kts (209 km/h, 130 mph)
Max rate of climb at S/L 305 m (1,000 ft)/min
Service ceiling 4,270 m (14,000 ft)
Hovering ceiling: IGE 1,860 m (6,100 ft)
OGE 1,370 m (4,500 ft)
Max range, no reserves approx 347 n miles (643 km, 400 miles)

North American Aviation founded 1928 and manufactured aircraft from 1934, merged with Rockwell Standard Corporation of Pittsburgh, Pennsylvania (which manufactured Aero Commander aircraft), 22 September 1967, forming North American Rockwell Corporation, became Rockwell International Corporation in 1973, present name adopted March 1994. Four major businesses comprise aerospace, automotive, electronics and graphics. Aerospace includes production of military aircraft, manned and unmanned space systems, rocket engines, advanced space-based surveillance systems, and high-energy laser and other directed energy programmes. Electronics includes industrial automation equipment and systems, avionics products and systems, and related communications technologies primarily used in commercial and military aircraft; commercial telecommunications systems and products, and defence electronics systems and products for precision guidance and control, for tactical weapons and for command, control, communications and intelligence.

In addition to programmes detailed, Rockwell teamed with DASA in X-31A programme (see NASA entry, this section and Rockwell/DASA entry in International section) and to offer Ranger 2000 for JPATS training aircraft requirement (see International section).

Modification work includes upgrade of Australian F/RF-111C avionics, with functional flight test phase of prototype conversion commencing at Palmdale late 1994 and was due for completion early 1995, to be followed by 12 month performance evaluation flight test programme at McClellan AFB, California under RAAF management. Total of 17 F-111C and four RF-111C to be involved in modification project (see *Jane's Aircraft Upgrades*).

Rockwell's North American Aircraft Modification Division also selected by Czech Republic Ministry of Defence to undertake design and integration of avionics system for L-159 single-seat light fighter/attack derivative of Aero Vodochody Albatros. Value of prototype programme estimated at about \$20 million, with 33 month initial test effort to be followed by production of up to 72 L-159s for Czech Air Force. Further details of L-159 in Aero Vodochody entry in Addenda.

ROCKWELL (LOCKHEED MARTIN) AC-130U SPECTRE

TYPE: Aerial gunship.

PROGRAMME: Development of new gunship version of Lockheed Martin C-130 Hercules launched 6 July 1987 with \$155,233,489 contract to North American Aircraft Operations; last contract awarded 31 December 1992; total value \$523.9 million.

Prototype delivered to Rockwell as standard C-130H transport, 28 July 1988, first post-conversion flight on 20 December 1990 was also ferry to Edwards AFB, California, for trials with 6510th Test Wing; work on remaining AC-130Us began January 1991, by January 1993, six aircraft complete, of which three with 418th Test Squadron/412th TW (ex-6510th TW) at Edwards AFB, operational unit 4th Special Operations Squadron at Hurlburt

1995

Third production Lockheed Martin Hercules conversion by Rockwell to AC-130U Spectre gunship

1995

Field, Florida, deliveries delayed by software and other changes; completion of FSD slipped from June 1991 to mid-1995, first aircraft delivered in June 1994, balance to follow by August 1995. Armament, firing to port, consists of (front to rear) trainable General Electric GAU-12/U

AC-130U PROCUREMENT

FY	Batch	Qty	First aircraft
87	—	1	87 0128
89	Lot 1	6	89 0509
90	Lot 2	5	90 0163
92	Lot 3	1	92-0167
Total		**13**	

25 mm six-barrel Gatling gun with 3,000 rounds, Bofors 40 mm gun, and a 105 mm gun based on US Army howitzer; addition of Rockwell Hellfire ASMs under consideration 1992; guns can be slaved to Hughes AN/APG-180 (modified AN/APG-70) digital fire control radar, Texas Instruments AN/AAQ-17 FLIR or GEC Marconi all light level television (ALLTV), for night and adverse weather attack on ground targets; sideways-facing HUD for visual aiming. Attack method was originally to circle target at altitude firing into apex of turn on ground, but guns can now be trained, relieving pilot of absolute precision flying. flight path is also less predictable; can fire on two targets simultaneously. AC-130U can refuel in flight and fly escort, surveillance, armed reconnaissance/interdiction, rescue and search missions.

Prone observer's position on rear ramp; starboard-side observer's window aft of flight deck, and battle management centre in cabin with five positions at monitoring consoles and four IBM AP-102 computers; crew totals 13, including flight crew and loaders. Defensive aids believed similar to those in MC-130H, modified fuel tank pylons contain IR countermeasures, total of 300 chaff bundles and 90 MJU7 or 180 M206 flares in three AN/ALE-40 launchers under fuselage, two ITT Avionics AN/ALQ-172 jammers in base of fin and on forward fuselage, Loral AN/ALR-56M RWR, AN/AAR-44 IR warner, QRC-84-02 IRCM and AN/APR-46 threat avoidance system, other equipment includes INS and GPS, triple MIL-STD-1553B digital databuses and Spectra ceramic armour protection.

ROTORWAY INTERNATIONAL

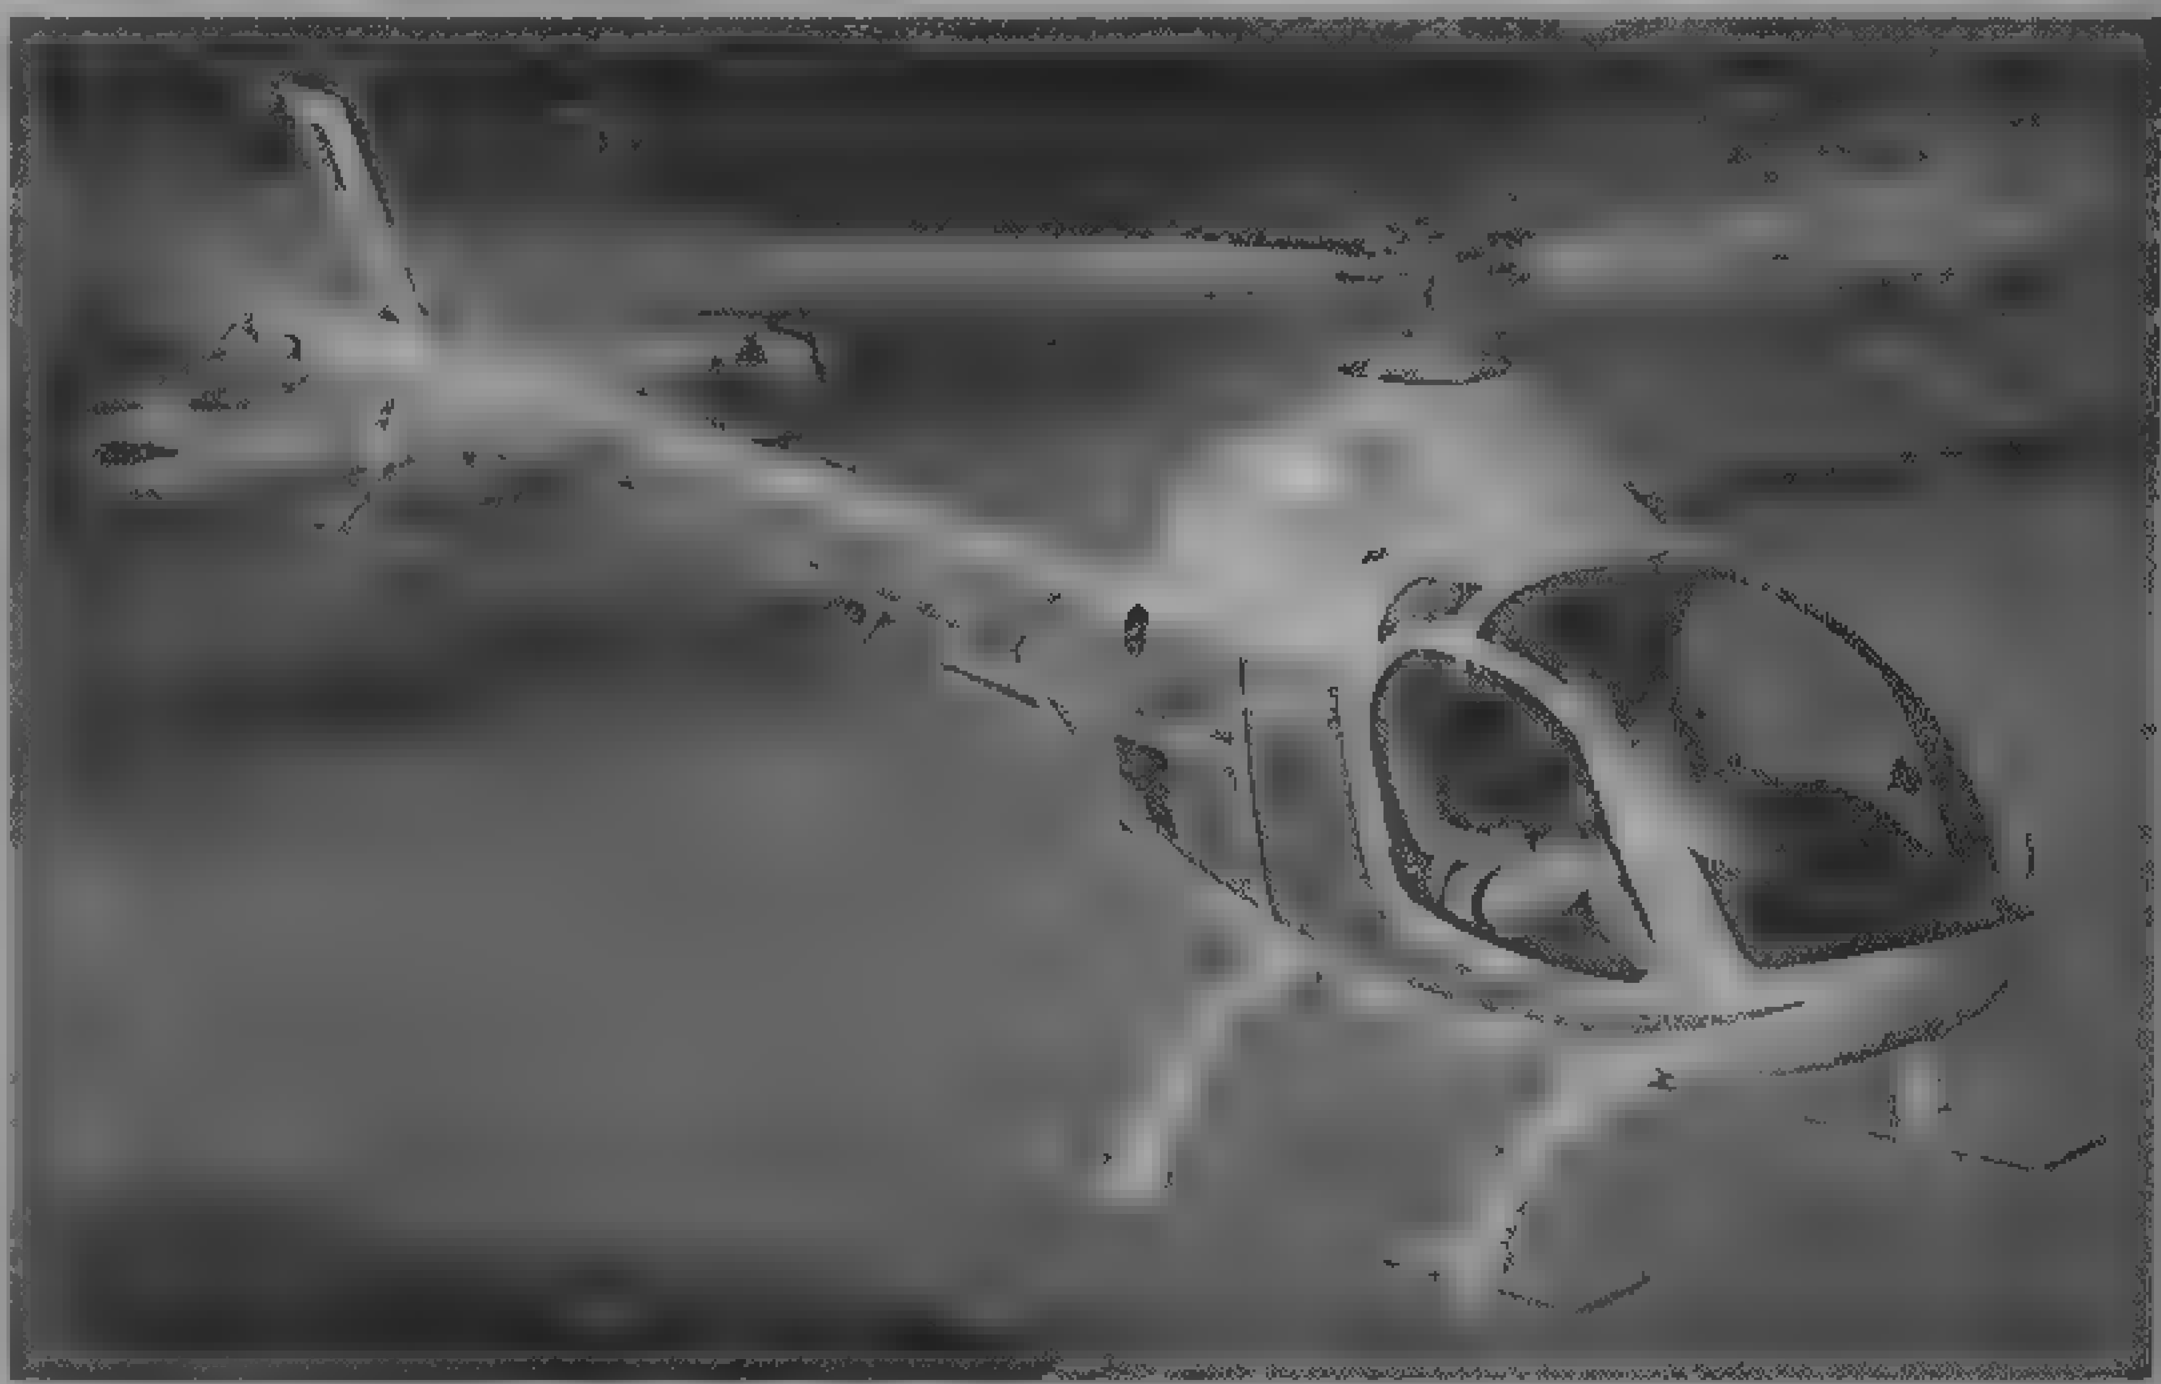
4141 West Chandler Boulevard, Chandler, Arizona 85226
Telephone 1 (602) 961 1001
Fax 1 (602) 961 1514
PRESIDENT: John Netherwood

Assets of former RotorWay Aircraft Inc purchased by John Netherwood, and new company established on 1 June 1990, now trading as RotorWay International. Original product was Exec 90, the former Exec with some 23 modifications. In August 1994, Exec 162F introduced and replaced the Exec 90; 162F improvements can be retrofitted to Exec 90.

RotorWay currently manufactures Exec 162F helicopter kits for final assembly by amateur builders, powered by the company's own R 1 2.66 litre (162 cu in) liquid-cooled engine; kit comes complete and only requires paint and avionics.

Some foreign distributors also sell helicopter fully assembled and test flown for delivery. RotorWay offers flight orientation and maintenance training, and customer service programme. RotorWay has a 3,440 m² (37,000 sq ft) facility on an Air Park outside Phoenix, Arizona. The facility incorporates all of RotorWay's departments including manufacturing, sales and flight school.

UPDATED



RotorWay International Exec 162F two-seat homebuilt helicopter *1995*

ROTORWAY INTERNATIONAL EXEC 162F

TYPE: Side by side two-seat homebuilt helicopter

PROGRAMME: RotorWay International manufactures Exec 162F helicopter kits for final assembly by amateur builders. Currently marketed in USA and 33 other countries. Being assembled in China from imported kits by Jingzhou Aircraft Company as Jingzhou No. 1

CUSTOMERS: Including earlier Exec 90 model, 260 kits sold and 140 flying by 1994. First Jingzhou version flew in China in 1993

COSTS: Kit $56,000

DESIGN FEATURES: Asymmetrical aerofoil section two-blade main rotor. All-metal aluminium alloy blades attached to aluminium alloy teetering rotor hub by retention straps. Teetering tail rotor, with two blades each comprising steel spar and aluminium alloy skin. Elastomeric bearing rotor hub system with dual push/pull cable controlled swash plate for cyclic pitch control

STRUCTURE: Blades as detailed under Design Features. Basic 4130 steel tube airframe structure, with wraparound glassfibre fuselage/cabin enclosure. Aluminium alloy monocoque tailboom

LANDING GEAR: Twin skid type

POWER PLANT: One 113.3 kW (152 hp) RotorWay International R 1 engine with dual electronic ignition. Standard fuel capacity 64.4 litres (17 US gallons, 14.2 Imp gallons)

DIMENSIONS, EXTERNAL:

Main rotor diameter	7.62 m (25 ft 0 in)
Length of fuselage	6.71 m (22 ft 0 in)
Height to top of main rotor	2.44 m (8 ft 0 in)

WEIGHTS AND LOADINGS:

Weight empty	420 kg (925 lb)
Crew weight	181 kg (400 lb)
Max T-O weight	646 kg (1,425 lb)

PERFORMANCE (at max T-O weight, ISA):

Never-exceed (V_{NE}) and max level speed	100 kts (185 km/h; 115 mph)
Normal cruising speed	82 kts (153 km/h; 95 mph)
Max rate of climb at S/L	305 m (1,000 ft)/min
Service ceiling	3,050 m (10,000 ft)
Hovering ceiling, with two persons: IGE	2,135 m (7,000 ft)
OGE	1,525 m (5,000 ft)
Range with max fuel at optimum cruising power	156 n miles (290 km; 180 miles)
Endurance with max fuel at optimum cruising power	2 h

Scaled Composites Inc bought by Beech Aircraft Corporation June 1985, sold back to Burt Rutan November 1988 and integrated in joint venture with Wyman-Gordon Company of Worcester, Massachusetts. Scaled produces composite aerospace structures for Wyman-Gordon and continues to provide R&D facilities to individuals and companies; several projects developed for Beech retained by Scaled

Past projects summarised in 1994-95 *Jane's* and detailed in earlier editions, company also active in UAV field (refer *Jane's Unmanned Aerial Vehicles and Targets*) Current programmes include Freewing Scorpion and RAPTOR UAVs Company plans to relocate to Montrose, Colorado

UPDATED

RUTAN 151 ARES

TYPE Agile Response Effective Support (ARES) low-cost military and paramilitary aircraft

PROGRAMME Rutan made design study of US Army Low-Cost Battlefield Attack Aircraft (LCBAA) 1981, ARES design began 1985; first flight (N151SC) 19 February 1990; live firing tests with GAU-12/U cannon November 1991, funded by US Air Force. Scaled Composites intended selling complete programme with ultimate goal of production, no purchaser acquired by 1995, fuller details in 1994-95 and earlier *Jane's*

STRUCTURE Extensive use of carbonfibre/epoxy over foam/PVC cores

LANDING GEAR Hydraulically retractable tricycle type, with single wheel on each unit

POWER PLANT One 13.12 kN (2,950 lb st) Pratt & Whitney JT15D-5 turbofan with electronic fuel control unit, offset 8° to port of centreline, with thrust line corrected by curved jetpipe. Curved air intake on port side of centre-fuselage only

ACCOMMODATION Pilot only, on UPC SIIS-3ER ejection seat

ARMAMENT One internal 25 mm General Electric GAU-12/U five-barrel rapid-firing cannon on starboard side of fuselage, with 220 rounds Provision for carriage of two AIM-9L Sidewinder or four AIM-92 Stinger air-to-air missiles on external stores hardpoints

DIMENSIONS, EXTERNAL

Wing span	10.67 m (35 ft 0 in)
Length overall	8.97 m (25 ft 5¼ in)
Height overall	3.00 m (9 ft 10 in)

WEIGHTS AND LOADINGS

Weight empty, unarmed	1,308 kg (2,884 lb)
Max T-O weight unarmed	2,179 kg (4,804 lb)
with GAU-12/U and 220 rds	2,767 kg (6,100 lb)

Established 1939 to produce sailplanes, which remain as element of current business, from mid-1957 to 1979 Schweizer also made Grumman (later Gulfstream American) Ag-Cat under subcontract, all rights to Ag-Cat purchased January 1981, delivery of Ag-Cat Super-B, since supplemented by turboprop version, started October 1981, Ag-Cat marketing and support based at Elmira factory until disposal of manufacturing rights in 1995 to Ag-Cat Corporation (which see) of Malden, Missouri

Schweizer acquired rights for sole US manufacture of Hughes 300 light helicopter 13 July 1983, Schweizer supporting earlier Hughes 300s, first Elmira built 300C completed June 1984, Schweizer purchased US rights for whole 300C programme from McDonnell Douglas Helicopter Company (formerly Hughes Helicopters) 21 November 1986.

Schweizer subcontracts include work for Bell Helicopter, Boeing, Sikorsky and others, company is involved in design and prototyping, and in projects to develop heavy lift vehicles, aerial applicators for pheromones, centrifuges, and spatial disorientation trainers.

UPDATED

SCHWEIZER SA 2-37A

US military designation: RG-8A

TYPE: Two-seat quiet special missions surveillance aircraft.

PROGRAMME First flight of SA 2-37A in 1986 prototype fitted with Hughes AN/AAQ-16 and other manufacturers' thermal imaging systems. Full description in 1991-92 and earlier *Jane's*

CUSTOMERS Nine built by mid-1994, including demonstrator N9237A (third produced). Three for US Army (85-0047, 85-0048 and 86-0404) of which 0048 lost in accident, remaining two transferred in 1987 to US Coast Guard at Opa Locka for anti-narcotics operations (serials 8101-8102) both converted to SA 2-38A (see next entry)

Fifth, sixth and seventh 2-37As built for Central Intelligence Agency late 1989/early 1990 as N7508U, N7508W and N7508Y, employed as airborne communications relay platforms for long-range reconnaissance UAVs; believed used over former Yugoslavia in 1994, supporting General Atomics Gnat 750 vehicles

Eighth 2-37A to Colombian Air Force as FAC-2406 aircraft No 7 delivered to Mexican Air Force early 1994 as [illegible]

DESIGN FEATURES Modification of Schweizer SGM 2-37 motor glider, but with slightly greater wing span drooped leading edge and leading-edge fences on outer wing panels to improve stall, much more powerful engine with large exhaust silencers on fuselage sides, three-blade quiet propeller, fuselage modified to accept bulged canopy and larger engine, streamlined fairings and hydraulic parking brake on mainwheels, more than treble standard fuel capacity, but optional extra tank also available; removable underfuselage skin and hatches give access to 1.84 m³ (65 cu ft) payload bay behind cockpit, in which pallets holding LLLTV, FLIR or camera payloads can be quickly removed and installed, other engines and larger payloads available for surveillance, basic and advanced training, operator training, glider and banner towing, and priority cargo delivery. Certificated to FAR Pt 23 for day and night IFR

Schweizer RG-8A of US Coast Guard (*Peter J Cooper*)

1995

inaudible when overflying at 'quiet mode' speed at about 610 m (2,000 ft) using 38.8 kW (52 hp) from its 175 kW (235 hp) Textron Lycoming IO-540 engine

Wing section Wortmann FX 61-163 at root and FX-60-126 (modified) at tip; outer wing panels and horizontal tail can be removed for transport

POWER PLANT: One 175 kW (235 hp) Textron Lycoming IO-540-W3A5D flat six engine, driving a McCauley three-blade constant-speed propeller. Standard fuel capacity of 196.8 litres (52 US gallons; 43.3 Imp gallons), increasable optionally to 253.6 litres (67 US gallons; 55.8 Imp gallons). Shadin fuel flow system

ACCOMMODATION: Seats for two persons side by side under two-piece upward-opening canopy, hinged on centreline. Dual controls, seat belts and inertia reel harnesses standard. Compartment aft of seats enlarged to accommodate pallet containing up to 340 kg (750 lb) of sensors or other equipment

DIMENSIONS, EXTERNAL:

Wing span	18.745 m (61 ft 6 in)
Wing aspect ratio	18.97
Fuselage length	8.46 m (27 ft 9 in)
Height overall (tail down)	2.36 m (7 ft 9 in)
Wheel track	2.79 m (9 ft 2 in)
Wheelbase	5.99 m (19 ft 8 in)
Propeller diameter	2.18 m (7 ft 2 in)

AREAS:

Wings, gross	8.52 m² (199.4 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	918 kg (2,025 lb)
Max mission payload	340 kg (750 lb)
Max T-O weight	1,587 kg (3,500 lb)
Max wing loading	85.65 kg/m² (17.55 lb/sq ft)
Max power loading	9.06 kg/kW (14.89 lb/hp)

PERFORMANCE (at max T-O weight):

Max permissible diving speed (VD)	176 kts (326 km/h; 202 mph) CAS
Cruising speed at 1,525 m (5,000 ft):	
75% power	138 kts (256 km/h; 159 mph)
65% power	129 kts (239 km/h; 148 mph)
Approach speed	117 kts (217 km/h; 135 mph) CAS
Quiet mode speed	70-80 kts (130-148 km/h; 80-92 mph)
Optimum climbing speed	77 kts (142 km/h; 88 mph) CAS
Stalling speed:	
airbrakes open	71 kts (132 km/h; 82 mph)
airbrakes closed	67 kts (124 km/h; 77 mph)
Max rate of climb at S/L	292 m (960 ft)/min
Service ceiling	5,490 m (18,000 ft)
T-O run (S/L, ISA): hard surface	387 m (1,270 ft)
grass	533 m (1,750 ft)
T-O to 15 m (50 ft) (S/L, ISA):	
hard surface	612 m (2,010 ft)
grass	759 m (2,490 ft)
Landing from 15 m (50 ft) (S/L, ISA):	
hard surface	680 m (2,230 ft)
grass	732 m (2,400 ft)
Best glide ratio	20
g limits	+6.6/-3.3

UPDATED

SCHWEIZER SA 2-38A

Unofficial name: RU-38A Twin Condor

TYPE: Special missions surveillance aircraft (converted SA 2-37A).

PROGRAMME: Development and redesign started 1993, first aircraft returned to Schweizer 24 January 1994 for conversion beginning in April; first flight (N61428) 31 May 1995, next aircraft due end 1995; further one (first 'new' build but with wing taken from stock) in February 1996; all three for USCG. Type publicly revealed 20 July 1995.

CURRENT VERSIONS: **Two-seat** version, *as described*, for USCG; **three-seat** version reportedly under design for an export customer; turbocharged version also under development, to increase operating altitude to 9,150 m (30,000 ft).

CUSTOMERS: US Coast Guard (three); second US customer, and one overseas, also reported. USCG aircraft expected to be deployed mainly over Caribbean and Gulf of Mexico from bases in south eastern USA.

COSTS: $450,000 (1993) for initial redesign; $3.5 million (1994) USAF contract to convert existing two aircraft, approximately $1 million each (excluding sensors) for any additional procurement.

DESIGN FEATURES: Main objectives were to increase night patrol capability and reduce engine coking problems compared with SA 2-37A; additional engine also increases safety factor for overwater operation, though normal mode will be single-engine cruise with second engine shut down.

Utilises wings and cockpit forward section of SA 2-37A; principal design changes are adoption of pod and twin tailboom configuration with twin engines in push-pull layout, cabin slightly widened.

LANDING GEAR: Retractable tricycle type, single wheel on each unit.

POWER PLANT: Two heavily muffled Teledyne Continental GIO-550A flat-six engines, each rated at 261 kW (350 hp) at 3,400 rpm, with reduction gear to limit propeller speed to 2,267 rpm. One engine in nose and one in rear of fuselage pod, respectively driving a tractor and pusher three-blade propeller. Usable fuel capacity 375 litres (99 US gallons; 82.5 Imp gallons).

ACCOMMODATION: Pilot and sensor operator.

AVIONICS: Bendix/King AN/APN-215(V) colour weather radar with search and mapping modes in nose of port tail boom and FLIR in nose of starboard boom, but sensors interchangeable if required.

DIMENSIONS, EXTERNAL:

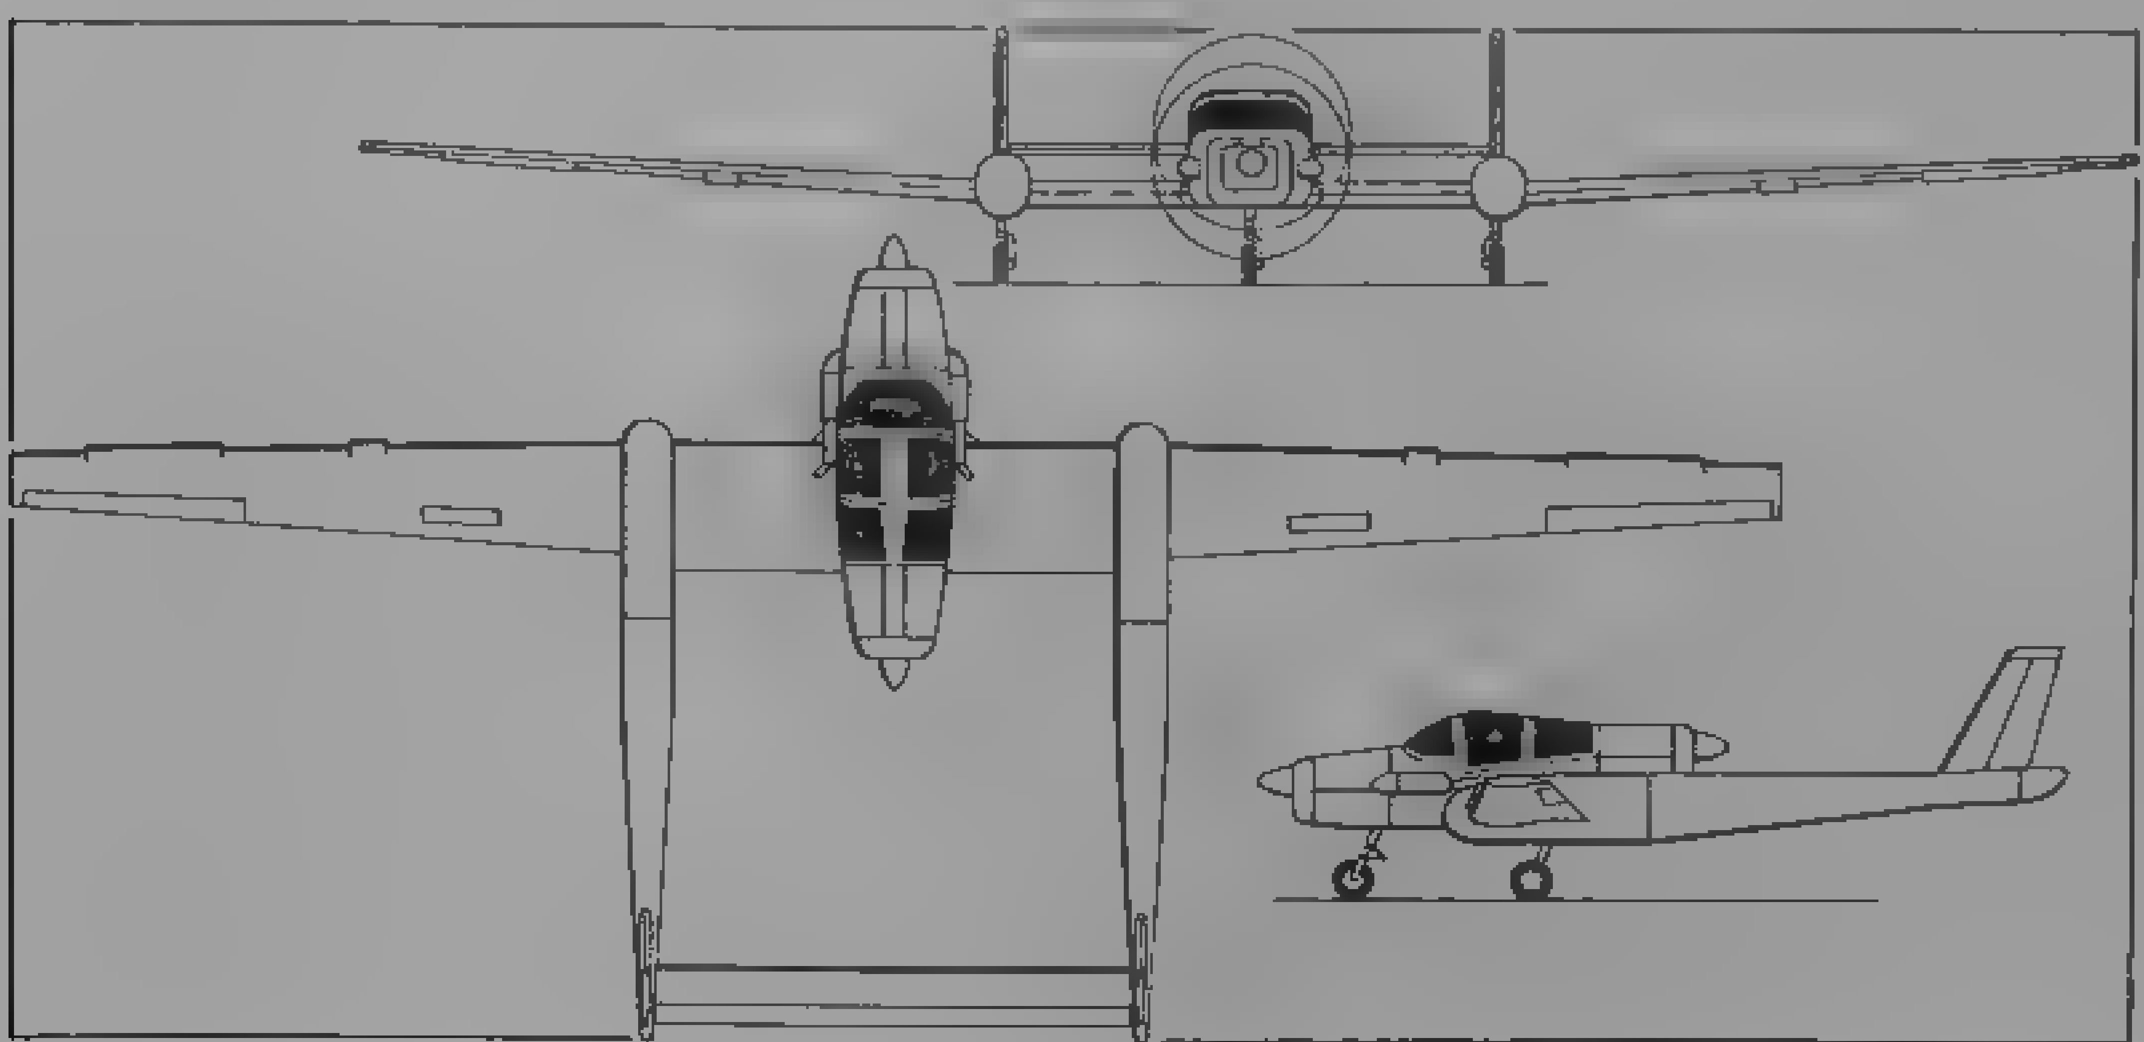
Wing span	19.51 m (64 ft 0 in)

WEIGHTS AND LOADINGS:

Max payload	408 kg (900 lb)
Max T-O weight	2,404 kg (5,300 lb)

PERFORMANCE (estimated):

Typical mission speed	85-95 kts (157-176 km/h; 98-109 mph)
Typical operating altitude	below 3,050 m (10,000 ft)
Max endurance	6 h



Schweizer SA 38A twin-engined surveillance aircraft *(Jane's/Mike Keep)* *1994*

Schweizer Ag-Cat Super-B Turbine agricultural aircraft *1993*

SCHWEIZER AG-CAT SERIES

TYPE: Agricultural biplane.

PROGRAMME: First flight of original Grumman Ag-Cat 27 May 1957, first deliveries 1959, production resumed in October 1981 with improved G-164B designated Ag-Cat Super-B, later joined by Ag-Cat Super-B Turbine. Production again suspended, December 1992, with manufacture of 833rd G-164B (N75099). Ag-Cat specification appears under EAL in Ethiopian section, but US production will resume following transfer of production rights to Ag-Cat Corporation of Malden, Missouri.

UPDATED

SCHWEIZER 300C

TYPE: Three-seat light utility helicopter.

PROGRAMME: First flight August 1969, first flight Hughes production model December 1969, FAA certification May 1970 (basic Hughes 300 described in 1976-77 *Jane's*). Production of 300C transferred from Hughes Helicopters to Schweizer July 1983; first flight Schweizer 300C June 1984. Schweizer bought entire programme November 1986. Model 300C is marketing title; engineering model number is 269C.

CURRENT VERSIONS: **300C**: Standard civil version, *to which main description applies*.

300C Sky Knight: Special police version, options include safety mesh seats with inertia reel shoulder harnesses, public address/siren system, searchlight, integrated communications, infra-red sensor, heavy-duty 28 V 100 A electrical system, cabin heater, night lights with strobe beacons, cabin utility light, fire extinguisher, first aid kit and map case.

TH-300C: Military training version.

300CB: 'Bare' version of 300C for training role, 134 kW (180 hp) Textron Lycoming HO-360 engine and 2,000 hour TBO; claimed to be cheaper to operate than 300C.

CUSTOMERS: Hughes produced 2,800 of all versions, including TH-55A Osage for US Army, before transfer to Schweizer. US Army $4.9 million order for 30 300Cs and spares placed in late 1985; two batches of 24 TH-300C training helicopters delivered to Royal Thai Army between March 1986 and mid-1989. 500th Schweizer manufactured 300C delivered at Heli Expo 1994. Recent Sky Knight customers include police departments of Baltimore, Maryland, Columbus, Ohio, and Allen County, Ohio.

DESIGN FEATURES: Fully articulated three-blade main rotor; fully interchangeable blades, blade section NACA 0015, elastomeric dampers, two-blade teetering tail rotor; limited blade folding; no rotor brake; multiple V-belt and pulley reduction gear/drive system between horizontally mounted engine and transmission, with electrically controlled belt-tensioning system instead of clutch; braced tubular tailboom.

FLYING CONTROLS: Mechanical, with first pilot on left, electric cyclic trim, separate dihedral tailplane and fin.

STRUCTURE: Main rotor blades bonded with constant section extruded aluminium spar, wraparound skin and trailing edge, tail rotor blades have steel tube spar and glassfibre skin; steel tube cabin section with light alloy, stainless steel and Plexiglas skin.

LANDING GEAR: Skids carried on oleo-pneumatic shock-absorbers. Replaceable skid shoes. Two ground handling wheels with 0.25 m (10 in) balloon tyres, pressure 4.14 to 5.17 bars (60 to 75 lb/sq in). Available optionally on floats made of polyurethane coated nylon fabric, 4.70 m (15 ft 5 in) long and with a total installed weight of 27.2 kg (60 lb).

POWER PLANT: One 168 kW (225 hp) Textron Lycoming HIO-360-D1A flat-four engine, derated to 142 kW (190 hp), mounted horizontally aft of seats. Two aluminium fuel tanks, total capacity 185.5 litres (49 US gallons; 40.8 Imp gallons), mounted externally aft of cockpit. Crash resistant fuel tank optional. Oil capacity 9.5 litres (2.5 US gallons; 2.1 Imp gallons).

ACCOMMODATION: Three persons side by side on sculptured and cushioned bench seat, with shoulder harness, in Plexiglas enclosed cabin. Carpet and tinted canopy standard. Forward hinged, removable door on each side. Dual controls optional. Baggage capacity 45 kg (100 lb). Exhaust muff heating and ventilation kits available.

SYSTEMS: Standard electrical system includes 24 V 70 A alternator, 24 V battery, starter and external power socket.

First Schweizer 330 in Europe is demonstrator for Saab Helikopter

1995

AVIONICS: *Comms*: Optional avionics include Bendix/King KY 196A com transceiver and headsets, KR 86 ADF and KT 76A transponders.

EQUIPMENT: Standard equipment includes map case, first aid kit, fire extinguisher, engine hour meter and main rotor blade tiedown kit. Optional equipment includes amphibious floats, litter kits, cargo racks with combined capacity of 91 kg (200 lb), external load sling of 408 kg (900 lb) capacity, Simplex Model 5200 agricultural spray or dry powder dispersal kits, Sky Knight law enforcement package, instrument training package, throttle governor start-up overspeed control unit, night flying kit, dual controls, all weather cover, heavy-duty skid plates, single or dual exhaust mufflers, door lock and dual oil coolers.

DIMENSIONS, EXTERNAL:

Main rotor diameter	8.18 m (26 ft 10 in)
Main rotor blade chord	0.171 m (6¾ in)
Tail rotor diameter	1.30 m (4 ft 3 in)
Distance between rotor centres	4.66 m (15 ft 3½ in)
Length overall, rotors turning	9.40 m (30 ft 10 in)
Height: to top of rotor head	2.66 m (8 ft 8¾ in)
to top of cabin	2.19 m (7 ft 2 in)
Width: rotor partially folded	2.44 m (8 ft 0 in)
[illegible]	1.30 m (4 ft 3 in)
Skid track	1.99 m (6 ft 6½ in)
Length of skids	2.51 m (8 ft 3 in)
Passenger doors (each): Height	1.09 m (3 ft 7 in)
Width	0.97 m (3 ft 2 in)
Height to sill	0.91 m (3 ft 0 in)

AREAS:

Main rotor blades (each)	0.70 m² (7.55 sq ft)
Tail rotor blades (each)	0.08 m² (0.86 sq ft)
Main rotor disc	52.5 m² (565.5 sq ft)
Tail rotor disc	1.32 m² (14.2 sq ft)
Fin	0.23 m² (2.5 sq ft)
Horizontal stabiliser	0.246 m² (2.65 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	474 kg (1,046 lb)
Max T-O weight: Normal category	930 kg (2,050 lb)
external load	975 kg (2,150 lb)
Max disc loading:	
Normal category	[illegible] kg/m² (3.62 lb/sq ft)
Max power loading:	
Normal category	6.55 kg/kW (10.8 lb/hp)

PERFORMANCE (at max Normal T-O weight, ISA):

Never-exceed speed (V_{NE}) at S/L	91 kts (169 km/h; 105 mph)
Max cruising speed	82 kts (153 km/h; 95 mph)
Speed for max range, at 1,220 m (4,000 ft)	[illegible] mph)
Max rate of climb at S/L	229 m (750 ft)/min
Service ceiling	3,110 m (10,200 ft)
Hovering [illegible]: IGE	1,800 m (5,900 ft)
OGE	840 m (2,750 ft)
Range at 1,220 m (4,000 ft), 2 min warm-up, max fuel, no reserves	194 n miles (360 km; 224 miles)
Max endurance at S/L	3 h 24 min

UPDATED

Schweizer 300C light utility helicopter

1995

SCHWEIZER 330

TYPE: Turbine-powered three/four-seat light helicopter.

PROGRAMME: Announced 1987, first flight in public (N330ST) 14 June 1988. FAA certification September 1992. Deliveries started mid-1993. A version with three sets of controls is being studied for student training. Model 330 is marketing designation; type is 269D.

CUSTOMERS: Customers include Kawanda Industries, Saab Helikopter, AER of Bladensburg, Maryland, and Venezuelan Army. Three aircraft delivered in 1993, five in 1994, plus one prototype and one demonstrator; total 10 by January 1995.

COSTS: $433,[illegible]5 for basic civil aircraft (1994).

DESIGN FEATURES: Civil roles include law enforcement, scout/observation, aerial photography, light utility, agricultural spraying and personal transport; uses turbine fuel rather than scarcer Avgas; extremely low flat rating of engine promises outstanding hot and high performance; third

occupant seat allows second student to observe instruction, three sets of flying controls can be fitted, streamlined external envelope and large tailplane with endplate fins added during development, rotor rpm 471

FLYING CONTROLS: Similar to 300C; see Design Features

STRUCTURE: Generally similar to 300C

POWER PLANT: One 313.2 kW (420 shp) Allison 250-C20 turboshaft. Maximum fuel capacity 227 litres (60 US gallons, 50 Imp gallons)

DIMENSIONS, EXTERNAL:
- Main and tail rotor diameters: as for Model 300C
- Length overall, rotors turning: 9.40 m (30 ft 10 in)
- Height overall: 2.89 m (9 ft 5¾ in)
- Skid track: 2.08 m (6 ft 10 in)

DIMENSIONS, INTERNAL:
- Cabin: Width at seat: 1.72 m (5 ft 7¾ in)
- Height at seat: 1.35 m (4 ft 5 ¼ in)

WEIGHTS AND LOADINGS:
- Weight empty: 508 kg (1,120 lb)
- Normal T-O weight: 1,012 kg (2,230 lb)

PERFORMANCE (at Normal T-O weight, ISA):
- Max cruising speed: 108 kts (200 km/h, 124 mph)
- Normal cruising speed: 100 kts (185 km/h, 115 mph)
- Hovering ceiling: IGE: 4,300 m (14,100 ft)
- OGE: 3,080 m (10,100 ft)
- Max range at 1,220 m (4,000 ft), no reserves: 269 n miles (498 km, 309 miles)
- Max endurance, no reserves: 4 h 12 min

VERIFIED

SEQUOIA 300 SEQUOIA

TYPE: Side by side two-seat utility and aerobatic aircraft

PROGRAMME: First flown 26 April 1992, single prototype, programme was offered for sale during 1993, no buyer found by early 1995

STRUCTURE: Wings, ailerons, slotted flaps and tail unit of flush riveted aluminium alloy construction. Welded steel tube fuselage, covered entirely with lightweight shell of glassfibre/PVC foam/glassfibre sandwich, attached to tubing with glassfibre and epoxy resin

LANDING GEAR: Retractable tricycle type

POWER PLANT: One 224 kW (300 hp) Textron Lycoming TIO-540-S1AD turbocharged engine in prototype

DIMENSIONS, EXTERNAL:
- Wing span: 9.14 m (30 ft 0 in)
- Length overall: 7.62 m (25 ft 0 in)
- Height overall: 2.90 m (9 ft 6 in)

WEIGHTS AND LOADINGS:
- Weight empty: 816 kg (1,800 lb)
- Baggage capacity: 45 kg (100 lb)
- Max T-O weight: Utility: 1,270 kg (2,800 lb)
- Aerobatic: 1,088 kg (2,400 lb)

PERFORMANCE (at max T-O weight, ISA):
- Max level speed at S/L: 195 kts (362 km/h, 225 mph)
- Max cruising speed at 2,440 m (8,000 ft): 185 kts (343 km/h, 213 mph)
- Service ceiling: 7,620 m (25,000 ft)
- T-O run: 457 m (1,500 ft)
- Landing run: 548 m (1,800 ft)
- Range at max cruising speed, 45 min reserves: 868 n miles (1,609 km, 1,000 miles)

Sequoia 300 Sequoia

1993

SEQUOIA FALCO F 8L

TYPE: Side by side two-seat, dual control aircraft, provision for child's seat in baggage space

PROGRAMME: Sequoia Aircraft markets plans and kits to build improved version of Falco F 8L high-performance monoplane, designed in Italy by Ing Stelio Frati of General Avia (which see) and first flown on 15 June 1955

CUSTOMERS: 45 aircraft flying in early 1995

COSTS: Kit: $60,000. Plans: $400

DESIGN FEATURES: NACA $64_2$212.5 wing section at root, NACA $64_2$210 at tip

STRUCTURE: Entire airframe has plywood covered wood structure, with overall fabric covering and glassfibre wing fillets. Optional metal control surfaces

LANDING GEAR: Retractable tricycle type

POWER PLANT: One 119 kW (160 hp) Textron Lycoming IO-320-B1A is standard for kit built aircraft. Optional engines for which Sequoia offers installation kits are the 112 kW (150 hp) IO-320-A1A and 134 kW (180 hp) IO-360-B1E. Fuel capacity 151 litres (40 US gallons, 33.3 Imp gallons). Optional 7.6 litre (2 US gallon, 1.7 Imp gallon) header tank to permit inverted flight

DIMENSIONS, EXTERNAL:
- Wing span: 8.00 m (26 ft 3 in)
- Wing aspect ratio: 6.40
- Length overall: 6.50 m (21 ft 4 in)
- Height overall: 2.29 m (7 ft 6 in)

AREAS:
- Wings, gross: 10.00 m² (107.6 sq ft)

WEIGHTS AND LOADINGS (119 kW, 160 hp engine):
- Weight empty: 550 kg (1,212 lb)
- Payload with max fuel: 194 kg (428 lb)
- Baggage capacity: 40 kg (88 lb)
- Max aerobatic weight: 748 kg (1,650 lb)
- Max T-O weight: 853 kg (1,880 lb)
- Max wing loading: 85.31 kg/m² (17.47 lb/sq ft)
- Max power loading: 7.17 kg/kW (11.75 lb/hp)

PERFORMANCE (at max T-O weight, ISA, 119 kW, 160 hp engine):
- Max level speed at S/L: 184 kts (341 km/h, 212 mph)
- Cruising speed: more than 174 kts (322 km/h, 200 mph)
- Stalling speed, flaps and wheels down: 54 kts (100 km/h, 62 mph)
- Max rate of climb at S/L: 347 m (1,140 ft)/min
- Service ceiling: 5,790 m (19,000 ft)
- Range at econ cruising speed: 868 n miles (1,609 km, 1,000 miles)

Telephone: 1 (612) 544 6422
PRESIDENT: M S Reda

NEW ENTRY

SHADIN S-10 AEROPONY

TYPE: Side by side, two-seat trainer

PROGRAMME: Bucker Bü 181 Bestmann entered production in 1939; built under licence in Sweden, Czechoslovakia (Zlin Z-281 and Z-381) and Egypt (Helwan Gomhouria); various power plants. Production re-launched by Shadin, 1994

DESIGN FEATURES: Similar to Bü 181D, but has four cockpit transparencies instead of 15, Continental engine, as Gomhouria Mk 6, modern avionics

FLYING CONTROLS: Manually operated; narrow chord ailerons over half of wing trailing-edge; split flaps between ailerons and fuselage. Elevators with trim tabs, rudder with fixed tab

STRUCTURE: Forward and centre fuselage of steel tubing coated with duralumin, rear of wooden monocoque. Wooden fin constructed on two longerons, metal control surfaces throughout

LANDING GEAR: Fixed, tricycle

POWER PLANT: One 108 kW (145 hp) Teledyne Continental O-300D driving a two-blade propeller. Fuel capacity 125 litres (33 US gallons, 27.5 Imp gallons)

ACCOMMODATION: Two persons, side by side in enclosed cockpit

AVIONICS: *Flight*: Bendix/King KN 75 VOR/ILS and KLX 135 GPS

DIMENSIONS, EXTERNAL:

Wing span	10.60 m (34 ft 9¼ in)
Wing aspect ratio	8.78
Length overall	7.90 m (25 ft 11 in)
Height overall	2.05 m (6 ft 8¾ in)

AREAS:

Wings, gross	12.80 m² (137.78 sq ft)

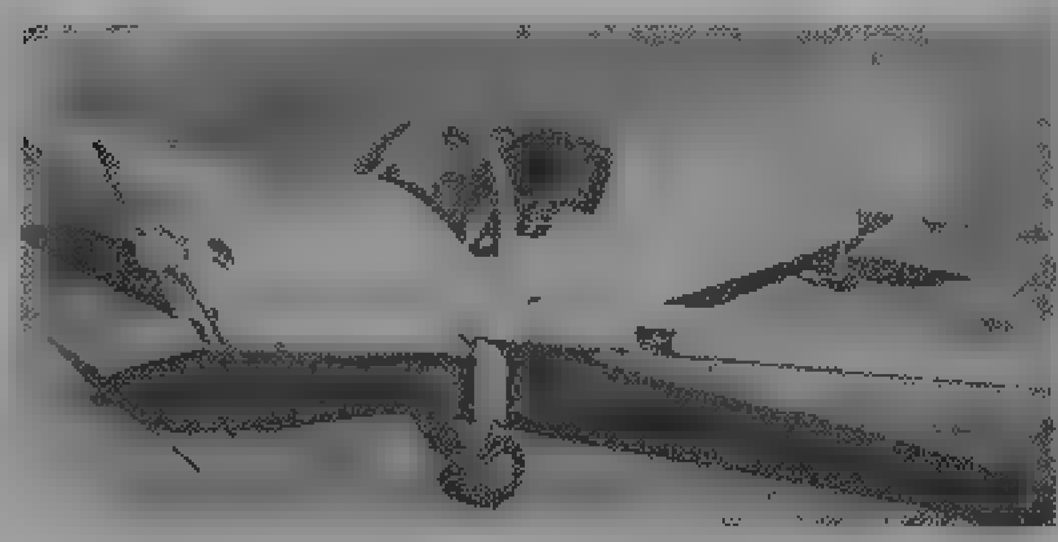
WEIGHTS AND LOADINGS:

Operating weight empty	544 kg (1,200 lb)
Max T-O weight	828 kg (1,825 lb)
Max wing loading	64.68 kg/m² (13.25 lb/sq ft)
Max power loading	7.66 kg/kW (12.58 lb/hp)

PERFORMANCE:

Max level speed	119 kts (220 km/h, 136.7 mph)
Cruising speed	100 kts (185 km/h, 115 mph)
Time to 3,000 m (9,840 ft)	20 min
Service ceiling	4,200 m (13,780 ft)
Range	432 n miles (800 km, 497 miles)

NEW ENTRY



Shadin S-10 Aeropony, evolved from Bü 181 via Gomhouria

Founded as Sikorsky Aero Engineering Corporation by late Igor I. Sikorsky, has been division of United Technologies Corporation since 1929, but established as a subsidiary with effect 1 January 1995, began helicopter production in 1940s, has produced more than 7,800 rotary-wing aircraft; further 1,800 Sikorsky helicopters built by foreign licensees. Workforce 10,500 in 1994.

Headquarters and main plant at Stratford, Connecticut; main current programmes include UH-60 Black Hawk and derivatives, CH-53E Super Stallion and S-76 series. Sikorsky and Boeing Helicopters won US Army RAH-66 Comanche light helicopter demonstration/validation order on 5 April 1991 (see under Boeing Sikorsky in this section).

Sikorsky licensees include Agusta of Italy, Eurocopter of France and Germany, Mitsubishi of Japan, Pratt & Whitney Canada Ltd and Westland of the UK. Sikorsky and Embraer of Brazil signed agreement in Summer 1983 to transfer technology covering design and manufacture of composites components. Sikorsky and CASA of Spain signed MoU in June 1984 covering long-term helicopter industrial co-operation programme; CASA builds tail rotor pylon, tailcone and stabiliser components for H-60 and S-70, with first CASA S-70 components delivered to Sikorsky January 1986.

Westland plc (see UK section) shareholders approved joint Fiat/Sikorsky plan involving financial and technical support and minor equity participation in Westland on 12 February 1986. Westland then licensed to manufacture S-70 series.

Licence to manufacture S-70 in Japan granted to Mitsubishi Heavy Industries in 1988.

UPDATED

SIKORSKY S-80/H-53E

US Marine Corps and Navy designations: CH-53E Super Stallion and MH-53E Sea Dragon

TYPE: Three-engined heavy-lift helicopter.

PROGRAMME: Phase I development funding for CH-53E Super Stallion allocated 1973; first flight of first of two prototypes 1 March 1974; first flight of first production prototype 8 December 1975, first flight of second production prototype March 1976; deliveries to US Marine Corps started 16 June 1981; 158 CH-53Es and 50 MH-53Es funded up to and including FY93, 12 CHs funded in FY94, followed by an option for two examples in FY95, but programme future still uncertain.

CURRENT VERSIONS: **CH-53E Super Stallion**: Used by US Marine Corps for amphibious assault, carrying heavy equipment and armament, and recovering disabled aircraft; also used by US Navy for vertical onboard delivery and recovery of damaged aircraft from aircraft carriers; went into operation in Mediterranean area Summer 1983 with HC-4 at Sigonella, Italy; also serves as part of HC-2 at Norfolk, Virginia, and with Marines squadrons HMH-361, HMH-465 and HMH-466 at Tustin, California, and HMH-461 and HMH-464 at New River, North Carolina, plus HMT-302 for training at Tustin. *Detailed description applies to CH-53E, but applicable also to MH-53E, except where indicated.*

Sikorsky CH-53E Super Stallion heavy lift helicopter of the US Navy's HC-4 'Black Stallions' *(Paul Jackson)*

1995

Planned improvements for CH-53E include composites tail rotor blades, uprated GE T64-GE-416 engines, Omega navigation system, ground proximity warning system, flight crew night vision system, improved internal cargo handling system, missile alerting system, chaff/flare dispensers, nitrogen fuel inerting system, and facility for refilling hydraulic system inside cargo compartment. CH-53E will possibly be equipped with self-defence air-to-air missiles; initial trials of AIM-9 Sidewinder conducted at Naval Air Test Center, Patuxent River, Maryland.

Full-scale development of helicopter night vision system (HNVS) for CH-53E began June 1986, in co-operation with Northrop Electro-Mechanical Division. HNVS includes Lockheed Martin pilot night vision system (PNVS) and Honeywell integrated helmet and display sighting system (IHADSS) from Bell AH-1S surrogate trainer; HNVS will allow low-level operations in night and adverse weather; HNVS ground testing began 1988, operational evaluation began August 1989. Smaller scale capability authorised 1993, with contract to EER Systems for installation of Hughes AN/AAQ-16B FLIR, Teledyne Ryan Electronics AN/APN-217 Doppler and Rockwell Collins GPS 3A, total 24 upgrades to follow.

MH-53E Sea Dragon: Airborne mine countermeasures helicopter able to tow through water hydrofoil sledge carrying mechanical, acoustic and magnetic sensors; early history in 1982-83 *Jane's*; nearly 3,785 litres (1,000 US gallons; 833 Imp gallons) extra fuel carried in enlarged sponsons made of composites, improved hydraulic and electrical systems; minefield, navigation and automatic flight control system with automatic towing and approach and departure from hover modes. First flight of first pre-production MH-53E, 1 September 1983, first delivery to US Navy 26 June 1986, in operational service with HM-14 at Norfolk, Virginia, 1 April 1987, another MH-53E delivered to HM-12 (now AMCM training unit) in Spring 1987 was 100th H-53E, 32 delivered to USN by December 1991, including some with HM-15 at Alameda, California, for Pacific Fleet, none delivered in 1992; first carrier deployment by HM-15 on board USS *Tripoli*, 9 December 1989. HM-18 at Norfolk, Virginia, and HM-19 (USN Reserve) at Alameda both re-equipped from RH-53Ds in 1993 but due to integrate with regular force units HM-14 and HM-15 respectively, also partly equips Marines squadron HMH-461 at New River, North Carolina. Total requirement was 56. Delivery effected 1994 of MH-53E retrofitted with upgraded avionics package by EER Systems, comprising two 15.2 cm (6 in) horizontal situation display colour screens, Fairchild mission data loader and Rockwell Collins GPS 3A, USN developmental testing began June 1994 and to continue until end September, when month-long operational evaluation scheduled; upgrade of entire MH-53E fleet planned but may be reduced to around 30 as result of defence budget trimming. One MH-53E to West Palm Beach, Florida, for installation of T64-GE-419 engines, late 1993. Trials during 1994 verified performance gains, including recovery and flyaway capability in event of engine failure during hover; plans in hand to retrofit entire MH-53E fleet, with Sikorsky under contract to deliver first eight engine kits in October 1996, proposal for 11 more submitted.

CUSTOMERS: US Navy and Marine Corps (see Programme and Current Versions). Japan has acquired helicopters similar to MH-53E (see S-80M entry). Over 700 of Sikorsky S-65/S-80/H-53 series built by 1993.

SEA DRAGON and SUPER STALLION DELIVERIES

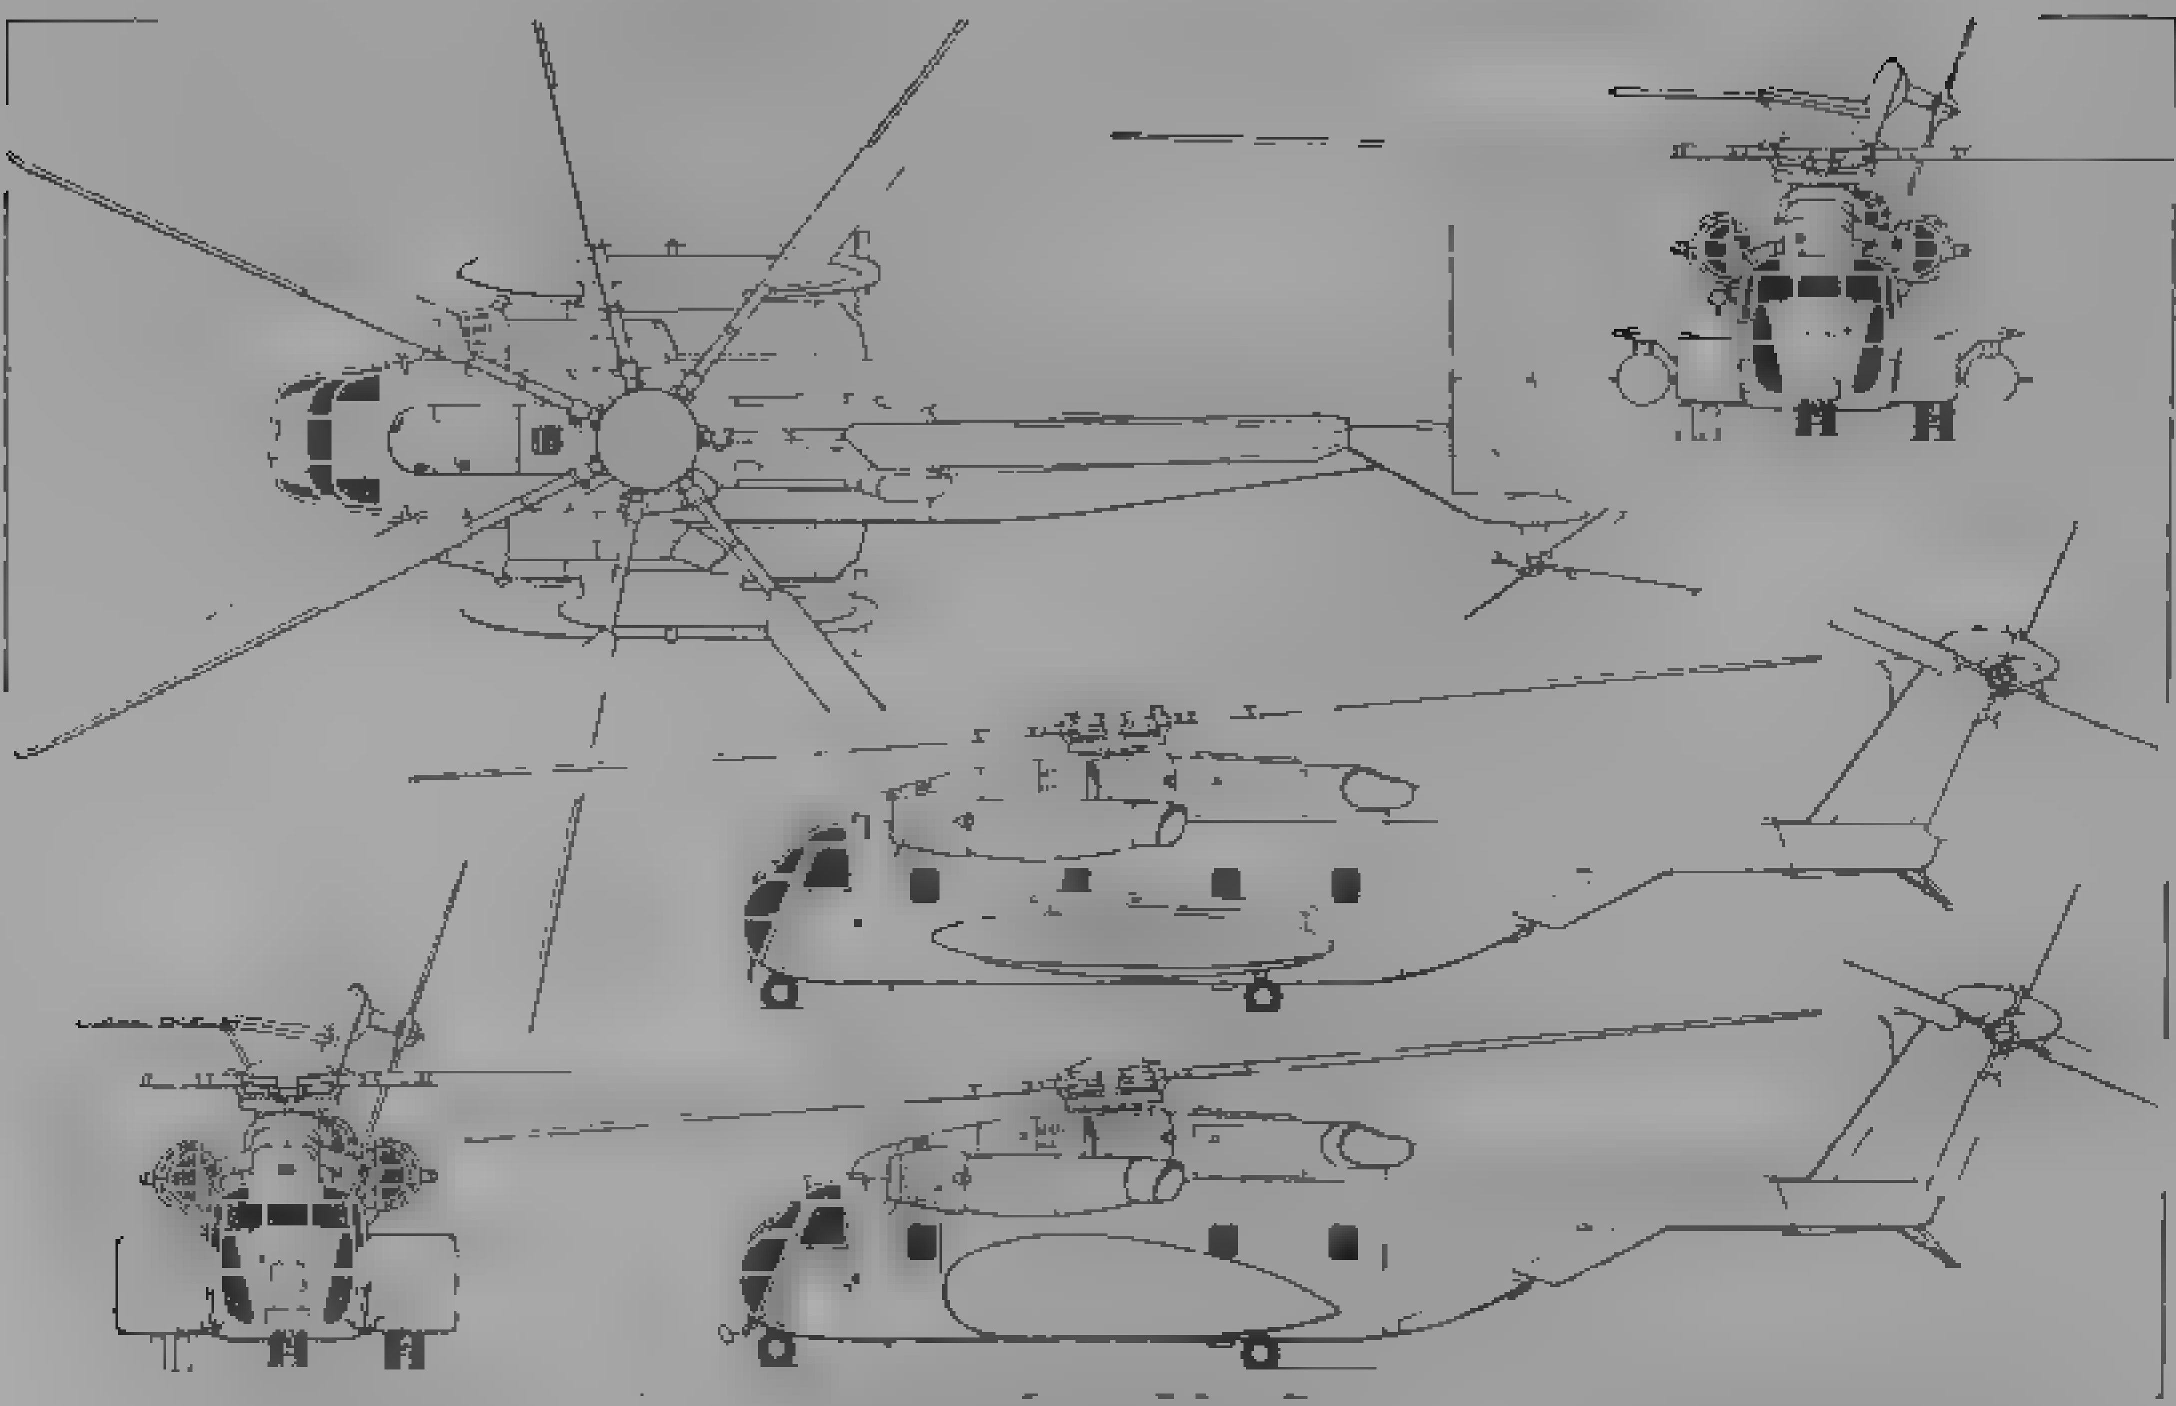
Year	USN/USMC	Japan
1980	2	
1981	14	
1982	24	
1983	20	
1984	18	
1985	10	
1986	9	
1987	12	
1988	13	1
1989	12	3
1990	14	2
1991	6	
1992	8	4
1993	14	
1994	17	1
Totals	**193**	**11**

COSTS: $24.36 million (1992) projected average unit cost.

DESIGN FEATURES: Fully articulated seven-blade main rotor; blade twist 14°; hydraulic powered blade folding for main rotor; tail pylon folds hydraulically to starboard; four-blade tail rotor on pylon canted 20° to port to derive some lift from tail rotor and extend CG range; cranked, strut-braced tailplane; rotor brake standard; fuselage stressed for 20 g vertical and 10 g lateral crash loads.

FLYING CONTROLS: Fully powered, with autostabilisation and autopilot. See also Current Versions and Avionics.

STRUCTURE: Fuselage has watertight primary structure of light alloy, steel and titanium; glassfibre/epoxy cockpit section, extensive use of Kevlar in transmission fairing and engine cowlings; main rotor blades have titanium spar, Nomex honeycomb core and glassfibre/epoxy composites skin; titanium and steel rotor head; Sikorsky blade inspection method (BIM) sensors detect blade spar cracks occurring in service; tail rotor of aluminium, pylon and tailplane of Kevlar composites.



Sikorsky CH-53E Super Stallion, with additional lower side view and lower front view of MH-53E Sea Dragon (*Jane's/Dennis Punnett*)

1995

LANDING GEAR: Retractable tricycle type, with twin wheels on each unit. Main units retract into rear of sponsons on each side of fuselage. Fully castoring nosewheels.

POWER PLANT: Three General Electric T64-GE-416 turboshafts, each with a maximum rating of 3,266 kW (4,380 shp) for 10 minutes, intermediate rating of 3,091 kW (4,145 shp) for 30 minutes and maximum continuous power rating of 2,756 kW (3,696 shp). Retrofit planned with T64-GE-419s. Transmission rated at 10,067 kW (13,500 shp) for take-off.

Self-sealing bladder fuel cell in forward part of each sponson, each with capacity of 1,192 litres (315 US gallons; 262 Imp gallons). Additional two-cell unit, with capacity of 1,465 litres (387 US gallons, 322 Imp gallons) brings total standard internal capacity to 3,849 litres (1,017 US gallons, 847 Imp gallons). (Total internal capacity of MH-53E is 12,113 litres, 3,200 US gallons, 2,664 Imp gallons.)

Optional drop tank outboard of each sponson of CH-53E, total capacity 4,921 litres (1,300 US gallons, 1,082 Imp gallons). (MH-53E can carry seven internal range extension tanks, total capacity 7,949 litres, 2,100 US gallons; 1,748 Imp gallons.) Forward extendable probe for in-flight refuelling. Alternatively, aircraft can refuel by hoisting hose from surface vessel while hovering.

ACCOMMODATION: Crew of three. Main cabin of CH-53E will accommodate up to 55 troops on folding canvas seats along walls and in centre of cabin. Door on forward starboard side of main cabin. Hydraulically operated rear loading ramp. Typical freight loads include seven standard 1.02 × 1.22 m (3 ft 4 in × 4 ft) pallets. Single-point central hook for slung cargo, capacity 16,330 kg (36,000 lb).

SYSTEMS: Hydraulic system, with four pumps, for collective/cyclic pitch/roll, yaw and feel augmentation flight control servo mechanisms; engine starters, landing gear actuation, cargo winches, loading ramp; and blade and tail pylon folding. System pressure 207 bars (3,000 lb/sq in), except for engine starter system which is rated at 276 bars (4,000 lb/sq in). (Separate hydraulic system in MH-53E to power AMCM equipment.) Electrical system includes three 115 V 400 Hz 40 to 60 kVA AC alternators, and two 28 V 200 A transformer-rectifiers for DC power. Solar APU.

AVIONICS: *Flight:* Hamilton Standard automatic flight control system, using two digital onboard computers and a four axis autopilot. Retrofit test flown late 1993, comprising four Canadian Marconi CM A-2082 15.2 cm (6 in) square colour displays, tied with GPS, Doppler and AHRS, installation by Teledyne Ryan.

EQUIPMENT: MH-53E equipment includes Westinghouse AN/AQS-14 towed sonar, AN/AQS-17 mine neutralisation device, AN/ALQ-141 electronic sweep, and Edo AN/ALQ-166 towed hydrofoil sled for detonating magnetic mines.

DIMENSIONS, EXTERNAL (CH-53E and MH-53E):

Main rotor diameter	24.08 m (79 ft 0 in)
Main rotor blade chord	0.76 m (2 ft 6 in)
Tail rotor diameter	6.10 m (20 ft 0 in)
Length overall: rotors turning	30.19 m (99 ft 0½ in)
rotor and tail pylon folded	18.44 m (60 ft 6 in)
Length of fuselage	22.35 m (73 ft 4 in)
Width of fuselage	2.69 m (8 ft 10 in)
Width overall, rotor and tail pylon folded	
CH-53E	8.66 m (28 ft 5 in)
MH-53E	8.41 m (27 ft 7 in)
Height: to top of main rotor head	5.32 m (17 ft 5½ in)
tail rotor turning	8.97 m (29 ft 5 in)
rotor and tail pylon folded	5.66 m (18 ft 7 in)
Wheel track (c/l of shock struts)	3.96 m (13 ft 0 in)
Wheelbase	8.31 m (27 ft 3 in)

DIMENSIONS, INTERNAL (CH-53E and MH-53E):

Cabin:	
Length (rear ramp/door hinge to fwd bulkhead)	9.14 m (30 ft 0 in)
Max width	2.29 m (7 ft 6 in)
Max height	1.98 m (6 ft 6 in)

AREAS (CH-53E and MH-53E):

Main rotor disc	455.38 m² (4,901.7 sq ft)
Tail rotor disc	29.19 m² (314.2 sq ft)

WEIGHTS AND LOADINGS:

Weight empty: CH-53E	15,072 kg (33,228 lb)
MH-53E	16,482 kg (36,336 lb)
Internal payload (100 n miles; 185 km; 115 miles radius)	
CH-53E	13,607 kg (30,000 lb)
External payload (50 n miles, 92.5 km, 57.5 miles radius)	
CH-53E	14,515 kg (32,000 lb)
Max external payload: CH-53E	16,330 kg (36,000 lb)
Useful load, influence sweep mission	
MH-53E	11,793 kg (26,000 lb)
Max T-O weight (CH-53E and MH-53E):	
internal payload	31,640 kg (69,750 lb)
external payload	33,340 kg (73,500 lb)
Max disc loading:	
internal payload	69.47 kg/m² (14.23 lb/sq ft)
external payload	73.21 kg/m² (14.99 lb/sq ft)
Max power loading:	
internal payload	3.14 kg/kW (5.17 lb/shp)
external payload	3.31 kg/kW (5.44 lb/shp)

PERFORMANCE (CH-53E and MH-53E, ISA, at T-O weight of 25,400 kg, 56,000 lb):

Max level speed at S/L	170 kts (315 km/h, 196 mph)
Cruising speed at S/L	150 kts (278 km/h, 173 mph)
Max rate of climb at S/L, 11,340 kg (25,000 lb) payload	762 m (2,500 ft)/min
Service ceiling at max continuous power	5,640 m (18,500 ft)
Hovering ceiling at max power:	
IGE	3,520 m (11,550 ft)
OGE	2,895 m (9,500 ft)
Self-ferry range, unrefuelled, at optimum cruise condition for best range:	
CH-53E	1,120 n miles (2,074 km, 1,289 miles)

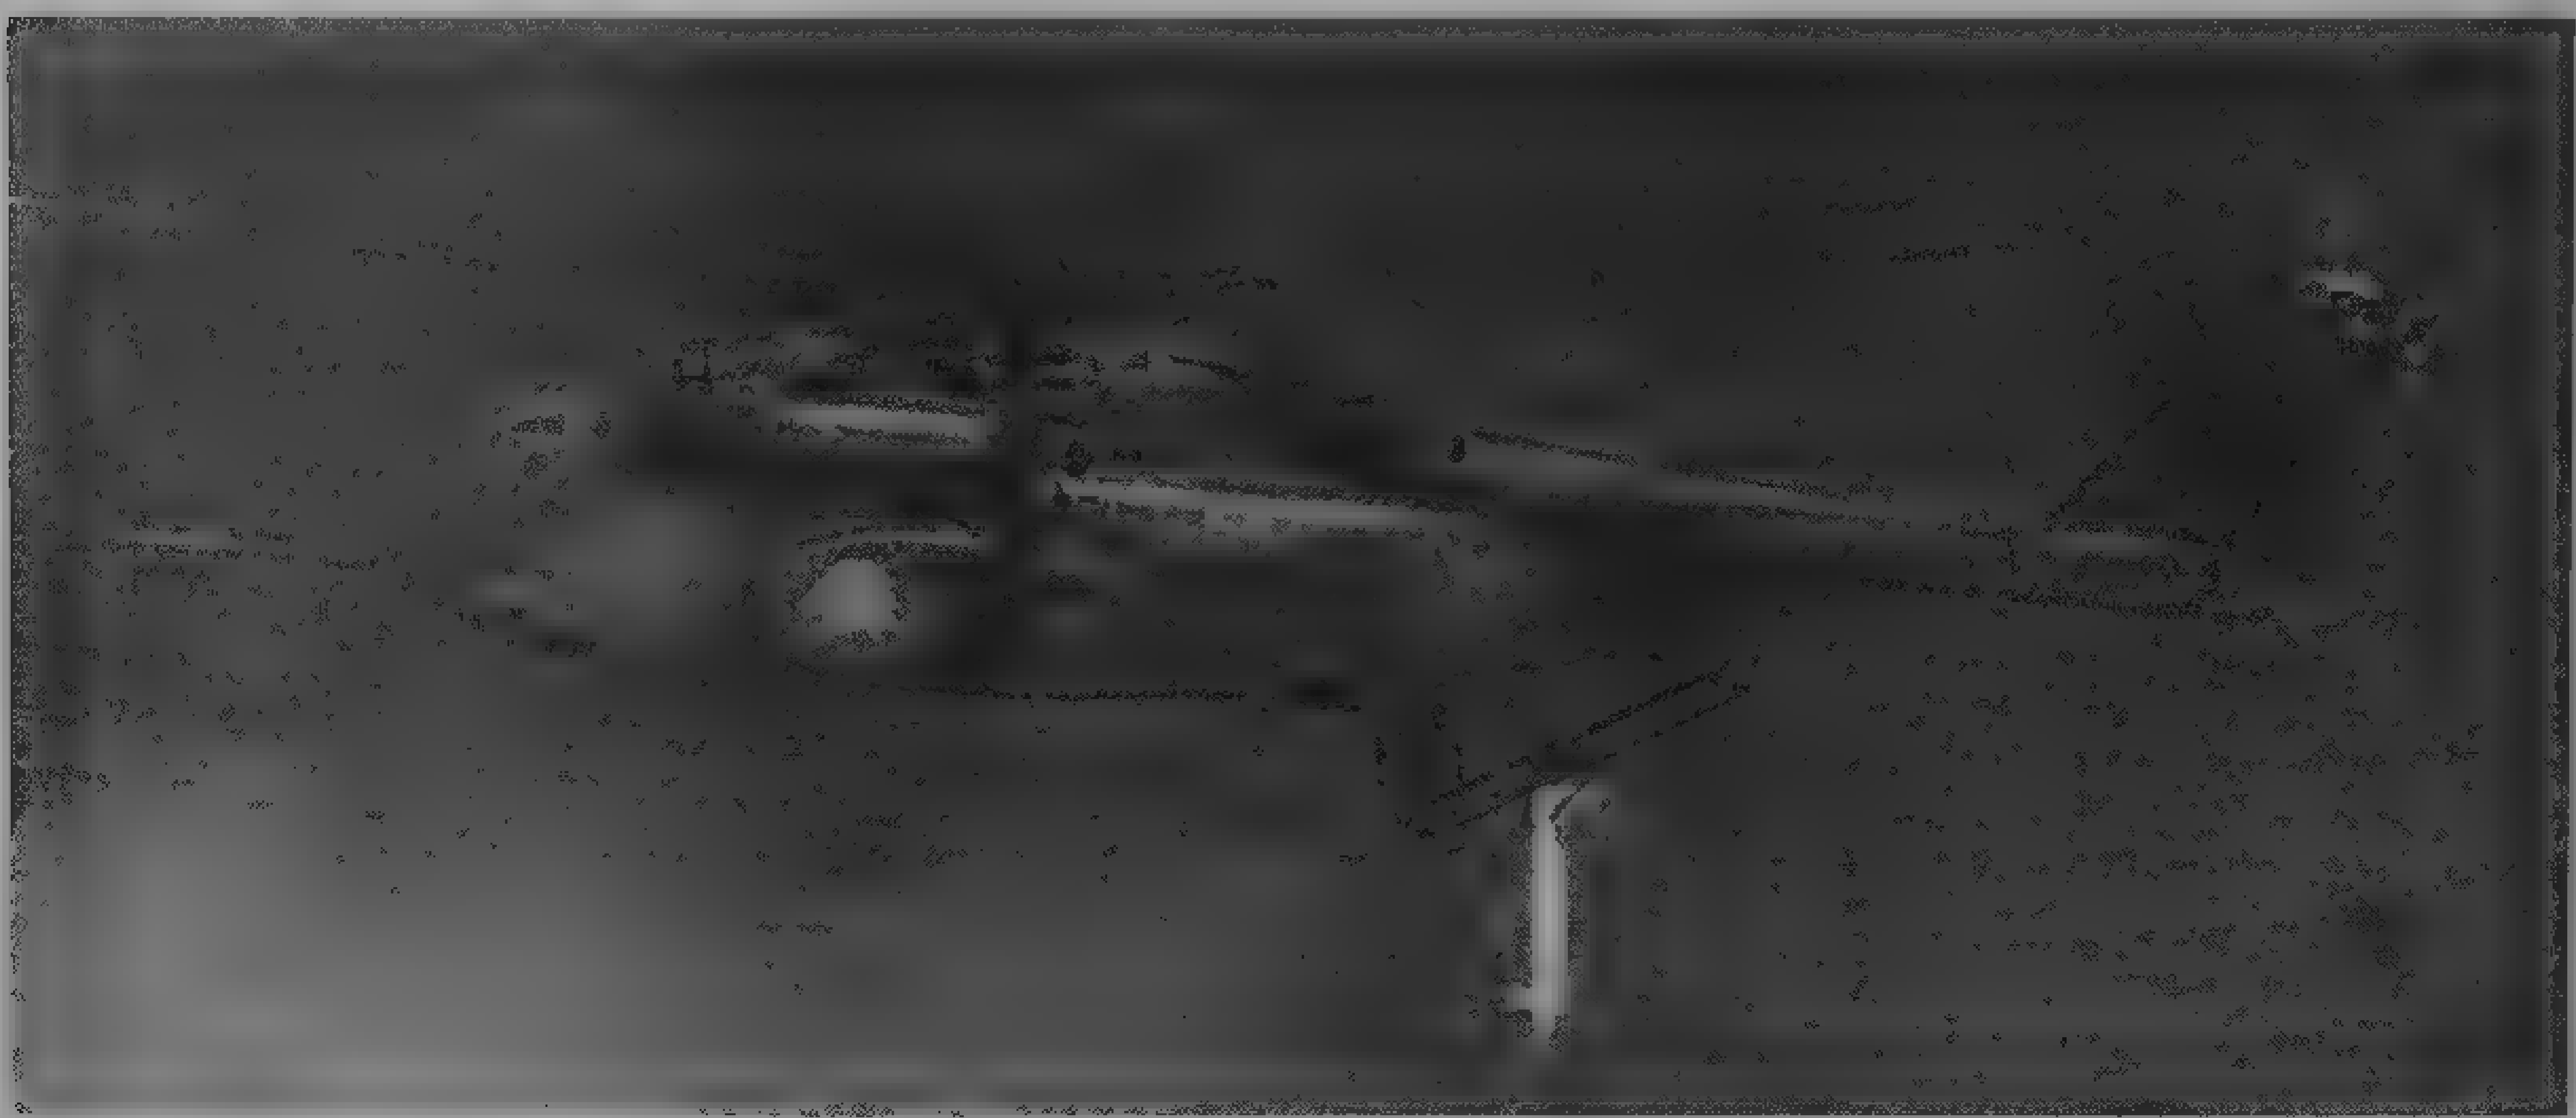
UPDATED

SIKORSKY S-80E and S-80M

Export versions of CH/MH-53E, available as **S-80E** basic heavy transport helicopter and **S-80M** mine countermeasures helicopter; S-80E has single-point cargo hook and VFR equipment; options include troop seats, cabin soundproofing, internal cargo winch, 272 kg (600 lb) external hoist, two-point external cargo attachment, automatic blade and tail folding, two 2,460.5 litre (650 US gallon, 541 Imp gallon) external tanks, ground-to-air or in-flight refuelling equipment, engine air particle separators, and wide selection of com/nav equipment.

Japan allocated funding for 11 S-80Ms (four in FY86, two in FY87, four in FY89 and one in FY91; further one required); first S-80M-1 (8623) completed 13 January 1989 and handed over to Japan Defence Agency 30 November 1989, initially to 51 Squadron at Atsugi for trials, 10 delivered by January 1993, 11th followed in May 1994.

UPDATED



MH-53E of HM-14 deploys its side-scanning sonar device

1995

SIKORSKY S-70A

US Army designations: UH-60A, UH-60L and UH-60Q Black Hawk, AH-60L, EH-60A, MH-60A, MH-60K and MH-60L

US Air Force designations: UH-60A, HH-60G, MH-60G Pave Hawk

US Marine Corps designation: VH-60N

Israel Defence Force name: Yanshuf (Owl)

TYPE: Infantry squad transport helicopter; also adapted for other roles.

PROGRAMME: UH-60A declared winner of US Army Utility Tactical Transport Aircraft System (UTTAS) competition against Boeing Vertol YUH-61A 23 December 1976; first flight of first of three YUH-60A competitive prototypes 17 October 1974; early development history recorded in 1982-83 and earlier *Jane's*; 2,000th H-60 delivered May 1994. For retrofitted improvements, see UH-60L below.

CURRENT VERSIONS: **UH-60A Black Hawk**: Initial production version, designed to carry crew of three and 11 troops; also can be used without modification for medevac, reconnaissance, command and control, and troop supply; cargo hook capacity 3,630 kg (8,000 lb); one UH-60A can be carried in C-130, two in C-141 and six in C-5.

Medevac kits delivered from 1981; missile qualification completed June 1987, with day and night firing of Hellfire in various flight conditions, airborne target handover system (ATHS) qualified; cockpit lighting suitable for night vision goggles fitted to production UH-60s since November 1985 and retrofitted to those built earlier; US Army began testing Honeywell Volcano mine dispensing system July 1987; Volcano container is disposable and dispenses 960 Gator anti-tank and anti-personnel mines; usage monitor to measure certain rotor loads installed in 30 UH-60As; wire strike protection added to UH-60s and EH-60s during 1987; accident data recorders also fitted. Total 1,049 built for US Army (including 66 conversions to EH-60A) before production change to UH-60L in 1989. *Detailed description applies to UH-60A/L except where indicated.*

Enhanced Black Hawk: Incorporates active and passive self-defence systems, retrofitted by Corpus Christi Army Depot, Texas, to new build UH-60A/Ls, first 15 delivered to US Army in South Korea November 1989. Equipment includes Tracor AN/ARN-148 Omega navigation receiver, Motorola AN/LST-5B satellite UHF communications transceiver, Bendix/King AN/ARC-199 HF-SSB, and AEL AN/APR-44(V)3 specific threat RWR complementing existing AN/APR-39 general threat RWR. M134 Minigun can be fitted on each of two pintle mounts, replacing M60 machine gun.

JUH-60A: At least seven used temporarily for trials.

GUH-60A: At least 20 grounded airframes for technical training.

HH-60D Night Hawk: One prototype (82-23718) completed for abandoned USAF combat rescue variant.

EH-60A: (Designation **EH-60C** reserved, but not adopted by US Army.) Prototype YEH-60A (79-23301) ordered in October 1980 to carry 816 kg (800 lb) Quick Fix IIB battlefield ECM detection and jamming system. TRW Electronic Systems Laboratories was prime contractor for AN/ALQ-151(V)2 ECM kit, with installation by Tracor Aerospace; four dipole antennae on fuselage and deployable whip antenna, hover infra-red suppressor subsystem (HIRSS) standard. YEH-60A first flight 24 September 1981; order for Tracor Aerospace to modify 40 UH-60As to EH-60A standard under $51 million contract placed October 1984; first delivery July 1987 as part of US Army Special Electronics Mission Aircraft (SEMA) programme; 66 funded by FY87 excluding prototype; programme completed 1989.

Intercepts/locates AM, FM, CW and SSB radio emissions from upper HF to mid-VHF ranges over bandwidths of 8, 30 or 50 kHz; jams VHF communications with Fairchild AN/TLQ-17A; jams radar with ITT AN/ALQ-136(V)2 pulsed and Northrop Grumman AN/ALQ-162(V)2 CW transmitters. Protective systems of UH-60A/L (M-130 chaff/flare and AN/ALQ-144 IR jammer) augmented by Sanders AN/ALQ-156(V)2 missile plume detector and Litton AN/APR-39(V)2 RWR. Used by regular Army and Guard (D Coy, 135th Aviation of Kansas ArNG). Contract for conversion of 32 EH-60s to Advanced Quick Fix due 1995 for 1997 deployment; improvements to include AN/APR-39A(V)2 RWR, new PRC 118 wideband datalink, AEL/Sanders TACJAM-A ECM subsystem, IBM Communications High-Accuracy Locating System - Exploitable (CHALS-X) and UH-60L engines and gearbox for increase in maximum weight from 7,845 kg (17,295 lb) to 10,206 kg (22,500 lb).

MH-60A: About 30 modified for Army 160th Special Operations Aviation Regiment (SOAR), fitted with Hughes AN/AAQ-16 FLIR, Tracor AN/ARN-148 Omega/VLF navigation, M-130 chaff/flare dispensers, AN/ALQ-144 IR jammer, night vision equipment, multifunction displays, auxiliary fuel tanks and door-mounted Minigun; interim equipment, pending MH-60K, but replaced by MH-60L in late 1990 and passed to 1-245 Aviation Regiment, Oklahoma ArNG.

EH-60C: Original ECM/jamming Black Hawk redesignated EH-60A (see above). Designation now reserved for projected command and control version, not yet funded.

HH/MH-60G Pave Hawk: Replaced US Air Force HH-60D Night Hawk rescue helicopters, which were not funded (see 1987-88 *Jane's*), converted from UH-60A/L, including 10 originally delivered to 55th Aerospace Rescue and Recovery Squadron (now Special Operations Squadron) at Eglin AFB, Florida, in 1982-83, initially remaining as UH-60As, all progressively fitted by Sikorsky Support Services at Troy, Alabama, with aerial refuelling probe, 443 litre (117 US gallon; 97.5 Imp gallon) internal auxiliary fuel tank and fuel management panel, then to Pensacola NAD for mission avionics and modified instrument panel; some retrofitted with replacement internal tank of 700 litres (185 US gallons; 154 Imp gallons); most standardised on -701C engines by 1993.

Further procurement began with batch of nine in FY87, followed by purchases of 16, 18, 22, 15 and 8 in FY88-92 with more since, all designated MH-60G until 1 January 1992, when 82 in combat rescue role redesignated HH-60G, balance of 16 remaining as MH-60G for special operations units. All have rescue hoist, Doppler/INS, electronic map display, Tacan, Bendix/King AN/APN-239 lightweight weather/ground-mapping radar, secure HF, and Satcom. MH-60G additionally has ESSS (see Armament paragraph) for weapons and additional fuel carrying capability plus door-mounted 0.50 in machine guns and Hughes AN/AAQ-16 Pave Low III FLIR as fitted in MH-53H/J; individual aircraft configurations vary, as only 10 per cent of fleet is to full 'G' standard.

Issued to 55th SOS at Eglin AFB, Florida (first operational MH-60G unit, March 1992, later to Hurlburt Field, Florida); 512th SOS, Kirtland AFB, New Mexico; 38th RQS (Rescue Squadron), Osan, South Korea; 66th RQS, Nellis AFB, Nevada (formed 1 March 1991); 56th RQS, Keflavik, Iceland (from December 1991), plus 304th RQS, Portland, Oregon (AFRes), 102nd RQS, Suffolk County, New York ANG, 129th RQS, Moffett Field NAS, California ANG; 210th RQS, Kulis, Alaska ANG; 33rd RQS, Kadena, Okinawa; 39th RQS, Misawa, Japan (1992); 48th RQS, Holloman AFB, New Mexico (1993); 305th RQS (ex-71st SOS), Davis-Monthan AFB, Arizona (1992), AFRes; 301st RQS, Homestead AFB (temporarily Patrick AFB), Florida (1992), AFRes, and 41st RQS, Patrick AFB, Florida (October 1992). Equipment planned of Combat Rescue School at Nellis AFB in 1994.

MH-60K: US Army special operations aircraft (SOA); prototype (88-26194) ordered in January 1988, first flight 10 August 1990. US Army funded two batches of 11 with options for another 38, first production aircraft (91-26368) complete, February 1992; trials at Patuxent River and Edwards AFB before intended first deliveries in June 1992

Sikorsky UH-60Q 'Dustoff' medical evacuation helicopter during trials 1995

Sikorsky AH-60L special forces' helicopter first revealed in 1995 1995

to 160th Special Operations Aviation Group (part of 160 SOA Regiment). Planned assignments to 'C' and 'D' Companies of 1 Battalion/160 SOA Group at Fort Campbell, Kentucky; 3-160 Avn at Hunter AAF, Georgia, and 1-245 Avn, Oklahoma ArNG. Deliveries delayed by software problems with special operations equipment, first 10 accepted in 1992 in non-operational state; remaining 12 initially stored, then delivered with new software installed October to December 1993 to permit start of training by 160 SOA Group, February 1994.

Features include provision for additional 3,141 litres (829 US gallons; 691 Imp gallons) of internal and external fuel (see Power Plant), plus flight refuelling capability, integrated avionics system with electronic displays, Hughes AN/AAQ-16 FLIR, Texas Instruments AN/APQ-174B terrain following, ground-mapping and air-to-ground ranging radar, T700-GE-701C engines and uprated transmission, external hoist, wire-strike protection, rotor brake, tiedown points, folding tailplane, AFCS similar to that of SH-60B, strengthened pintle mounts for 0.50 in machine guns, provision for Stinger missiles, missile warning receiver, pulse radio frequency jammer, CW radio jammer, laser detector, chaff/flare dispensers, and IR jammer.

SH-60B Seahawk: US Navy ASW/ASST helicopter, described separately.

SH-60F Seahawk: US Navy carrierborne inner-zone ASW helicopter to replace SH-3D Sea King. See Seahawk entry.

HH-60H and HH-60J Jayhawk: Search and rescue/special warfare helicopters, see Seahawk entry.

UH-60J: Designation of Japanese built S-70A-12 for Air Self Defence Force.

UH-60JA: Japanese Ground Self Defence Force to obtain 80 Mitsubishi built combat/utility Black Hawks in $2.67 billion acquisition programme announced early 1995. FY95 budget includes $66.8 million appropriation for first two; plans to deploy 50 with five district helicopter units alongside UH-1J, with balance assigned to VIP/training duties.

UH-60L: Replaced UH-60A in production for US Army from October 1989 (aircraft 89-26179 onwards); prototype (84-23953) first flight 22 March 1988, two preseries aircraft (89-26149 and 26154), first delivery 7 November 1989 to Texas ArNG. Powered by T700-GE-701C engines with uprated 2,535 kW (3,400 shp) transmission. Current production aircraft fitted with hover infra-red suppression system (HIRSS) to cool exhaust in hover as well as forward flight; older UH-60s retrofitted. Composites wide-chord main rotor blades of improved design flight tested at West Palm Beach, beginning 8 December 1993; new blade 16 per cent wider than current titanium rotor and has anhedral tip angled down at 20°; testing reveals much lower vibration plus anticipated benefits in payload, speed and manoeuvrability; projected retrofit from 1997.

MH-60L: Similar to MH-60A, for 160th SOAR, US Army, further modified as below.

AH-60L: 'Direct Action Penetrator'. Upgrade of MH-60L in 1990 with FLIR, radar and standard UH-60 external stores support system; two Black Hawk companies of 160th SOAR each have MH-60K platoon and AH-60L platoon.

UH-60M: Proposed enhanced version for US Army. Cancelled early 1989 in favour of UH-60L.

VH-60N: Nine for US Marine Corps Executive Flight Detachment of squadron HMX-1 at Quantico, Virginia, to replace UH-1Ns; deliveries started November 1988; known as VH-60A until redesignated 3 November 1989. Additional equipment includes more durable gearbox, weather radar, SH-60B-type flight control system and ASE, cabin soundproofing, VIP interior, cabin radio operator station, EMP hardening, 473 litre (125 US gallon; 104 Imp gallon) internal fuel tank and extensive avionics upgrading.

UH-60P: South Korean Army version of UH-60L (S-70A-18) with minor avionics modifications to meet local requirements; first (KA-1602) of three UH-60Ls delivered by Sikorsky 10 December 1990; balance of 80 UH-60Ps being assembled locally by Korean Airlines with increasing indigenous content, in $500 million, five-year programme.

UH-60Q: 'Dustoff' medical evacuation/armed search and rescue version for US Army; includes OBOGS, patient monitoring equipment, cabin lighting/air conditioning, personnel locator system, FLIR, weather radar, rescue hoist, dual mode IR/white searchlight, navigation (GPS, Tacan, Doppler and INS), communications (HF, multiband and satellite) and survivability (RWR/LWR) upgrades and improved litter arrangement. Prototype flown 31 January 1993 (conversion of UH-60A 86-24560 by Serv-Air Inc at Richmond, Kentucky). Delivered to Tennessee ArNG at Lovell Field, Chattanooga, on 12 March 1993. Evaluation for 12 months from September 1993; conversion programme anticipated but final decision awaited from US Army; requirement for 120.

UH-60V: Command and control version fitted with Symetrics Industries improved data modem allowing helicopters, armoured fighting vehicles and troops to communicate digitally; this capability successfully demonstrated in September 1994 during field exercise with development example of AH-64D Apache. Not yet deployed operationally but Army intent to use digital communications likely to lead to acquisition of further examples.

Exports comprise: S-70A-1: FMS deal for Royal Saudi Land Forces Army Aviation Command; 12 delivered January to April 1990 to squadron based at King Khaled Military City, modified to **Desert Hawk** and one (delivered December 1990) fitted with VIP interior. Desert Hawk has 15 troop seats, blade erosion protection using polyurethane tape and spray-on coating, Racal Jaguar 5 frequency-hopping radio, provision for searchlights, internal auxiliary fuel tanks, and external hoist.

S-70A-1L: Medical evacuation version for Saudi Arabia, infra-red filtered searchlight, rescue hoist, improved AN/ARC 217 HF com, AN/ARN-147 VOR/ILS, AN/ARN-149 ADF, air conditioning and provision for six stretchers; eight delivered from December 1991, further eight required.

S-70A-5: Two for Philippine Air Force, delivered March 1984.

S-70A-9: Royal Australian Air Force; 39 to replace Bell UH-1s; deliveries ran from October 1987 to 1 February 1991; first completed by Sikorsky, remainder assembled by Hawker de Havilland in Australia; aircraft transferred to Australian Army in February 1989, but RAAF continues to maintain them.

S-70A-11: Three to Jordan in 1986-87.

S-70A-12: Japan Self-Defence Forces acquiring

Notes: Kits in parentheses, NOT to be included in totals (appear also under year of completion)
DEA, Drug Enforcement Agency (USA)
SOA, Special Operations Aircraft

UH-60J version of Mitsubishi SH-60J for search and rescue. Sikorsky built prototype (N7267D), plus two CKD kits, delivered late 1990. JASDF and JMSDF require 70; 18 JASDF funded up to FY95, 12 funded for JMSDF to FY95.

S-70A-14: Two VIP for Brunei, delivered November and December 1986.

S-70A-16: Reserved for Westland Helicopters (see UK section).

S-70A-17: Turkish Jandarma ordered six in September 1988, deliveries completed December 1988, further six (including two VIP) delivered from late 1990 to Turkish National Police. See also S-70A-28.

S-70A-18: Korea (see UH-60P).

S-70A-19: Reserved for Westland of UK.

S-70A-21: Two VIP versions to Egypt, 1990.

S-70A-22: Korean VIP version. Three aircraft built by Sikorsky.

S-70A-24: Two UH-60Ls for Mexico. Delivered 1991.

S-70A-25/26: Moroccan Gendarmerie ordered two Black Hawks with different seating arrangements in 1991; delivered October 1992; began operations 11 November 1992, fitted with colour weather radar.

S-70A-27: Hong Kong. Two delivered 16 December 1992 to Royal Hong Kong Auxiliary Air Force, unit became Government Flying Service 1 April 1993. Fitted with FLIR and searchlight. Requirement for further four in 1995.

S-70A-28: Turkish follow-on batch, 95 ordered 8 December 1992, of which first five to Jandarma on 4 January 1993, followed by 40 to armed forces during 1993-94; balance of 50 co-produced in Turkey by TAI (which see).

S-70A-30: One VIP transport ordered for Argentine Air Force, January 1994, delivered 4 September 1994.

Direct transfers include one UH-60L to Bahrain, early 1991; five UH-60As delivered to Colombian Air Force in July 1988 for anti-narcotics operations, five more sold February 1989 and six in 1990; 10 delivered to Israel, August 1994, for 124 Squadron at Palmachim, under local name of Yanshuf (Owl); further deliveries planned.

Reserved designations as yet not ordered comprise S-70A-2 for Germany, -3 Spain, -4 Switzerland; -6 Thailand (transport); -7 Peru, -8 Brazil; -10 Israel, -13 not used, -15 Sweden, -20 Thailand (VIP), -23 Algeria, -29 unknown.

S-70C: Commercial version, described separately and under SH-60B Seahawk.

CUSTOMERS: Total 1,653 planned by US Army to end of FY96, including EH-60As and diversions to USAF, Bahrain, Colombia, Egypt and Saudi Arabia: see table; 1,000th accepted 17 October 1988 and 2,000th May 1994. US Army Black Hawks in service in Germany, Hawaii, South Korea, Panama and with Army National Guard and Army Reserve.

US Army loaned 12 UH-60As to the US Drug Enforcement Agency, augmenting five bought direct from Sikorsky.

See Current Versions for export models and details.

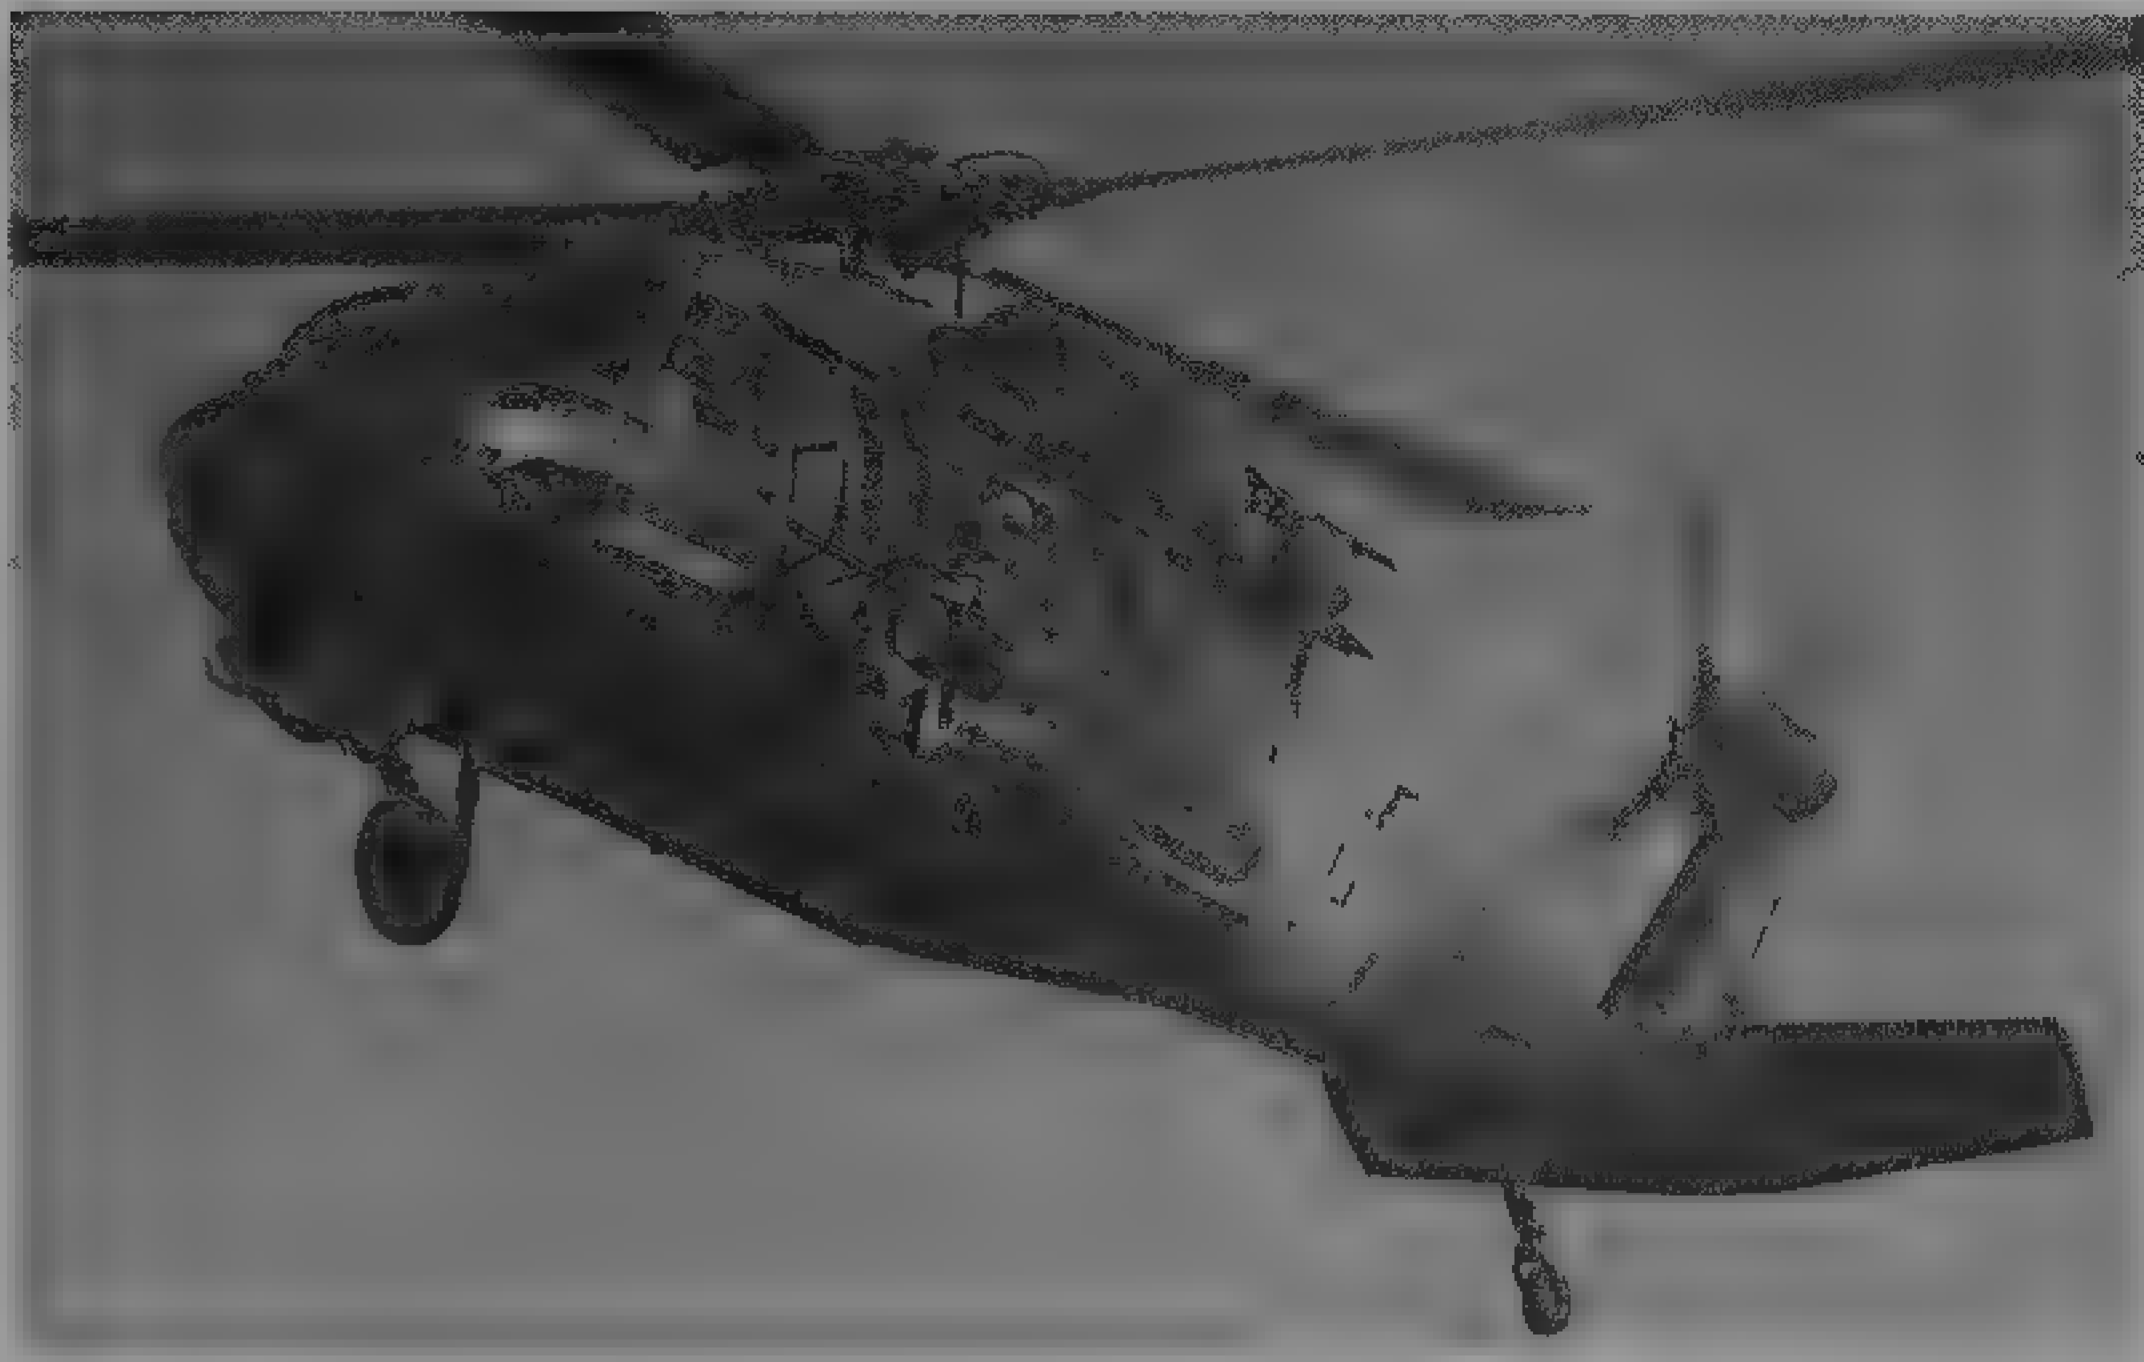
COSTS: UH-60L $5.87 million (1992) US Army unit cost; MH-60G $10.2 million.

DESIGN FEATURES: Represented new generation in technology for performance, survivability and ease of operation when introduced to replace UH-1 as US Army's main squad-carrying helicopter, adapted to wide variety of other roles, including several maritime applications. Four-blade main rotor: one-piece forged titanium rotor head with elastomeric blade retention bearings providing all movement and requiring no lubrication, hydraulic drag dampers; bifilar self-tuning vibration absorber above head, blades have 18° twist, and tips swept at 20°, thickness and camber vary over the length of blades, based on Sikorsky SC-1095 aerofoil, blades tolerant up to 23 mm hits and spar tubes pressurised with gauges to indicate loss of pressure following structural degradation.

Two pairs of tail rotor blades fastened in cross beam arrangement, mounted to starboard, tail rotor pylon tilted to port to produce lift as well as anti-torque thrust and to extend permissible CG range, fixed fin large enough to allow controlled run-on landing following loss of tail rotor.

FLYING CONTROLS: Rotor pitch control powered by two independent hydraulic systems; Hamilton Standard AFCS with digital three-axis autopilot provides speed and height control and coupled modes. Full-time autostabilisation includes feet-off heading hold cancelling torque-induced yaw at all airspeeds and during hover; positive fuselage attitude control provided by electrically driven variable incidence tailplane moving from +34° in hover to −6° during autorotation, angle is controlled by combined sensing of airspeed, collective-lever position, pitch attitude rate and lateral acceleration.

STRUCTURE: Main blade spar is formed and welded into oval titanium tube, with Nomex core, graphite trailing-edge and covered by glassfibre/epoxy skin; titanium leading-edge abrasion strip and Kevlar tip. New main blades, with modified tips and 16 per cent increase in chord, under development for UH-60L, available for retrofit from 1997. Cross-beam composites tail rotor, eliminating all rotor head bearings. Light alloy airframe designed to retain 85 per cent of its flight deck and passenger space intact after vertical impact at 11.5 m (38 ft)/s, lateral impact at 9.1 m (30 ft)/s, and longitudinal impact at 12.2 m (40 ft)/s, also withstands simultaneous 20 g forward and 10 g downward impact; glassfibre and Kevlar used for cockpit doors, canopy, fairings and engine cowlings; glassfibre/Nomex floors, tailboom folds to starboard and main rotor mast can be lowered for transport/storage.



Sikorsky S-70A-27 Black Hawk of Hong Kong Government Flying Service

1995

LANDING GEAR: Non-retractable tailwheel type with single wheel on each unit. Energy absorbing main gear with a tailwheel which gives protection for the tail rotor in taxying over rough terrain or during a high-flare landing. Axle assembly and main gear oleo shock-absorbers by General Mechatronics. Mainwheel tyres size 26 × 10.00-11, pressure 8.96 to 9.65 bars (130 to 140 lb/sq in), tailwheel tyre size 15 × 6.00-6, pressure 6.21 to 6.55 bars (90 to 95 lb/sq in). Alaskan based H-60s have Airglass Engineering ski undercarriage.

POWER PLANT: Two 1,210 kW (1,622 shp) intermediate rating General Electric T700-GE-700 turboshafts initially. From late 1989 (UH-60L), two T700-GE-701C engines, each developing intermediate 1,342 kW (1,800 shp). (T700-GE-701A engines with maximum T-O rating of 1,285 kW (1,723 shp) optional in export models.) Transmission rating 2,109 kW (2,828 shp) in UH-60A, uprated to 2,535 kW (3,400 shp) in models with T700-GE-701C engines. Two crashworthy, bulletproof fuel cells, with combined usable capacity of 1,361 litres (360 US gallons; 299.5 Imp gallons), aft of cabin. Single-point pressure refuelling, or gravity refuelling via point on each tank. Auxiliary fuel can be carried internally in one of several optional arrangements, or externally by the ESSS system. Two external tanks each of 870.5 litres (230 US gallons; 191.5 Imp gallons), up to two internal tanks, each of 700 litres (185 US gallons, 154 Imp gallons).

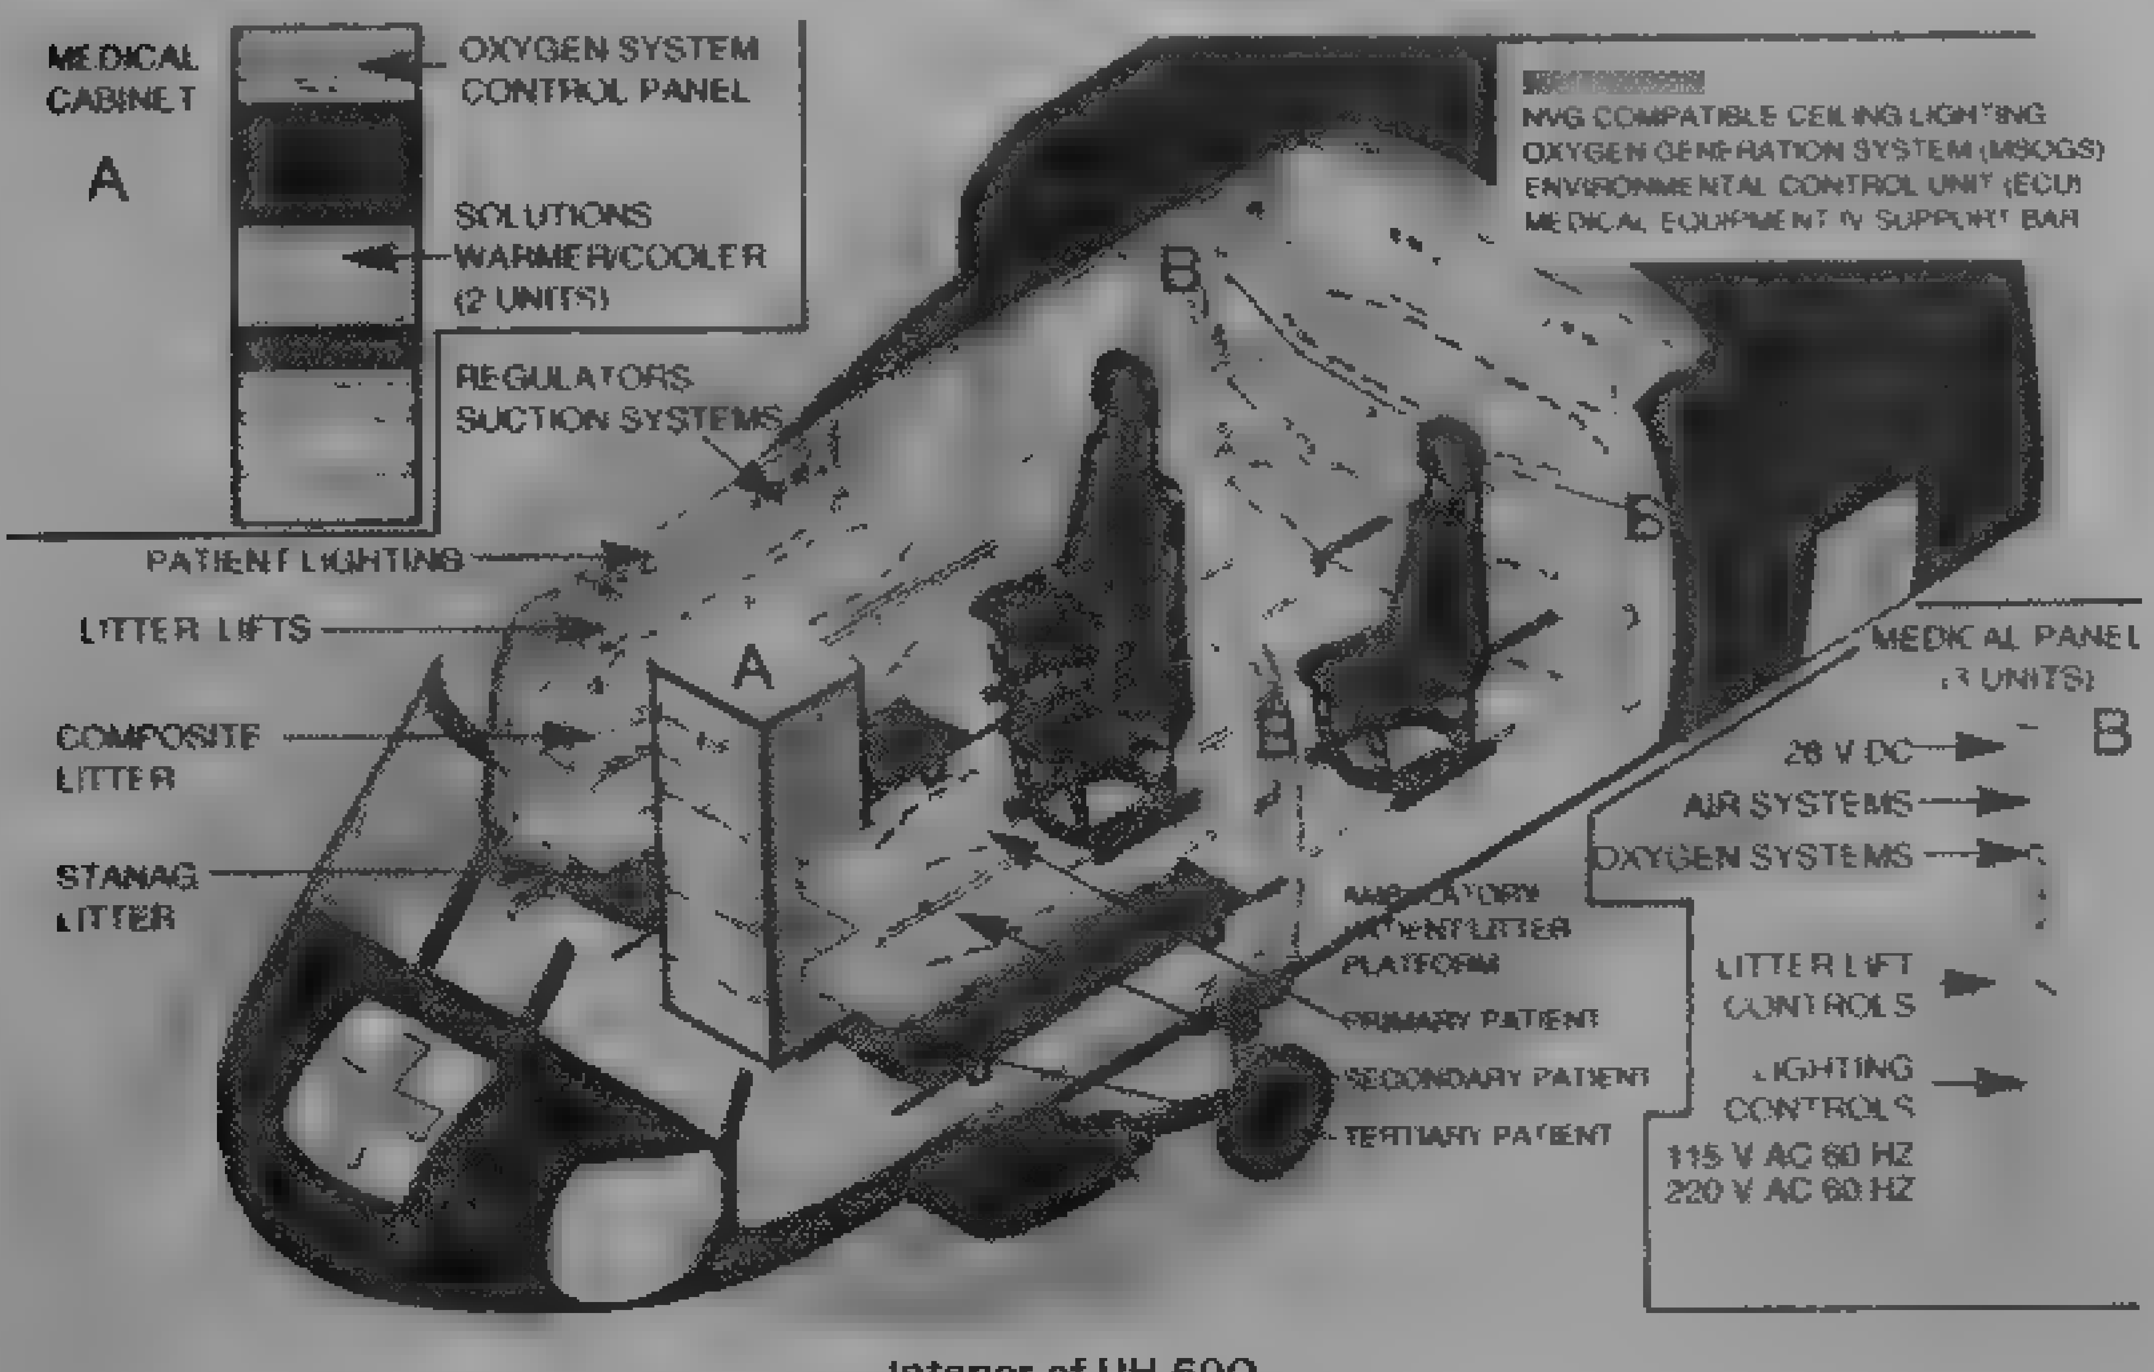
ACCOMMODATION: Two-man flight deck, with pilot and co-pilot on armour protected seats. A third crew member is stationed in the cabin at the gunner's position adjacent forward cabin windows. Forward-hinged jettisonable door on each side for access to flight deck area. Main cabin open to cockpit to provide good communication with flight crew and forward view for squad commander. Accommodation for 11 fully equipped troops, or 14 in high-density configuration. Eight troop seats can be removed and replaced by four litters for medevac missions, or to make room for internal cargo. An optional layout is available to accommodate a maximum of six litter patients. Cabin heated and ventilated. External cargo hook, having a 3,630 kg (8,000 lb) lift capability, enables UH-60A to transport a 105 mm howitzer, its crew of five and 50 rounds of ammunition. Rescue hoist of 272 kg (600 lb) capacity optional. Large rearward sliding door on each side of fuselage for rapid entry and exit. (Executive interiors for seven to 12 passengers available for the S-70A.)

SYSTEMS: Solar 67 kW (90 hp) T-62T-40-1, AlliedSignal or Sundstrand APU. An optional winterisation kit provides a second hydraulic accumulator installed in parallel with the APU hydraulic start accumulator, maintaining engine start capability at low ambient temperatures. Bendix 30 to 40 kVA and 20 to 30 kVA electrical power generators, 17 Ah Ni/Cd battery. Engine fire extinguishing system. Rotor blade de-icing system standard on US Army aircraft, optional for export. Electric windscreen de-icing.

AVIONICS: Configurations vary between aircraft, particularly on HH/MH-60G versions. Additional avionics and self protection equipment installed in Enhanced Black Hawk as described under Current Versions.

Comms: E-Systems AN/ARC-186 VHF-FM, GTE Sylvania AN/ARC-115 VHF-AM, Magnavox AN/ARC-164 UHF-AM, Collins AN/ARC-186(V) VHF-AM/FM, Bendix/King AN/APX-100 IFF transponder, Magnavox TSEC/KT-28 voice security set, and intercom. HH/MH-60G has AN/URC-108 Satcom.

Radar: MH-60K has Texas Instruments AN/APQ-147A terrain following/terrain-avoidance radar. HH/MH-60G has Bendix/King AN/APN-239 (RDR-1400C) radar. AH-60L and some export S-70s also equipped with radar

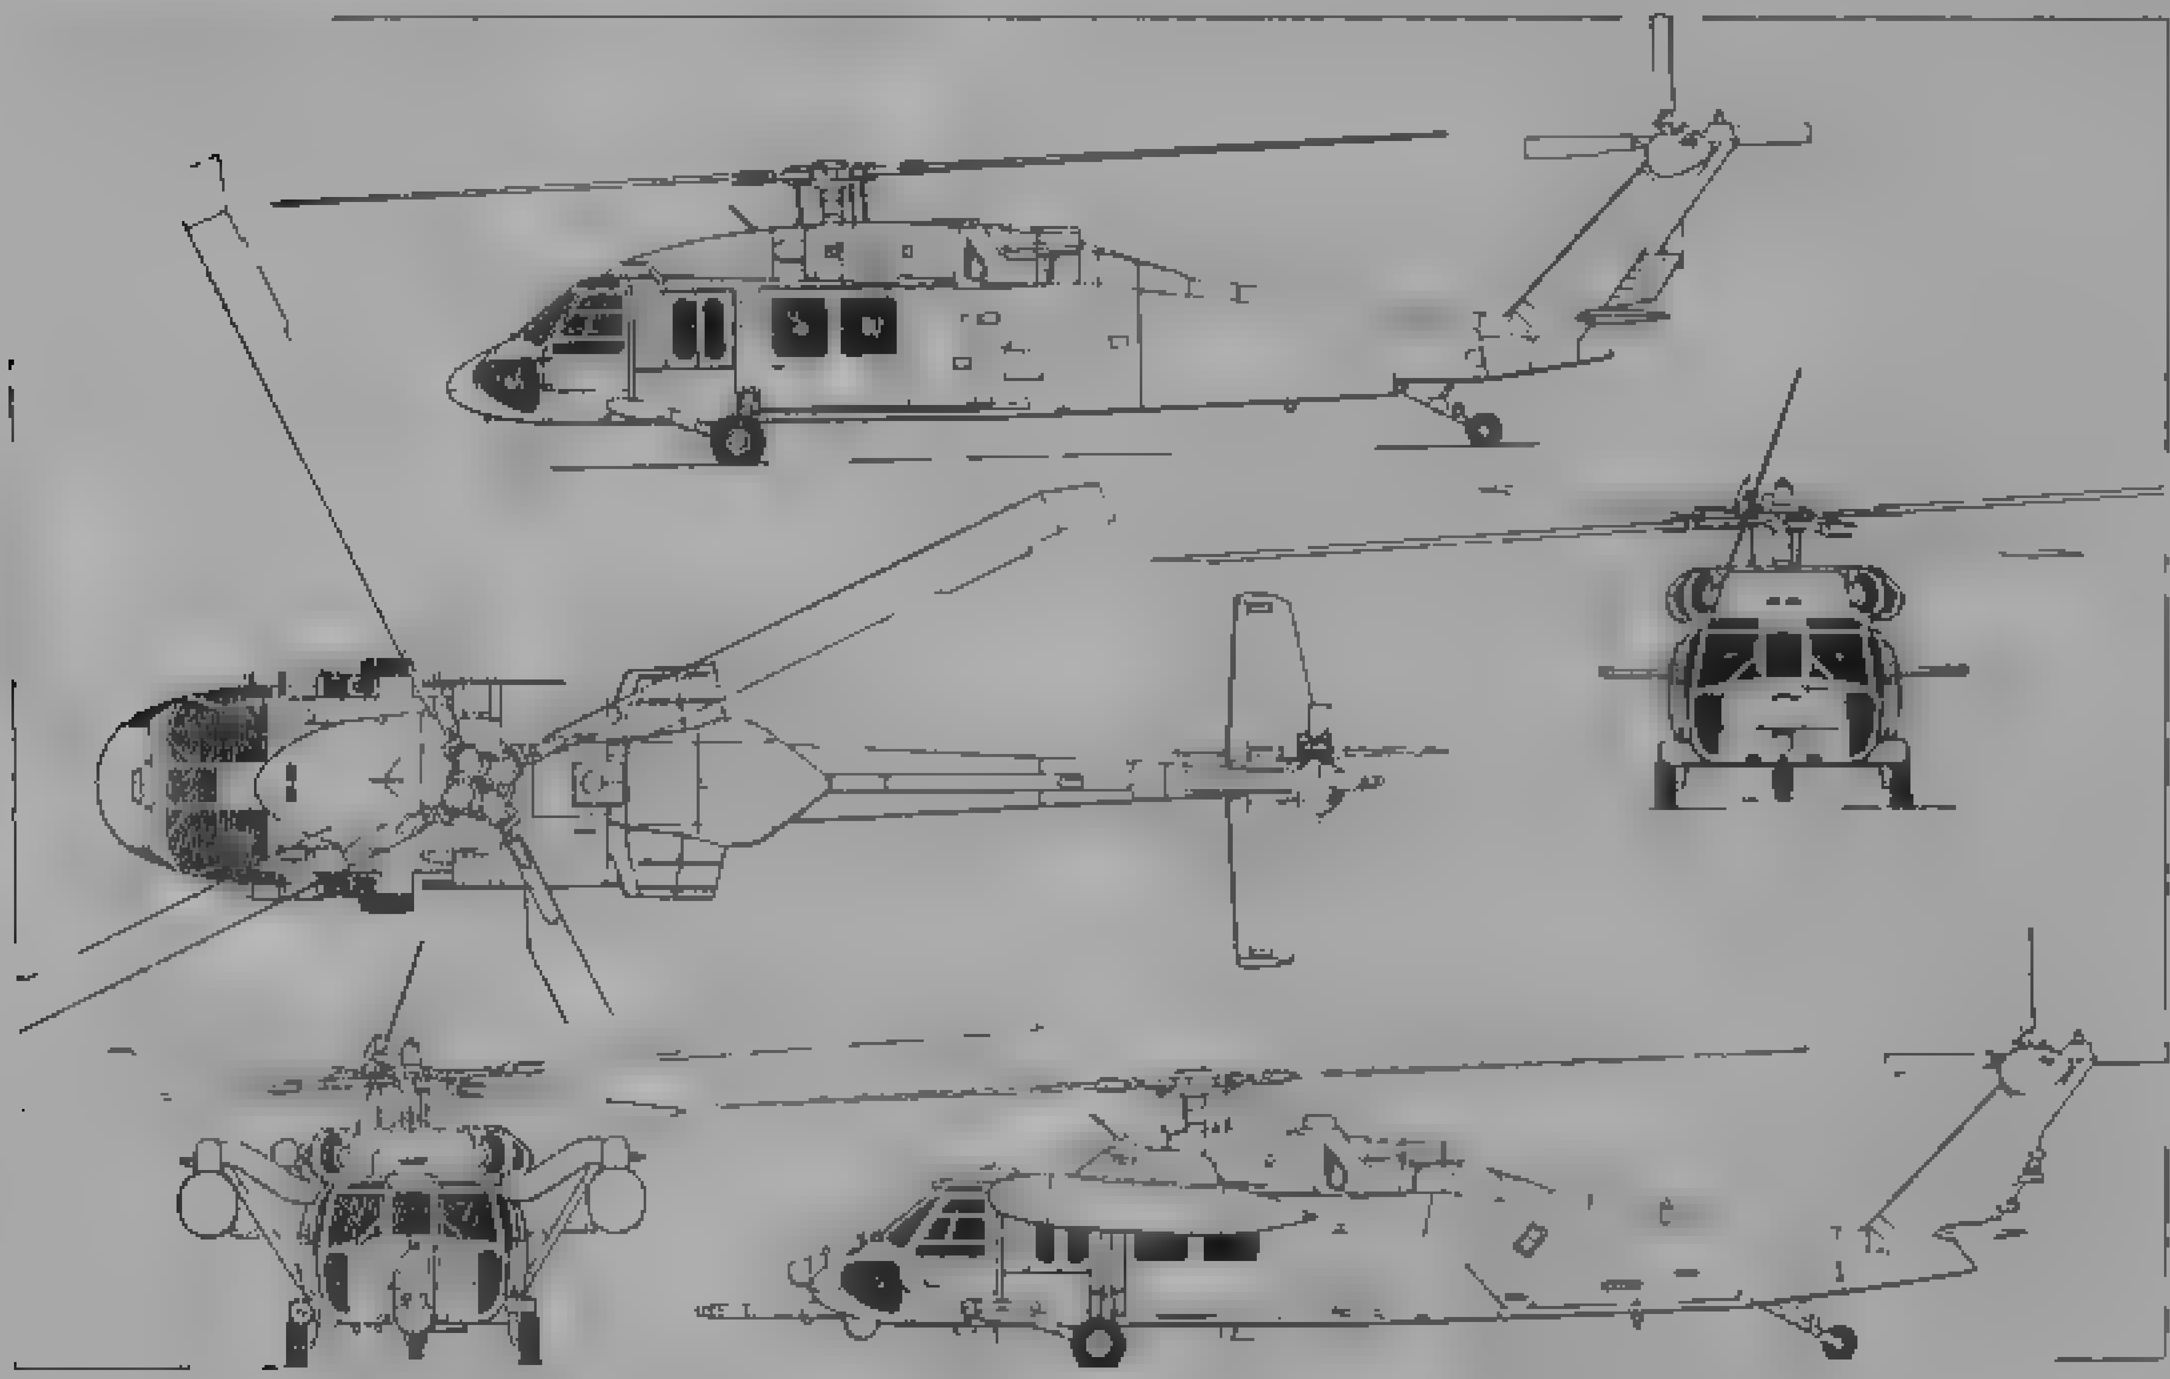


Interior of UH-60Q

1995

Moroccan Gendarmerie S-70A Black Hawk with nose-mounted colour weather radar

1995



Sikorsky UH-60L Black Hawk combat assault helicopter, with additional lower side view and lower front view of MH-60K special operations variant *(Jane's/Dennis Punnett)*

1995

Flight: Hamilton Standard AFCS with digital three-axis autopilot, Bendix/King AN/ARN-123(V)1 VOR/marker beacon/glide slope receiver, Emerson AN/ARN-89 ADF, Honeywell Plessey Electronic Systems AN/ASN-128 Doppler, AN/ASN-43 gyrocompass, Honeywell AN/APN-209(V)2 radar altimeter. HH/MH-60G has GEC-Marconi AN/ASN-137 Doppler, Rockwell Collins AN/ASN-149 GPS and Litton ring laser gyro INS (replacing Carousel IV).

Instrumentation: HH/MH-60G has Teldix KG-10 map display.

Mission: HH/MH-60G has Hughes AN/AAQ-16 FLIR.

Self-defence: Baseline UH-60 Black Hawk has E-Systems Melpar/Memcor AN/APR-39(V)1 RWR, Sanders AN/ALQ-144 IR countermeasures set and Tracor M-130 chaff/flare dispenser. MH-60K has Honeywell AN/AAR-47 missile warning system, Northrop Grumman AN/ALQ-136 pulse radio frequency jammer, Northrop Grumman AN/ALQ-162 CW radio jammer, E-Systems AN/APR-39A and AN/APR-44 pulse/CW warning receivers, Perkin Elmer AN/AVR-2 laser detector, Tracor M-130 chaff/flare dispenser and Sanders AN/ALQ-144 IR countermeasures set. HH/MH-60G has chaff/flare dispenser (Tracor M-130 being replaced by AN/ALE-40, but AN/ALE-47 to follow) and Sanders AN/ALQ-144 IR countermeasures set.

EQUIPMENT: HH/MH-60 have Lucas Western internal rescue hoist with 76 m (250 ft) of cable.

ARMAMENT: New production UH-60As and Ls from c/n 431 onward incorporate hardpoints for an external stores support system (ESSS). This consists of a combination of fixed provisions built into the airframe and four removable external pylons from which fuel tanks and a variety of weapons can be suspended. Able to carry more than 2,268 kg (5,000 lb) on each side of the helicopter, the ESSS can accommodate two 870 litre (230 US gallon; 191.5 Imp gallon) fuel tanks outboard, and two 1,703 litre (450 US gallon; 375 Imp gallon) tanks inboard. This allows the UH-60A to self-deploy 1,200 n miles (2,222 km; 1,381 miles) without refuelling. The ESSS also enables the Black Hawk to carry Hellfire laser-guided anti-armour missiles, gun or M56 mine dispensing pods, ECM packs, rockets and motorcycles. Up to 16 Hellfires can be carried externally on the ESSS, with another 16 in the cabin to provide the capability to land and reload. (Laser designation provided by Bell OH-58 helicopter or ground troops.) Two pintle mounts in cabin, adjacent forward cabin windows on each side, can each accommodate a 0.50 in calibre General Electric GECAL 50 or 7.62 mm six-barrel Minigun.

DIMENSIONS, EXTERNAL:
Main rotor diameter 16.36 m (53 ft 8 in)
Main rotor blade chord 0.53 m (1 ft 8¾ in)
Tail rotor diameter 3.35 m (11 ft 0 in)
Length overall: rotors turning 19.76 m (64 ft 10 in)
rotors and tail pylon folded 12.60 m (41 ft 4 in)
Length of fuselage:
UH-60A/MH-60G, excl flight refuelling probe 15.26 m (50 ft 0¾ in)
MH-60G, incl retracted refuelling probe 17.38 m (57 ft 0¼ in)
Width: UH-60A fuselage 2.36 m (7 ft 9 in)
MH-60G with auxiliary tanks 5.46 m (17 ft 11 in)
Max depth of fuselage 1.75 m (5 ft 9 in)
Height: overall, tail rotor turning 5.13 m (16 ft 10 in)
to top of rotor head 3.76 m (12 ft 4 in)
in air-transportable configuration 2.67 m (8 ft 9 in)
Tailplane span 4.38 m (14 ft 4½ in)
Wheel track 2.705 m (8 ft 10½ in)
Wheelbase 8.83 m (28 ft 11¾ in)
Tail rotor ground clearance 1.98 m (6 ft 6 in)
Cabin doors (each): Height 1.37 m (4 ft 6 in)
Width 1.75 m (5 ft 9 in)

DIMENSIONS, INTERNAL:
Cabin: Volume 11.61 m³ (410.0 cu ft)

AREAS:
Main rotor blades (each) 4.34 m² (46.70 sq ft)
Tail rotor blades (each) 0.41 m² (4.45 sq ft)
Main rotor disc 210.15 m² (2,262 sq ft)
Tail rotor disc 8.83 m² (95.03 sq ft)
Fin 3.00 m² (32.3 sq ft)
Tailplane 4.18 m² (45.0 sq ft)

WEIGHTS AND LOADINGS:
Weight empty: UH-60A 5,118 kg (11,284 lb)
UH-60L 5,216 kg (11,500 lb)
Payload: internal, UH-60A/L 1,197 kg (2,640 lb)
underslung, UH-60A/L 3,629 kg (8,000 lb)
Mission T-O weight: UH-60A 7,484 kg (16,500 lb)
UH-60L 7,711 kg (17,000 lb)
HH-60G 8,119 kg (17,900 lb)
MH-60K 11,113 kg (24,500 lb)
Max alternative T-O weight:
UH-60A 9,185 kg (20,250 lb)
UH-60L 10,659 kg (23,500 lb)
Max disc loading:
UH-60L at mission T-O weight 36.69 kg/m² (7.52 lb/sq ft)
UH-60L at max alternative T-O weight 50.72 kg/m² (10.39 lb/sq ft)
Max power loading:
UH-60L at mission T-O weight 3.04 kg/kW (5.00 lb/shp)
UH-60L at max alternative T-O weight 4.20 kg/kW (6.91 lb/shp)

PERFORMANCE (UH-60A at mission T-O weight, except where indicated):
Max level speed at S/L 160 kts (296 km/h; 184 mph)
Max level speed at max T-O weight 158 kts (293 km/h; 182 mph)
Max cruising speed:
UH-60A 139 kts (257 km/h; 160 mph)
UH-60L 150 kts (278 km/h; 173 mph)
Single-engine cruising speed at 1,220 m (4,000 ft) and 35°C (95°F) 105 kts (195 km/h; 121 mph)
Vertical rate of climb at 1,220 m (4,000 ft) and 35°C (95°F): UH-60A 125 m (411 ft)/min
UH-60L 239 m (785 ft)/min
Service ceiling 5,790 m (19,000 ft)
Hovering ceiling: IGE at 35°C 2,895 m (9,500 ft)
OGE, ISA 3,170 m (10,400 ft)
OGE at 35°C 1,705 m (5,600 ft)
Range with max internal fuel at max T-O weight, 30 min reserves: UH-60A 319 n miles (592 km; 368 miles)
UH-60L 315 n miles (584 km; 363 miles)
Range with external fuel tanks on ESSS pylons:
with two 870 litre (230 US gallon; 191.5 Imp gallon) tanks 880 n miles (1,630 km; 1,012 miles)
with two 870 litre (230 US gallon; 191.5 Imp gallon) and two 1,703 litre (450 US gallon; 375 Imp gallon) tanks 1,200 n miles (2,222 km; 1,381 miles)
Endurance: UH-60A 2 h 18 min
UH-60L 2 h 6 min
MH-60G with max fuel 4 h 51 min

UPDATED

SIKORSKY S-70B

US Navy designations: SH-60B Seahawk, SH-60F and HH-60H

US Coast Guard designation: HH-60J Jayhawk

Spanish Navy designation: HS.23

TYPE: ASW, and anti-ship surveillance and targeting helicopter.

PROGRAMME: Naval development of Sikorsky UTTAS (UH-60A Black Hawk) utility helicopter; won US Navy LAMPS Mk III competition for shipboard helicopter in 1977; first flight of first of five prototypes (161169) 12 December 1979; development details in 1982-83 *Jane's*; first 18 SH-60Bs authorised FY82. Changed USN planning in 1993 resulted in premature end to SH-60B/F production, SH-60F to be withdrawn from aircraft carriers, remanufacture of SH-60B/Fs as SH-60R to begin in 1998.

CURRENT VERSIONS: **SH-60B:** Initial production version for ASW/ASST, *as detailed under main description*.

XSH-60J: Japan Maritime Self-Defence Force (JMSDF) placed $27 million order for two **S-70B-3**s for installation of Japanese avionics and mission equipment, first flights 31 August and early October 1987, 1,007 hour test programme by Japan Defence Agency Technical Research and Development Institute between 1 June 1989 and 7 April 1991 to evaluate largely Japanese avionics for SH-60J but AN/APS-124 radar.

SH-60J: Mitsubishi (which see) is manufacturing SH-60J Seahawk for JMSDF to replace Sikorsky SH-3 Sea Kings by mid-1990s; total 90 required, 64 funded up to FY95, including two US built development aircraft. Japan Defence Agency's Technical Research and Development Institute to assemble prototype advanced rotor system for SH-60J in 1995, with full-scale version to be tested 1996-97. Will incorporate all-composite blades with redesigned cross-sections, planforms and tips and is expected to offer 5 per cent increase in hover efficiency and 30 per cent reduction in vibration levels, fleetwide retrofit probable if trials successful.

UH-60J/UH-60JA: Japanese variants of Black Hawk (see previous entry).

S-70B: Royal Australian Navy selected Seahawk, designated **S-70B-2**, for role adaptable weapon system (RAWS) full spectrum ASW helicopter with autonomous

First S-70B-6 Seahawk was delivered to Greece in 1994

1995

operating capability, order for eight confirmed 9 October 1984, eight more ordered May 1986, operates from RAN 'Adelaide' class (FFG-7) guided missile frigates; first flight (N7265H, now N24-001) at West Palm Beach 4 December 1987; 14 originally planned to be assembled in Australia, but announced late 1988 Sikorsky would assemble first eight, ASTA in Australia (which see) designated to assemble remainder in early 1989, first S-70B-2 handed over in USA 12 September 1989; formal acceptance at Nowra, NSW, 4 October 1989, Seahawk Introduction and Transition Unit became HS 816 at Nowra, 1 June 1991, formed first ship's flight, September 1991, squadron formally commissioned 23 July 1992. S-70B-2 has substantially different avionics to USN version Thomson Thorn Super Searcher radar (capable of tracking 32 surface targets) and Rockwell Collins advanced integrated avionics including cockpit controls and displays, navigation receivers, communications radios, airborne target hand-off datalink and tactical data system (TDS), final delivery 11 September 1991.

Spanish Navy received six **S-70B-1**s from December 1988 (designated **HS 23**) for operation from four FFG-7 frigates by Escuadrilla 010 at Rota, similar to USN SH-60B, but with Bendix/King AN/AQS-13F dipping sonar; further six ordered 1991

SH-60F. CV Inner Zone ASW helicopter, known as **CV-Helo**, for close-in ASW protection of aircraft carrier groups; $50.9 million initial US Navy contract for full-scale development and production options placed 6 March 1985, replacing SH-3H Sea King; Seahawk prototype modified as SH-60F test aircraft, first flight 19 March 1987, initial fleet deployment with USS *Nimitz* in 1991 Production terminated with delivery of final example 1 December 1994. To be phased out of carrier operations, conversions planned to SH-60R.

SH-60F has all LAMPS Mk III avionics, fairings and equipment removed, including cargo hook and RAST system main and tail probes, but installation provisions retained. Replaced by integrated ASW mission avionics including Bendix AN/AQS-13F dipping sonar, MIL-STD-1553B databus, dual Teledyne Systems AN/ASN-150 tactical navigation computers and AN/ASM-614 avionics support equipment, automatic flight control system with quicker automatic transition and both cable and Doppler autohover, tactical datalink with other aircraft, communications control system, multifunction keypads and displays for each of four crew members, internal/external fuel system and extra weapon station to port allowing carriage of three Mk 50 homing torpedoes, provision for surface search radar, FLIR, night vision equipment, passive ECM, MAD, air-to-surface missile capability, sonobuoy datalink, chaff/sonobuoy dispenser, attitude and heading reference system (AHRS), Navstar GPS, fatigue monitoring system and increase of maximum T-O weight to 10,659 kg (23 500 lb), secondary missions include SAR and plane guard

HH-60H: US Navy procurement of planned 42 to be achieved following resumption of deliveries on 1 December 1994, when first example of follow-on batch of 24 handed over at Stratford, Connecticut, used for strike-rescue/special warfare support (HCS), designated HH-60H, in September 1986; first flight (163783) 17 August 1988, accepted by USN 30 March 1989, in service with HCS-4 at Norfolk, Virginia, January 1990, initial procurement ended with 18th delivery July 1991, completing HCS-5 at Point Mugu, California, both squadrons are Reserves. Regular SH-60F squadrons later added pairs of HH-60Hs (HS-2, 3, 4, 6, 8, 14 and 15); missions are to recover four man crew at 250 n miles (463 km, 288 miles) from launch point or fly 200 n miles (371 km, 230 miles) and drop eight SEALs from 915 m (3,000 ft).

Close derivative of SH-60F, with same T700-GE-401C engines and HIRSS as SH-60B/F; equipment includes General Instrument AN/APR-39A(XE)2 RWR, Hughes AN/AVR-2 laser warning receiver, Honeywell AN/AAR-47 missile plume detector, Loral AN/ALE-47 chaff/flare dispenser, Sanders AN/ALQ-144 IR jammer, night vision goggle cockpit and two cabin-mounted M60D 7.62 mm machine guns; provision for weapon pylons, required to operate from decks of FFG-7, DD-963, CG-47 and larger vessels, as well as unprepared sites. Cubic AN/ARS-6 personnel locator system installed from FY91 Some equipped with Seahawk-type Indal RAST (recovery assist, secure and traverse) equipment. Armament development authorised October 1991 for installation of Hellfire ASM, 70 mm (2.75 in) rockets and forward-firing guns

HH-60J Jayhawk. Ordered in parallel with HH-60H, adapted for US Coast Guard medium-range recovery (MRR) role; 42 funded, including six in FY91, one each in FY92-93 and two in FY94, five more required. First flight (USCG 6001) 8 August 1989; first delivery to USCG (6002 at Elizabeth City CGAS) 16 June 1990; subsequently to Mobile, Traverse City, San Francisco, Cape Cod, Sitka, Kodiak and (December 1992) Clearwater CGAS When carrying three 455 litre (120 US gallon, 100 Imp gallon) external tanks, HH-60J can fly out 300 n miles (556 km, 345 miles) and return with six survivors in addition to four-man crew, or loiter for 1 hour 30 minutes when investigating possible smugglers; other duties include law enforcement, drug interdiction, logistics, aids to navigation, environmental protection and military readiness; compatible with decks of 'Hamilton' and 'Bear' class USCG cutters Equipment includes Bendix/King RDR-1300C search/weather radar, AN/ARN-147 VOR/ILS, KDF 806 direction-finder, GPS, Tacan, VHF/UHF-DF, TacNav, dual U/VHF-FM radios, HF radio, IFF V/U/HF IFF crypto computers, NVG-compatible cockpit, rescue hoist and external cargo hook

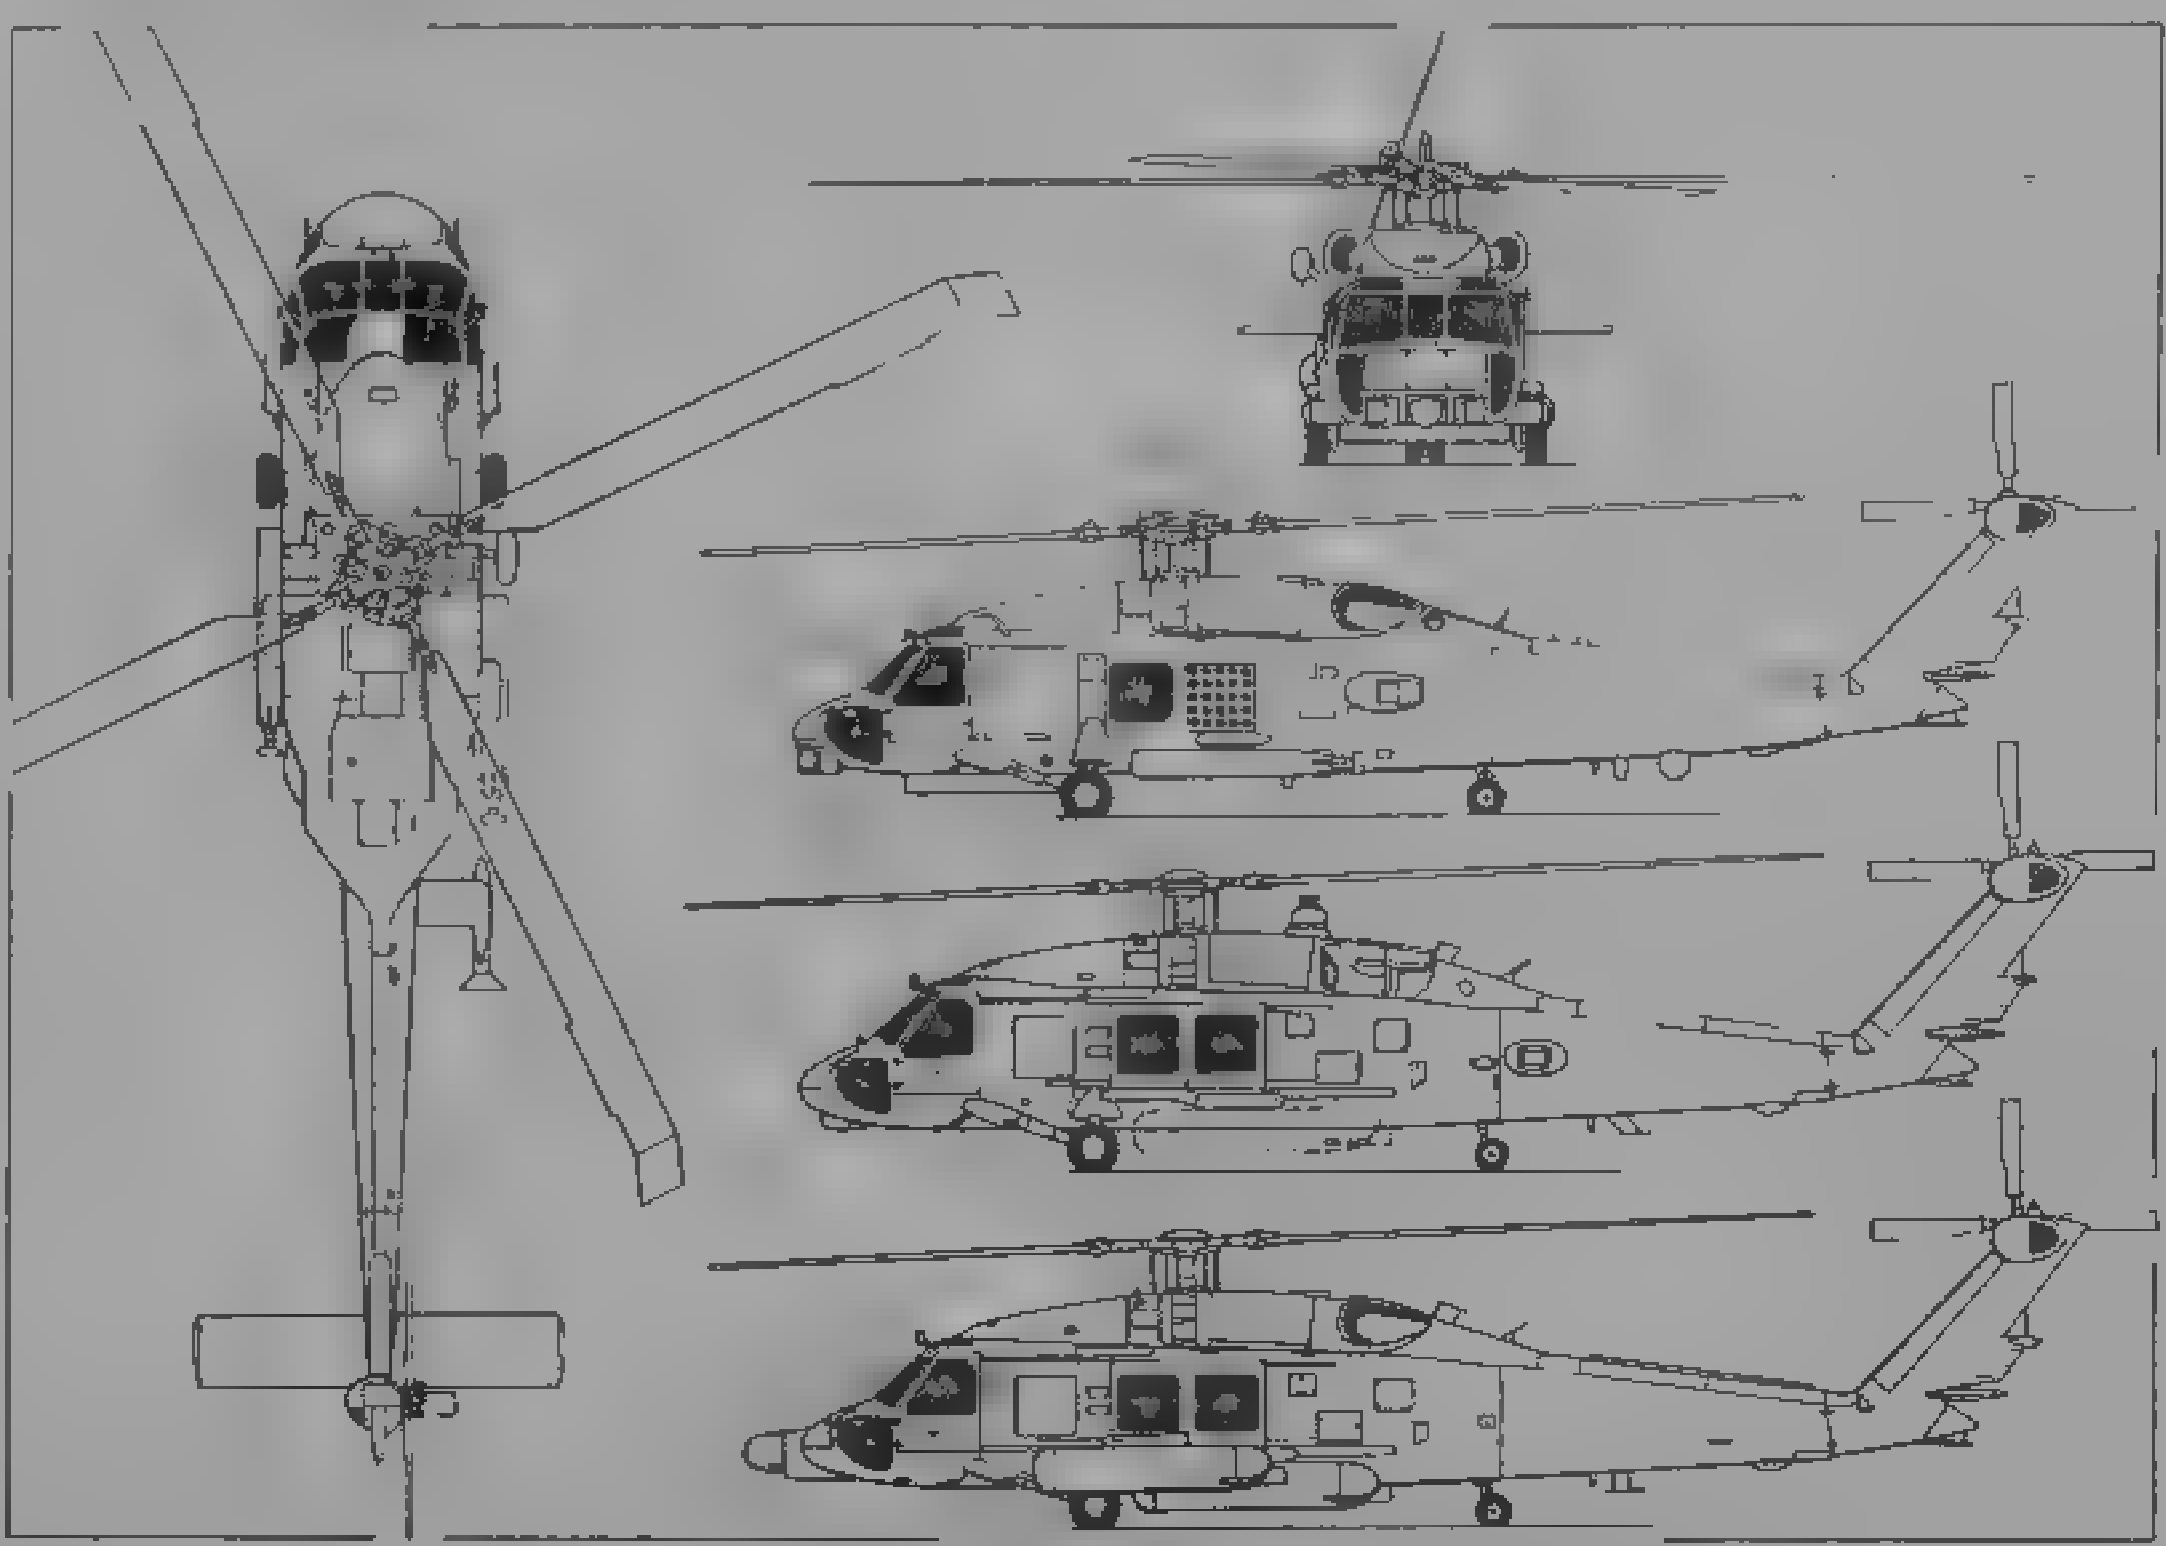
SH-60R: Remanufactured SH-60B/F combines SH-60B capabilities with dipping sonar of SH-60F; original plan anticipated first two conversions to be funded in FY98, 15 in FY99 and more thereafter, however, concerns over cost have led to one year delay in launch of remanufacture programme

S-70B-6. Hybrid SH-60B/F for Greece; five (plus three options) selected December 1991 and ordered 17 August 1992 for MEKO 200 frigates, armament includes NFT Penguin ASMs; avionics include AN/AQS-18(V)-3 dipping sonar, AN/APS-143(V)3 radar and AN/ALR-66(V)-2 ESM first two delivered fourth quarter of 1994

S-70B-7: Anticipated designation for six Seahawks ordered by Royal Thai Navy in October 1993, equipped for coastal surveillance maritime patrol and SAR from helicopter carrier, deliveries from 1997

S-70C(M)-1 Thunderhawk: Delivery began July 1990 to Taiwanese Navy of 10 SH-60B Seahawks, given S-70C designation, shipboard deployment from 1993 aboard six FFG-7 frigates. Equipment includes Bendix AN/AQS-18(V) dipping sonar, Telephonics AN/APS-128PC radar and Litton AN/ALR-606(V)-2 ESM integrated with radar antenna, no MAD

CUSTOMERS: Total US Navy requirement originally 260 SH-60Bs, plus five prototypes, 188 on order, including 12 in FY93 and seven in FY94, procurement then prematurely suspended. First flight production Seahawk 11 February 1983, deliveries at two a month; first squadron was HSL-41 at NAS North Island, San Diego, California, operational deployment began 1984, 10 US Navy squadrons operating by March 1991 (HSLs 41, 43, 45, 47 and 49 at



Sikorsky SH-60B Seahawk twin-turbine ASW/ASST helicopter, with additional side views of HH-60H (centre) and HH-60J Jayhawk (bottom) *(Jane's/Dennis Punnett)*

1995

Sikorsky SH-60B Seahawk LAMPS Mk III helicopter *(Paul Jackson)* 1995

Sikorsky HH-60J Jayhawk rescue and law enforcement helicopter for US Coast Guard 1995

NAS North Island, 40, 42, 44, 46 and 48 at NAS Mayport Florida), subsequently HSL-51 formed at Atsugi, Japan, 1 October 1991, and HSL-37 at NAS Barbers Point, Hawaii began converting from SH-2Fs on 6 February 1992. SH-60Bs deployed in 'Oliver Hazard Perry' (FFG-7) class frigates, 'Spruance' class and Aegis equipped destroyers and 'Ticonderoga' class guided missile cruisers. US Navy originally required 150 SH-60Fs; total 82 completed, comprising seven preseries plus 18 each in FY88, 89 and 91, 12 in FY92 and nine in FY93, procurement then prematurely halted, two used for operational evaluation; five more delivered by September 1989; in West Coast service with HS-2, 4, 6, 8, 10 and 14 squadrons NAS North Island, California. HS-3 at Jacksonville, Florida equipped from 27 August 1991 as first East Coast squadron, followed by HS-1, 11 and 15.

Exported to Australia, Greece, Japan and Spain (see Current Versions). S-70B-4 and -5 are derivatives of SH-60F and HH-60H, respectively; not taken up.

COSTS: $20.25 million (1992) USN programme unit cost.

DESIGN FEATURES: SH-60B Seahawk designed to provide all weather detection, classification, localisation and interdiction of surface ships and submarines, either controlled through datalink from mother ship or operating independently; secondary missions include SAR, vertical replenishment, medevac, fleet support and communications relay.

New features include more powerful navalised GE T700-GE-401 engines, additional fuel, sensor operator's station, port-side internal launchers for 25 sonobuoys, pylon on starboard side of tailboom for MAD bird, lateral pylons for two torpedoes or external tanks, chin-mounted ESM pods, sliding cabin door, rescue hoist, electrically actuated blade folding, rotor brake, folding tail, short wheelbase tailwheel landing gear with twin tailwheels stressed for lower crash impact, DAF Indal RAST recovery assist, secure and traversing for haul-down landings on small decks and moving into hangar, hovering in-flight refuelling system, and emergency flotation system; pilots' seats not armoured. SH-60B gives 57 minutes more listening time on station and 45 minutes more ship surveillance and targeting time than LAMPS Mk I.

For operation in Gulf during Iran-Iraq war, 25 SH-60Bs fitted with upper and lower Sanders AN/ALQ-144 IR jammers, Tracor AN/ALE-39 chaff/flare dispensers, Honeywell AN/AAR 47 electro-optical missile warning, and a single 7.62 mm machine gun in door, for a weight penalty of 169 kg (369.5 lb); seven Seahawks fitted with Ford Aerospace AN/AAS-38 FLIR on port weapon pylon with instantaneous relay to parent ship.

First Block I SH-60B update, introduced in production Lot 9, delivered from October 1991, includes provision for NFT AGM 119 Penguin anti-ship missile, Mk 50 advanced lightweight torpedo, Rospatch AN/ARR-84 99-channel sonobuoy receiver (replacing ARR 75), Chelton AN/ARC 182 V/UHF FM radio and Rockwell Collins Class 3A Navstar GPS, prior to production cutbacks, 115 Penguin-capable Seahawks to come from retrofitting back to Lot 5. Block II development, including airborne low frequency sonar and inverse synthetic aperture radar began 1991 with preliminary design contract award to IBM, EMD contract August 1993; for retrofitting from 1999, new sonar decision announced December 1991 in favour of Hughes/Thomson Sintra FLASH (folding light acoustic sonar for helicopters), 158 to replace AN/AQS-13F in SH-60F, plus 185 for installation in SH-60B, associated AT&T AN/UYS 2 enhanced modular signal processor; Telephonics multimode radar; improved version of AN/AYK 14 mission computer; improved ESM, maximum weight increased to 10,659 kg (23,500 lb).

FLYING CONTROLS: As for UH-60.

STRUCTURE: Basically as for UH-60 plus marine corrosion protection, single cabin door, starboard side, narrower than on UH-60.

POWER PLANT: Two 1,260 kW (1,690 shp) intermediate rating General Electric T700-GE-401 turboshafts in early aircraft, 1,342 kW (1,800 shp) T700-GE-401C turboshafts introduced in 1988 and on HH-60H/J. Transmission rating 2,535 kW (3,400 shp). Internal fuel capacity 2,233 litres (590 US gallons; 491 Imp gallons). Hovering in-flight refuelling capability. Two 455 litre (120 US gallon; 100 Imp gallon) auxiliary fuel tanks on fuselage pylons optional (three on HH-60J). Hover infra-red suppressor subsystem (HIRSS) exhaust cowling fitted to HH-60H.

ACCOMMODATION: Pilot and airborne tactical officer/back-up pilot in cockpit, sensor operator in specially equipped station in cabin. Dual controls standard. Sliding door with jettisonable window on starboard side. Accommodation heated, ventilated and air conditioned.

SYSTEMS: Generally as for UH-60A.

AVIONICS: Refer also to Current Versions for variants other than SH-60B.

Comms: Collins AN/ARC-159(V)2 UHF, Collins AN/ARC-174(V)2 HF, Hazeltine AN/APX-76A (V) and Bendix/King AN/APX-100(V)1 IFF transponders, TSEC/KG-45(E-1) communications security set, TSEC/KY-75 voice security set, Telephonics OK-374/ASC communications system control group.

Radar: Texas Instruments AN/APS-124 search radar (Thomson Thorn SuperSearcher for Australia, Telephonics AN/APS-128PC for Taiwan).

Flight: Collins AN/ARN-118(V) Tacan, Teledyne Ryan AN/APN-127 Doppler, Collins AN/ARA-50 UHF DF, Honeywell AN/APN-194(V) radar altimeter.

Mission: Sikorsky sonobuoy launcher, Edmac AN/ARR-75 and R-1651/ARA sonobuoy receiving sets (AN/ARR 84 receiver in Australian Seahawks and for USN Block 1 upgrade), Texas Instruments AN/ASQ-81(V)2 towed-MAD (CAE AN/ASQ-504(V) internal MAD in Australian Seahawks), Raymond MU-670/ASQ magnetic tape memory unit, Astronautics IO-2177/ASQ altitude indicator, Fairchild AN/ASQ-164 control indicator set, Fairchild AN/ASQ-165 armament control indicator set, IBM AN/UYS-1(V)2 Proteus acoustic processor (Computing Devices UYS-503 for Australia) and CV-3252/A converter display, Control Data AN/AYK-14 (XN 1A) digital computer, Raytheon AN/ALQ 142 ESM, Sierra Research AN/ARQ-44 datalink and telemetry (Rockwell Collins DHS-901 in Australian Seahawks). SH-60F has Bendix AN/AQS-13F dipping sonar (AN/AQS-18 in Taiwanese S-70s). During 1991 Gulf War, pod-mounted Hughes AN/AAQ-16 FLIR fitted to five SH-60Bs and Texas Instruments AN/AAQ-17 FLIR deployed on one SH-60B. GEC Marconi Sea Owl IR turret evaluated later in 1991; Texas Instruments FLIR/laser designator under test on SH-60B in early 1994, option to procure 90 systems by 1997. Australian examples also acquired AN/AAQ-16 FLIR for Gulf War.

Self-defence: Australian Seahawks fitted with AN/ALE-47 chaff/flare dispensers and AN/AAR-47 missile detectors for Gulf War.

EQUIPMENT: External cargo hook (capacity 2,722 kg, 6,000 lb) and rescue hoist (272 kg, 600 lb) standard.

ARMAMENT: Includes two Mk 46 torpedoes and (IOC 1993) NFT AGM-119B Penguin Mk 2 Mod 7 anti-shipping missiles. Block I upgrade integrates Penguin and Honeywell Mk 50 Advanced Lightweight Torpedo from 1993. HH-60H has two pintle-mounted M60D machine guns but to receive Rockwell AGM 114 Hellfire ASMs, 70 mm (2.75 in) rocket pods and forward-firing guns. Hellfire additionally considered as SH-60B/F armament for attacking small ships.

DIMENSIONS, EXTERNAL: As UH-60A except

Length overall, rotors and tail pylon folded:	
SH-60B	12.47 m (40 ft 11 in)
HH-60H	12.51 m (41 ft 0⅝ in)
HH-60J	13.13 m (43 ft 0⅞ in)
Length of fuselage: HH-60J	15.87 m (52 ft 1 in)
Width, rotors folded	3.26 m (10 ft 8¼ in)
Height: to top of rotor head	3.79 m (12 ft 5⅛ in)
overall, tail rotor turning	5.18 m (17 ft 0 in)
overall, pylon folded	4.04 m (13 ft 3¼ in)
Wheelbase	4.83 m (15 ft 10 in)
Tail rotor ground clearance	1.83 m (6 ft 0 in)
Main/tail rotor clearance	6.6 cm (2⅝ in)

Vertical rate of climb at S/L, 32.2°C (90°F), OEI:	
SH-60B	137 m (450 ft)/min

UPDATED

SIKORSKY S-70C

TYPE: Commercial or military H-60 for non-FMS customers.

PROGRAMME: See Customers below.

CUSTOMERS: Delivery of 24, designated **S-70C-2**, with undernose radar to People's Republic of China completed December 1985 but offered for sale in 1992 due to spares embargo; 14 supplied to Republic of China Air Force, Taiwan, one each for Westland plc (designated Westland **WS-70L**) and Rolls-Royce in UK, R-R aircraft used as testbed for R-R Turbomeca RTM 322 turboshafts; all based on Black Hawk. **S-70C(M)-1** designation assigned to 10 Seahawks for Taiwan (see SH-60B entry). No recent purchases.

DESIGN FEATURES: Certificated to FAR Pt 21.25; roles include utility transport, external lift, maritime and environmental survey, forestry and conservation, mineral exploration and heavy construction support, powered by General Electric CT7-2C or -2D engines; options include de-icing kit for main and tail rotors, cargo hook for 3,630 kg (8,000 lb) loads, rescue hoist, aeromedical evacuation kit, and winterisation kit. Combined transmission rating (continuous) 2,334 kW (3,130 shp).

FLYING CONTROLS: As for UH-60.

STRUCTURE: As for UH-60.

POWER PLANT: Two 1,212 kW (1,625 shp) General Electric CT7-2C or 1,285 kW (1,723 shp) CT7-2D turboshafts, or equivalent military T700s. Rolls-Royce Turbomeca RTM 322 in demonstrator G-RRTM. Maximum fuel capacity 1,370 litres (362 US gallons; 301 Imp gallons).

ACCOMMODATION: Flight deck crew of two, with provision for 12 passengers in standard cabin configuration and up to 19 passengers in high-density layout. Forward-hinged door on each side of flight deck for access to cockpit area. Large rearward-sliding door on each side of main cabin.

DIMENSIONS, INTERNAL:

Cabin: Length	3.84 m (12 ft 7 in)
Max width	2.34 m (7 ft 8 in)
Max height	1.37 m (4 ft 6 in)
Floor area	8.18 m² (88.0 sq ft)
Volume	10.96 m³ (387.0 cu ft)
Baggage compartment volume	0.52 m³ (18.5 cu ft)

WEIGHTS AND LOADINGS:

Weight empty	4,607 kg (10,158 lb)
Max external load	3,630 kg (8,000 lb)
Max T-O weight	9,185 kg (20,250 lb)
Max disc loading	43.73 kg/m² (8.96 lb/sq ft)
Max power loading	3.94 kg/kW (6.47 lb/shp)

PERFORMANCE (ISA, at max T-O weight):

Never-exceed speed (V_{NE})	195 kts (361 km/h; 224 mph)
Max level speed at S/L	157 kts (290 km/h; 180 mph)
Cruising speed at S/L	145 kts (268 km/h; 167 mph)
Max rate of climb at S/L	615 m (2,020 ft)/min
Service ceiling	4,360 m (14,300 ft)
Service ceiling, OEI	1,095 m (3,600 ft)
Hovering ceiling OGE	1,204 m (3,950 ft)
Range at 135 kts (250 km/h; 155 mph) at 915 m (3,000 ft) with max standard fuel, 30 min reserves	255 n miles (473 km; 294 miles)
Range, max fuel, no reserves	297 n miles (550 km; 342 miles)

VERIFIED

SIKORSKY S-76

TYPE: Twin-turbine helicopter.

PROGRAMME: Announced 19 January 1975; four prototypes begun May 1976; first flight (N762SA) 13 March 1977; certification to FAR Pt 29 in November 1978; deliveries started early 1979; delivery of Mk II began 1 March 1982; Mk II modification kits available for earlier S-76s.

CURRENT VERSIONS: **S-76**: Original transport version delivered before 1 March 1982 (see earlier editions).

S-76A+: Retrofit of Turbomeca Arriel 1S to S-76A.

S-76 Mark II: Standard version from March 1982, no longer current. Details in 1991-92 and earlier *Jane's*.

S-76 Utility: More basic version of S-76 Mk II with sliding doors (one each side), dual controls, and floors stressed for 976 kg/m² (200 lb/sq ft); options include fixed landing gear with low-pressure tyres, crash-resistant fuel tanks, baggage compartment auxiliary tank for 416 litres (100 US gallons; 91.5 Imp gallons), armoured crew seats, cargo hook, rescue hoist, engine air particle separators, and provision for stretchers. Philippine Air Force received 17 military S-76 Utility, of which 12 AUH-76s fitted for counter-insurgency, troop/logistic support and medevac, two others for SAR, and three as 12- or eight-passenger transports.

S-76B: Powered by P&W PT6B-36 engines, described separately; current production model. One S-76B flown with Fantail anti-torque system as part of RAH-66 Comanche development programme; see H-76 Eagle.

S-76C: Powered by Turbomeca Arriel 1S1 engines, described separately; current production model.

S-76C+: Powered by Turbomeca Arriel 2S1 engines, in development 1995.

H-76 and H-76N Eagle: Military and naval developments of S-76B, described separately.

Shadow: One-off modification (N765SA) of S-76,

Sikorsky S-76 of Helijet Airways, Vancouver, Canada

1995

Sikorsky Helicopter Advanced Demonstrator and Operator Workload fitted with nose-mounted single-seat cockpit for US Army Rotorcraft Technology Integration (ARTI) programme, main cabin used for safety pilots and test operators, first flight 24 June 1985, trials of full cockpit began Spring 1986; now has fly-by wire side-mounted control stick, voice interactive system, remote map reader, FLIR, HUD with programmable symbol generator, visually coupled helmet mounted display and dual CRT displays with touch-sensitive screens. Later modifications include upgraded engines and dynamic components, NVG compatible cockpit and cabin, reconfigurable evaluation cockpit, and high-visibility paint for night and NOE flying.

Partners in programme include Bendix/King, Kaiser Litton, Northrop Grumman, Pacer Systems, Rockwell Collins, Plessey Electronic Systems and Hamilton Standard.

Used 1990 in Boeing/Sikorsky LH First Team programme to flight test NVPS (night vision pilotage system) developed by Martin Marietta.

CUSTOMERS: Total 413 all civil versions delivered by 31 December 1994, total includes 284 S-76s (including Mark II), 17 S-76A+ conversions, 80 S-76Bs and 32 S-76Cs. Japan Maritime Safety Agency selected S-76C in advanced SAR configuration, with first delivery early 1994.

UPDATED

SIKORSKY S-76B

TYPE: PT6B-36A-engined S-76 Mark II.

PROGRAMME: Initiated October 1983, first flight (N3123U) 22 June 1984, first flight of reworked ground test S-76B February 1985, certificated in FAA Category A early 1987. UK certification testing began July 1987; increase in maximum T-O weight to 5,307 kg (11,700 lb) approved by FAA in June 1988.

CUSTOMERS: S-76Bs operating in China, Germany, Japan, South Korea, Netherlands, UK and USA; total 80 delivered by 31 December 1994.

DESIGN FEATURES: Meets FAR Pt 29 with Category A IFR; intended for offshore support, business transport, medical evacuation and general utility use, technology and aerodynamics based on those of UH-60 Black Hawk.

Four-blade main rotor with high twist and varying section and camber based on Sikorsky SC-1095, tapered blade tip has 30° leading-edge sweep; fully articulated rotor head with single elastomeric bearings, hydraulic drag dampers, dual bifilar vibration absorber assemblies above rotor head, four blade cross-beam tail rotor on port side, transmission rating 969 kW (1,300 shp), rotor brake optional.

Experimental higher harmonic control (HHC) system, to damp vibration through control actuators at rotor head tested Spring 1985, demonstrated 90 per cent vibration reduction. Ice protection kit weighing 68 kg (150 lb), of which 45 kg (100 lb) could be removed in Summer, also under development. Optional manual blade folding introduced in 1993.

Additional power of P&WC PT6B-36A engines and raised transmission rating increases take-off power in S-76B by 48 per cent, useful load increased 51 per cent in hot and high conditions; maximum T-O weight increased by 635 kg (1,400 lb), tail rotor pylon area reduced by 15 per cent and engine exhaust reconfigured.

Emergency medical service installation includes multiple-position pivoting primary patient litter, a second litter, and track-mounted seats for four attendants, forward and rear oxygen systems, and dual access to external power on ground; cabin volume 4.0 m³ (141 cu ft).

FLYING CONTROLS: Dual powered hydraulic controls with autostabilisation and autopilot, releasable spring-centring trim system for both cyclic and collective controls.

STRUCTURE: Main rotor blades have formed and welded titanium oval-section tubular main spar with Nomex honeycomb aerofoil core, glassfibre composite outer skin and titanium/nickel leading-edge abrasion strips. Fuselage contains extensive Kevlar and honeycomb components.

LANDING GEAR: Hydraulically retractable tricycle type, with single wheel on each unit. Nosewheel retracts rearward, main units inward into rear fuselage, all three wheels are enclosed by doors when retracted. Mainwheel tyres size 14.5 × 5.5-6, pressure 11.38 bars (165 lb/sq in); nosewheel tyre size 13 × 5.00-4, pressure 9.31 bars (135 lb/sq in). Hydraulic brakes, hydraulic mainwheel parking brake. Non-retractable tricycle gear, with low-pressure tyres, optional.

POWER PLANT: Two Pratt & Whitney Canada PT6B-36A turboshafts, 5 minute T-O rating 732 kW (981 shp), maximum continuous rating 661 kW (887 shp), 30 minute OEI rating 771 kW (1,033 shp); 30 minute OEI rating, S/L, 90°F, 686 kW (920 shp); 30 minute OEI rating, 305 m (1,000 ft), up to 90°F 602 kW (807 shp); maximum continuous rating at 1,524 m (5,000 ft) and 30°C (77°F) 504 kW (676 shp). Transmission rating 1,118 kW (1,500 shp). Standard fuel capacity 1,064 litres (281 US gallons, 234 Imp gallons), optional auxiliary tank capacity 208 litres (55 US gallons; 46 Imp gallons).

ACCOMMODATION: Two pilots and 12 to 13 passengers. Three four-abreast rows of seats, floor-mounted at a pitch of 79 cm (31 in). A number of executive layouts are available including a four passenger 'office in the sky' configuration. Executive versions have luxurious interior trim, full carpeting, special soundproofing, radiotelephone, and co-ordinated furniture. Dual controls optional. Two large doors on each side of fuselage, hinged at forward edges, sliding doors available optionally. Baggage hold aft of cabin, with external door each side of fuselage. Cabin heated and ventilated. Windscreen demisting and dual windscreen wipers. Windscreen heating and external cargo hook optional.

SYSTEMS: Hydraulic system at pressure of 207 bars (3,000 lb/sq in) supplied by two pumps driven from main gearbox. Hydraulic system maximum flow rate 15.9 litres (4.2 US gallons; 3.5 Imp gallons)/min. Bootstrap reservoir. Pump head pressure 3.45 bars (50 lb/sq in). In VFR configuration, electrical system comprises two 200 A DC starter/generators and a 24 V 17 Ah Ni/Cd battery. In IFR configuration, system comprises gearbox-driven 7.5 kVA

Sikorsky S-76B twin turboshaft helicopter

1995

Sikorsky S-76C SAR helicopter of the Japan Maritime Safety Agency

1995

generator, and a 115 V 600 VA 400 Hz static inverter for AC power. 34 Ah battery optional. Engine fire detection and extinguishing system.

AVIONICS: Standard avionics (utility configuration) with four-tube EFIS display comprise dual Collins VHF com/nav with single Collins Mode S transponder, ADF and DME, Baker audio/cabin ICS system and Artec emergency locator transmitter. Two optional avionics packages include Bendix/King com/nav and dual Honeywell Primus II integrated avionics system; other options include VHF/UHF/HF/AM/FM com radios, cockpit voice recorder, FMS/Loran/Omega/GPS and Decca navigation systems, flight data recorder and colour weather radar.

EQUIPMENT: Standard equipment includes provisions for dual controls, cabin fire extinguishers, cockpit, cabin, instrument, navigation and anti-collision lights; landing light, external power socket, first aid kit, and utility soundproofing. Optional equipment includes air conditioning, cargo hook, rescue hoist, emergency flotation gear, engine air particle separators and litter installation.

DIMENSIONS, EXTERNAL:

Main rotor diameter	13.41 m (44 ft 0 in)
Main rotor blade chord	0.39 m (1 ft 3½ in)
Tail rotor diameter	2.44 m (8 ft 0 in)
Tail rotor blade chord	0.16 m (6½ in)
Length: overall, rotors turning	16.00 m (52 ft 6 in)
fuselage	13.21 m (43 ft 4 in)
Height overall, tail rotor turning	4.41 m (14 ft 5¾ in)
Tailplane span	3.05 m (10 ft 0 in)
Width of fuselage	2.13 m (7 ft 0 in)
Wheel track	2.44 m (8 ft 0 in)
Wheelbase	5.00 m (16 ft 5 in)
Tail rotor ground clearance	1.97 m (6 ft 5¾ in)

DIMENSIONS, INTERNAL:

Passenger cabin: Length	2.46 m (8 ft 1 in)
Max width	1.93 m (6 ft 4 in)
Max height	1.35 m (4 ft 5 in)
Floor area	4.18 m² (45.0 sq ft)
Volume	5.78 m³ (204 cu ft)
Baggage compartment volume	1.08 m³ (38 cu ft)

AREAS:

Main rotor disc	141.26 m² (1,520.53 sq ft)
Tail rotor disc	4.67 m² (50.27 sq ft)
Tailplane	2.00 m² (21.5 sq ft)

WEIGHTS AND LOADINGS:

Weight empty, standard equipment	3,012 kg (6,641 lb)
Max T-O weight	5,307 kg (11,700 lb)
Max disc loading	37.6 kg/m² (7.69 lb/sq ft)
Max power loading	4.75 kg/kW (7.80 lb/shp)

PERFORMANCE (at max T-O weight, ISA):

Max level speed	155 kts (287 km/h; 178 mph)
Cruising speed	145 kts (269 km/h; 166 mph)
Max rate of climb at S/L	502 m (1,650 ft)/min
Max operating altitude	4,575 m (15,000 ft)
Service ceiling, OEI	1,980 m (6,500 ft)
Hovering ceiling: IGE	2,440 m (8,000 ft)
OGE	1,143 m (3,750 ft)

Range at 139 kts (257 km/h; 160 mph) at 1,220 m (4,000 ft) with standard fuel:

no reserves	350 n miles (648 km; 402 miles)
30 min reserves	280 n miles (518 km; 322 miles)

UPDATED

SIKORSKY H-76 EAGLE

TYPE: Military armed utility derivative of S-76B.

PROGRAMME: First flight (N3124G) February 1985, weapon firing from four-station pitch-compensated armament pylon at Mojave, California, early 1987.

CURRENT VERSIONS: **H-76**: Standard military armed version, *as described in detail*.

H-76N: Naval version announced 1984; no known customers so far. Details in 1991-92 and earlier *Jane's*.

Fantail Demonstrator: Fitted with Boeing Sikorsky Fantail anti-torque system for RAH-66 Comanche (which see) and flown 6 June 1990; eight-blade tail rotor 1.20 m (3 ft 11¼ in) diameter, generating 737 kg (1,624 lb) maximum thrust at 610 m (2,000 ft) and 35°C (95°F).

CUSTOMERS: Thailand ordered six in 1995.

DESIGN FEATURES: Airframe modifications include armoured crew seats, sliding cabin doors, heavy-duty floor, optical sight above instrument panel, self-sealing high-strength fuel tanks, and door-mounted weapons; main transmission, intermediate and tail rotor gearboxes uprated, main rotor hub and shaft strengthened, broader tail rotor blade chord, dual spars in tail pylon, fuselage side skin thickened to resist weapon blast. Strobex rotor blade tracker optional.

H-76 can be equipped for troop transport/logistic support, as gunship, or for airborne assault, air observation post, combat SAR, evacuation, ambulance and conventional SAR. Can carry either mast-mounted or roof-mounted sight, plus HUD, laser ranger and integrated armament management system, also provision for self-protection system including radar warning, infra-red jammer, and chaff/flare dispensers, high-clearance landing gear and Honeywell SPZ-7000 dual digital autopilot available.

Armament pylon has faired leading-edge, giving 3 to 4 knots speed increase; weapons tested include Giat 20 mm cannon pod, 7.62 mm and 12.7 mm machine gun pods, VS-MD-H mine dispenser and 70 mm (2.75 in) rockets;

Mockup of Sikorsky S-92C Helibus proposed 19/22-passenger transport in 1993 configuration *1993*

H-76 could carry 16 AAMs or eight AAMs and two cannon pods; integrated armament management system allows weapons to be selected from collective lever as well as from panel; system ready lights and sideslip trim ball on HUD.

External/internal dimensions generally as for S-76B; *details below show differences from civil S-76s*.

POWER PLANT: As for S-76B, except fuel is contained in two high-strength, optionally self-sealing, tanks located below the rear cabin, with a total capacity of 993 litres (262.4 US gallons; 218.4 Imp gallons). Gravity refuelling point on each side of fuselage. Engine fire detection and extinguishing systems. Engine air particle separator optional.

ACCOMMODATION: Pilot and co-pilot, plus varying troop/passenger loads according to role. Armoured pilots' seats optional. Ten fully armed troops can be transported, or seven troops when configured as an airborne assault vehicle with multipurpose pylon system (MPPS) and one 7.62 mm door gun installed. For evacuation use the cabin can be equipped with 12 seats or, in emergency, all seats can be removed and 16 persons can be airlifted sitting on the cabin floor. For SAR use the cabin will accommodate three patients on litters, or six persons lying prone on the floor and on the rear cabin raised deck. The standard medevac layout provides for three litters and a bench seat for two medical attendants.

SYSTEMS: Generally as for S-76B, except electrical system has a 17 or optional 34 Ah battery. Engine ice protection by bleed air anti-icing system.

AVIONICS: *Comms*: Typically including VHF-20A VHF transceiver, AN/ARC-186 VHF-AM/FM, 719A UHF, ADF-60A ADF.

Flight: ELT, Andrea A301-61A intercom, cabin speaker system and loudhailer, DF-301E UHF DF, VIR-30A VOR with ILS, glide slope and marker beacon receivers, DME-40 DME, TDR-90 transponder and dual RMI-36 RMI, all by Collins; course deviation indicators.

Mission: Targeting equipment can include FLIR, Saab-Scania reticle sight, TOW roof sight or TOW mast-mounted sight and laser rangefinder.

EQUIPMENT: Typical equipment includes dual controls and instrumentation, stability augmentation system, dual 5 in VGIs, Allen RCA-26 standby self-contained attitude indicator, Collins ALT-50A radio altimeter, soundproofing, 'Fasten seat belt—No smoking' sign, first aid kit, two cabin fire extinguishers, external power socket, provisions for optional emergency flotation system, and provisions for installation of cargo hook with certificated capacity of 1,497 kg (3,300 lb) and rescue hoist of 272 kg (600 lb) capacity. Standard lighting includes cockpit, cabin and instrument lights, navigation lights, anti-collision strobe light, and a battery operated cabin emergency light.

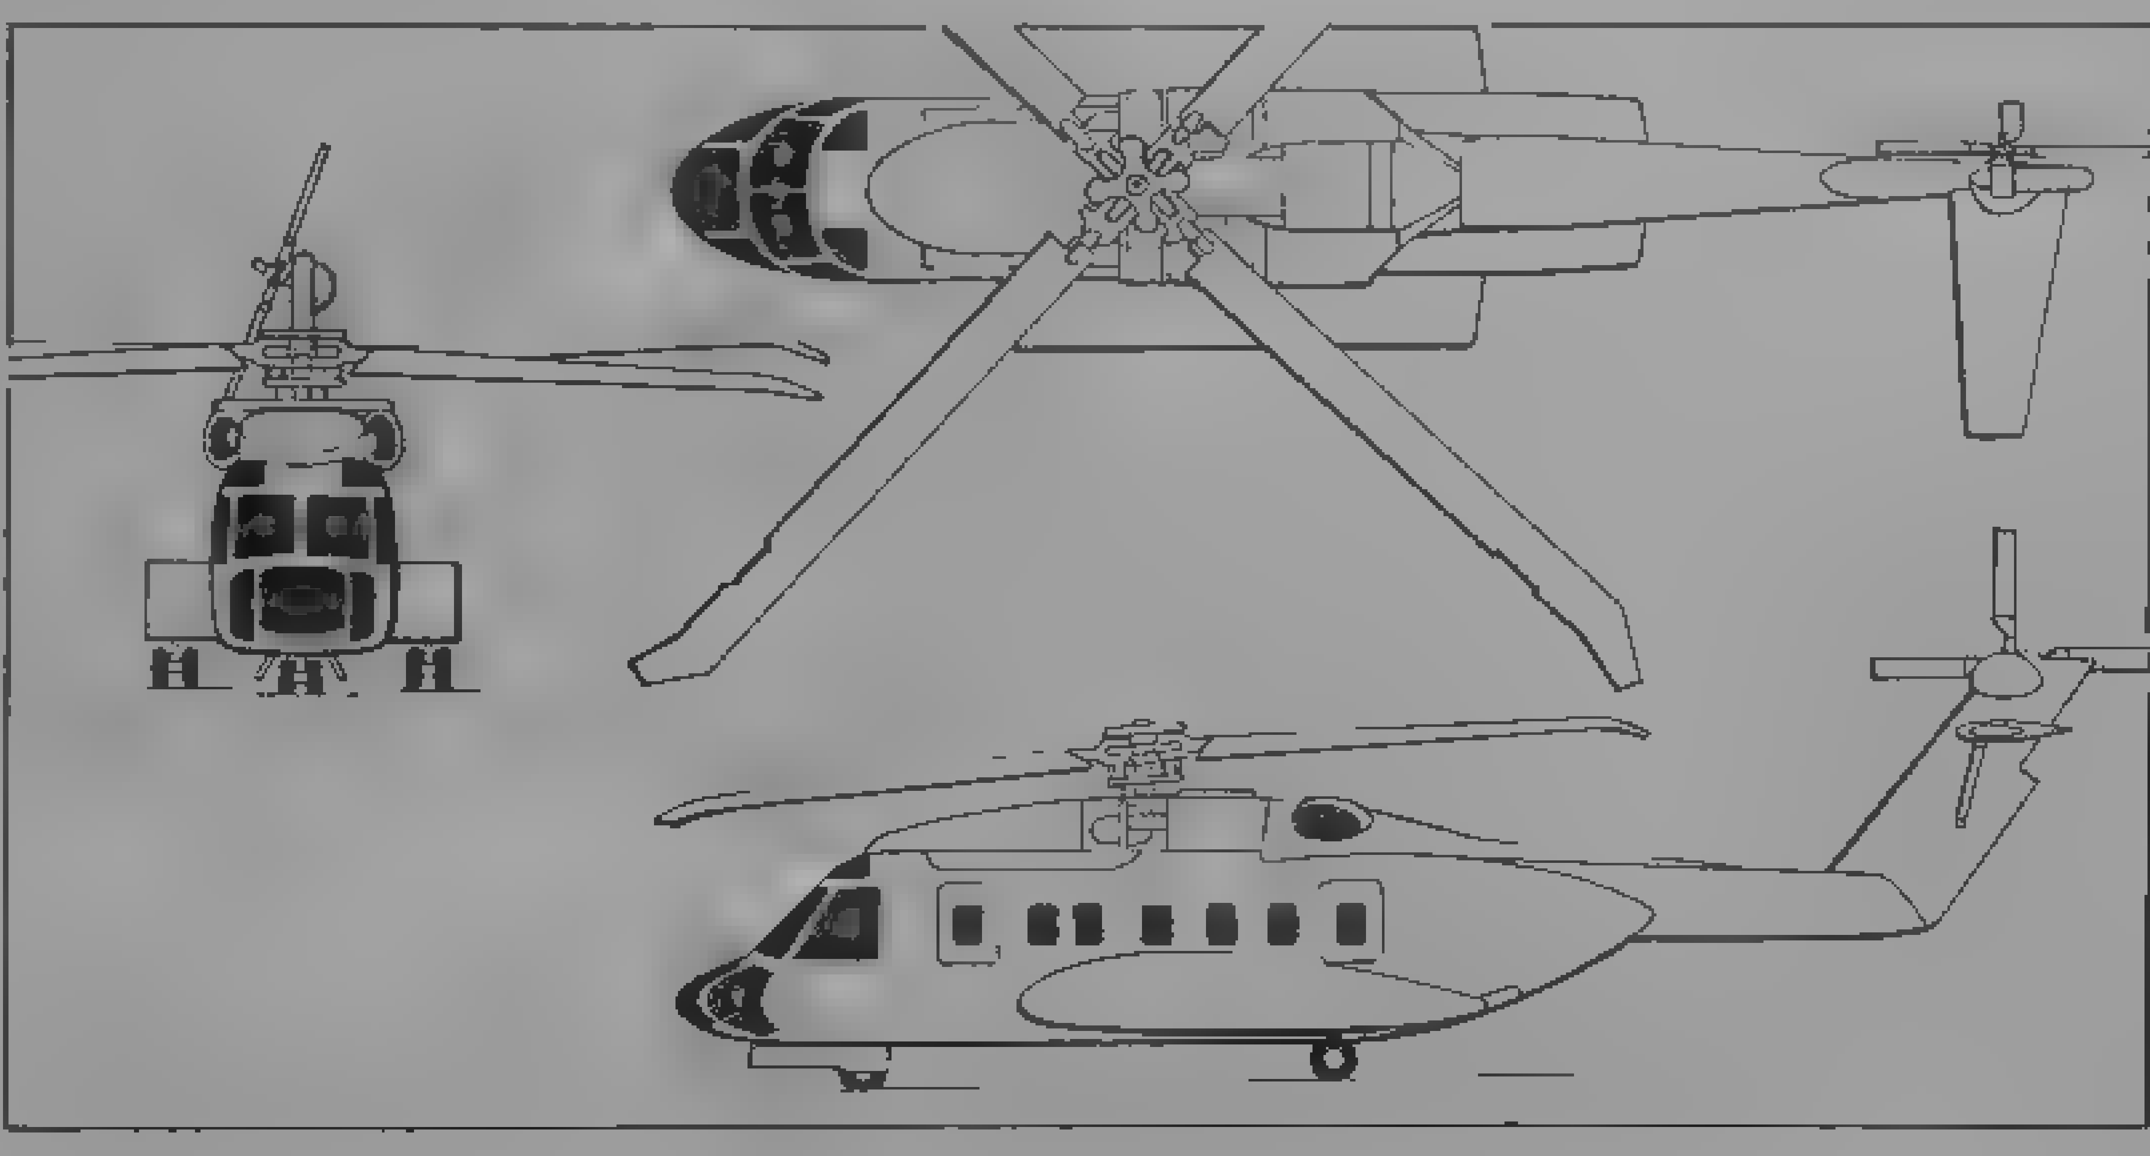
ARMAMENT: One 7.62 mm machine gun can be pintle-mounted in each doorway and fired with or without the MPPS system installed. Pintles incorporate field of fire limiters and will accept FN Herstal or Maramount M60D machine guns. The MPPS can be installed on the cabin floor, providing the capability to carry and deploy pods containing single or twin 7.62 mm machine guns, 0.50 in machine guns, 2.75 in and 5 in rocket pods, Mk 66 2.75 in rockets, Oerlikon 68 mm rockets, mines, Hellfire, TOW, Sea Skua and Stinger missiles, and Mk 46 torpedoes (see also Design Features).

WEIGHTS AND LOADINGS:

Basic weight empty	2,545 kg (5,610 lb)
Weight empty, equipped (typical)	3,030 kg (6,680 lb)
Max fuel weight	792 kg (1,745 lb)
Max T-O weight	5,171 kg (11,400 lb)

PERFORMANCE: Similar to S-76B, but range highly variable according to loading and mission.

UPDATED



Sikorsky S-92 medium-lift helicopter *(Jane's/James Goulding)* *1995*

SIKORSKY S-76C

TYPE: Arriel 1S1-engined S-76B

PROGRAMME: Announced June 1989, first flight 18 May 1990; FAA certification and first deliveries April 1991. S-76C+, scheduled for certification in first quarter of 1996, features uprated Arriel 2S1 turboshafts with FADEC for improved single-engine performance and fuel efficiency.

CUSTOMERS: Two ordered for Royal Hong Kong Auxiliary Air Force and eight for Spanish Air Force (for IFR training at Ala 78 helicopter school, Granada/Armilla), deliveries to Spain began November 1991. Bond Helicopters, Scotland ordered seven for delivery from 1993. Malaysian Helicopter Services ordered three for 1992 delivery plus options for three, deliverable in 1993; two delivered 1994 to Japan Maritime Safety Agency (MSA) for coastguard duties, equipped with Honeywell SAR avionics package, rescue hoist, Nightsun searchlight and manual rotor blade fold facility. Deliveries totalled 32 by 31 December 1994.

DESIGN FEATURES: Same airframe and power train as S-76B, but powered by two Turbomeca Arriel 1S1 turboshafts; initial certification for maximum T-O weight 5,171 kg (11,400 lb), useful load 299 kg (660 lb) greater than S-76 for same range. In typical UK CAA IFR offshore configuration, S-76C can fly 12 passengers for 220 n miles (407 km, 253 miles) or 10 passengers for 320 n miles (593 km, 368 miles) with 45 minutes reserves.

POWER PLANT: Two Turbomeca Arriel 1S1 turboshafts, each rated at 539 kW (723 shp) for take-off and maximum continuous, 591 kW (792 shp) maximum contingency OEI for 2½ minutes and 498 kW (668 shp) for normal cruise. Transmission and fuel details as S-76B.

AVIONICS: As S-76B

ACCOMMODATION: As S-76B

DIMENSIONS, EXTERNAL: As S-76B

DIMENSIONS, INTERNAL: As S-76B

AREAS: As S-76B

WEIGHTS AND LOADINGS:
Weight empty, standard equipment: 2,849 kg (6,282 lb)
Max T-O weight: 5,307 kg (11,700 lb)
Max disc loading: 37.56 kg/m² (7.69 lb/sq ft)
Max power loading: 4.75 kg/kW (7.80 lb/shp)

PERFORMANCE (at max T-O weight, ISA, except where indicated):
Max level speed at S/L: 155 kts (287 km/h; 178 mph)
Normal cruising speed at S/L: 145 kts (269 km/h, 166 mph)
Max rate of climb at S/L, T-O power: 445 m (1,460 ft)/min
Service ceiling: two engines: 3,505 m (11,500 ft)
single engine at 30 min power: 630 m (2,070 ft)
Fuel consumption at 138 kts (255 km/h, 159 mph) at 915 m (3,000 ft), 3,261 kg (10,700 lb) gross weight: 268 kg/h (593 lb/h)
Range at 138 kts (255 km/h, 159 mph) at 915 m (3,000 ft) with standard fuel:
no reserves: 430 n miles (798 km, 494 miles)
30 min reserves: 366 n miles (678 km, 421 miles)

UPDATED

SIKORSKY S-92 HELIBUS

TYPE: Twin-turboshaft medium-lift helicopter.

PROGRAMME: Announced March 1992; originally envisaged as 'Growth Hawk' development of S-70; market evaluation co-ordinated with Mitsubishi Corporation and Mitsubishi Heavy Industries. Launched at Paris Air Show, June 1995. Risk-sharing partners Mitsubishi Heavy Industries (7.5 per cent), Jingdezhen Helicopter Group of China (2 per cent), and Gamesa of Spain (7 per cent), with Taiwan Aerospace (6.5 per cent), and Embraer 4 per cent) as additional fixed-price supplier/partners. Russia's Mil is associated with programme, but not yet a full partner; other suppliers include GEC-Marconi (health monitoring system), Hamilton Standard (automatic flight control system), Sanders (cockpit instrumentation), and Parker Bertea (servos). First of five flying prototypes (two S-92C, three S-92IU) scheduled to fly in second quarter of 1998, with FAA/JAA Pt 29 certification in first quarter of 2000 for S-92C and third quarter for S-92IU.

CURRENT VERSIONS: **S-92C**: Civil transport version, will be first to fly.

S-92IU: International utility/military version with external cargo hook.

CUSTOMERS: Estimated market for more than 5,000 helicopters in class between 2000-2019.

COSTS: Programme $600 million; target direct operating cost $2,500 per hour and $0.83 per air seat mile.

DESIGN FEATURES: Design, manufacture and assembly will use CATIA database system; both versions share common 'core airframe' comprising cockpit, cabin with rear ramp, sponsons, main rotor, aft transition section, and tail rotor pylon; dynamic components based on proven Sikorsky technology to reduce development risks, including yoke-type infinite life main rotor head with elastomeric bearings; four-blade all-composite main rotor based on scaled-up version of wide-chord, drooped-tip blades tested on Black Hawk; new transmission based on upgraded four-stage version of Black Hawk's three-stage main gearbox; new intermediate tail rotor gearbox; and new four-blade fully articulated tail rotor to starboard, meeting FAR/JAR 29 bird-strike requirements; high-set, strut-braced tail plane to port.

FLYING CONTROLS: Similar, but not identical, to Black Hawk; dual digital automatic flight control system with autopilot and stability augmentation features; Hamilton Standard primary processor based on that of RAH-66 Comanche, and is expected to have 8,000 hour MTBF.

STRUCTURE: Modular structure of aluminium and composites (about 40 per cent of structure will be composites, though mostly non-structural to reduce costs); composites main rotor blades (including spars); structure optimised for minimum parts count.

Sikorsky responsible for rotor and transmission systems, final assembly and flight test. Airframe largely designed and manufactured by 'Team S-92' partners, as follows: Mitsubishi (main cabin), Taiwan Aerospace (flight deck), Embraer (sponsons and fuel system), Gamesa (cabin interior and transmission housing), and Jingdezhen (tail pylon and tailplane).

LANDING GEAR: Retractable tricycle; main units retract rearwards into sponsons, nosewheel retracts forwards under flight deck.

POWER PLANT: *S-92C*: Two GE CT7-6D turboshafts, rated (S/L, 90°F) at 1,305 kW (1,750 shp) for T-O, 1,081 kW (1,450 shp) continuous, 1,603 kW (2,150 shp) OEI 30 seconds, 1,454 kW (1,950 shp) OEI 2 minutes, 1,342 kW (1,800 shp) OEI continuous. *S-92IU*: Two GE CT7-8 turboshafts, rated (1,220 m; 4,000 ft, 35°C, 95°F) at 1,417 kW (1,900 shp) for T-O, 1,081 kW (1,450 shp) continuous, 1,491 kW (2,000 shp) OEI 30 seconds, 1,417 kW (1,900 shp) OEI 2 minutes, 1,342 kW (1,800 shp) OEI continuous. Transmission rating 3,109 kW (4,170 shp). Crashworthy fuel system standard.

ACCOMMODATION: Two-pilot crew on separate flight deck; 19 passengers or up to three LD-3 cargo containers in S-92C; 22 combat-ready troops in S-92IU; both versions have rear loading ramp.

SYSTEMS: GEC-Marconi health usage monitoring system standard, with cockpit displays and downloading facility to enable groundcrew to access system via hand-held diagnostic equipment; active noise control system will reduce cabin noise by 3 to 4 dB; active vibration control may be employed in key airframe areas.

AVIONICS: Open architecture avionics system accommodating Arinc 429 and MIL-STD-1553 interfaces; Sanders 'glass cockpit' based on C-130J units, with four liquid crystal EFIS displays and option for fifth; all avionics housed in removable mission equipment rack behind co-pilot station with wiring routed through conduits in fuselage frames for added protection.

DIMENSIONS, EXTERNAL:
Main rotor diameter: 17.71 m (56 ft 4 in)
Length overall, rotors turning: 20.85 m (68 ft 5 in)
Fuselage: Length: 17.32 m (56 ft 10 in)
Max width over sponsons: 3.89 m (12 ft 9 in)
Height overall: 6.45 m (21 ft 2 in)
Wheel track: 3.48 m (11 ft 5 in)
Wheelbase: 5.79 m (19 ft 0 in)

DIMENSIONS, INTERNAL:
Cabin: Length: 5.66 m (18 ft 7 in)
Max width: 2.01 m (6 ft 7 in)
Max height: 1.83 m (6 ft 0 in)
Volume: 16.88 m³ (596 cu ft)
Baggage volume (S-92C): 3.11 m³ (110 cu ft)

AREAS:
Main rotor disc: 231.55 m² (2,492.4 sq ft)

WEIGHTS AND LOADINGS (A: S-92C, B: S-92IU):
Weight empty: A: 6,743 kg (14,866 lb)
Max hook capacity: B: 4,536 kg (10,000 lb)
Max T-O weight:
internal load: A, B: 10,931 kg (24,100 lb)
external load: A, B: 12,020 kg (26,500 lb)

PERFORMANCE (estimated, at max internal load T-O weight, S/L, ISA):
Max cruising speed: 155 kts (287 km/h, 178 mph)
Econ cruising speed: 140 kts (259 km/h, 161 mph)
Hovering ceiling: IGE: A: 2,990 m (9,800 ft)
B: 3,870 m (12,700 ft)
OGE: A: 1,525 m (5,000 ft)
B: 2,530 m (8,300 ft)
Range: A: 510 n miles (944 km, 587 miles)
B: 480 n miles (889 km, 552 miles)

SkyStar Aircraft Corporation took over Kitfox programme from former Denney Aerocraft Company in 1993. Kitfox production continues; tricycle variant Vixen was shown at Oshkosh in August 1993. Local variants also produced by Skyfox in Australia and PACI in Philippines, which see.

VERIFIED

SKYSTAR KITFOX IV

TYPE: Side by side two-seat, dual control homebuilt.

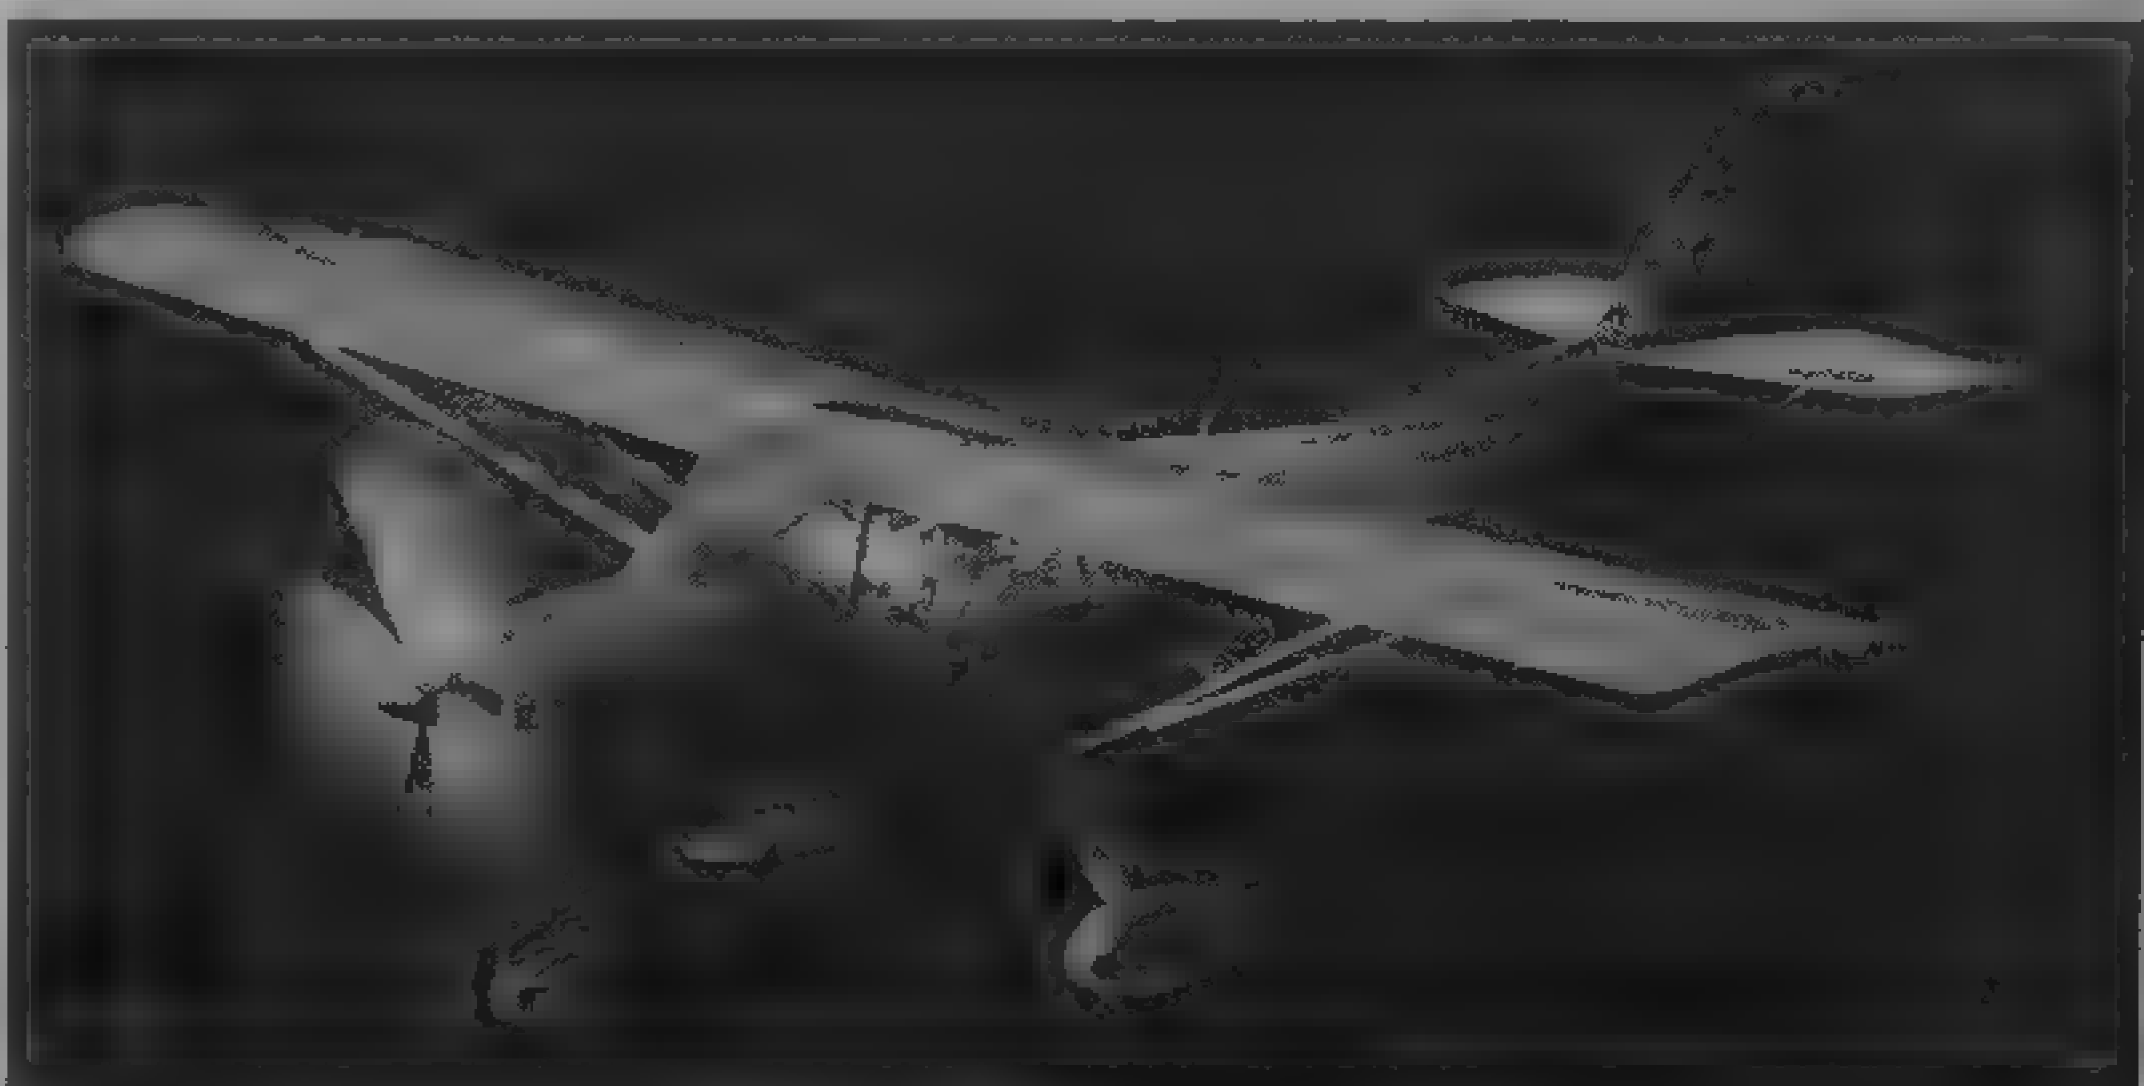
PROGRAMME: Prototype Kitfox first flown 7 May 1984. Vixen derivative is to be certificated under new FAA Primary Aircraft category.

CURRENT VERSIONS: **Kitfox IV**: Also referred to as Kitfox IV-1200. *Detailed description applies to this version.*

Speedster: Higher performance version through optional package costing further $2,000.

Vixen: Non-retractable tricycle landing gear version of Kitfox, with steerable nosewheel, and Rotax 912 engine under new smooth engine cowling. To be FAA certificated under Primary Aircraft category.

XL: Fourth variant of basic Kitfox IV. Rotax 503 engine; maximum T-O weight 431 kg (950 lb). Flight testing to VLA criteria completed early 1993.



The tri-gear Kitfox Vixen *(C. O. Denney)*

1994

CUSTOMERS: Some 2,000 Kitfox aircraft ordered, and 850 built.

COSTS: Kits: start at $14,995 including engine; Kitfox with Speedster package (Rotax 912) is approximately $25,000 including engine.

DESIGN FEATURES: Designed to have good short-field performance. Kitfox IV was introduced in 1991, featuring new wing with laminar flow section and all-metal hinge brackets for full span flaperons, windscreen material thickened and given increased slope and, with other changes, resulted in increase in cruising speed, stalling and landing speeds decreased, former due to use of flaperons; differential ailerons, can have 0.14 m³ (5 cu ft) storage space behind seat, wing folding standard. Speedster optional package

increases cruising speed to approximately 109 knots (202 km/h, 125 mph) with Rotax 912 engine; included are cropped wings of about 8 84 m (29 ft) span with new wing tips, revised tail unit, wheel fairings, airscoop and more Optional agricultural spray and underfuselage cargo pods

STRUCTURE: Wings of aluminium alloy tubing with aluminium inserts, plywood ribs and drooped glassfibre tips, with Stits Poly Fiber covering overall Steel tube fuselage and tail unit, with Poly Fiber covering

LANDING GEAR: Non-retractable tailwheel type, with hydraulic disc brakes Optional composite floats, amphibious floats and skis.

POWER PLANT: One 38.8 kW (52 hp) Rotax 503 or 48 5 kW (65 hp) Rotax 582 LC two-cylinder two-stroke engine, with 3 1 reduction gear Optional 59 7 kW (80 hp) Rotax 912 flat-four Fuel capacity 36 litres (9 5 US gallons, 8 Imp gallons) standard. Two 22 7 litre (6 US gallon; 5 Imp gallon) or two 49 litre (13 US gallon, 10.8 Imp gallon) optional fuel tanks in wings

DIMENSIONS, EXTERNAL:
Wing span 9 75 m (32 ft 0 in)
Wing aspect ratio 7 83
Length overall 5 38 m (17 ft 8 in)
Height overall 1 73 m (5 ft 8 in)
Propeller diameter 1.73 m (5 ft 8 in)

AREAS:
Wings, gross 12 16 m² (130 84 sq ft)

WEIGHTS AND LOADINGS:
Weight empty 216 kg (475 lb)
Pilot weight range 68-113 kg (150-250 lb)
Max recommended pilot and passenger weight 181 kg (400 lb)
Max T-O weight 544 kg (1,200 lb)
Max wing loading 44.77 kg/m² (9 17 lb/sq ft)
Max power loading:
Rotax 503 14 04 kg/kW (23 08 lb/hp)
Rotax 582 11 24 kg/kW (18 46 lb/hp)

PERFORMANCE (two crew, unless stated otherwise):
Max level speed 109 kts (201 km/h; 125 mph)
Cruising speed 91 kts (169 km/h, 105 mph)
Stalling speed 25 kts (47 km/h, 29 mph)
Max rate of climb at S/L, at max T-O weight 396 m (1,300 ft)/min
Service ceiling, pilot only 6,100 m (20,000 ft)
T-O run, pilot only 26 m (85 ft)
Landing run 46 m (150 ft)
Range: standard fuel 195 n miles (362 km, 225 miles)
max fuel 825 n miles (1,528 km, 950 miles)
Endurance, standard fuel 3 h
g limits, pilot only +6/-3

SPENCER S-12-E

TYPE: Four-seat, dual control homebuilt amphibian

PROGRAMME: Continues to be available in 1995

CURRENT VERSIONS: **S-12-E**: Standard current version, available in plans and kit forms. *Description applies to this version.*

S-12-D: Earlier version, plans and some components still available.

CUSTOMERS: At least 38 completed and flown by January 1995. Plans and components sold in Brazil, Canada, Germany, Italy, New Zealand, USA and elsewhere

COSTS: Kit: $27,000 without engine and instruments. Plans $350

DESIGN FEATURES: Slightly sweptback high-wing, pusher-engined monoplane; strut-mounted, wire-braced stabilising float under each wing near tip. Single-step hull with retractable water rudder Specially designed STOL wing section (modified NACA 4415); one-piece leading edge

FLYING CONTROLS: Conventional, mechanically actuated primary surfaces, trailing-edge flaps

STRUCTURE: Fuselage has wooden frames, longerons and skin sheathed in GFRP and Kevlar, with welded steel tube framework for wing/engine mountings and landing gear attachment; wing is wood, steel and GFRP, with wooden ailerons and flaps, glassfibre tip floats All-glassfibre hull a future possibility

LANDING GEAR: Retractable tricycle type, with GFRP legs, forward wheel protrudes from nose when retracted

POWER PLANT: One 212 5 kW (285 hp) Teledyne Continental Tiara 6-285 engine Also recommended is 224 kW (300 hp) Teledyne Continental IO-520 flat six. Development undertaken from 1988 to install a Ford 351 W converted motorcar engine Fuel capacity 360 litres (95 US gallons, 79 Imp gallons)

DIMENSIONS, EXTERNAL:
Wing span 11 38 m (37 ft 4 in)
Wing aspect ratio 7 57
Length overall 8 05 m (26 ft 5 in)
Height overall 2 90 m (9 ft 6 in)
Propeller diameter 2 13 m (7 ft 0 in)

AREAS:
Wings, gross 17.1 m² (184 0 sq ft)

WEIGHTS AND LOADINGS:
Weight empty 993 kg (2,190 lb)
Max T-O weight 1,451 kg (3,200 lb)
Max wing loading 84 9 kg/m² (17 39 lb/sq ft)
Max power loading: Tiara 6 83 kg/kW (11 23 lb/hp)
IO-520 6.49 kg/kW (10 67 lb/hp)

PERFORMANCE (at max T-O weight):
Cruising speed 122 kts (225 km/h, 140 mph)
Econ cruising speed at 3,050 m (10,000 ft) 109 kts (201 km/h, 125 mph)
Stalling speed, flaps down 38 kts (70 km/h, 43 mph)
Max rate of climb at S/L 320 m (1,050 ft)/min
Service ceiling 4 875 m (16,000 ft)
T-O run from calm water 213 m (700 ft)
Landing run 213 m (700 ft)
Range, 65% power at 2,315 m (7,600 ft), 20 min reserves 695 n miles (1,285 km, 800 miles)
Endurance with 37 9 litres (10 0 US gallons, 8 3 Imp gallons) reserve 7 h

STARKRAFT

STARKRAFT

Fort Scott, Kansas

First product of StarKraft is the SK-700. Intended for sale in kit form, this will now be marketed complete

NEW ENTRY

STARKRAFT SK-700

TYPE: Eight-seat, twin-engined transport.

PROGRAMME: First flight (N700SK) December 1994. Production version will have 1 21 m (4 ft 0 in) fuselage stretch, foreplane, additional fuel and maximum T-O weight increase of 780 kg (1,720 lb)

CUSTOMERS: Anticipated orders for 20 in 1995 and 40 in 1996 Deliveries begin in 1997, following certification

COSTS: Target $1 million to $1 2 million.

DESIGN FEATURES: Push-pull configuration, design assistance from Aircraft Design (responsible for Lancair IV).

STRUCTURE: All composites

LANDING GEAR: Tricycle, retractable; mainwheels retract inwards, nosewheel rearwards.

POWERPLANT: Two 261 kW (350 hp) Teledyne Continental TSIOL-550 six-cylinder, liquid-cooled engines as tractor and pusher, each driving a three-blade propeller Turboprop alternatives under consideration

WEIGHTS AND LOADINGS:

Max T-O weight	4,082 kg (9,000 lb)

1995

STODDARD-HAMILTON GLASAIR II-S

TYPE: Side by side two-seat, dual control homebuilt.

PROGRAMME: Glasair II-S (stretched) available in **RG** (retractable landing gear), **FT** (non-retractable tricycle gear) and **TD** (tailoragger) forms to supersede earlier Glasair series

CUSTOMERS: 1,450 kits sold, about 600 flying (early 1995)

COSTS: Kits, $28,500 for RG, $20,400 for FT, $21,400 for TD, all without engine, propeller, instruments and avionics, engine $23,800 for 180 hp version, fixed-pitch propeller $1,500, constant-speed propeller $5,700

DESIGN FEATURES: Wing section NASA LS(1)-0413. Upswept Hoerner style trailing-edges

STRUCTURE: Glassfibre and foam composite construction.

LANDING GEAR: Three types available, as detailed above. RG version has inward-retracting mainwheels and rearward-retracting nosewheel Brakes fitted

POWER PLANT: One 119 to 134 kW (160 to 180 hp) Textron Lycoming O-360 series engine. Fuel capacity 182 litres (48 US gallons, 40 Imp gallons). Auxiliary tanks of 42 litres (11 US gallons, 9 2 Imp gallons) capacity in optional wingtip extensions

ACCOMMODATION: Enclosed cockpit with gull-wing doors

DIMENSIONS, EXTERNAL (all versions):

Wing span standard	7 10 m (23 ft 3½ in)
Wing aspect ratio	6.67
Length overall	6.16 m (20 ft 2½ in)
Height overall	2.07 m (6 ft 9½ m)

AREAS:

Wings, gross	7.55 m² (81 3 sq ft)

WEIGHTS AND LOADINGS:

Weight empty: RG	601 kg (1,325 lb)
FT	567 kg (1,250 lb)
TD	544 kg (1,200 lb)
Baggage capacity: all versions	36 kg (80 lb)
Max T-O weight: RG, FT	953 kg (2,100 lb)
TD	907 kg (2,000 lb)
Max wing loading: RG, FT	126 1 kg/m² (25 83 lb/sq ft)
TD	120.1 kg/m² (24.60 lb/sq ft)

PERFORMANCE (RG and TD with 180 hp engine, FT with 160 hp):

Max level speed at S/L:	
RG	217 kts (402 km/h, 250 mph)
FT	207 kts (383 km/h, 238 mph)
TD	208 kts (385 km/h, 239 mph)
Econ cruising speed at 2,440 m (8,000 ft):	
RG	189 kts (351 km/h, 218 mph)
FT	178 kts (330 km/h, 205 mph)
TD	179 kts (332 km/h, 206 mph)
Stalling speed, flaps down, power off:	
RG	43 kts (80 km/h, 50 mph)
FT, TD	42 kts (78 km/h, 49 mph)
Service ceiling: all versions	approx 5,790 m (19,000 ft)
Max rate of climb at S/L:	
all versions	732 m (2,400 ft)/min
Range:	
RG, standard fuel	1,125 n miles (2,083 km, 1,295 miles)
RG, with auxiliary fuel	1,383 n miles (2,561 km, 1,591 miles)
FT, TD, standard fuel	1,042 n miles (1 930 km; 1,199 miles)
FT, TD, with auxiliary fuel	1,281 n miles (2,372 km; 1,474 miles)
g limits at AUW of 708 kg (1,560 lb):	
all versions	+6/–4 limit
	+9/–6 ultimate

UPDATED

STODDARD-HAMILTON GLASAIR III

PROGRAMME: First flight July 1986; similar configuration to earlier models but designed to offer exceptional performance, constructional simplicity and economical kit price Construction takes approximately 1,800 working hours

CUSTOMERS: 300 kits delivered by early 1995

COSTS: Kit $37,700 without engine, propeller, instruments and avionics, engine $33,350, fixed-pitch propeller $1,500, constant-speed propeller $5,700.

DESIGN FEATURES: Larger and wider fuselage for increased baggage space, payload capacity and comfort, also improving the longitudinal and directional stability and thereby making it a better cross-country and IFR aircraft Thicker windscreen to improve protection against bird strikes at higher speeds, and additional glassfibre laminates, integral longerons, and lay-up schedule which provides structurally stronger and torsionally stiffer fuselage Wing section LS(1)-0413; strengthened, carries more fuel than previous models. NACA style air vents provide cabin ventilation. Under development is turbocharging system to be offered as retrofit kit option for IO-540-K engined Glasair IIIs. Projected maximum cruising speed with system is 284 kts (526 km/h; 327 mph) at 5,485 m (18,000 ft)

LANDING GEAR: Retractable

POWER PLANT: One 224 kW (300 hp) Textron Lycoming IO-540-K1H5. Fuel capacity in wings 201 litres (53 US gallons, 44 Imp gallons). Fuselage header tank, capacity 30 litres (8 US gallons, 6.7 Imp gallons). Optional tanks in wingtip extensions, total capacity 41 6 litres (11 US gallons, 9 2 Imp gallons).

DIMENSIONS, EXTERNAL:

Wing span, standard	7 10 m (23 ft 3½ in)
Wing aspect ratio	6.67
Length overall	6.52 m (21 ft 4¾ in)
Height overall	2.29 m (7 ft 6 in)

AREAS:

Wings, gross	7.55 m² (81 3 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	703 kg (1,550 lb)
Baggage capacity	45 kg (100 lb)
Max T-O weight, without wingtip extensions	1,089 kg (2,400 lb)
Max wing loading	144 13 kg/m² (29 52 lb/sq ft)
Max power loading	4.86 kg/kW (8.00 lb/hp)

PERFORMANCE (at max T-O weight, ISA, standard wings, except where indicated):

Max level speed at S/L	252 kts (467 km/h, 290 mph)
Cruising speed, 75% power at 2 440 m (8,000 ft)	243 kts (451 km/h, 280 mph)
50% power at 5,335 m (17,500 ft)	223 kts (414 km/h, 257 mph)
Stalling speed: pilot only, flaps and wheels up	65 kts (119 km/h, 74 mph)
flaps down, at max T-O weight	70 kts (129 km/h, 80 mph)
Max rate of climb at S/L	732 m (2,400 ft)/min
Service ceiling	approx 7 315 m (24,000 ft)
Range at 55% power:	
standard fuel	1,112 n miles (2,059 km, 1,280 miles)
with tip tanks	1,313 n miles (2 432 km; 1,511 miles)
g limits at AUW of 962 kg (2,120 lb)	+6/–4 limit
	+9/–6 ultimate

UPDATED

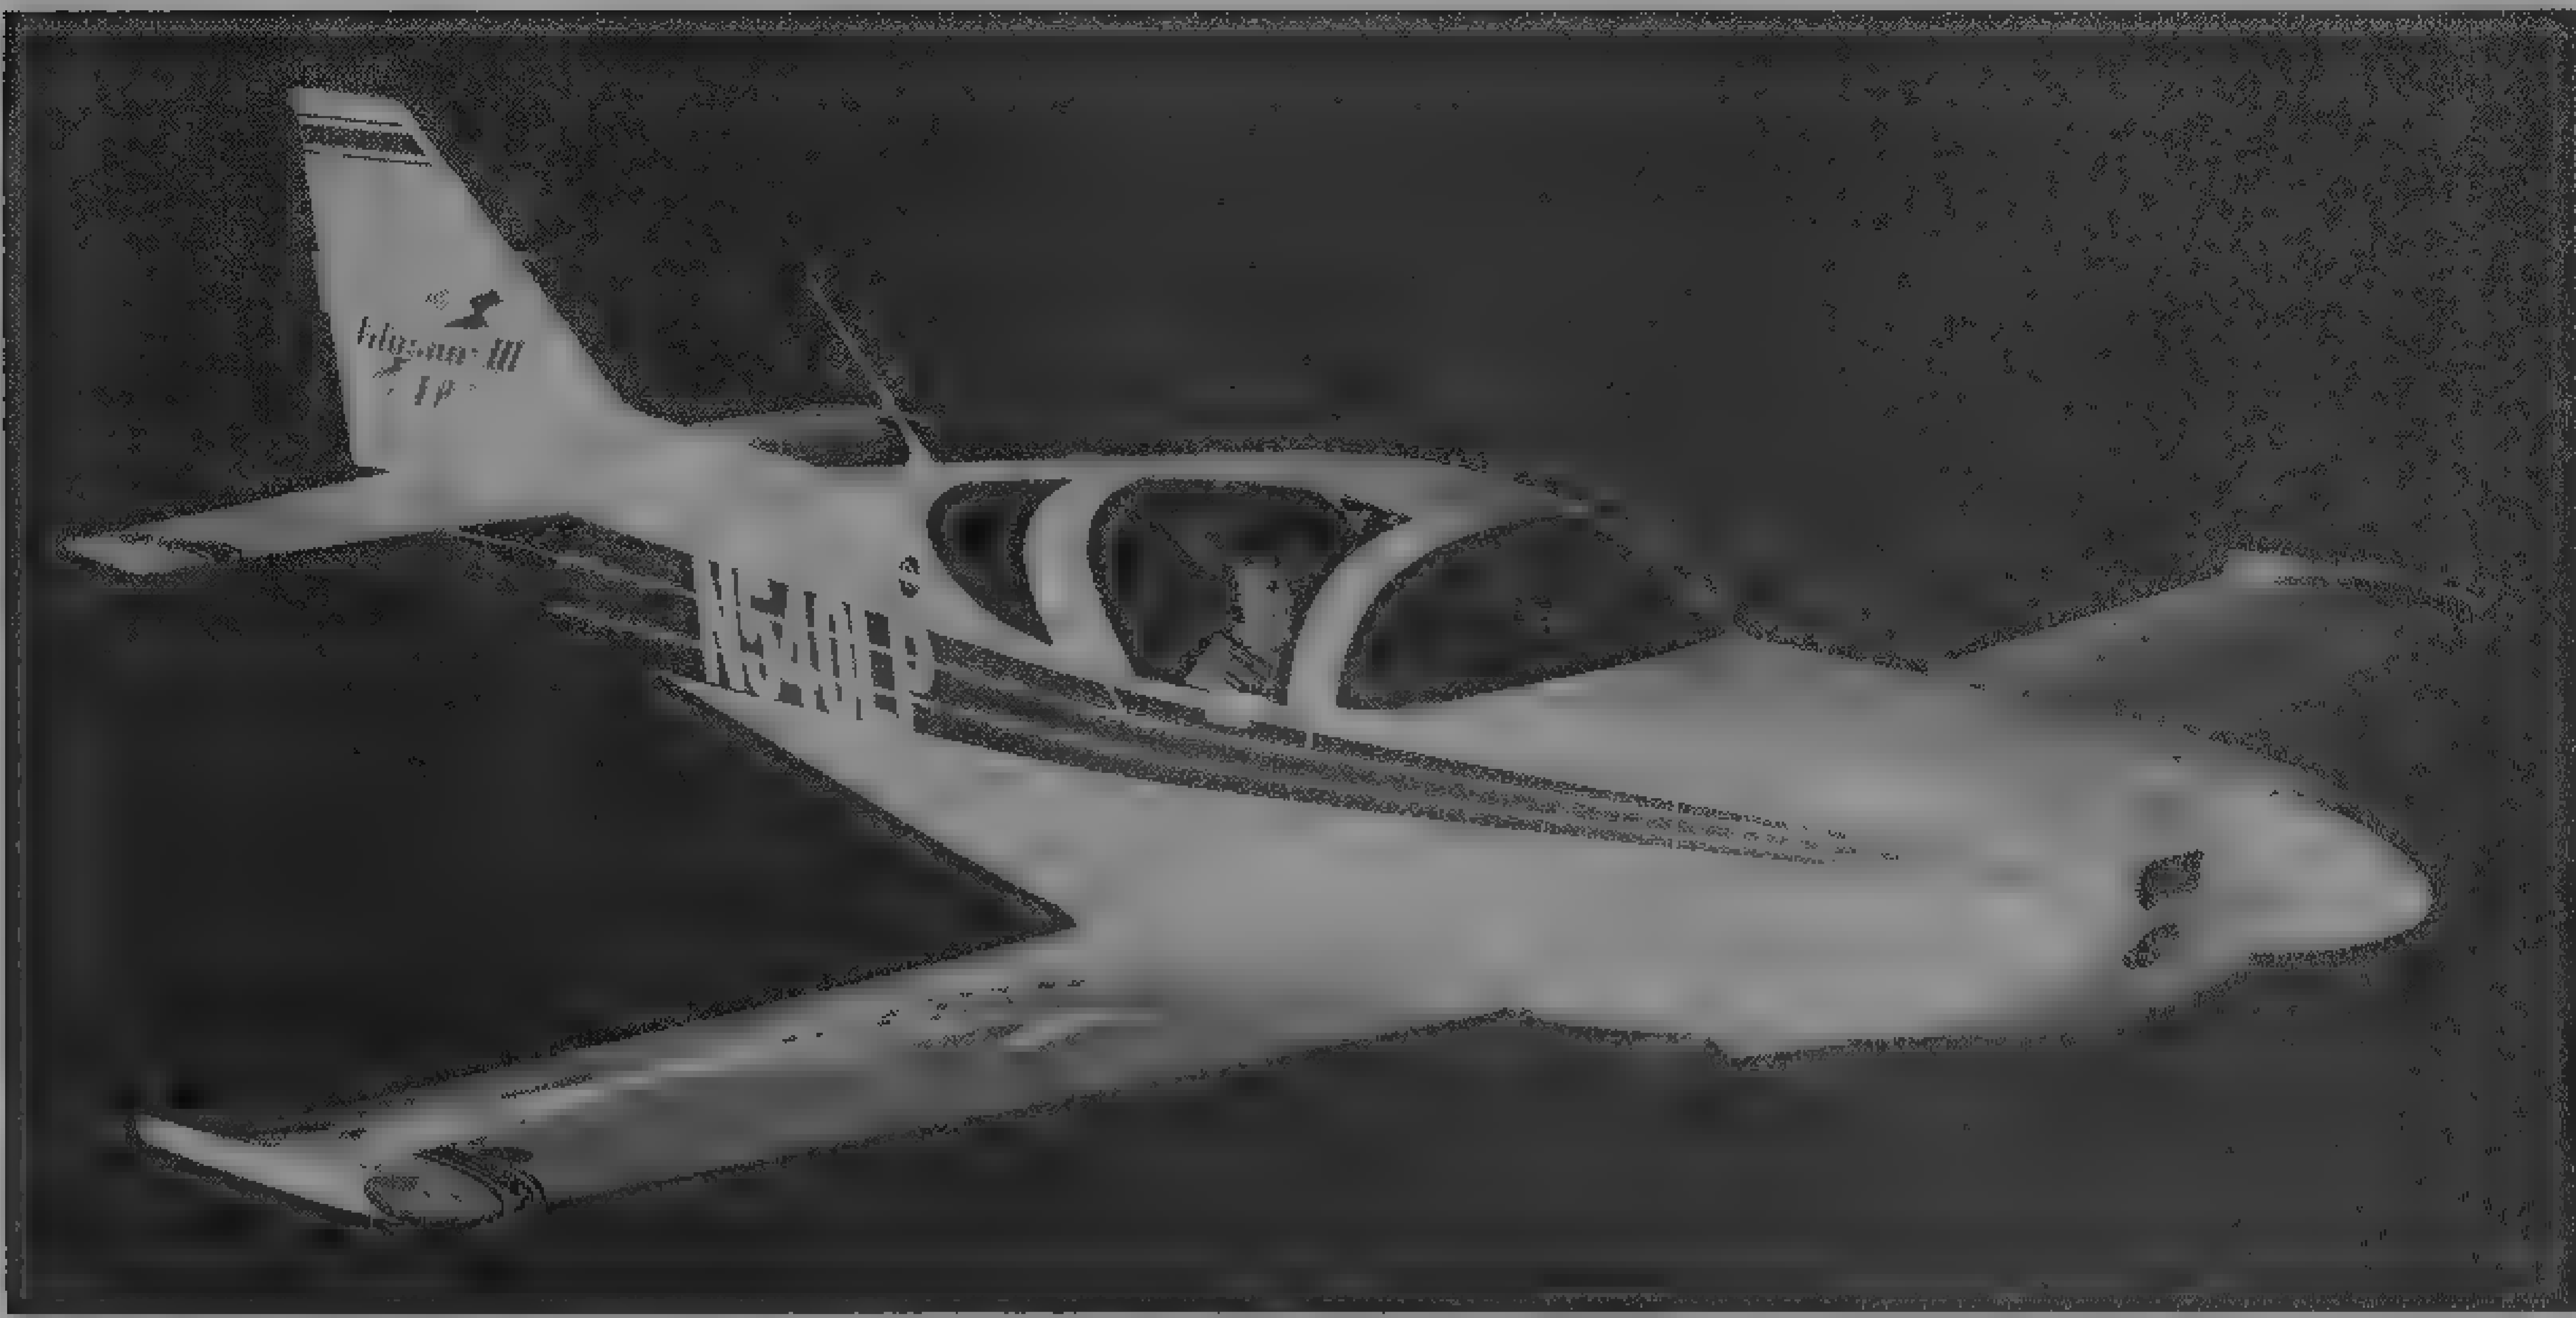
STODDARD-HAMILTON GLASTAR

TYPE: Two-seat monoplane.

PROGRAMME: Prototype (N824G) first flew 29 November 1994, deliveries of kits started 1995, initially rear section only, followed by wings and fuselage at three month intervals; complete kits available from December 1995. Over 170 hours flown by May 1995 when prototype converted to tailwheel configuration

CUSTOMERS: Over 200 kits sold by mid-1995, mostly tricycle landing gear

COSTS: $19 950 per kit, excluding engine, instructions, upholstery and paint



Stoddard-Hamilton Glasair III with 224 kW (300 hp) engine

1995

DESIGN FEATURES: Objective is cheap basic two-seater of moderate performance. Fixed undercarriage, high wing with struts; conventional tail layout. Wings fold for compact hangarage or for trailer mounting. Three-position flaps, 10, 20 and 30°.

FLYING CONTROLS: Conventional mechanical ailerons, elevator and rudder. Frise ailerons. Elevator tab for pitch trim. Fixed tabs on ailerons and rudder for adjustments before flight.

STRUCTURE: Fuselage construction of reinforced glassfibre with metal tube frame surrounding cockpit section. Wings and tail surfaces of aluminium; wings fold and tailplane detaches for transportation and storage.

LANDING GEAR: Fixed nosewheel type with spats, tailwheel or float versions also available. Tailwheel (15 cm, 6 in tyre) conversion effected in 2 hours; mainwheels with 8.00-6 tundra tyres.

POWER PLANT: 93 kW (125 hp) Continental IO-240. Sensenich two-blade propeller. Fuel capacity 129 litres (34 US gallons, 28.3 Imp gallons).

ACCOMMODATION: Two crew side by side, seats adjust for pilot heights between 1.52 and 1.98 m (5 ft 20 in and 6 ft 6 in). Baggage capacity 91 kg (200 lb).

SYSTEMS: Electrical system 12 V 30 Ah battery, alternator fit appropriate to engine.

AVIONICS: Customer specified.

DIMENSIONS, EXTERNAL:

Wing span	0.67 m (35 ft 0 in)
Wing aspect ratio	9.57
Length overall	6.78 m (22 ft 3 in)
*Height overall	2.57 m (8 ft 5 in)
Tailplane span	3.35 m (11 ft 0 in)
Propeller diameter	.83 m (6 ft 0 in)

DIMENSIONS, INTERNAL:

Cabin: Max width	1.12 m (3 ft 8 in)

AREAS:

Wings, gross	1.89 m² (128 sq ft)
Ailerons (total)	0.37 m² (3.97 sq ft)
Trailing-edge flaps (total)	0.65 m² (6.95 sq ft)
*Fin	1.29 m² (13.92 sq ft)
*Rudder	0.47 m² (5.08 sq ft)
Tailplane	1.11 m² (12.00 sq ft)
Elevators	0.99 m² (10.67 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	499 kg (1,100 lb)
Fuel weight	92.2 kg (203.3 lb)
Max T-O weight	861 kg (1,900 lb)
Max wing loading	72.47 kg/m² (14.84 lb/sq ft)
Max power loading	9.25 kg/kW (15.20 lb/hp)

PERFORMANCE (at max T-O weight):

Max level speed	135 kts (250 km/h; 155 mph)
Max cruising speed at 75% power	121 kts (224 km/h; 139 mph)
Stalling speed, power off, flaps down	39 kts (73 km/h; 45 mph)
Max rate of climb at S/L	365 m (1,200 ft)/min
Range with max fuel	738 n miles (1,366 km; 849 miles)
Endurance with max fuel	6 h

**Prior to early 1995 fin and rudder extension*

Ed Swearingen is well known for designing Merlin and Metro commuter and business aircraft (see under Fairchild in this section), and for engineering such aircraft as Piper Twin Comanche and Lockheed 731 JetStar II; also built prototype SA-32T for Jaffe (1991-92 *Jane's*). Now building Swearingen SJ30 small business jet. Joint venture company with Sino Aerospace of Taiwan, called Sino-Swearingen, will certificate and produce SJ30 at new 18,580 m² (200,000 sq ft) facility at Martinsburg, West Virginia.

UPDATED

Swearingen SJ30 (two Williams Rolls FJ44 turbofans) *1995*

SWEARINGEN SJ30

TYPE: Twin-turbofan pressurised business jet.

PROGRAMME: Announced 30 October 1986 as SA-30 Fanjet; Gulfstream Aerospace, Williams International and Rolls-Royce announced they were joining programme in October 1988 and aircraft renamed Gulfstream SA-30 Gulfjet; Gulfstream withdrew from programme 1 September 1989; place taken by Jaffe Group of San Antonio, Texas, and aircraft renamed Swearingen/Jaffe SJ30; now solely a Swearingen project; first flight of prototype (N30SJ) 13 February 1991; certification due 1995, plans two preproduction aircraft and two static test airframes, first customer deliveries 1997.

CUSTOMERS: Three distributors appointed in USA and 10 for international sales, 66 orders reported.

COSTS: Standard aircraft $3 million, Spring 1995.

DESIGN FEATURES: Tapered, 30° sweptback wing of computer-designed section with integral fuel tanks in torsion box.

FLYING CONTROLS: Mechanical, with electrically actuated variable incidence tailplane, rudder and aileron trim tabs; two large outward-canted ventral fins under tail; slotted Fowler trailing-edge flaps actuated electrically; hydraulically actuated full-span leading-edge slats; single electro-hydraulically actuated airbrake/lift dumper panel on each wing ahead of flap.

STRUCTURE: All-metal with chemically milled skins on fuselage.

LANDING GEAR: Retractable tricycle type, with twin wheels on each unit. Trailing-link oleo-pneumatic suspension on main units. Hydraulic actuation, main units retracting inward and rearward into fuselage, nose unit forward. Electrically steerable nose unit.

POWER PLANT: Two 8.45 kN (1,900 lb st) Williams Rolls FJ44 turbofans, pod-mounted on pylons on sides of rear fuselage. Fuel in three integral tanks, one in each wing and one in rear fuselage, combined capacity 1,893 litres (500 US gallons; 416 Imp gallons). Single-point refuelling.

ACCOMMODATION: Pilot and one passenger (or co-pilot) on flight deck. Main cabin separated by a bulkhead, four chairs in facing pairs, each with adjustable reclining backs and retractable armrests, plus two foldaway tables, optional refreshment centre at front, and toilet, washbasin and storage cabinets at rear. Other layouts for up to seven passengers optional. Lengthened cabin for two extra seats in production version. Airstair passenger door at front on port side. Baggage compartment aft of main cabin, with external access via port side door aft of wing. Two-piece birdproof electrically heated wraparound windscreen.

SYSTEMS: Cabin pressurised to 0.69 bar (10.0 lb/sq in) on prototype (0.83 bar; 12.0 lb/sq in on second and production aircraft), and heated by engine bleed air; cooled by a Freon-cycle system. Hydraulic system (207 bars, 3,000 lb/sq in) for actuation of leading-edge slats, airbrake/lift dumpers and landing gear extension/retraction. Two 300 A engine-driven starter/generators and static inverters. Redundant frequency-wild alternators provide power for windscreen heating. Wing and tailplane have TKS liquid de-icing systems; inlets de-iced by engine bleed air.

AVIONICS: Bendix/King Gold Crown III dual IFR avionics.
Radar: Colour weather radar.
Flight: Autopilot/flight director.

DIMENSIONS, EXTERNAL:	
Wing span	11.07 m (36 ft 4 in)
Wing aspect ratio	8.00
Length overall	12.98 m (42 ft 7¼ in)
Height overall	4.24 m (13 ft 11 in)
DIMENSIONS, INTERNAL:	
Cabin: Length	
between pressure bulkheads	5.23 m (17 ft 2 in)
passenger section	3.61 m (11 ft 10 in)
Max width	1.43 m (4 ft 8½ in)
Max height	1.31 m (4 ft 3½ in)
Volume	8.95 m³ (316.22 cu ft)
AREAS:	
Wings, gross	15.33 m² (165.0 sq ft)
WEIGHTS AND LOADINGS:	
Weight empty, equipped	2,817 kg (6,210 lb)
Fuel weight	1,519 kg (3,350 lb)
Max ramp weight	4,762 kg (10,500 lb)
Max zero-fuel weight	3,447 kg (7,600 lb)
Max T-O weight	4,717 kg (10,400 lb)
Max landing weight	4,309 kg (9,500 lb)
Max wing loading	291.5 kg/m² (59.7 lb/sq ft)
Max power loading	278.9 kg/kN (2.74 lb/lb st)
PERFORMANCE (estimated, at max T-O weight except where indicated):	
Max operating speed (V_{MO})	Mach 0.82 (470 kts, 871 km/h; 541 mph)
Max cruising speed	445 kts (824 km/h, 512 mph)
Long-range cruising speed	413 kts (765 km/h, 475 mph)
Stalling speed at max landing weight	81 kts (150 km/h, 93 mph)
Max rate of climb at S/L	1,195 m (3,920 ft)/min
Max operating altitude	13,100 m (43,000 ft)
FAA T-O balanced field length	1,015 m (3,330 ft)
FAA landing distance	762 m (2,500 ft)
Range at Mach 0.72 (413 kts; 765 km/h, 475 mph):	
NBAA VFR reserves	2,076 n miles (3,845 km, 2,389 miles)
NBAA IFR reserves	1,730 n miles (3,204 km, 1,991 miles)

THURSTON

THURSTON AEROMARINE CORPORATION

24 Ledge Road, Cumberland Foreside, Maine 04110
Telephone: 1 (207) 829 6108
PRESIDENT: David B Thurston

Company owns type certificate A15EA and related data for original TSC-1A Teal amphibian and, following cessation of operations by International Aeromarine Corporation of Sanford, Florida, during 1991, design data and all rights to TA16 Seafire reverted to Thurston Aeromarine Corporation. Plans to develop eight-seat Seamaster twin-engined amphibian.

VERIFIED

THURSTON TSC-1A3 TEAL III

TYPE: Two-seat amphibian.

PROGRAMME: Thurston Aircraft built 19 Teal Is from 1968. Schweizer produced 12 Teal IIs and Washac Industries assembled seven more from Schweizer components by 1994; all tailwheel versions. Construction of Teal III prototype started February 1991, first flight 1994. Financing by International Aeromarine Inc. for first deliveries due June 1995 from assembly line of International Aeromarine, Fort Erie, Canada.

CURRENT VERSIONS: **Teal III**: Basic model, *as described below*.

CUSTOMERS: Delivery began to USA and Norway, June 1995.

COSTS: Standard aircraft $125,000 (1992).

DESIGN FEATURES: Development of TSC-1A Teal with wing span increased by 1.22 m (4 ft 0 in), horizontal tail surfaces increased in area; pylon mount similar to TA16 Seafire; 134 kW (180 hp) engine in place of original 112 kW (150 hp) unit. Hull structure revised to take tricycle landing gear with nosewheel steering, maximum T-O weight increased to 1,043 kg (2,300 lb). Wing section NACA 4415.

FLYING CONTROLS: Conventional ailerons, elevator and rudder both with trim tabs.

STRUCTURE: All-metal D-spar wing, all-metal semi-monocoque fuselage with GFRP foredeck and cabin top skins; cantilever all-metal T tail.

LANDING GEAR: Retractable tricycle type.
POWER PLANT: One 134 kW (180 hp) Textron Lycoming O-360-A1F6D flat-four engine, driving a Hartzell HC-C2YK-1BF/F7666A-2 tractor propeller. Two leading-edge fuel tanks, total capacity 174 litres (46 US gallons; 38.3 Imp gallons).
ACCOMMODATION: Enclosed cabin seating two side by side; baggage space behind seats.

DIMENSIONS, EXTERNAL:
Wing span 10.97 m (36 ft 0 in)
Wing aspect ratio 7.32
Length overall 7.27 m (23 ft 10¼ in)
Height overall 2.79 m (9 ft 2 in)
Propeller diameter 1.88 m (6 ft 2 in)

AREAS:
Wings, gross 16.44 m² (177.0 sq ft)

WEIGHTS AND LOADINGS:
Weight empty 680 kg (1,500 lb)
Baggage weight 113 kg (250 lb)
Max T-O weight 1,043 kg (2,300 lb)
Max wing loading 63.42 kg/m² (12.99 lb/sq ft)
Max power loading 7.78 kg/kW (12.78 lb/hp)

PERFORMANCE:
Max level speed 101 kts (187 km/h; 116 mph) IAS
Max cruising speed at 2,285 m (7,500 ft) 104 kts (193 km/h; 120 mph)
Cruising speed at 75% power at 2,285 m (7,500 ft) 97 kts (180 km/h; 112 mph)
Stalling speed, flaps up, power off 48 kts (89 km/h; 55 mph)
Max rate of climb at S/L 244 m (800 ft)/min
Service ceiling 4,875 m (16,000 ft)
T-O run: land 305 m (1,000 ft)
water 366 m (1,200 ft)
Landing run: land 213 m (700 ft)
water 275 m (900 ft)
Range with standard fuel 434 n miles (804 km; 500 miles)
Endurance 5 h 30 min
g limit 5.7

UPDATED

THURSTON TA16 SEAFIRE

TYPE: Four-seat amphibian.
PROGRAMME: Construction of prototype (N16SA) started June 1980; first flight 10 December 1981; original development by International Aeromarine continued by Thurston. FAR Pt 23 type certification 1992; financing for production due end 1995.
CURRENT VERSIONS: **Seafire**: Basic version, *as described below*.
COSTS: Standard aircraft approximately $235,000 (1992).
DESIGN FEATURES: Wing section NACA 64_2A215; dihedral 3°, incidence 4°.
FLYING CONTROLS: Thurston ailerons (US Patent 3,598,340) with ground adjustable trim tab, single-slotted trailing-edge flaps, elevators with bungee trim system; conventional rudder. Dual controls.
STRUCTURE: All-metal constant chord wings, all-metal single-step planing hull with retractable water rudder; cantilever all-metal tail surfaces.
LANDING GEAR: Hydraulically retractable tricycle type. Main units retract inward, steerable nosewheel retracts forward to close opening in hull, which needs no closure doors. Oleo-pneumatic shock-absorbers. Parker-Hannifin aluminium alloy wheels, all three size 6.00-6, with tyre size 17.5 × 6.30, 6 ply rating. Tyre pressures: mainwheels 2.76 bars (40 lb/sq in), nosewheel 2.07 bars (30 lb/sq in). Parker-Hannifin dual-pad disc brakes. Toe brakes. Parking brake. Wheel landing gear designed to meet Canadian DoT snow-ski load conditions.
POWER PLANT: One 186 kW (250 hp) Textron Lycoming O-540-A4D5 flat-six engine, pylon-mounted and braced from upper surface of hull directly over wing, driving Hartzell two-blade constant speed metal tractor propeller. Fuel tank in leading-edge of each wing, with combined capacity of 340 litres (90 US gallons; 75 Imp gallons). Refuelling point on upper surface of each wing. Oil capacity 11.5 litres (3 US gallons; 2.5 Imp gallons). Engine air intake incorporates filter and automatic inlet door which opens if main duct becomes blocked by ice or debris.
ACCOMMODATION: Pilot and three passengers in pairs in enclosed cabin, with two-section rearward-sliding canopy. Forward section slides aft over rear canopy, and both can then be rotated to either side of hull, or removed, to facilitate loading/unloading of bulky items. All glass tinted. Adjustable seats with belts and shoulder harness. Space for baggage or freight at rear of cabin. Accommodation heated and ventilated.
SYSTEMS: Electrical system powered by 24 V 70 A engine-driven alternator; 24 V 37 Ah battery. Electrically driven hydraulic pump provides system pressure of 69 bars (1,000 lb/sq in) for actuation of landing gear. Oxygen system optional.
AVIONICS: Standard Narco package, optional nav/com equipment to customer requirements.

DIMENSIONS, EXTERNAL:
Wing span 11.28 m (37 ft 0 in)
Wing chord, constant 1.52 m (5 ft 0 in)
Wing aspect ratio 7.40
Length overall 8.28 m (27 ft 2 in)
hull 7.42 m (24 ft 4 in)
Height overall 3.28 m (10 ft 9 in)
Tailplane span 3.05 m (10 ft 0 in)
Wheel track 4.01 m (13 ft 2 in)
Wheelbase 3.28 m (10 ft 9 in)
Propeller diameter 2.03 m (6 ft 8 in)

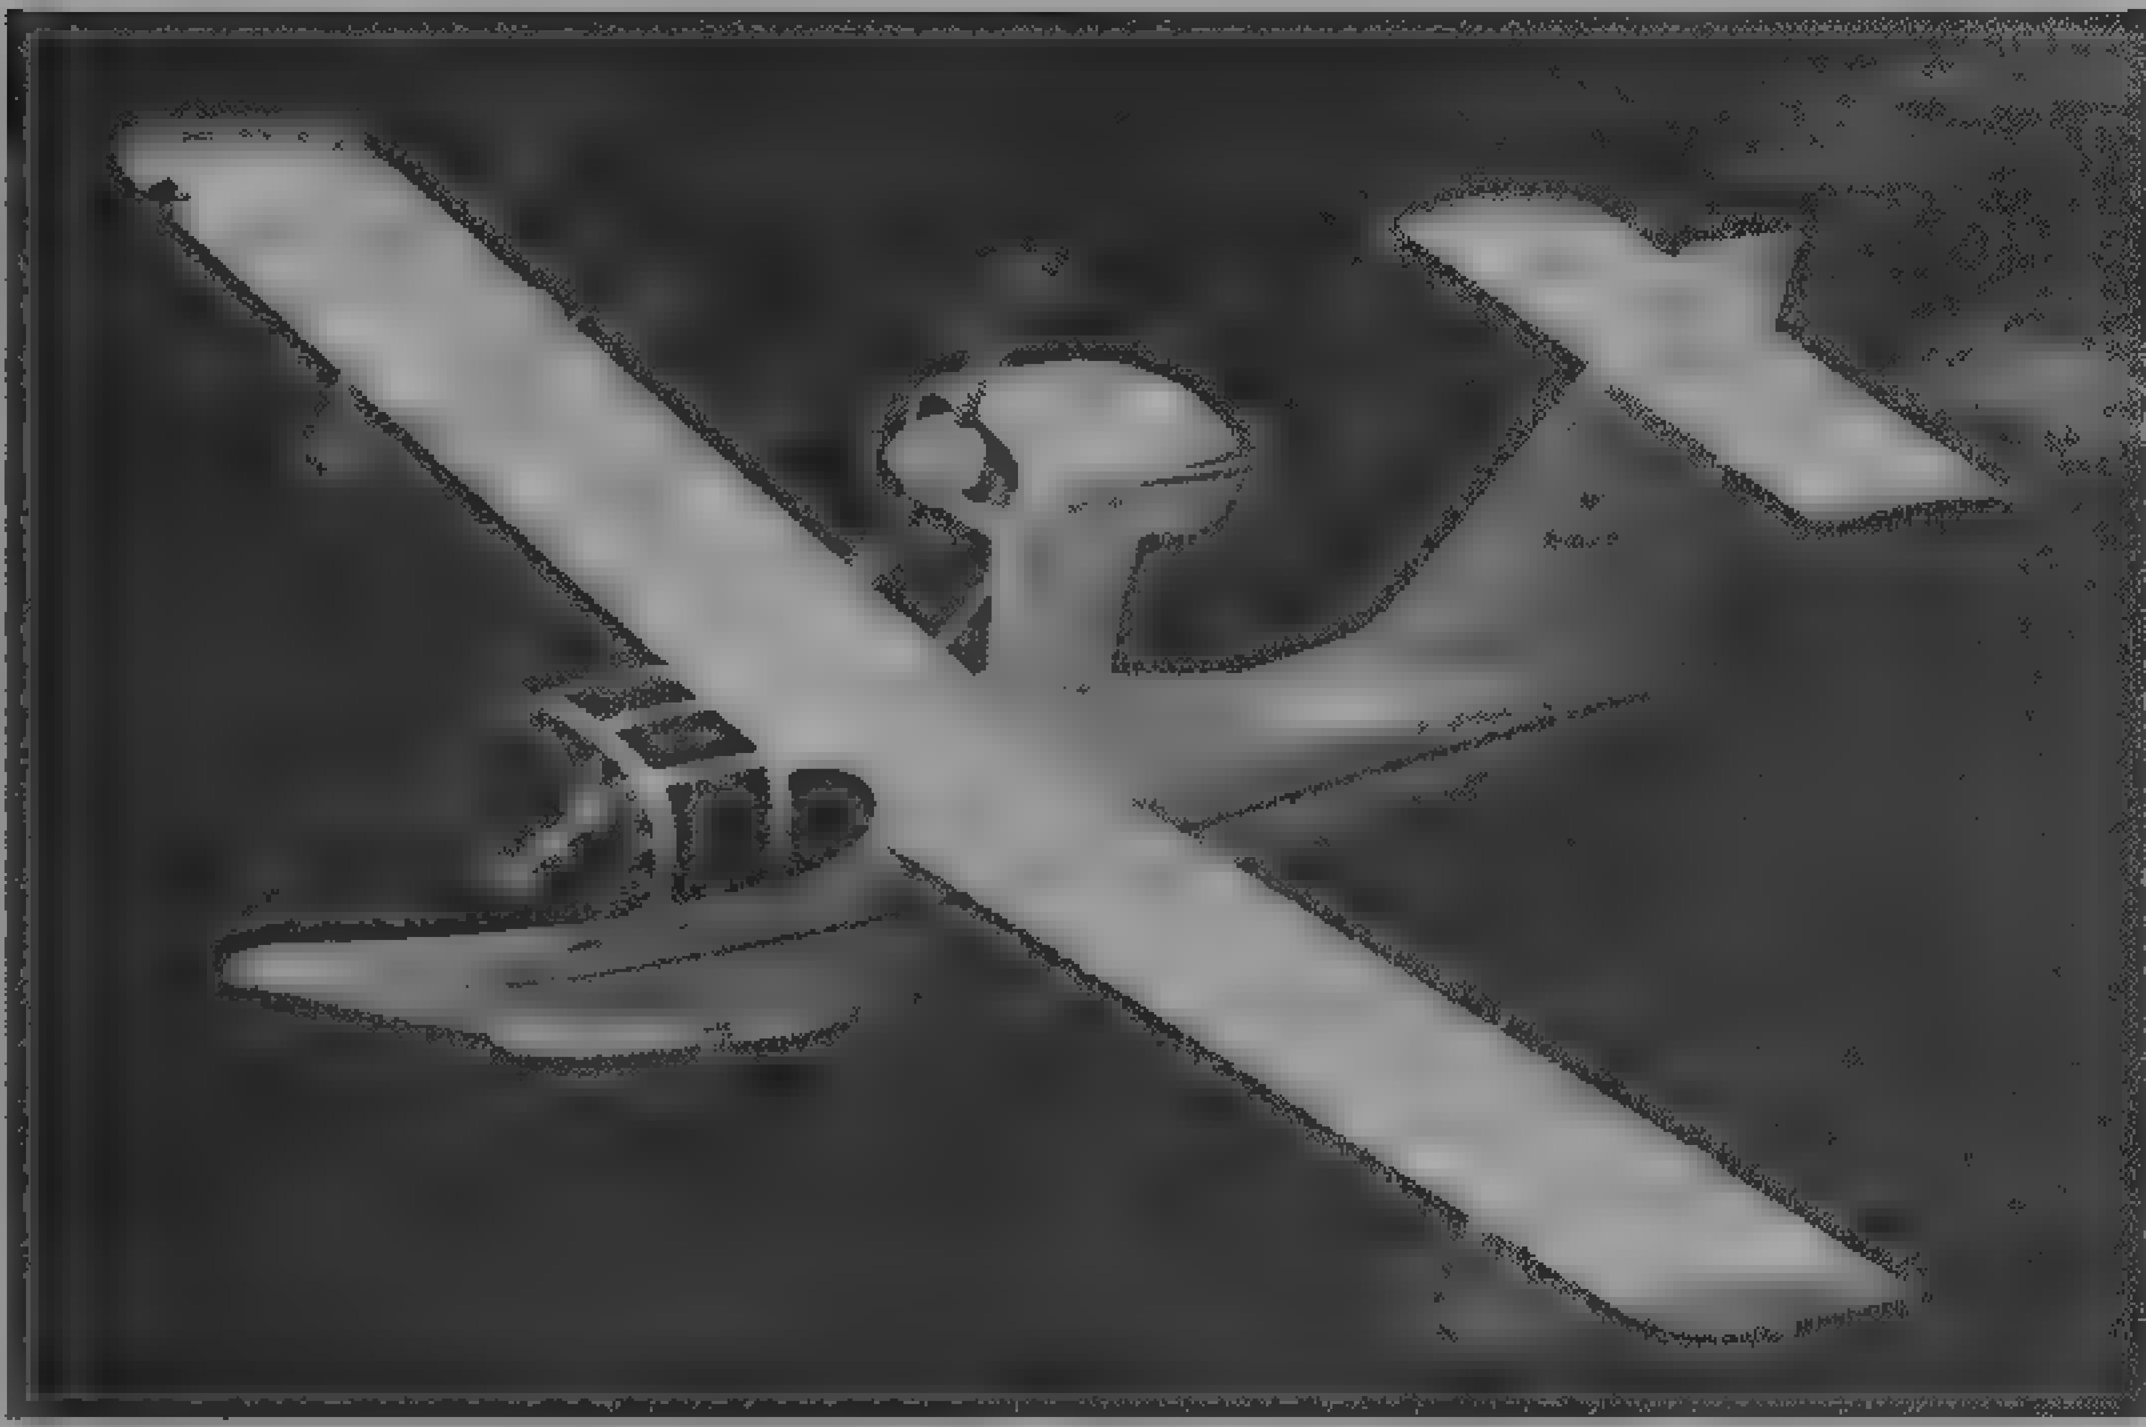
DIMENSIONS, INTERNAL:
Cabin: Length 2.13 m (7 ft 0 in)
Max width 1.01 m (3 ft 4 in)
Max height 1.22 m (4 ft 0 in)
Floor area 1.86 m² (20.0 sq ft)
Volume 2.26 m³ (80.0 cu ft)

AREAS:
Wings, gross 17.00 m² (183.0 sq ft)
Ailerons (total) 1.11 m² (12.0 sq ft)
Trailing-edge flaps (total) 2.51 m² (27.0 sq ft)
Fin 2.34 m² (25.2 sq ft)
Dorsal fin 0.12 m² (1.30 sq ft)
Rudder 0.67 m² (7.2 sq ft)
Tailplane 1.95 m² (21.0 sq ft)
Elevators 1.45 m² (15.6 sq ft)

WEIGHTS AND LOADINGS:
Weight empty, equipped 885 kg (1,950 lb)
Max fuel weight 245 kg (540 lb)
Max T-O and landing weight 1,451 kg (3,200 lb)
Max wing loading 85.44 kg/m² (17.5 lb/sq ft)
Max power loading 7.80 kg/kW (12.8 lb/hp)

PERFORMANCE (at max T-O weight, ISA):
Never-exceed speed (VNE) 160 kts (298 km/h; 185 mph) IAS
Max level speed at 2,135 m (7,000 ft) 152 kts (281 km/h; 175 mph) IAS
Max cruising speed, 75% power at 2,135 m (7,000 ft) 139 kts (257 km/h; 160 mph)
Econ cruising speed, 67% power at 2,135 m (7,000 ft) 135 kts (249 km/h; 155 mph)
Stalling speed, engine idling:
flaps up 63 kts (117 km/h; 73 mph)
flaps down 52 kts (97 km/h; 60 mph)
Max rate of climb at S/L 323 m (1,060 ft)/min
Service ceiling 5,485 m (18,000 ft)
T-O run: land 198 m (650 ft)
water 259 m (850 ft)
T-O to 15 m (50 ft): land 305 m (1,000 ft)
water 366 m (1,200 ft)
Landing from 15 m (50 ft): land or water 366 m (1,200 ft)
Range with max fuel 868 n miles (1,609 km; 1,000 miles)

UPDATED



Thurston TA16 Seafire four-seat amphibian prototype
1993

THURSTON TA19 SEAMASTER

TYPE: Eight-seat transport amphibian.
PROGRAMME: Design studies completed 1992, construction of prototype 1995, with production aircraft available 1997.
CURRENT VERSIONS: **Seamaster**: Basic version, *as described below*.
COSTS: Standard aircraft approximately $1.2 million.
DESIGN FEATURES: Being developed as modern turboprop replacement for Grumman Goose and Mallard amphibians. Wing section GA 40U-A215.
FLYING CONTROLS: Droop ailerons, conventional rudder and elevators, double-slotted flaps.
STRUCTURE: Aluminium alloy main structure, GFRP secondary structure (wingtips, forward cabin top, bow deck).
LANDING GEAR: Retractable tricycle type with steerable nosewheel, underwing floats, skis optional.
POWER PLANT: Two 335.5 kW (450 shp) Allison 250-B17F turboprops, each driving a Hartzell three-blade constant-speed propeller. Four interconnected fuel tanks in each wing, total capacity 1,363 litres (360 US gallons; 300 Imp gallons).
ACCOMMODATION: Two pilots on flight deck, eight passengers in main cabin.

DIMENSIONS, EXTERNAL:
Wing span 16.15 m (53 ft 0 in)
Wing aspect ratio 8.39
Length overall 11.89 m (39 ft 0 in)
Height overall 4.27 m (14 ft 0 in)
Propeller diameter 2.24 m (7 ft 4 in)

AREAS:
Wings, gross 31.12 m² (335.0 sq ft)

WEIGHTS AND LOADINGS:
Weight empty 2,204 kg (4,860 lb)
Max T-O weight 3,901 kg (8,600 lb)
Fuel weight 1,111 kg (2,450 lb)
Max wing loading 125.34 kg/m² (25.67 lb/sq ft)
Max power loading 5.81 kg/kW (9.56 lb/shp)

PERFORMANCE (estimated, at max T-O weight, ISA):
Max level speed at S/L 191 kts (354 km/h; 220 mph)
Cruising speed, 75% power at 2,285 m (7,500 ft) 174 kts (322 km/h; 200 mph)
Econ cruising speed, 50% power at 2,285 m (7,500 ft) 152 kts (281 km/h; 175 mph)
Stalling speed 52 kts (97 km/h; 60 mph)
Max rate of climb at S/L 457 m (1,500 ft)/min
Rate of climb at S/L, OEI 152 m (500 ft)/min
Service ceiling 6,100 m (20,000 ft)
T-O run: land 427 m (1,400 ft)
water 564 m (1,850 ft)
Landing run: land 366 m (1,200 ft)
water 427 m (1,400 ft)
Range with max standard fuel, 50% power, 30 min reserves 1,164 n miles (2,156 km; 1,340 miles)
Range with max payload, power and reserves as above 956 n miles (1,770 km; 1,100 miles)
Endurance with max standard fuel 9 h

JOINT PRIMARY AIRCRAFT TRAINING SYSTEM (JPATS)

TYPE: Primary/basic pilot trainer; version of Pilatus PC-9

PROGRAMME: USAF and USN issued Joint-Service Operational Requirements Document, November 1991, Department of Defense go-ahead of 19 January 1993 re-timed programme, but further delays followed, draft RFP July 1993, final RFP 18 May 1994 (aircraft only, associated ground training package now separate); flight trials of seven contenders in July to October, following which Vought Pampa 2000 International dropped from contest, manufacturing development contract award scheduled for February 1995. However, major restructuring revealed on 24 January 1995 featured six month slippage of contract award to 25 August and stretching of programme from 12 to 20 years. Initial planned purchase of 168 aircraft over five year period also amended to 141 over seven years, but ultimate requirement of 372 USAF and 339 USN examples stands, plus 45 for NATO school in USA. In short term, FY96 funding cut to $55 million for purchase of three aircraft instead of six, and year two procurement also down, from 10 to three. Revision of JPATS programme means first USAF aircraft will now be delivered in 1999, with USN examples following in 2002. Decision in favour of Beech Mk II (Pilatus PC-9 Mk II) announced 22 June 1995

COSTS: $6,000 million programme

DESIGN FEATURES: Tandem, stepped cockpits specified November 1991, eliminating Promavia Jet Squalus, Teledyne Ryan (with revised Fairchild Republic T-46 design) and Saab 2060. Minimum 250 knots (463 km/h; 288 mph) IAS cruising speed; 270 knots (500 km/h; 311 mph) objective, canopy resistance to 1.8 kg (4 lb) bird at objective speed; pressurised accommodation; provision for blind-flying hood in front cockpit; zero height/60 knots (111 km/h; 69 mph) ejection seats. Land-based only

Contenders summarised in accompanying table. All are described on the appropriate pages of this edition

STRUCTURE: Life of 24 years/19,000 flying hours, +6/−3 g

AVIONICS: To include GPS microwave landing system, collision warning system and provision for HUD

UPDATED

1995 JPATS CONTENDERS

US Manufacturer	Original Manufacturer	JPATS Bid Aircraft Name	Remarks
Raytheon	Pilatus, Switzerland	Beech Mk II	Modified PC-9, single uprated turboprop (932 kW; 1,250 shp)
Cessna	—	CitationJet	New design, twin turbofans (each 6.67 kN, 1,500 lb st)
Lockheed Martin	Aermacchi, Italy	T-Bird II	Re-engined MB-339A, single turbojet (17.79 kN, 4,000 lb st)
Northrop Grumman	Embraer, Brazil	Super Tucano	Stretched/re-engined Tucano, single uprated turboprop (1,193 kW, 1,600 shp)
Northrop Grumman	Agusta, Italy	S.211A	Modified S.211, single uprated turbofan (14.19 kN, 3,190 lb st)
Rockwell	DASA, Germany	Ranger 2000	Fantrainer development, single turbofan (11.12 kN, 2,500 lb st)

NON DEVELOPMENT AIRLIFT AIRCRAFT (NDAA)

TYPE: Strategic transport

PROGRAMME: NDAA requirement evolved as alternative to, or supplement for, troubled C-17A Globemaster III and therefore dependent upon outcome of 'Milestone 3B' programme review. Contest open to either FAA certified commercial aircraft derivative or US military certified airlift aircraft. Request for proposals for competitive commercial aircraft released in March 1995, with joint C-17/NDAA Defense Acquisition Board scheduled for November 1995 to evaluate Globemaster III performance, cost, quality and reliability, and establish most cost-effective mix of C-17 and NDAA aircraft to satisfy future Air Force/Army strategic airlift requirements. If programme carried through, successful NDAA will be purchased off-the-shelf and 'missionised' for aircraft role (Refer to Boeing 747F and Lockheed Martin C-5D in this section for two potential contenders.)

NEW ENTRY

C-32A

TYPE: Large, special mission (VIP) transport.

PROGRAMME: Boeing C-137B/C replacement, USAF has invited industry bid to supply initial six long-range, high-volume aircraft with executive interiors for service with executive-tasked 89th Airlift Wing at Andrews AFB Maryland. Initial acquisition expected on lease basis, with option to buy. Aircraft must be capable of carrying at least 60 passengers, 18 crew and baggage; and transport 40 passengers, 18 crew and baggage non-stop from Frankfurt, Germany to Andrews at normal cruise speed. USAF anticipates entering into lease agreement in FY96, with aircraft delivery in FY97, culminating in planned buy, if option is exercised, of one aircraft in FY98, one in FY99 and two each in FY00-01. Communications systems must provide global clear and secure voice, data and facsimile capability; and aircraft will also feature automated self-defence system to limit vulnerability to shoulder-launched, IR-guided missiles

NEW ENTRY

Electronic Systems Center

Hanscom AFB, Massachusetts 01731
Telephone. 1 (617) 377 4441

NEW ENTRY

ADVANCED SURVEILLANCE AND TRACKING TECHNOLOGY/AIRBORNE RADAR DEMONSTRATOR (ASTT/ARD)

PROGRAMME: Part of AFMC's Electronic Systems Center programme to develop new AWACS aircraft for use in 21st century, wind tunnel tests conducted late 1990; flight test demonstrator not expected before 1996. Current proposals envisage Boeing 747 platform aircraft, with GE Aerospace (now Lockheed Martin) advanced L-band phased-array radar installed in very large E-Systems dorsal radome (40 × 14.5 × 3.8 m; 131.2 × 47.6 × 12.5 ft), called a 'synergistic plandome', supported by multiple-strut structure above fuselage

UPDATED

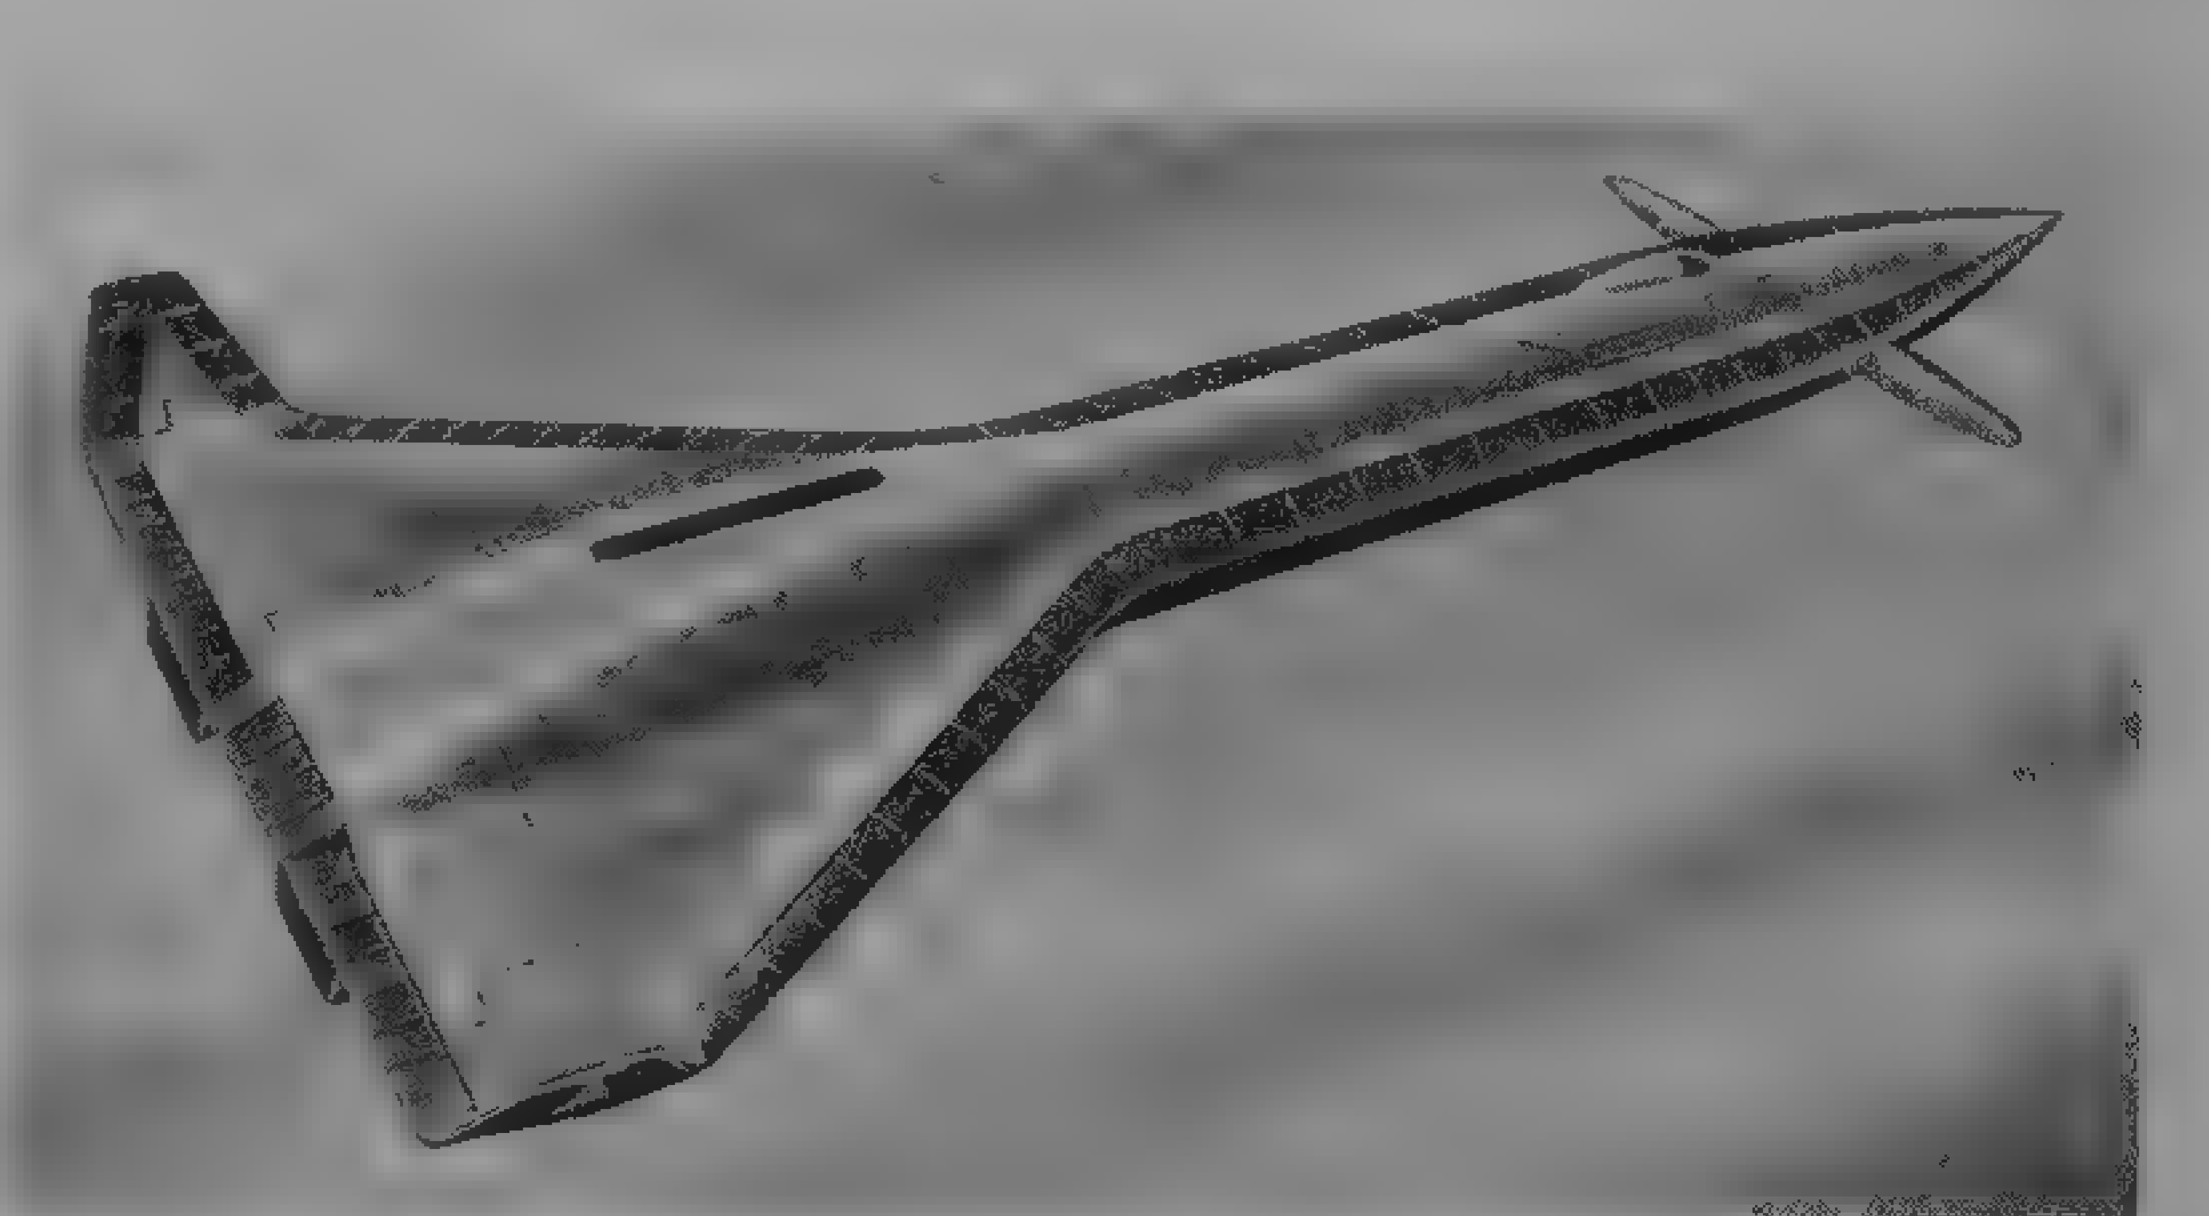
'BLACK' PROJECTS

Some disinformation, and minimal verifiable fact, are available on 'black' programmes that have followed the Lockheed U-2, A-12/SR-71 and F-117. Central to almost all reports is secret USAF test site at Groom Lake, Nellis range, Nevada. In October 1993, USAF announced intent to seal-off last public land having view over test site complex and lake bed. However, public objections delayed this, but authorisation to proceed eventually obtained in first half of 1995. Data below have been gathered from many uncorroborated sources and do not conform to *Jane's* usual standards of accuracy, their reproduction here does not imply that *Jane's* accepts the existence of all or some of those aircraft described below

Much speculation surrounds so-called **'Aurora'** codename accidentally revealed 1985, often linked with Lockheed Martin and most commonly used by published sources to refer to manned hypersonic vehicle believed under flight test from Groom Lake from end of 1980s onwards. Pentagon officials, Congressional sources and Lockheed representatives persistently denied these stories, with former Skunk Works manager Ben Rich offering explanation that 'Aurora' codename referred to B-2 funding in autobiography published shortly before his death

Balance of probability indicates existence of hypersonic project of unknown status and application and not named 'Aurora'; press reports, 1988, of aircraft under development, linked to Groom Lake test site, reportedly cancelled in 1990.



Alleged 'Aurora' design based on sighting reports during 1992, length about 60 m (200 ft) *(Jane's/Mike Keep)*

1993

but sonic booms of Mach 3 to 5 aircraft, about 27 m (90 ft) in length and heading towards southern Nevada, tracked by seismological stations since June 1991, radio intercepts reveal operating altitude of at least 20,420 m (67,000 ft) for unknown aircraft near Edwards AFB, April 1992. Deep rumbling/booming engine noise associated with hypersonic project frequently reported night flying from Groom Lake from 1990 to at least 1992. Aircraft apparently has pulse detonation wave engine which, under varying conditions, allegedly produces distinctive 'donuts-on-a-rope' or 'string of sausages' condensation trails, however, similar trails seen behind civil airliners and may be aerodynamic/meteorological phenomenon.

Physical characteristics uncertain, but appears possible that parasite concept employed (as per SR-71 predecessor M-12 with D-21A reconnaissance drone) for mid-air launch, airliner crew reported airmiss near Los Angeles, August 1992, with F-16 size aircraft having SR 71 shape forward fuselage and indistinct tail surfaces; possibly after launch. Presence of unusually tall hangar at Groom Lake supports contention that it may be for repositioning parasite vehicle on launch platform.

'Northrop TR-3A': Designation almost certainly bogus; attributed to stealthy flying wing of approximately 20 m (66 ft) span first reported over California in 1990, originally believed scale demonstrator of GD/McDonnell Douglas A-12. Possibly developed from Northrop THAP (Tactical High-Altitude Penetrator), prototype of which first flew mid-1981, conceivably adapted for low altitude penetrating reconnaissance mission. Press speculation that 'TR 3A' aircraft involved in accident near Boscombe Down, UK on 26 September 1994, but no other recent reports. (See also British Aerospace, Advanced Aircraft Studies, UK section.)

Two other fixed wing 'black' aircraft projects presently said to exist. Both reportedly fighter attack types with stealth attributes and possessing moderate range/payload characteristics. Current view is that one of these is a Northrop development based on unsuccessful YF-23 contender for USAF's Advanced Tactical Fighter programme. This reportedly is a stealthy variable geometry attack aircraft, having potential as F-111 replacement.

Many sightings of 'black' aircraft with 'flying wing' or 'triangle' shapes undoubtedly relate to unmanned aerial vehicle (UAV) programmes, such as now-cancelled 'Tier 3' high altitude reconnaissance aircraft, replaced by less ambitious 'Tier 3 Minus' project.

ADVANCED CARGO AIRCRAFT (ACA)

PROGRAMME: Possible replacement for existing Boeing CH-47D Chinooks; full scale engineering development 1998, IOC 2002, 11,800 kg (26,014 lb) payload with full fuel; 18,000 kg (39,683 lb) 'zero range' lift. Sikorsky to offer new design; Boeing offering interim CH-47F Advanced Chinook with MH-47E fuel tanks, refuelling probe, improved rotors and advanced avionics, estimated non-recurring cost $200 to 300 million (1992) and flyaway cost $15 to 20 million.

VERIFIED

UH-X

PROGRAMME: Replacement for Bell UH-1H Iroquois utility helicopter; 1,279 required for procurement from FY98 specification currently undefined, contenders include Sikorsky UH-60X Advanced Black Hawk, Eurocopter/Vought AS 565 Panther 800 and improved/re-engined UH-1s (see Bell Helicopter, UNC and Global Helicopters in *Jane's Aircraft Upgrades*). Likely to be deferred for financial reasons.

VERIFIED

JOINT ADVANCED STRIKE TECHNOLOGY (JAST)

TYPE: Multirole, dual-configuration, bi-service combat aircraft.

PROGRAMME: Originally launched as replacement for several USAF and USN programmes cancelled in 1993 (A/F-X, ATA, JSSA and JAF), initial concept resembled JSSA and JAF in anticipating use of modular construction techniques, examples include elements assembled to produce 600 n mile (1,120 km, 691 mile) aircraft with internal weapons or 350 n mile (653 km, 403 mile) aircraft with larger, external bomb load. Dozen nine month, concept-exploration contracts awarded May 1994 at total cost of $10 million out of $30 million JAST appropriation for FY94, recipients Boeing Defense & Space (basic concept, including low-cost procedures), McDonnell Douglas (affordable offboard architecture, joint strike warfare and weapons integration), Lockheed Martin (Fort Worth) (strike mission studies), Northrop Grumman (affordability studies, and systems architecture and configuration management for 'virtual strike warfare' environment), Hughes Missiles (weapons carriage), Cambridge Research (virtual strike environment architecture); Litton Amecom (sensor integration), and Honeywell (next generation avionics).

Initial programme objectives included decision on required JAST technologies to be taken 1996; two demonstrators (Concept-X and Concept-Y) to fly by 2000, one probably in ASTOVL configuration to incorporate Navy's SSF requirement, all technologies to be demonstrated prior to EMD phase in 2001 for risk/cost reduction, target of 75 per cent use of existing B-2/F-22 technology for near term JAST aircraft, prototype JAST first flight expected 2005-2006, IOC in 2008-2010; possible second stage involving 75 per cent new technology JAST to be developed over 15 to 20 years; JAST planned as replacement for F-14, AV-8B, F-111F, F-117, F-15E and F-16, but international collaboration a possibility, with UK first to express interest. Follow-on concept development study contracts, worth $175 million, to be awarded in FY95.

Most of those objectives still being pursued, but project base broadened in latter half 1994/early 1995; prospect of Congressional-driven amalgamation of separate JAST and Advanced Research Projects Agency (ARPA) Common Affordable Lightweight Fighter (CALF) ASTOVL projects emerged in 1994, with Deputy Secretary of Defense John Deutch endorsing earlier rather than later merger at JAST forum in Arlington, Virginia, on 28 June; Congress subsequently issued directive to that effect in Autumn, with efforts in vital technology areas detrimentally affected by accompanying $61 million funding cut.

MoU covering merger concluded and signed by Pentagon JAST Program Office's Maj Gen George Muellner and ARPA's head Gary Denman by early November 1994, subsequently approved by Defense Research and Engineering Director Anita Jones and service acquisition chiefs. Phase 3 of revised programme to start 1996, will address key concerns over payload/radius and survivability attributes; changes arising from combination of JAST and CALF considered beneficial in allowing contractors to tailor design proposals to satisfy service needs, rather than concentrate solely on technology advancement.

In meantime, Pentagon confirmed that up to four research contracts to be awarded for integrated aircraft weapon system concept definition and design research phase; formal Request for Proposals issued 2 September 1994, inviting submissions from industry by 4 November with contract issue by 16 December. Additionally, up to 10 separate projects envisaged for research and development of potential propulsion and avionics systems, structures and materials.

Some elements of US industry joined forces to secure future JAST work, with international collaboration in evidence. McDonnell Douglas heading one team after signing MoU end October 1994 with Northrop Grumman and British Aerospace, each company submitted individual bids for work on JAST project, but all three to participate in event of securing contract; Boeing also linked with Dassault on aspects of subsystem design effort.

Total of 24 contracts covering definition and design phase awarded to 18 US companies in December 1994, major share distributed between four airframe manufacturers for overall weapon system work to be completed by March 1996, Boeing allocated $27.6 million, Lockheed Martin (Fort Worth) $19.9 million, McDonnell Douglas $28.2 million and Northrop Grumman $24.1 million.

Further 20 contracts totalling $28 million allotted to related areas of avionics, structures and materials, propulsion, and modelling and simulation. Recipients included Boeing ($2.3 million for avionics virtual systems engineering and prototyping and $1.7 million for JAST multi-service common airframe work), Lockheed Martin ($0.44 million for structurally integrated, reconfigurable multi-function apertures and $2 million for onboard/offboard information fusion), Northrop Grumman ($2.1 million for avionics virtual systems engineering and prototyping), Pratt & Whitney ($5.4 million for propulsion system demonstrations); General Electric/Allison ($3.6 million for work on low-cost nozzles and turbocooler engine demonstration for flexible thermal management), Lockheed Martin (Marietta) ($0.54 million for work on a modular electro-optical/infra-red sensor subsystem), Texas Instruments ($2.5 million for avionics virtual systems engineering); TRW ($2.0 million for advanced strike integrated diagnostics), Loral ($1.2 million for multiprocessing system work) and Westinghouse ($0.31 million for radio frequency/intermediate frequency packaging).

Reconfiguration of JAST in light of merger with CALF to result in expanded flight test programme, with two finalists each building two demonstrators; one to have ASTOVL capability while other employs conventional take-off and landing (CTOL); currently expected that request for demonstration phase proposals from industry will lead to contract awards to successful contenders in Spring 1996. Longer-term manufacturing effort increasingly likely to employ modular airframe structure, which has potential for variable levels of stealthiness with low observable attributes tailored to customer requirements, which could accommodate single-place or two-place crew options, and which would allow several variations on basic tactical fighter theme, utilising either CTOL or ASTOVL, to be assembled on single production line to satisfy US and UK armed forces requirements: USAF seeking CTOL version as F-16 Fighting Falcon replacement; USN wants strengthened CTOL version to replace F-14 Tomcat and F/A-18 Hornet aboard carrier fleet, STOVL variant candidate to replace F/A-18 Hornet and AV-8B Harrier II with USMC plus Sea Harrier F/A Mk 2 of Royal Navy, RAF potential buyer to replace Harrier GR Mk 7 and Tornado GR Mks 1/4.

Refer also to individual company entries in this section and McDonnell Douglas/BAe in International section for illustrations and additional information on JAST and related CALF (see next entry).

UPDATED

COMMON AFFORDABLE LIGHTWEIGHT FIGHTER (CALF)

TYPE: Strike-fighter technology demonstrator.

PROGRAMME: Requirement defined by USN in April 1992, project managed by ARPA, RFP deadline 5 December 1992; proposals received from Lockheed Fort Worth (ex General Dynamics), Lockheed, Grumman, Boeing and McDonnell Douglas/British Aerospace, two to be selected for 30 month concept validation phase; ARPA then to select most promising design, demonstrator to fly 2000; fighter in service 2010. Potential replacement for F/A-18 Hornet and AV-8B Harrier II. **X-32** designation allocated to technology demonstrator programme.

First decision, March 1993, awarded Phase 2 concept validation contracts to Lockheed Martin (see this section) and McDonnell Douglas (see International section). Former uses shaft-driven fan for lift during STO and VL phase, latter relies on gas-coupled fan, both fans are mounted forward, rear element of thrust coming from

Impression of Northrop Grumman CALF contender *1995*

engine nozzle deflection; fan doors on both aircraft close for normal forward flight. Under Congressional instructions, ARPA later admitted Boeing's CALF project (which see) in January 1994, despite earlier rejection of direct jet lift design; $6 million Boeing ARPA 12-month concept design contract signed 25 March 1994. Northrop Grumman also entered programme in mid-1994 at own expense with lift-plus-lift/cruise propulsion concept. One non-flying airframe from each of two original teams to be pylon mounted at NASA/Ames for engine trials and later tested in wind tunnel at same facility. One design due to be selected for Phase 3 production of two flying prototypes, powered by single afterburning engine in class of Lockheed F-22 power plant 200 kN (45,000 lb st) in conventional flight; 165 kN (37,000 lb st) during lift phase; however, Congressional directive in Autumn 1994 forced merger of this project with JAST (see previous entry).

Illustrations of some CALF projects appear under individual company headings in this section.

UPDATED

COMBAT SUPPORT HELICOPTER REPLACEMENT

FY96 budget request included statement that US Navy to seek off-the-shelf replacement for Boeing CH-46D Sea Knight combat support/vertical replenishment helicopter, due to increasing improbability of redundant US Marine Corps CH-46E Sea Knight version becoming available at desired time. Procurement planning anticipates funding initial batch of four new helicopters in FY99 budget, selected type will be either variation of helicopter currently in US Navy inventory or missionised version of commercially available machine.

VAN'S

VAN'S AIRCRAFT INC

PO Box 160, North Plains, Oregon 97133
Telephone: 1 (503) 647 5117
PRESIDENT: Richard VanGrunsven

The name Van's is from Richard VanGrunsven, who is known as 'Van'. Details of the current single-seat Van's RV-3 sporting homebuilt, available in kit and plan forms, can be found in the 1992-93 *Jane's*.

UPDATED

VAN'S RV-4

TYPE: Tandem two-seat sporting kit-built/homebuilt.

PROGRAMME: First flight of prototype 21 August 1979. Plans and kits available to homebuilders.

CUSTOMERS: By early 1995, over 3,950 sets of plans sold, with about 1,800 aircraft under construction and 550 RV-4s flying.

COSTS: Kit, $8,890. Plans: $165. Information pack: $8.

DESIGN FEATURES: Wing section Van's Aircraft 135.

POWER PLANT: One 112 kW (150 hp) Textron Lycoming O-320-E1F flat-four engine, two-blade propeller. Fuel capacity 121 litres (32 US gallons, 26.6 Imp gallons).

DIMENSIONS, EXTERNAL:

Wing span	7.01 m (23 ft 0 in)
Wing aspect ratio	4.81
Length overall	6.21 m (20 ft 4½ in)
Height overall	1.60 m (5 ft 3 in)
Propeller diameter	1.73 m (5 ft 8 in)

AREAS:

Wings, gross	10.22 m² (110.0 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	404 kg (890 lb)
Baggage capacity	13.6 kg (30 lb)
Max T-O weight	680 kg (1,500 lb)
Max wing loading	66.58 kg/m² (13.64 lb/sq ft)
Max power loading	6.07 kg/kW (10.00 lb/hp)

PERFORMANCE (at max T-O weight, and prior to prototype's aerodynamic clean-up):

Max level speed at S/L	175 kts (323 km/h, 201 mph)
Econ cruising speed, 55% power at 2,440 m (8,000 ft)	142 kts (264 km/h, 164 mph)
Stalling speed	47 kts (87 km/h, 54 mph)
Max rate of climb at S/L	503 m (1,650 ft)/min
Service ceiling	5,945 m (19,500 ft)
T-O run	137 m (450 ft)
Landing run	130 m (425 ft)
Range with max fuel, 55% power	695 n miles (1,287 km; 800 miles)

UPDATED

Van's RV-4 tandem-seat light aircraft *(Paul Jackson)* *1995*

VAN'S RV-6

TYPE: Side by side two-seat sporting kit-built/homebuilt.

PROGRAMME: Prototype first flight June 1986. Plans and kits available.

CUSTOMERS: By early 1995, more than 4,000 sets of RV-6/RV-6A plans sold, with about 2,500 aircraft under construction and 150 flying.

COSTS: Kit, $9,615. Plans: $195. Information pack: $8.

DESIGN FEATURES: Basically side by side two-seat derivative of RV-4.

POWER PLANT: One 112-134 kW (150-180 hp) Textron Lycoming flat-four engine. Fuel capacity 140 litres (37 US gallons, 30.8 Imp gallons).

DIMENSIONS, EXTERNAL: As RV-4 except:

Length overall	6.16 m (20 ft 2½ in)

AREAS: As RV-4

WEIGHTS AND LOADINGS:

Weight empty	431 kg (950 lb)
Baggage capacity	27.2 kg (60 lb)
Max T-O weight	726 kg (1,600 lb)
Max wing loading	71.04 kg/m² (14.55 lb/sq ft)

PERFORMANCE (at max T-O weight):

Max level speed at S/L	175 kts (323 km/h, 201 mph)
Econ cruising speed, 55% power at 2,440 m (8,000 ft)	146 kts (270 km/h, 168 mph)
Stalling speed	47 kts (87 km/h, 54 mph)
Max rate of climb at S/L	503 m (1,650 ft)/min
Service ceiling	5,945 m (19,500 ft)
T-O run	160 m (525 ft)
Landing run	153 m (500 ft)
Range with max fuel (55% power)	803 n miles (1,488 km, 925 miles)

UPDATED

VAN'S RV-6A

TYPE: Tricycle landing gear variation of RV-6.

PROGRAMME: Prototype first flight July 1988. Plans and kits available. AIEP of Nigeria (which see) has developed version known as Air Beetle, now in production for Nigerian Air Force as military trainer for screening new pilots before more expensive training.

CUSTOMERS: By early 1995, about 100 RV-6As had flown and about 800 were under construction.

COSTS: Kit, $10,215. Plans: $205. Information pack: $8.

POWER PLANT: Similar to RV-6, fuel capacity 144 litres (38 US gallons; 31.6 Imp gallons).

DIMENSIONS, EXTERNAL: As RV-6 except:

Length overall	6.07 m (19 ft 11 in)
Height overall	2.13 m (7 ft 0 in)

AREAS: As RV-6

WEIGHTS AND LOADINGS: As RV-6 except:

Weight empty	451 kg (995 lb)

PERFORMANCE (two persons):

Max level speed	174 kts (322 km/h, 200 mph)
Econ cruising speed, 55% power at 2,440 m (8,000 ft)	144 kts (267 km/h, 166 mph)
Stalling speed	48 kts (89 km/h; 55 mph)
Max rate of climb at S/L	427 m (1,400 ft)/min
Service ceiling	4,970 m (16,300 ft)
T-O run	92 m (300 ft)
Landing run	153 m (500 ft)
Range, 55% power at 2,440 m (8,000 ft)	760 n miles (1,408 km, 875 miles)

Vertical Aviation Technologies Inc is FAA approved repair facility for various Sikorsky helicopters. In 1984 development began to modify four-seat Sikorsky S-52-3 former production helicopter (of which 87 originally produced) into kit for assembly by individuals, corporations or military, with all tooling and fixtures completed by 1988. In 1991, VAT purchased assets of Orlando Helicopter Airways and is continuing Orlando's activity in remanufactured Sikorsky helicopters.

UPDATED

VAT HUMMINGBIRD

TYPE: Four-seat helicopter.

CUSTOMERS: Thirteen Hummingbird kits sold at $86,000 including engine by early 1995, of which six flying. See also entry under Hungary for version being developed by Danubian Aircraft Company.

DESIGN FEATURES: Based on previously type certificated Sikorsky S-52-3. VAT replaced standard Sikorsky S-52-3 power plant with 194 kW (260 hp) aluminium block V8

engine. Newly manufactured airframes and tailcones identical to S-52-3, except for nose section. Assembly takes about 1,500 working hours and kit includes original Sikorsky components. Currently under development are five-blade rotor system, Allison turbine power plant, supercharged liquid-cooled power plant, and military/law enforcement variant.

DIMENSIONS, EXTERNAL:

Main rotor diameter	10.06 m (33 ft 0 in)
Length overall, rotors turning	12.11 m (39 ft 9 in)
fuselage	9.27 m (30 ft 5 in)
Height: to top of rotor head	2.62 m (8 ft 7 in)
overall	2.87 m (9 ft 5 in)

AREAS:

Main rotor disc	79.46 m² (855.3 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	771 kg (1,700 lb)
Max payload	453 kg (1,000 lb)
Max T-O weight	1,225 kg (2,700 lb)
Max disc loading	15.41 kg/m² (3.16 lb/sq ft)

PERFORMANCE (three-blade rotor):

Cruising speed	85 kts (157 km/h, 98 mph)
Max rate of climb at S/L	366 m (1,200 ft)/min
Service ceiling	3,350 m (11,000 ft)
Range	approx 304 n miles (563 km, 350 miles)

VIKING DRAGONFLY

TYPE: Side by side two-seat, dual control sporting homebuilt.

PROGRAMME: Prototype first flight 16 June 1980. Plans available, together with preformed engine cowling and canopy. Kits of prefabricated component parts, requiring no complex jigging or tooling, also available, in this form aircraft known as 'Snap' Dragonfly. Kits estimated to save builder more than 700 working hours.

CURRENT VERSIONS: **Dragonfly Mark I:** Original configuration, with non-retractable mainwheels at tips of foreplane.

Dragonfly Mark II: In parallel production, for operation from unprepared strips and narrow taxiways. Main landing gear in short non-retractable cantilever units under wings, with individual hydraulic toe brakes, and increased foreplane and elevator areas; wheel track 2.44 m (8 ft).

Dragonfly Mark III: Flight tested in 1985, non-retractable tricycle landing gear.

CUSTOMERS: By Spring 1994, more than 100 kits delivered, together with 1,800 sets of plans, some 70 kit built and more than 300 plans built aircraft flying.

COSTS: Kit $14,000. Plans: $259 in USA, $300 foreign.

DESIGN FEATURES: Wing section Eppler 1213. Foreplane GU25 section.

STRUCTURE: Composites wing, foreplane and tail unit structures of styrene foam, glassfibre, carbonfibre and epoxy. Semi-monocoque fuselage, formed (not carved) from 12.5 mm (½ in) thick urethane foam, with strips of 18 mm (¾ in) foam bonded along edges to allow large-radius external corners. Fuselage covered with glassfibre inside and out.

LANDING GEAR: See Current Versions. Brakes fitted.

POWER PLANT: One 44.5 kW (60 hp) 1,835 cc modified Volkswagen motorcar engine, 1,600 cc engine, rated at 33.5 kW (45 hp), optional. Fuel capacity 56.8 litres (15 US gallons, 12.5 Imp gallons).

DIMENSIONS, EXTERNAL:

Wing span	6.71 m (22 ft 0 in)
Wing aspect ratio	9.18
Foreplane span	6.40 m (21 ft 0 in)
Length overall	5.79 m (19 ft 0 in)
Height overall: Mk I	1.22 m (4 ft 0 in)
Propeller diameter	1.32 m (4 ft 4 in)

AREAS:

Wings, gross	4.90 m² (52.75 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	283 kg (625 lb)
Baggage capacity	22.6 kg (50 lb)
Max T-O weight	522 kg (1,150 lb)
Max wing loading	106.53 kg/m² (21.80 lb/sq ft)

PERFORMANCE (ISA, max T-O weight):

Max level speed at 2,285 m (7,500 ft), 75% power	143 kts (266 km/h, 165 mph)
Cruising speed at S/L	104-146 kts (193-270 km/h, 120-168 mph)
Stalling speed	42 kts (78 km/h, 48 mph)
Max rate of climb at S/L	259 m (850 ft)/min
Service ceiling	5,640 m (18,500 ft)
T-O run	213 m (700 ft)
Range	434 n miles (804 km, 500 miles)
Endurance	4 h 15 min
g limits	+4.4/−2

UPDATED

Viking Aircraft Dragonfly Mark I

1994

Viking Cygnet SF-2A

1995

VIKING CYGNET SF-2A

TYPE: Two-seat light aircraft.

PROGRAMME: Designed by Bert Sisler as Whistler SF-2, flew at Oshkosh EAA convention 1973. EAA NASAD Class I certificate of compliance No. 119, dated 8 August 1981. Build time suggested at 1,700 hours.

CUSTOMERS: About 25 flying.

COSTS: Information pack $10, plans $150, kit $12,000.

DESIGN FEATURES: Shoulder wing with struts, conventional tail surfaces; tailplane strut-braced. NACA 3413 wing section.

FLYING CONTROLS: Conventional mechanical ailerons, elevator and rudder. Elevator tab for pitch trim. Fixed tabs on ailerons and rudder.

STRUCTURE: Fuselage of metal tube, wing with wood spars and conventional spruce ribs overlayed with a lattice of spruce strips not dissimilar to geodetic construction principle. Fabric coverings.

LANDING GEAR: Tailwheel type.

POWER PLANT: 50.7 kW (68.0 hp) 1,835 cc VW engine. Fuel capacity 56.8 litres (15.0 US gallons, 12.5 Imp gallons).

ACCOMMODATION: Two persons side by side.

SYSTEMS: Electrical system 12 V 30 Ah battery, alternator fit appropriate to engine.

AVIONICS: Customer specified.

DIMENSIONS, EXTERNAL:

Wing span	9.14 m (30 ft 0 in)
Wing chord	1.27 m (4 ft 2 in)
Wing aspect ratio	7.20
Length overall	5.79 m (19 ft 0 in)
Height overall	1.78 m (5 ft 10 in)
Tailplane span	2.39 m (7 ft 10 in)
Wheelbase	1.93 m (6 ft 4 in)
Propeller diameter	1.47 m (4 ft 10 in)

DIMENSIONS, INTERNAL:

Cabin: Max width	0.99 m (3 ft 3 in)

AREAS:

Wings, gross	11.61 m² (125.0 sq ft)
Ailerons (total)	0.80 m² (8.6 sq ft)
Fin	0.46 m² (5.0 sq ft)
Rudder	0.65 m² (7.0 sq ft)
Tailplane	0.98 m² (10.5 sq ft)
Elevator	0.93 m² (10.0 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	265 kg (585 lb)
Max payload	233 kg (515 lb)
Baggage weight with two crew	32 kg (70 lb)
Fuel weight	40.9 kg (90.2 lb)
Max T-O weight	499 kg (1,100 lb)
Max wing loading	42.97 kg/m² (8.80 lb/sq ft)
Max power loading	9.85 kg/kW (16.18 lb/hp)

PERFORMANCE (at max T-O weight)
Never-exceed speed (VNE) 117 kts (217 km/h, 135 mph)
Max level speed 95 kts (176 km/h, 109 mph)
Max cruising speed 94 kts (174 km/h, 108 mph
Econ cruising speed 98 kts (161 km/h, 100 mph)
Stalling speed, power off 42 kts (78 km/h, 49 mph)
Max rate of climb at S/L 176 m (580 ft)/min
T-O run 92 m (300 ft)
T-O to 15 m (50 ft) 213 m (700 ft)
Landing from 15 m (50 ft) 213 m (700 ft)
Landing run 77 m (250 ft)
Range with max internal fuel 334 n miles (619 km, 385 miles)
Endurance with max internal fuel 4 h 30 min

WAG-AERO SPORT TRAINER

TYPE: Modernised versions of Piper J-3

PROGRAMME: Sport Trainer first flew 12 March 1975

CURRENT VERSIONS: **Sport Trainer:** Basic two-seat design with wooden main spar and ribs, light alloy leading-edge and fabric covering. The fuselage and tail unit are of welded steel tube with fabric covering. Can be powered by any flat-four Teledyne Continental, Franklin or Textron Lycoming engine of between 48.5 and 93 kW (65 and 125 hp). *Description applies to this version*

Acro Trainer: Differs from standard version by having strengthened fuselage, shortened wings (8.23 m, 27 ft), modified lift struts, improved wing fittings and rib spacing, and new leading-edge.

Observer: Replica of L-4 military liaison aircraft.

Super Sport: Structural modifications to accept engines of up to 112 kW (150 hp), making it suitable for glider towing, bush operations, or operation as floatplane.

COSTS: Plans $65, kit $18,000

DIMENSIONS, EXTERNAL
Wing span 10.73 m (35 ft 2½ in)
Wing aspect ratio 6.94
Length overall 6.82 m (22 ft 4½ in)
Height overall 2.03 m (6 ft 8 in)

AREAS
Wings, gross 16.58 m² (178.5 sq ft)

WEIGHTS AND LOADINGS
Weight empty 327 kg (720 lb)
Max T-O weight 635 kg (1,400 lb)
Max wing loading 38.3 kg/m² (7.84 lb/sq ft)

PERFORMANCE (at max T-O weight, ISA)
Max level speed at S/L 89 kts (164 km/h; 102 mph)
Cruising speed 82 kts (151 km/h, 94 mph)
Stalling speed 34 kts (63 km/h; 39 mph)
Max rate of climb at S/L 149 m (490 ft)/min
Service ceiling over 3,660 m (12,000 ft)
T-O run 114 m (375 ft)
Range: at cruising speed with standard fuel (45.5 litres, 12 US gallons; 10 Imp gallons) 191 n miles (354 km, 220 miles)
with auxiliary fuel (98.5 litres, 26 US gallons; 21.6 Imp gallons) 395 n miles (732 km; 455 miles)

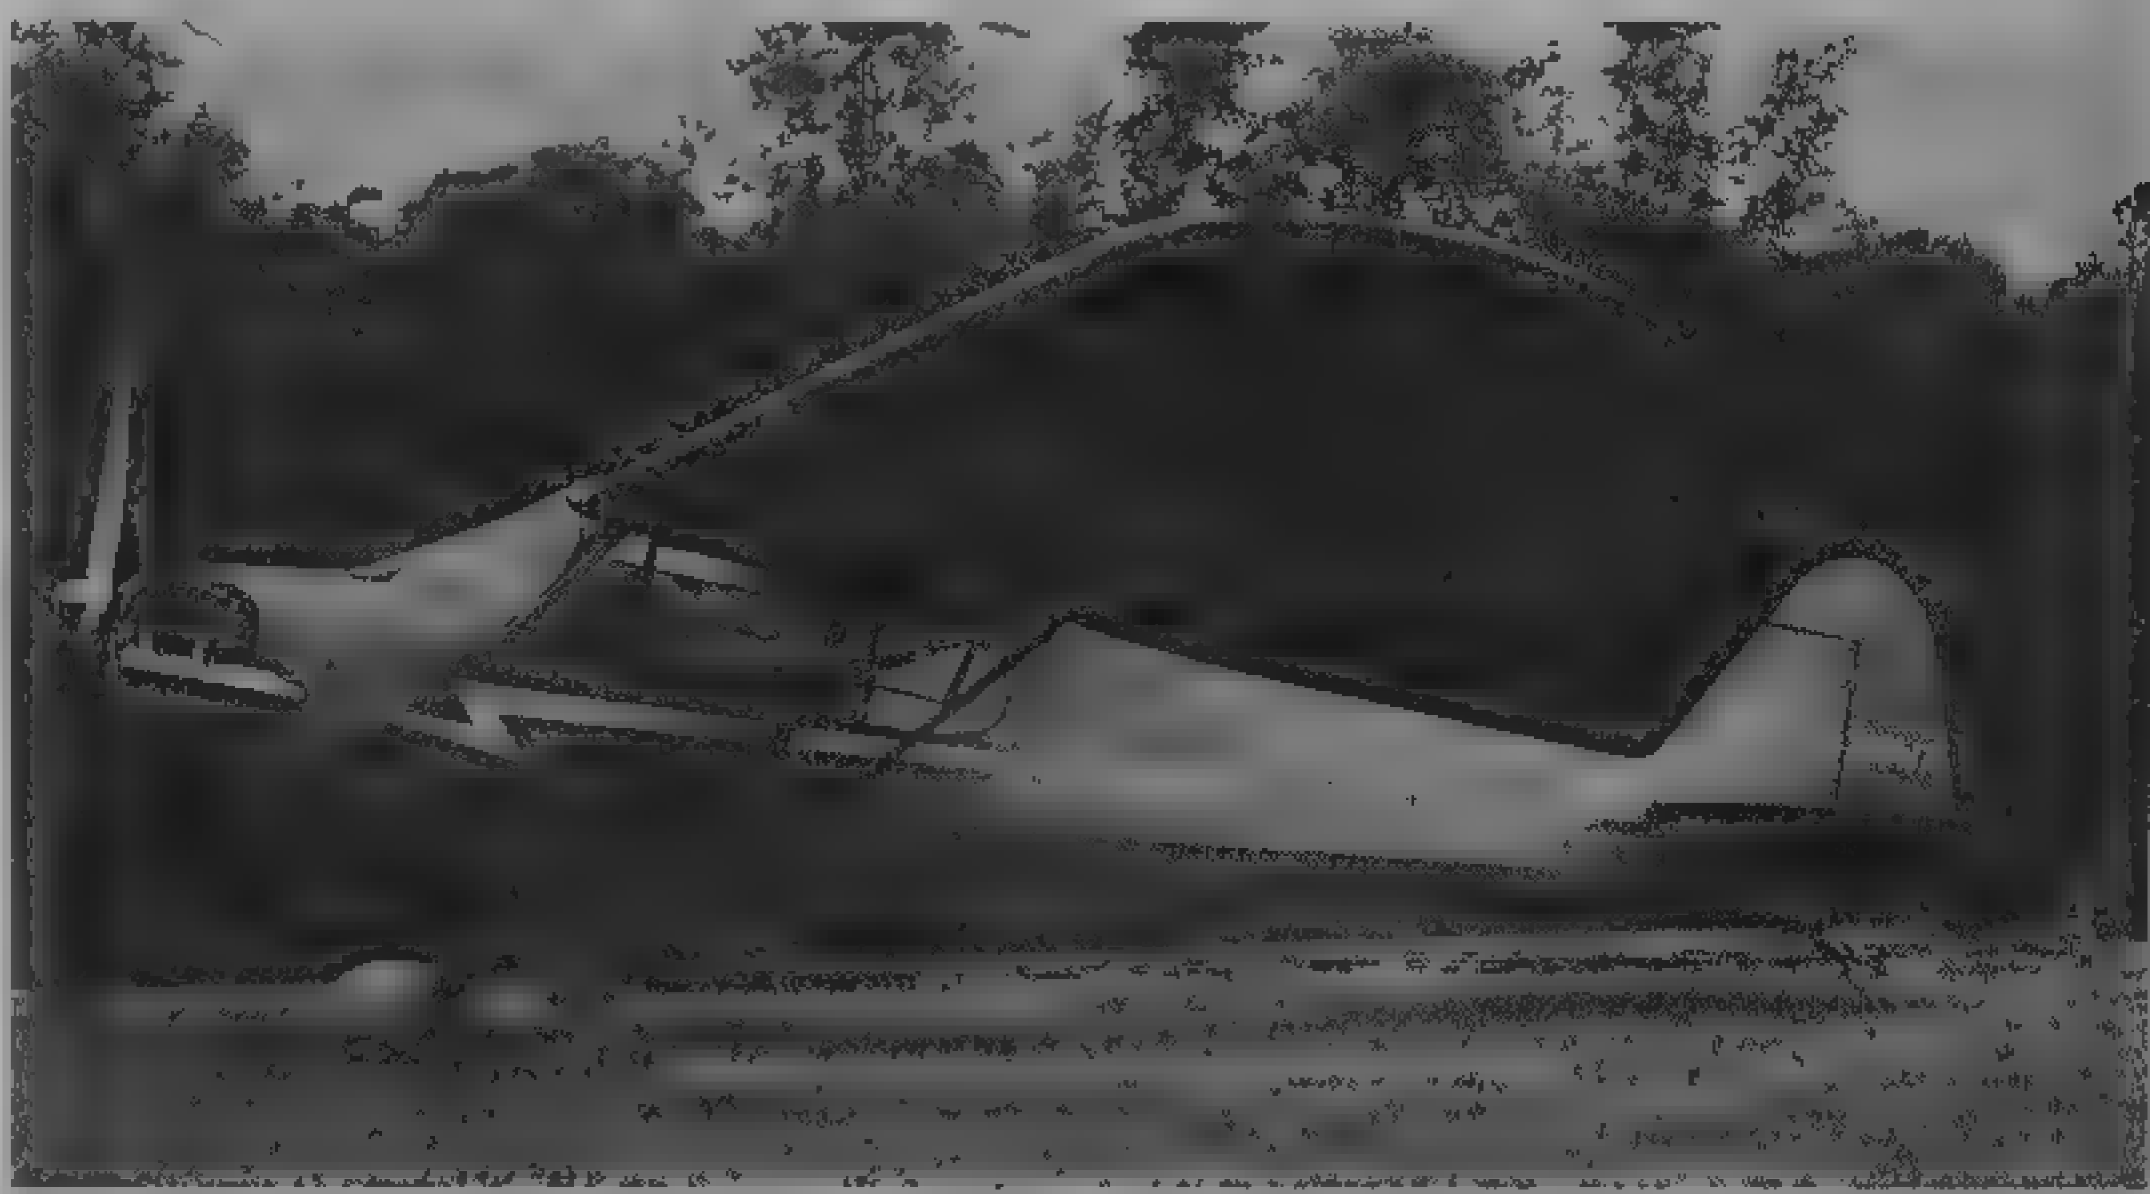
UPDATED

WAG-AERO WAG-A-BOND

TYPE: Side by side two-seat homebuilt; replica of Piper PA-15 Vagabond

PROGRAMME: Prototype Wag-A-Bond completed May 1978; plans and kits available

DESIGN FEATURES: Two versions (**Classic** and **Traveler**); Traveler is modified and updated version of Vagabond with port and starboard doors, overhead skylight window, extended sleeping deck (conversion from aircraft to camper interior taking about two minutes and accommodating two persons), extended baggage area, engine of up to 85.7 kW (115 hp), and provision for full electrical system.



WAG-Aero Sport Trainer

1995

STRUCTURE: All-wood wing and aluminium alloy aileron structures. Welded steel tube and flat plate fuselage structure, and steel tube tail unit. Complete airframe is fabric covered

LANDING GEAR: Non-retractable tailwheel type. Optional skis

POWER PLANT: Traveler can be powered by a Textron Lycoming engine of 80.5 to 85.7 kW (108 to 115 hp). Classic can be powered by a Teledyne Continental engine of 48.5 to 74.5 kW (65 to 100 hp). Fuel capacity: Traveler 98.5 litres (26 US gallons; 21.6 Imp gallons), Classic 45.5 litres (12 US gallons, 10 Imp gallons)

DIMENSIONS, EXTERNAL
Wing span 8.32 m (29 ft 3½ in)
Wing aspect ratio 5.82
Length overall 5.66 m (18 ft 7 in)
Height overall 1.83 m (6 ft 0 in)

AREAS
Wings, gross 13.70 m² (147.5 sq ft)

WEIGHTS AND LOADINGS
Weight empty: Traveler 329 kg (725 lb)
Classic 290 kg (640 lb)
Baggage capacity
Traveler 27 kg (60 lb)
Classic 18 kg (40 lb)
Max T-O weight: Traveler 658 kg (1,450 lb)
Classic 567 kg (1,250 lb)
Max wing loading: Traveler 47.99 kg/m² (9.83 lb/sq ft)
Classic 41.35 kg/m² (8.47 lb/sq ft)

PERFORMANCE
Max level speed
Traveler 118 kts (219 km/h; 136 mph)
Classic 91 kts (169 km/h, 105 mph)
Cruising speed: Traveler 108 kts (200 km/h, 124 mph)
Classic 83 kts (153 km/h; 95 mph)
Stalling speed
Traveler, Classic 39 kts (73 km/h; 45 mph)
Max rate of climb at S/L: Traveler 259 m (850 ft)/min
Classic 190 m (625 ft)/min

VERIFIED

WAG-AERO 2+2 SPORTSMAN

TYPE: Four-seat homebuilt

PROGRAMME: Plans and material kits available.

COSTS: Plans $89, kit $22,000

DESIGN FEATURES: Based on Piper PA-14 Family Cruiser. True four-seater, with option of hinged rear fuselage decking to provide access to baggage and rear seat areas. The rear seat can be removed for cargo or litter

FLYING CONTROLS: Include upper and lower spoilers.

STRUCTURE: Similar construction to Wag-A-Bond, with glassfibre wingtips. Alternatively drawings and materials provided to modify standard PA-12, PA-14 or PA-18 wings. Prewelded fuselage structure also available

POWER PLANT: Engine of 93 to 149 kW (125 to 200 hp). Usable fuel capacity 148 litres (39 US gallons; 32.5 Imp gallons)

DIMENSIONS, EXTERNAL
Wing span 10.90 m (35 ft 9 in)
Wing aspect ratio 7.34
Length overall 7.12 m (23 ft 4½ in)
Height overall 2.02 m (6 ft 7½ in)

AREAS
Wings, gross 6.18 m² (174.12 sq ft)

WEIGHTS AND LOADINGS
Weight empty 490 kg (1,080 lb)
Max T-O weight 998 kg (2,200 lb)
Max wing loading 61.67 kg/m² (12.63 lb/sq ft)

PERFORMANCE (typical, actual data depend on engine fitted)
Max level speed 112 kts (207 km/h, 129 mph)
Cruising speed 108 kts (200 km/h, 124 mph)
Stalling speed 33 kts (62 km/h, 38 mph)
Max rate of climb at S/L 244 m (800 ft)/min
Service ceiling 4,510 m (14,800 ft)
Range at cruising speed 582 n miles (1,078 km, 670 miles)

WASHINGTON AEROPROGRESS

WASHINGTON AEROPROGRESS INC

8535 Perimeter Road South, Boeing Field, Seattle, Washington 98108
Telephone: 1 (206) 763 4915
Fax: 1 (206) 768 0661
PRESIDENT: Lloyd Lounsbury
SALES MANAGER: Vadim Karpan

Company founded 1994 as Western source for selected products of Russian design and manufacturing group Aeroprogress Corporation (which see). Operations begun with marketing of T-411 Wolverine kitplane to North American market. To be expanded with three further light transports, two of which yet to be officially launched by Russian parent company; Washington Aeroprogress responsible for development (including conversion to Federal Standard measurements), production, certification and sales; also collaborates with number of East European and Asian manufacturers with production of airframe elements

NEW ENTRY

AEROPROGRESS T-121 GRIF

TYPE: 10-passenger utility transport.

PROGRAMME: Offered for joint development by ROKS-AERO (Aeroprogress) in collaboration with MERO company; also suitable for agricultural and parachuting duties, to be certified to FAR Pt 23

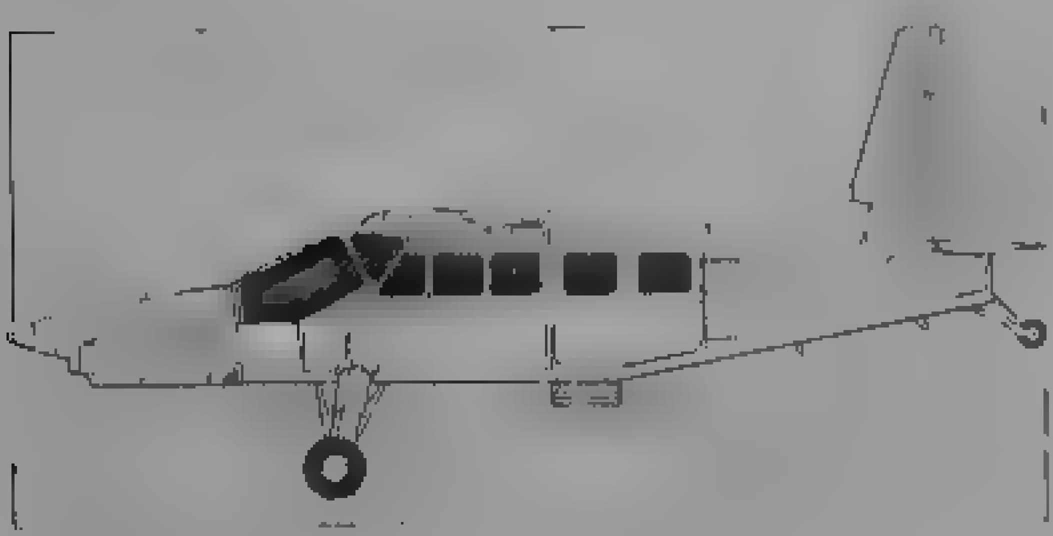
DESIGN FEATURES: Components adapted from other aircraft for simplicity and economy: wing of PZL M-18 Dromader (Poland), main landing gear from Antonov An-2; Dromader tailwheel, flying controls improved from Dromader and M-24 Dromader Super

POWER PLANT: One 716 kW (960 shp) PZL Rzeszów PZL-10S (TWD-10B) turboprop

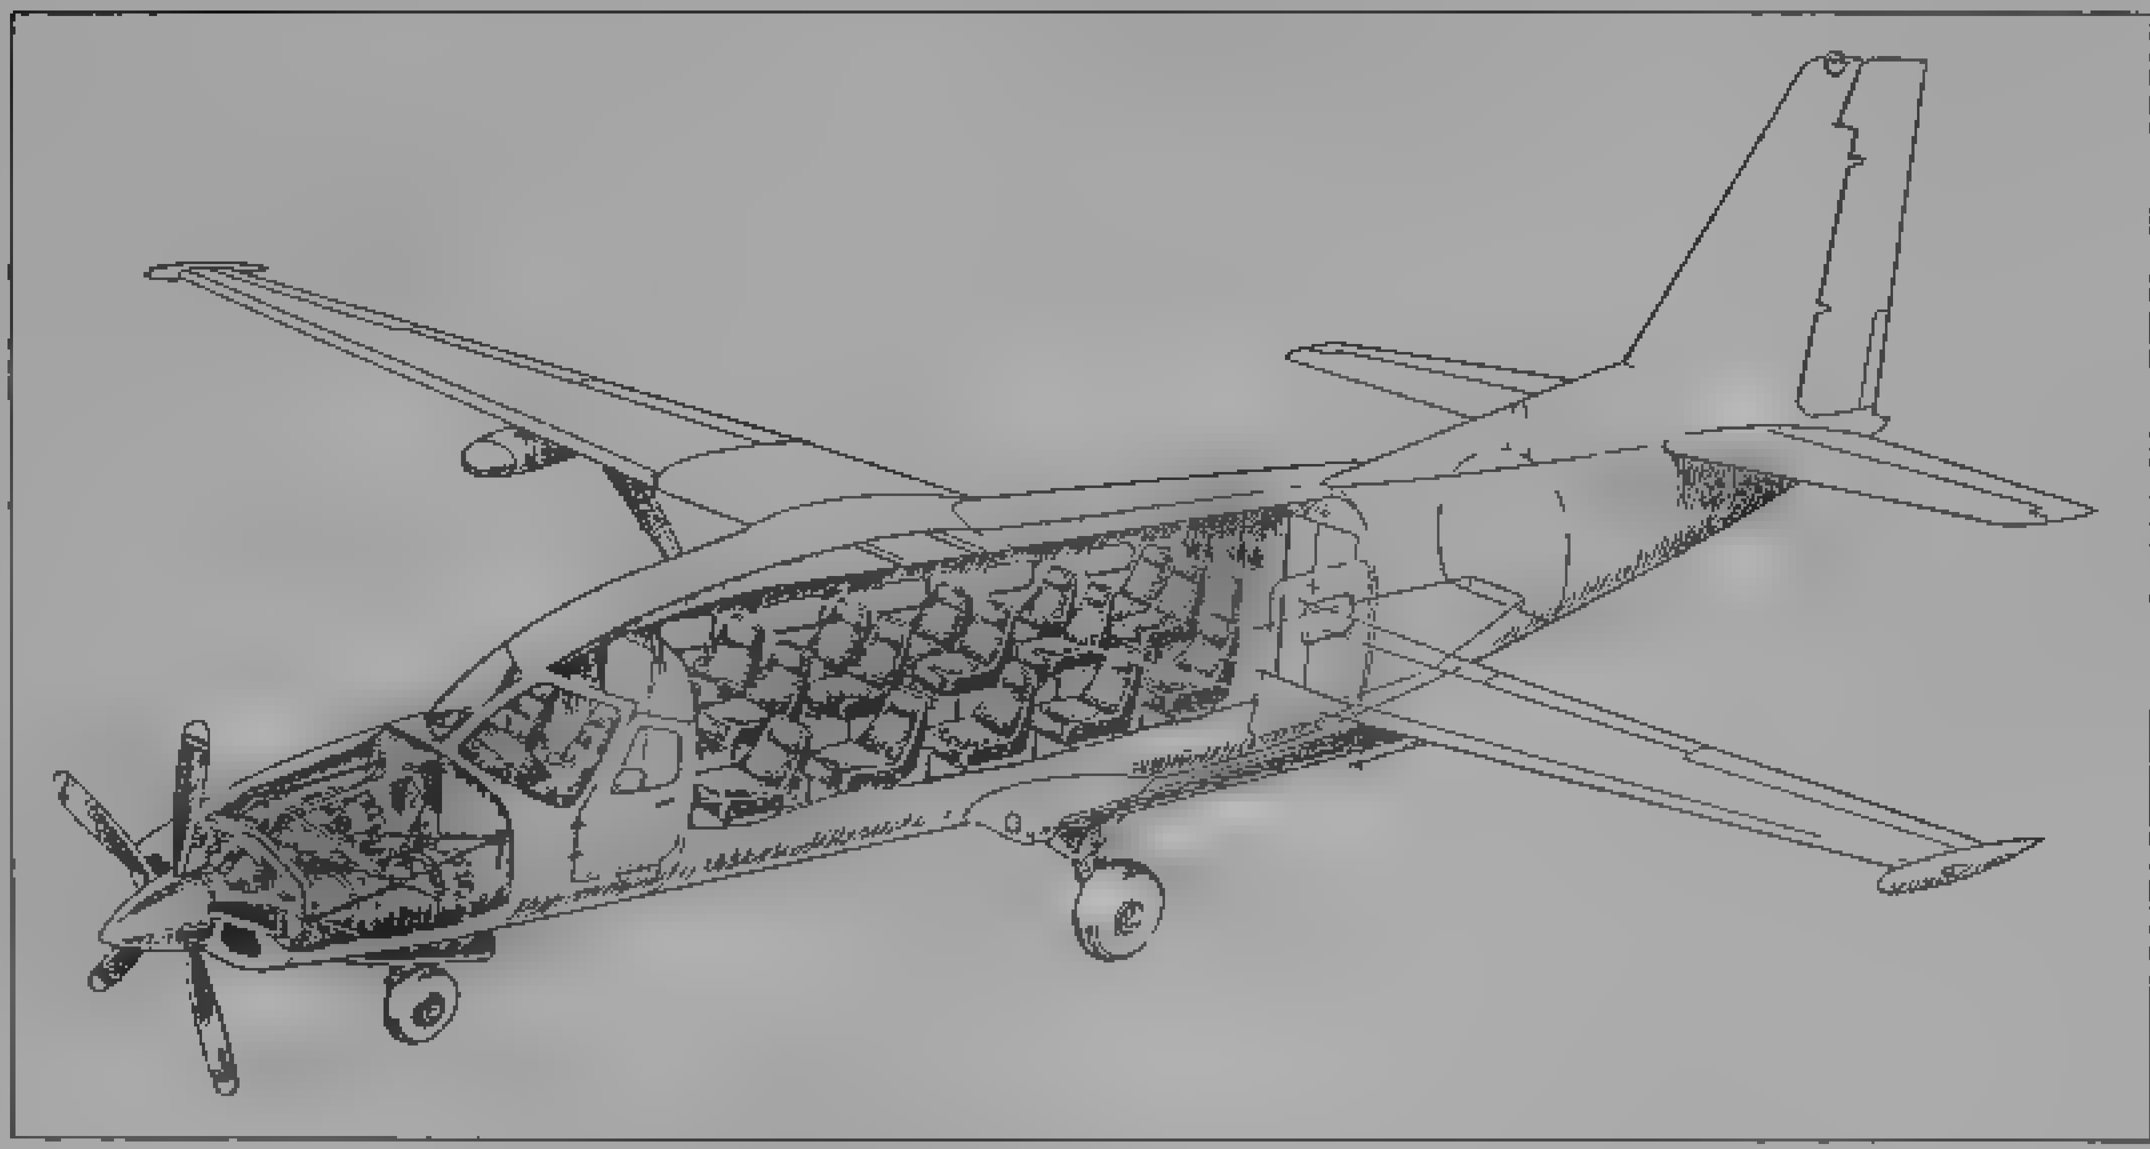
ACCOMMODATION: 12 persons, including one or two pilots.

DIMENSIONS, EXTERNAL:

Wing span	17.70 m (58 ft 0¾ in)
Length overall	14.00 m (45 ft 11 in)
Height	5.20 m (16 ft 4¾ in)



Profile of Washington Aeroprogress T-121 Grif *(Jane's/James Goulding)*
1995



Cutaway view of Washington Aeroprogress T-720DP Korshun
1995

WEIGHTS AND LOADINGS:

Max payload	1,150 kg (2,535 lb)
Max T-O weight	4,800 kg (10,582 lb)
Max zero-fuel weight	3,250 kg (7,165 lb)

PERFORMANCE:

Max cruising speed	157 kts (290 km/h, 180 mph)
Range with max payload	593 n miles (1,100 km, 683 miles)

NEW ENTRY

AEROPROGRESS T-204 CONDOR

TYPE: Nine-passenger, STOL utility transport

PROGRAMME: Western version of T-204, described in Russian section

NEW ENTRY

AEROPROGRESS T-411 WOLVERINE

TYPE: Four-seat, kit built STOL light aircraft

PROGRAMME: Western version of Aeroprogress T-411 Aist, as described in Russian section, but more closely related to Khrunichev-built version; employs US made materials, avionics, wheels and brakes; dimensions converted to Federal Standard units

NEW ENTRY

AEROPROGRESS T-720DP KORSHUN

TYPE: 17-passenger utility transport

PROGRAMME: Under development, timescale unspecified

DESIGN FEATURES: Employs components from other aircraft, including wing, centre and rear fuselage elements of Antonov An-28 and vertical tail of Aeroprogress T-10. Floatplane and stretched versions also available

POWER PLANT: Solov Dual Pac of two P&W Canada PT6A-114 turboprops; 1,267 kW (1,700 shp) combined rating

ACCOMMODATION: Two crew and 17 passengers

DIMENSIONS, EXTERNAL:

Wing span	22.06 m (72 ft 4½ in)
Length overall: standard	13.70 m (44 ft 11¼ in)
stretched	14.35 m (47 ft 1 in)
Height	5.55 m (18 ft 2½ in)

WEIGHTS AND LOADINGS:

Max payload	1,200 kg (2,645 lb)
Max T-O weight	5,700 kg (12,566 lb)

PERFORMANCE:

Max cruising speed	189 kts (350 km/h, 217 mph)
Range	842 n miles (1,560 km, 969 miles)

VERIFIED

WL AIRCRAFT WHITE LIGHTNING

TYPE: Four-seat homebuilt

PROGRAMME: Prototype first flew 8 March 1986. In same year it established several world speed records in Classes C1b and C1c. Construction from kit takes about 1,000 working hours for the first-time builder

CUSTOMERS: 32 kits sold, 13 aircraft flying by 1992, no known recent completions

COSTS: Kit: $40,000. Many optional kits, including electrical for $1,110

DESIGN FEATURES: Options include electrical, various engine installation, light, strobe light and interior kits, plus other items. Wing section NACA 66_2-215

STRUCTURE: Wings have graphite tubular 'wet' main spar, and glassfibre/epoxy front and rear spars and ribs, all precast in the lower glassfibre/epoxy skin. Glassfibre/epoxy fuselage moulded in upper and lower halves. Spars and ribs of fin and tailplane precast into one skin of each

LANDING GEAR: Retractable tricycle type, with brakes

POWER PLANT: Prototype has 156.6 kW (210 hp) Teledyne Continental IO-360-CB flat-six engine. Usable fuel capacity 257 litres (68 US gallons, 56.6 Imp gallons)

DIMENSIONS, EXTERNAL:

Wing span	8.43 m (27 ft 8 in)
Wing aspect ratio	8.60
Length overall	7.11 m (23 ft 4 in)
Height overall	2.18 m (7 ft 2 in)
Tailplane span	2.74 m (9 ft 0 in)
Propeller diameter	1.85 m (6 ft 1 in)

AREAS:

Wings, gross	8.29 m² (89.22 sq ft)
Tailplane	1.81 m² (19.5 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	635 kg (1,400 lb)
Max baggage capacity	154 kg (340 lb)
Max T-O weight	1,225 kg (2,700 lb)
Max wing loading	148.12 kg/m² (30.34 lb/sq ft)
Max power loading	7.83 kg/kW (12.86 lb/hp)

PERFORMANCE (at max T-O weight, ISA):

Max level speed at S/L	243 kts (450 km/h; 280 mph)
Max cruising speed at 2,440 m (8,000 ft)	230 kts (426 km/h, 265 mph)
Econ cruising speed at 3,200 m (10,500 ft)	217 kts (402 km/h, 250 mph)

YUGOSLAVIA (SERBIA)

New state of Yugoslavia proclaimed 27 April 1992, is, effectively, former provinces of Serbia and Montenegro

UTVA

UTVA—SOUR METALNE INDUSTRIJE, RO FABRIKA AVIONA

Jabučki Put bb, YU-26000 Pančevo
Telephone 38 (13) 515383, 512584
Fax 38 (13) 519859
Telex 13250 UTVA YU

Utva (Sheldrake) Aircraft Industry formed at Zemun, 5 June 1937, to Pančevo 1939. Second World War production of Trojka, 212, 213, Aero 3, Utva 56, 60, 65P and 66; currently 85,500 m² (920,320 sq ft) of covered floor area. Subcontract work previously included flaps and weapon pylons for Soko/Avioane Orao/IAR-93, centre and rear fuselage sections, tail surfaces and gun pod for Super Galeb, components for FLS Aerospace Optica, Boeing 737 rib assemblies, Boeing 747 assemblies, Boeing 757 wingtips and floor supports, tools for Israel Aircraft Industries, McDonnell Douglas and CIS aircraft industry; external trade prohibited by UN embargo 1992

Following termination of aircraft production at the Soko (Falcon) works in newly proclaimed independent Bosnia-Hercegovina, on 1 May 1992, some machinery and jigs from G-4 Super Galeb and Gazelle production lines removed to 'new' Yugoslavia, despite UN trade embargoes. Utva reportedly has assumed development responsibilities for G-4M version of Super Galeb, G-5 derivative and Soko/Avioane Orao (see International section) as well as returning to production an upgraded version of the Utva 75 lightplane. Utva also involved with aircraft maintenance and munitions production during civil war

UPDATED

Single-seat agricultural version of the Utva-75, of similar appearance to projected Utva-95 *1994*

UTVA-95

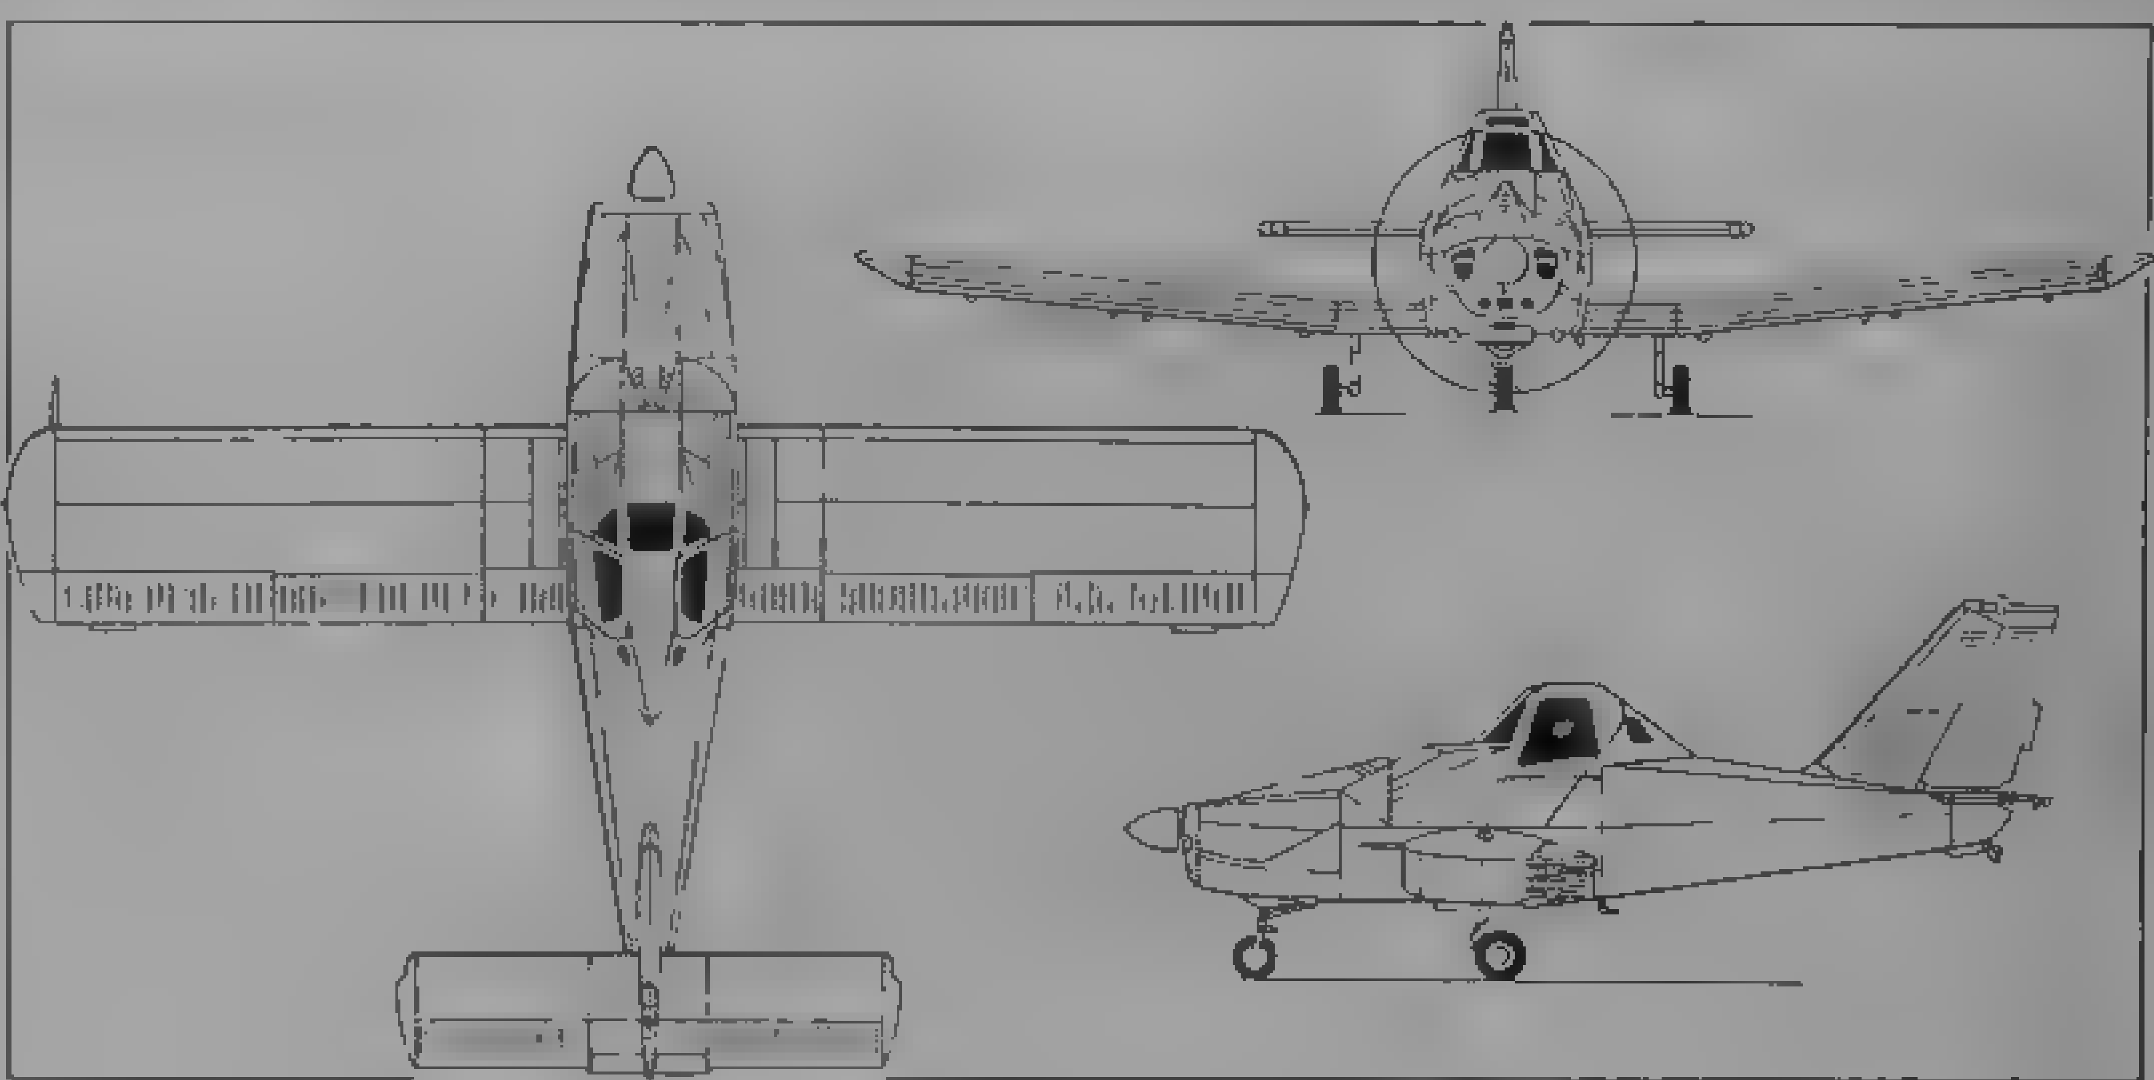
TYPE: Single-seat agricultural aircraft

PROGRAMME: Turboprop version of Utva-75AG11; first flight due 1996. Derived from Utva 75 two/four-seat tourer, of which over 150 built 1976-86; 75AG11 prototype (YU-XAF) first flown 3 March 1989 as single-seat variant carrying up to 870 litres (230 US gallons, 191 Imp gallons) of chemicals, no further production

DESIGN FEATURES: Utva-95 fitted with 2,000 litre (528 US gallons; 440 Imp gallon) chemical hopper. *Data follow for Utva-75AG11, to which Utva 95 is similar*

Wing section NACA 65_2415, dihedral 0° on centre-section, 6° on outer panels

FLYING CONTROLS: Conventional mechanical. Fluted skin on ailerons, flaps, fin, rudder and elevators, rudder and elevators horn balanced, ground adjustable tab on rudder;



Utva-75AG11 on which Utva-95 is based *(Jane's/Mike Keep)* *1995*

Flettner trim tab on each aileron. Teleflex acuator for elevator control tab.

STRUCTURE: All metal semi-monocoque.

LANDING GEAR: Non-retractable tricycle type, with single wheel on each unit, and small tail bumper; oleo-pneumatic shock-absorbers. Tyres, size 7.00-8 on mainwheels; size 6.00-6 on nosewheel, hydraulic brakes.

ACCOMMODATION: Pilot only, in high set cabin. Downward-hinged canopy door on each side. Cabin heated and ventilated.

SYSTEMS: Electrical system 24 V 60 A DC, with 19 Ah Ni/Cd battery. Vacuum system standard.

DIMENSIONS, EXTERNAL:

Wing span	9.73 m (31 ft 11 in)
Wing chord, constant	1.55 m (5 ft 1 in)
Wing aspect ratio	6.47
Length overall	7.11 m (23 ft 4 in)
Height overall	3.15 m (10 ft 4 in)
Tailplane span	3.80 m (12 ft 15½ in)
Wheel track	2.58 m (8 ft 5½ in)
Wheelbase	1.99 m (6 ft 6¼ in)

AREAS:

Wings, gross	14.63 m² (157.5 sq ft)
Ailerons (total)	1.38 m² (14.85 sq ft)
Flaps (total)	1.61 m² (17.33 sq ft)
Vertical tail surfaces (total)	1.78 m² (19.16 sq ft)
Horizontal tail surfaces (total)	3.34 m² (35.95 sq ft)

NEW ENTRY

OTHER AIRCRAFT

Anticipated restart to production of **Lasta 2, G-4 Super Galeb and Gazelle** appears not to have taken place, these aircraft last described in 1994-95 *Jane's*; Super Galeb in *Jane's Aircraft Upgrades*.

UPDATED

LIGHTER THAN AIR

The inclusion of balloons produced primarily for sport or recreational flying has been discontinued. Last full coverage of such types appeared in the 1991-92 edition with a partial update in the 1992-93 *Jane's*

AUSTRALIA

AHA

ADVANCED HYBRID AIRCRAFT LTD

96 Rankins Road, Kensington, Victoria 3031
Telephone 61 (3) 372 1998
Fax 61 (3) 391 9569
MANAGER: Bruce N Blake

Formerly based in Isle of Man, UK (see 1993-94 *Jane's*) Mr Blake relocated to Australia in 1993, where he is continuing to seek venture capital for his buoyant aircraft programme. AHA was based in Adelaide, South Australia, during 1994 An independent, privately funded market survey in the USA indicates that best support is most likely to be gained in that country, and AHA planned to relocate to the USA in 1995, investor funding has not been forthcoming in Australia Survey results were encouraging, and a business plan has been prepared

UPDATED

AHA HORNET LV

TYPE: Recreational hybrid buoyant aircraft (50 per cent buoyant)

PROGRAMME: Design of Hornet LV (leisure variant) initiated October 1991 next stage will be to develop prototype (not for certification) and undertake six-month US demonstration tour, followed by set-up of production lines, initial work planned to concentrate on kits or fully assembled examples of single-seat sports version This would be followed by certificated AW (aerial work) version with two or more seats, to be offered for aerial photography, advertising, police patrol, surveillance and similar missions, as a viable and economic alternative to helicopters; design of the AW version has been established

CUSTOMERS: Hornet LV aimed specifically at US sport flying market, where members of EAA were of much assistance during 1994 market survey, interest also received from Denmark, France, Germany, India, Italy and UK

DESIGN FEATURES: Single-seat gondola/cabin of LV is essentially microlight 'podule' with fixed tricycle landing gear Hornet can be taxied like a microlight, mast-moored by one person (mainly an automated operation), and remain on ground when vacated by pilot Some 67.45 m² (726 sq ft) of advertising area (10.06 × 3.35 m, 33 × 11 ft panel each side) is available on envelope

Hornet range designed to operate at heaviness of about 50 per cent, compared with conventional types with which operation at or near equilibrium is essential Hybrid buoyant aircraft do not require ballast and have flexibility to carry greater or lesser load, thus providing greater productivity

POWER PLANT: Two 18 kW (24 hp) König SC 430 three-cylinder radial engines, mounted on stub-wings that can be tilted upward to vector thrust 30° downward for climb

DIMENSIONS, EXTERNAL:

Envelope: Length overall	15.24 m (50 ft 0 in)
Max diameter	3.81 m (12 ft 6 in)
Height overall (incl gondola)	4.88 m (16 ft 0 in)
Wing span	6.86 m (22 ft 6 in)
Wheel track	2.13 m (7 ft 0 in)
Wheelbase	2.74 m (9 ft 0 in)
Propeller diameter	1.37 m (4 ft 6 in)
Distance between propeller centres	4.95 m (16 ft 3 in)

DIMENSIONS, INTERNAL:

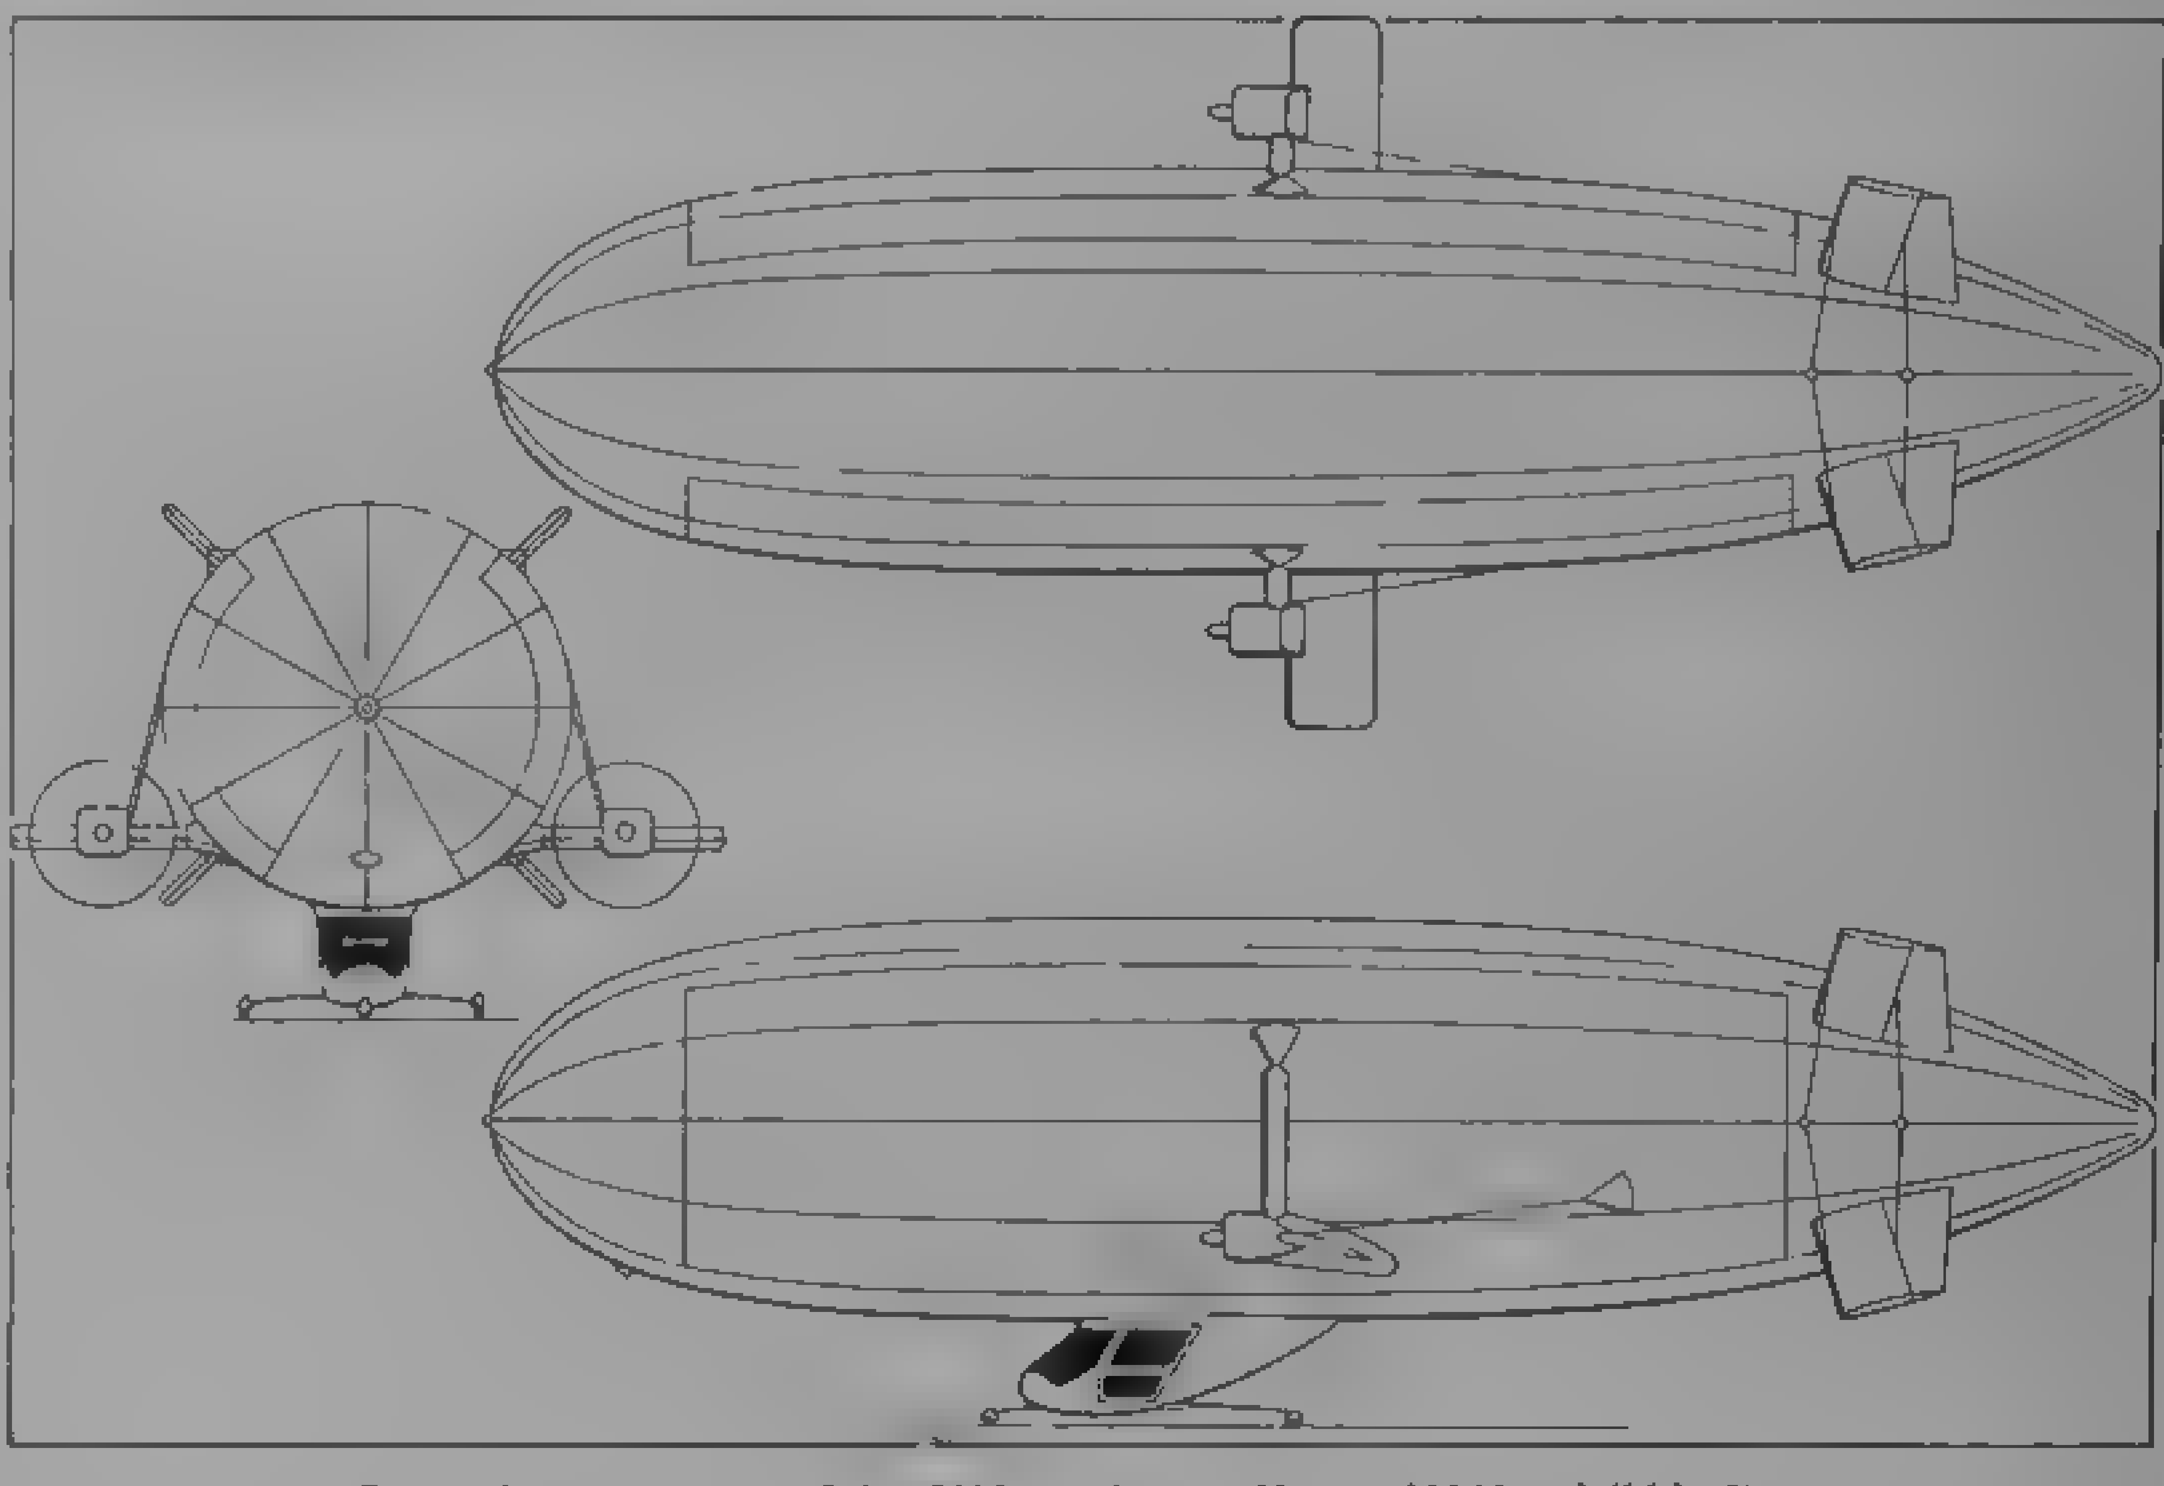
Envelope volume	121.8 m³ (4,300 cu ft)
Ballonet volume (two, total)	12.18 m³ (430 cu ft)

AREAS:

Envelope surface, total	145.86 m² (1,570 sq ft)

Scale model of the AHA Hornet LV

1995



General arrangement of the AHA single-seat Hornet LV *(Jane's/Mike Keep)*

1992

WEIGHTS AND LOADINGS:

Weight empty	152.4 kg (336 lb)
Weight empty at mast (heaviness)	30 kg (66 lb)
Max normal heaviness	122.5 kg (270 lb)
Gross aerostatic lift at 5% ballonet inflation	122.5 kg (270 lb)
Disposable load	92.5 kg (204 lb)
Max T-O weight	250 kg (540 lb)

PERFORMANCE (estimated):

Max level speed	51 kts (95 km/h; 59 mph)
Min flying speed	23 kts (43 km/h; 27 mph)
Max rate of climb at S/L, thrust vectored 30°	610 m (2,000 ft)/min

PRESIDENT AND CEO: Hokan Colting

Company formed 1988 to focus on R&D aimed at improving airship low-speed manoeuvrability, a problem its President identified and has studied since 1978 He moved from Sweden to Canada 1981, has extensive experience in manufacturing and piloting lighter than air craft; has achieved all objectives of his original 1978 research programme.

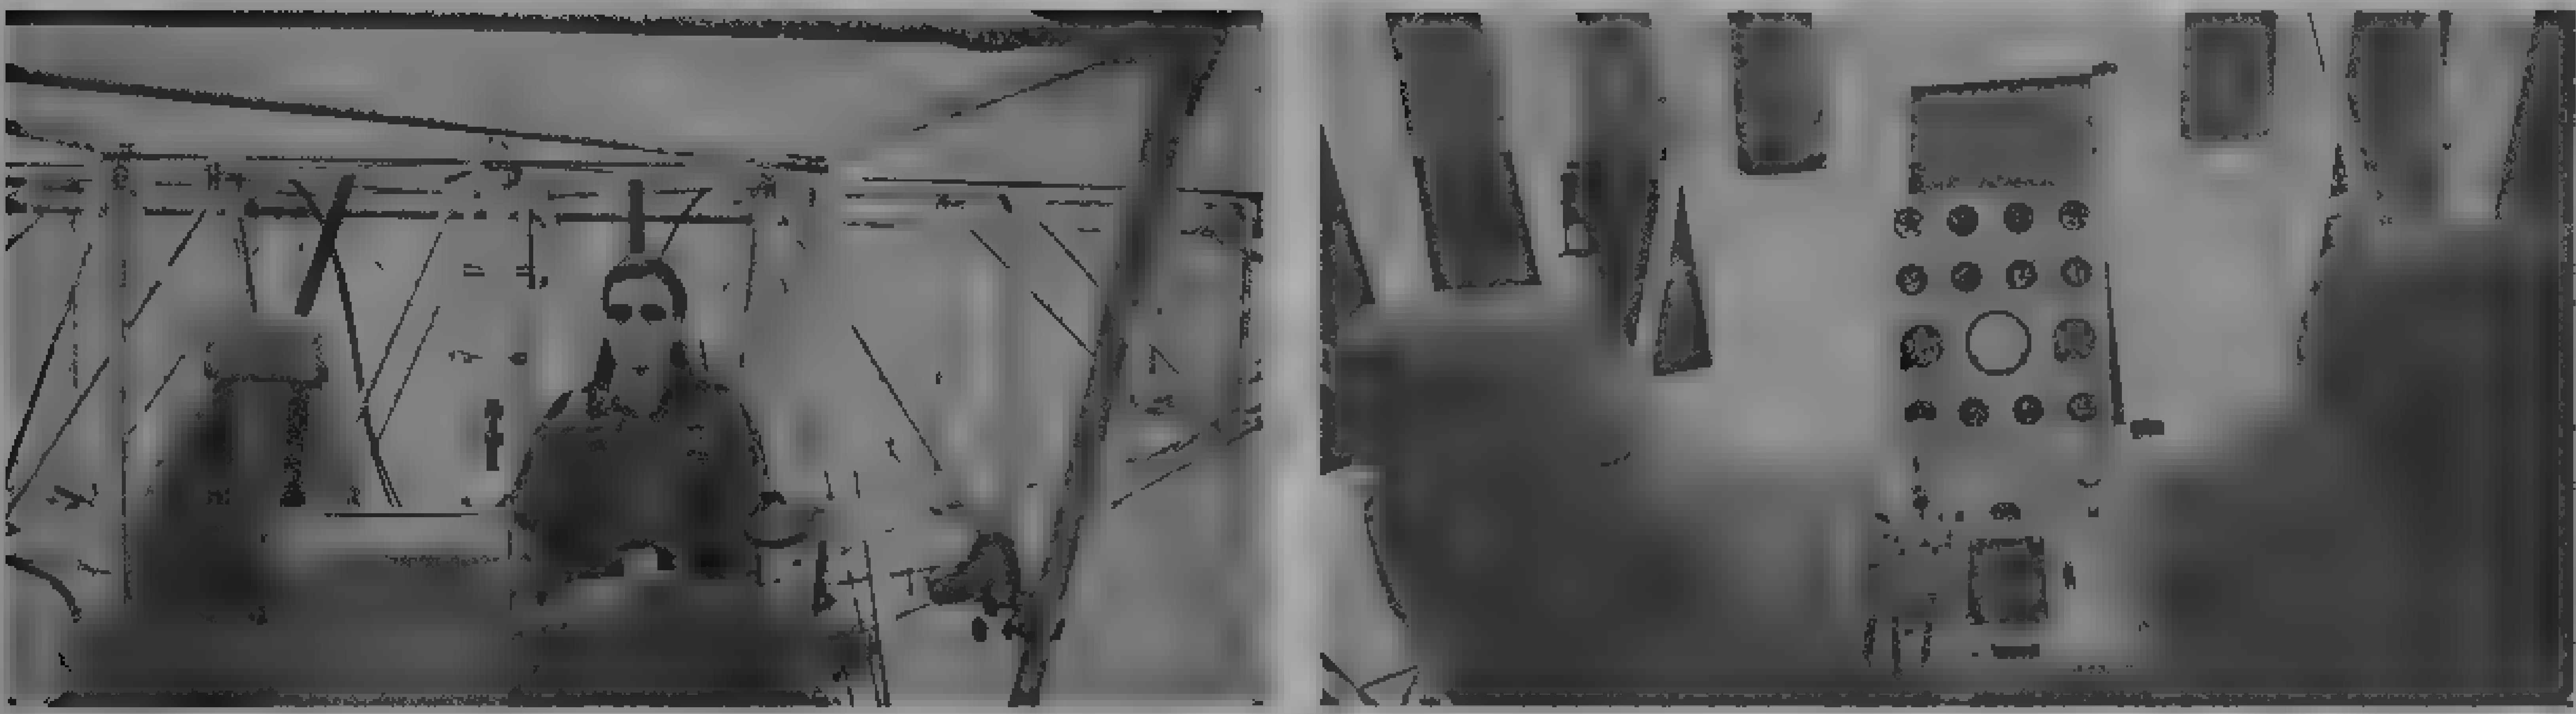
Construction of an 11 seat spherical airship for passenger sightseeing and advertising was under way in January 1995

UPDATED

21ST CENTURY AIRSHIPS PROTOTYPES

TYPE: Non-rigid helium airships; all illustrated in 1994-95 *Jane's*.

CURRENT VERSIONS: **SPAS-1**: First version Spherical finless envelope, 10.67 m (35 ft 0 in) in diameter, powered by two 17.9 kW (24 hp) König engines; maximum speed 16 knots (30 km/h, 18 mph). Steering and altitude controls achieved through variable and deflected thrust No gondola, pilot's seat attached to open platform. Several



These two views illustrate the spacious accommodation, simple control panel and all-round field of view from within the SPAS 13 envelope

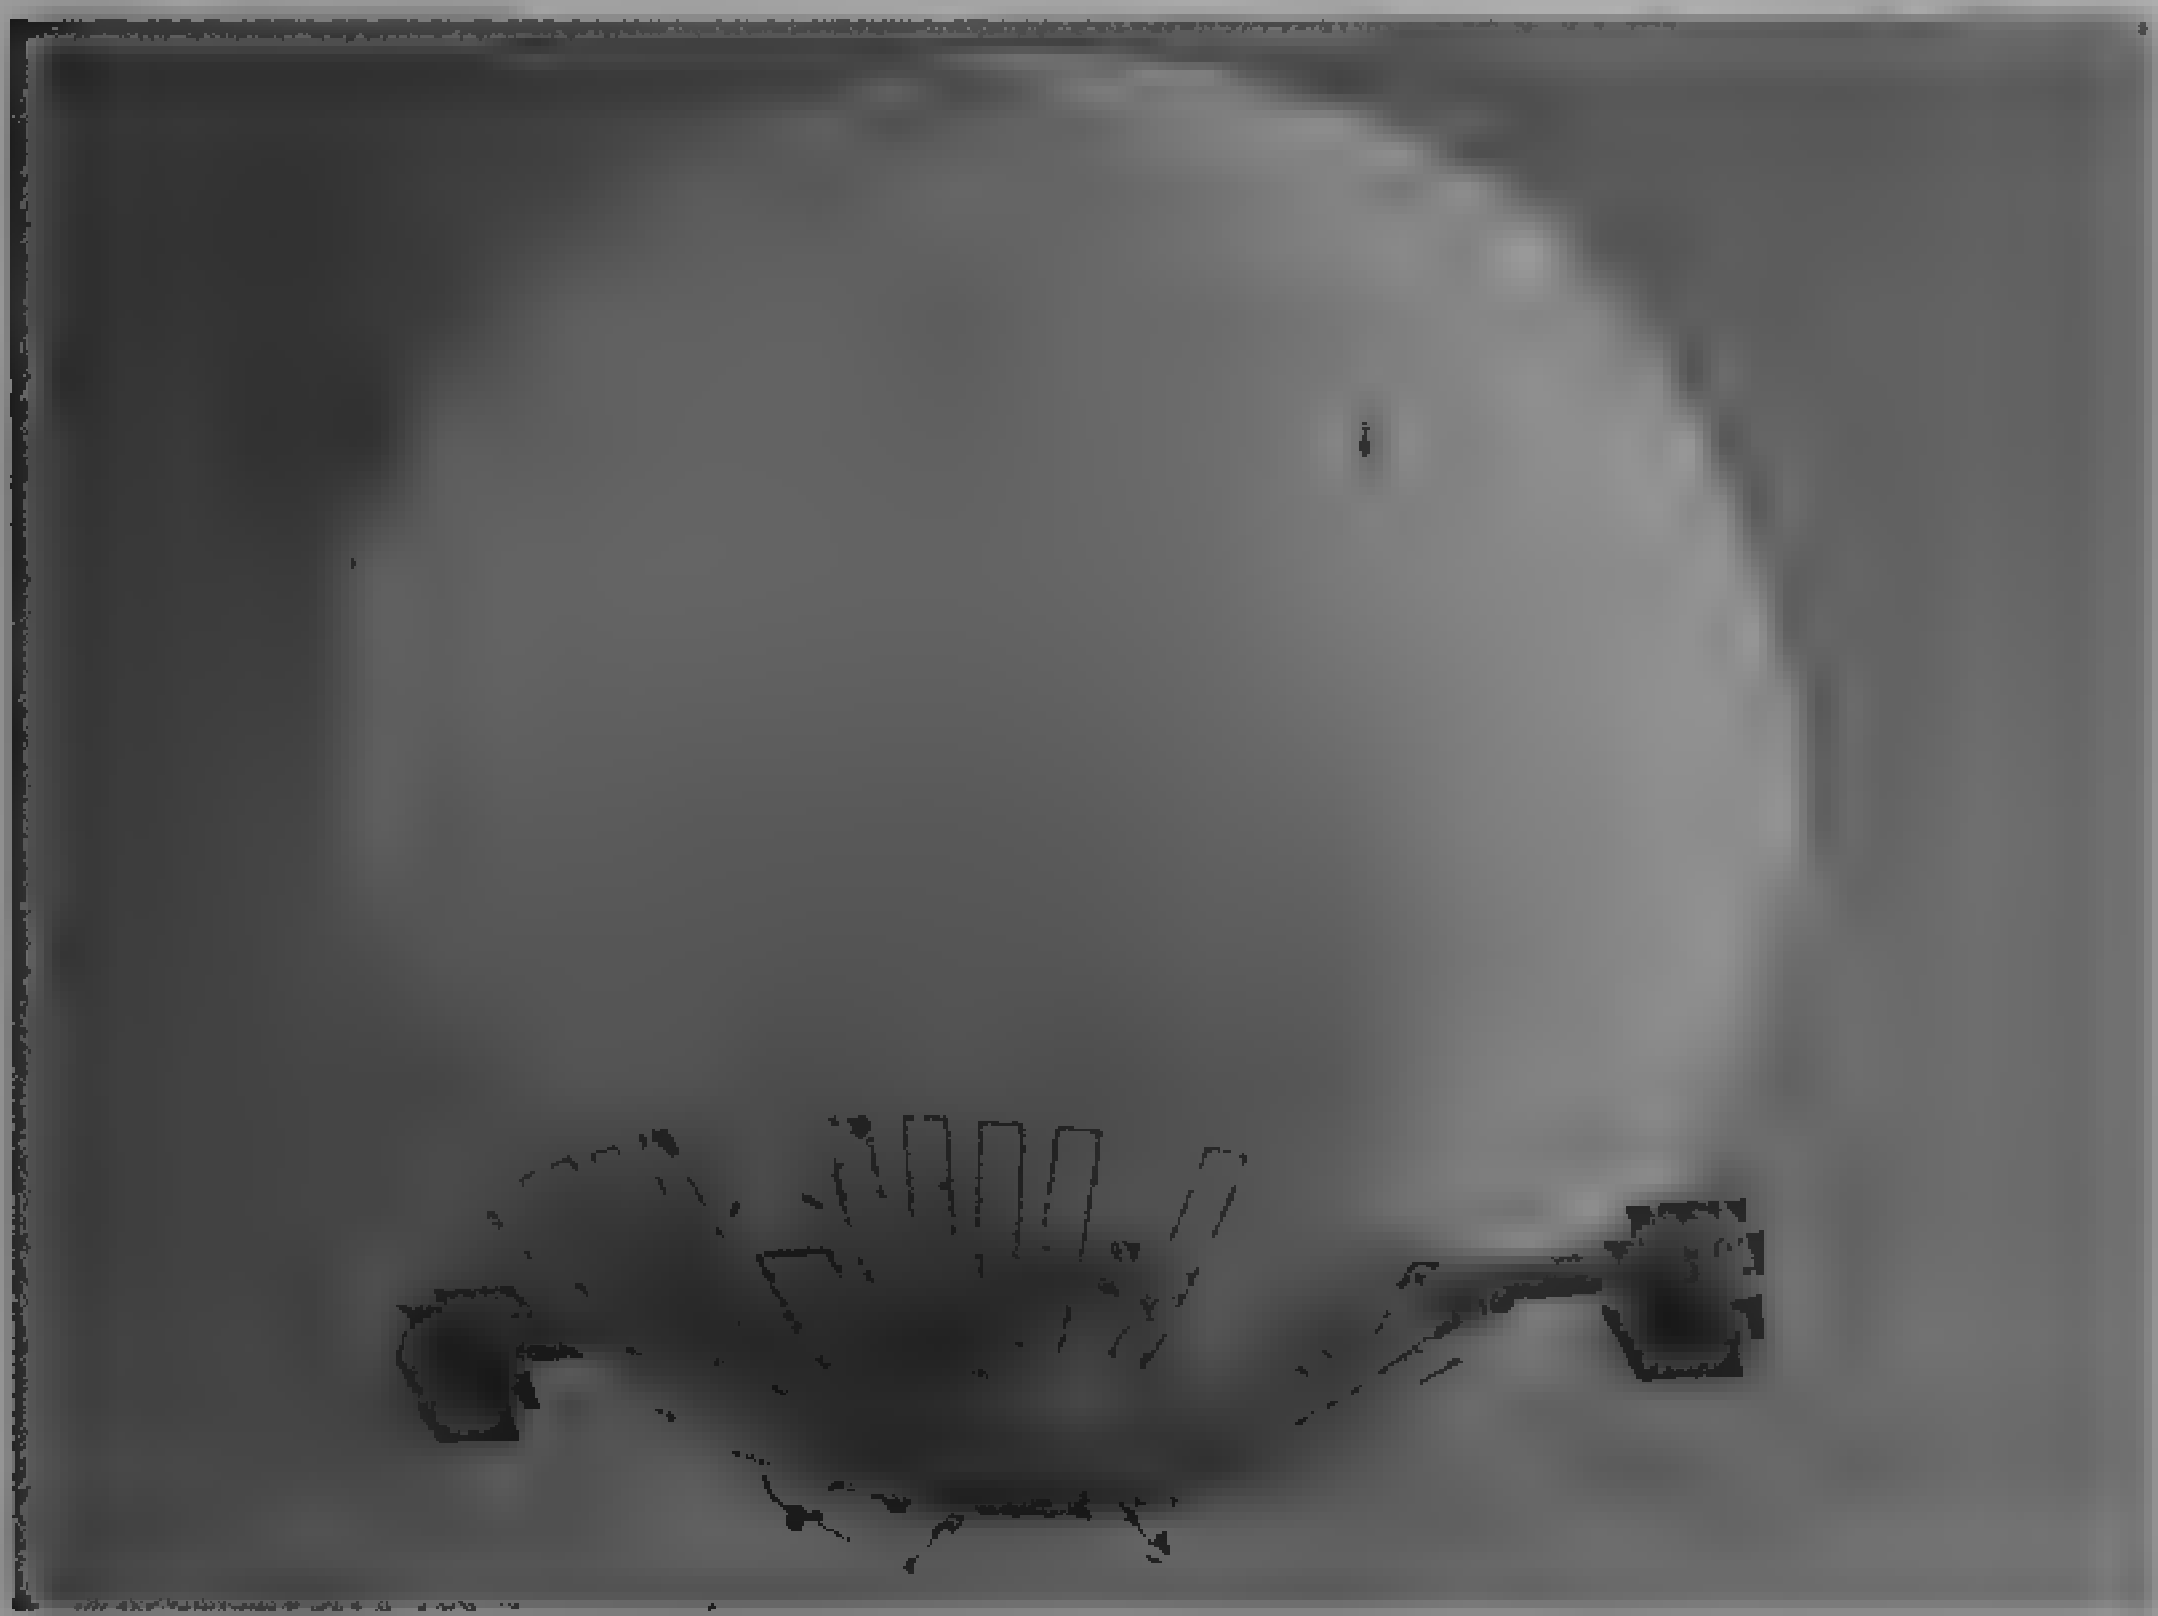
1995

hundred flights made during three month period, Summer 1991.

SPAS-2: Second version. Spherical finless envelope, 10.06 m (33 ft 0 in) in diameter, powered by four 1.86 kW (2.5 hp) Quadra engines, one on each side of envelope and one each side of single-seat gondola. Smiling face with 1.83 m (6 ft) long protruding nose on one side of envelope, teddy bear's face on the other. Planned test programme of 16 flights successfully flown Spring 1992.

SPAS-3: Third version. Same envelope as SPAS-2, but powered by two 3.73 kW (5 hp) Honda engines on envelope and one 17.9 kW (24 hp) König engine on single-seat gondola. Planned test programme of five flights successfully flown Autumn 1992; reached altitude of 2,270 m (7,450 ft) on 8 November 1992 on power of third engine only, establishing nine records in FAI Classes BA2-BA10.

UPDATED



21st Century Airships Inc SPAS 13 demonstrator

1995

21ST CENTURY AIRSHIPS SPAS-13

TYPE: Semi-rigid helium airship.

PROGRAMME: Demonstrator prototype; first flight (C-FRLM) 10 June 1994. Made 112 flights before being deflated on 20 November 1994. Was to be reinflated in May 1995 after series of minor modifications including increased fuel capacity.

DESIGN FEATURES: Spherical envelope, requires only one-man groundcrew.

FLYING CONTROLS: Steering and altitude controlled through varied and deflected thrust technology developed and patented by 21st Century Airships Inc.

LANDING GEAR: Twin-skid helicopter-type gear.

POWER PLANT: Two 37.3 kW (50 hp) Rotax piston engines, mounted on stub-wings.

ACCOMMODATION: Pilot and one passenger, seated inside envelope in spacious cabin enhanced by large tinted windows surrounding base of envelope.

DIMENSIONS, EXTERNAL:

Envelope diameter	13.11 m (43 ft 0 in)

PERFORMANCE (estimated):

Max level speed	28 kts (52 km/h; 32 mph)

UPDATED

21ST CENTURY AIRSHIPS PRODUCTION VERSION

TYPE: Semi-rigid helium airship.

PROGRAMME: Construction and certification under way January 1995.

DESIGN FEATURES: Spherical envelope; pressurised 11-seat gondola built into envelope; for sightseeing tours and advertising. Ground crew of two required.

FLYING CONTROLS: As for demonstrator.

POWER PLANT: Two 104 kW (140 hp) piston engines.

ACCOMMODATION: Pilot and 10 passengers inside envelope, 360° view through wraparound panoramic windows.

DIMENSIONS, EXTERNAL:

Envelope diameter	19.51 m (64 ft 0 in)

PERFORMANCE (estimated):

Max level speed	30 kts (55 km/h; 34 mph)

Pan Atlantic is a principal Canadian operating company overseeing management, systems and engineering integration of lighter than air project development; it is affiliated with Nord-Am Research Corporation, which has been involved in past development of Cargo Airship System. Pan Atlantic also represents and is affiliated with Magnus Aerospace Corporation, co-owner in development of Magnus rotating-sphere airship designed and developed by F. D. Ferguson (see 1989-90 and earlier *Jane's*). Pan Atlantic represents a collective development encompassing more than 15 years dedicated to R&D advancing state of the art in airship technologies, and has expended over $20 million in this area. The companies are private and financed privately by a small group of shareholders.

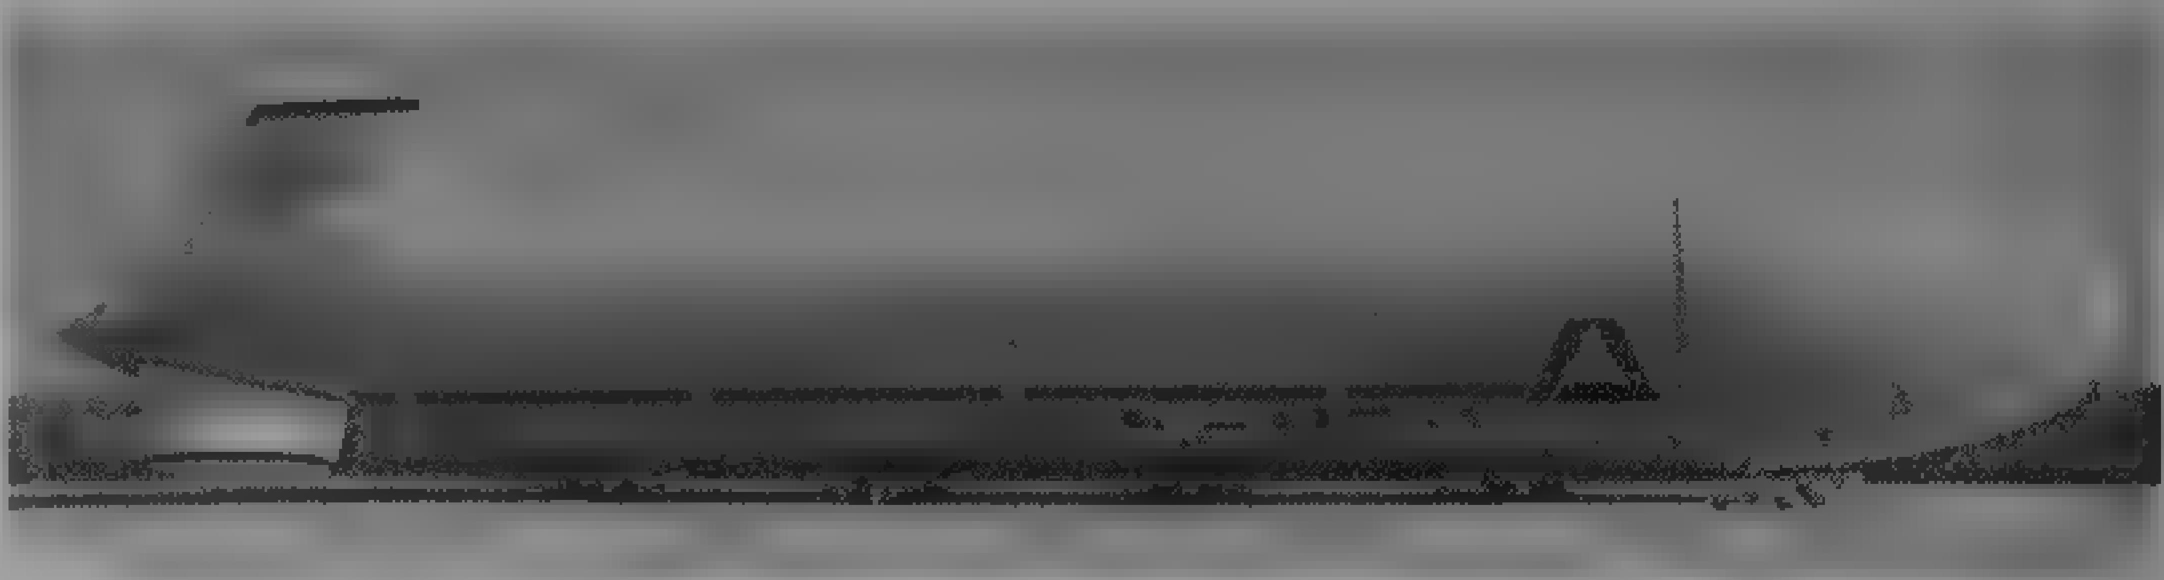
1995



Model of the projected full-scale modular CAS

1994

PAN ATLANTIC CAS 1200 CARGO AIRSHIP SYSTEM

TYPE: Non-rigid, segmented pressure airship.

PROGRAMME: Concept originated by F. D. Ferguson in 1988; 15.24 m (50 ft) proof-of-concept (POC) scaled first prototype test flown as drone, September to December 1990; second prototype, same size, flight tested September to November 1991; now in 18 month, $20 million (approximately) detailed engineering phase leading to preproduction CAS 1200 approximately 183 m (600 ft) long, scheduled to fly by Spring 1997.

COSTS: $10 million for initial development including two prototypes.

DESIGN FEATURES: New patented technology based on six modular segments (middle four for payload) made of high strength, lightweight materials and designed to articulate to overcome gust problems encountered by rigid airships, intended for all weather operation, articulation allowing effective load transfer throughout module envelopes. Long envelope, with high fineness ratio, is able to accommodate ISO containerised loads such as produce, livestock and large department store inventories at rates potentially comparable with road transport. Four tailfins, in X configuration.

FLYING CONTROLS: Ballonet in each segment, ruddervator on each tail surface.

STRUCTURE: Dacron/Tedlar and Kevlar/Spectra laminates under consideration.

POWER PLANT: Four 4,474 kW (6,000 shp) Allison AE 2100 turboprops. See Weights and Loadings for fuel details.

DIMENSIONS, EXTERNAL:

Envelope: Length	457.20 m (1,500 ft)
Max diameter	60.96 m (200 ft)
Fineness ratio	7.5
Drag coefficient (Cd)	0.026
Payload modules, each: Length	60.96 m (200 ft)
Max diameter	60.96 m (200 ft)
Nose and tail modules, each: Length	106.68 m (350 ft)

DIMENSIONS, INTERNAL:

Envelope total volume	1.13 million m³ (39.8 million cu ft)
Ballonet total volume	0.23 million m³ (8.0 million cu ft)
Lifting volume	0.90 million m³ (31.8 million cu ft)

WEIGHTS AND LOADINGS:

Weight empty	190,508 kg (420,000 lb)
Max fuel weight	107,955 kg (238,000 lb)
Net available payload	582,412 kg (1,284,000 lb)
Max T-O weight (gross lift at S/L)	891,762 kg (1,966,000 lb)

PERFORMANCE (estimated):

Max level speed	82 kts (153 km/h; 95 mph)
Cruising speed	66 kts (122 km/h; 76 mph)
Range, 10% reserves	3,476 n miles (6,437 km; 4,000 miles)
Endurance, 10% reserves	52 h 36 min

UPDATED

PAN ATLANTIC LEMS

TYPE: Non-rigid segmented, solar-powered helium airship.

PROGRAMME: Design definition completed (LEMS = Long Endurance Manned Solar).

DESIGN FEATURES: Similar segmented design to Cargo Airship System, but with only three interconnected modules, motive power from onboard solar cells, powering electric motors and charging batteries to store energy for use at night or in poor light conditions. Prototype to be promoted for single-sponsor use, follow on production craft to be marketed as surveillance, environmental research and monitoring, advertising and peacetime military vehicles.

DIMENSIONS, EXTERNAL (approx):

Length overall	42.98 m (141 ft)
Height overall	6.71 m (22 ft)

SHANGHAI AIRCRAFT RESEARCH INSTITUTE

Long Hua Airport Building, 2 Long Hua West Road, PO Box 232-003, Shanghai 200232
Telephone: 86 (21) 4380296
Fax: 86 (21) 4390584
PRESIDENT: Wu Xing Shi
AIRSHIP CHIEF DESIGN ENGINEER: Wu Li Yao

A division of Shanghai Aviation Industrial Group, SARI is an institute for research and design of major civil aircraft, of which most notable was Y-10 jet airliner of the 1970s. It has been engaged in study of development of a major hybrid helium airship since 1989. Development of larger airships is continuing

UPDATED

SARI SHEN ZHOU-1 and -2

TYPE: Remotely controlled non-rigid helium airships.

PROGRAMME: Development study began 1989, Shen Zhou-1 made first flight April 1992, Shen Zhou-2 in May 1993

CURRENT VERSIONS: **Shen Zhou-1**: Initial version. Third engine mounted ahead of gondola and can be swivelled to augment turning and manoeuvring

Shen Zhou-2: Slightly larger envelope; third engine mounted aft of gondola for faster forward speed but without swivel mechanism

CUSTOMERS: Both airships sold during 1994 (customers not named)

DESIGN FEATURES: Conventional envelope shape with cruciform tail surfaces, VTOL capability by vectoring paired ducted propellers

FLYING CONTROLS: Helium provides neutral buoyancy; ducted propellers, one each side of gondola, can be pivoted through 270° for VTOL, climb and descent, elevators assist pitch control, yaw control by rudders on lower fin only of Shen Zhou-1, on both fins of Shen Zhou-2. Internal ballonets

STRUCTURE: Envelope of coloured nylon fabrics; ballonets of three ply nylon film, tail surfaces are frame structures with tough silk covering. Helicopter-type twin-skid landing gear under gondola

POWER PLANT: Three 2.24 kW (3 hp) OS MAX-108 FSR piston engines, two mounted on gondola sides and driving ducted propellers that can be swivelled through 270°. Third engine mounted ahead of gondola on Shen Zhou-1 and able to swivel independently 60° to left and right to assist turning and manoeuvring; on Shen Zhou-2, third engine is mounted aft of gondola and does not swivel

AVIONICS: *Mission:* Video camera with real-time imagery downlink to ground receivers.

DIMENSIONS, EXTERNAL

Envelope: Length overall	
SZ-1	8.70 m (28 ft 6½ in)
SZ-2	9.20 m (30 ft 2¼ in)

Aerazur began building lighter than air craft before Second World War, and in 1960s manufactured world's largest non-rigid kite balloons (up to 15,000 m³, 529,720 cu ft), used for tests in the atmosphere of French nuclear weapons. It manufactures envelopes for Skyship series, and is associated in designing envelopes for Westinghouse Sentinel airships.

GEFA-FLUG

GESELLSCHAFT ZUR ENTWICKLUNG UND FÖRDERUNG AEROSTATISCHER FLUGSYSTEME mbH
Weststrasse 14, D-52074 Aachen
Telephone: 49 (241) 874026/27
Fax: 49 (241) 875206
MANAGING DIRECTOR: Karl Ludwig Busemeyer

GEFA-Flug established 1975 to operate advertising and passenger-carrying hot-air balloons; has R&D department to develop remotely controlled airships for manned and unmanned civil and environmental research applications such as aerial photogrammetry and pollution monitoring. Photogrammetry for archaeological research has been undertaken in Egypt, France, Germany, Greece, Israel, Oman, Pakistan, Syria, Turkey, UK, former Yugoslavia and elsewhere.

Company currently operates more than half a dozen hot-air balloons, four hot air airships and a number of remotely controlled aerostats, and has sold about 100 systems (mostly unmanned and remotely controlled) worldwide. Fleet includes two AS 80 GD hot-air airships (see 1991-92 *Jane's*), a modified version of the Thunder & Colt AS 80 Mk II. Future market seen as survey projects for environmental research. GEFA-Flug also developing manned family of civil hot-air aerostats, and developing scientific measuring equipment in partnership with German Mining Technology, a partly government funded body.

WDL resumed airship construction in 1987 with first of new design known as WDL 1B. In addition to airship activities, WDL operates Fokker F27 transports on passenger/cargo flights within Europe.

UPDATED

WDL 1B seven-passenger non-rigid (two Teledyne Continental IO-360-CD flat six engines)

1990

WDL 1B

TYPE: Passenger carrying non-rigid helium airship.

PROGRAMME: First flight (D-LDFP *Asahi*) 30 August 1988; first delivery (to Mitsui, Japan) mid September 1988.

CUSTOMERS: Four completed; fifth under construction for 1995 delivery.

DESIGN FEATURES: World's second largest certificated non-rigid; improved gondola compared with WDL 1; panel 33 × 8 m (108.3 × 26.2 ft) each side with advertising graphics and computer-controlled coloured 10,000 bulb night sign on *Asahi*.

FLYING CONTROLS: Two ballonets (40 per cent air-filled) and 300 litres (79.25 US gallons; 66 Imp gallons) water ballast; ballonet valves actuated by digital computer which indicates gas temperature and pressure.

POWER PLANT: Two 157 kW (210 hp) Teledyne Continental IO-360-CD flat-six engines, each driving a two-blade propeller. Total fuel capacity (two tanks) 400 litres (105.7 US gallons; 88 Imp gallons)

ACCOMMODATION: Pilot and up to seven passengers in new-design gondola

AVIONICS: Instrumentation improved compared with WDL 1

DIMENSIONS, EXTERNAL:

Envelope: Length overall	59.90 m (196 ft 6¼ in)
Max diameter	16.40 m (53 ft 9¾ in)
Gondola: Length overall	7.60 m (24 ft 11¼ in)
Width: top	2.10 m (6 ft 10¾ in)
bottom	1.30 m (4 ft 3¼ in)
Height: excl landing gear	2.53 m (8 ft 3½ in)
incl landing gear	3.68 m (12 ft 1 in)

DIMENSIONS, INTERNAL:

Envelope volume	7,200 m³ (254,265 cu ft)

WEIGHTS AND LOADINGS:

Envelope weight	2,000 kg (4,409 lb)
Max payload	1,180 kg (2,601 lb)
Weight empty	5,100 kg (11,243 lb)

PERFORMANCE:

Never-exceed speed (VNE)	48 kts (90 km/h; 60 mph)
Max manoeuvring speed	35 kts (65 km/h; 40 mph)
Max endurance	22 h

ZEPPELIN

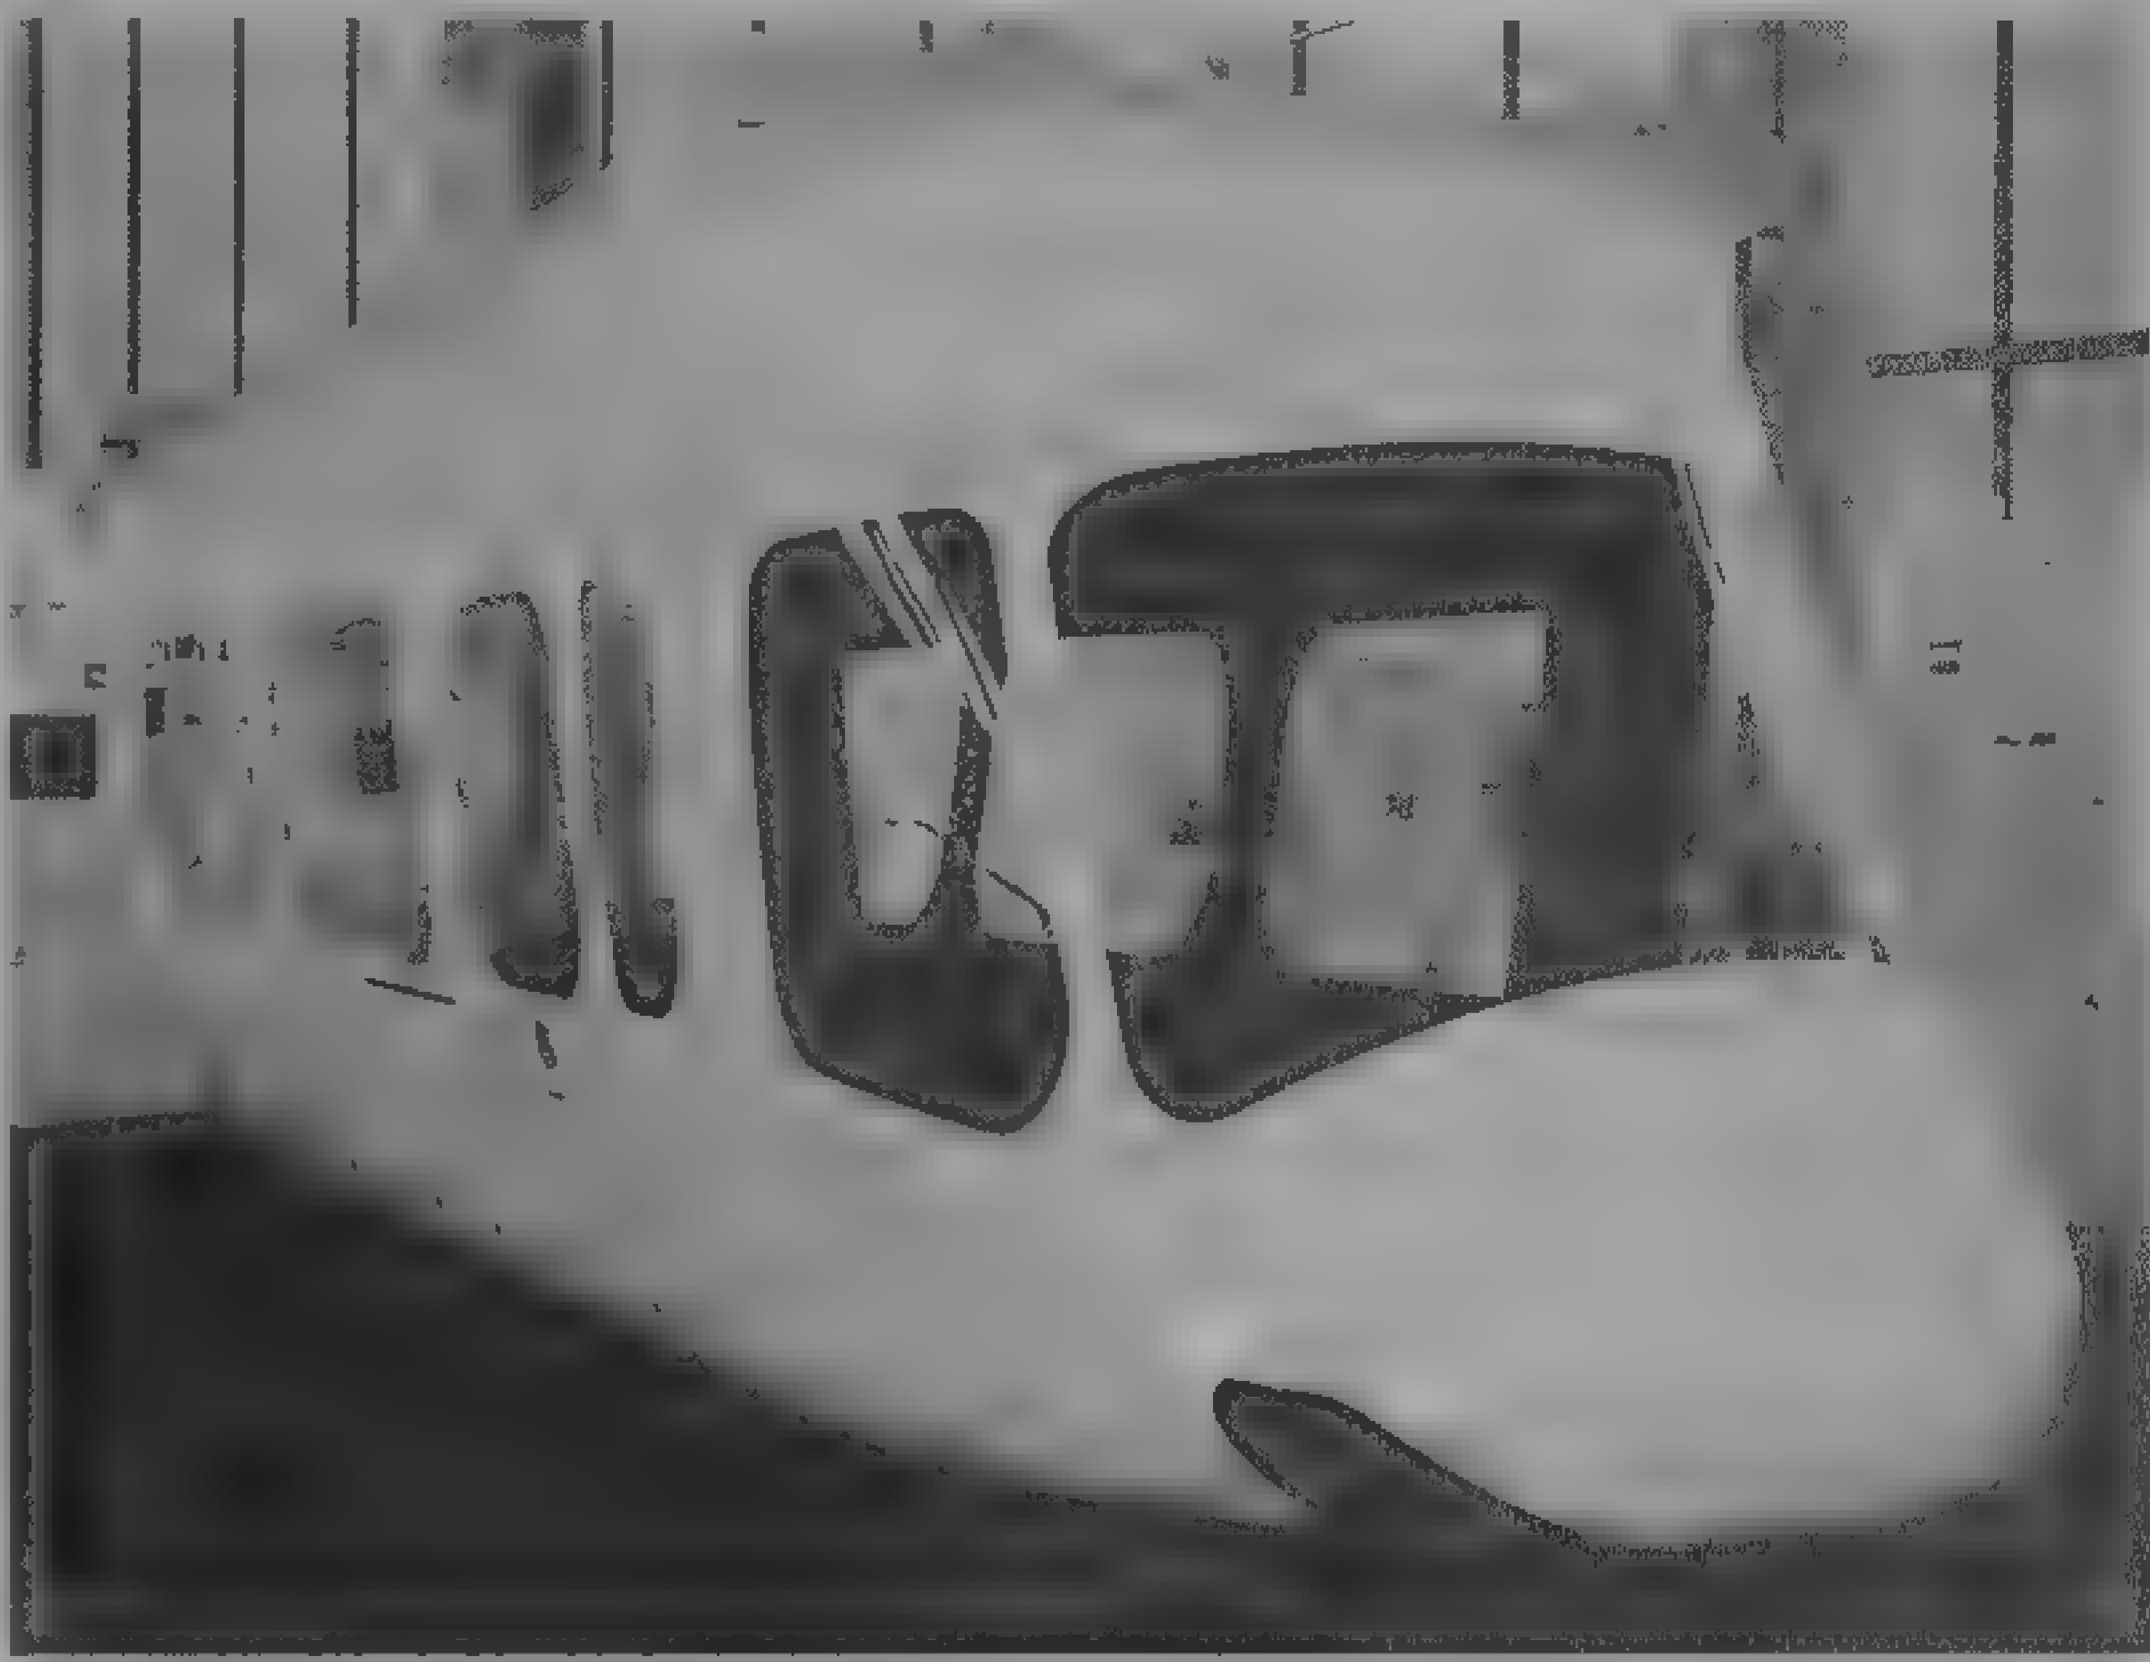
ZEPPELIN LUFTSCHIFFTECHNIK GmbH

Zeppelin Werftgelände, Leutholdstrasse, D-88045 Friedrichshafen
Telephone: 49 (7541) 202515
Fax: 49 (7541) 202516
MANAGING DIRECTOR: Max Mugler
NT PROJECT MANAGER: Klaus Hagenlocher

Zeppelin Luftschifftechnik (ZLT) was formed in 1993 for the development and production of new technology (NT) airships. Luftschiffbau Zeppelin GmbH, of which ZLT is a subsidiary, was founded by Count Ferdinand von Zeppelin in 1908 and still exists under the auspices of the Zeppelin Foundation.

Current NT programme comprises N 07 (under construction), N 17 (under development) and N 30 (planned).

UPDATED



N 07 gondola mockup

1995

ZEPPELIN N 07

TYPE: Semi-rigid helium airship demonstrator.

PROGRAMME: Study group for revival of modern rigid airships formed 1989, concluded that combination of vectored thrust and new constructional approach offers best solution, resulting in NT programme, 10 m (32 ft 10 in) long, remotely controlled proof-of-concept model tested extensively in 1991. Design definition of demonstrator (originally designated N 05, now N 07) completed late 1992, construction scheduled to start October 1995 leading to first flight early 1997, certification and commercial production in 1998. Intended as precursor of product line of commercial airships for variety of applications including scientific research, environmental monitoring, TV missions and tourism.

DESIGN FEATURES: Internal 'prism' primary structure modified and optimised from Stuttgart University proposal of 1975 and British patent of 1924; multiple gas cells increase safety; placement of vectored thrust units near CG and also at rear enhances manoeuvrability and control at low speeds, further improving safety and reducing groundcrew requirements to three persons, thereby also reducing operating costs.

FLYING CONTROLS: Computer-assisted flight control, propulsion and landing. Dual fly-by-wire flight control system; no mechanical back-up. Elevators or rudders on all four tail surfaces. Engine thrust control (see under Power Plant) in pitch and yaw.

STRUCTURE: Internal primary structure consists of three rows of aluminium tubular longerons, interconnected with triangular carbonfibre frames, providing internal prism-shaped structure accounting for only 12 per cent of gross weight; this frame and pressurised envelope are both load-carrying structures to enhance safety factor (airship remains fully manoeuvrable even if internal pressure drops). Envelope is a high-strength, multilayer laminate of Dacron, Mylar and Tedlar with multiple internal helium cells; this material has low gas permeability and allows airship to be moored permanently in the open. Air ballonets in lower part of envelope afford protection to cabin and airframe in the event of a hard landing.

LANDING GEAR: Twin landing/ground handling wheels in tandem under gondola and rear of envelope. Airship can be moored to a fixed or mobile mast.

POWER PLANT: Three 149 kW (200 hp) Textron Lycoming flat-four engines; one each side of hull above gondola in vectored-thrust propulsion unit, driving a three-blade variable-pitch tractor propeller; engine in tailcone drives one pusher and one vectoring propeller via a two-shaft gearbox, thus being able to deliver both lateral thrust and vectored/horizontal thrust for precise pitch and yaw control. Combination of thrust vectoring and fuel trim tanks virtually obviate need for ballast management.

ACCOMMODATION: Crew of two, on ergonomically designed flight deck; gondola main cabin accommodates up to 12 passengers on individual seats, with galley, toilet and wardrobe provision, or equivalent cargo or other payload.

AVIONICS: Said to be comparable to those of a modern twin-engined general aviation aircraft; include weather radar and Stormscope.

DIMENSIONS, EXTERNAL:

Envelope: Length overall	68.40 m (224 ft 5 in)
Max diameter	14.16 m (46 ft 5½ in)

DIMENSIONS, INTERNAL:

Envelope volume	7,200 m³ (254,266 cu ft)

WEIGHTS AND LOADINGS:

Max payload	1,850 kg (4,078 lb)
Max T-O weight	6,950 kg (15,322 lb)

PERFORMANCE (estimated):

Max level speed	76 kts (140 km/h; 87 mph)
Cruising speed	62 kts (115 km/h; 71 mph)
Cruising altitude	1,000 m (3,280 ft)

Fax: 7 (095) 4132630

PRESIDENT: Dr Alexander N. Kirilin

NEW ENTRY

AEROSTATICA-01

TYPE: Small multifunction helium airship.

PROGRAMME: Developed by this private company with assistance from Moscow Aviation Institute (MAI); first flight at Kubinka 12 August 1994, and 20 take-offs and landings made between then and 4 September same year. Partial testing (light winds only) of captive aerostat form also undertaken; flight testing of pilotless version planned for 1995.

DESIGN FEATURES: Designed to fly in one of three modes: as single-seater with 50 to 70 kg (110 to 154 lb) payload, pilotless under automatic remote control and payload of up to 100 kg (220 lb), or as captive aerostat at up to 1,000 m (3,280 ft) altitude with maximum payload of 150 kg (330 lb).

Conventional-shape envelope encircled at rear by eight sweptback tailfins (probably reducing to four for captive version). Single, centrally located ballonet.

FLYING CONTROLS (piloted version): Electromechanical (control column) for rudders and elevators, throttle control, lever control of engine exhaust vector vanes. In the event of engine failure, emergency control exercised by means of pilot controlled gas galve, operation of electric compressor to inflate ballonet, and ballast discharge system. Rudder or elevator on each vertical and horizontal fin, none on intermediate (X configuration) fins.

STRUCTURE: Envelope mainly of Kapron synthetic fibre and polyethylene film, laminated with 12 layers of rubberised adhesive of which three combined with aluminium powder to inhibit gas loss. Reinforced area above gondola (four gores each 4 m; 13.12 ft long) is of Lavsan and film. All envelope and ballonet seams cold-sealed with self-vulcanising adhesive and reinforced with hermetic adhesive tape. Tailfins each have two tubular spars and are braced to envelope by four cables. Gondola based on fuselage of Aviatika MAI 89 microlight, attached to envelope by longitudinal and cross-tubes.

POWER PLANT: Two 20.9 kW (28 hp) RMZ-640 two-cylinder air-cooled piston engines, each driving a four-blade fixed-pitch ducted propeller. Five movable vanes in duct aft of each propeller permit exhaust gases to be vectored between 0 and 90°.

ACCOMMODATION: Single seat, with safety belt, in open-sided gondola; plastics side doors optional.

AVIONICS: *Flight:* Include GPS (NavStar) navigation.

DIMENSIONS, EXTERNAL:

Length overall	22.88 m (75 ft 0½ in)
Fineness ratio	4
Height overall	7.68 m (25 ft 2½ in)
Propeller diameter	0.99 m (3 ft 3 in)

DIMENSIONS, INTERNAL:

Envelope volume	370.0 m³ (13,066.5 cu ft)
Ballonet volume	45.0 m³ (1,589.2 cu ft)

AREAS:

Tailfins (eight, each)	2.25 m² (24.22 sq ft)

WEIGHTS AND LOADINGS:

Max payload	see Design Features

PERFORMANCE:

Max level speed	40-43 kts (75-80 km/h; 46-50 mph)
Pressure ceiling	1,000 m (3,280 ft)

Telephone: 7 (095) 4088909

Fax: 7 (095) 4087511

CHIEF DESIGNER: Petr Petrovich Dementyev

VERIFIED

DKBA DP-800 ECOLOGIYA

TYPE: Multipurpose semi-rigid helium airship.

PROGRAMME: First revealed in form of model (then known as **DS-3**) at 1989 Paris Air Show; was originally planned to make first flight in 1993, but delayed due to lack of funding; most development work now completed; possible first flight during 1995.

DESIGN FEATURES: Helium-filled semi-rigid, with cruciform tail surfaces. Can perform launches and landings from 700 m (2,300 ft) diameter grass or hard-surface area.

FLYING CONTROLS: Mechanical control of elevators and rudders by rods and cables; no rudder pedals. Electrical control of tail surfaces available as customer option. Three-section ballast compartment in lower portion of gondola.

STRUCTURE: Internally rigged envelope of two-ply diagonally laminated, rubberised Kapron-based aluminium-coated fabric (estimated life 10,000 hours over five year period). Metal framed, fabric-covered tail surfaces. All metal semi-monocoque gondola (frames and stringers), suspended from envelope by load bearing belt and 28 steel cables.

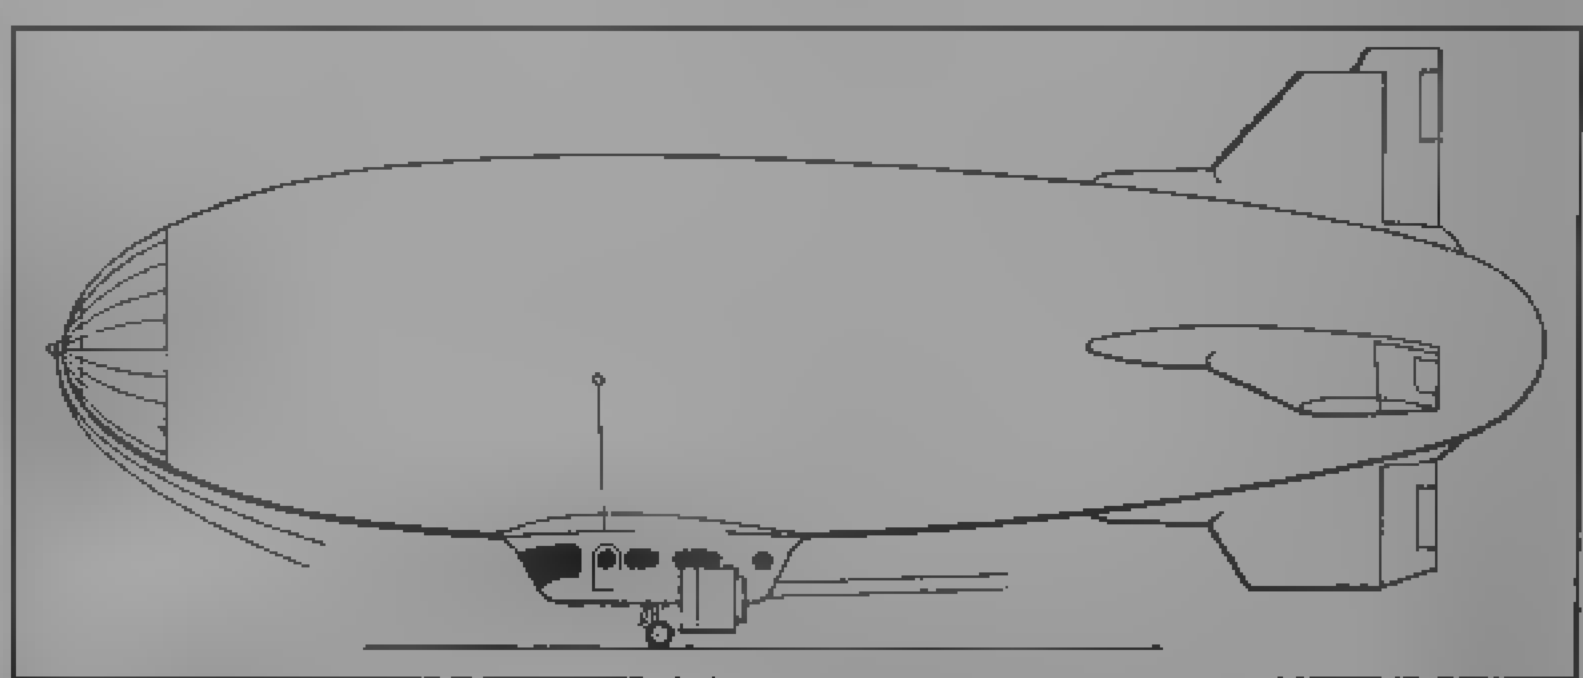
LANDING GEAR: Single-strut, twin-wheel unit, derived from that of Mi-24 helicopter. Groundcrew requirement is three to five persons.

POWER PLANT: Two 242 kW (325 hp) VOKBM M-14V-26 nine-cylinder air-cooled radial engines (nominal power 205 kW; 275 hp each), driving AV-83 four-blade, variable- and reversible-pitch ducted propellers, one each side of gondola, via a modified reduction gearbox. Propeller thrust can be vectored 120° upward and 120° downward.

ACCOMMODATION: Gondola accommodates crew of two and up to 12 passengers or equivalent cargo; bulky loads of up to 2,000 kg (4,409 lb) can be carried on external sling.

DIMENSIONS, EXTERNAL:

Envelope: Length overall	62.00 m (203 ft 5 in)
Max diameter	15.75 m (51 ft 8 in)
Lift/drag ratio	3.95
Height overall, incl landing gear	22.00 m (72 ft 2¼ in)
Gondola: Length	10.00 m (32 ft 9¾ in)
Max width	3.00 m (9 ft 10 in)
Max height	2.40 m (7 ft 10½ in)
Propeller diameter	1.50 m (4 ft 11 in)



Preliminary drawing (*Jane's/Mike Keep*) and model photo (*Paul Jackson*) of the DKBA DP-800 passenger/cargo airship

1989/1995

DIMENSIONS, INTERNAL:
Envelope volume 8,039 m³ (283,895 cu ft)
WEIGHTS AND LOADINGS
Weight empty 5,150 kg (11,354 lb)
Max fuel weight 1,000 kg (2,205 lb)
Max useful load (incl fuel and ballast) 3 000 kg (6,614 lb)
Max T-O weight 8,400 kg (18,518 lb)
PERFORMANCE (estimated):
Max level speed 59 kts (110 km/h, 68 mph)
Max cruising speed 43 kts (80 km/h; 50 mph)
Max rate of climb at S/L 600 m (1,968 ft)/min
Max operating altitude 2,700 m (8,860 ft)
Range at cruising speed of 38 kts (70 km/h, 43 mph) 723 n miles (1,340 km, 832 miles)
Endurance at cruising speed of 38 kts (70 km/h, 43 mph) 44 h 42 min

UPDATED

DKBA DP-6000 VITYAZ (KNIGHT)

TYPE: Projected development of DP 800.
PROGRAMME: Development started 1993 and continuing.
DESIGN FEATURES: Objective is 20 tonne payload capability in two-deck gondola.
FLYING CONTROLS: Electric remote control of elevators and rudder.
POWER PLANT: Two vectored thrust ducted propeller units each driven by two 596 kW (800 hp) diesel engines and two cruise propeller units each driven by a 1,864 kW (2,500 shp) turboshaft; or two vectored-thrust ducted propeller units each driven by two 746 kW (1 000 hp) diesel engines and one cruise propeller unit driven by 2,500 shp turboshaft.
ACCOMMODATION: Double-deck gondola utilised as load-bearing structure housing power plant accessories, flight equipment, flight deck, main cabin (144 passenger or military transport seats, 20 tonnes of cargo, or typically a mix of 84 passengers plus cargo), fuel tanks, ballast compartment, crew utility and rest quarters, refreshment and toilet facilities.
Hull volume sufficient to accommodate large phased-array radars, intelligence-gathering and processing facilities or other mission equipment.
DIMENSIONS, EXTERNAL:
Envelope: Length overall 125 46 m (411 ft 7½ in)
Gondola: Length 32.50 m (106 ft 7½ in)
Height (incl landing gear) 6 10 m (20 ft 0¼ in)
DIMENSIONS, INTERNAL:
Envelope volume 60,000 m³ (2,118 882 cu ft)
WEIGHTS AND LOADINGS:
Max payload 20,000 kg (44,092 lb)
PERFORMANCE (estimated):
Typical cruising speed 54 kts (100 km/h, 62 mph)
Cruising altitude:
with 12,000 kg (26,455 lb) payload 3,000 m (9,840 ft)
with 20,000 kg (44,092 lb) payload 1,000 m (3,280 ft)
Range at 1,000 m (3,280 ft) with 20 t payload 1 890 n miles (3,500 km, 2,175 miles)

THERMOPLANE

THERMOPLANE DESIGN BUREAU, MOSCOW AVIATION INSTITUTE

4 Volokolamskoe Highway, 125871 Moscow
Telephone: 7 (095) 1584127
Fax: 7 (095) 1582977
DIRECTOR OF MAI: Academician Yuri A. Ryzhov
CHIEF DIRECTOR, THERMOPLANE DESIGN BUREAU: Yuri G. Ishkov
COMMERCIAL DIRECTOR: Dr Leon Ponyaev

Thermoplane Design Bureau formed at MAI in 1980 to study requirement for large, unballasted airship, ecologically friendly, able to transport heavy or bulky cargoes in Siberian winter conditions, yet needing minimal ground support bases, hangars, mooring masts and personnel.

VERIFIED

THERMOPLANE ALA-40

TYPE: Proof-of-concept demonstrator for unique 'two-gas' airship.
PROGRAMME: Began 1985, originally funded by former Soviet government and first reported 1989, when preliminary design work completed; objective to develop ecologically clean heavy-lift airships to transport bulky cargo (for example for construction, logging or mining industries) in remote areas; three prototypes being built, with funding in 1992 provided by joint venture complex of Russian timber, oil and other industries; buoyancy, static and dynamic ground testing of first prototype 1992 at Aviastar factory in Ulyanovsk; first flight (tethered) 1993, free flights not considered necessary; 02 due for roll-out 1995.
DESIGN FEATURES: Disc-shaped envelope with elliptical cross-section and unique two-gas lift system; disc configuration claimed to offer smaller size, lower weight, greater strength, and more even distribution of stress loads, than conventional cigar shape; Mi-2 helicopter fuselage adapted as gondola.
FLYING CONTROLS: Centre portion of envelope is occupied by spheres filled with non-combustible mixture of helium and oxygen; hot air bled from main propulsion engines ducted into disc to augment basic lift provided by spheres; smaller engines fore and aft generate additional lift and control in conjunction with horizontal and vertical control surfaces.
STRUCTURE: Composites structure and skin (thermoplastics skin, based on Terlon, and carbonfibre tapes).
POWER PLANT: Two 112 kW (150 hp) piston engines for primary propulsion, propellers mounted on extension shafts from envelope/gondola junction; small diesel engines on centreline (one forward, one aft) to supplement main lift and control systems.
ACCOMMODATION: Modified Mi-2 helicopter fuselage serves as gondola for test crew and equipment.
DIMENSIONS, EXTERNAL:
Envelope: Diameter 40 00 m (131 ft 3 in)
Max depth 16 00 m (52 ft 6 in)
Height, overall 19 514 m (64 ft 0¼ in)
to envelope c/l 11 514 m (37 ft 9¼ in)
to base of tail unit 7 662 m (25 ft 1¾ in)
to base of envelope 3 00 m (9 ft 10 in)
DIMENSIONS, INTERNAL:
Envelope volume:
helium/oxygen 5,800 m³ (204,825 cu ft)
hot air 4,860 m³ (171,629 cu ft)
total 10,660 m³ (376,455 cu ft)
WEIGHTS AND LOADINGS:
Weight empty 6,150 kg (13,558 lb)
Fuel weight 200 kg (441 lb)
Max payload 2,150 kg (4,740 lb)
Max T-O weight 8,500 kg (18,739 lb)
PERFORMANCE (estimated):
Max level speed 59 kts (110 km/h, 68 mph)
Cruising speed 43 kts (80 km/h; 50 mph)
Pressure ceiling 2,000 m (6,560 ft)

1993

THERMOPLANE ALA-600

TYPE: Projected 600 tonne Thermoplane.
PROGRAMME: First flight planned for late 1995, service entry by 2000.
ACCOMMODATION: Crew of four per shift (16 total), plus 150 passengers or equivalent cargo.
DIMENSIONS, EXTERNAL:
Length overall 210 0 m (688 ft 11¾ in)
Envelope: Diameter 198.0 m (649 ft 7½ in)
Max depth 82.0 m (269 ft 2½ in)
Cargo platform: Diameter 30 0 m (98 ft 5 in)
Height 6 0 m (19 ft 8¼ in)
WEIGHTS AND LOADINGS:
Fuel weight 190.000 kg (418,878 lb)

Max payload	600,000 kg (1,322,772 lb)
Max T-O weigh	1,200,000 kg (2,645,544 lb)

PERFORMANCE (estimated):

Max level speed	97-108 kts (180-200 km/h; 112-124 mph)
Cruising speed	38 kts (70 km/h; 43 mph)
Pressure ceiling	7,000 m (22,965 ft)
Range	2,700 n miles (5,000 km; 3,107 miles)

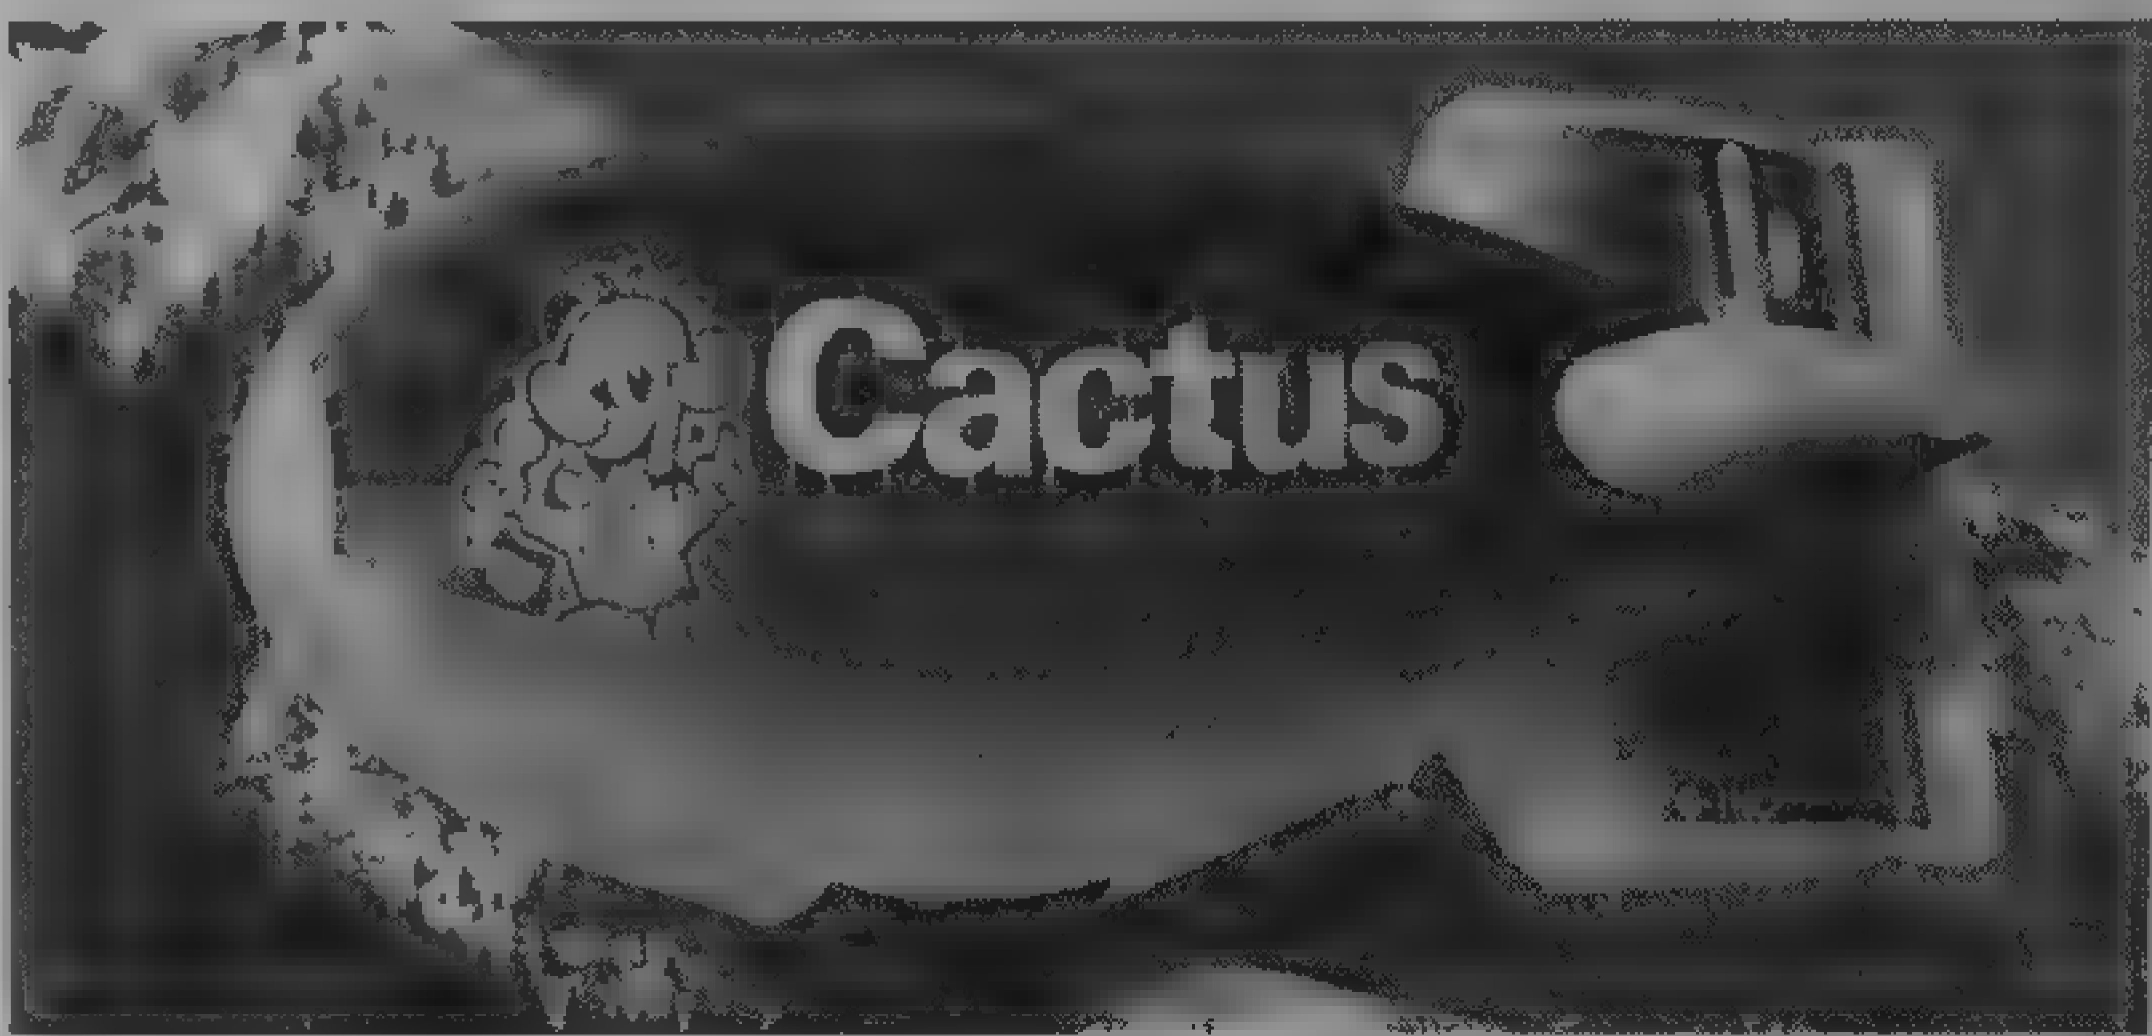
SALES DIRECTOR: Philip Dunnington

Cameron Balloons, formed in 1970, holds CAA, FAA, French CNT and German Musterzulassungsschein type certificates for its balloons. It is now world's largest manufacturer of special-shape and conventional hot-air balloons, and by 1 January 1995 had produced nearly 3,800 from main factory in Bristol and smaller unit at Harrogate. A sister company in Dexter, Michigan, USA, had then produced more than 800.

Details of Cameron's conventional-shape balloon range last appeared in the 1992-93 *Jane's*. The company acquired the balloon assets of the former Thunder & Colt Ltd in late 1994.

Cameron also designs and produces hot-air airships, being first company to develop a craft of this type. Production hot-air airships now include pressurised DP series. Helium-filled airships have included DG-14 and DG-19 single-seaters and DG-25 two-seater.

UPDATED



Cameron DP 80 hot-air airship for Luxembourg *1995*

CAMERON DP SERIES

TYPE: Pressurised hot-air airships; figures in designations indicate volume in thousands of cubic feet.

PROGRAMME: DP prototype (G-BMEZ) made first flight April 1986, DP series first/second/third in World Hot-Air Airship Championships 1990; DP 70 first in British and European Championships 1991, DP 80 holds current world endurance record and in 1994 received CAA approval for night flying.

CURRENT VERSIONS: **DP 60:** Single/two-place.

DP 70: As DP 60, but larger envelope, two-seater.

DP 80: Two-seater, with better performance in hot/high conditions.

DP 90: Larger envelope version of DP 80.

CUSTOMERS: By 1 January 1995 Cameron had completed, in addition to DP 50 prototype, 29 DP series airships, customer countries comprise Australia, Belgium, Brazil, Chile, Czech Republic, Germany, Hungary, Luxembourg, Switzerland, UK, USA and Venezuela.

DESIGN FEATURES: Differ from earlier hot-air airships in utilising single engine for both propulsion and pressure control. Cameron self regulating pressure control system; can be flown unpressurised in event of engine failure and landed like hot air balloon. Twin silencers minimise engine noise level; ergonomically designed cockpit.

STRUCTURE: All-aluminium gondola. Envelope incorporates twin pressure relief valves and Hyperlast fabric top.

POWER PLANT: One 21 kW (28 hp) König SD 570 four-cylinder two-stroke engine standard for DP 60/70, optional for DP 80/90, driving a three-blade König shrouded pusher propeller. Standard engine for DP 80/90 is 47 kW (63 hp) Rotax 582 UL. Fuel capacity 22.7 litres (6 US gallons; 5 Imp gallons) of 40:1 two-stroke mixture for König engine; Rotax runs on unleaded automotive fuel.

ACCOMMODATION: Gondola seats one or two persons with full-harness seat belts. Full-height polycarbonate windscreen.

EQUIPMENT: Manometer, rev counter, fuel contents gauge, voltmeter, variometer, altimeter and thermistor. 12 V 30 Ah battery standard. Propane fuel in two Worthington, Cameron 599 or Cameron 426 tanks, according to model, with respective capacities of 77.3, 86.4 or 109 litres (20.4, 22.8 or 28.8 US gallons; 17, 19 or 24 Imp gallons) per tank. Manual piezoelectric or electronic ignition.

DIMENSIONS, EXTERNAL:

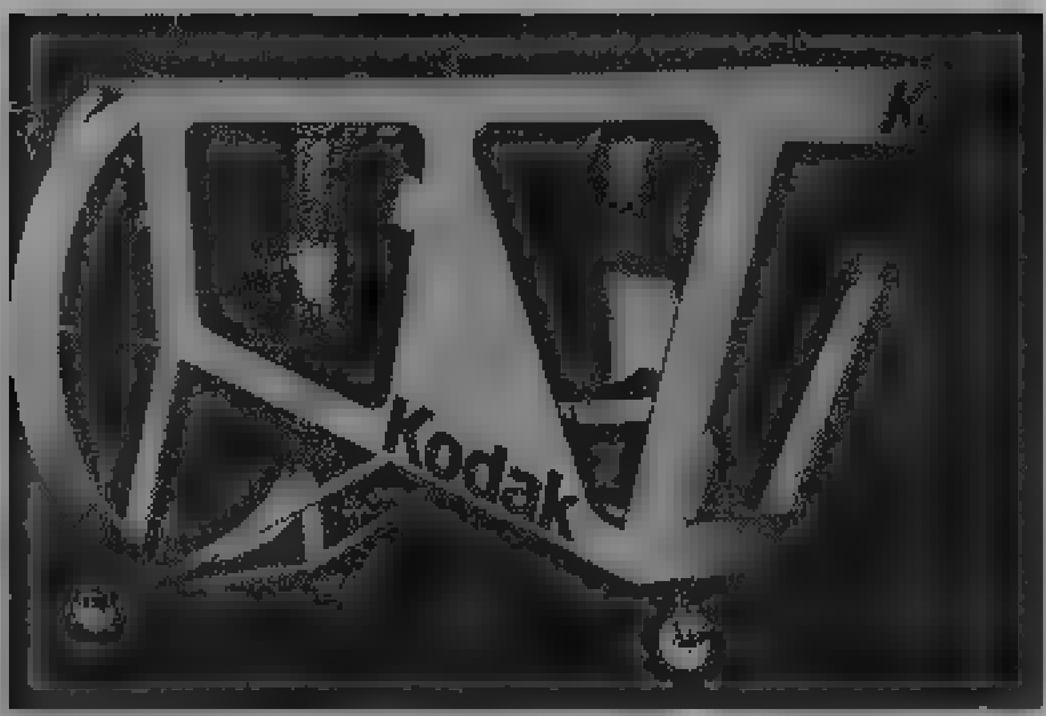
Envelope: Length overall: DP 60	30.48 m (100 ft 0 in)
DP 70	32.31 m (106 ft 0 in)
DP 80	33.83 m (111 ft 0 in)
DP 90	35.05 m (115 ft 0 in)
Height: DP 60	13.72 m (45 ft 0 in)
DP 70	14.63 m (48 ft 0 in)
DP 80	15.24 m (50 ft 0 in)
DP 90	15.54 m (51 ft 0 in)
Max width: DP 60	11.28 m (37 ft 0 in)
DP 70	11.89 m (39 ft 0 in)
DP 80	12.19 m (40 ft 0 in)
DP 90	12.80 m (42 ft 0 in)
Max display area per side: DP 60	86.96 m² (936 sq ft)
DP 70	95.97 m² (1,033 sq ft)
DP 80	91.97 m² (990 sq ft)
DP 90	99.03 m² (1,066 sq ft)

DIMENSIONS, INTERNAL:

Envelope volume: DP 60	1,699.0 m³ (60,000 cu ft)
DP 70	1,982.2 m³ (70,000 cu ft)
DP 80	2,265.3 m³ (80,000 cu ft)
DP 90	2,548.5 m³ (90,000 cu ft)

WEIGHTS AND LOADINGS:

Gondola (all models)	195 kg (430 lb)



Gondola of the Cameron DP series
1989

Envelope: DP 60	146 kg (322 lb)
Useful passenger load (S/L, 15°C)	
DP 60	149 kg (328 lb)
DP 70	222 kg (489 lb)
DP 80	285 kg (628 lb)
DP 90	359 kg (791 lb)
Max T-O weight: DP 60: one person	469 kg (1,034 lb)
two persons	546 kg (1,204 lb)
DP 70: one person	485 kg (1,069 lb)
two persons	562 kg (1,239 lb)
PERFORMANCE:	
Max level speed: DP 60	15 kts (28 km/h, 17 mph)

UPDATED

CAMERON AS 80 Mk II and AS 105 Mk II

TYPE: Hot-air airship.

PROGRAMME: AS 80 Mk II developed and certificated by Thunder & Colt 1988.

CURRENT VERSIONS: **AS 80 Mk II**: *Description applies to this version except where indicated.*

AS 105 Mk II: As AS 80 except for larger envelope.

CUSTOMERS: Total of 18 AS 80 Mk II and AS 105 Mk II built by Thunder & Colt by 1 January 1994, including two **AS 80 GD** for GEFA Flug of Germany (which see).

DESIGN FEATURES: Envelope fineness ratio 2.5; cruciform tail surfaces with rudder on each vertical fin; twin catenary load suspension system distributes loads of gondola weight and power plant forces evenly into envelope.

FLYING CONTROLS: Burners located inside envelope and operated electrically, with manual override; pilot lights fitted with electric spark and piezoelectric ignition, specially modified to operate directly underneath inflation fan without blowing out; steering by rudder on each vertical fin, operated by cables connecting them to gondola.

STRUCTURE: Envelope made from HTN90K high-tenacity and high-temperature-resistant fabric; engine drives generator supplying electric fan used to pressurise envelope, additional air for envelope pressurisation via scoop located in propeller slipstream. Gondola is stainless steel tube spaceframe with aluminium skin panels; windscreen, of polycarbonate sheet, forms partially enclosed cockpit.

LANDING GEAR: Non-retractable tricycle type.

POWER PLANT: One 38.8 kW (52 hp) Rotax 462 two-cylinder water-cooled engine, driving a two-blade pusher propeller.

ACCOMMODATION: Pilot and one passenger in tandem; second seat can be replaced by auxiliary fuel tank.

AVIONICS: *Comms:* 720-channel VHF transceiver and pilot/passenger intercom optional.

Instrumentation: Altimeter, variometer, envelope temperature and pressure gauges, propane volume gauge, petrol level gauge, voltmeter, engine water temperature and engine rpm gauge.

Cameron AS 80 Mk II single/two-person hot-air airship
1993

Cameron R-77 transatlantic Rozière balloon
1992

Envelope: Length overall: 80	31.00 m (101 ft 8½ in)
105	34.00 m (111 ft 6½ in)
Max diameter: 80	12.40 m (40 ft 8¼ in)
105	13.87 m (45 ft 6 in)
Gondola: Length overall: 80, 105	3.84 m (12 ft 7¼ in)
Max width: 80, 105	1.75 m (5 ft 9 in)
Height overall: 80, 105	1.80 m (5 ft 11 in)
Propeller diameter: 80, 105	1.57 m (5 ft 2 in)
DIMENSIONS, INTERNAL:	
Envelope volume: 80	2,123.8 m³ (75,000 cu ft)
105	2,973.3 m³ (105,000 cu ft)
WEIGHTS AND LOADINGS:	
Envelope: 80	190 kg (419 lb)
105	213 kg (469 lb)
Gondola, empty: 80, 105	210 kg (463 lb)
Propane fuel: 80, 105	60-110 kg (132-242 lb)
Gross lift: 80	600 kg (1,323 lb)
PERFORMANCE:	
Max level speed: 80, 105	20 kts (37 km/h, 23 mph)
Max endurance: 80, 105	2 h 30 min

UPDATED

CAMERON DG-14

TYPE: Non-rigid helium airship.

PROGRAMME: First flight (G-BRDU) October 1989; trials completed 1990; certificated to BCAR 31, 20 February 1991; made 54 n mile (100 km, 62 mile) flight in 1993, piloted by Don Cameron. No further examples yet built. Details in 1994-95 and earlier editions.

UPDATED

CAMERON ROZIERE BALLOONS

Rozières are combination helium/hot-air balloons in which small propane burner maintains helium efficiency at night when solar heating is absent, providing greatly extended flight duration without expending helium or sand ballast. Cameron manufactures seven types: the R-15, R-42, R-60, R-77, R-150, R-225 and R-700. An R-60 (illustrated in 1991-92 *Jane's*) made first UK to USSR balloon flight in October 1990. Another R-60 completed east-west Atlantic crossing (Canary Islands to Venezuela) in February 1992; three Rozières successfully completed 1992 transatlantic race (crews of two others rescued safely), several more under construction for other long-distance flights, including Autumn 1995 transatlantic race and one for an attempt to make first round-the-world flight.

UPDATED

LINDSTRAND

LINDSTRAND BALLOONS LTD

Maesbury Road, Oswestry, Shropshire SY10 8ZZ
Telephone: 44 (1691) 671717
Fax: 44 (1691) 671122
MANAGING DIRECTOR: Per Lindstrand

Company formed November 1992 with initial workforce of 25; planned product range will include airships and balloons, in sizes from one-man to passenger-carrying. Early work included repurchase of GA 42 airships 01 and 02 (see Thunder & Colt entry in 1994-95 *Jane's*) from Imperial Airships for refurbishment and resale; also makes inner envelopes for Virgin Lightships (see ABC entry in US section).

UPDATED

LINDSTRAND AS 300

TYPE: Very large hot-air airship.

PROGRAMME: Ordered August 1992 by Dany Cleyet Marrel for botanical research into deterioration of rain forests, planned deployment in Borneo and Sumatra in 1993 postponed for political and other reasons, but was used in Myanmar in 1994.

DESIGN FEATURES: Enlarged and improved version of Thunder & Colt AS 261 (see 1991-92 *Jane's*) which flew 260 hours and made 82 raft drops; drops large, man-carrying inflatable raft on to tree canopy (only type of aircraft able to do this without damage to canopy). World's largest hot-air airship.

Same envelope cross-section as AS 261, but longer and with more rounded tail end; redesigned cruciform tail surfaces with new air distribution system, new catenary load curtain to inhibit pitch instability, upgraded gondola; more powerful engine (89.5 kW, 120 hp instead of 75 kW, 100 hp), with twin thrust reverser vanes aft of propeller. Changes make it faster and more manoeuvrable than AS 261.

ACCOMMODATION: Pilot and six passengers.

DIMENSIONS, INTERNAL:	
Envelope volume	8,495 m³ (300,000 cu ft)
WEIGHTS AND LOADINGS:	
Inflatable raft	680 kg (1,500 lb)

UPDATED

LINDSTRAND HS 110

TYPE: Hot-air airship.

PROGRAMME: Designed 1994, and several features tested that year on the AS 300 airship (see previous entry). First example was due to fly Spring 1995, expected to behave like a gas airship.

CUSTOMERS: Four firm orders placed by mid-January 1995.

DESIGN FEATURES: Designed using latest computer-aided design technology. Conventional-shape envelope with cruciform tailfins and small ventral gondola; envelope can carry advertising artwork directly on fabric or on three banners (one each side and one under nose) which are attached by Velcro and can be changed in less than 1 hour.

FLYING CONTROLS: Burners activated from electrical switches on top of joystick located on control panel between seats. Rudder on each vertical fin.

STRUCTURE: Envelope is of high-tenacity polyamide fabric with heat-resistant polyurethane coating, double-fell, twin-needle seams reinforced with load tape, catenary load curtain and four gondola suspension cables each side. Tail fins, inflated through fan in gondola, have much higher pressure than envelope and thus stay rigid even in full turns. Monocoque gondola built of glassfibre, Kevlar and carbonfibre. All metal components are of stainless steel or anodised aluminium.

LANDING GEAR: Non-retractable tricycle type.

POWER PLANT: One 48.5 kW (65 hp) Arrow GT 500 air-cooled flat-twin engine, driving a three-blade composites propeller. Fuel capacity 35 litres (9.25 US gallons, 7.7 Imp gallons). Modified Lindstrand Jetstream double burner for hot air supply (see under Weights and Loadings for fuel quantity). Burners can be fired singly or as a pair.

ACCOMMODATION: Side by side seats for pilot and one passenger in gondola, behind polycarbonate windscreen

AVIONICS: *Instrumentation*: Altimeter, variometer, envelope temperature and pressure gauges, engine rpm indicator and engine cylinder head temperature gauge.

DIMENSIONS, EXTERNAL:

Length overall	34.00 m (111 ft 6½ in)
Envelope max diameter	13.20 m (43 ft 3¾ in)
Envelope fineness ratio	2.575
Width over tailfins	14.80 m (48 ft 6¾ in)
Height overall	15.80 m (51 ft 10 in)
Wheel track	1.75 m (5 ft 9 in)
Gondola: Length	3.00 m (9 ft 10 in)
Max width	1.65 m (5 ft 5 in)
Height (incl landing gear)	1.80 m (5 ft 10¾ in)

DIMENSIONS, INTERNAL:

Envelope volume	3,125 m³ (110,358 cu ft)

AREAS:

Side banner displays (each)	300.0 m² (3,229.2 sq ft)
Nose banner display	14.0 m² (150.7 sq ft)

WEIGHTS AND LOADINGS:

Envelope	170 kg (375 lb)
Gondola, empty	184 kg (405 lb)
Burner fuel: standard	80 kg (176 lb)
max (solo pilot)	120 kg (264 lb)

PERFORMANCE (estimated):

Max level speed	20 kts (37 km/h, 23 mph)
Normal cruising speed	10-12 kts (18-22 km/h, 11-14 mph)
Endurance: standard burner fuel	2 h
max burner fuel	more than 3 h

Telephone/Fax: 44 (181) 943 1868 or (1628) 34290
MANAGING DIRECTOR: Doug Smith
TECHNICAL DIRECTOR: Jeremy Russell

Partnership formed 1993, primarily to design and build a remotely controlled airship for advertising and aerial filming. First prototype, already tested, was designated PIG 1.

NEW ENTRY

PIG 2

TYPE: Small non-rigid helium airship.

PROGRAMME: Redesigned and re-engineered development of PIG 1; due to fly mid-1995. Suitable for advertising and remote filming. Once perfected, will form basis for larger manned airship.

DESIGN FEATURES: Four-fold power increase compared with PIG 1; high power/weight ratio permits flight in non-perfect conditions. Assembly, including inflation, takes approximately 1 hour; when deflated is fully portable and can be carried in typical estate car.

FLYING CONTROLS: Remote radio control via seven-channel PCM unit: computer channel mixing for rudder, elevator and engine thrust vector control, one channel configured to operate emergency dump valve.

STRUCTURE: Spinnaker outer shell with foil laminate inner envelope incorporating quick-release safety mechanism.

POWER PLANT: Two high-performance 2.05 kW (2.75 hp) electric motors, powered by two 22- to 28-cell, 5,000 mAh (26.4 to 33.6 V) Ni/Cd batteries. Engines rotate 90° up/90° down to vector thrust for climb and descent, and can each run independently in forward or reverse direction.

Appropriately decorated envelope of the remotely controlled PIG 2 non-rigid

1995

AVIONICS: *Comms*: Two PCM receivers: one for engine control, one for tail surface and dump valve actuation.

DIMENSIONS, EXTERNAL:

Length overall	8.25 m (27 ft 0¾ in)
Max diameter	2.40 m (7 ft 10½ in)
Propeller diameter	0.36-0.46 m (14-18 in)

DIMENSIONS, INTERNAL:

Envelope volume	24.0 m³ (847.5 cu ft)

WEIGHTS AND LOADINGS:

Free payload, depending upon battery configuration	4-8 kg (8.8-17.6 lb)
Max T-O weight	22 kg (48.5 lb)
Gross lift	26 kg (57.3 lb)

PERFORMANCE (estimated):

Max level speed	30-40 kts (55-74 km/h, 34.5-46 mph)
Cruising speed	10 kts (18.5 km/h, 11.5 mph)
Max operating height	1,000 m (3,280 ft)
Max range	1,000 m (3,280 ft)
Endurance, at max speed	15 min
at cruising speed	1 h

NEW ENTRY

THUNDER & COLT

Thunder & Colt went into receivership 7 November 1994. Purchase of balloon assets by Cameron Balloons Ltd (which see) announced 8 December 1994; no purchaser of airship assets found at time of going to press.

ABC A-60 PLUS LIGHTSHIP

TYPE: Five-seat non-rigid helium airship.

PROGRAMME: A-50 prototype (see 1990-91 *Jane's*) made first flight 9 April 1988; first flight of production A-60 (1991-92 *Jane's*) June 1989; A-60 certificated by FAA 18 May 1990 for day/night and VFR/IFR flight; first delivery (to Virgin Lightships Ltd) November 1990; A-60 Plus certificated Autumn 1991 by FAA; APU upgrade certificated by FAA.

One of the Lightships operated by Lightships Group

1994

and FLIR Systems Inc infra-red gyrostabilised camera approved by FAA, in 1993, all A-60s converted to A-60 Plus in 1993

CURRENT VERSIONS: **A-60:** Initial production version, described in 1991-92 *Jane's*. All now converted to A-60 Plus

A-60 Plus. Current version from 1991, larger envelope, payload increased by 181 kg (400 lb) compared with A-60; Lightsign message board option from 1992. *Description applies to this version*

CUSTOMERS: Eight in operation by Spring 1995 with Lightships Group (merger of Virgin Lightships and Lightship America Inc). Nos 8 and 9 delivered in 1994 (to Brazil and China respectively)

DESIGN FEATURES: Conventional shape envelope; cruciform tail surfaces, gondola suspended by 12 catenary cables each attached to external patches, eliminating need for internal cables, gastight fittings and bellow sleeves. Can be inflated without a net by attaching ballasted gondola before adding helium, gondola can be removed from inflated Lightship without a net by ballasting catenary cables

FLYING CONTROLS: Single internal ballonet; rudder or elevator on each of four tailfins, primary flight controls for left-hand front seat only

STRUCTURE: Outer envelope skin of Dacron/Mylar with separate urethane film inner gastight bladder and single ballonet. All structural attachments to sewn outer bag, such as nose mooring, fin base and guy wires, car catenary and handling lines, made with webbing reinforcements sewn directly to envelope

LANDING GEAR: Single twin-wheel unit beneath gondola; small tailwheel at base of lower vertical fin

POWER PLANT: Twin 60 kW (80 hp) Limbach L 2000 engines, pusher-mounted to enhance propulsive efficiency and reduce noise. Standard capacity of rear-mounted fuel tank is 280 litres (74 US gallons, 61.6 Imp gallons); can be refuelled in the field without mooring

ACCOMMODATION: Two single seats and three-person rear bench seat in gondola

SYSTEMS: APU capable of delivering 2.5 kW at 110 V certificated December 1993 and now standard. Used mainly to power internal illumination lights, but can be used also for other airborne equipment

EQUIPMENT: Certificated for gyrostabilised TV camera mount, complete with microwave downlink for live broadcast, can be operated simultaneously with APU

DIMENSIONS, EXTERNAL:

Envelope: Length overall	39.01 m (128 ft 0 in)
Max diameter	10.01 m (32 ft 10 in)
Fineness ratio	3.80
Gondola: Length overall	3.96 m (13 ft 0 in)
Width	1.52 m (5 ft 0 in)
Height overall	2.90 m (9 ft 6 in)
Propeller diameter	1.52 m (5 ft 0 in)

Gondola and power plant of the A-60 Plus Lightship *1993*

DIMENSIONS, INTERNAL:

Envelope volume	1,925.5 m³ (68,000 cu ft)
Gondola: Cabin length	2.74 m (9 ft 0 in)
Cabin height	1.83 m (6 ft 0 in)

AREAS:

Tailfins (four, total)	42.74 m² (460.0 sq ft)

WEIGHTS AND LOADINGS:

Total weight empty	1,216 kg (2,680 lb)
Max buoyancy	1,814 kg (4,000 lb)
Max dynamic lift	113 kg (250 lb)
Max useful lift, ISA at 656 m (2,000 ft)	680 kg (1,500 lb)
Max gross weight	1,993 kg (4,394 lb)

PERFORMANCE:

Max level speed	46 kts (85 km/h, 53 mph)
Max rate of ascent	457 m (1,500 ft)/min
Service ceiling	2,225 m (7,300 ft)
Max rate of descent	396 m (1,300 ft)/min
Min T-O distance	112 m (366 ft)
Max range at 35 kts (65 km/h, 40 mph)	521 n miles (965 km, 600 miles)
Max endurance at 35 kts (65 km/h, 40 mph)	15 h

UPDATED

ABC A-120 LIGHTSHIP

Conceptual study continues for nine-passenger development with 3,398 m³ (120,000 cu ft) envelope and stretched gondola. Power plant to be decided, but performance expected to be comparable to that of A-60 Plus

Company specialises in developing and manufacturing airships and tethered aerostats for such applications as atmospheric research, advertising and surveillance. Headquarters and main production facilities moved in October 1993 from Ukraine (see 1993-94 *Jane's*) to California, where activities by May 1994 included full-scale production of several modifications of tethered aerostats used for advertising, aerial photography and environmental research

UPDATED

The Aeros 50-02 *Dina* in the hangar at Castle AFB, California *1995*

AEROS-50

TYPE: Semi-rigid helium airship

PROGRAMME: Original prototype was nearing completion in Ukraine by Spring 1993, but following transfer of activity to USA Aeros undertook new, modified version, latter version, to which description applies, was completed in 1994 (N4236K); ground testing beginning in 1995 at Castle AFB, California. New design meets current FAA requirements

DESIGN FEATURES: Conventional shape envelope, with cruciform tail surfaces, capable of being flown by pilot with limited airship experience. Can be landed by pilot without groundcrew assistance, by using electric winch installed in gondola

FLYING CONTROLS: Two ballonets (one forward, one aft) provide attitude control by compensating for atmospheric changes. Ballonets are inflated with air by pressurising fan controlled manually by pilot; automatic valves respond when pressure limit is reached, in the event of fan malfunction, air is supplied via a duct aft of the propeller. Elevator or rudder on each tail surface. Envelope has helium valve which can be opened manually, but responds automatically when pressure ceiling is reached

STRUCTURE: Envelope of high-strength polyurethane fabric, tail surfaces of composite materials. Loads of gondola and propeller thrust distributed through two central and two side catenary curtains. Gondola has tubular aluminium frame and composites skin, with large window and door openings (including windows in ceiling) for maximum field of view (ceiling window permits observation of envelope internal structure). Engine is mounted on steel frame at rear of gondola

POWER PLANT: One 59.7 kW (80 hp) Rotax 912 flat four engine, driving a three-blade variable-pitch ducted pusher propeller. Fuel capacity 60.6 litres (16 US gallons, 13.3 Imp gallons)

SYSTEMS: Electrical power for avionics, instruments and mooring winch supplied by engine-driven generator, which also supplies a 17 Ah battery to provide back-up power for emergency use

DIMENSIONS, EXTERNAL:

Length overall	23.93 m (78 ft 6 in)
Width overall (tail span)	10.88 m (35 ft 8½ in)
Height overall	12.03 m (39 ft 4¾ in)
Envelope: Length	23.77 m (78 ft 0 in)
Max diameter	8.00 m (26 ft 3 in)
Gondola: Length	2.70 m (8 ft 10¼ in)
Max width	1.10 m (3 ft 7¼ in)
Max height	1.55 m (5 ft 1 in)
Propeller diameter	1.83 m (6 ft 0 in)

DIMENSIONS, INTERNAL:

Envelope volume	750.4 m^3 (26,500 cu ft)
Ballonet volume (two, total)	187.6 m^3 (6,625 cu ft)

AREAS:

Envelope surface, total	470.1 m^2 (5,060.0 sq ft)
Tail surfaces (four, total)	31.96 m^2 (344.0 sq ft)

WEIGHTS AND LOADINGS: No details received

PERFORMANCE:

Max level speed	78 kts (145 km/h; 90 mph)
Econ cruising speed	61 kts (112 km/h; 70 mph)
Pressure ceiling	1,500 m (4,920 ft)
Range at econ cruising speed, 20% reserves	521 n miles (965 km; 600 miles)
Max endurance	8 h

UPDATED

AEROS-500

TYPE: Projected 20-passenger rigid airship.

PROGRAMME: Design development continuing in 1994. No update received for 1995-96 edition; all known details in 1994-95 *Jane's*.

UPDATED

AEROS D-1 and D-4

TYPE: Cargo-carrying rigid helium airships.

PROGRAMME: Realisation of cargo airship project initiated in the former USSR in the 1970s, now being implemented under joint programme developed between Worldwide Aeros Corporation and the Ukrainian company Aeroplast; construction of D-1 subscale prototype scheduled to begin October 1995.

DESIGN FEATURES: Applications to include transportation of cargo internally or on external sling, flying crane; ship's escort, tourism. Conventional shape hull; sweptback vertical fin and rudder; T tailplane with sweptback leading-edge and one-piece elevator. Large cargo compartment inside hull.

FLYING CONTROLS: Computer-based flight and engine thrust control system.

STRUCTURE: Semi-monocoque rigid hull made up of three-ply CFRP panels, with plasma-sprayed aluminium film outer coating. Radially distributed internal ballonets (20) of Vectran fabric.

LANDING GEAR: Retractable quadricycle type.

POWER PLANT (D-1): Two 224 kW (300 hp) Zoche ZO 02A piston engines, one each side of hull near centre of buoyancy in ducted propulsion unit which can be vectored 120° up and 90° down; one rear-mounted 2,535 kW (3,400 shp) General Electric T64 turboprop. Fuel tanks on each side of cargo compartment.

POWER PLANT (D-4): Same arrangement as for D-1 except that selected engines will have power ratings of 746 kW (1,000 hp) for lateral units and 4,474 kW (6,000 shp) for main propulsion engine.

ACCOMMODATION: Gondola at forward end of cargo compartment is three-tier structure, with auxiliary compartments and living quarters on top deck (inside hull) and landing gear retraction bay beneath lower deck. Latter contains four-place cockpit at front (two pilots, navigator and flight engineer) and cargomaster's cockpit at rear, with stairs to upper deck between them on starboard side. Main cargo compartment is accessible in flight via passage from upper deck.

SYSTEMS: Electrical power supply 200/115 V AC (three-phase, 400 Hz) from 125 kW main and standby engine-driven generators and 27 V DC from two batteries and inverter. Hot air anti-icing of hull and tail unit, electrothermal anti-icing of propellers; combination of three systems for anti-icing of engines, rudder, elevator, observation windows, lights, AoA and pressure indicators and cargo platform locks.

DIMENSIONS, EXTERNAL:

Length overall: D-1	95.00 m (311 ft 8¼ in)
Height overall, excl landing gear:	
D-1	33.00 m (108 ft 3¼ in)
Hull length: D-1	84.00 m (275 ft 7 in)
D-4	168.00 m (551 ft 2¼ in)
Max diameter: D-1	25.00 m (82 ft 0¼ in)
D-4	50.00 m (164 ft 0½ in)
Tailplane span: D-1	22.40 m (73 ft 6 in)
Wheel track: D-1	8.20 m (26 ft 10¾ in)
D-4	24.00 m (78 ft 9 in)
Wheelbase: D-1	20.05 m (65 ft 9½ in)
D-4	52.00 m (170 ft 7¼ in)

DIMENSIONS, INTERNAL:

Hull volume: D-1	27,500 m^3 (971,155 cu ft)
D-4	220,000 m^3 (7,769,238 cu ft)
Cargo compartment:	
Length: D-1	16.00 m (52 ft 6 in)
D-4	50.00 m (164 ft 0½ in)
Max width: D-1	6.20 m (20 ft 4 in)
D-4	16.00 m (52 ft 6 in)
Max height: D-1	3.30 m (10 ft 10 in)
D-4	3.50 m (11 ft 5¾ in)
Volume: D-1	327.36 m^3 (11,560.6 cu ft)
D-4	2,800.0 m^3 (98,881.2 cu ft)
Gondola:	
Length: D-1	6.75 m (22 ft 1¾ in)
Max width: D-1	3.60 m (11 ft 9¾ in)
Height: D-1	4.70 m (15 ft 5 in)

AREAS:

Hull surface area: D-1	5,370 m^2 (57,802 sq ft)
Vertical tail surfaces: D-1	160 m^2 (1,722.2 sq ft)
Horizontal tail surfaces: D-1	100 m^2 (1,076.4 sq ft)

WEIGHTS AND LOADINGS:

Max payload, incl fuel:	
D-1	12,500 kg (27,558 lb)
D-4	125,000 kg (275,578 lb)

PERFORMANCE (estimated, both):

Max level speed	151 kts (280 km/h; 174 mph)
Cruising speed	124 kts (230 km/h; 143 mph)
Design altitude range	0-3,000 m (0-9,840 ft)

Larry Newman of the USA, who crossed Atlantic in helium balloon *Double Eagle II* in 1978 and Pacific in *Double Eagle V* three years later, plans to attempt non-stop round-the-world flight in unique double balloon *Earthwinds Hilton*. Other crew members will be co-captains Richard Abruzzo and David Melton of the USA. Maj Gen Vladimir Dzhanibekov, a former Russian cosmonaut, is the project's scientific attaché. Objectives are to make first circumnavigation of the Earth in a manned balloon and to conduct tests of the Earth's atmosphere, including condition of ozone layer.

Balloon will carry wind data collection equipment on behalf of NASA and instrument package from US Desert Research Institute, to provide information on atmospheric turbulence and how jetstream bends, by measuring motion of balloon capsule and changes in atmospheric pressure and temperature. Russian experiments are named Obzor (survey), to measure thickness of ozone layer along flight path and ultraviolet radiation penetration into atmosphere; Impactor, to explore aerosol particle contamination; and SSD (solid-state detector), to measure background radiation at flight altitude to help determine intensity and composition of cosmic rays.

Supporting agencies are NASA and NOAA (National Oceanic and Atmospheric Administration) in the USA, and Yuri Gagarin Cosmonaut Training Centre in Russia. Balloon system is devised and manufactured by Raven Industries, capsule designed and built by Scaled Composites.

VERIFIED

EARTHWINDS HILTON

TYPE: Unique manned two-balloon system for global circumnavigation and research.

PROGRAMME: Planned for original launch window between 1 November 1993 and 28 February 1994 when conditions most favourable; tiedown break November 1993, 7 hour trial flight made on 12 January 1994, but launch not possible within original time frame; new window of opportunity awaited.

Launch will be from Reno Stead Airfield, Nevada; flight aimed to follow 45th parallel, within altitude band 9,750 to 10,670 m (32,000 to 35,000 ft), but could deviate anywhere between 30 and 60° N, overflying up to 73 countries, depending on air currents. Flight duration approximately 12 to 21 days.

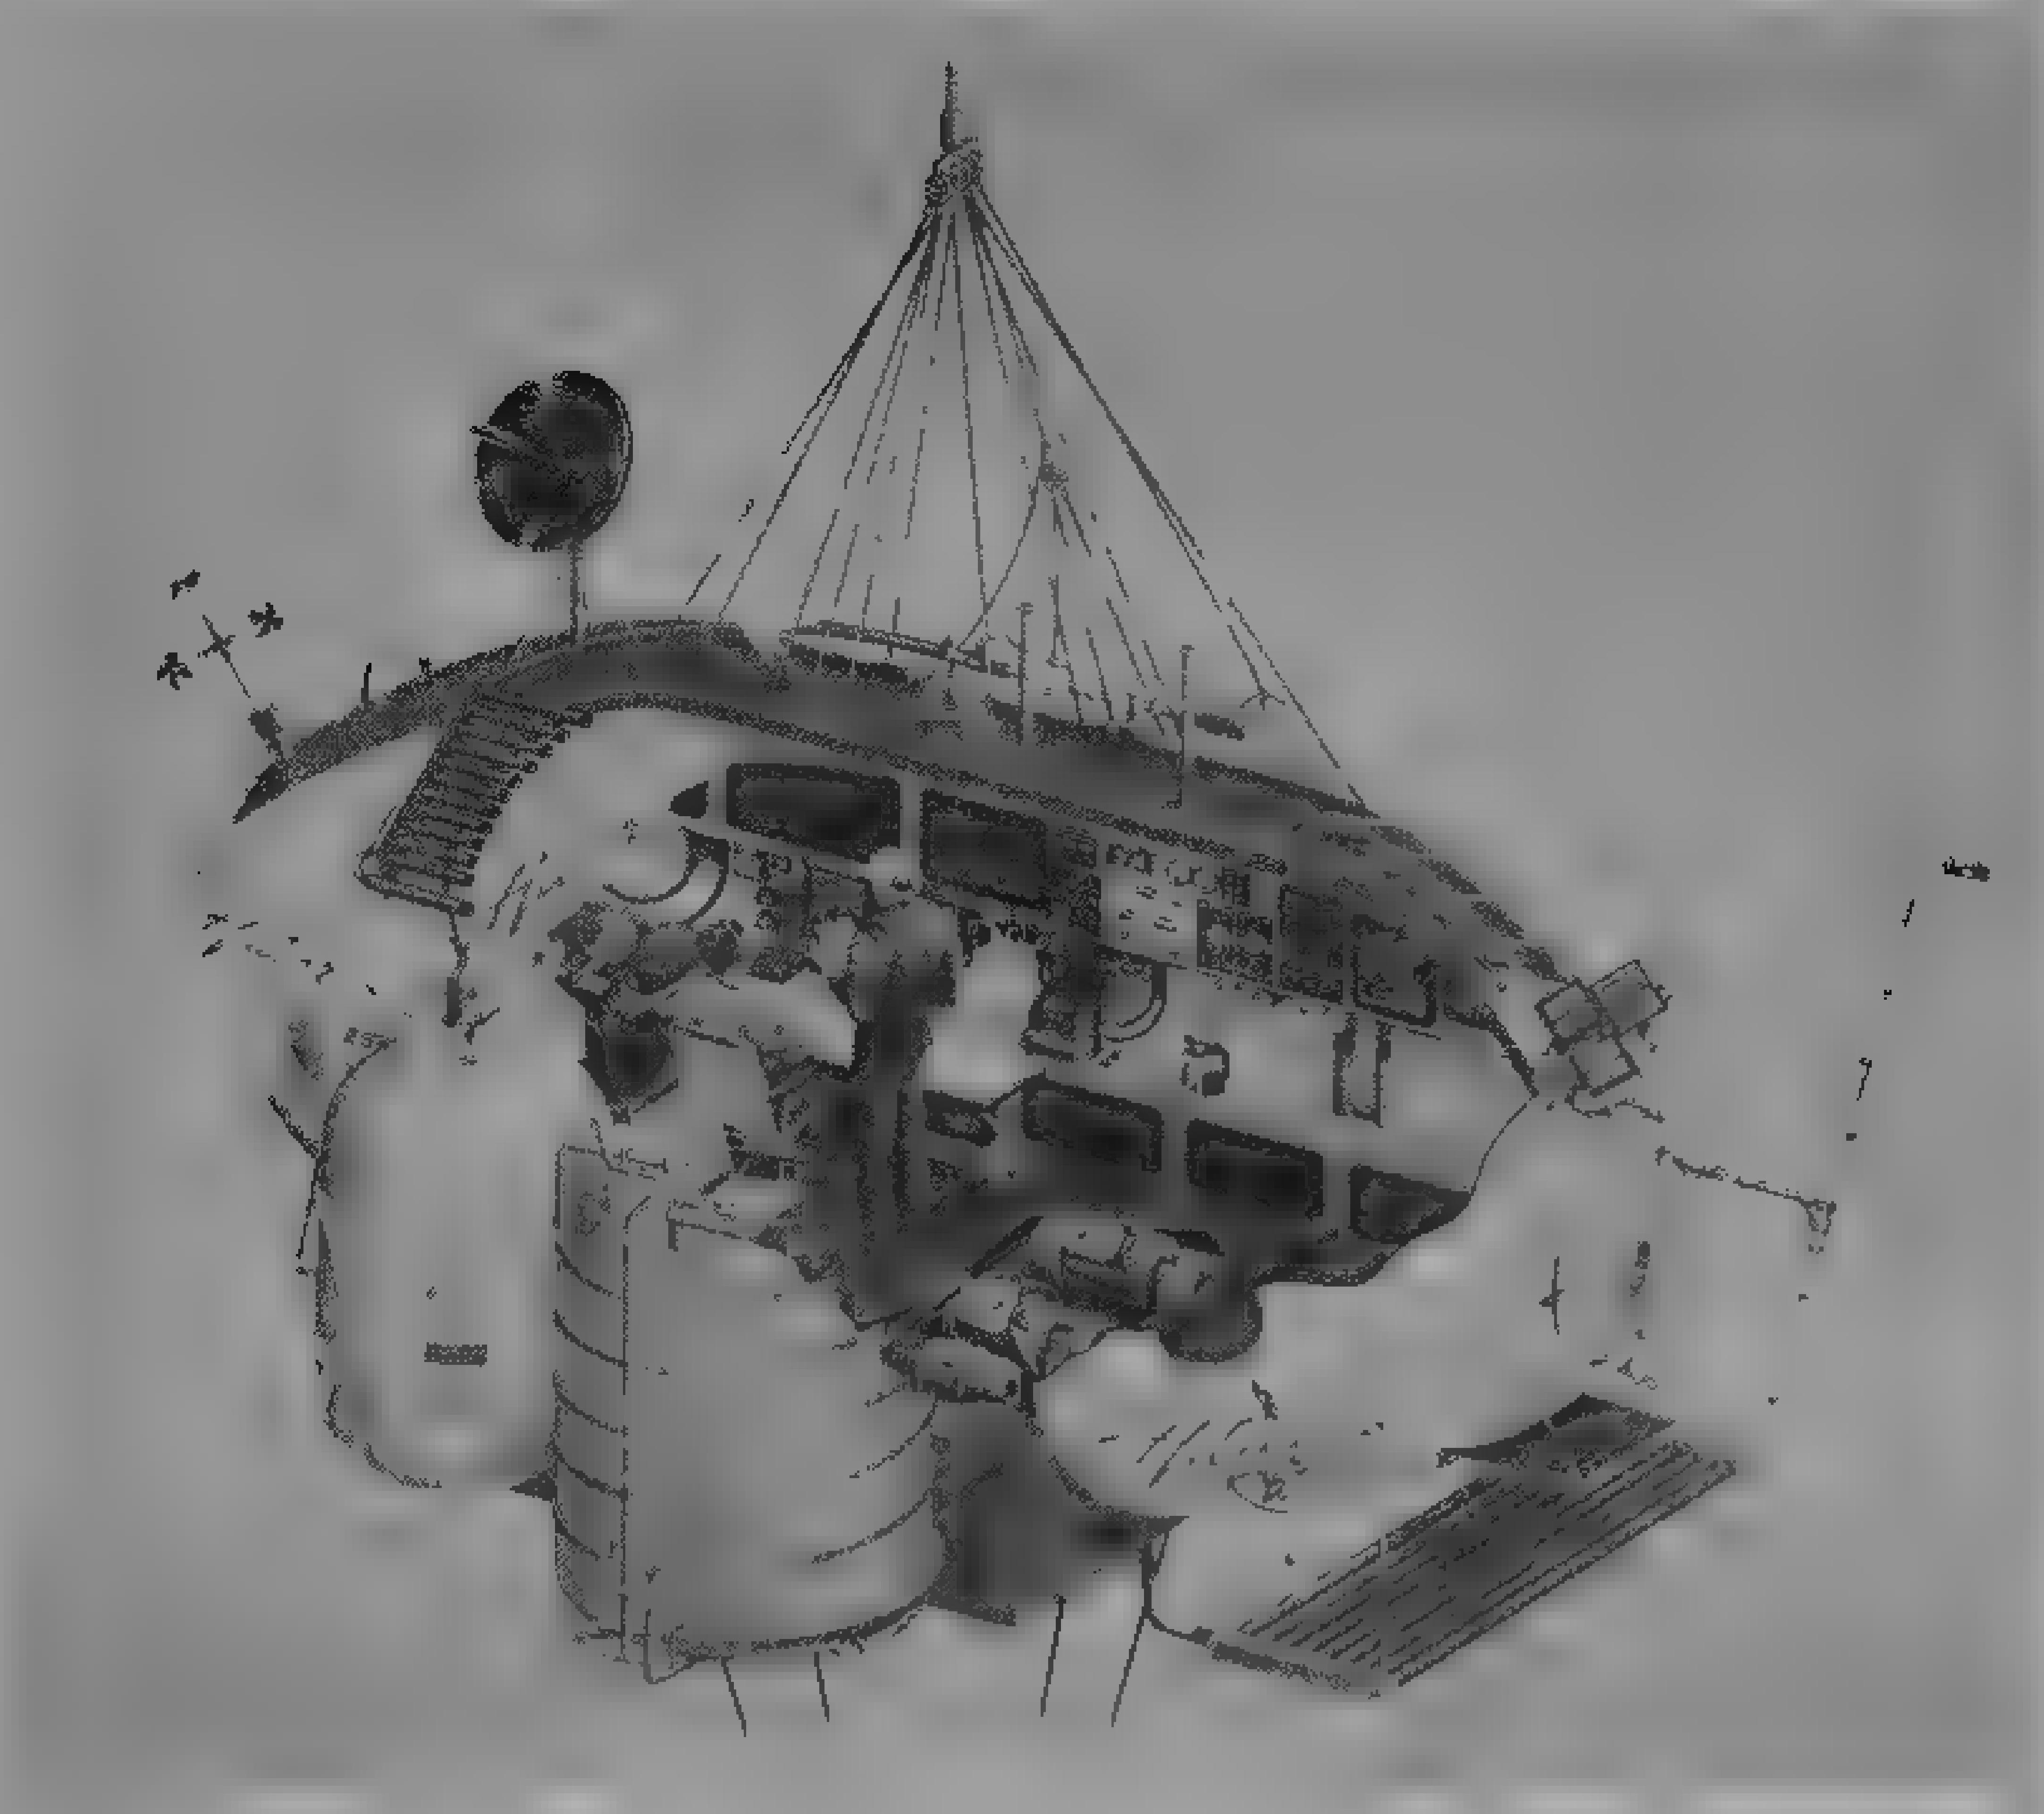
DESIGN FEATURES: Unique two-balloon system designed by Tim Lachenmeier of Raven Industries, upper one containing helium for lift, lower one acting as anchor, filled with air under pressure to act as ballast. Pressurised crew capsule, designed by Burt Rutan of Scaled Composites, suspended between upper and lower balloons.

FLYING CONTROLS: Upper (zero pressure) balloon has openings through which excess helium can vent automatically to equalise internal pressure with that of surrounding atmosphere; liquid helium from storage tanks can be gasified to replenish any helium lost during flight. Pilot initiates descent by releasing helium through three electric valves at top of balloon. Electric blower inside lower anchor balloon enables crew to pump additional air pressure into it to increase its displaced weight; varying this weight keeps combined system in virtually level flight.

STRUCTURE: Helium balloon fabricated from three layers of clear plastics astrofilm, reinforced with glassfibre load tapes; lower anchor balloon made from an extremely strong lightweight polyester material made by Winzen International. Crew capsule is of glassfibre and other high-performance fibres, bonded with epoxy resins; walls, ceilings and floors are covered with sound-absorbing materials.

ACCOMMODATION: Crew of three (see introductory paragraphs). Capsule pressurised to provide environment equivalent to 2,440 m (8,000 ft) above S/L; temperature controlled manually at 18 to 21°C (65 to 70°F) via external heat exchanger. Onboard amenities include astronaut-type meals, beds, bath, toilet with holding tank, movies, worldwide telephone link via satellite, and daily 'newspaper' received by fax. Interior decor, meals and travel kits by Hilton.

SYSTEMS: Two 7.5 kW (10 hp) Honda liquid-cooled petrol engines supply electrical power for life support systems, capsule pressurisation, electrical equipment and onboard



Artist's impression of the *Earthwinds Hilton*'s three-man crew capsule *(Bob Sandford/Loral Defense Systems)*
1994

The world's first 10 ton balloon system fully rigged, the *Earthwinds Hilton* will measure some 112.8 m (370 ft) from top to bottom
1994

experiments. Fuel for these engines (2,650 litres, 700 US gallons, 583 Imp gallons) in large tanks alongside capsule.
AVIONICS: Nav/com avionics provided by Bendix/King and NASA.
Comms: HF and VHF radio.
Flight: Satellite data via GPS to provide precise position and wind data information, downlink via Argos satellite to provide exact balloon location to operations centre at Reno Hilton, Cospas/Sarsat satellite locator transmitter to aid search and rescue in event of emergency.
DIMENSIONS, EXTERNAL:
Helium balloon:
Height at launch 54.86 m (180 ft)
Height at floating altitude 42.67 m (140 ft)
Diameter at launch 30.48 m (100 ft)
Diameter at floating altitude 42.67 m (140 ft)
Air balloon: Diameter 33.53 m (110 ft)
Crew capsule: Length 7.32 m (24 ft)
Diameter 3.05 m (10 ft)
DIMENSIONS, INTERNAL:
Helium balloon volume 31,148 m³ (1,100,000 cu ft)
Air balloon volume 19,734 m³ (696,910 cu ft)
WEIGHTS AND LOADINGS:
Crew capsule, empty 907 kg (2,000 lb)
Liquid helium 680 kg (1,500 lb)
Crew capsule at T-O 6,804 kg (15,000 lb)
Total T-O weight of capsule, fuel and inflated balloons 9,072 kg (20,000 lb)
PERFORMANCE:
Estimated average ground speed 65 kts (121 km/h; 75 mph)
Estimated average daily travel 1,564 n miles (2,897 km; 1,800 miles)

TCOM

TCOM LP

7115 Thomas Edison Drive, Columbia, Maryland 21046-2113
Telephone: 1 (410) 312 2400
Fax: 1 (410) 312 2455
VICE PRESIDENT, MARKETING: Stephen E. Silvoy

During the past 24 years TCOM has designed, manufactured and operated (up to February 1994) a total of 61 advanced tethered aerostat systems, mostly to support sophisticated radar systems at altitudes from 900 to more than 6,000 m (2,950 to above 19,685 ft). The aerostats have varied in length from 25 to 71 m (82 ft 0⅛ in to 232 ft 11¼ in), with volumes from 750 to 16,700 m³ (26,486 to 589,755 cu ft). they have operated, or are still operational, at sites in the USA, Caribbean, Bahamas, Canada, Middle East, Africa and Far East. TCOM experience includes development and deployment of such systems in Arctic, tropical and desert environments, and in mountainous terrain, conducting operations from fixed, road transportable and sea-based mooring installations. Current production types are the 32M and 71M.

UPDATED

TCOM 32M and 71M

TYPE: Helium filled non-rigid aerostats.
PROGRAMME: See introductory paragraph.
CURRENT VERSIONS: **32M**: Largest version of TCOM's transportable series of aerostat systems, can be mounted on a flatbed trailer, deployed from a ship or towed by a helicopter. Communications with surface use latest fibre optic technology, with both electrical power and optical fibres embedded in core of umbilical tether.
MATSS (Maritime Aerostat Tracking and Surveillance System): Latest and most versatile system offered for sea-based or land-based surveillance of littoral regions, utilises a fully coherent I/J band radar mounted on the 32M platform. When operated between 900 and 1,200 m (2,950 and 3,940 ft) the specially designed sea surveillance radar can detect 2 m² (21.5 sq ft) surface or air targets out to the line

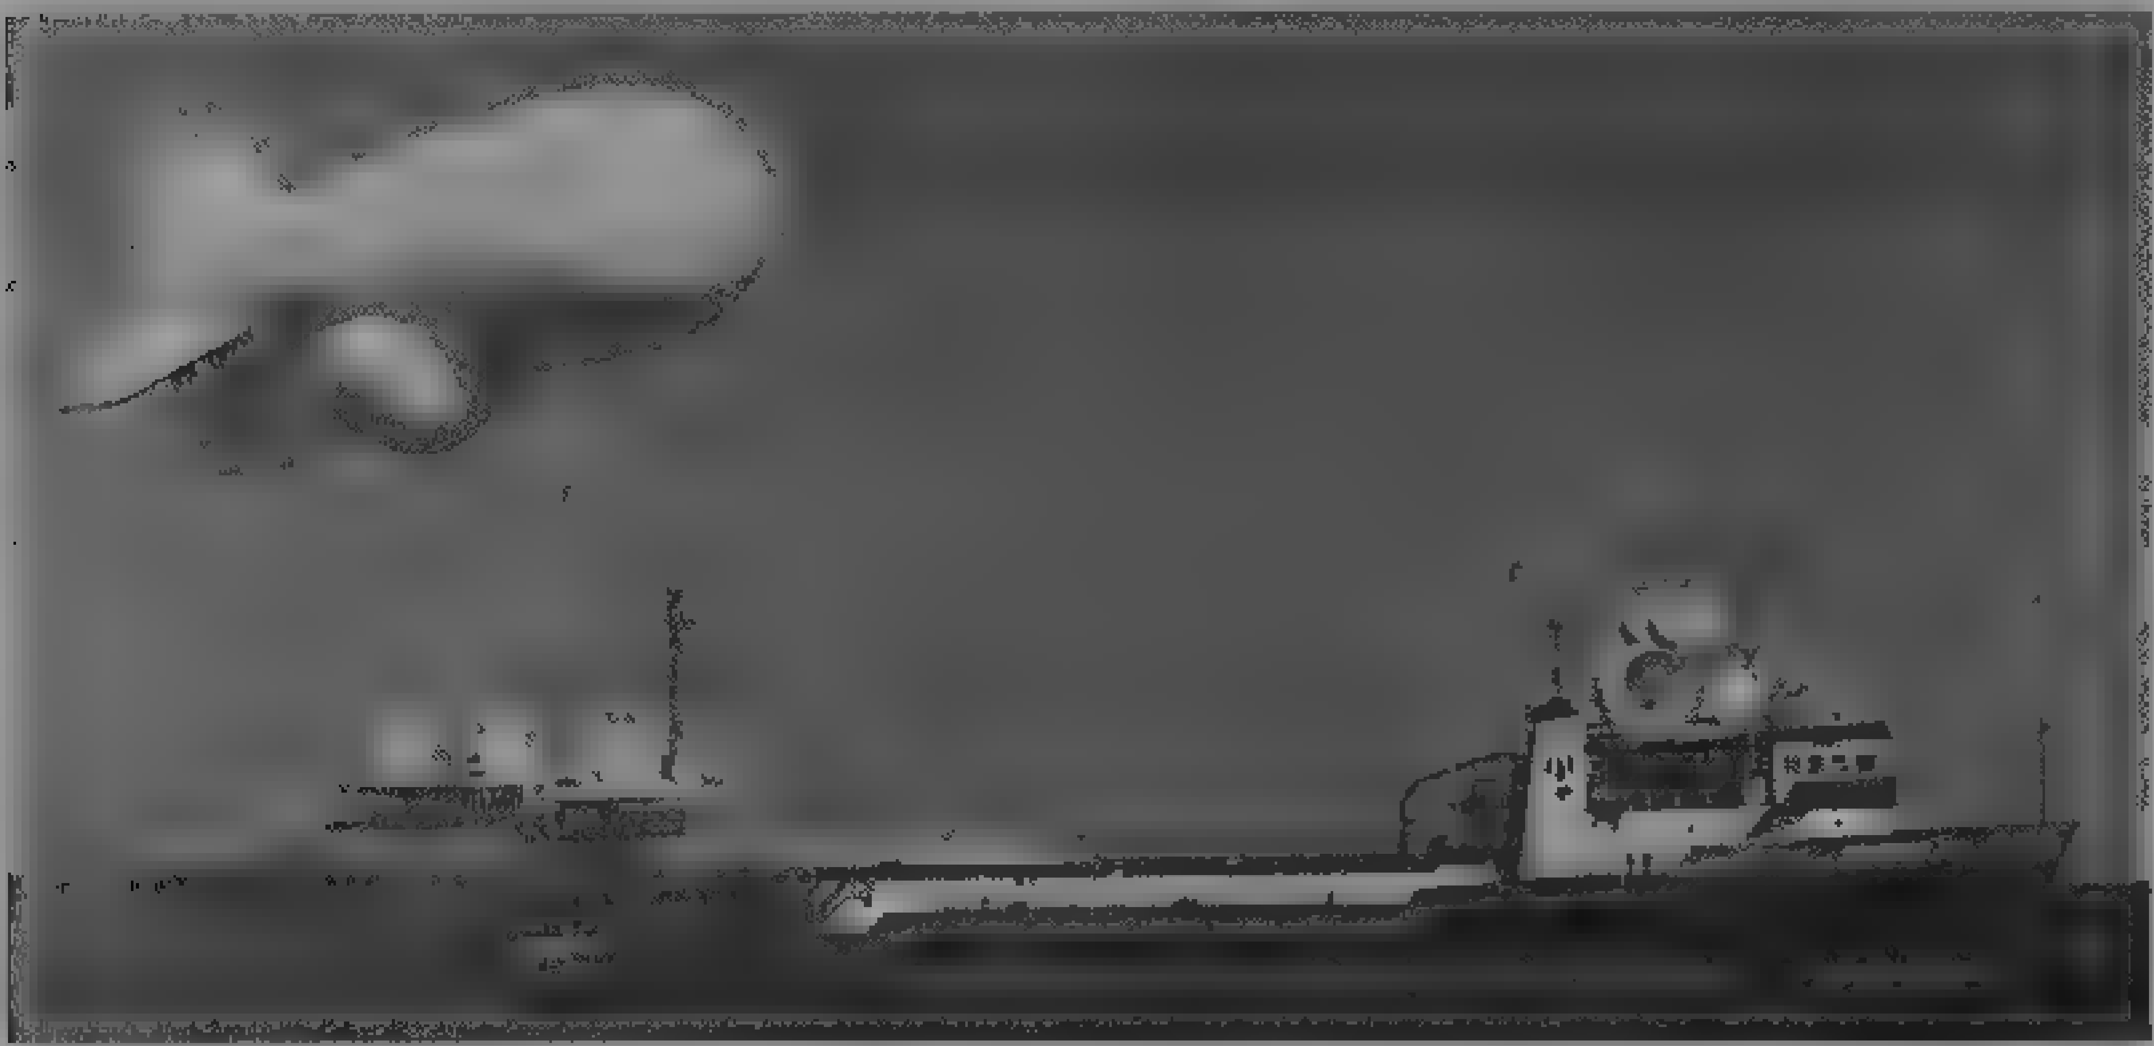
TCOM 71M LASS aerostat at its mooring mast. Ventral blister houses the radar antenna
1994

US CUSTOMS SERVICE

Fleet of 16 LASS aerostats in service or planned, operated for USCS by US Air Force and based as under, first four (Nos. 1, 2, 3 and 14) ordered October 1986, Nos. 7, 8, 9 and 10 were under construction in 1993. Intended to form unbroken surveillance line across southern border of USA and out to Bahamas

1. Yuma, Arizona
2. Fort Huachuca, Arizona
3. Deming, New Mexico
4. Marfa, Texas
5. Eagle Pass, Texas
6. Rio Grande, Texas
7. Matagorda, Texas
8. Morgan City, Louisiana
9. Alabama Point, Alabama
10. Horseshoe Beach, Florida
11. Venice, Florida
12. Cudjoe Key, Florida
13. High Rock, Bahamas
14. Georgetown, Bahamas
15. Great Inagua, Bahamas
16. Lajas, Puerto Rico

of sight horizon. In addition to radar, a GCI (ground-controlled intercept) radio relay system is incorporated to facilitate control of aircraft or surface vessel interceptors. Optional payloads include latest comint and direction finding equipment.



Ship-based MATSS, using the TCOM 32M aerostat as the radar platform

1994

71M: Largest TCOM aerostat in current production, can operate 24 hours per day for several weeks, flights need be interrupted only to avoid thunderstorms or for occasional helium top-up.

LASS (Low-Altitude Surveillance System): Ordered by US agencies and worldwide customers for long-range detection of small low-flying aircraft. Platform is 71M aerostat, carrying an all-solid-state D-band coherent radar (Westinghouse AN/TPS-63 derivative) known as E-LASS with a range capability of 173 n miles (320 km, 199 miles).

STRUCTURE: Multilayered synthetic fabrics, with bonded seams. Tether cable of braided Kevlar, with braided copper sheath to protect against lighting strikes.

CUSTOMERS: Include US Customs Service (see table), US Army, US Coast Guard, South Korea (eight), Kuwait (two), Saudi Arabia (one), UAE (one).

DIMENSIONS, EXTERNAL:	
Length overall: 32M	32.00 m (104 ft 11¾ in)
71M	71.00 m (232 ft 11¼ in)

THOMPSON AIRSHIP

TYPE: Sport/advertising non-rigid helium airship.

PROGRAMME: Protracted construction on opportunity basis (see earlier editions), but by January 1993 nearly all components completed and airship transferred to Oregon for final assembly, rigging and flight test. Inflated at Tillamook, Oregon, in July 1994, in-hangar tests of buoyancy, suspension and other systems conducted, engine tests and rigging of controls completed. Flight testing deferred by bad weather; hoped to start Spring 1995.

DESIGN FEATURES: See accompanying illustration. Inverted Y tail surfaces (all three angles 120°); no catenary curtains (cables attached to five finger patches on each side of envelope suspend gondola slightly forward of centre of buoyancy to compensate for pitch-up). Gondola stabilised by three cables attached to propeller shroud.

FLYING CONTROLS: Two 48.9 m³ (1,728 cu ft) air ballonets, fillable unequally to provide pitch trim; elevators on lower pair of tail surfaces operate differentially for roll control. 81.6 kg (180 lb) of lead shot or sand ballast in gondola.

STRUCTURE: Tail unit is fabric covered aluminium tube structure. Gondola has steel tube frame, with glassfibre and urethane foam skin panels.

POWER PLANT: One 1,200 cc Honda liquid-cooled engine, with 2.2:1 toothed belt reduction drive to a shrouded two-blade wooden pusher propeller.

The fully inflated Thompson two-person airship

1995

ACCOMMODATION: Pilot and one passenger in gondola.

DIMENSIONS, EXTERNAL:	
Envelope: Length overall	24.91 m (81 ft 9 in)
Max diameter	7.91 m (25 ft 11¼ in)
Fineness ratio	3.15
DIMENSIONS, INTERNAL:	
Envelope volume: helium	695.0 m³ (24,544 cu ft)
ballonets (two, total)	97.9 m³ (3,456 cu ft)
design total	792.9 m³ (28,000 cu ft)
WEIGHTS AND LOADINGS:	
Envelope	244 kg (538 lb)
Gondola	187 kg (412 lb)
Ballast	81.6 kg (180 lb)
Max T-O weight	696 kg (1,534 lb)
PERFORMANCE (estimated):	
Design speed	30 kts (55 km/h, 34 mph)

ULITA

ULITA INDUSTRIES INC (Manufacturing Division)

PO Box 412, Sheboygan, Wisconsin 53082-0412
Telephone and Fax: 1 (414) 458 2842
PRESIDENT AND CHAIRMAN: Thomas S. Berger

Ulita has undergone organisational and financial restructuring in recent years, resulting in termination of UM20-48 and UM25-64 programmes (see 1992-93 *Jane's*). Current hardware development programme is UM10-23 Cloud Cruiser; concept development and detail design of UM30-71 (see 1994-95 *Jane's*) being continued.

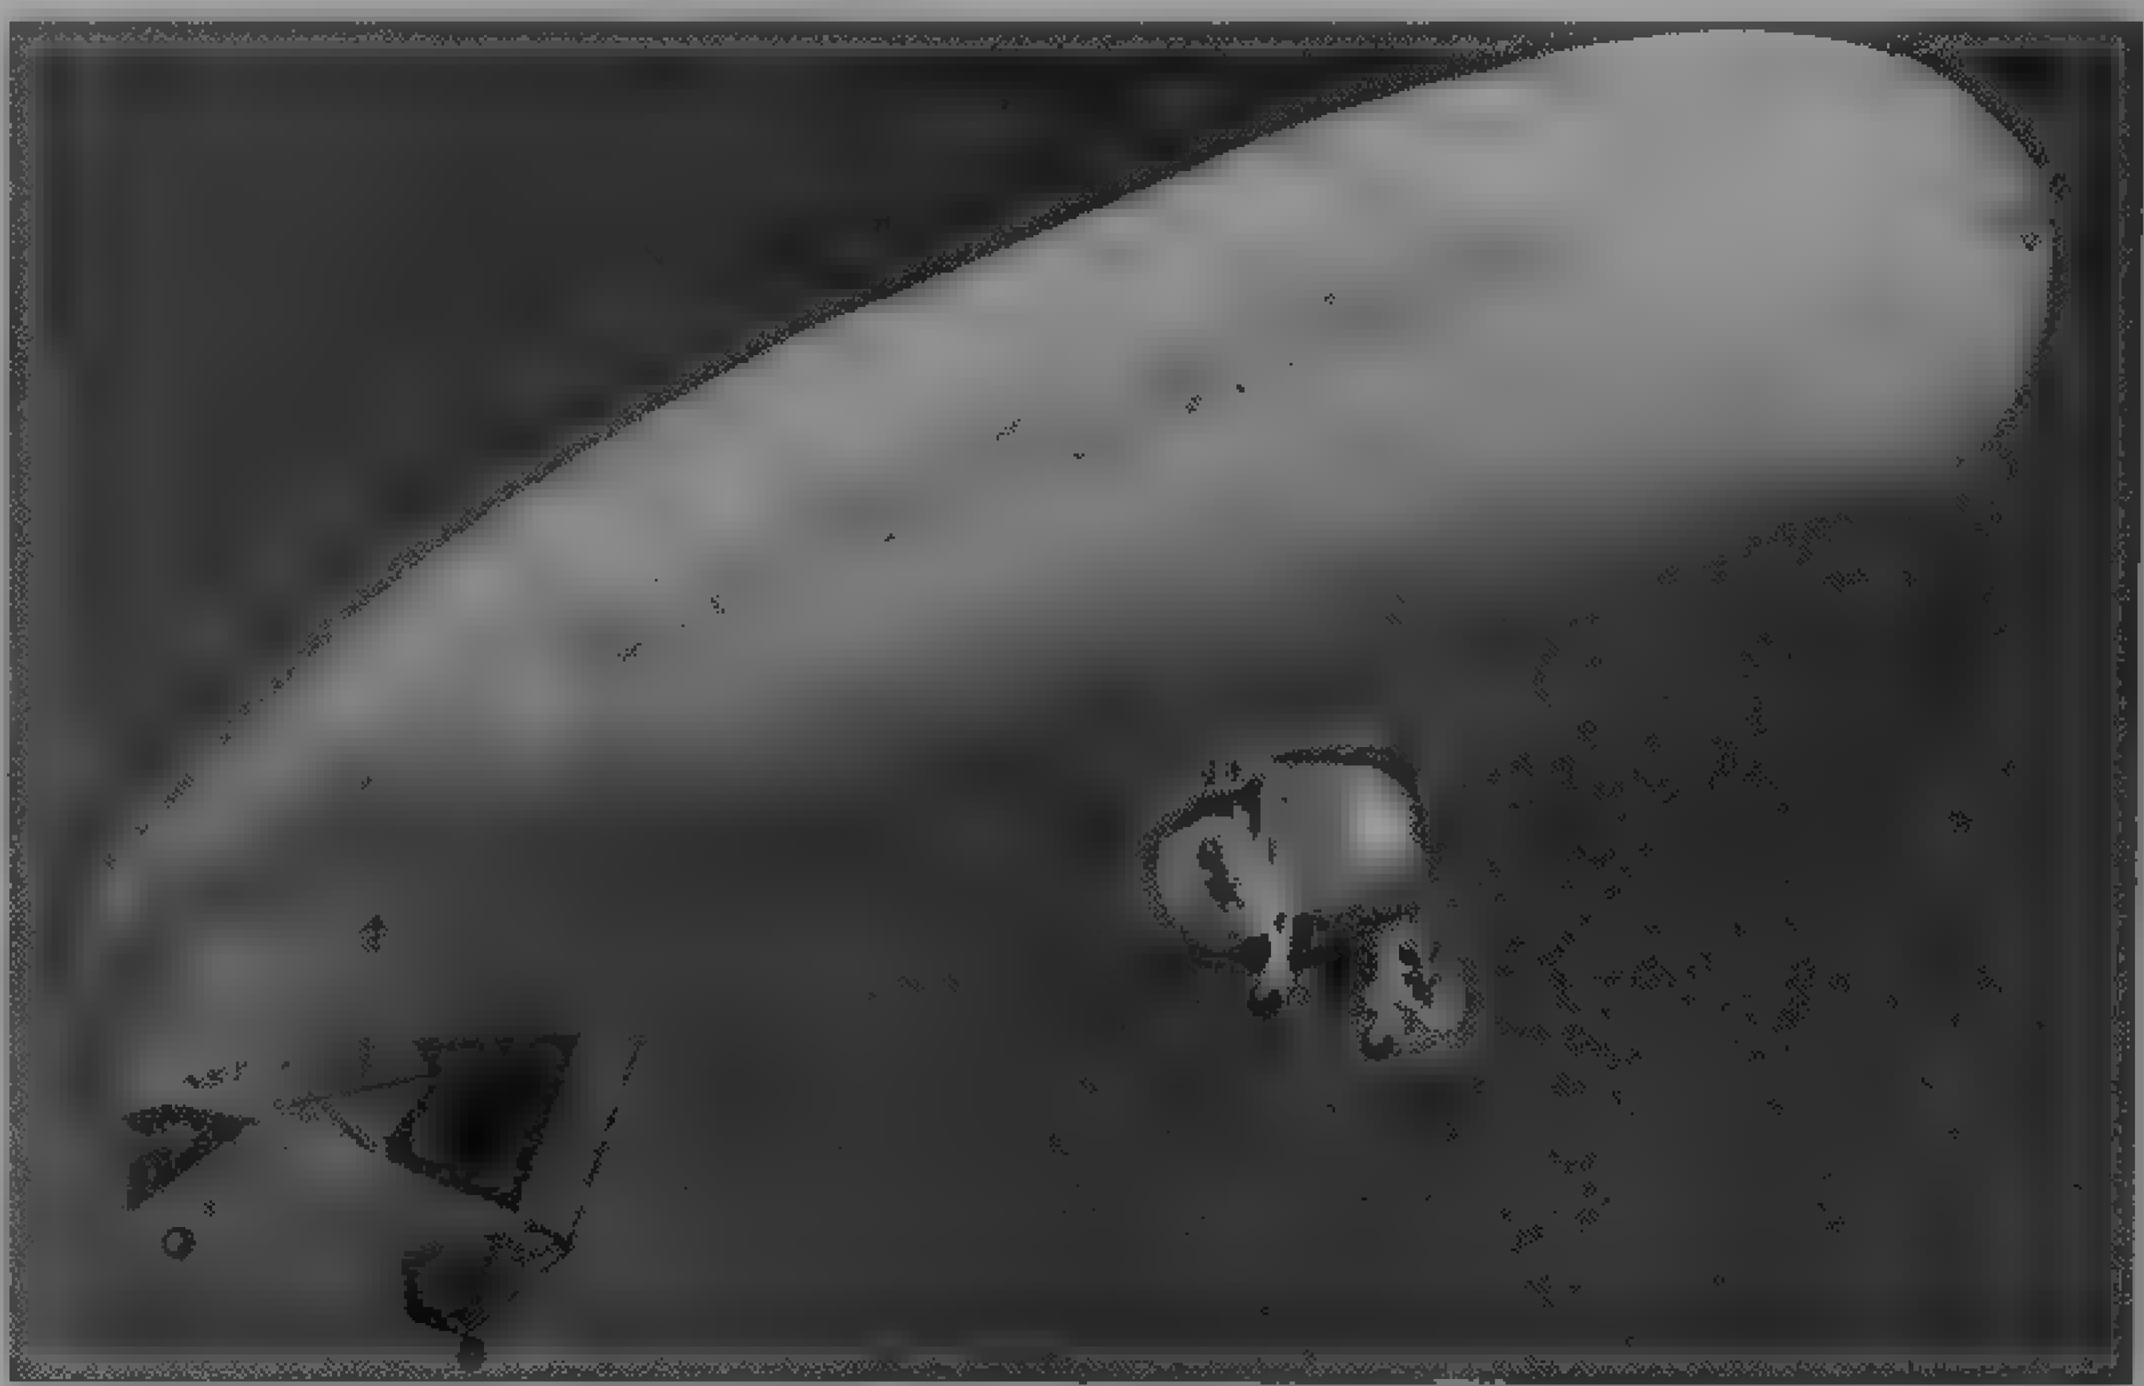
UPDATED

ULITA UM10-23 CLOUD CRUISER

TYPE: Non-rigid helium airship.

PROGRAMME: Prototype under construction; enlarged slightly from original 637.2 m³ (22,503 cu ft) UM10-22 design described in 1992-93 and earlier editions.

DESIGN FEATURES: Optimised for ARV (air recreational vehicle) market as low-cost light utility craft; to be available initially in kit form only, but certification being



Model of the Ulita UM10-23 Cloud Cruiser air recreational vehicle airship

1990

considered. Twin horizontal and vertical stabilisers, each with movable control surface, attached to ends of internally mounted inverted V structure.

FLYING CONTROLS: Two internal ballonets (one forward, one aft) for pitch trim; twin elevators and rudders for pitch and yaw control.

LANDING GEAR: Landing wheel, mounted on outrigger, on each side of gondola, small wheel at base of each tailfin.

POWER PLANT: Two 18 kW (24 hp) Konig SC 340 three-cylinder two-stroke engines, each driving a three-blade fixed-pitch ducted propeller mounted on outrigger from gondola and rotatable to provide horizontal or vertical thrust. Main fuel tank in gondola, with provision for auxiliary tanks on outriggers. Main fuel tank capacity 60 6 litres (16 US gallons; 13.3 Imp gallons); increasable with auxiliary tanks to 98 5 litres (26 US gallons, 21 6 Imp gallons).

ACCOMMODATION: Side by side seating, with dual control wheels, for pilot and one pupil/passenger. Gondola ventilated, but not heated.

SYSTEMS: 12 V DC battery and alternators.

DIMENSIONS, EXTERNAL:

Length overall	25 48 m (83 ft 7 in)
Width overall	8.15 m (26 ft 8¾ in)
Height overall	8 97 m (29 ft 5 in)
Envelope: Length	24 99 m (82 ft 0 in)
Max diameter	6.95 m (22 ft 9½ in)
Fineness ratio	3.6
Gondola: Length at top	3.12 m (10 ft 3 in)
overall	3 44 m (11 ft 3½ in)
Width: at top	1 32 m (4 ft 4 in)
at floor	1.04 m (3 ft 5 in)
overall (incl propulsors)	4.33 m (14 ft 2½ in)
Height: excl landing gear	1 71 m (5 ft 7¼ in)
incl landing gear	2 12 m (6 ft 11½ in)
Propeller diameter (each)	1 07 m (3 ft 6 in)

DIMENSIONS, INTERNAL:

Envelope volume	658.4 m³ (23,250 cu ft)
Ballonet volume (two, total)	144 8 m³ (5,115 cu ft)

WEIGHTS AND LOADINGS:

Weight empty	427 kg (941 lb)
Fuel (standard)	32.7 kg (72 lb)
Crew of two	154 kg (340 lb)
Payload	32 kg (70 lb)
Total gross lift	645 kg (1,423 lb)

PERFORMANCE (estimated):

Max level speed	39 kts (72 km/h, 45 mph)
Econ cruising speed	26 kts (48 km/h, 30 mph)
Pressure ceiling	2,440 m (8,000 ft)

UPDATED

UPSHIP 100-001

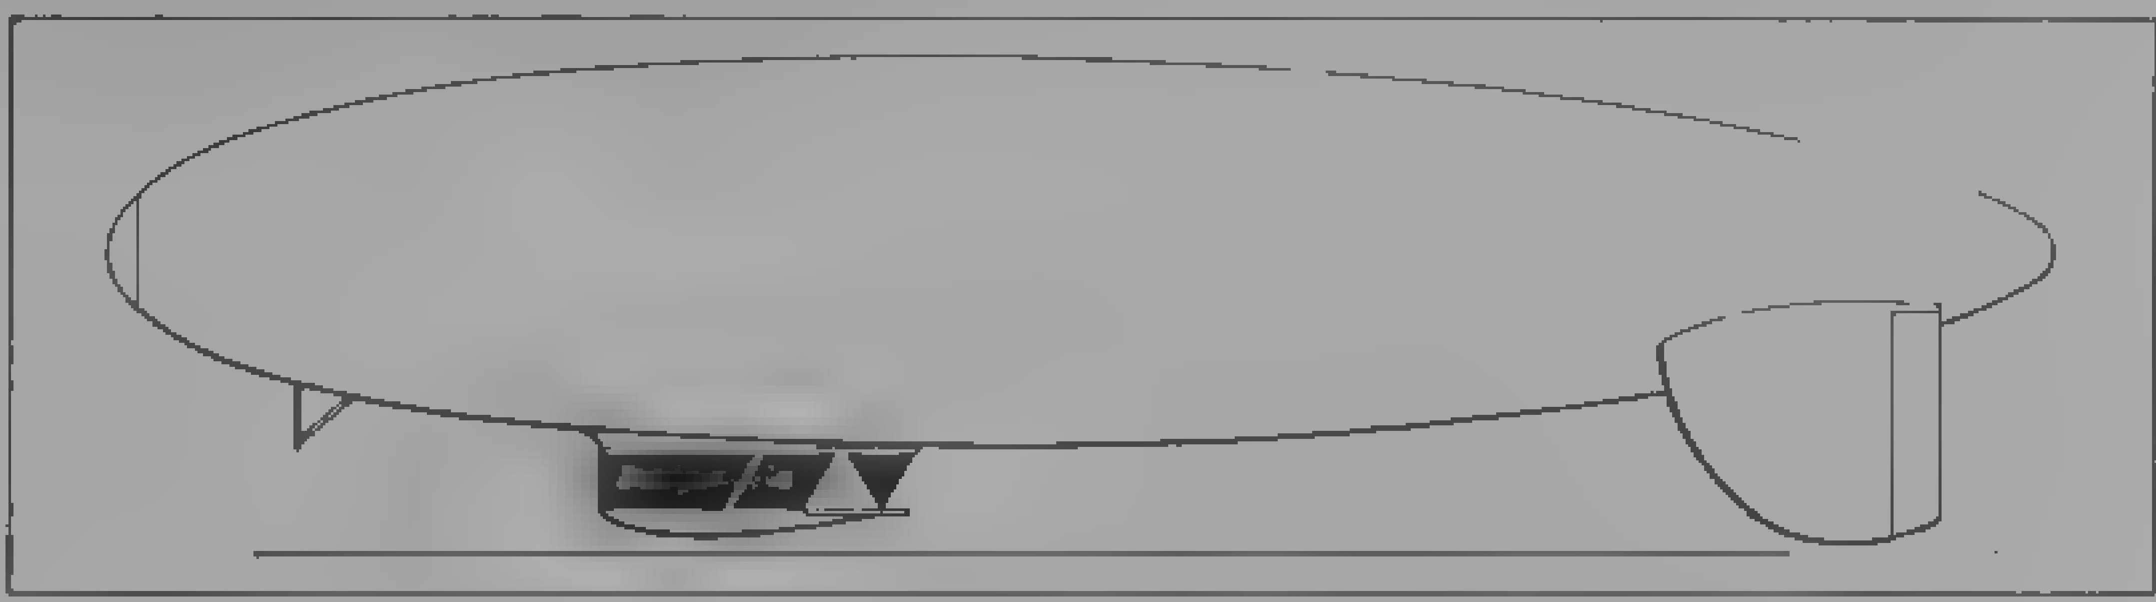
TYPE: Semi-rigid helium airship.

PROGRAMME: Design started 1989; original 750-001 (see 1992-93 *Jane's*) now enlarged as 100-001 proof-of-concept vehicle, progress in 1992 included full-scale gondola and tailfin mockups, land acquisition and further detail design work accomplished in 1993 and 1994, full-time construction of 100-00, not expected to begin before 1996, after completion of current project intended to provide necessary funding.

CUSTOMERS: Markets foreseen in tourism, advertising, scientific research, cargo, resource management, and minimum-impact logging operations, where UPships can be built and operated at competitive price.

DESIGN FEATURES: Aim is to develop helium airships able to utilise full potential of buoyant flight, semi-rigid configuration chosen as offering better low-speed control and more design flexibility than a non-rigid, simple but effective control system claimed to give design efficient control at all speeds and to eliminate major expense of need for groundcrew. Conventional-shape envelope, with inverted V tail surfaces.

FLYING CONTROLS: Pitch and yaw control by ruddervators, ballonet for pitch trim.



Preliminary drawing of the UPship 100-001 *(Jane's/Mike Keep)*

1993

STRUCTURE: Triangular-section aluminium girder keel, outer envelope of sewn polyester fabric, with three-compartment inner helium bag of Mylar film, tailfins and ruddervators have balsa and carbonfibre framework with polyester fabric covering.

POWER PLANT: Three 3.7 kW (5 hp) Honda GX 140 piston engines, each driving a mahogany propeller. Fuel capacity 66 litres (17 5 US gallons, 14.6 Imp gallons).

ACCOMMODATION: Pilot and one passenger, seated in tandem.

DIMENSIONS, EXTERNAL:

Envelope: Length overall	30.48 m (100 ft 0 in)
Max diameter	6.10 m (20 ft 0 in)
Height overall, incl gondola	7 52 m (24 ft 8 in)
Propeller diameter	1 02 m (3 ft 4 in)

DIMENSIONS, INTERNAL:

Envelope volume	620 8 m³ (21,925 cu ft)
Ballonet volume (20%)	124 17 m³ (4,385 cu ft)

WEIGHTS AND LOADINGS (approx):

Weight empty	363 kg (800 lb)
Useful lift	181 kg (400 lb)
Total lift	544 kg (1,200 lb)

PERFORMANCE (estimated):

Max level speed	29 kts (53 km/h; 33 mph)
Cruising speed, 70% power	25 kts (47 km/h, 29 mph)
Ceiling above T-O, normal	610 m (2,000 ft)
max	1,830 m (6,000 ft)
Range at cruising speed, two engines, 20% reserves	510 n miles (946 km, 588 miles)
Endurance, conditions as above	20 h
Fuel consumption (cruising speed, two engines)	2 23 litres (0 59 US gallon, 0 49 Imp gallon)/h

UPDATED

US-LTA

US LIGHTER THAN AIR CORPORATION

6040 Hangar Road, Tillamook, Oregon 97141
Telephone: 1 (503) 842 3032
Fax: 1 (503) 842 7362

Originally known as Grace Aircraft Corporation, later (1985) as US Airship Corporation, and then (April 1986) as Aerotek Corporation, came under new ownership July 1988 and renamed US Lighter Than Air Corporation. Assets acquired included prototype Aerotek USA 100 (originally Grace GAC-20) airship, now known as US-LTA 138-S. Major components of prototype built at Eugene; final assembly in former US Navy airship hangar at Tillamook.

VERIFIED

US-LTA 138-S

TYPE: Non-rigid helium airship.

PROGRAMME: Prototype made first flight 28 October 1987, FAA certification received 1990 after more than 200 hours flown, one production airship completed and flown, but lost in non-fatal crash in Manhattan, New York, on 4 July 1993; construction of second production example reportedly started in 1992.

Prototype employed 1992 and subsequently on several oceanographic missions for Naval Research Laboratory, Woods Hole Oceanographic Institute, Washington University and others, typical programme was NRL/WU research into sea-surface wind phenomena, deploying 317 kg (700 lb) AeroVironment boat-shaped rig stowed alongside gondola and lowered to about 10 m (33 ft) above water (100 m; 330 ft below airship) to collect data. Other missions have included pollution monitoring and atmospheric sampling.

CUSTOMERS: None sold, airship owned and operated by US-LTA.

DESIGN FEATURES: Conventional ellipsoid envelope with inverted Y tail surfaces, gondola also shaped as ellipsoidal hyperbola with circular end section, separated acoustically from engine compartment at rear.

FLYING CONTROLS: Two air-filled ballonets within helium compartment to compensate for variations in gas pressure and adjust in-flight trim; air supplied via ram air duct aft of propeller, with mechanically controlled valves to duct air to front or rear ballonet as required, passive pressure relief valve fitted to each ballonet and in helium compartment to control and prevent accidental envelope overpressure. Manual cable control permits controlled venting of helium or air if required. Flight control system is cable-driven and hydraulically boosted, using a conventional stick with pushrods in combination with an adjustable friction damper, hydraulic boost system and mechanical mixer for the tail surfaces. System can be flown manually in the event of hydraulic failure.

STRUCTURE: Envelope made of polyurethane coated Dacron with a non woven material laminated on the inside for bias stability; seams heat sealed inside and out, nose stiffened by 16 battens to permit higher airspeeds and distribute mooring loads. Weight of gondola supported by cables attached to two internal catenary curtains which hang from upper quarter of envelope over half of its length, side loads and thrust from gondola transmitted to envelope via gondola catenary, a fabric doubler extending away from gondola perimeter in all directions to ensure uniform load distribution to envelope. Three identical aluminium framework fins, covered with doped fabric, each fin is attached to envelope with 13 fan patches at its base and supported by three guy wires on each side.

Gondola has exterior shell of glassfibre epoxy sandwich construction with a foam core, over a welded steel tube frame. Windows of Plexiglas.

LANDING GEAR: Single-wheel gear of trailing link type, pivoting about vertical axis.

POWER PLANT: One 224 kW (300 hp) Textron Lycoming IO-540-K1A5 flat six engine, mounted aft of gondola on a 4130 steel tube frame and driving a Hartzell HC-3YR-7LF three-blade constant speed reversible-pitch pusher propeller within an annular duct. Fuel tanks at rear of gondola, combined capacity 386 litres (102 US gallons; 85 Imp gallons).

ACCOMMODATION: Seats for six persons, including crew, in pairs.

SYSTEMS: Electrical system is standard light aircraft 28 V 100 A negative ground type, powered by engine-driven alternator. While moored, a blower system is powered by a ground-based generator for automatic monitoring and control of envelope pressurisation.

AVIONICS: *Comms:* Dual nav/com radios, transponder.

Flight: VOR/ILS, Loran, ADF and marker beacon receivers.

Instrumentation: Standard instrumentation includes ASI, VSI, attitude indicator, barometric and radar altimeters, turn co-ordinator, direction gyro, magnetic compass, engine and fuel system instruments, inside and outside air temperature gauges, ballonet and helium envelope manometers, hydraulic system temperature and pressure gauges, and clock.

DIMENSIONS, EXTERNAL:

Envelope: Length overall	48.77 m (160 ft 0 in)
Max diameter	12.80 m (42 ft 0 in)
Height overall, incl gondola	17 37 m (57 ft 0 in)
Gondola: Length incl power plant	6 55 m (21 ft 6 in)
Length excl power plant	approx 5 79 m (19 ft 0 in)
Max width	approx 1 83 m (6 ft 0 in)
Max height	approx 2.74 m (9 ft 0 in)

DIMENSIONS, INTERNAL:

Envelope volume	3 908 m³ (138 000 cu ft)
Gondola: Length	4 07 m (13 ft 4¼ in)
Max width: at floor	1 65 m (5 ft 4¾ in)
at ceiling	1 77 m (5 ft 9½ in)
Max height	1 93 m (6 ft 4 in)

WEIGHTS AND LOADINGS:

Weight empty	2,660 kg (5,865 lb)
Gondola, empty	1,052 kg (2,320 lb)
Max fuel	278 kg (612 lb)
Payload with standard fuel	1 143 kg (2,520 lb)
Max T-O weight	3,804 kg (8,386 lb)

PERFORMANCE:

Max level speed	56 kts (104 km/h, 65 mph)
Demonstrated service ceiling	2,745 m (9 000 ft)
Range with max fuel, cruising at 30 kts (56 km/h, 35 mph)	434 n miles (804 km; 500 miles)
Endurance with max fuel, speed as above	14 h 30 min

WAI

WESTINGHOUSE AIRSHIPS INC

PO Box 17319 (MS A255), Baltimore, Maryland 21203-7319
Telephone: 1 (410) 765 6812
Fax: 1 (410) 765 2950
CHAIRMAN: William Adams
ODM PROGRAMME MANAGER: James R Fisher
VICE-PRESIDENT, BUSINESS DEVELOPMENT:
E Judson Brandreth Jr
PUBLIC RELATIONS: Ann Grizzel

Following collapse of Airship Industries (UK) Ltd in 1990, Westinghouse Electric Corporation acquired that company's 50 per cent share in their WAI joint venture company together with Sentinel 1000/5000 programmes and military/defence applications of AI's smaller airships. In late 1993 WAI purchased from Slingsby Aviation Ltd of the UK the design and manufacturing rights for the Skyship 500/500HL/600, and is now FAA and CAA type certificate holder for these airships. WAI has a construction facility at Weeksville, North Carolina, and a design office at Luton, UK.

UPDATED

WAI SKYSHIP 600

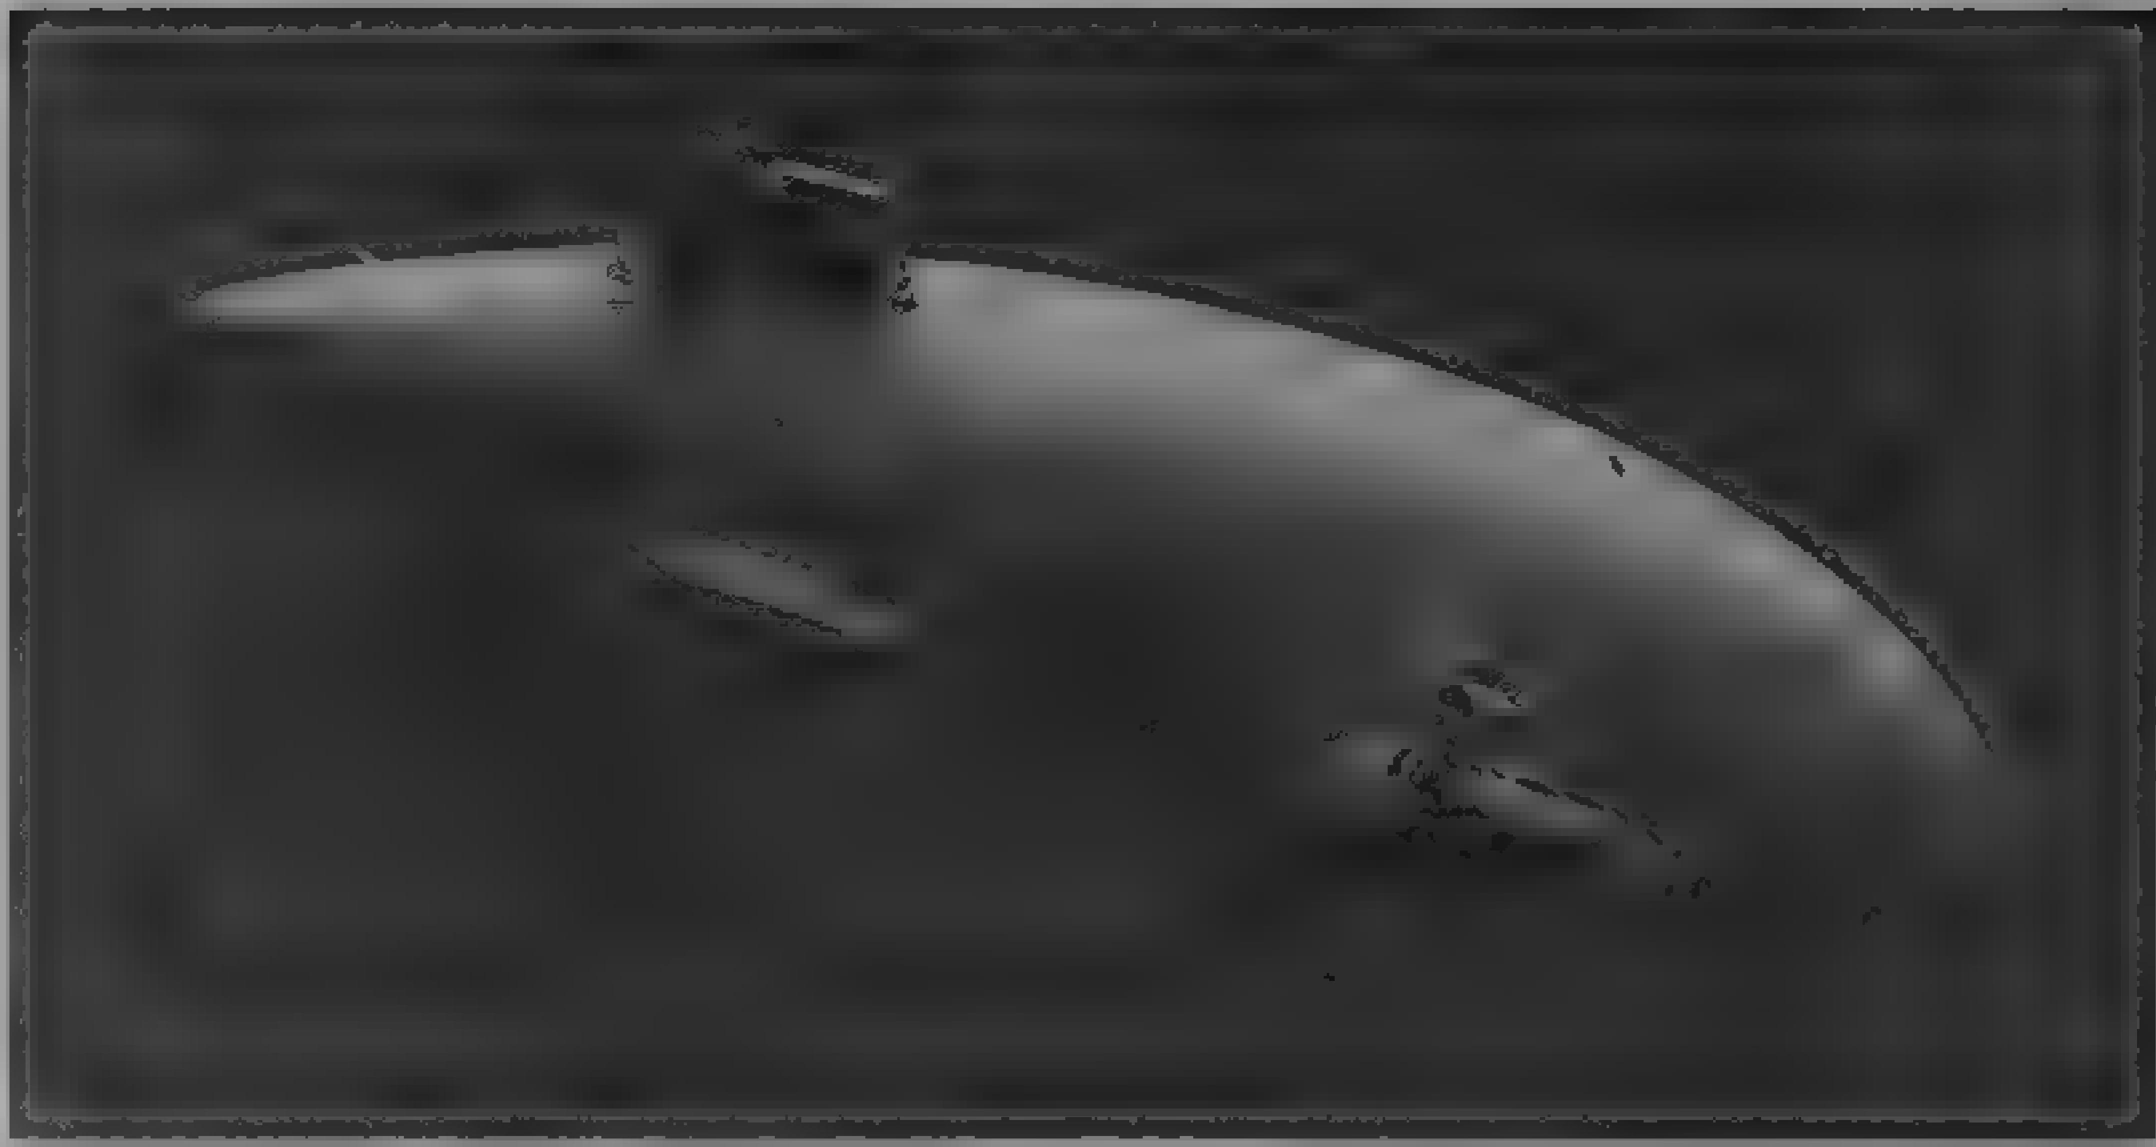
TYPE: Non-rigid helium airship.

PROGRAMME: First flight 6 March 1984; special category C of A awarded by UK CAA 1 September 1984, aerial work certification received Spring 1986; full passenger-carrying C of A 8 January 1987, initiating Skycruise aerial sightseeing service over London, San Francisco, Munich and Sydney in 1987, and over Paris in 1988. First US FAA type certificate awarded to an airship for civil use was issued to Skyship 600 May 1989. During 1990 Farnborough Air Show a Skyship 600 (G-SKSC) with two 227 litre (60 US gallon, 50 Imp gallon) long-endurance fuel tanks made unrefuelled flight of 50 hours 15 minutes, sufficient fuel for a further 20 hours remained at end of flight. Production completed. See 1994-95 and earlier *Jane's* for description.

CUSTOMERS: Total of nine built, of which three operating in early 1995 with UK MoD (c/n 01), Airship Management Services, USA (07) and Japan Airship Services (06).

Skyship 600-01 (G-SKSC) purchased by UK MoD in June 1993 and made first flight under this ownership 15 September 1993 after receiving new envelope manufactured by Aerazur, France. MoD flight trials at A&AEE Boscombe Down followed by handover to British Army (as ZH762) early 1995 to consider potential future uses will continue until mid-1996.

UPDATED



Skyship 600-01 in current operation by the British Army ***(Christopher F. Foss)***

1995

WAI SENTINEL 1000

TYPE: Non-rigid helium airship.

PROGRAMME: Initiated by Airship Industries (UK) and taken over after collapse by WAI; first flight 26 June 1991, first flight with production-standard fly-by-light system, 11 April 1992; ARPA-funded UHF communications relay demonstration October 1992 involving cruiser USS *Anzio* and destroyer USS *Conolly*; at certification under FAR Pt 21 for single-pilot operation on 22 October 1993, airship had logged 320 hours in 97 flights. Made first 24 hour unrefuelled flight August 1994, using only 443 of its 931 litres fuel load (117 of 246 US gallons, 97.4 of 205 Imp gallons). Over 400 hours flown by start of 1995.

Note: Sentinel 1000 destroyed in hangar fire at Weeksville, 2 August 1995.

DESIGN FEATURES: Derivative of Skyship 600 (see 1994-95 *Jane's*), larger envelope (one-half linear scale model of Sentinel 5000 and currently the largest non-rigid airship flying), higher performance engines, upgraded avionics, new tricycle landing gear; substantial increase in payload, improved flight control through autopilot/autostabilisation elements of YEZ-2A flight control system. Official trials vehicle for US Navy YEZ-2A programme.

Tested January 1995 with new, British-designed bow thruster device which enables pilot to approach and moor airship to standard mast without groundcrew assistance.

FLYING CONTROLS: GEC-Marconi optical fibre (fly-by-light) flight control system. Vectored thrust propulsion (see Power Plant), differential inflation of ballonets for static fore and aft trim, cable-operated rudders and elevators, each with spring tab.

STRUCTURE: Envelope has outer skin of Tedlar, impervious to ultraviolet radiation, and heat-bonded seams. Parabolic arch load curtains, carrying multiple Kevlar 29 gondola suspension cables. Nose structure is domed disc, moulded from GFRP and carrying fitting by which airship is moored to its mast. Four GFRP tailfins, in X configuration, each attached to envelope at root and braced by wires on each side; all four surfaces constructed from interlocking ribs and spars of Fibrelam with GFRP skins.

One piece moulded gondola of Kevlar reinforced plastics, with flooring and bulkheads of Fibrelam panels; those forming engine compartment at rear are faced with titanium for fire protection.

LANDING GEAR: Non-retractable tricycle type; single wheels.

POWER PLANT: Two 190 kW (255 hp) Porsche 930/67 six-cylinder air-cooled and turbocharged piston engines, mutually mounted in rear of gondola. Each drives a ducted propulsor consisting of a Hoffmann five-blade reversible-pitch propeller within an annular duct of carbonfibre-reinforced GFRP. Each propulsor can be rotated about its pylon attachment to gondola through an arc of 210°, 90° upward and 120° downward, vectored thrust thus providing both V/STOL and in-flight hovering ability. Porsche engines to be replaced during 1995 by 224 kW (300 shp) Zoche ZO 02A eight-cylinder air-cooled two-stroke diesel radials.

Fuel tank at rear of engine compartment. Auxiliary fuel tanks optional.

ACCOMMODATION: Two flight deck positions, but single-pilot operation. Main cabin area has ample space for relief pilot, mission equipment, two or three mission specialists, plus bunks, toilet and galleys for long-endurance missions.

SYSTEMS: 28 V electrical system, supplied by engine-driven alternators. Pneumatic control of valves that maintain envelope pressure.

AVIONICS: *Flight:* Three-axis autopilot, with sidestick controller.

Mission: Can include low light TV camera with 2-200 mm zoom lens; IR sensors, maritime surveillance radar; communications equipment, datalink. Radar's 7 m (30 ft) wide antenna can detect 3 m² (32.3 sq ft) targets at ranges of more than 135 n miles (250 km, 155 miles).

DIMENSIONS, EXTERNAL:
Envelope: Length overall — 67.50 m (221 ft 5½ in)
Max diameter — 16.70 m (54 ft 9½ in)
Height overall (incl gondola and landing gear) — 20.20 m (66 ft 3¼ in)
Gondola: Length overall — 11.67 m (38 ft 3¼ in)
Max width — 2.56 m (8 ft 4¾ in)
Propeller diameter — 1.68 m (5 ft 6¼ in)

DIMENSIONS, INTERNAL:
Envelope volume — 10,700 m³ (377,868 cu ft)
Ballonet volume (total) — 2,405 m³ (84,932 cu ft)
Gondola: Cabin length — 6.89 m (22 ft 7¼ in)
Cabin height — 1.92 m (6 ft 3½ in)
Cabin width — 2.60 m (8 ft 6½ in)
Cabin floor area (usable) — 12.00 m² (130.0 sq ft)

WEIGHTS AND LOADINGS (design):
Max usable fuel — 1,133 kg (2,498 lb)
Gross disposable load — 4,200 kg (9,260 lb)

PERFORMANCE:
Max continuous speed — 55 kts (102 km/h, 63 mph)
Cruising speed (70% power) — 48 kts (89 km/h, 55 mph)
Endurance at 35 kts (65 km/h, 40 mph) with two 454 litre (120 US gallon, 100 Imp gallon) long-endurance tanks — 35 h

UPDATED

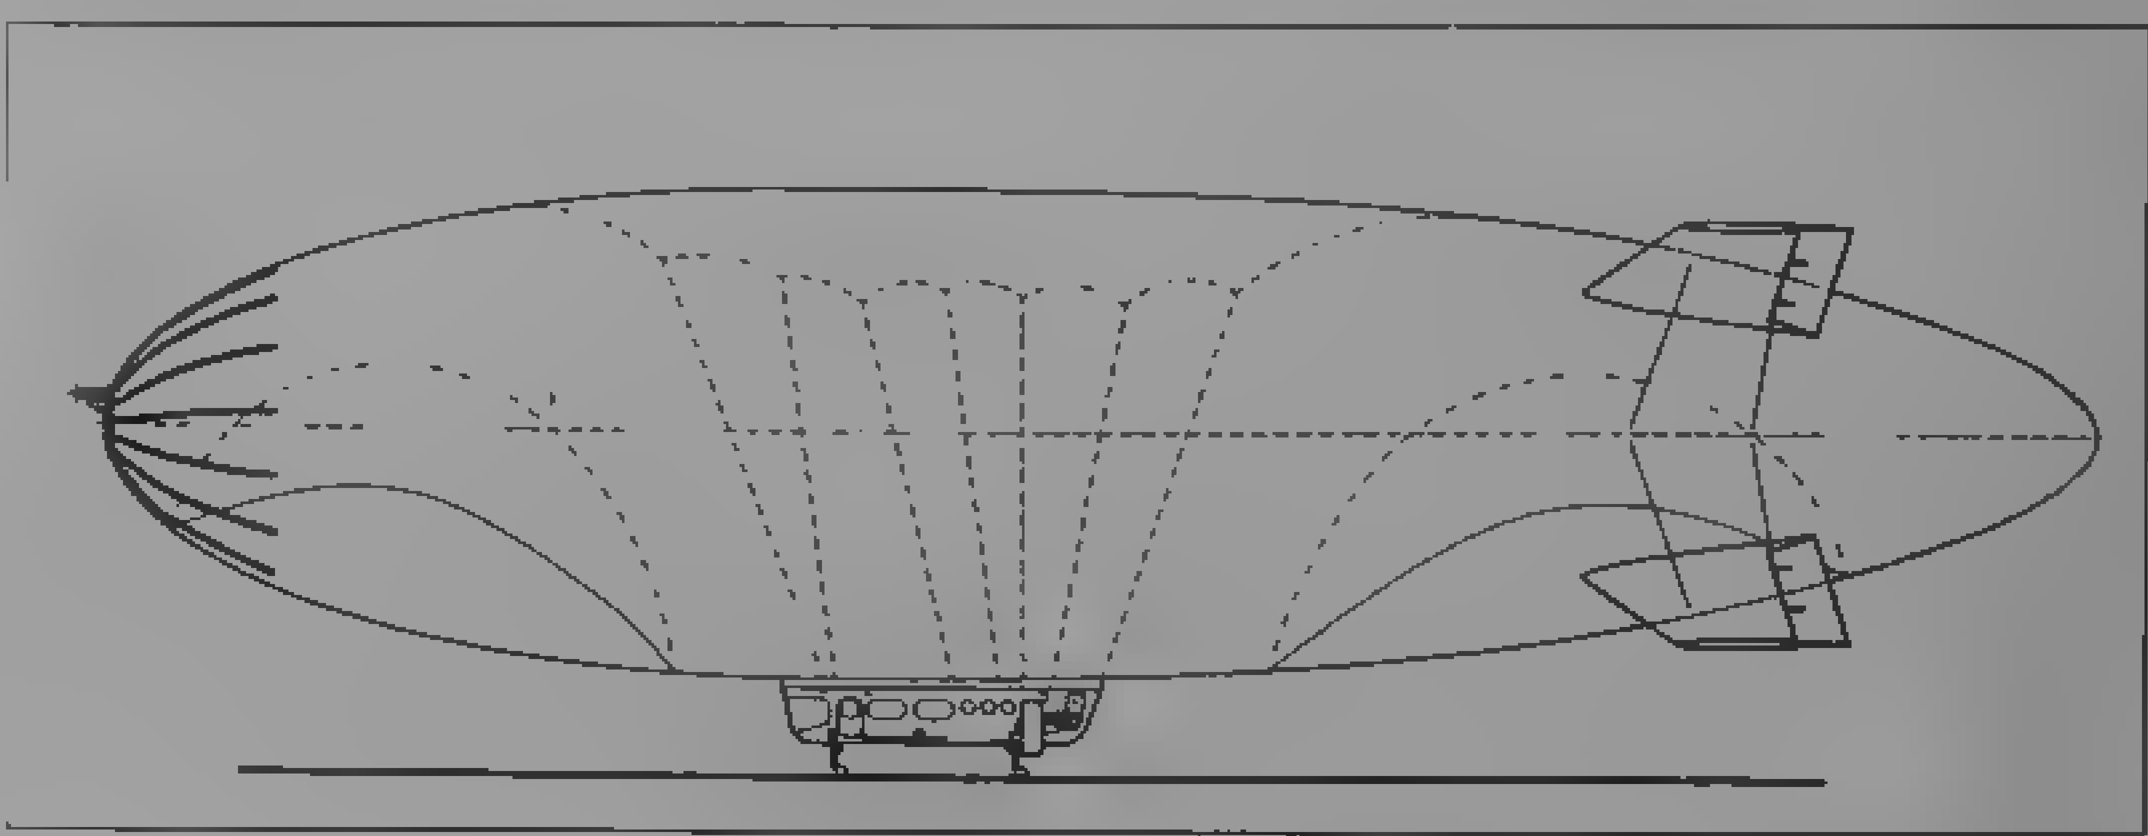
WAI SENTINEL 1240

TYPE: Non-rigid helium airship.

PROGRAMME: Being developed to meet requirements of specific military and government agencies requiring higher

Westinghouse Airships 10,700 m³ (377,868 cu ft) Sentinel 1000 non-rigid

1994



General arrangement of the WAI Sentinel 1240

1994

disposable loads at altitude than existing range of small airships

DESIGN FEATURES: Development of Sentinel 1000 with larger envelope and uprated engines.

FLYING CONTROLS: GEC-Marconi optical fibre (fly-by-light) flight control system. Bow thruster for ground and low speed handling.

STRUCTURE: Generally similar to Sentinel 1000

POWER PLANT: Two 235 kW (315 hp) Porsche 930/67/WAI/1 six-cylinder turbocharged air-cooled engines or 224 kW (300 hp) eight-cylinder Zoche (ZO-02A) air-cooled two-stroke diesel engines. Fuel capacity as for Sentinel 1000.

DIMENSIONS, EXTERNAL

Envelope: Length overall	72.50 m (237 ft 10¼ in)
Max diameter	18.00 m (59 ft 0¾ in)
Height overall (incl gondola and landing gear)	21.60 m (70 ft 10¼ in)
Gondola	as for Sentinel 1000
Propeller diameter	1.68 m (5 ft 6¼ in)

DIMENSIONS, INTERNAL

Envelope volume	12,400 m³ (437,902 cu ft)
Ballonet volume (total)	3,720 m³ (131,371 cu ft)
Gondola	as for Sentinel 1000

WEIGHTS AND LOADINGS (design)

Max usable fuel	1,133 kg (2,498 lb)
Max gross disposable load	5,730 kg (12,632 lb)

PERFORMANCE (estimated)

Max continuous speed	52 kts (96 km/h, 60 mph)
Cruising speed (70% power)	48 kts (89 km/h, 55 mph)
Endurance at 35 kts (65 km/h, 40 mph) with two 454 litre (120 US gallon; 100 Imp gallon) long-endurance tanks	32 h

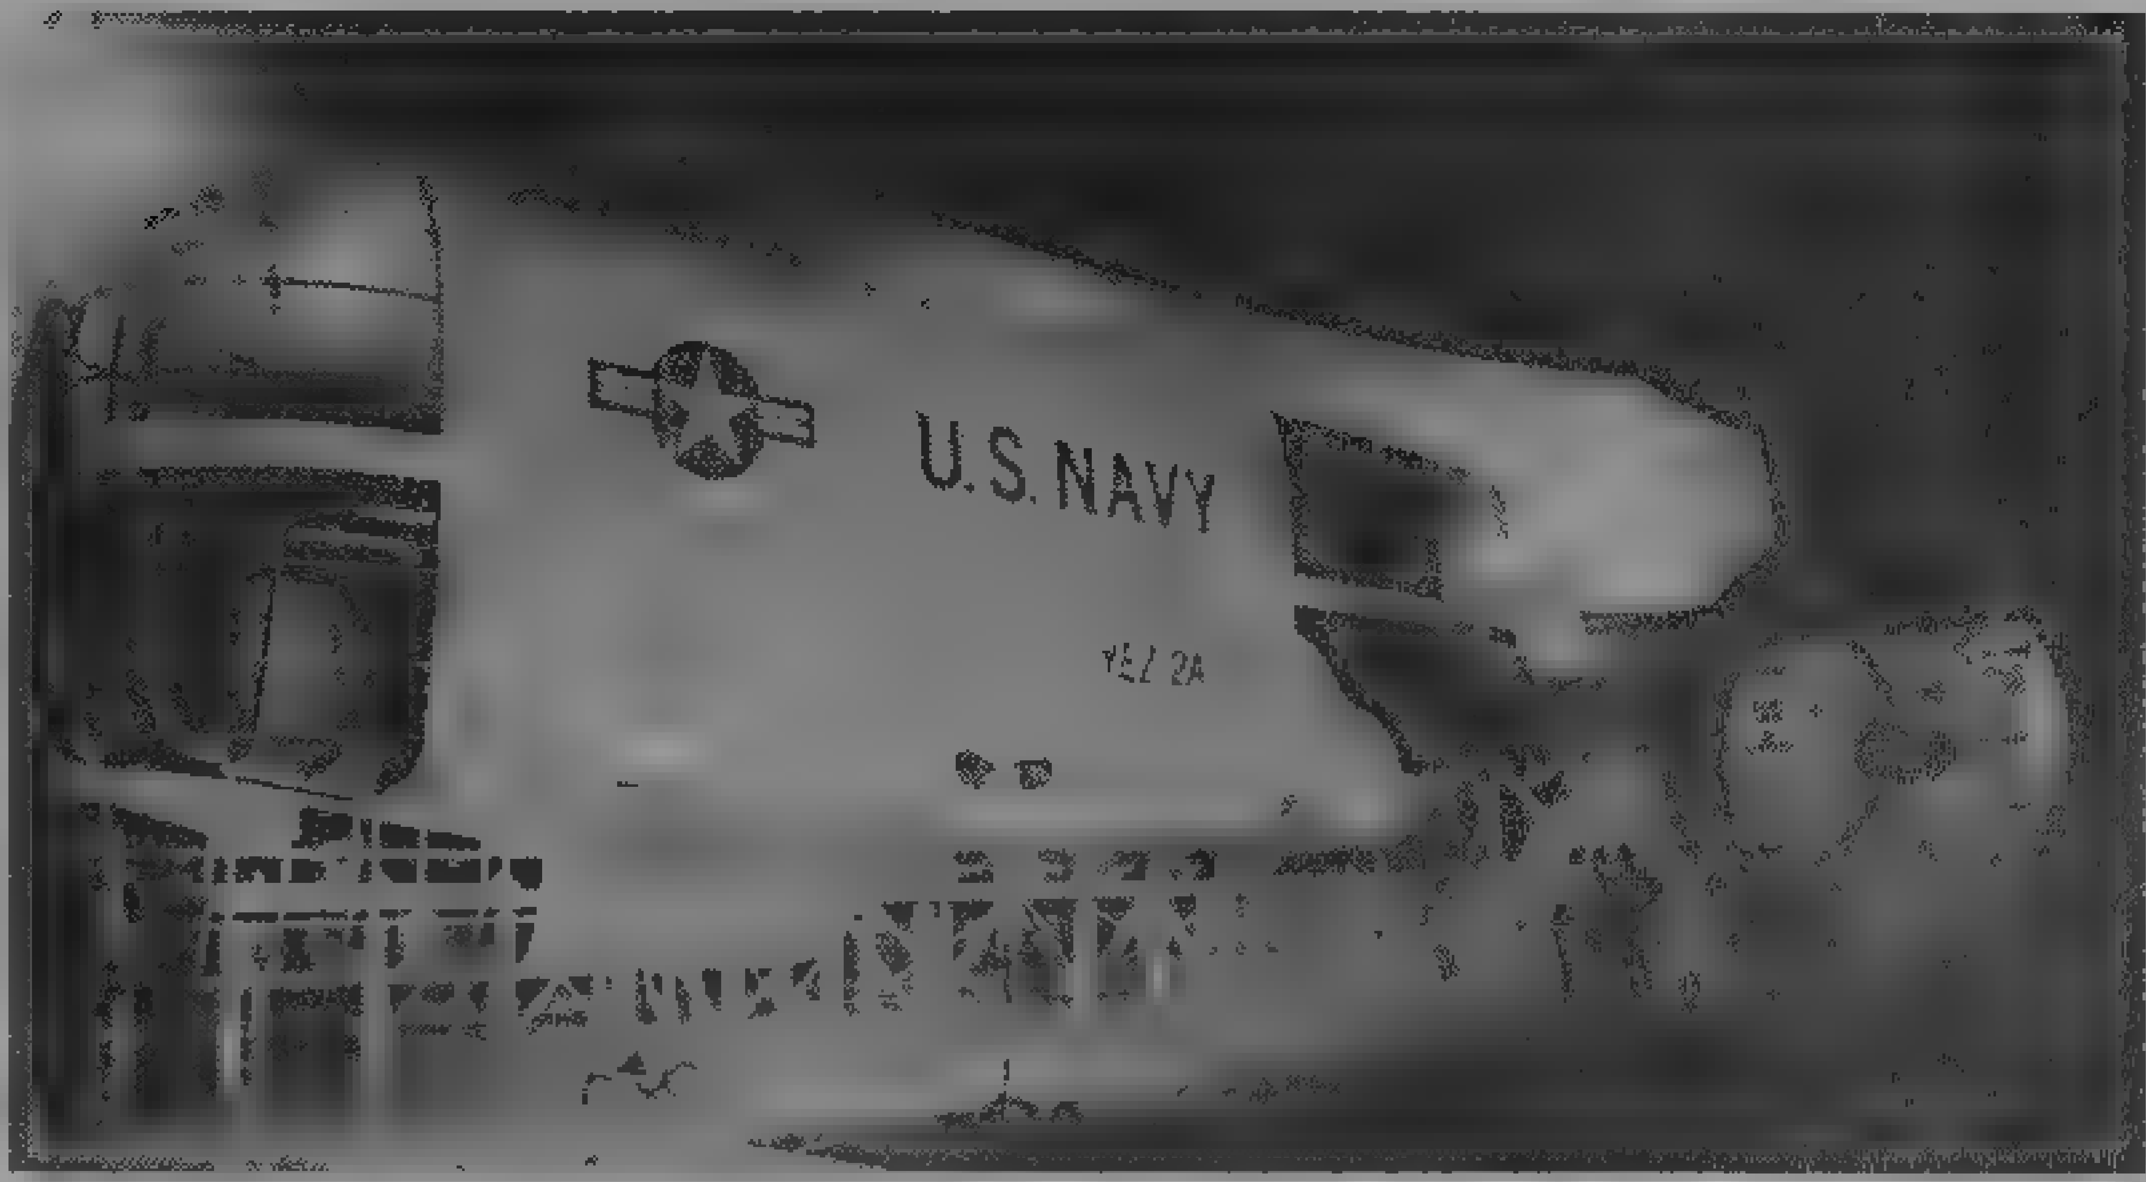
UPDATED

WAI SENTINEL 5000

US Navy designation: YEZ-2A

TYPE: AEW non-rigid helium airship

PROGRAMME: Naval Airship Program (NAP) initiated by Naval Air Systems Command 1985 to investigate suitability of airships in AEW role; early history of programme in previous editions of *Jane's*; $168.9 million contract to WAI June 1987, selecting Sentinel 5000 as basis for operational development model (ODM) airship. In October 1988, NAP evolved from an exclusively US Navy programme to one by Defense Advanced Research Projects Agency (DARPA); since FY90 has been funded under DoD's Air Defense Initiative. Programme still focuses primarily on demonstration of long-range, long-endurance surveillance system capable of seeing low-observable sea-skimming cruise missiles; other potential applications include OTH (over-the-horizon) targeting, drug surveillance and interdiction functions.



Ground test vehicle for the YEZ-2A Sentinel 5000 gondola and propulsion system, at Weeksville, North Carolina

1991

Original Navy requirement was for independent airborne early warning system capable of operating with surface attack groups anywhere in the world. ODM vehicle will have unrefuelled endurance of two to three days; by refuelling and replenishing from surface units within a task force, a mission capability of some 30 days is intended. Designated USN missions are surveillance and targeting, AEW and communications. ARPA contract, ending May 1994, included critical design review of ODM; recently renewed USN interest hoping to produce funding to build ODM for first flight 1996 and production start in 1998.

CUSTOMERS: US Navy; original NASC contract included options for up to five more Sentinels after ODM.

DESIGN FEATURES: Will be largest non-rigid ever built; general configuration similar to Sentinel 1000, but much larger with considerably different gondola; four tailfins in X configuration.

FLYING CONTROLS: GEC-Marconi computer-controlled, optically signalled fly-by-light flight control system, using two MIL-STD-1750A standard computers and a MIL-STD-1553B databus, providing redundant fail-safe actuation of movable tail surfaces (two on each tailfin) via fibre optic signalling, automatic stability and good handling characteristics throughout flight regime, hands-off autopilot control for cruising, hovering and mooring, and automatic speed control.

STRUCTURE: Envelope made of single ply Dacron weave material, laminated with Tedlar and Mylar and bonded with Hytrel.

POWER PLANT: Unpressurised engine room aft contains CODAG (combined diesel and gas turbine) propulsion system, comprising internally mounted pair of 1,544 kW (2,070 hp) ducted propulsion CRM diesel units, with thrust vectoring, plus a 1,394 kW (1,870 shp) General Electric CT7-9 turboprop, mounted on gondola centreline at rear, to provide additional power when higher dash speed required. Substantial winching bay between engine room aft and pressurised accommodation section forward, from where refuelling, re-storing and personnel transfers will be conducted through large opening in base of gondola.

ACCOMMODATION: Crew of 10 to 15 in multideck pressurised gondola. Upper deck provides living accommodation for crew, including double cabins, showers, separate wardrobe, galley and small gymnasium. Mission avionics, control information centre, galley, replenishment stores and refuelling equipment on lower main deck. Below these two is smaller flight deck containing flight controls and instrumentation.

DIMENSIONS, EXTERNAL

Envelope: Length overall	129.54 m (425 ft 0 in)
Max diameter	32.00 m (105 ft 0 in)
Height overall, incl gondola and landing gear	46.33 m (152 ft 0 in)
Gondola: Length overall	25.91 m (85 ft 0 in)
Max width	5.08 m (16 ft 8 in)
Max height	7.32 m (24 ft 0 in)

DIMENSIONS, INTERNAL

Envelope volume	70,792 m³ (2,500,000 cu ft)

WEIGHTS AND LOADINGS

Max usable fuel	17,690 kg (39,000 lb)
Max gross disposable load	27,375 kg (60,350 lb)

PERFORMANCE (estimated)

Max level speed (three engines)	88 kts (163 km/h, 101 mph)
Operating height range	S/L to 3,050 m (10,000 ft)
Pressure ceiling	4,270 m (14,000 ft)
Max unrefuelled endurance at 40 kts (74 km/h, 46 mph) at 1,525 m (5,000 ft)	more than 60 h
Mission capability	30 days

UPDATED

General configuration of the YEZ-2A Sentinel 5000

1991

AERO-ENGINES

This section includes all available details of engines of the aircraft which are featured in this annual. Engines of homebuilts, and propulsion systems used purely for UAVs, targets, missiles and spaceflight are no longer included. To power its LSA aircraft this company has designed the **Jabiru 1600** direct drive horizontally opposed four-stroke air-cooled piston engine, in production at A$10,800, with fixed price overhauls

CYLINDERS: Bore 88.0 mm (3.465 in). Stroke 66.0 mm (2.598 in). Capacity 1,606 cc (248.9 cu in³)

DIMENSIONS: Length overall 532 mm (20.9 in)
Width 574 mm (22.6 in)
Height 472 mm (18.6 in)

WEIGHT, DRY (equipped): 54.0 kg (119.0 lb)

RATING: Max 45 kW (60 hp) at 3,300 rpm

PRODUCT MANAGER: Josef Fürlinger

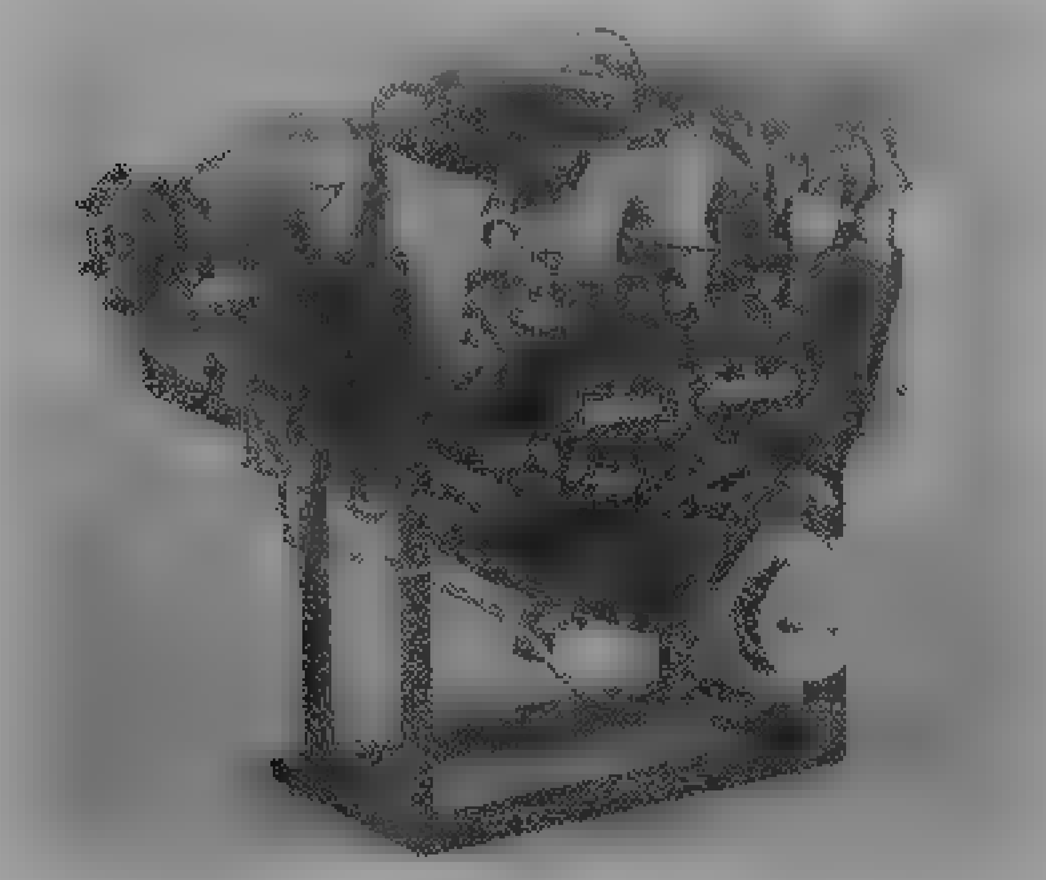
This company is one of the world's largest producers of light piston engines. In the past 10 years it has sold 60,000 engines for aircraft propulsion. The types described below are used in a growing range of kitbuilt and factory-built light aircraft, an increasing proportion of which are being officially certificated under the European JAR Very Light Aircraft and US FAA Primary Aircraft regulations

UPDATED

ROTAX 912 A

Specially designed for use in aircraft, added to the range in 1988. 912 A3 certificated with hydraulic governor for constant-speed propeller in mid-1993. FAR 33 end 1994

TYPE: Four-cylinder four-stroke piston engine, certificated to FAR 22. Dry sump forced lubrication. Electric starter. Reduction gear 2.273:1



Rotax 914 four-cylinder piston engine
1994

CYLINDERS: Air-cooled barrels, liquid-cooled heads. Bore 79.5 mm (3.13 in). Stroke 61.0 mm (2.40 in). Capacity 1,211.2 cc (73.912 cu in). Compression ratio 9.0

IGNITION: Breakerless dual-condenser discharger

OPTIONAL EQUIPMENT: Vacuum pump, external 13.5 V 40 A alternator, engine mount, oil and coolant radiators, air filter and engine instruments

FUEL: Unleaded minimum RON 90 or Avgas 100 LL

WEIGHT, DRY:
With carburettors, intake silencer and exhaust system
912 A2 and A4 60.1 kg (132.5 lb)
912 A3 62.8 kg (138.4 lb)

RATING: T-O 59.6 kW (81 hp) at 5,800 rpm
Cruise 58.0 kW (78 hp) at 5,500 rpm

UPDATED

ROTAX 914 DCDI

Uprated version of 912, to be certified to FAR 33 by end 1995 on RON 95 or Avgas 100LL.

WEIGHT, DRY:
With gearbox, two CD carburettors, intake silencer and exhaust 66.2 kg (145.9 lb)

RATING: Max 5 min 85.7 kW (115 hp) at 5,800 rpm

UPDATED

ROTAX 618UL DCDI

Based on 582 (see next) with stroke increased to 68.0 mm (2.68 in) and fitted with adjustable exhaust and electronic dual ignition

WEIGHT, DRY:
With gearbox, carburettors, intake silencer and exhaust 52.8 kg (116.4 lb)

RATING: 55.0 kW (73.8 hp)

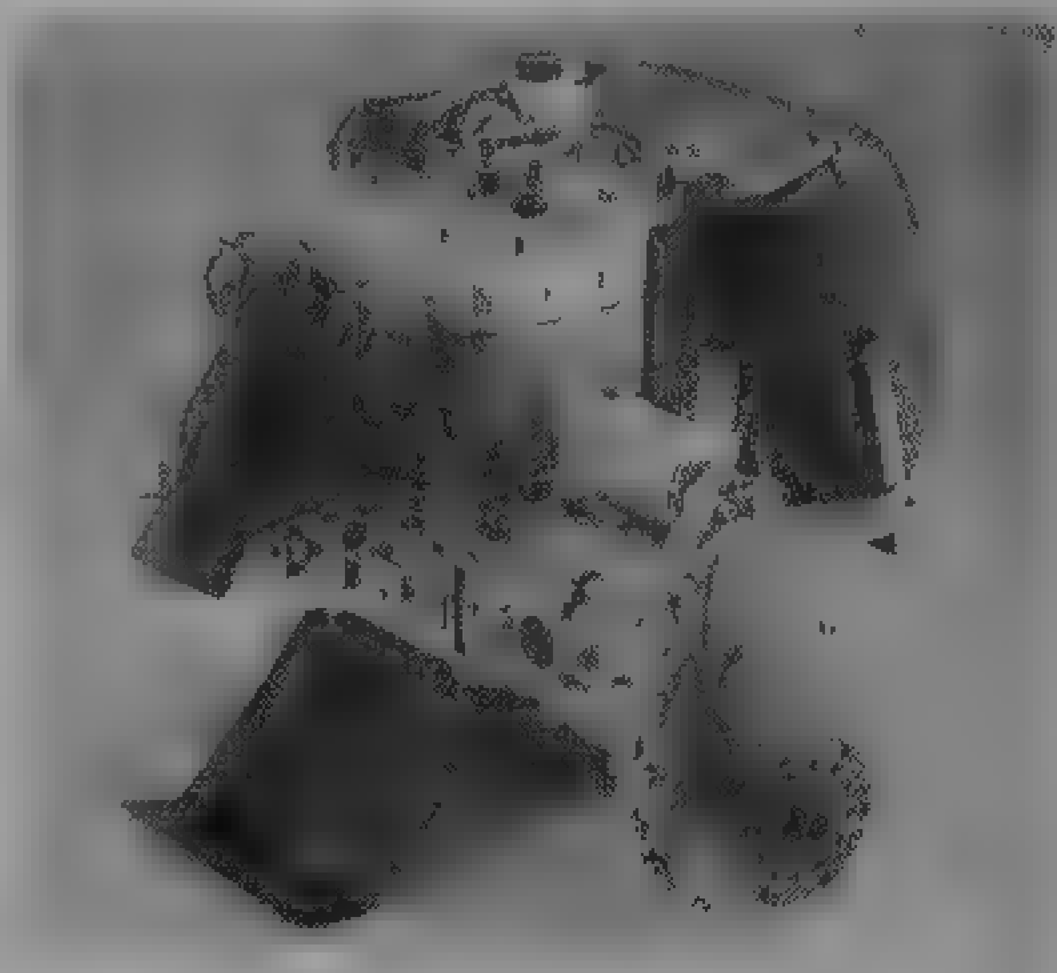
VERIFIED

ROTAX 582

Non-certified engine for very light aircraft

TYPE: Two-cylinder two-stroke rotary-valve piston engine

CYLINDERS: In-line in water-cooled block. Bore 76.0 mm (2.99 in). Stroke 64.0 mm (2.52 in). Capacity 580.7 cc (35.44 cu in)



Rotax 618 two-cylinder piston engine
1994

IGNITION: Dual breakerless

WEIGHT, DRY:
With carburettors and exhaust system 33.8 kg (74.5 lb)

RATING: 47.0 kW (63 hp) at 6,500 rpm

VERIFIED

ROTAX 503

Non-certified engine for very light aircraft. Available with or without cooling fan, with choice of reduction gears and with single (type 1V) or twin (2V) carburettors

TYPE: Two-cylinder two-stroke piston engine.

CYLINDERS: Air-cooled. Bore 72.0 mm (2.84 in). Stroke 61.0 mm (2.40 in). Capacity 496.7 cc (30.31 cu in)

OPTIONAL EQUIPMENT: Includes 155 W generator, electric starter, filters and silencers

WEIGHT, DRY:
Basic engine, with cooling fan 31.4 kg (69.2 lb)

RATING: 503UL 1V 34.0 kW (45.6 hp) at 6,500 rpm
503UL 2V 37.0 kW (49.5 hp) at 6,500 rpm

Previously known as FN Moteurs, this company began jet engine production in 1949. Today's activity is equally distributed in three sectors: fighter engine production, medium/large transport and space propulsion production, and depot maintenance for air forces. Major programmes are:

Production and assembly of P&W F100 fan and engine core modules, and for assembly and test of complete engines.

Responsible for four major parts of GE F110: fan discs 1 and 3, HP turbine disc, and fan stator case.

Member of consortium (RR, MTU, SNECMA, TA) producing Tyne 21 and 22 engines for Atlantique and Transall, with a 9.5 per cent share.

After having produced parts for the JT8D and JT9D-7R4 TA signed a partnership agreement with Pratt & Whitney for a 3 per cent share in the PW4000 series. TA is responsible for the HP compressor case and various other components.

Since 1972, in association with SNECMA, TA has developed and produced the lubrication modules of all CFM56 versions. TA has increased its participation up to 10 per cent of the SNECMA share (5 per cent overall) in the -5A and -5C versions, to power respectively the Airbus A320 and A340. TA is responsible for the lubrication and shop modules and other stator or rotor parts. TA is also performing endurance testing of complete engines.

TA has signed a co-operation agreement with Turbomeca, developed several critical parts of the TM 333.

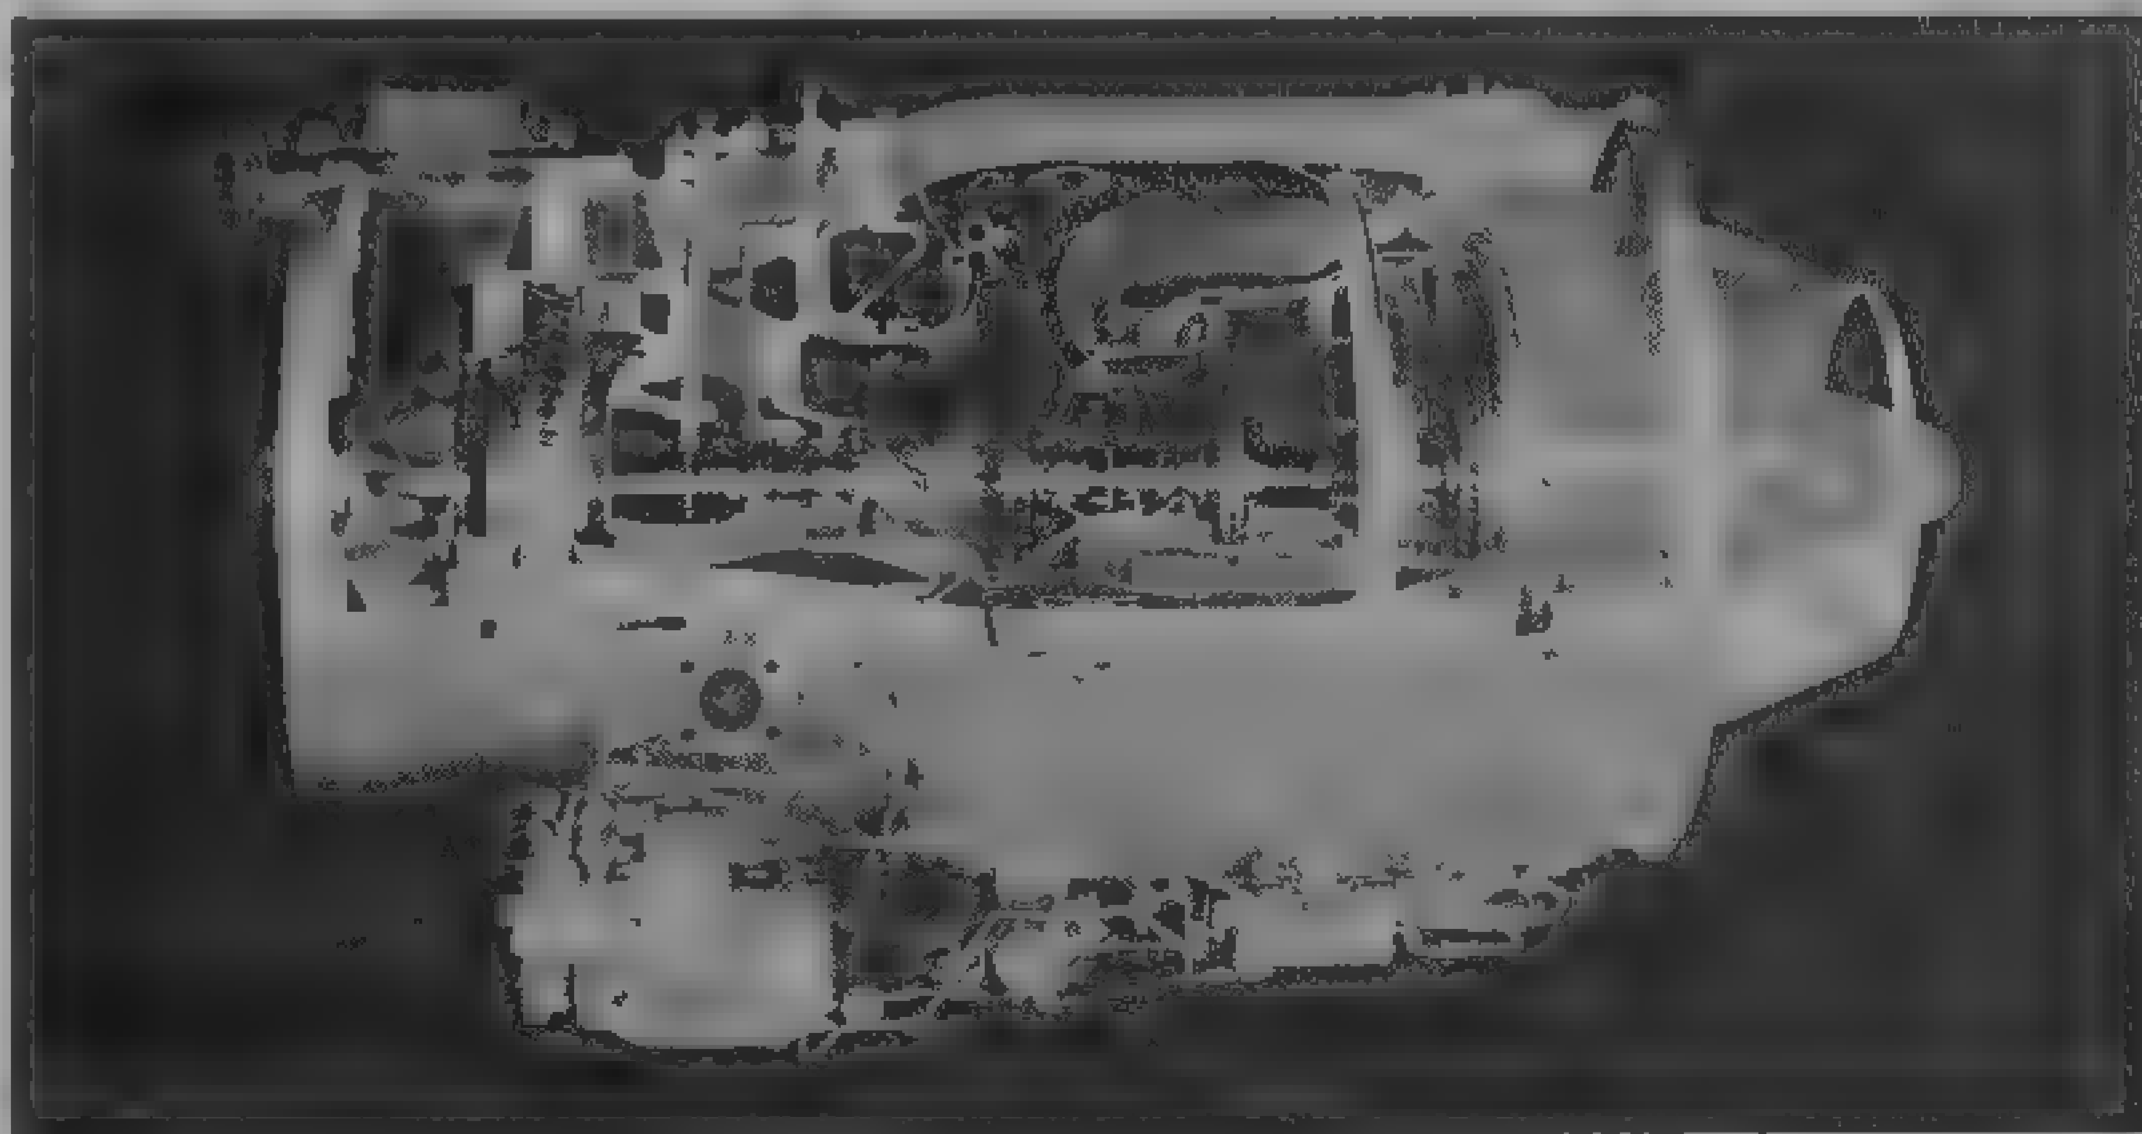
Pratt & Whitney Canada is owned 97 per cent by United Technologies Corporation, Connecticut, USA, and is the P&W Group member responsible for engines for general aviation and regional transport. Approximately 7,300 employees. By 1 January 1995 P&WC had delivered 40,164 engines. Link with Klimov (Russia) June 1993.

UPDATED



Cutaway P&WC JT15D-5 turbofan *1987*

P&WC JT15D

Designed to power business aircraft, small transports and training aircraft, the JT15D first ran on 23 September 1967. Initial application was the twin-engined Cessna Citation. Up to 1976 Cessna used the **JT15D-1**. Late that year it announced the Citation I powered by the **JT15D-1A** and the Citation II powered by the **JT15D-4**. During 1983 the D-1A was replaced by the **D-1B**.

Other twin-engined business jets powered by the JT15D-4 are the Aerospatiale Corvette and Mitsubishi Diamond I. TBO is 3,500 hours for the JT15D-1/D-1A, and 3,000 hours for the JT15D-4.

JT15D-4B. Altitude optimised variant for the Citation S/II.

JT15D-4C. Oil system for sustained inverted flight, and an electronic fuel control. Powers Agusta S.211.

JT15D-4D. Flat rated for improved hot and high performance for the Diamond 1A.

JT15D-5. Growth version. A new fan with higher pressure ratio and flow, plus an improved boost stage and HP compressor, are combined to produce 25 per cent more altitude cruise thrust, with a 3 per cent improvement in sfc. HP turbine blades and electronic fuel control are also improved. Powers Cessna T-47A, Diamond II and Beechjet.

JT15D-5A. Hydromechanical fuel control. Selected for Citation V.

JT15D-5B. Dash 5A modified to suit Beech T-1A Jayhawk.

JT15D-5C. Oil system for sustained inverted flight. Powers Agusta S.211A.

JT15D-5D. New fan with integrally bladed rotor and HP turbine with single-crystal blades. Selected for Citation V Ultra.

By the fourth quarter of 1994 total deliveries of all JT15D engines had reached 4,866. Operating time totalled 17,733,214 hours.

The following description relates to the JT15D-1B, except where indicated.

TYPE: Two-shaft turbofan.

FAN: Single-stage axial with 28 solid titanium blades with part span shrouds. Mass flow, 34 kg (75 lb)/s; bypass ratio about 3.3; fan pressure ratio 1.5.

COMPRESSOR: Single-stage titanium centrifugal. Overall pressure ratio about 10:1. (D-4 and D-5 have axial boost stage between fan and compressor.)

COMBUSTION CHAMBER: Annular reverse flow type. Spark igniters at 5 and 7 o'clock (viewed from rear).

FUEL SYSTEM: Pump delivering at 44.8 bars (650 lb/sq in)

D -4 -4B -4D -5A have DP-L2 hydromechanical control, 4C -5 and 5C have JFC 118 or 119 electronic system.

FUEL GRADES: JP-1, JP-4, JP-5 to CPW 204

TURBINE: Single-stage HP with 71 solid blades, two-stage LP first stage cast integrally with 61 blades and second carrying 55 blades in fir tree roots

LUBRICATION SYSTEM: Integral oil system, with gear type pump delivering at up to 5.52 bars (80 lb/sq in). Capacity, 9.0 litres (2.4 US gallons, 2.0 Imp gallons).

OIL SPECIFICATION: PWA521 Type II, CPW 202

STARTING: Air turbine starter or electric starter/generator

DIMENSIONS:

Diameter: JT15D-1	691 mm (27.2 in)
JT15D-4	686 mm (27.0 in)
Length overall: JT15D-1	1,506 mm (59.3 in)
JT15D-4	1,600 mm (63.0 in)

WEIGHT, DRY:

JT15D-1,	232.5 kg (514 lb)
JT15D-1A, -1B	235 kg (519 lb)
JT15D-4	253 kg (557 lb)
JT15D-4B	258 kg (568 lb)
JT15D-4C	261 kg (575 lb)
JT15D-4D	255 kg (560 lb)
JT15D-5, -5A	291.5 kg (632 lb)
JT15D-5B	291.7 kg (643 lb)
JT15D-5C	302 kg (665 lb)
JT15D-5D	284.4 kg (627 lb)

PERFORMANCE RATINGS:

T-O: JT15D-1, -1A, -1B	9.79 kN (2,200 lb st)
JT15D-4, -4B, -4C, -4D	11.12 kN (2,500 lb st)
JT15D-5, -5A, -5B	12.9 kN (2,900 lb st)
JT15D-5C	14.19 kN (3,190 lb st)
JT15D-5D	13.54 kN (3,045 lb st)
Max continuous:	
JT15D-1, -1A, -1B	9.3 kN (2,090 lb st)
JT15D-4, -4B, -4C, -4D	10.56 kN (2,375 lb st)
JT15D-5, -5A, -5B	12.9 kN (2,900 lb st)
JT15D-5C	14.19 kN (3,190 lb st)
JT15D-5D	13.54 kN (3,045 lb st)

SPECIFIC FUEL CONSUMPTION (T-O):

JT15D-1, -1A, -1B	15.30 mg/Ns (0.540 lb/h/lb st)
JT15D-4, -4B, -4C, -4D	15.92 mg/Ns (0.562 lb/h/lb st)
JT15D-5, -5A, 5B	15.61 mg/Ns (0.551 lb/h/lb st)
JT15D-5C	16.23 mg/Ns (0.573 lb/h/lb st)
JT15D-5D	15.86 mg/Ns (0.550 lb/h/lb st)

UPDATED

P&WC PW300

This high-BPR turbofan has been optimised for long-range business jets. MTU is a 25 per cent risk sharing partner responsible for the LP turbine. Principal versions are:

PW305A. T-O rating 20.81 kN (4,679 lb st) to 33.9°C. Selected for Learjet 60.

PW305B. T-O rating 23.42 kN (5,266 lb st) to 23.5°C. Selected for Hawker 1000.

PW306A. Larger fan, improved hot-end materials, lobed propulsive nozzle. T-O rating 25.35 kN (5,700 lb st) to 31.7°C. To be certificated January 1996. Selected for Astra Galaxy.

The following description applies to all PW300 series engines.

TYPE: Two-shaft turbofan.

FAN: Single-stage, overhung ahead of front bearing. Pointed (PW305) or round (PW306) rotating spinner. Bypass ratio (S/L, T-O): PW305A/B 4.3, PW306A 4.5.

COMPRESSOR: Four axial stages followed by one centrifugal. Core pressure ratio: PW305A/B, 12.9, PW306A, 12.7.

COMBUSTION CHAMBER: Annular, fed around periphery by ring of separate curved piped ducting air from diffuser case of centrifugal compressor.

Cutaway P&WC PW300 turbofan

1993

Cutaway P&WC PW500 turbofan

1995

FUEL GRADES: JP-1, JP-4, JP-5 to CPW 204

CONTROL SYSTEM: Dowty and Smiths Industries full authority digital, with dual channels.

HP TURBINE: Two axial stages, the PW305 having air-cooled blades for the first stage, and the PW306 having air cooled blades for both stages.

LP TURBINE: Three axial stages joined via centre stage disc to fan shaft. Two main shaft bearings.

LUBRICATION SYSTEM: Integral oil system with gear-type pump. Capacity 8 litres (2.11 US gallons; 1.76 Imp gallons).

OIL SPECIFICATION: CPW 202

STARTING: Electric starter/generator

DIMENSIONS (estimated):

Diameter	927.1 mm (36.5 in)
Length	2,070.1 mm (81.5 in)

WEIGHT, DRY (basic):

PW305A/B	450 kg (993 lb)
PW306A	473 kg (1,043 lb)

PERFORMANCE RATINGS (ISA):

T-O, Static: see under model listing	
Cruise at Mach 0.8 at 12,200 m (40,000 ft):	
PW305A	5.14 kN (1,155 lb)
PW305B	5.14 kN (1,155 lb)
PW306A	5.91 kN (1,329 lb)

SPECIFIC FUEL CONSUMPTION:

T-O rating:	
PW305A	10.99 mg/Ns (0.388 lb/h/lb st)
PW305B	11.07 mg/Ns (0.391 lb/h/lb st)
PW306A	11.16 mg/Ns (0.394 lb/h/lb st)
Cruise at Mach 0.8 at 12,200 m (40,000 ft):	
PW305A	19.29 mg/Ns (0.681 lb/h/lb)
PW305B	19.29 mg/Ns (0.681 lb/h/lb)
PW306A	19.23 mg/Ns (0.679 lb/h/lb)

VERIFIED

P&WC PW500

This high BPR turbofan will be rated in the bracket 13.34 to 17.79 kN (3,000 to 4,000 lb st). Compared with the JT15D it will offer 12-15 per cent lower sfc. By 1995 two versions had found customers.

PW530A. Basic two-shaft engine with two axial plus one centrifugal compressor stages. LP spool has integrally bladed single-stage fan driven by two-stage turbine. Hydromechanical control system. Selected for Cessna Citation Bravo. First engine test October 1993.

PW545A. Fan diameter increased 101.6 mm (4.0 in), integrally bladed boost stage added, third stage added to LP turbine, single-crystal HP turbine blades. Electronic control. Selected for Cessna Citation Excel. To run 1996.

UPDATED

P&WC PW100

The PW100 is a free turbine turboprop consisting of turbomachine and reduction gearbox modules connected by a torque-measuring driveshaft and integrated structural intake case.

Flight development of the PW100 began in February 1982. Principal versions are as follows:

PW118. T-O rated at 1,411 ekW, 1,342 kW (1,892 ehp, 1,800 shp) at 1,300 propeller rpm to 33°C. Selected for EMB-120 Brasilia. Certificated March 1986.

PW118A. T-O rated at 1,411 ekW, 1,342 kW (1,892 ehp, 1,800 shp) at 1,300 propeller rpm to 42°. Selected for EMB-120 Brasilia. Certificated June 1987.

PW119B. T-O rated at 1,702 ekW; 1,626 kW (2,282 ehp, 2,180 shp) at 1,300 propeller rpm to 23°C. Selected for Dornier 328. Certificated June 1993.

PW120. T-O rated at 1,566 ekW; 1,491 kW (2,100 ehp, 2,000 shp) at 1,200 propeller rpm to 27.7°C. Selected for Aérospatiale/Alenia ATR 42 and Snow SA-210TA. Certificated December 1983.

PW120A. T-O rated at 1,566 ekW, 1,491 kW (2,100 ehp, 2,000 shp) at 1,200 propeller rpm to 29°C. Selected for Dash 8-100. Certificated September 1984.

PW121. T-O rated at 1,679 ekW; 1,603 kW (2,252 ehp, 2,150 shp) at 1,200 propeller rpm to 26°C. Selected for Dash 8-100 and ATR 42. Certificated February 1987.

PW123. T-O rated at 1,866 ekW, 1,775 kW (2,502 ehp, 2,380 shp) at 1,200 propeller rpm to 35°C. Selected for Dash 8-300. Certificated June 1987.

PW123AF. T-O rated at 1,866 ekW, 1,775 kW (2,502 ehp, 2,380 shp) at 1,200 propeller rpm to 35°C. Selected for CL-215/415. Certificated February 1990.

PW123B. T-O rated at 1,958 ekW, 1,864 kW (2,626 ehp, 2,500 shp) at 1,200 propeller rpm to 30°C. Selected for Dash 8-300. Certificated November 1991.

PW123C. T-O rated at 1,687 ekW, 1,603 kW (2,262 ehp, 2,150 shp) at 1,200 propeller rpm to 25.5°C. Selected for Dash 8-200.

PW123D. T-O rated at 1,687 ekW, 1,603 kW (2,262 ehp, 2,150 shp) at 1,200 propeller rpm to 45.0°C. Selected for Dash 8-200.

PW123E. T-O rated at 1,866 ekW, 1,775 kW (2,502 ehp, 2,380 shp) to 40.6°C. Selected for Dash 8-315.

PW124B. PW124 with PW123 turbomachinery to suit four-blade propeller at 1,200 rpm, same rating. Selected for ATR 72. Certificated May 1988.

PW125B. Growth PW124 with T-O rating of 1,958 ekW; 1,864 kW (2,626 ehp; 2,500 shp) at 1,200 propeller rpm to 30°C. Powers Fokker 50. Certificated May 1987.

PW126. Growth engine, maximum contingency 2,078 ekW; 1,978 kW (2,786 ehp, 2,653 shp) at 1,200 propeller rpm to 32.4°C. Powers Jetstream ATP. Certificated May 1987.

PW126A. Growth 124A with T-O rating of 2,084 ekW, 1,985 kW (2,795 ehp; 2,662 shp) at 1,200 propeller rpm to 29.2°C. Powers Jetstream ATP. Certificated June 1989.

PW127 T-O rated at 2,148 ekW, 2,051 kW (2,880 ehp; 2,750 shp) at 1,200 propeller rpm to 31.6°C. Selected for ATR 72 and ATR 42-500.

PW127A. T-O rated at 1,864 kW (2,500 ehp). Selected for An-140.

PW127B T-O rated at 2,147 ekW, 2,051 kW (2,880 ehp, 2,750 shp) at 1,200 propeller rpm to 30°C. Selected for hot and high performance Fokker 50.

PW127C T-O rated at 2,148 ekW, 2,051 kW (2,880 ehp, 2,750 shp) at 1,200 propeller rpm to 30.2°C. Selected for XAC Y7-200A.

PW127D T-O rated at 2,148 ekW, 2,051 kW (2,880 ehp, 2,750 shp) at 1,200 propeller rpm to 33.0°C. Powers Jetstream 61. Certificated January 1994.

PW127E. T-O rated at 2,148 ekW, 1,790 kW (2,880 ehp, 2,400 shp) at 1,200 propeller rpm to 45°C. Selected for ATR 42-500.

PW150 Growth version. Selected for Dash 8-400.

By September 1994 deliveries of PW100 engines had reached 3,276. Operating time reached 23,431,400 hours.

The following description applies to all PW100 series engines.

TYPE: Free turbine turboprop.

PROPELLER DRIVE: Twin-layshaft gearbox with propeller shaft offset above turbomachine. Maximum propeller speed 1,200 rpm.

AIR INTAKE: S-bend duct. A secondary duct forms a flowing bypass to prevent foreign object ingestion.

COMPRESSOR: Two centrifugal impellers in series, each driven by its own turbine. Air guided through ring of curved pipes from LP diffuser to HP entry.

COMBUSTION CHAMBER: Annular reverse flow type, with 14 air blast fuel nozzles around periphery and two spark igniters.

FUEL SYSTEM: Hydromechanical control and electronic power management.

FUEL GRADES: JP-1, JP-4, JP-5 to PWA Spec 522.

TURBINES: Single-stage HP with 47 air-cooled blades. Single-stage LP with 53 solid blades. Two-stage power turbine, first with 68 blades and second with 74, all with shrouded tips.

ACCESSORY DRIVES: Pads driven by HP compressor for starter/generator, hydromechanical fuel control and hand turning. Pads on reduction gearbox for alternator, hydraulic pump, propeller control module, overspeed governor and electric aux hairy pump. Electric torque signal and auto power augmentation.

LUBRICATION SYSTEM: One pressure pump and two scavenge pumps, all driven off HP rotor. Integral tank, capacity 9.44 litres (2.5 US gallons, 2.08 Imp gallons).

OIL SPECIFICATION: CPW 202 or PWA521 Type II.

STARTING: Electric starter/generator.

DIMENSIONS:

Length: PW118, 118A, 119B	2,057 mm (81 in)
others	2,134 mm (84 in)
Width: PW118-121	635 mm (25 in)
others	660 mm (26 in)
Height: PW118-121	787 mm (31 in)
others	838 mm (33 in)

WEIGHT, DRY:

PW118	391 kg (861 lb)
PW118A	394 kg (866 lb)
PW119B	415.5 kg (916 lb)
PW120	417.8 kg (921 lb)
PW120A	423 kg (933 lb)
PW121	425 kg (936 lb)

others	481 kg (1,060 lb)

PERFORMANCE RATINGS (S/L, static):

T-O: See under model listings

Max cruise:

PW118	1,188 ekW, 1,128 kW (1,593 ehp; 1,513 shp) at 1,300 rpm to 20°C
PW118A	1,188 ekW, 1,127 kW (1,593 ehp; 1,513 shp) at 1,300 rpm to 29.4°C
PW119B	1,339 ekW, 1,267 kW (1,796 ehp; 1,699 shp) at 1,300 rpm to 22°C
PW120	1,271 ekW, 1,207 kW (1,704 ehp; 1,619 shp) at 1,200 rpm to 15°C
PW120A	1,296 ekW, 1,231 kW (1,738 ehp; 1,651 shp) at 1,200 rpm to 15°C
PW121	1,330 ekW, 1,268 kW (1,784 ehp; 1,700 shp) at 1,200 rpm to 15°C
PW123, 123B	1,593 ekW, 1,514 kW (2,136 ehp; 2,030 shp) at 1,200 rpm to 22.2°C
PW123C, 123D	1,532 ekW, 1,454 kW (2,054 ehp, 1,950 shp) at 1,200 rpm to 26.1°C
PW124B	1,593 ekW, 1,514 kW (2,136 ehp; 2,030 shp) at 1,200 rpm to 22.2°C
PW125B	1,623 ekW, 1,513 kW (2,203 ehp, 2,029 shp) at 1,200 rpm to 22.2°C
PW126	1,635 ekW, 1,553 kW (2,193 ehp, 2,083 shp) at 1,200 rpm to 26.3°C
PW126A	1,632 ekW, 1,553 kW (2,189 ehp, 2,083 shp) at 1,200 rpm to 27.2°C
PW127	1,667 ekW, 1,591 kW (2,236 ehp, 2,134 shp) at 1,200 rpm to 22.7°C
PW127B	1,424 ekW, 1,351 kW (1,911 ehp, 1,812 shp) at 1,200 rpm to 34.7°C
PW127C	1,667 ekW, 1,589 kW (2,237 ehp; 2,132 shp) at 1,200 rpm to 20.5°C
PW127D	1,667 ekW, 1,589 kW (2,237 ehp; 2,132 shp) at 1,200 rpm to 24.7°C

SPECIFIC FUEL CONSUMPTION:

T-O rating:

PW118	84.2 µg/J (0.498 lb/h/ehp)
PW118A	85.2 µg/J (0.504 lb/h/ehp)
PW119B	82.8 µg/J (0.490 lb/h/ehp)
PW120, 120A	82.0 µg/J (0.485 lb/h/ehp)

Cutaway P&WC PW100 turboprop

1987

P&WC PT6A

US military designations: T74 (separate entry) **and T101** (PT6A-45R)

The PT6A is a free turbine turboprop, built in many versions since November 1959. By late 1994 a total of 31,326 had logged over 168 million hours (190 million including turboshafts) with 5,460 customers. Several versions are to be built under licence by Klimov of St Petersburg, designated PT6K.

Current versions of the PT6A are as follows:

PT6A-11. Flat rated at 394 ekW, 373 kW (528 ehp, 500 shp) at 2,200 propeller rpm to 42°C. Piper Cheyenne I and IA, T-1040.

PT6A-11AG. Flat rated at 394 ekW, 373 kW (528 ehp, 500 shp) at 2,200 propeller rpm to 42°C. Can use diesel fuel. Ayres Turbo-Thrush, Turbo Ag-Cat and Weatherly 620 TP.

PT6A-112. Flat rated at 394 ekW, 373 kW (528 ehp, 500 shp) at 1,900 propeller rpm to 56°C. Cessna Conquest I, Reims-Cessna F 406 Caravan II.

PT6A-114. Flat rated at 471 ekW, 447 kW (632 ehp, 600 shp) at 1,900 propeller rpm to 54.4°C. Cessna Caravan I with single exhaust.

PT6A-114A. Flat rated at 529 ekW, 503 kW (709 ehp, 675 shp) at 1,900 propeller rpm to 46°C. Cessna Caravan 208B.

PT6A-15AG. Flat rated at 533 ekW; 507 kW (715 ehp, 680 shp) at 2,200 propeller rpm to 22°C. Can use diesel fuel. Ayres Turbo-Thrush, Frakes Turbo-Cat, Turbo Ag-Cat D and Air Tractor AT-402/502.

PT6A-21. Flat rated at 432.5 ekW, 410 kW (580 ehp, 550 shp) at 2,200 propeller rpm to 33°C. Mates A-27 power unit with A-20A gearbox. Beechcraft King Air C90.

PT6A-25. Flat rated at 432.5 ekW, 410 kW (580 ehp, 550 shp) at 2,200 propeller rpm to 33°C. Oil system for sustained inverted flight and Beechcraft T-34C.

PT6A-25A. Some castings of magnesium alloy instead of aluminium alloy. Pilatus PC-7 and NAC Firecracker.

PT6A-25C. Flat rated at 584 ekW, 559 kW (783 ehp, 750 shp) at 2,200 propeller rpm to 31°C. A-25 with A-34 hot end and A-27 first-stage reduction gearing. Embraer EMB-312 and Pilatus PC-7 Mk II.

PT6A-27. Flat rated at 553 ekW, 507 kW (715 ehp, 680 shp) at 2,200 propeller rpm to 22°C, attained by increase in mass flow, at lower turbine temperatures than in PT6A-20. Hamilton Westwind II/III (Beech 18) conversions, Beechcraft 99 and 99A, and U-21A and U-21D (as T74-CP-700/702). DHC-6 Twin Otter 300, Pilatus/Fairchild Industries PC-6/B2-H2 Turbo-Porter, Frakes Aviation (Grumman) Mallard conversion, Let L 410A Turbolet, Saunders ST-27A conversion, Embraer EMB-110 Bandeirante (early) and Harbin Y-12 II.

PT6A-28. Similar to PT6A-27, this has an additional cruise rating of 486 ekW (652 ehp) available to 21°C and maximum cruise up to 33°C. Beechcraft King Air E90 and A100, and 99A, Piper Cheyenne II and Embraer Xingu I.

PT6A-34. Flat rated at 584 ekW, 559 kW (783 ehp, 750 shp) at 2,200 propeller rpm to 31°C, this version has air-cooled nozzle guide vanes. IAI 102/201 Arava, Saunders ST-28, Frakes Aviation (Grumman) Mallard conversion, Embraer EMB-110P1/P2 and EMB-111.

PT6A-34B. Aluminium alloy replaces magnesium in major castings. Beechcraft T-44A.

PT6A-34AG. Agricultural, certificated on diesel fuel. Frakes conversion of Ag-Cat and Ayres Turbo-Thrush, Turbo Ag-Cat, Air Tractor AT-402/502/503A and Croplease Fieldmaster.

PT6A-135. Flat rated at 587 ekW, 559 kW (787 ehp, 750 shp) at 1,900 rpm. Changed drive ratio to reduce noise, higher cycle temperatures. Beech F90, Embraer 121A Xingu II, Piper Cheyenne IIXL, and Schafer Comanchero/Comanchero 750 conversions.

PT6A-135A. Higher thermodynamic ratings. Beech F90-1, Isravlation ST-50 and Dornier Composite Seasta.

PT6A-36. Flat rated at 586 ekW, 559 kW (786 ehp, 750 shp) at 2,200 rpm to 36°C. Similar to -34 but higher rating. IAI 101B/202 Arava and Beechcraft C99.

PT6A-41. Higher mass flow, air-cooled nozzle guide vanes and two-stage free turbine. T-O rating of 673 ekW, 634 kW (903 ehp; 850 shp) at 2,000 propeller rpm, to 41°C. Thermodynamic power 812 ekW (1,089 ehp). Beechcraft Super King Air 200 and C-12, and Piper Cheyenne III.

PT6A-41AG. For agricultural aviation. Frakes Turbo-Cat and Turbo Ag-Cat.

PT6A-42. A-41 with increase in cruise performance. Beechcraft Super King Air B200.

PT6A-45A. A-41 with gearbox to transmit higher powers at reduced speeds. Rated at 916 ekW, 875 kW (1,229 ehp, 1,173 shp) at 1,700 rpm to 8°C, or to 21°C with water injection. Shorts 330 and Mohawk 298.

PT6A-45B. A-45A with increased water injection.

PT6A-45R. A-45B with reserve power rating and deleted water system.

T101-CP-100. A-45R for Shorts C-23A.

PT6A-50. A-41 with higher ratio reduction gear for quieter operation. T-O 875.5 ekW, 835 kW (1,174 ehp, 1,120 shp) with water at 1,210 propeller rpm up to 34°C. DHC-7.

PT6A-60A. A-45B with jet flap intake and increased mass flow for high-altitude cruise. Rated at 830 ekW, 783 kW (1,113 ehp, 1,050 shp) at 1,700 rpm to 25°C. Beech Super King Air 300.

PT6A-61. A-60 gas generator matched with A-41 power section with 2,000 rpm gearbox. T-O rating 673 ekW, 634 kW (903 ehp, 850 shp) to 46°C. Cheyenne IIIA.

PT6A-62. Flat rated at 708 kW (949 shp). Pilatus PC-9 and PZL Orlik.

PT6A-64. A-67 gas generator with A-61 gearbox. Flat rated at 522 kW (700 shp) at 2,000 rpm to 63.5°C. TBM 700.

PT6A-65B. A-65R without reserve rating. Flat rated at 875.5 ekW, 820 kW (1,174 ehp, 1,100 shp) at 1,700 rpm to 51°C. Beechcraft 1900 and C-12J, PZL M 28 (An-28PT) and Beriev Be-32.

PT6A-65R. A-45R with four-stage compressor with jet flap intake, fuel control and fuel dump. Improved hot end and exhaust duct. Reserve power 1,087 ekW, 1,026 kW (1,459 ehp, 1,376 shp) at 1,700 rpm to 28°C. Alternative T-O at 975 ekW, 917 kW (1,308 ehp, 1,230 shp) at 1,700 rpm to 24°C. Shorts 360.

PT6A-65AG. Ag/firefighting version of -65. T-O rating 969 kW (1,300 shp) to 21°C. Ayres Turbo Thrush, Air Tractor AT-802 and 802A and Croplease Firemaster.

PT6A-65AR. Reserve power 1,125 ekW, 1,062 kW (1,509 ehp, 1,424 shp) at 1,700 rpm to 27.7°C. Shorts 360 and AMI DC-3.

PT6A-66. Flat rated at 674 ekW, 534 kW (905 ehp, 850 shp) at 2,000 rpm to 62.2°C. Myasishchev M-102 and Piaggio Avanti with opposed rotation gearbox.

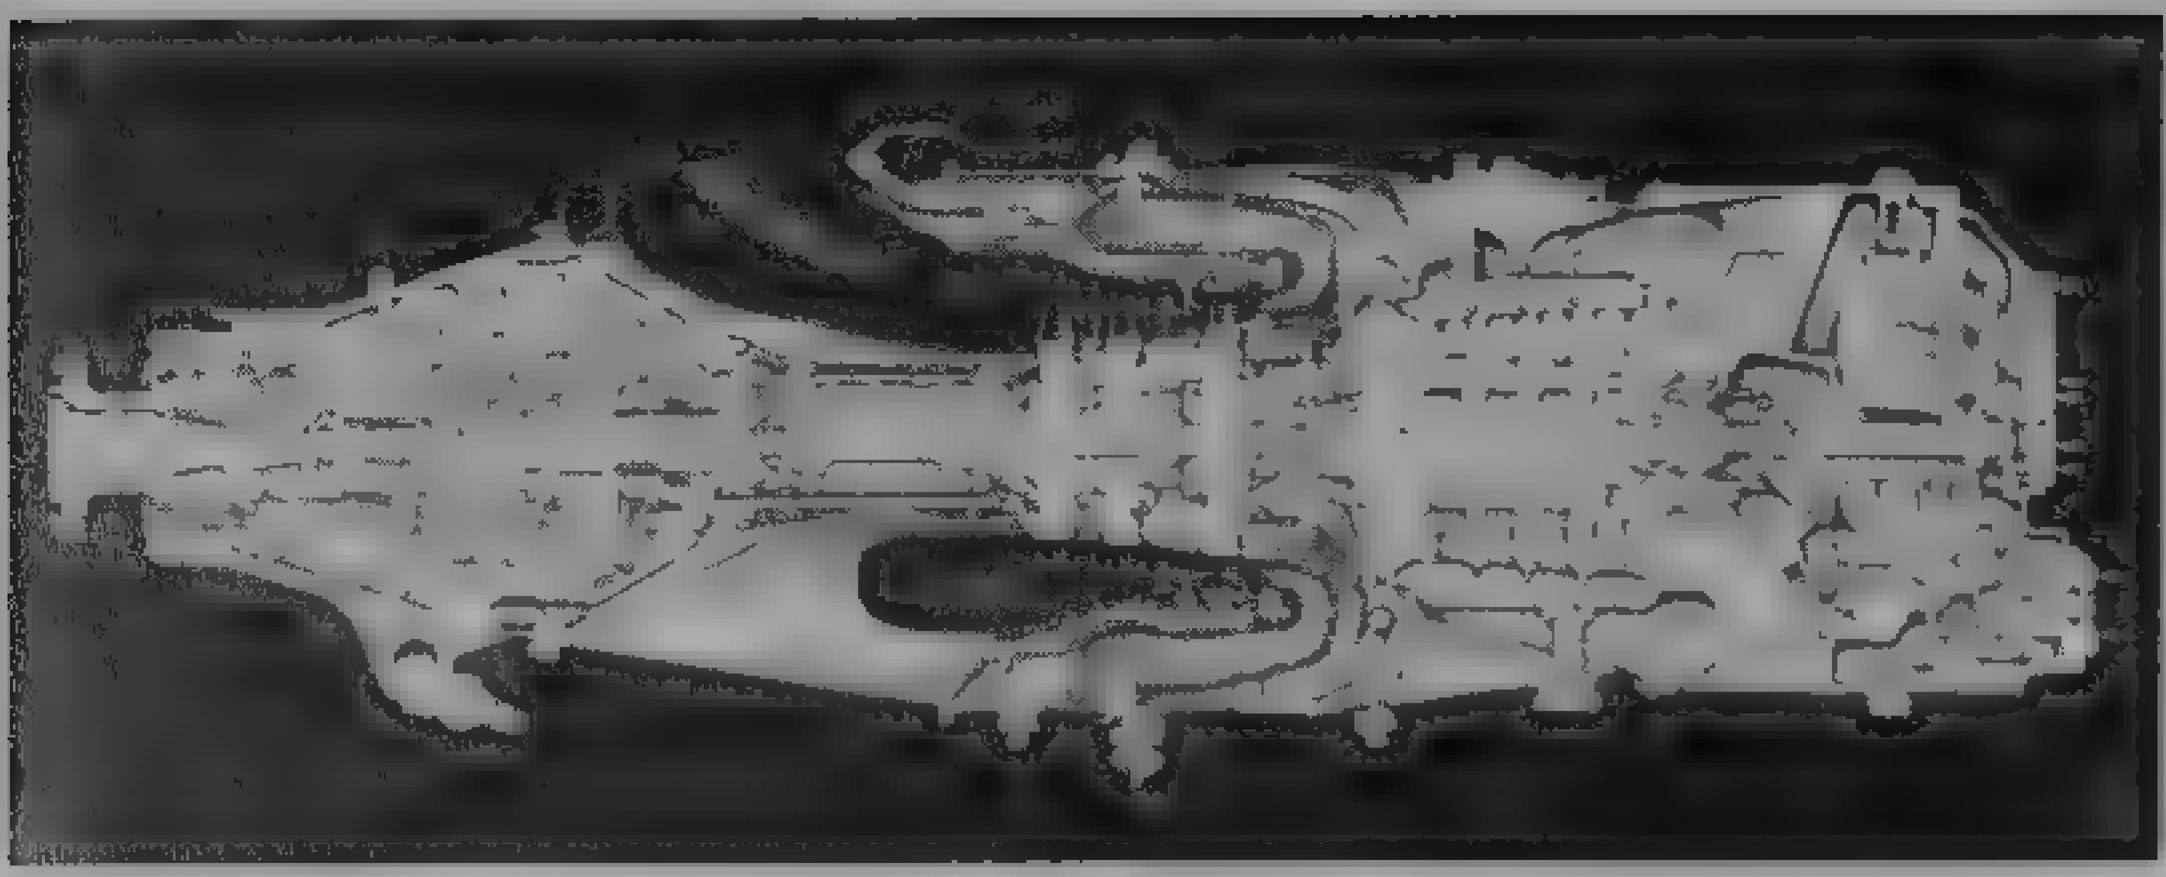
PT6A-67. Flat rated at 870 ekW, 820 kW (1,167 ehp, 1,100 shp) at 1,700 rpm to 60°C. Beechcraft RC-12K/N/P/Q.

PT6A-67A. Flat rated at 948 ekW, 894 kW (1,272 ehp, 1,199 shp) at 1,700 rpm to 51°C. Beech Starship 2000.

PT6A-67AF. Flat rated at 1,125 ekW, 1,062 kW (1,509 ehp, 1,424 shp) at 1,700 rpm to 37.2°C. Conair Turbo Firecat.

PT6A-67B. A-67 modified for medium altitudes. Flat rated at 895 kW (1,200 shp) at 1,700 rpm to 52°C. Pilatus PC-12.

PT6A-67D. A-67B with A-67R gearbox. Flat rated at 909 kW (1,219 shp) at 1,700 rpm to 39°C. Beech 1900D.



Longitudinal section of P&WC PT6A-67 turboprop

1987

PT6A-67R. A-67 with reserve power rating for commuter aircraft. Flat rated at 1,125 ekW, 1,062 kW (1,509 ehp; 1,424 shp) at 1,700 rpm to 37.2°C. Shorts 360-300 and Basler Turbo BT-67.

PT6A-68. Comprises -67 core with 2,000 rpm gearbox, [illegible] flight capability and full authority power management; configured to JPATS Beech (PC-9) Mk II and EMB 312H.

The following data apply generally to the PT6A series:

TYPE: Free turbine axial-plus-centrifugal turboprop.

PROPELLER DRIVE (all models up to and including PT6A-41): Two-stage planetary. Ratio 15. Higher ratio gears for A-45R, -50, -60, -65 and -67.

AIR INTAKE: Annular at rear with screen. Aircraft-supplied alcohol or inertial anti-icing.

COMPRESSOR: Three axial stages, plus single centrifugal (-65 series, four axial stages). PT6A-27: pressure ratio 6.7, mass flow 3.1 kg (6.8 lb/s). PT6A-65: pressure ratio 10, mass flow 4.3 kg (9.5 lb/s).

COMBUSTION CHAMBER: Annular reverse flow, with 14 simplex fuel nozzles.

FUEL SYSTEM: Bendix DP-F2 hydropneumatic automatic fuel control. A-50 has DP-F3 with starting spill valve and motive flow systems. A-60 series (except -62) have Woodward 83212 hyoromechanical system.

FUEL GRADE: JP-1, JP-4, JP-5, MIL-J-5624. Gasolines (MIL-G-5572) grades 80/87, 91/98, 100/130 and 115/145 for up to 150 [illegible] only overhaul period. Agricultural [illegible], diesel to CPW-46.

TURBINES: Up to A-34 two single-stage axial. HP (58 blades) drives compressor and LP [illegible] blades drives output shaft. A-41 onwards have two-stage LP turbine. All blades have hr tree root.

ACCESSORIES: Pads on accessory case (rear of engine) for starter/generator, fluid pump, two aircraft accessories and tachometer generator. Pad on reduction gear for propeller governor, constant-speed unit, overspeed governor and tachometer.

LUBRICATION SYSTEM: One pressure and four scavenge elements driven by gas generator. Integral oil tank 8.75 litres (2.3 US gallons).

OIL SPECIFICATION: CPW202, PWA521 Type II (7.5 cs vis) (MIL-L-23699, MIL-L-7808 for military engines).

STARTING: Electric starter/generator on accessory case.

DIMENSIONS:

Max diameter	483 mm (19 in)
Length, excl accessories:	
PT6A-11 to -36	1,575 mm (62 in)
PT6A-41, 42, 61	1,701 mm (67 in)
PT6A-45, 60A	1,829 mm (72 in)
PT6A-50	2,133 mm (84 in)
PT6A-62, -66	1,778 mm (70 in)
PT6A-65B	1,880 mm (74 in)
PT6A-65R, -65AR, -65AG	1,905 mm (75 in)
PT6A-67, -67R	1,930 mm (76 in)
PT6A-68	1,784 mm (70 in)

WEIGHT, DRY:

PT6A-11	148.8 kg (328 lb)
PT6A-11AG	149.7 kg (330 lb)
PT6A-110, 112	151.5 kg (334 lb)
PT6A-114, -114A	158.8 kg (350 lb)
PT6A-15AG, -21, -27, -28	148.8 kg (328 lb)
PT6A-25	160.1 kg (353 lb)
PT6A-25A	155.6 kg (343 lb)

PT6A-65AR, -65AG	220.4 kg (486 lb)
PT6A-66	213.2 kg (470 lb)
PT6A-67, -67A	229.5 kg (506 lb)
PT6A-67AF	241.0 kg (532 lb)
PT6A-67R, -67B, -67D	233.5 kg (515 lb)
PT6A-68	250.0 kg (551 lb)

PERFORMANCE RATINGS (S/L, static):

T-O: See under model listings

Max continuous:

PT6A-110	374 ekW; 354 kW (502 ehp; 475 shp) at 1,900 rpm (to 38°C)
PT6A-11, -11AG	394 ekW, 373 kW (528 ehp, 500 shp) at 2,200 rpm (to 42°C)
PT6A-112	394 ekW, 373 kW (528 ehp; 500 shp) at 1,900 rpm (to 56°C)
PT6A-114	471 ekW; 447 kW (632 ehp; 600 shp) at 1,900 rpm (to 54.4°C)
PT6A-114A	529 ekW, 503 kW (709 ehp; 675 shp) at 1,900 rpm (to 46.1°C)
PT6A-15AG, -27, -28	533 ekW, 507 kW (715 ehp; 680 shp) at 2,200 rpm (to 22°C)
PT6A-21	432.5 ekW; 410 kW (580 ehp, 550 shp) at 2,200 rpm (to 33°C)
PT6A-25, -25A	432.5 ekW, 410 kW (580 ehp; 550 shp) at 2,200 rpm (to 33°C)
PT6A-25C	584 ekW, 559 kW (783 ehp, 750 shp) at 2,200 rpm (to 31°C)
PT6A-34	584 ekW, 559 kW (783 ehp; 750 shp) at 2,200 rpm (to 30°C)
PT6A-135	587 ekW, 559 kW (787 ehp, 750 shp) at 1,900 rpm (-135 to 29°C, -135A to 34°C)
PT6A-36	586 ekW, 559 kW (786 ehp; 750 shp) at 2,200 rpm (to 36°C)
PT6A-41	673 ekW, 634 kW (903 ehp, 850 shp) at 2,000 rpm (to 41°C)
PT6A-42	674 ekW, 634 kW (904 ehp; 850 shp) at 2,000 rpm (to 41°C)
PT6A-45A, -45B, -45R	798 ekW; 761 kW (1,070 ehp; 1,020 shp) at 1,700 rpm (to: -45A, 26.7°C; -45B, 29°C; -45R, 33°C)
PT6A-50	762 ekW, 725.5 kW (1,022 ehp; 973 shp) at 1,210 rpm (to 32°C)
PT6A-60A	830 ekW, 783 kW (1,113 ehp; 1,050 shp) at 1,700 rpm (to 25°C)
PT6A-61	673 ekW, 634 kW (903 ehp; 850 shp) at 2,000 rpm (to 46°C)
PT6A-62	751 ekW; 708 kW (1,008 ehp, 950 shp) at 2,000 rpm (to 37°C)
PT6A-64	557 ekW (747 ehp) at 2,000 rpm (to 63.5°C)
PT6A-65B	875 ekW, 820 kW (1,173 ehp, 1,100 shp) at 1,700 rpm (to 45°C)
PT6A-65R	931 ekW, 875 kW (1,249 ehp, 1,173 shp) at 1,700 rpm (to 38°C)
PT6A-66	675 ekW; 634 kW (905 ehp, 850 shp) at 2,000 rpm (to 62°C)
PT6A-67	870 ekW, 820 kW (1,167 ehp; 1,100 shp) at 1,700 rpm (to 54.4°C)
PT6A-67A	950 ekW, 895 kW (1,273 ehp, 1,200 shp) at 1,700 rpm (to 53°C)
PT6A-67AF	965 ekW (1,294 ehp) at 1,700 rpm (to 48.3°C)
PT6A-67B	949 ekW (1,272 ehp) at 1,700 rpm (to 52°C)
PT6A-67D	1,009 ekW (1,353 ehp) at 1,700 rpm (to 39°C)
PT6A-67R	965 ekW, 910 kW (1,294 ehp; 1,220 shp) at 1,700 rpm (to 48°C)

Max	0.091 kg (0.20 lb)/h

UPOATED

P&WC T74

T74 is a US designation for military versions of the PT6A turboprop and PT6B turboshaft.

T74-CP-700. US Army PT6A-20. More than 300 delivered to Beech for 129 U-21A. Inertial separator system.

T74-CP-702. Rated at 580 ekW (778 ehp) and retrofitted in Beechcraft U-21.

VERIFIED

P&WC PT6B/PT6C

The PT6B is the commercial turboshaft version of the PT6A and has a lower ratio reduction gear. Current versions are:

PT6B-36. Reverse drive 6,409 rpm gearbox. T-O rating 732 kW (981 shp) to 15°C, with 2½ minute's contingency 770 kW (1,033 shp) to 15°C. Sikorsky S-76B.

PT6B-36A. Identical to -36 but with different ratings.

PT6B-36B. Improved hot section, ratings as -36A.

PT6C. Direct drive from the power turbine.

DIMENSIONS:

Max diameter	495 mm (19.5 in)
Length, excl accessories	1,504 mm (59.2 in)

WEIGHT, DRY:

PT6B-36	169 kg (372 lb)

P&WC PT6B-36 turboshaft

1993

PT6B-36A	171 kg (378 lb)
PT6B-36B	175 kg (386 lb)

PERFORMANCE RATINGS
T-O: See under model listings
Max cruise, continuous:

PT6B-36	640 kW (870 shp) to 15°C
PT6B-36A, -36B	652 kW (887 shp) to 15°C

SPECIFIC FUEL CONSUMPTION
At T-O rating:

PT6B-36	100.5 µg/J (0.594 lb/h/shp)
PT6B-36A, -36B	98.2 µg/J (0.581 lb/h/shp)

OIL CONSUMPTION:

Max	0.091 kg (0.20 lb)/h

VERIFIED

P&WC PT6T TWIN-PAC

First run in July 1968, the Twin-Pac comprises two PT6 turboshaft engines side by side and driving a combining gearbox.

PT6T-3 T-O rating 1,342 kW (1,800 shp). For Bell and Agusta-Bell 212 and California/Sikorsky S-58T.

In these applications, shaft power is limited by the transmission. In the Model 212 the 1,342 kW (1,800 shp) PT6T-3 is restricted to a T-O rating of 962 kW (1,290 shp) and 843 kW (1,130 shp) for continuous power. In the S-58T the limits are 1,122 kW (1,505 shp) at T-O and 935 kW (1,254 shp) for continuous operation.

PT6T-3B PT6T-3 with some T-6 hardware and improved single-engine performance. Bell 212, 412 and 412SP.

PT6T-3BE PT6T-3B with upgraded combining reduction gearbox and modified torque control unit. For Bell 412HP and AB 412HP.

PT6T-3D. Improved engine for 412EP. Certificated August 1993.

PT6T-6. Improved compressor-turbine nozzle guide vanes and rotor blades. S-58T and AB 212.

PT6T-6B Upgraded, combining reduction gearbox and modified torque control. AB 412HP.

The following features differ from the PT6:

TYPE: Coupled free turbine turboshaft.

SHAFT DRIVE: Combining gearbox comprises three separate gear trains, two input and one output, each contained within an individual sealed compartment and all interconnected by driveshafts. Overall reduction ratio 5.

AIR INTAKES: Additional inertial particle separator to reduce ingestion. High frequency compressor noise suppressed.

FUEL SYSTEM: As PT6 with manual back-up, and dual manifold for cool starts. Automatic power sharing and torque limiting.

FUEL GRADES: JP-1, JP-4 and JP-5.

ACCESSORIES: Starter/generator and tachogenerator on accessory case at front of each power section. Other drives on gearbox, including power turbine governors and tachogenerators, and provision for blowers and aircraft accessories.

OIL SPECIFICATION: PWA Spec 521. For military engines, MIL-L-7808 and -23699.

STARTING: Electrical, with cold weather starting down to -54°C.

DIMENSIONS:

Length	1,702 mm (67.0 in)
Width	1,118 mm (44.0 in)
Height	838 mm (33.0 in)

WEIGHT, DRY (standard equipment):

PT6T-3	294 kg (648 lb)
PT6T-3B, -3BE, -6	299 kg (660 lb)
PT6T-3D	317 kg (690 lb)

PERFORMANCE RATINGS:
T-O (5 min):
Total output, at 6,600 rpm

PT6T-3, -3B, -3BE, -3D	1,342 kW (1,800 shp)
PT6T-6	1,398 kW (1,875 shp) (to 21°C)

Single power section only, at 6,600 rpm

PT6T-3, -3B	671 kW (900 shp)
PT6T-6, -6B, -3BE (2½ min)	764 kW (1,025 shp)
PT6T-3D (2½ min)	820 kW (1,100 shp)

30 min power (single power section), at 6,600 rpm

PT6T-3B, -3BE, -6	723 kW (970 shp)

Cruise A:
Total output, at 6,600 rpm

PT6T-3, -3B, -3BE	932 kW (1,250 shp)
PT6T-6	1,014 kW (1,360 shp)

Single power section only, at 6,600 rpm

PT6T-3, -3B	466 kW (625 shp)
PT6T-3D, -6	500 kW (670 shp)

Cruise B:
Total output, at 6,600 rpm

PT6T-3, -3B, -3BE	820 kW (1,100 shp)
PT6T-6	891 kW (1,195 shp)

Single power section only, at 6,600 rpm

PT6T-3, -3B	410 kW (550 shp)
PT6T-6	440 kW (590 shp)
Ground idle, at 2,200 rpm	44.7 kW (60 shp) max

SPECIFIC FUEL CONSUMPTION:
At 2½ min rating (single power section):

PT6T-3B	100.7 µg/J (0.596 lb/h/shp)
PT6T-3D	101.5 µg/J (0.601 lb/h/shp)
PT6T-6	101.6 µg/J (0.602 lb/h/shp)

OIL CONSUMPTION:

Max (for both gas generators)	0.18 kg (0.4 lb)/h

UPDATED

P&WC PW200

Helicopter engine announced 1983. The basic design is flexible and is planned to permit increased power and reduced sfc without dimensional change.

PW206A. Initially certificated (see 1993-94 *Jane's* for ratings) December 1991 to power Explorer; by end of 1993 18 delivered. Recertificated at higher ratings November 1993.

PW206B Configured for Eurocopter EC135. For certication 1995.

PW206C. Announced 1995, maximum continuous rating 419 kW (562 shp). Selected for Agusta A 109 Power and (with engines assembled by Klimov) Kazan Ansat.

TYPE: Free turbine turboshaft.

AIR INTAKE: Inwards amidships through mesh screen.

COMPRESSOR: Single-stage centrifugal of machined titanium. Pressure ratio 8.

COMBUSTION CHAMBER: Reverse-flow annular with 12 air blast nozzles. Two capacitor discharge igniters.

FUEL SYSTEM: Hydromechanical with digital electronics powered by dedicated alternator.

FUEL GRADE: JP-1, JP-4, JP-5 or a range of gasolines.

TURBINES: Single-stage axial compressor and power turbines with blades held in dovetail slots. Cold junction temperature sensing.

GEARBOX: 206A: front mounted combined reduction and accessory gearbox with 6,000 rpm output; includes phase shift torquemeter and drives for starter/generator, hydraulic pump and alternator. 206B: similar but bevel accessory gearbox with 5,898 rpm output.

DIMENSIONS:

Length: 206A	912 mm (35.9 in)
206B	1,042 mm (41.0 in)
Width	500 mm (19.7 in)
Height: 206A	566 mm (22.3 in)
206B	627 mm (24.7 in)

PERFORMANCE RATINGS:

206A: 2½ min	514 kW (690 shp)
T-O and OEI	477 kW (640 shp)
Max continuous	410 kW (550 shp)
206B:	
2½ min	509 kW (683 shp)
T-O and OEI	474 kW (635 shp)
Max continuous	404 kW (542 shp)

SPECIFIC FUEL CONSUMPTION:

206A: T-O	91.7 µg/J (0.543 lb/h/shp)
Max continuous	94.6 µg/J (0.560 lb/h/shp)
206B:	
T-O	92.6 µg/J (0.548 lb/h/shp)
Max continuous	95.7 µg/J (0.566 lb/h/shp)

CATIC (China National Aero-Technology Import and Export Corporation)
See aircraft section for details

In the past 30 years China has enormously expanded its aero-engine industry. Today there are eight major engine manufacturing centres, five factory managed design institutes and four engine research and design institutes. Over 48,000 engines of 25 types have been manufactured for the air force and navy, 756 engines of 10 types manufactured for CAAC, and smaller numbers for export. Nine types of large solid and liquid rocket engines have also been manufactured. Most factories are seeking foreign orders or partners.

The following survey is by alphabetical order in English of the design or manufacturing organisation.

CHENGDU ENGINE COMPANY

PO Box 77, Chengdu, Sichuan 610067
Telephone: 86 (28) 443628
Fax: 86 (28) 442470
Telex: 60142 CET CN
Cables: 4721
GENERAL MANAGER: Duan Changping

This company was formed in October 1958, and is also known as CEF (Chengdu Aero-Engine Factory). Most of the staff and resources came from the Shenyang Overhaul Factory, and the first task was to produce the **RD-500K** (RR Derwent derivative) turbojet for a cruise missile.

Today CEC has a site area of 137 ha (338.5 acres) and a workforce of almost 20,000. It produces the **WP6** turbojet (see LM), the **WP13** turbojet (see LMC) and components for the Pratt & Whitney **JT8D** turbofan, including combustion liners. In October 1988 SNECMA announced that it was assisting CATIC to develop the improved **WP13G** and **WP14** for later F-7 versions. New annular combustion chambers will be produced.

DONGAN ENGINE MANUFACTURING COMPANY

PO Box 51, Harbin, Heilongjiang 150066
Telephone: 86 (451) 802120
Fax: 86 (451) 802266
Telex: 87131 HDEC CN
Cables: 0021
GENERAL MANAGER: Song Jingang

Also known as HEF (Harbin Engine Factory), this establishment was founded in 1948 and employs more than 10,000. Its first product was the 1,268 kW (1,700 hp) **HS7**, a 14-cylinder radial piston engine based on the Soviet Shvetsov ASh-82V. In parallel, in 195[illegible] [illegible] ASh-21 engines were made, but only the HS7 went into production, for the Z-5 helicopter. In the late 1950s there was a need for a better engine for the Il-12, Il-14, Tu-2 and Curtiss C-46, with better altitude performance. The result, produced from 1962 until 1980, was the **HS8**, which combined the main body and supercharger of the HS7 with the reduction gear of the ASh-82T. The HS8 is rated at 1,380 kW (1,850 hp).

A larger effort began in 1968 when development of the **WJ5** was transferred from ZEF. A derivative of the Ivchenko (ZMKB Progress) AI-24A rated at 1,901 ekW (2,550 ehp) was developed. Among problems solved were broaching of the turbine disc and welding of the annular combustion chambers. Following 5,678 test hours the WJ5 was certificated in January 1977. From 1969 the **WJ5A** was developed, to meet the needs of the SH-5. The turbine was redesigned, with air-cooled rotor blades, and many other parts changed in design or material. The first 5A went on test in late 1970, and certification was gained in January 1980. This modernised engine is rated at 2,350 ekW (3,150 ehp) up to 30°C. In 1979 work began on modifying the original WJ5 to enable the Y-7 series of aircraft to have better hot and high performance. The result, certificated in 1982, is the **WJ5A I**, basically a 5A flat rated at 2,162.5 ekW (2,900 ehp) to 38°C.

In 1988 an agreement was reached with General Electric of the USA for development of the **WJ5E** with reduced sfc. The prototype passed initial static tests in 1990, with sfc reduced from 98.7 μg/J (0.584 lb/h/shp) to 89.4 μg/J (0.529 lb/h/shp). The WJ5E is the engine of the Y7-200B.

In 1966 Harbin was assigned the task of modifying the WJ5 into the **WZ5** turboshaft engine for the Z-6 helicopter. After a prototype had been run this engine was transferred to ZARI (which see).

LIMING ENGINE MANUFACTURING CORPORATION

PO Box 424 (6 Dongta St, Dadong District), Shenyang, Liaoning 110043
Telephone: 86 (24) 443139
Fax: 86 (24) 732221
Cables: 4104
Telex: 80025 LMMCS CN
GENERAL MANAGER: Yan Guangwei

With site area exceeding 100 ha (247.1 acres), more than 200,000 m² (2,152,850 sq ft) covered area, and a workforce of over 20,000, Liming (Daybreak) is one of the largest and most experienced aero-engine centres in China. Alternatively known as SEF (Shenyang Aero-Engine Factory), or just as The New Factory, it was set up on the basis of the old overhaul factory in 1954-57. The first product was the **WP5** turbojet, a licensed version of the Soviet Klimov VK-1F (Rolls-Royce Nene derivative). Production of the WP5 was achieved in June 1956. By 1957 the WP5A, based on the VK-1A, was in production, but in 1963, following increased demand to power the H-5, production was transferred to XEF (see XAE).

In 1956 SADO (Shenyang Aero-Engine Design Office) was established, later being restyled SARI. This undertook the design of the first Chinese turbojet, the **PF1A**, based on the WP5 but smaller and rated at 15.7 kN (3,527 lb st) to power the JJ-1 trainer. Design was complete in 1957 and the PF1A powered the prototype JJ-1 in July 1958, but later the requirement for the JJ-1 was dropped.

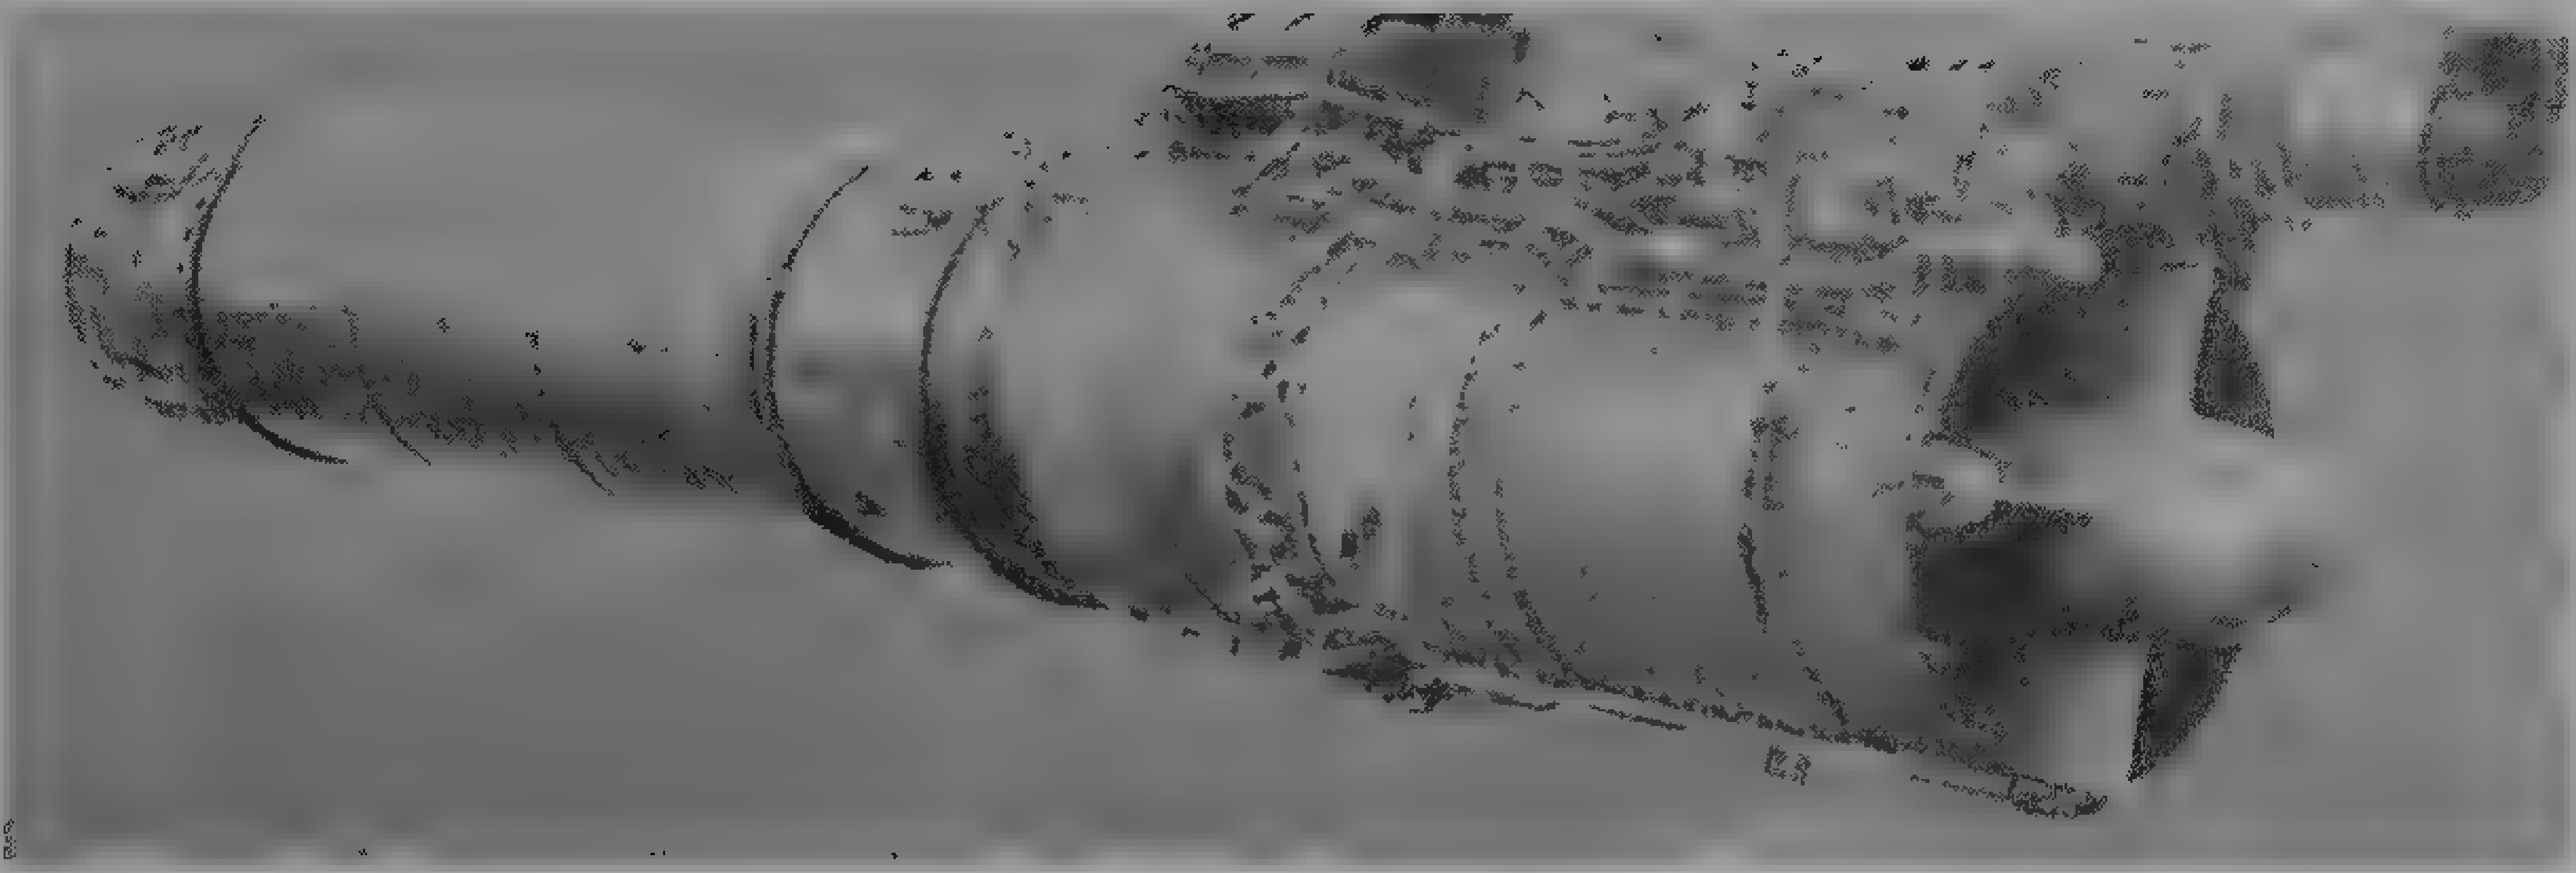
VERIFIED

LM WP6

In early 1958 Soviet documents arrived for licence production of the Tumansky (Soyuz) RD-9BF-811. This single-shaft axial turbojet with afterburner proved a major challenge, but the Shenyang **WP6** was first tested at the end of 1958. Tests were not successful, but following improvements in quality control trial production restarted in 1961. Subsequently several thousand, with progressive upgrades, have been made for the J-6, JJ-6 and Q-5. The **WP6A** for the Q-5 I attack aircraft, has a variable inlet stator stage and increased turbine temperature. This engine was certificated in August 1973. A further variant was the **WP6B** for the J-12, not made in quantity.

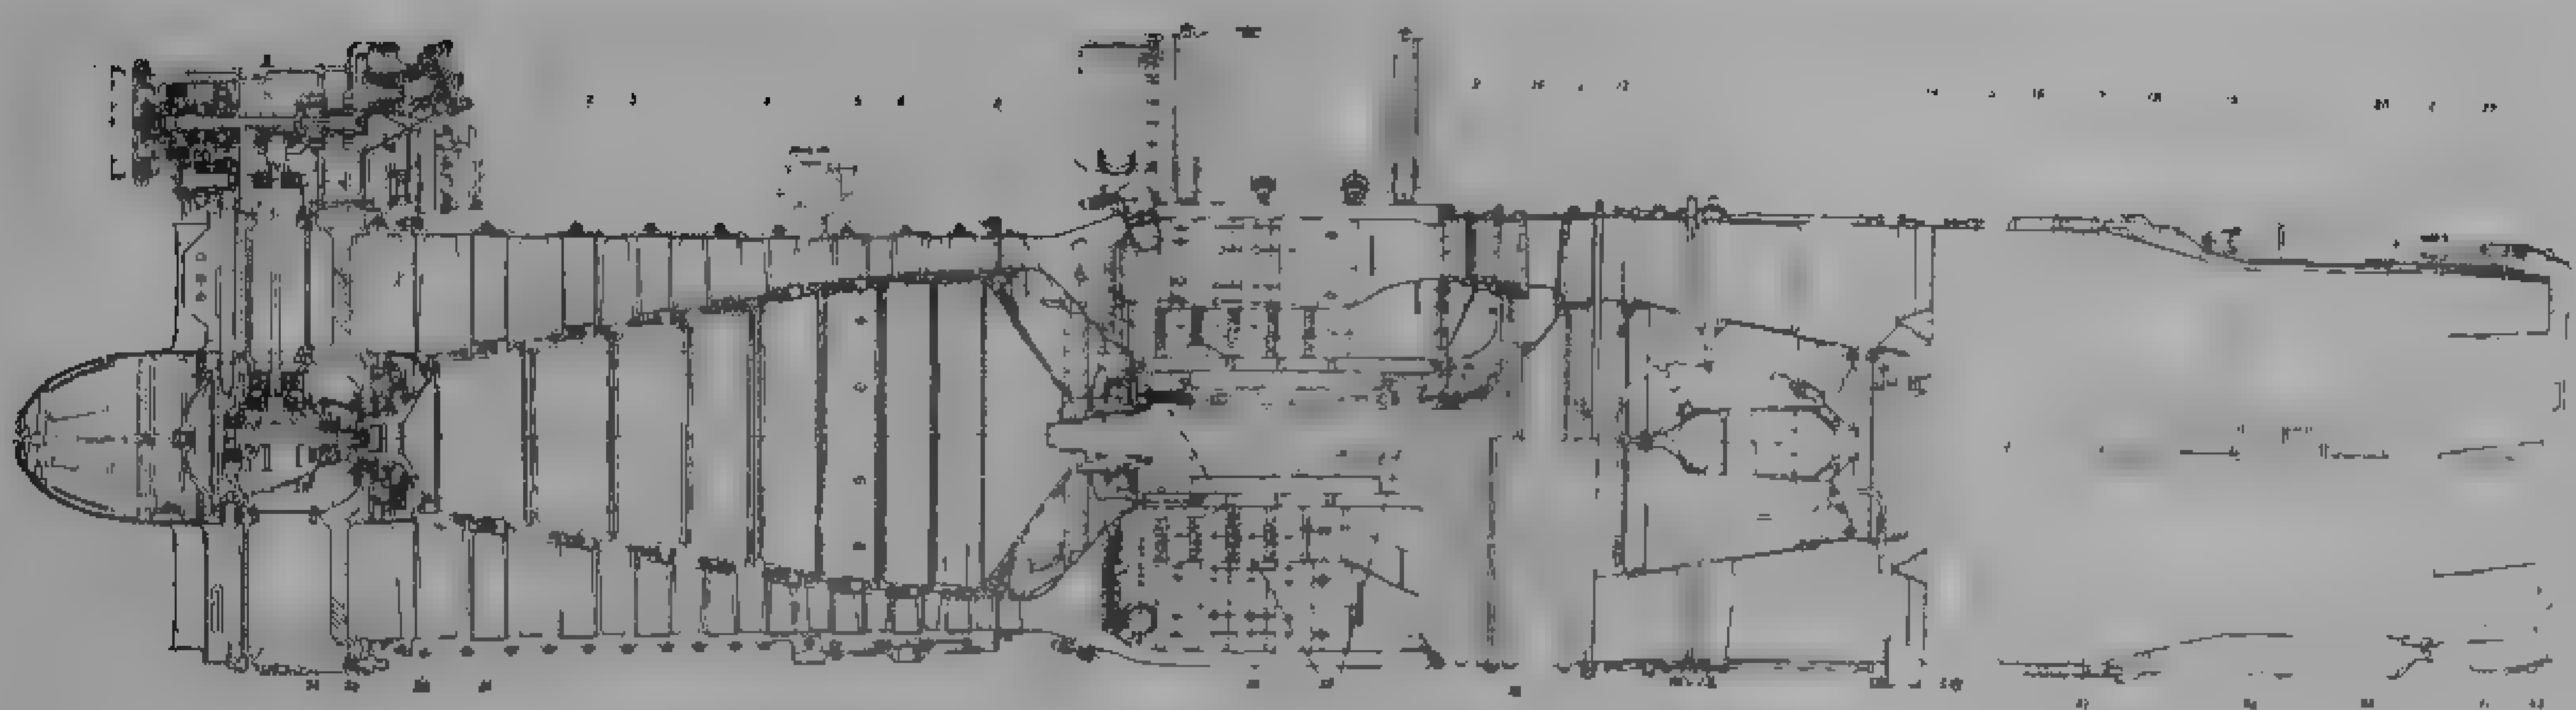
The following is a description of the WP6A:

INLET: Cast assembly with four de-iced radial struts, one housing drive to accessory section above and projecting ahead of inlet. Central fixed bullet and front bearing



WP6A afterburning turbojet

1986



Longitudinal section through WP6A turbojet (afterburner shown shortened)

1 variable inlet stator, 2 stator vanes, 3 compressor case, 4 air bleed band, 5 bleed actuating cylinder, 6: rear load relief cavity, 7: centre bearing, 8 starting igniter, 9 stage 1 nozzle, 10 turbine rotor, 11 stage 2 nozzle, 12 quick-release ring, 13. diffuser, 14 quick-release ring, 15 front flange, 16 case, 17 shroud, 18 bracket, 19 actuating cylinder, 20 adjustable flap flange, 21 actuator and rod heat shield, 22 nozzle adjusting ring, 23 copper plate 24 flap 25 centring pin, 26 cylinder cowl, 27 clamp strip 28 rear bearing 29 oil jet, 30 flame tube, 31 compressor, 32 front load relief cavity 33 front bearing 34 front case

1987

COMPRESSOR: Welded ring construction with one row of variable inlet stators and nine rows of rotor blades. Mass flow 46.2 kg (101 85 lb)/s Pressure ratio 7.44

COMBUSTION CHAMBER Can-annular type with 12 flame tubes, each terminating in a section of turbine inlet periphery Spill type burners Two igniters fed from starting tank

TURBINE: Two-stage type with blades inserted into large flat discs, driving compressor via tubular shaft

AFTERBURNER Constant diameter type with main starting burner in turbine rear cone and single ring of fuel nozzles and gutter flameholders around rear of cone Ten adjustable nozzle flaps positioned by four rams

DIMENSIONS:	
Length	5,483 mm (215 9 in)
Max height	950 mm (37 4 in)

WEIGHT, DRY	725 kg (1 598 lb)
PERFORMANCE RATINGS (S/L, static)	
Afterburner: WP6A	36 78 kN (8 267 lb st)
WP6B	39 72 kN (8 929 lb st)
Max dry, WP6A	29 42 kN (6 614 lb st)
Normal: WP6A	24 03 kN (5,401 lb st)
WP6B	24.51 kN (5,511 lb st)
SPECIFIC FUEL CONSUMPTION (WP6A)	
Afterburner	0 163 kg/h/N (45 24 mg/Ns, 1 597 lb/h/lb st)
Max	0 1 kg/h/N (27 76 mg/Ns, 0 980 lb/h/lb st)
Normal	0.099 kg/h/N (27 48 mg/Ns, 0.970 lb/h/lb st)

UPDATED

LM WP7

For the J 7 fighter the Shenyang factory produced the Tumansky (Soyuz) R 11F-300 afterburning turbojet under Licence. Designated **WP7** this Mach 2 engine was an even greater challenge as many key Soviet documents were not supplied, and 1,097 documents had errors or omissions Eventually, using indigenous materials, the first WP7 went on test in October 1965 Dry and afterburning ratings were 38 2 kN (8,598 lb st) and 56.4 kN (12,676 lb st) respectively By 1970 production of this engine was transferred to LMC Shenyang continued to introduce improvements, and a stall flutter problem was solved by using 24 larger blades in the first stage of the compressor instead of 31, while other changes were made to the HP turbine disc, bearing lubrication and afterburner nozzle flap design

In 1964 a decision had to be made on how to power the F-8 fighter No engine in the 120 kN (12 tonne) class could be produced in time, but Rong Ke, deputy director of Beijing Aeronautical Materials Institute, undertook to produce air-cooled blades within a year to allow two uprated WP7 engines to be used. In May 1965 the resulting engine was authorised as the **WP7A** After testing against forged blades with three large cooling holes the decision was taken to use nine-hole cast blades. Dry and afterburning ratings were established at 43 14 kN (9,698 lb st) and 59 kN (13,265 lb st) respectively These engines powered the J-8 on its first flight in July 1969, and were certificated in June 1982 Subsequently LMC developed the **WP7B** (see LMC) and **WP7C** The latter powers J 7 and J-7 II aircraft. Thrust ratings are maximum 60.6 kN (13,623 lb st), maximum dry 42 65 kN (9 588 lb st) and normal 33 54 kN (7,540 lb st). TBO is 300 hours Latest known variant is the **WP7F**, which powers the J 7E, dry rating is 44 13 kN (9,921 lb st) and with afterburning 63.74 kN (14,330 lb st)

VERIFIED

WP7C afterburning turbojet (afterburner not fitted)

1991

LM WS6

Also in 1964 a meeting was held to select an engine for a new indigenous fighter The choice fell on an augmented turbofan, the **WS6** In collaboration with SARI, drawings were produced in 1964-66, and by 1969 two prototype engines had been made. Then the cultural revolution delayed the programme by about 10 years but after 1978 eight more engines were built. A two-spool engine with air-cooled HP blades, it reached design figures in 1980 Augmented thrust was increased to 122 1 kN (27,450 lb st) in 1982, but by then the associated fighter programme had been cancelled

TYPE Two-shaft augmented turbofan for supersonic applications.

FAN Three stages, First stage transonic No inlet guide vanes. Mass flow 155 kg (342 lb)/s. Bypass ratio 1

COMPRESSOR: Eleven stages, with variable inlet vanes and fifth-stage bleed Pressure ratio 6 78 at 9,400 rpm. Overall pressure ratio 14.44.

COMBUSTION CHAMBER Can-annular

TURBINES: Two-stage HP inlet temperature 1,177°C. Two-stage LP
AFTERBURNER: Five circular gutters and six fuel-injection zones. Maximum temperature 1,527°C
NOZZLE: Outer nozzle only, multiflap type

DIMENSIONS:	
Length	4,654 mm (183.2 in)
Diameter (nozzle)	1,370 mm (53.94 in)
WEIGHT, DRY:	2,100 kg (4,630 lb)
THRUST RATINGS (S/L):	
Max T-O	122.1 kN (27,445 lb st)
Max dry	71.1 kN (15,991 lb st)
SPECIFIC FUEL CONSUMPTION:	
Max T-O	64.01 mg/Ns (2.26 lb/h/lb st)

LMC

LIYANG MACHINERY CORPORATION

PO Box 5, Pingba, Guizhou 561102
Telephone: 86 (34) 551779, 523313
Telex: 66044 LYMCG CN
Cables: 4099, 4101 PINGBA
GENERAL MANAGER: Hu Wenqin

With a covered area of 750,000 m² (8,073,200 sq ft), and a workforce of about 10,000, LMC is also known as GEF (Guizhou Aero Engine Factory). The associated GADRI undertook the development of the **WP7B** afterburning turbojet, the programme being transferred to LMC because Shenyang (LM) was overloaded.

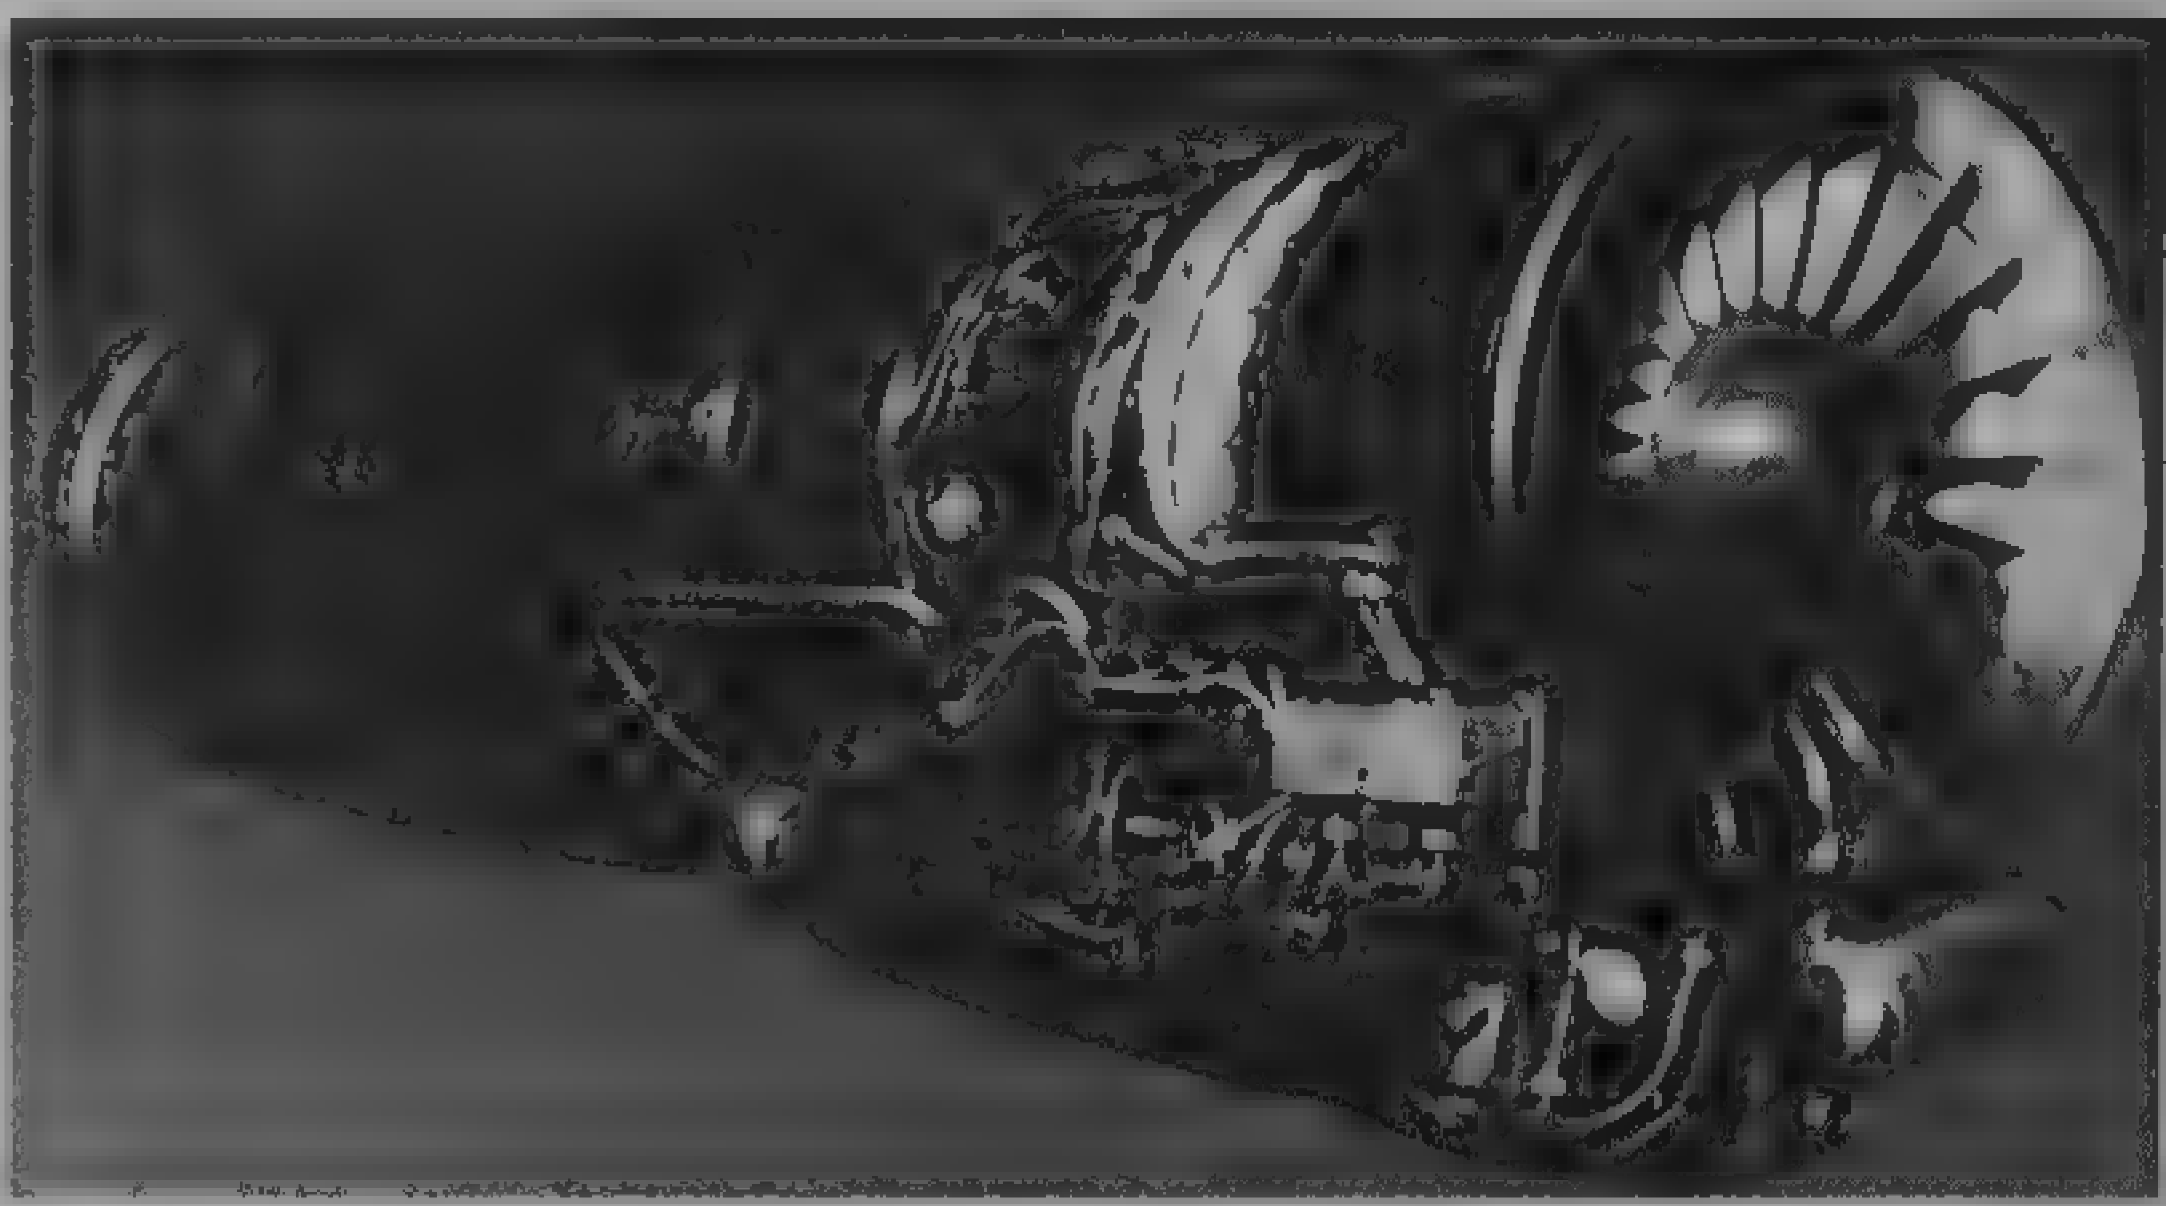
UPDATED

LMC WP7B

This engine powers the J-7 fighter and JJ-7 trainer. The main change in the 7B concerned the structure and length of the afterburner. The cast air-cooled turbine blades tended to crack, with a high reject rate of castings, and burning of the rear fuselage was caused by excessive afterburner wall temperatures. The 7B was eventually certificated in 1978 and succeeded the WP7 in production in 1980. Further changes enabled TBO to be increased from 100 to 200 hours. Guizhou then eliminated the separate petrol (gasoline) starter and its tank and supply system. The engine is known as the **WP7B (M batch)** and entered production in 1982. A further modification, the **WP7B(BM)**, reduces weight by 17 kg (37.5 lb), enabling the F-7M to add drop tanks.

The following refers to the WP7B (BM).

TYPE: Two-shaft turbojet with afterburner
INLET: No inlet guide vanes, first LP compressor stage overhung ahead of front roller bearing
COMPRESSOR: Three-stage LP compressor with pressure ratio of 2.74. Five-stage HP compressor giving overall pressure ratio of 8.1. All blades inserted into discs carried on short tubular shafts
COMBUSTION CHAMBER: Can-annular, with 10 flame tubes, Nos. 1 and 6 being of a different pattern and incorporating torch igniters. Air film liners coated on both sides with ceramic material



WP7B(BM) afterburning turbojet for the F-7M Airguard fighter
1987

TURBINES: Single-stage HP with 96 inserted shrouded blades. Single-stage LP with shrouded blades. Outlet gas temperature 1,083°K (810°C)
AFTERBURNER: Multiple gutters and double-wall liner. Multiflap nozzle driven by four hydraulic rams. Up to 40 hours operation permitted in each 200 hours overhaul period

PERFORMANCE RATINGS (S/L, static):	
Max afterburner	59.82 kN (13,448 lb st)
Max dry	43.15 kN (9,700 lb st)
SPECIFIC FUEL CONSUMPTION (as above):	
Max afterburner	56.37 mg/Ns (1.99 lb/h/lb st)
Max dry	28.61 mg/Ns (1.01 lb/h/lb st)

UPDATED

LMC WP13

The next major product of LMC was the **WP13**. Though this has some features in common with the Gavrilov R-13 it is a Chinese development, based on experience with the WP7. A two-spool afterburning turbojet, it was developed to power the J-7 III and J-8 II. Compared with the WP7 the air flow is increased, work per stage improved, pressure ratio raised (the HP spool having new blades) and surge margin doubled. New titanium alloys were used for the compressor discs and blades, and in a major development two more new titanium alloys were used for the cast compressor casings. WP13 development began in 1978, and it was decided to make the engine a 50/50 joint project with CEC. Both factories tested engines, and certification was gained in 1985. Further development introduced air-cooled HP turbine blades and modifications to the combustion chamber and afterburner, the afterburner of the **WP13A II** being longer.

DIMENSIONS:	
Length overall:	
WP13	4,600 mm (181.1 in)
WP13A II	5,150 mm (202.75 in)
Diameter: both	907 mm (35.71 in)
Max height: WP13	1,085 mm (42.72 in)
WEIGHT, DRY:	
WP13	1,211 kg (2,670 lb)
WP13A II	1,201 kg (2,648 lb)
PERFORMANCE RATINGS (S/L, static):	
Max afterburner:	
WP13	64.73 kN (14,550 lb st) at 11,156 LP rpm
WP13A II	65.9 kN (14,815 lb st)
Max dry:	
WP13	40.21 kN (9,039 lb st) at 11,156 LP rpm
WP13A II	42.7 kN (9,590 lb st)
SPECIFIC FUEL CONSUMPTION (as above):	
Max afterburner:	
WP13	63.73 mg/Ns (2.25 lb/h/lb st)
WP13A II	62.32 mg/Ns (2.20 lb/h/lb st)
Max dry:	
WP13	27.19 mg/Ns (0.96 lb/h/lb st)
WP13A II	28.04 mg/Ns (0.99 lb/h/lb st)
OVERHAUL LIFE:	
WP13	500 h (total service life 1,500 h)
WP13A II	300 h (including up to 90 h in afterburner)

DIRECTOR: Shen Huansheng

This factory was built in 1971-74 and was originally the SAF (Shanghai Aero-Engine Factory). It has a covered area of 56,191 m² (604,855 sq ft) and workforce of 2,000. Apart from various non-aero engines and components its main development effort was the **WS8** turbofan, to power the Y-10. Work proceeded quickly and the first engine went on test in June 1975. Eight engines were built, one running a 1,000 hour test, one a 150 hour certification test and one was flight tested, making eight flights totalling 22 hours. A front fan engine with a short bypass duct, the WS8 was rated at 80 kN (18,000 lb st). About 17 per cent was titanium, and new techniques included anti-corrosion coating with cadmium and nickel, graphite varnish of titanium parts; and aluminised siliconising of turbine blades. The Y-10 was not put into production and the engine had no other application.

Cables: 4391 (national), SARI (international)
DIRECTOR: Hai Yide

Shenyang Aero-engine Research Institute (SARI), founded in 1961, has nearly 3,000 employees. It is responsible for research, design and development of large and intermediate size turbojet and turbofan engines and their components and systems. In the 1960s SARI modified the **WP7** engine into the **WP7A**, and transferred the engine to Liming Corporation in Shenyang and Liyang Corporation for serial production for F-7 and J-8 aircraft. From 1965 SARI developed the **WS6**, a high thrust turbofan with afterburner. There were 10 WS6 demonstrator engines built. All performance goals were achieved, but the WS6 was not put into production (see under LM).

SARI is now developing new types of turbojet and turbofan engines.

SAEC (South Aero-Engine Company)

Address as above
GENERAL MANAGER: Wu Shenduo

With a covered area of nearly 300,000 m² (3,230,000 sq ft) and workforce of over 10,000, SMPMC is one of the larger MAS establishments. Until 1983 its aero-engine division SAEC was known as ZEF (Zhuzhou Aero-Engine Factory), and in 1951 was set up as the first aero-engine factory in China. Its first product was the Soviet Shvetsov **M-11FR** radial piston engine rated at 119 kW (160 hp), the first three being completed in July 1954. Mass production followed. To meet the needs of the Y-5 (licensed An-2) ZEF began in September 1956 to work on the **HS5** (licensed ASh-621R). Over 2,600 of these 746 kW (1,000 hp) radial piston engines were produced by 1986, some being installed in CAAC Li-2s.

Lacking the chosen Praga Doris B engine to power the CJ-6 trainer, the Soviet Ivchenko (ZMKB Progress) AI-14R radial piston engine was produced as the **HS6**. Rated at 191 kW (260 hp), the HS-6 entered production in June 1962, about 700 being produced. To improve performance, especially at altitude, ZEF increased rpm, compression ratio and supercharger ratio. The result, in 1963, was the **HS6A**, with T-O power increased to 212.5 kW (285 hp). About 3,000 were made by 1986. In 1975 the engine was again modified to power the Y-11, rpm were increased and the reduction gear strengthened. The resulting **HS6D**, with power of 224 kW (300 hp), was certificated in August 1980. The **HS6E**, for the NAMC Haiyan, has a further increased compression ratio and modifed exhaust valves and reduction gear, raising output to 261 kW (345 hp). In 1990 the simplified **HS6K** was certificated at 298 kW (400 hp) and is intended as the future engine of the N-5A. Experimental models, in the 1963-70 period, were the turbocharged **HS6B** and the **HS6C** for helicopters used in the 701 and Yan'an II helicopters.

Work on gas turbines began in January 1965 in support of the development by BIAA (Beijing Institute of Aeronautics and Astronautics) of the **WP11**. This simple turbojet, rated at 8.3 kN (1,874 lb st), powered the WZ-5 unmanned reconnaissance vehicle. The WP11 first ran in June 1971 and was certificated in 1980, manufacture then being transferred to ZEF. In September 1965 ZEF was selected to develop the **WJ5** turboprop, but this was transferred in 1968 to HEF (see DEMC). In 1969 ZEF was ordered to develop the **WJ6** turboprop, based on the Soviet Ivchenko AI-20M, to power the Y-8. Testing started in 1970, but various problems delayed certification until January 1977. Further changes (for example to compressor vane angle, igniter and lubrication clearances) resulted in TBO being raised in stages from 300 to 3,000 hours. T-O power was 3,169 ekW (4,250 ehp) and weight 1,200 kg (2,645 lb). In 1977 work began on the **WJ6A** to power the Y-8C with a pressure cabin and greater payload. By using air-cooled blades and raising the rpm this engine was successfully run in 1983 at 3,393 ekW (4,550 ehp).

In 1980 ZEF began the assembly and test of the **WZ8** (Turbomeca Arriel 1C) for the Z-9 helicopter. ZEF gives the output as 522 kW (700 shp) for a weight of 118 kg (260 lb). An all-Chinese WZ8 ran in 1985, and resulted in major technical upgrades at Zhuzhou (the high-voltage igniter box was the only imported part). As part of the offset, 40 accessory gearboxes were supplied to France.

ZEF also produces solid rocket motors for air-to-air missiles.

PRESIDENT: Wang Xin Yan

Construction of this factory began in August 1958, as XEF (Xian Aero-Engine Factory), and today its workforce exceeds 10,000. Its history was given in the 1993-94 *Jane's*. Today it has a wide range of products, for aerospace and many other fields. It has established business relations with GE, Pratt & Whitney, Rolls-Royce and other Western companies. The photograph shows a WS9, the Rolls-Royce Spey 202 made in 1975-79 under licence. In 1994 XAE delivered its 30,000th nozzle guide vane for Rolls-Royce Spey and Tay engines.

WS9 two-shaft augmented turbofan *1991*

ZAC

ZHUZHOU AERO-ENGINE COMPANY

This organisation, apparently an alternative or earlier title for SAEC (see SMPMC entry), was formed in 1983 by merging ZEF and ZARI. Its main task so far has been to produce the **WJ9** turboprop to power a production version of the Y-12. This engine, rated at 507 kW (680 shp), is based on the WZ8 (Arriel 1C), but with a new reduction gear, accessory drives and fuel and lubrication systems. The first engine ran in 1986 and met the design figures. A production WJ9 would probably also power agricultural and other special purpose aircraft.

VERIFIED

ZARI

ZHUZHOU AERO-ENGINE RESEARCH INSTITUTE

This organisation was established in 1968 From the start it has been tasked with R&D of shaft-drive gas-turbine engines, starting with the **WZ5** (see DEMC). The poor payload and lack of twin-engine safety of the Z-5 and Z 6 led to a new helicopter, the Z-7, in 1970. This was powered by the twin packaged **WZ5A**, developed at ZARI. Contingency power of each power section was 1,737 kW (2,330 shp). Design was finished in 1971, but the cultural revolution caused a delay of eight years. The WZ5A then reached its design targets, but was cancelled upon the abandonment of the Z-7 ZARI was merged with ZEF in 1983 to form ZAC

ZEF

ZHUZHOU AERO-ENGINE FACTORY

Established in 1951 as China s first aero-engine factory (see SMPMC entry), ZEF was amalgamated with ZARI in 1983 to form ZAC

Walter operates the main aero-engine establishment in the Czech Republic. It has delivered over 17,000 piston engines, 16,000 turbojets and nearly 4,500 turboprops. The Walter company was re-named Motorlet but reverted to its original title in March 1995, although the Walter name was used throughout as a trademark

UPDATED

WALTER M 601

The M 601 was designed to power the L-410 transport. It drives an Avia V 508 propeller.

The first version, rated at 410 ekW (550 ehp), ran in October 1967. Development of the **M 601 A**, of increased diameter, started during 1968. The Let L-410M powered by M 601 A engines was in Aeroflot service by early 1976. The **M601B** powers the L-410MA and L-410UVP In 1982 a

further variant, the **M 601 D**, entered production. This gives increased power and can be operated to longer TBO. It powers the L-410UVP and PZL-106 BT. By 1983 the derated **M 601 Z** had entered production to power the Z 137T agricultural aircraft. It drives an auxiliary piston compressor and a mechanical take-off shaft for the spraying/dusting installation. All the above drive AVIA/HamStan VJ8 508 three-blade propellers.

The **M 601 E** powers the L-410UVP-E. It has a TBO of 2,000 hours without hot-section inspection. It drives a VJ 8 510 five-blade propeller, and an alternator for anti-icing windscreens and propeller blades. It is certificated to Russian NLGS-2 Swedish JAR and FAR Pt 33 in the Czech Republic, and received FAA certification in January 1995.

The **M 601 T** is an aerobatic version for the PZL-130TM and -130TB Orlik. The **M601 F**, with TBO of 3,000 hours without hot-section inspection, is intended for Western markets, initially with FAA and Canadian certification. It entered production in early 1995 to power the L-420, Myasishchev M-101 and Aero Ae 270.

TYPE: Free turbine turboprop

PROPELLER DRIVE: Reduction gear at front of engine with drive from free turbine. Reduction ratio 14.9

AIR INTAKE: Annular, at rear (reverse flow engine)

COMPRESSOR: Two axial stages of stainless steel, plus single centrifugal stage of titanium. Pressure ratio (601 B) 6.4, (601 D) 6.55, (601 E, F, T) 6.65, at 36,660 rpm gas generator speed. Air mass flow (601 B) 3.25 kg (7.17 lb)/s, (601 D) 3.55 kg (7.83 lb)/s, (601 E, F, T) 3.6 kg (7.94 lb)/s

COMBUSTION CHAMBER: Annular combustor with rotary fuel injection and low-voltage ignition

COMPRESSOR TURBINE: Single stage with solid blades, inlet temperature 957°C

POWER TURBINE: Single stage

FUEL SYSTEM: Low-pressure regulator

FUEL GRADE: PL-6, PL-7, PSM-2, RT, TS-1 and Jet A-1 kerosene

LUBRICATION SYSTEM: Pressure gear pump circulation. Integral oil tank

More than 5,200 Atar turbojets have been produced for Mirage fighters. SNECMA is now producing the M53 turbojet and developing the M88. It is also participating in international collaborative programmes, the most important being CFM.

Today, SNECMA has about 23,000 personnel in its major subsidiaries: SEP (rocket motors, remote sensing and composites), Hispano-Suiza (aeronautical equipment, nuclear and robotic equipment), Messier Bugatti (braking systems) and Sochata (engine repair). SNECMA has this year (1995) deleted reference to the Project Blue collaborative programme with PWA, GE and MTU on 'mid-thrust' civil turbofans.

UPDATED

SNECMA ATAR 9K50

The Atar is a single-shaft military turbojet, first run in 1946 and subsequently developed and cleared for flight at Mach numbers greater than 2. The final version was the Atar 9K50, which powers all production Mirage F1 and Mirage 50 versions. Total 1,075 built for 28 customers by January 1995; further 17 to be produced.

DIMENSIONS:

Diameter	1,020 mm (40.2 in)
Length overall	5,944 mm (234 in)

WEIGHT, DRY:

Complete with all accessories	1,582 kg (3,487 lb)

PERFORMANCE RATINGS:

With afterburner	70.6 kN (15,870 lb st) at 8,400 rpm
Without afterburner	49.2 kN (11,055 lb st)

SPECIFIC FUEL CONSUMPTION
With afterburner 55.5 mg/Ns (1.96 lb/h/lb st)
Without afterburner 27.5 mg/Ns (0.97 lb/h/lb st)
OIL CONSUMPTION 1.5 litres (3.2 US pints, 2.64 Imp pints)/h

UPDATED

SNECMA M53

The M53 is a single-shaft bypass turbojet capable of propelling fighter aircraft to Mach 2.5, without any throttle limitations over the flight envelope. Its modular construction allows easier maintenance.

It includes a three-stage fan, five-stage compressor (pressure ratio 9.8 at 10,600 rpm), annular combustion chamber, two-stage turbine and an afterburner equipped with a multiflap variable nozzle. The control system is monitored by an Elecma electronic computer. The following versions are in service:

M53-5 Produced in 1980-85 as the initial engine of the Mirage 2000.

M53-P2 Designed to power the Mirage 2000 from 1985; current production version.

Orders totalled 684 for seven customers by January 1995, at which time 547 engines had been built.

DIMENSIONS
Length overall 5,070 mm (199.6 in)
Max diameter 1,055 mm (41.5 in)
WEIGHT, DRY
M53-5 1,470 kg (3,240 lb)
M53-P2 1,500 kg (3,307 lb)
PERFORMANCE RATINGS
Max with afterburner
M53-5 88.2 kN (19,830 lb st)
M53-P2 95.0 kN (21,355 lb st)
Max without afterburner
M53-5 54.4 kN (12,230 lb st)
M53-P2 64.3 kN (14,455 lb st)
SPECIFIC FUEL CONSUMPTION (without afterburner)
M53-5 24.64 mg/Ns (0.87 lb/h/lb st)
M53-P2 25.55 mg/Ns (0.90 lb/h/lb st)

SNECMA M88

The M88 is a family of advanced augmented turbofans, built around the same core, with thrust ranging from 50 kN (11,250 lb) to 105 kN (23,600 lb).

M88-2. This is the basic engine of the family, under development since 1987 for the Rafale aircraft for the French Air Force and Navy. The first engine went on test on 27 February 1989, and by December 1994 a total of 22 M88-2 engines had run 8,500 hours including 2,350 hours in flight. The programme is on schedule and within initial budget; deliveries start in 1996 from the 14 on order by January 1995.

The following relates to the basic M88-2:

TYPE: Two-shaft augmented turbofan.

COMPRESSOR: Variable inlet guide vanes, three-stage LP (fan), six-stage HP, with variable stators on first three stages.

COMBUSTOR: Annular, with aerodynamic fuel injection.

TURBINES: Single-stage HP (TET 1,850 K, 2,870 F), single-stage LP.

ACCESSORIES: Full-authority digital control system.

DIMENSIONS
Length 3,540 mm (139.0 in)
WEIGHT, DRY 897 kg (1,970 lb)
PERFORMANCE RATINGS (installed)
With afterburner 75 kN (16,872 lb st)
Without afterburner 50 kN (11,250 lb st)
SPECIFIC FUEL CONSUMPTION
With afterburner 49.9 mg/Ns (1.76 lb/h/lb st)
Without afterburner 22.1 mg/Ns (0.78 lb/h/lb st)

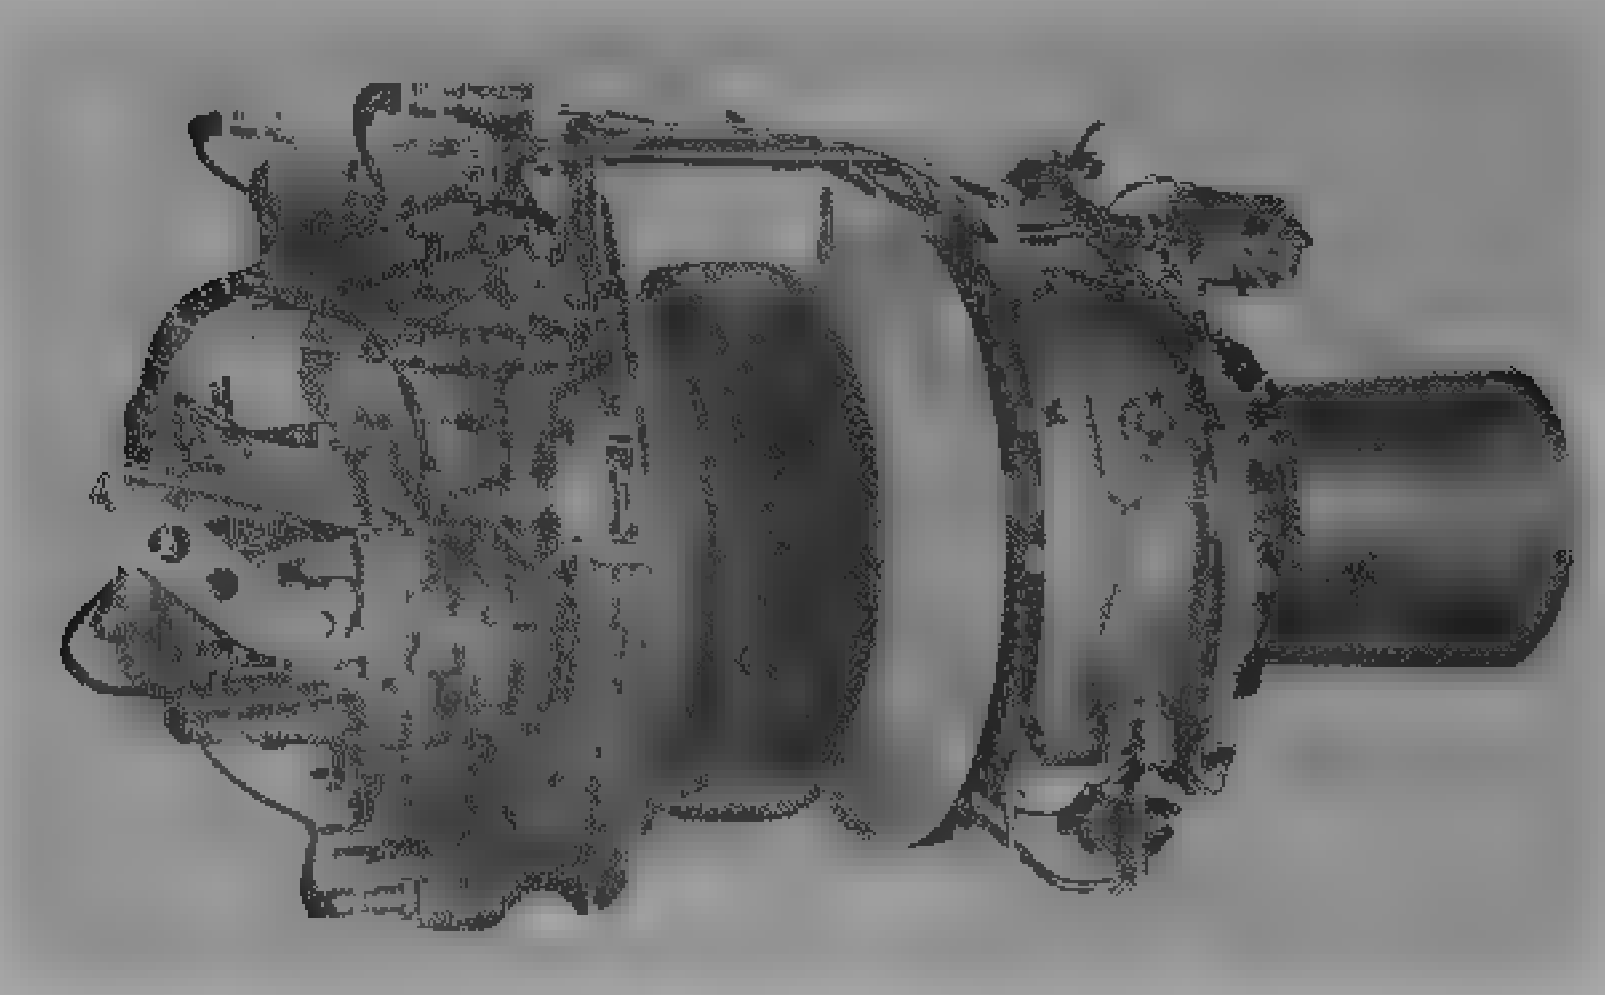
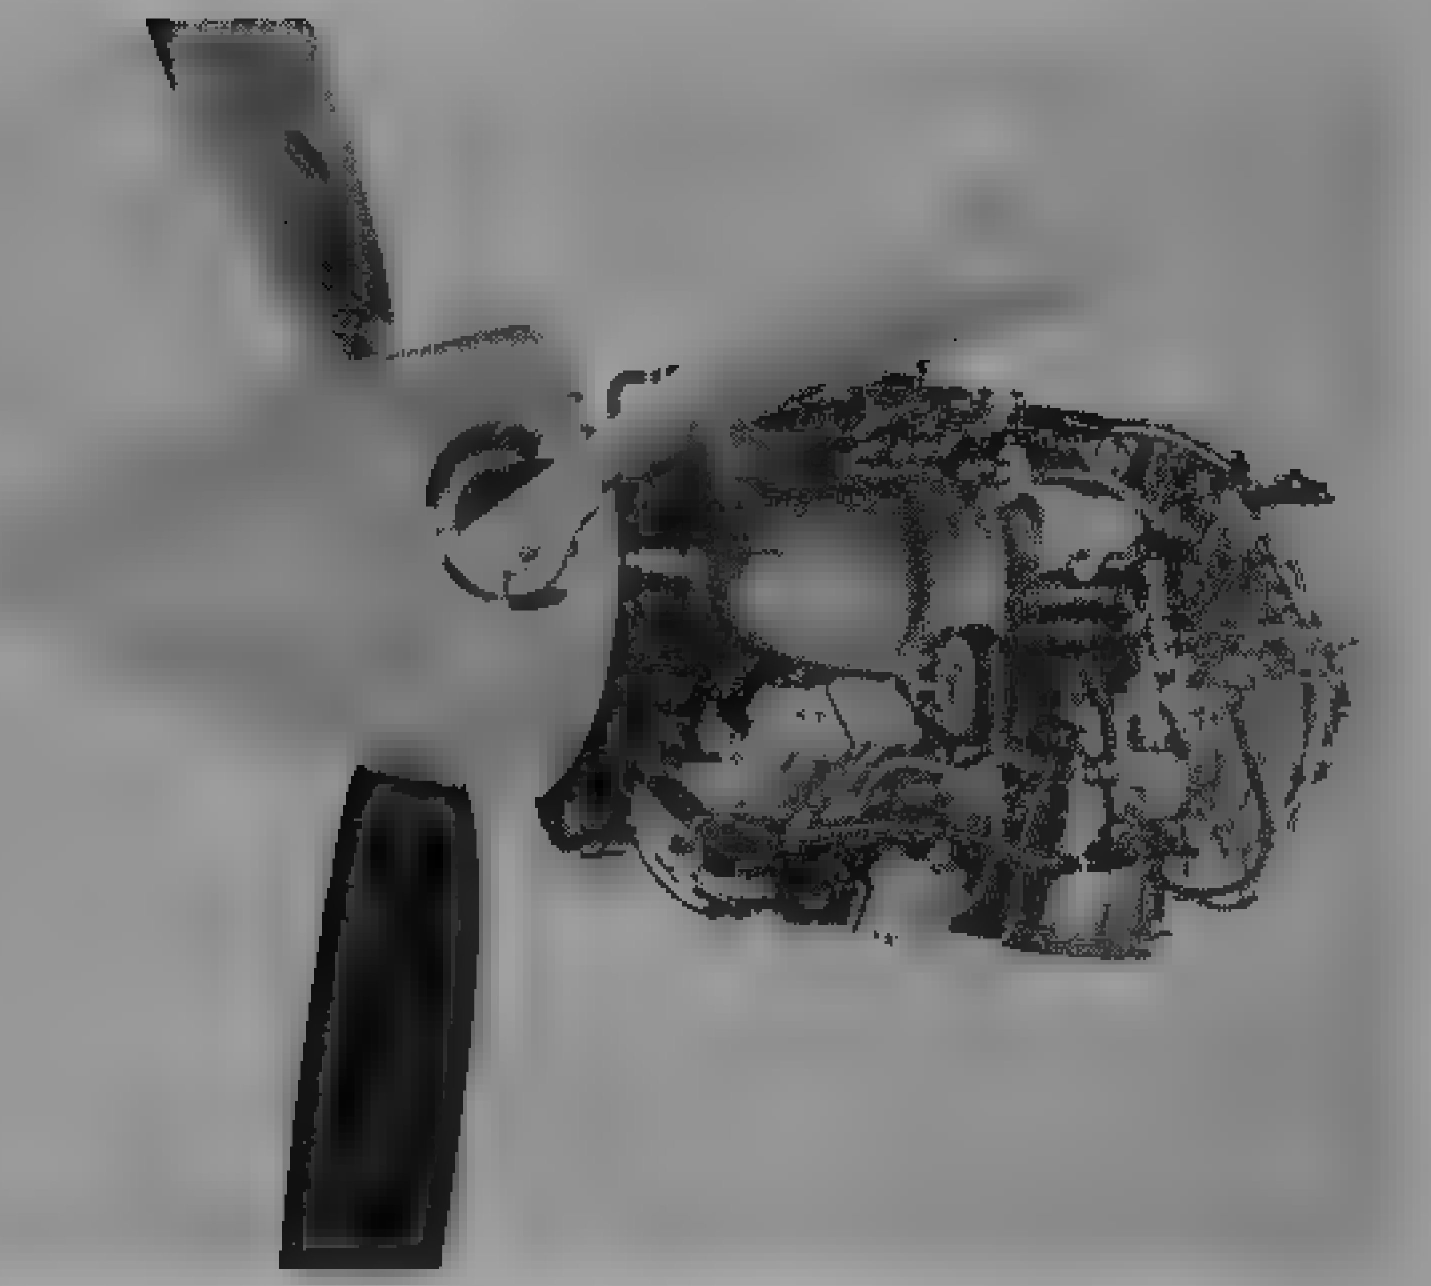
More than 27,000 Turbomeca aircraft engines have been delivered to customers in 125 countries and approximately 14,000 more built under licence by what are today Rolls-Royce plc in the UK, Teledyne CAE in the USA, ENMASA in Spain, Hindustan Aeronautics in India, Bet-Shemesh in Israel, SMPMC in China and factories in Romania and former Yugoslavia.



Turbomeca Arrius free turbine turboshaft
1992



Turbomeca Arrius 1D free turbine turboprop
1990

A European Small Engines Co-operation Agreement signed in April 1985 joins Turbomeca, MTU of Germany and Rolls-Royce of the UK in promoting three complementary new engines: the Turbomeca TM 333, MTU-Turbomeca-RR MTR 390 and Rolls-Royce Turbomeca RTM 322. Other European small engine makers may join the collaboration, in which each partner may share in engines sold to its own government.

In March 1989 a UK marketing company was formed: Turbomeca Ltd. Address as for Rolls-Royce Turbomeca (see International part of this section). General Manager St John Williamson.

Total covered floor area for Turbomeca's three plants at Bordes, Mézières and Tarnos is 140,500 m² (1,512,200 sq ft). The company employs about 3,900 people.

TURBOMECA ARRIUS

Previously known as the TM 319, this turboshaft is compact, with just a single centrifugal compressor, reverse flow combustor, single-stage HP and single-stage LP turbines, and FADEC control.

The initial rating is 340 kW (456 shp). The first was run on the bench on 21 February 1983. Full-authority digital electronic control is supplied by Elecma.

Production deliveries for the AS 355/555 began in 1987, and reached 280 by January 1995, out of 648 then on order. The same gas generator is used in the Arrius 1D turboprop.

Arrius 1. Basic version to which data below apply. Twin TM 319s at a T-O rating of 358 kW (480 shp) are an alternative power plant for the Eurocopter EC 155.

Arrius 2. Growth version, maximum T-O rating 473 kW (634 shp). Optional for McDonnell Douglas Explorer.

DIMENSIONS:

Length	782 mm (30.78 in)
Width	360 mm (14.2 in)
Height	540 mm (21.26 in)
WEIGHT, DRY:	87 kg (192 lb)
PERFORMANCE RATINGS (Arrius 1, ISA, S/L):	
Max contingency	408 kW (547 shp)
Max T-O	380 kW (509 shp)
Max continuous	295 kW (395 shp)

UPDATED

TURBOMECA ARRIUS 1D

The turboprop version is fully aerobatic. The gas generator and power turbine modules are identical with those of the Arrius 1. The first Arrius 1D ran on 11 September 1985. Flight testing in an Epsilon began in November 1985, followed by a Valmet L-90 TP in December 1987. The Arrius 1D is flying in the Socata Omega.

DIMENSIONS:

Length	826 mm (32.52 in)
Width	476 mm (18.74 in)
Height	590 mm (23.22 in)
WEIGHT, DRY (bare):	111 kg (245 lb)
PERFORMANCE RATINGS (ISA, S/L):	
T-O	313 kW (420 shp)
Cruise (6,100 m, 20,000 ft)	179 kW (240 shp)

VERIFIED

TURBOMECA ARRIEL

This turboshaft powers the single-engined AS 350 Ecureuil/AS 550 Fennec, twin-engined AS 365/565 Dauphin/Panther, Agusta A 109K and 109K2, and Sikorsky S-76A+ and S-76C and Eurocopter/Kawasaki BK 117 C1.

The Arriel has modular construction. The first complete engine ran on 7 August 1974.

There are 13 qualified production versions, differing essentially only in power rating.

Arriel 1A, 1B. T-O rating 478 kW (641 shp); power AS 350B/BA and AS 365C.

Arriel 1C. T-O rating 492 kW (660 shp); powers AS 365N.

Arriel 1D. T-O rating 510 kW (684 shp), powers AS 350B and L1.

Arriel 1C1, 1M, 1K, 1S. All have T-O rating of 522 kW (700 shp), power AS 365F and N1, A 109K and S-76A+.

Arriel 1C2. T-O rating 550 kW (738 shp); powers AS 365N2.

Arriel 1D1. T-O rating 558 kW (749 shp), powers AS 350B2 and AS 550U2. Selected for Kamov Ka-128.

Arriel 1M1. T-O rating 558 kW (749 shp); powers AS 565UA and AS 565MA.

Arriel 1S1. T-O rating 539 kW (723 shp); powers S-76C.

Arriel 1E. T-O rating 528 kW (708 shp); powers BK 117 C1.

Arriel 2. Growth version with single-stage gas generator turbine. To provide at least 16 per cent more power than 1S. Candidate engine for EC 120, Dauphin and S-76.

By 1 January 1995 a total of 3,439 Arriels had been delivered, out of 3,622 then on order. Totals do not include engines produced under licence in China.

The following relates to the Arriel 1A, 1B.

TYPE: Single-shaft free turbine turboshaft.

COMPRESSOR: Single-stage axial and supersonic centrifugal. Pressure ratio 9.

COMBUSTION CHAMBER: Annular, with flow radially outwards and then inwards. Centrifugal fuel injection.

GAS GENERATOR TURBINE: Two integral cast axial stages with solid blades.

POWER TURBINE: Single axial stage with inserted blades.

REDUCTION GEAR: Light alloy gearbox, containing two stages of helical gears, giving drive at 6,000 rpm to front and rear. Hydraulic torquemeter.

ACCESSORY DRIVES: Main pad provides for optional 12,000 rpm alternator, other drives for oil pumps, tachometer generator, governor and starter.

LUBRICATION SYSTEM: Independent circuit through gear pump and metallic cartridge filter.

OIL SPECIFICATION: AIR 3512 or 3513A.

STARTING: Electric starter or starter/generator.

DIMENSIONS:

Length, excl accessories	1,090 mm (42.91 in)
Height overall	569 mm (22.40 in)
Width	430 mm (16.93 in)
WEIGHT, DRY:

TURBOMECA ASTAZOU TURBOSHAFT

This turboshaft series is derived from the Astazou II turboprop. Variants are:

Astazou IIA. Rated at 390 kW (523 shp) for SA 318C.

Astazou IIIA. Derived from IIA but with revised turbine to match power needs of SA 341G. Produced jointly by Turbomeca and Rolls-Royce, with 1,008 delivered.

Astazou XIVB and XIVF. For SA 319B, XIVB is civil and XIVF military. Flat rated to 441 kW (591 shp) (1 h) up to 4,000 m (13,125 ft) or +55°C.

Astazou XIVH. For SA 342J/L, to remove altitude and temperature limitations; 1,146 delivered.

Astazou XVIIIA. Higher gas temperature. Powers AS 360C.

Astazou XX. Fourth axial compressor stage added. Designed for operation in hot and high countries.

By 1993 a total of 2,253 Astazous had been delivered; the engine is no longer in production.

The following description relates to the Astazou III, except where indicated.

TYPE: Single-shaft axial-plus-centrifugal turboshaft.

REDUCTION GEAR: Two-stage epicyclic having helical primary and straight secondary gears. Ratio 7.039 : 1 (XIVB/F, 7.345, XVIIIA, 7.375).

COMPRESSOR: Single-stage axial (IIA, III), two-stage axial (XIV, XVIII) or three-stage axial (XX) followed by single-stage centrifugal. Mass flow 2.5 kg (5.5 lb)/s.

COMBUSTION CHAMBER: Reverse flow annular with centrifugal injector using rotary atomiser. Two ventilated torch igniters.

TURBINE: Three-stage axial with blades integral with discs.

ACCESSORIES: Five drive pads on casing forming rear of air intake.

FUEL SYSTEM: Automatic constant-speed control.

LUBRICATION SYSTEM: Pressure type with gear type pumps. Oil tank of 8 litres (17 US pints, 14 Imp pints) capacity.

STARTING: Electrical, automatic.

DIMENSIONS:

Length overall: Astazou IIA	1,272 mm (50.0 in)
Astazou III, XIVB/F	1,433 mm (56.3 in)
Astazou XIVH	1,470 mm (57.9 in)

TURBOMECA ARTOUSTE III

The Artouste IIIB is a single-shaft turboshaft with two-stage axial-centrifugal compressor and three-stage turbine. Pressure ratio 5.2. Mass flow 4.3 kg/s (9.5 lb/s) at 33,300 rpm. Built under licence in India by Hindustan Aeronautics.

The IIIB powers the SA 315B and SA 316B/C. The uprated IIID has a reduction gear giving 5,864 rpm at the driveshaft (instead of 5,773) and in revised equipment. The IIID powers the SA 316C, data are for this version. Over 2,500 Artouste III engines have been built.

DIMENSIONS:

Length	1,815 mm (71.46 in)
Height	627 mm (24.68 in)
Width	507 mm (19.96 in)

WEIGHT, DRY: 178 kg (392 lb)
PERFORMANCE RATING (T-O, maintained up to 55°C at S/L or up to 4,000 m, 13,125 ft): 440 kW (590 shp)
SPECIFIC FUEL CONSUMPTION: 126.2 µg/J (0.747 lb/h/shp)

UPDATED

TURBOMECA TM 333

This turboshaft was launched in July 1979 to power the AS 365 and other helicopters in the 4,000 kg (8,800 lb) class, including the Indian ALH. French certification of the 1A version was obtained on 11 July 1986.

TM 333 1A. Basic version, composed of a gas generator module, free turbine module and reduction gear module.

TM 333 1M. For military AS 565.

TM 333 2B. Growth version with single crystal HP turbine, giving T-O rating of 747 kW (1,001 shp). Selected for HAL (India) ALH. First flight 20 August 1992, certificated December 1993. Total 14 built by January 1995 and no further orders received.

The TM 333 is one of three new engines included in the European Small Engines Co-operation Agreement. Data are for the 2B.

TYPE: Free turbine turboshaft.
COMPRESSOR: Variable inlet guide vanes, two-stage axial compressor, single-stage centrifugal.
COMBUSTION CHAMBER: Annular, reverse flow.
GAS GENERATOR TURBINE: Single-stage with uncooled inserted blades.
POWER TURBINE: Single-stage axial with uncooled inserted blades.
GEARBOX: Two stages to give drive at 6,000 rpm to front output shaft.
LUBRICATION: Independent system. Oil passes through gear pump and metallic cartridge filter.
FUEL SYSTEM: Microprocessor numerical control.
DIMENSIONS:

Length, including accessories	1,045 mm (41.1 in)
Height overall	712 mm (28.0 in)
Width	454 mm (17.9 in)

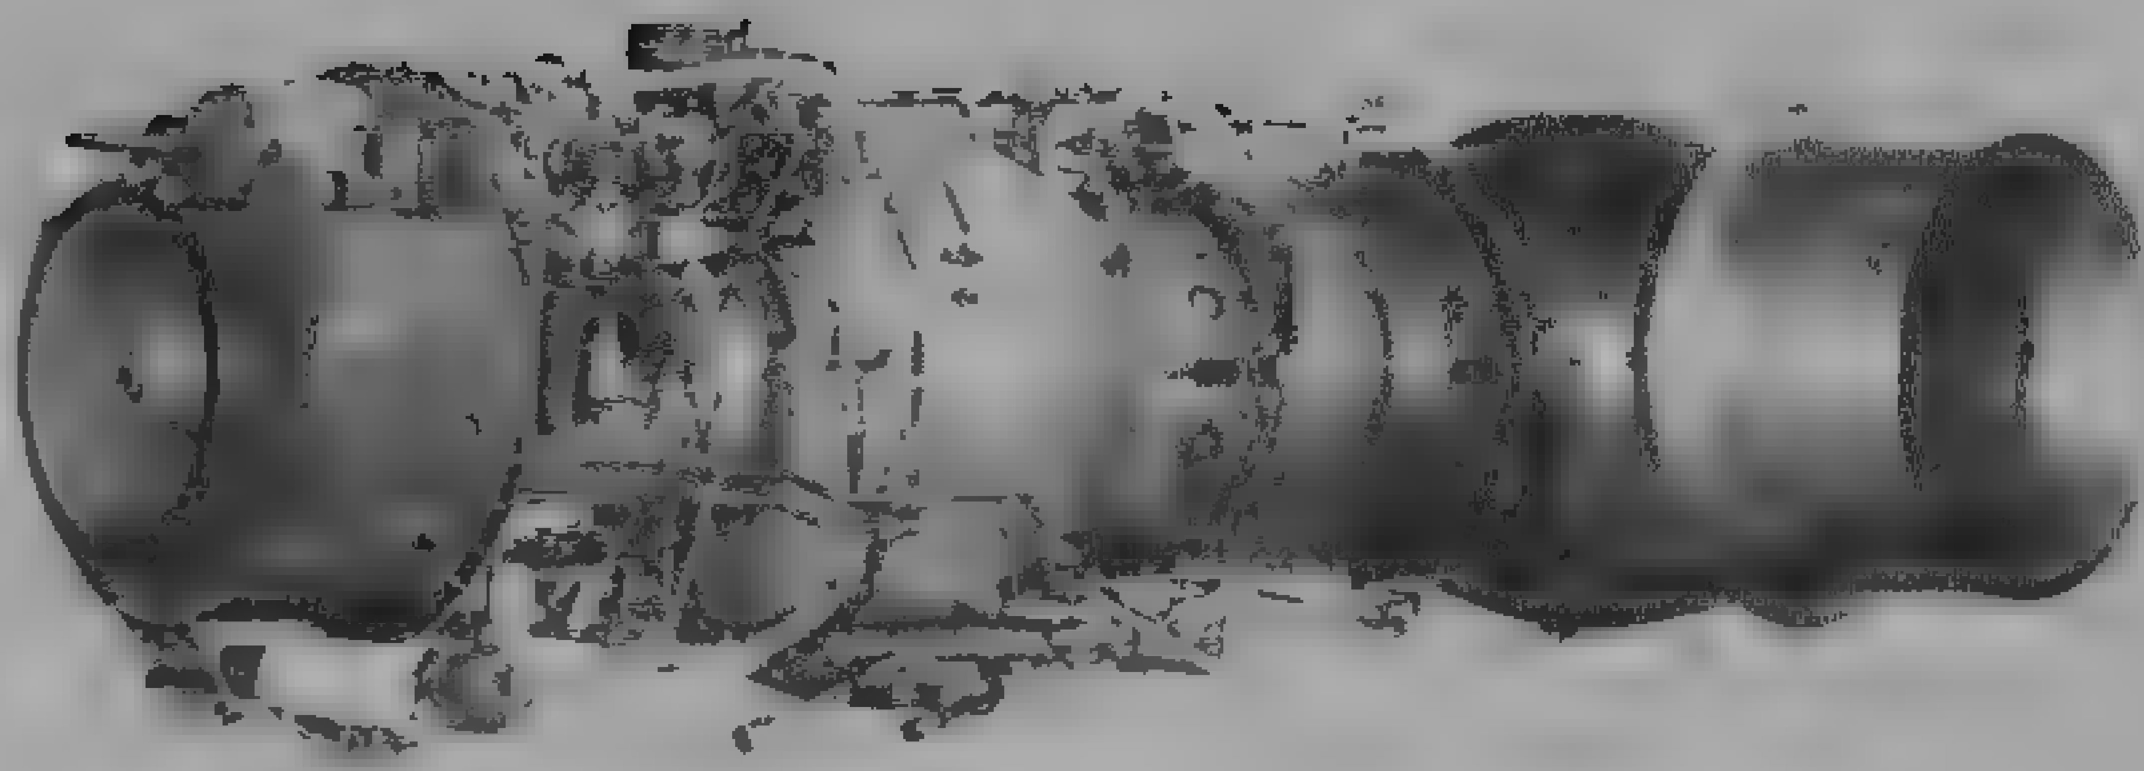
WEIGHT, DRY: 156 kg (345 lb)
PERFORMANCE RATINGS:

Max contingency	788 kW (1,057 shp)
T-O	747 kW (1,001 shp)
Max continuous	663 kW (889 shp)

SPECIFIC FUEL CONSUMPTION:

Max contingency	88 µg/J (0.523 lb/h/shp)
T-O	89.4 µg/J (0.529 lb/h/shp)
Max continuous	91.7 µg/J (0.543 lb/h/shp)

UPDATED



Turbomeca Makila 1A free turbine turboshaft

1987

TURBOMECA TURMO

The Turmo free turbine engine is in service in both turboshaft and turboprop versions. A total of 2,020 had been ordered and built by January 1995, no further production contracts received.

Current variants are as follows:

Turmo IIIC$_5$, IIIC$_6$, IIIC$_7$. For SA 321F/G/H/Ja. Total production 549.

Turmo IIIE$_6$. Higher turbine temperature.

Turmo IVA. Civil engine derived from IIIC$_4$, with contingency rating of 1,057 kW (1,417 shp). The IVB is a military version.

TYPE: Free turbine turboshaft.
REDUCTION GEAR: IIIC$_3$, C$_5$ and E$_3$ fitted with rear-mounted reduction gear; IIIC$_4$ direct drive.
COMPRESSOR: Single-stage axial followed by single-stage centrifugal. Pressure ratio 5.9 on IIIC$_3$. Mass flow 5.9 kg (13 lb)/s.
COMBUSTION CHAMBER: Reverse flow annular with centrifugal fuel injector using rotary atomiser. Two ventilated torch igniters.
GAS GENERATOR TURBINE: Two-stage axial.
POWER TURBINE: Two-stage axial unit in IIIC$_3$, C$_5$ and E$_3$, and single-stage in IIIC$_4$.
ACCESSORIES: Pads for oil pump, fuel control, electric starter, tacho-generator and, on IIIC$_4$, oil cooler fan.
FUEL SYSTEM: Fuel control for gas generator on IIIC$_3$, C$_5$ and E$_3$ with speed limiter for power turbine on E$_3$. Constant speed system on IIIC$_4$ power turbine.
FUEL GRADE: AIR 3405 for IIIC$_4$.
LUBRICATION SYSTEM: Pressure type with oil cooler and 13 litre (27.5 US pint, 23 Imp pint) tank.
OIL SPECIFICATION: AIR 3155A, or AIR 3513, for IIIC$_4$.
STARTING: Automatic system with electric starter motor.
DIMENSIONS:

Length	
Turmo IIIC$_3$, C$_5$ and E$_3$	1,975.7 mm (78.0 in)
Turmo IIIC$_4$	2,184 mm (85.5 in)
Turmo IIID$_3$	1,868 mm (73.6 in)
Width	
Turmo IIIC$_3$, C$_5$ and E$_3$	693 mm (27.3 in)

TURBOMECA MAKILA

This turboshaft powers the AS 332. Derived partly from the Turmo, it incorporates rapid-strip modular construction, three axial stages of compression plus one centrifugal, centrifugal atomiser; two-stage gas generator turbine with cooled blades, two-stage free power turbine, and lateral exhaust.

Makila 1A. Certificated 1980. OEI rating 1,310 kW (1,757 shp).

Makila 1A1. Certificated 1984. OEI rating 1,400 kW (1,877 shp).

Makila 1A2. Under development. OEI rating (30 seconds) 1,569 kW (2,103 shp), (2 minutes) 1,433 kW (1,921 shp).

By 1 January 1995 deliveries of Makila engines had reached 1,165 from 1,216 then on order.

DIMENSIONS:

Length, intake face to rear face	1,395 mm (54.94 in)
Max diameter	514 mm (20.25 in)

WEIGHT, DRY: Basic 210 kg (463 lb)
Equipped 243 kg (535 lb)
PERFORMANCE RATINGS (ISA, S/L):
Max contingency: see model listings
Cruise: 1A, 1A1, 1A2 700 kW (939 shp)
SPECIFIC FUEL CONSUMPTION:

Max contingency: 1A	83.9 µg/J (0.496 lb/h/shp)
1A1	81.4 µg/J (0.481 lb/h/shp)
Cruise: 1A	97.7 µg/J (0.578 lb/h/shp)
1A1	95.0 µg/J (0.562 lb/h/shp)

Groupement Turbomeca-SNECMA is a company formed jointly by Société Turbomeca and SNECMA to manage the Larzac turbofan launched in 1968

VERIFIED

TURBOMECA-SNECMA LARZAC

In February 1972 the **Larzac 04** turbofan was selected for a joint Franco-German programme to provide propulsion for the Alpha Jet (see under Dassault/Dornier in 1992-93 International part of Aircraft section). In addition to the two French engine partners, two German companies, MTU and KHD (now BMW RR), shared in production and development. A total of 1,264 engines was assembled in the two countries and production has ceased

CHAIRMAN: Albert Schneider
PUBLIC AFFAIRS: Holger Lapp

This joint venture company was established in July 1990 by BMW AG of Munich (50½ per cent) and Rolls-Royce plc of London (49½ per cent). It is located at the facilities of the former KHD Luftfahrttechnik, with over 1,200 employees and capital of DM250 million. It is an independent German company

It has taken over activities of the former KHD, including the Tornado secondary power system, T117 propulsion for the CL-289 UAV, T118 APU demonstrator and T128 low-cost turbojet. It has a 20 per cent share in the Rolls-Royce Tay programme, 5 per cent in the Rolls-Royce Trent, and 5 per cent in the CFM56-5

Both partners are supporting the BR700 series, a new family of turbofans. These entered production at a new factory at Dahlewitz, 20 miles south of Berlin in June 1995

UPDATED

BR710

This is the baseline engine of the BR700 family, and the first in timing. The first complete engine ran on 1 September 1994, and a 150 hour endurance test was successfully completed on 28 February 1995. The initial application is the Gulfstream GV, for which an order for 200 engines was placed on 8 September 1992. The GV is to fly in late 1995 and engine certification is due in October 1996. The second application is the Bombardier Global Express. Certification is scheduled for February 1997, with the first delivery to Canadair late that year

TYPE: Two-shaft turbofan

CONFIGURATION: Single-stage wide-chord fan, 10-stage HP compressor, two-stage HP and LP turbines

EMISSIONS: Noise significantly below FAR 36 Stage 3, NO_x 30 per cent below ICAO, with advanced combustor designed for further 30 per cent reduction.

FAN DIAMETER:	1,219 mm (48.0 in)
RATING (T-O, ISA + 20°C)	
GV	66.28 kN (14,900 lb st)
Global Express	65.30 kN (14,680 lb st)

UPDATED

BR715

BR715 is the largest current member of the BR700 engine family. It has been selected for the MDC MD-95, will run for the first time in June 1996, and be certified in December 1997. A dual-stage low-emissions combustor will be available for service in 2000

TYPE: Two-shaft turbofan

CONFIGURATION: Single-stage wide-chord fan, two-stage booster, 10-stage HP compressor, two-stage HP and three-stage LP turbines

EMISSIONS: Noise significantly below FAR 36 Stage 3, NO_x 30 per cent below ICAO, with advanced combustor designed for further 30 per cent reduction

FAN DIAMETER:	1,422.4 mm (56 in)
RATING (T-O, ISA + 15°C)	
MD-95	82.29 kN (18,500 lb st) with option of 88.97 kN (20,000 lb st)

UPDATED

LIMBACH SL 1700

Several variants of this engine have been certificated. Applications include Scheibe SF 25C Falke 1700. The following description refers to the SL 1700E

TYPE: Four-cylinder opposed air-cooled four-stroke piston engine

CYLINDERS: Bore 88 mm (3 46 in). Stroke 69 mm (2 71 in) Capacity 1,680 cc (102 51 cu in) Compression ratio 8

INDUCTION: Stromberg-Zenith 150CD carburettor

FUEL GRADE: 90 octane

IGNITION: Single Slick 4230 magneto feeding one Bosch WB 240 ERT 1 plug in each cylinder

STARTING: One Fiat 0 37 kW (0 5 hp) starter (EA, EAI, one Bosch 0 3 kW, 0 4 hp)

ACCESSORIES: Ducellier 250W alternator; APG 17 09 001 fuel pump

DIMENSIONS:

Length overall	618 mm (24 3 in)
Width overall	764 mm (30 1 in)
Height overall	368 mm (14 5 in)

WEIGHT DRY: 73 kg (161 lb)

PERFORMANCE RATINGS:

T-O	51 kW (68 hp) at 3,600 rpm
Continuous	45.5 kW (61 hp) at 3,200 rpm

UPDATED

LIMBACH L 1800

Basically an L 2000 with reduced stroke

CYLINDERS: Bore 90 mm (3 54 in). Stroke 69 mm (2 7 in) Capacity 1,756 cc (107 cu in) Compression ratio 7 5

FUEL GRADE: 100LL or Mogas

WEIGHT DRY: about 70 kg (154 lb)

PERFORMANCE RATINGS (S/L):

T-O	49 2 kW (66 hp) at 3,600 rpm
Cruise	41 kW (55 hp) at 2,600 rpm

INDIA

GTRE

GAS-TURBINE RESEARCH ESTABLISHMENT

Suranjan Das Road, Post Bag 9302, C. V. Raman Nagar, Bangalore 560 093
Telephone: 91 (812) 57 [illegible]
Telex: 0845 2458 GTRE IN
DIRECTOR: Dr R [illegible]

Established in 1959, the GTRE is one of 45 R&D establishments administered by the DRDO (Defence Research & Development Organisation). By far its biggest challenge is the design and development of a new engine for fighter aircraft.

VERIFIED

GTRE GTX

This engine is planned as the power plant of the production LCA (Light Combat Aircraft). Although influenced by existing engines, the GTX is a completely Indian project, and is being developed in the following versions:

GTX37-14U. This afterburning turbojet was the first designed in India. First run in 1977, it has a three-stage LP compressor and seven-stage HP compressor, both driven by single-stage turbines. It is flat rated to ISA +30°C at 44.5 kN (10,000 lb st) dry and 64.3 kN (14,450 lb st) with full reheat. A few engines will continue running to support later variants.

GTX37-14UB. Turbofan version with bypass ratio of 0.215. Maximum thrust 88.9 kN (19,990 lb st) with a larger frontal area.

GTX-35. Advanced turbojet with five-stage HP compressor, new annular combustor and increased turbine temperature. Offered required thrust for LCA, but higher fuel consumption due to higher thrust levels.

Kaveri. Improved turbofan planned as engine for LCA. Earlier designation of GTX-35VS changed to Kaveri with a redesigned core compressor of six stages, updated full-authority digital engine control of Indian design and advanced exhaust nozzle. Core was to run in December 1993 and engine in March 1994.

LP COMPRESSOR: Three stages, with transonic blading. Pressure ratio 3.38.

HP COMPRESSOR: Six stages with some variable stators. Pressure ratio 6.5. Overall pressure ratio 22.

COMBUSTION CHAMBER: Annular with air-blast atomisers.

HP TURBINE: Heavily loaded single-stage with DS cooled blades. Maximum entry gas temperature 1,427°C. Later to have thermal barrier coating.

LP TURBINE: Single-stage, cooled.

CONTROL SYSTEM: FADEC being developed in India and of Indian design.

PERFORMANCE RATINGS (flat rated to ISA + 20°C, S/L):

Max dry	51.3 kN (11,530 lb st)
with afterburning	80.2 kN (18,030 lb st)

VERIFIED

HAL

HINDUSTAN AERONAUTICS LTD

PO Box 5150, 15/1 Cubbon Road, Bangalore 560 001
Telephone: 91 (080) 2256901

OFFICERS: see Aircraft section

The Bangalore Engine and Koraput Divisions of HAL constitute the main aero-engine manufacturing elements of the Indian aircraft industry.

BANGALORE COMPLEX (Engine Division)

This division manufactures under licence the Adour 811 (RRTI), TPE331-5-252D (AlliedSignal) and Artouste IIIB (Turbomeca). Avon, Dart, Orpheus and Gnome engines are repaired and overhauled.

KORAPUT DIVISION

This Division was established to manufacture under Soviet government licence the Tumansky R-11 afterburning turbojet. With help from the Soviet Union, the first engine was run in early 1969. In 1977 production switched to the R-25 for the MiG-21bis, followed in 1984 by the R-29B for the MiG-27M. R-11 and R-25 engines are repaired and overhauled, to be joined soon by the RD-33.

MARKETING DIRECTOR: Richard B. Shaffer

CFM International, a joint company, was formed by SNECMA (France) and General Electric (USA) in 1974 to provide management for the CFM56 programme and a single customer interface.

GE is responsible for design integration, the core engine and the main engine control. The core engine is derived from that of the F101 turbofan developed for the US military. SNECMA is responsible for the low-pressure system, gearbox, accessory integration and engine installation.

UPDATED

CFM INTERNATIONAL CFM56

US military designation: F108

In the late 1960s SNECMA and General Electric (now GE Aircraft Engines) concluded that a large market existed for a high-bypass ratio engine in the 10 ton class (97.9 to 106.8 kN, 22,000 to 24,000 lb st). The first CFM56 demonstrator ran at GE's Evendale plant on 20 June 1974.

The CFM56 designation covers a family of engines from 82.3 to 151.25 kN (18,500 to 34,000 lb st). By January 1995 a total of 6,937 engines had been delivered, against firm orders for 8,560, and 2,400 aircraft had logged over 59 million flight hours. The following are current versions:

CFM56-2C. Certificated 8 November 1979 under FAR Pt 33 and JAR-E, at 106.8 kN (24,000 lb st); but a 97.9 kN (22,000 lb) T-O rating is used to re-engine the DC-8-60 to Super 70 standard. Scheduled operations began on 24 April 1982. Engine-caused shop visit rate is 0.13 and the dispatch reliability is 99.97 per cent.

CFM56-2B. Certificated 25 June 1982 at 97.9 kN (22,000 lb st), flat rated to 32°C (90°F), the CFM56-2B1 was selected by the US Air Force for its KC-135A tanker re-engining programme on 22 January 1980. First flight of a KC-135R took place on 4 August 1982 and production **F108-CF-100** engines power KC-135R aircraft delivered from late 1983. CFM56-2B1 also powers the C-135CFR tankers of the French Armée de l'Air. Total early 1995 was 380 aircraft.

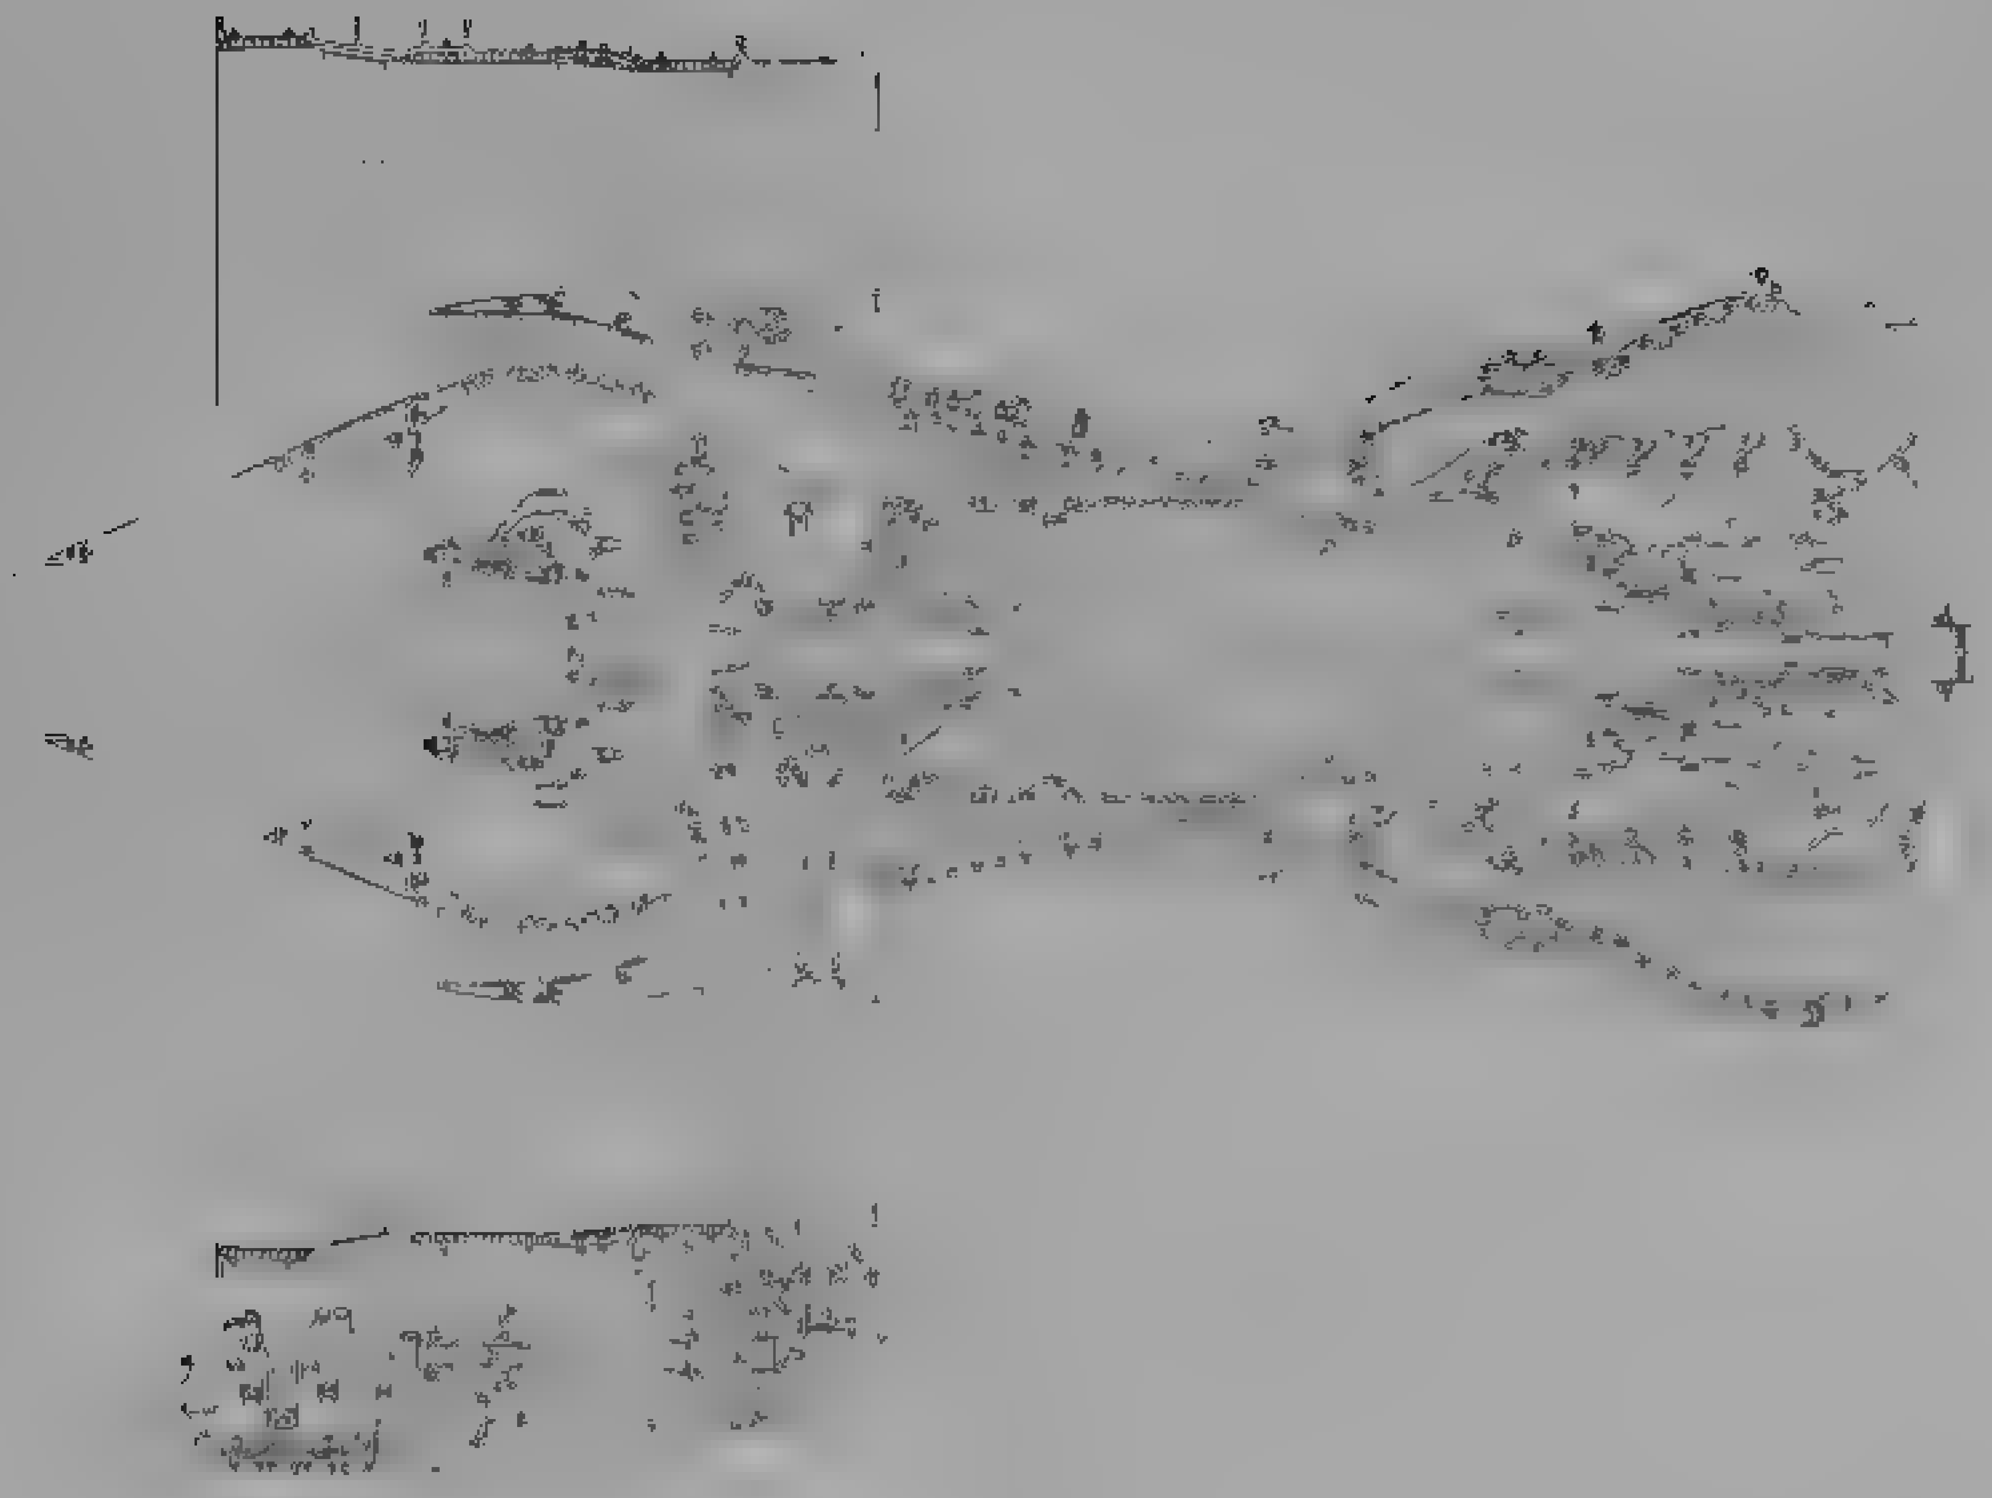
CFM56-2A. Certificated 6 June 1985 at 106.8 kN (24,000 lb st), flat rated to 35°C (95°F), the CFM56-2A-2 and 2A-3 powers the US Navy E-6 communications aircraft, the Royal Saudi Air Force E-3 and KE-3 and the E-3 for the UK and France. These applications require long-duration oil tank, reverser and gearbox for two high-capacity integrated drive generators.

Total 2,403 CFM56-2s of all sub-types delivered to 24 customers out of 2,450 on order by January 1995.

CFM56-3B1. Derivative of CFM56-2, rated at 89.00 kN (20,000 lb st), flat rated to 30°C (86°F), with smaller fan. Powers Boeing 737-300 and -500. First ran in March 1982. US and French certification granted 12 January 1984. Entered airline service December 1984. Rerated at 82.3 kN (18,500 lb st), powers 737-500 which entered service February 1990.

CFM56-3B2. Certificated at 97.90 kN (22,000 lb st), flat rated to 30°C (86°F), on 20 June 1984. For 737-300 and 737-400 with improved payload/range from short, hot, high airfields. 737-400 entered service September 1988.

CFM56-3C1. Rated at 104.5 kN (23,500 lb st) for 737-400. Certificated December 1986. Offered as common engine for all 737 models at 82.3 to 104.5 kN (18,500 to 23,500 lb st). All Dash-3 models ETOPS qualified.



Longitudinal section of CFM56-5A1

1990

By January 1995, 135 customers had ordered 4,246 CFM56-3 engines of which 3,490 had then been delivered. Engine-caused shop visit rate (12 month rolling averages) was 0.073, and dispatch reliability 99.97 per cent.

CFM56-5A1. Launched September 1984, for A320. Has fan diameter of -2, with improved aerodynamics in all LP and HP components, advanced clearance control features and FADEC. Nominal rating of 111.21 kN (25,000 lb st), flat rated to 30°C (86°F). Certificated 27 August 1987 and entered service April 1988. Outstanding reliability resulted in 120 minutes ETOPS certification.

CFM56-5A3. Rated at 117.9 kN (26,500 lb st). To meet specific airline requirements for A320.

CFM56-5A4, -5A5. Respectively rated at 97.9 and 104.5 kN (20,000 and 23,500 lb st), these versions power the A319.

CFM56-5B1. Rated at 133.5 kN (30,000 lb st). Certified February 1994 for A321.

CFM56-5B2. High-performance derivative with core of 5C4. Rated at 137.9 kN (31,000 lb st) for A321. First run 25 October 1991 at Villaroche. Optional double-annular combustor to minimise NO_x emissions. Certification May 1993, entry to service March 1994.

CFM56-5B4. Version of -5B derated to 120.1 kN (27,000 lb st) to 45°C (113°F), available for A320.

CFM56-5B5, -5B6. Alternatives for A319, respectively 97.9 kN (22,000 lb st) and 104.5 kN (23,500 lb st).

CFM56-5B/P. New airfoils throughout and improved seals to extend life and reduce sfc by 3 per cent.

CFM56-5C2. Advanced fan, new four-stage LP compressor, active clearance control HP spool, new turbine section (five-stage LP, new frame, modulated clearance, new aerodynamics throughout), integrated mixer nozzle and FADEC. Rated at 138.8 kN (31,200 lb st). Powers A340, certificated 31 December 1991, service entry February 1993.

CFM56-5C3. Growth version rated at 144.6 kN (32,500 lb st). Certificated 31 December 1991 at 950°C TET. Entered service early 1994.

CFM56-5C4. Growth version certificated October 1994 at 151.25 kN (34,000 lb st) for A340.

Total 1,656 CFM56-5s of all variants ordered by January 1995, of which 1,044 delivered.

CFM56-7B. Matches -5B core and LP turbine with new wide-chord fan, single-crystal HP turbine, streamlined engine flow path and FADEC II control. Rated at 82.3 to 117.4 kN (18,500 to 26,400 lb st) for 737-700. Certification due October 1997; 208 on order for seven customers by January 1995.

CFM56XX. Projected engine in 200 kN (45,000 lb) class with 2,134 mm (84.0 in) fan and 20 per cent greater core air flow.

TYPE: Two-shaft subsonic turbofan.

FAN: Single-stage axial. Forged titanium disc holding (CFM56-2) 44 titanium blades, each with a tip shroud to form a continuous ring, (CFM56-3) 38 titanium blades, each with part-span shroud, (CFM56-5) 36 titanium blades, each with part-span shroud, (CFM56-7) 24 solid wide-chord unshrouded blades. Mass flow (-2A2) 370 kg (817 lb)/s, (-3B2) 312 kg (688 lb)/s, (-5A1) 386 kg (852 lb)/s, (-5B2) 434 kg (956 lb)/s, (-5C2) 466 kg (1,027 lb)/s, (-7B20) 310 kg (686 lb)/s. Bypass ratio (-2) 6, (-3) 5, (-5A) 6, (-5B) 5.5, (-5C) 6.6, (-7B) 5.1-5.6.

LP COMPRESSOR: Three axial stages (4 on -5B and -5C), on titanium drum bolted to fan disc. A ring of bleed doors allows core air flow to escape into fan duct at low power settings.

HP COMPRESSOR: Nine-stage rotor with three stages of titanium blades and remainder of steel. Stator vanes are steel, with first four stators variable. Overall pressure ratio (-2) 25 class, (-3C) 30.6, (-5A) 31.3, (-5B) 35, (-5C2/-5C3, maximum climb) 37.4.

COMBUSTION CHAMBER: Machined ring, fully annular, with advanced film cooling. Dual annular offered on -5B and -7B.

HP TURBINE: Single-stage with air-cooled stator and rotor airfoils, advanced materials on -5. HP system carried in two bearings.

LP TURBINE: Four-stage (5 on -5C) with tip shrouds.

EXHAUST UNIT (FAN): Constant-diameter duct of sound-absorbent construction. Outer cowl and engine cowl form convergent plug nozzle, with airframe-mounted reverser (expected -5C, see next).

EXHAUST UNIT (CORE): Fixed-area with convergent nozzle, mixer on -5C.

ACCESSORY DRIVE: (CFM56-2 and -5) Gearbox in front sump transmits drive from front of HP spool to transfer gearbox on underside of fan case. Air starter at transfer gearbox (-2) or accessory gearbox (-5). (CFM56-3 and -7B) Side-mounted accessory drive gearbox with transfer gearbox, air starter pad on accessory gearbox.

CONTROL SYSTEM: Hydromechanical with electronic trim (-2, -3), FADEC (-5 and -7B).

LUBRICATION: Dry sump system.

DIMENSIONS:

Length, excl spinner:	
CFM56-2	2,430 mm (95.7 in)

CFM56-5B	16.98 mg/Ns (0.600 lb/h/lb)
CFM56-5C (with mixer)	16.06 mg/Ns (0.567 lb/h/lb)

UPDATED

CFM INTERNATIONAL CFM88

This proposed turbofan is based on the core of the SNECMA M88-2 fighter engine, with an added seventh HP compressor stage. The LP spool would have a single fan stage. The CFM88 is seen as leading to a family of engines from 53.38 kN (12,000 lb st) to 88.97 kN (20,000 lb st), for 50/120-seat regional transports, business jets and military transports.

EUROJET

EUROJET TURBO GmbH

Inselkammerstr 5, D-82008 Unterhaching, Munich, Germany
Telephone: 49 (89) 666920
Fax: 49 (89) 6669 2139/6669 2162
Telex: 5212124 EJET D
MANAGING DIRECTOR: Kenneth J. Greenal

Formed in August 1986 by a consortium of Fiat Aviazione (now FiatAvio) of Italy, MTU-Munchen GmbH of (then) West Germany, Rolls-Royce of the UK and Sener (now ITP) of Spain, this company became operational on 1 January 1987 as EUROJET Turbo GmbH. It was established to co-ordinate the design, development and manufacture of the EJ200 engine for the European Fighter Aircraft (now Eurofighter 2000).

The workshare was proportional to the expected aircraft requirement of the four nations, and was agreed as follows: Fiat (21 per cent), LP turbine and shaft, interstage support, th[illegible] system, gearbox, oil system, and participation in the intermediate casing; MTU (33 per cent), LP compressor, HP compressor, participation in HP turbine, and FADEC (full authority digital electronic control) design responsibility; Rolls-Royce (33 per cent), combustion system, HP turbine, intermediate casing, and participation in LP and HP compressors, LP turbine, interstage support, reheat system and nozzle; ITP (13 per cent), nozzle, jetpipe, exhaust diffuser and bypass duct.

Engine build and test during development and production is at each partner's facilities. Each partner provides comprehensive support for engines of its own national air force. The original requirement of the four nations was for 760 aircraft, including about 2,000 engines.

The development programme is structured in four phases: 1 (Technology Acquisition) which started in 1985, 2 (Design Verification), first DVE run in November 1988, 3 (Full Scale Development), prototype engines (for which contract signed in November 1988) delivered in 1994 for flight testing, DA3 first flight with EJ200 engines in 1995, and 4 (Flight Evaluation and Full Certification), to begin late 1995. The technology used and the extensive testing had led to an engine free from any serious mechanical or engine dynamics problem. By mid 1995 the EJ200 has run more than 5,000 hours, of which more than 1,600 hours were on altitude test.

UPDATED

EUROJET EJ200

This engine is an advanced turbofan designed for Mach numbers of about 2. It is fully modular, and allows for on-condition maintenance with built-in engine health monitoring and test equipment. Low maintenance and life cycle cost along with high reliability have been prime design criteria. The total number of aerofoils is only approximately 60 per cent of those used in the RB199. The EJ200 programme has achieved all technical milestones on time and cost. This includes 150 hours of accelerated mission endurance testing at full temperature rating. Installed in third and subsequent Eurofighter 2000s, first flight 5 June 1995. Entry into service is expected to be in 2000.

TYPE: Two-shaft augmented turbofan.

LP COMPRESSOR: No inlet guide vanes. Three stages, with 3D transonic blades of robust large-chord section held in blisks. Overhung ahead of high-capacity ball bearing and forward roller bearing. Bypass ratio about 0.4. Pressure ratio 4 plus.

HP COMPRESSOR: Five stages, with first stage variable inlet guide vanes and blisk rotor stage. Shaft supported between front ball and rear roller bearings. Overall pressure ratio more than 25.

COMBUSTOR: Fully annular, with airspray can combustor.

HP TURBINE: Single stage, with single crystal blades. Both turbine bearings in single interstage support frame.

LP TURBINE: Single-stage, with single crystal blades. Both turbine bearings in single interstage support frame.

EXHAUST SYSTEM: High efficiency augmentor of burn-then-mix type, with fully variable convergent divergent nozzle.

ACCESSORIES: Central gearbox driven via tower shaft in interstage support. FADEC. Integrated health monitoring system, produced by consortium led by Dornier, with Smiths Industries, Tecnost and Ceselsa. Rotating tank oil system to give artificial positive gravity at all times.

DIMENSIONS: Length overall	4.0 m (157 in)
Inlet diameter	740 mm (29 in)
WEIGHT:	990-1,035 kg (2,183-2,282 lb)

PERFORMANCE RATING: In 90 kN (20,000 lb st) class

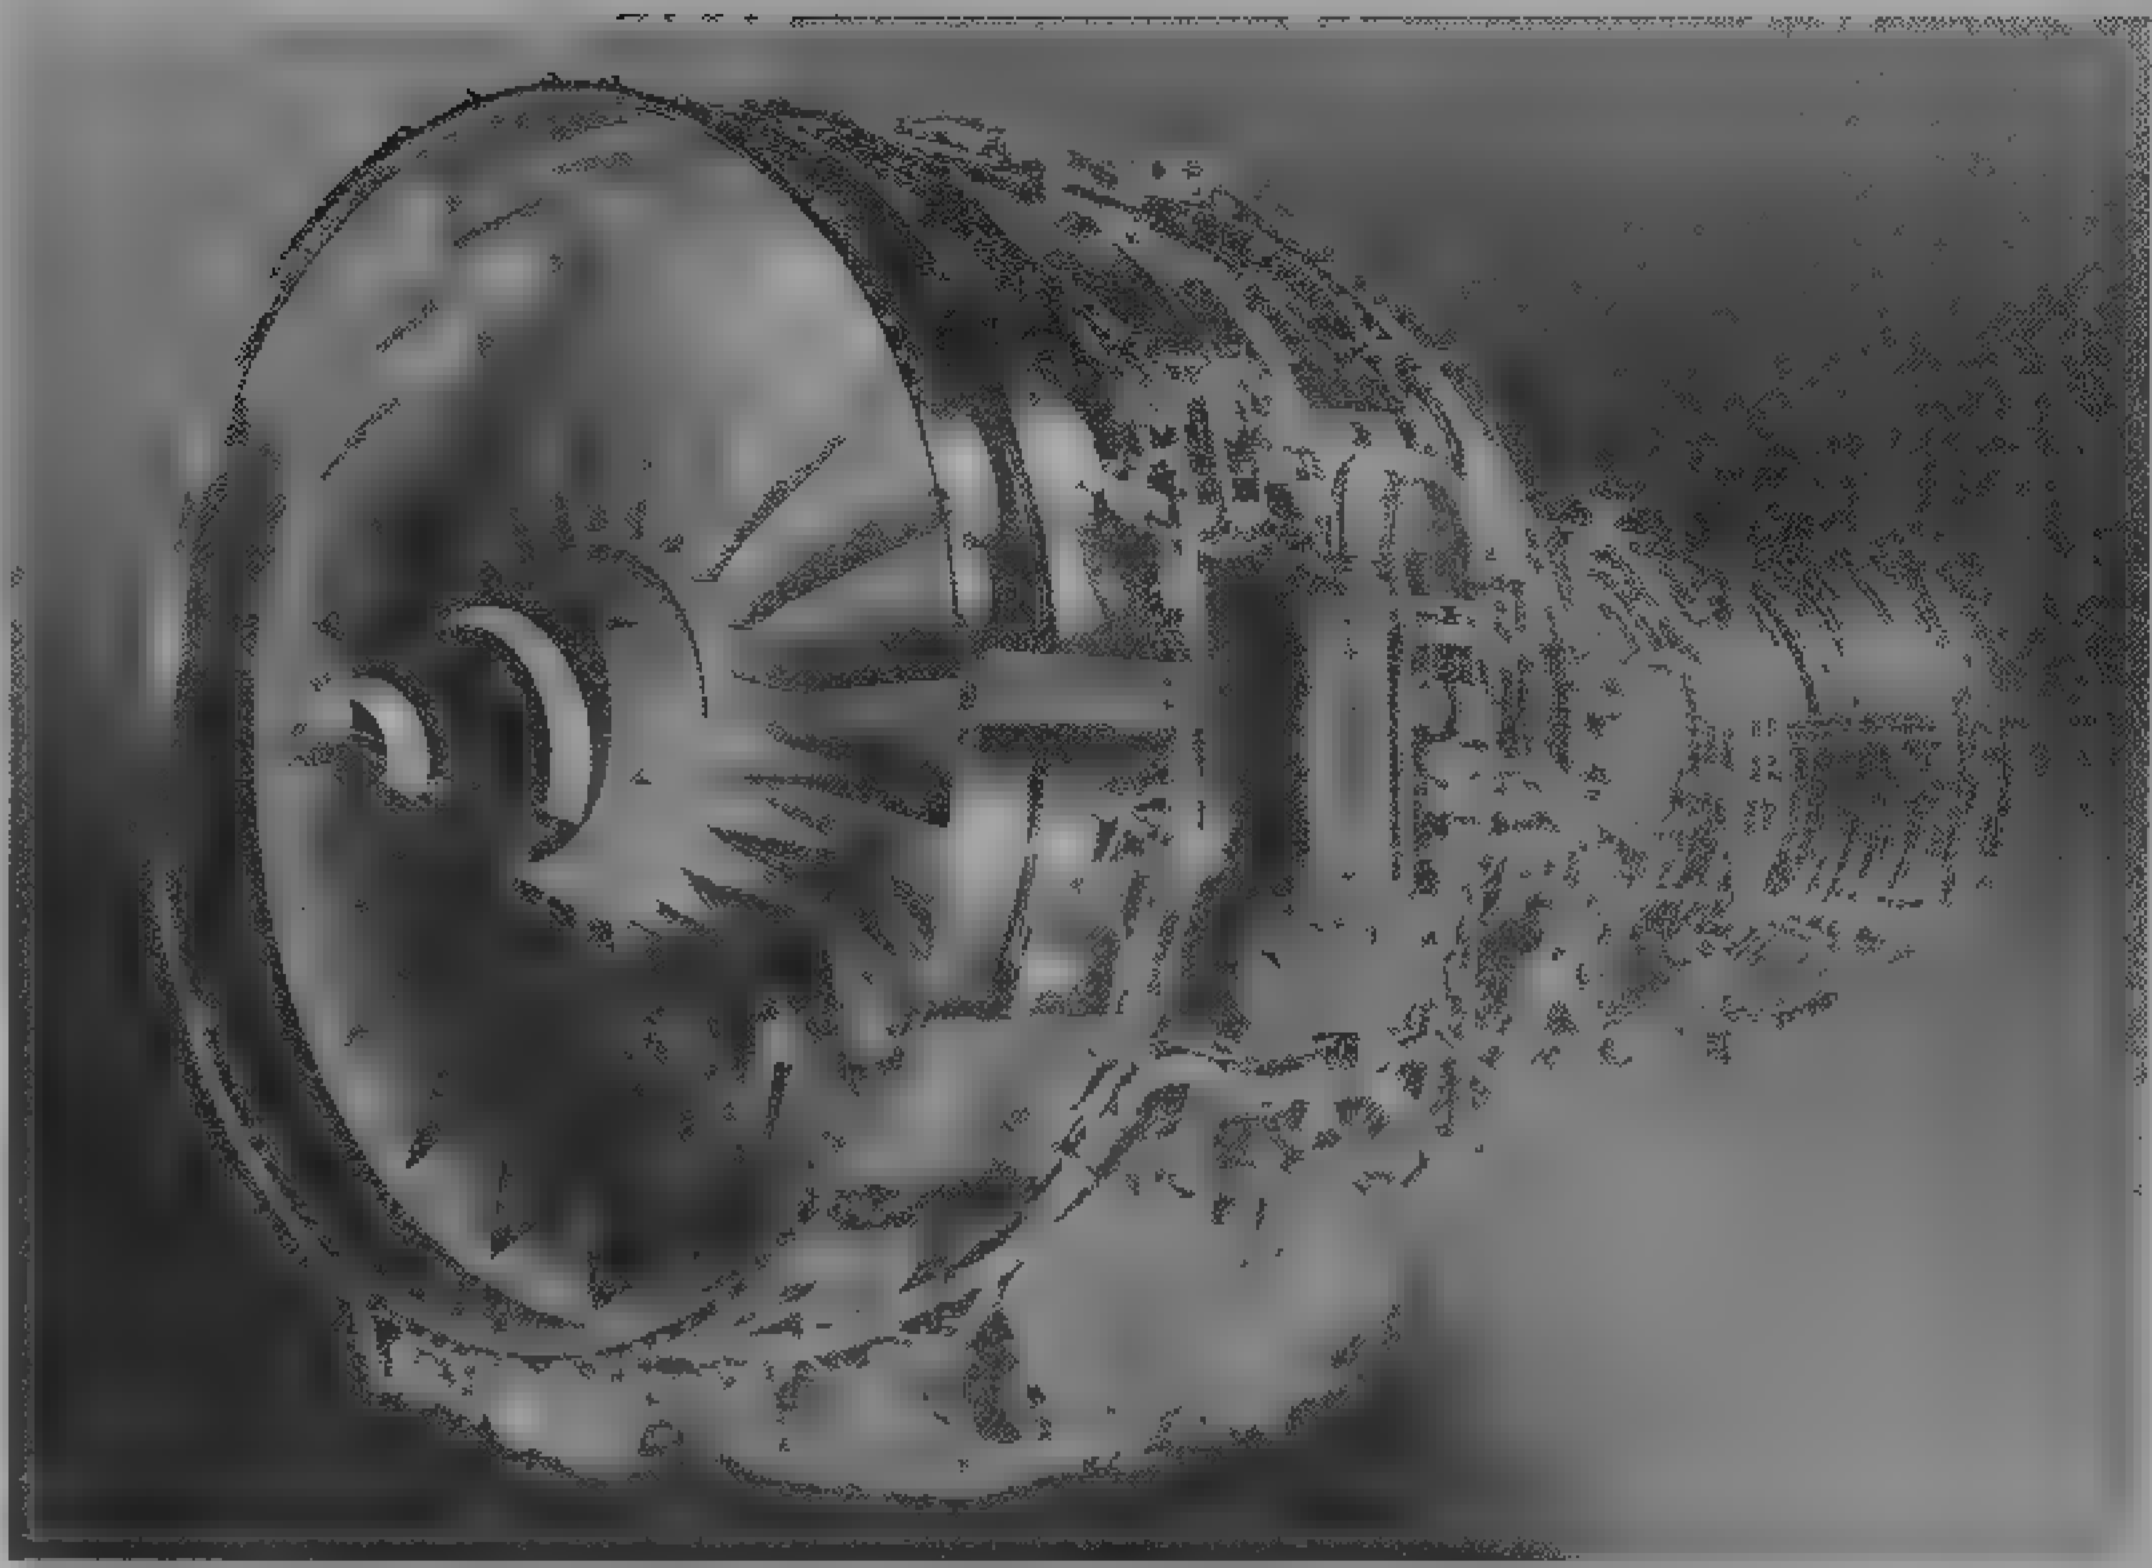
PUBLIC RELATIONS MANAGER: Robert Nuttall

IAE is a management company set up on 14 December 1983 to direct the entire programme for the V2500 turbofan worldwide. The following shareholders signed a 30-year agreement: Rolls-Royce, UTC (P&W), Japanese Aero-Engines (IHI, KHI, MHI), MTU and FiatAvio. Responsibility for each module is allocated according to shareholding. Overall engineering direction is delegated to Pratt & Whitney. Rolls-Royce manages the nacelle programme. Engines are assembled and tested by Pratt & Whitney and Rolls-Royce.

JAEC is responsible for the fan (derived from 535E4) and LP compressor, Rolls-Royce for the HP compressor, Pratt & Whitney for the combustor and HP turbine, MTU for the LP turbine and Fiat for the gearbox. Turbines, gearbox and FADEC use PW2000 technology.

UPDATED



IAE V2500 two-shaft turbofan

1994

IAE V2500

V2500-A1. In service on the A320. IAE supplies the complete package, including the nacelle (by Rohr/Shorts). Testing of the engine began in December 1985. A flight programme on a Boeing 720B in Canada was completed in 35 hours in Spring 1988, and every ingestion and fan-blade-off test was passed first time (believed an industry record). The first pair of propulsion systems was delivered to Airbus Industrie in March 1988 and the V2500 was certificated in June 1988.

The first V2500-powered A320 made its first flight on 28 July 1988. The aircraft entered service in May 1989. Awarded 120 minutes EROPS approval January 1992. Shop visit rate (12 months to December 1994) was 0.073 per 1,000 h.

Subsequent development to higher thrust has been achieved by increasing the core air flow and aerodynamic changes. Pressure ratio of the LP compressor is increased by adding a fourth stage. A engines in the A (Airbus) and D (Douglas) series have common fans and cores, and fit into a common nacelle which for the MD-90 is modified for fuselage side mounting. A5/D5 engines all certificated November 1992. All versions projected with Calcor final nozzle giving 5 per cent area variation.

V2522-A5. Rated at 99.79 kN (22,000 lb st). Four-stage LP compressor, as in all A5 and D5 versions. Bypass ratio 4.9. Pressure ratio 25.3. For A319.

V2524-A5. Rated at 106.6 kN (23,500 lb st).

V2527-A5. Flat rated at 117.88 kN (26,500 lb st). Bypass ratio 4.75. Pressure ratio 28.6. For A320. Flight testing from 1992, first delivery (to United) November 1993.

V2525-D5. Flat rated at 111.25 kN (25,000 lb st). Bypass ratio 4.8. Pressure ratio 27.7. For MD-90-30. Flight testing began February 1993, first delivery (to Delta) early 1995.

V2528-D5. Rated at 124.55 kN (28,000 lb st). Bypass ratio 4.7. Pressure ratio 30.4. For MD-90-50.

V2530-A5. Rated at 133.4 kN (30,000 lb st). Bypass ratio 4.6. Pressure ratio 32.5. For A321-100. Flight testing began March 1993, first delivery (Lufthansa) March 1994.

V2533-A5. Rated at 146.8 kN (33,000 lb st) to power A321-200. Launched by Aero Lloyd April 1995.

V2535. Provisional designation for future growth engine to be rated in the 155.7 kN (35,000 lb st) class, with increased diameter fan and revised LP compressor and turbine.

By December 1994 a total of 39 customers had specified the V2500 for 658 aircraft, comprising 448 A320/321s and 210 MD-90s.

The primary features of the V2500-A5/D5 are as follows:

TYPE: Two-spool subsonic turbofan.

FAN: Single stage, with wide-chord shroudless blading. Diameter 1,600 mm (63.0 in). Pressure ratio 1.70. Bypass ratio 4.6. Mass flow 384 kg (848 lb)/s.

LP COMPRESSOR: Four stages, bolted to rear of fan to boost inlet to core. (Three stages in A1 version.)

HP COMPRESSOR: Ten stages of blading supported by a drum rotor. Inlet guide and first three vane stages variable. Overall pressure ratio 29.4.

COMBUSTOR: Annular segmented construction eliminates hoop stresses and provides low emissions and uniform exit temperatures.

HP TURBINE: Two stages of air-cooled single-crystal blading in powder metallurgy discs. Active tip clearance control.

LP TURBINE: Five stages of uncooled blading in welded and bolted rotor. Active clearance control.

GEARBOX: Modular unit, fan case mounted.

CONTROL SYSTEM: Full-authority digital electronic control (FADEC) to provide command outputs for engine fuel flow, stator vane angle, bleed modulation, turbine and exhaust case cooling, oil cooling, ignition and reverser functions. Supplied by Hamilton Standard.

NACELLE: Full length nacelle with reverser. Cowl load sharing to minimise case deflections. Acoustically treated.

DIMENSIONS:

Length (flange to flange)	3,200 mm (126 in)
Fan diameter	1,600 mm (63 in)

WEIGHT, DRY (with original single-stage LP compressor):

Bare engine	2,370 kg (5,224 lb)
Complete power plant, incl nacelle	3,311 kg (7,300 lb)

PERFORMANCE RATINGS (installed):

T-O, S/L, ISA: 133.4 kN (30,000 lb st) to ISA + 15°C
Cruise Mach 0.8, 10,670 m (35,000 ft): 25.6 kN (5,752 lb)

SPECIFIC FUEL CONSUMPTION (Cruise Mach 0.8, 10,670 m/35,000 ft, installed): 16.26 mg/Ns (0.575 lb/h/lb)

MTFE

MID THRUST FAMILY ENGINE

MTU (see under Germany in this section)
Pratt & Whitney (see under USA in this section)
PROGRAMME MANAGER: Tom Davenport
DEPUTY PROGRAMME MANAGER: Dr Rainer Schwab

After failure of the Project Blue team (the above plus GE and SNECMA) to reach agreement, these two companies are hoping to produce an engine that will capture at least half the estimated market of 8,800 aircraft of 91 to 160 seats by 2015. Pratt & Whitney has 51 per cent of the MTFE project and MTU 49 per cent.

NEW ENTRY

MTFE

Said to be based on components already run by the partners in previous (unrelated) test programmes. The philosophy behind the engine is that, by making it simpler and running at lower turbine temperatures, it can be produced much more cheaply than competitor engines, even though it would be heavier for a given thrust and have higher fuel consumption. Excluding the nacelle, the estimated development cost is $615 million, and certification is scheduled for 1999.

TYPE: Two-shaft turbofan.

FAN: Single stage, with wide-chord snubberless blades. Bypass ratio 5.2. Rotating with two-stage core booster.

COMPRESSOR: Six stages, with two variable stators. Overall pressure ratio about 27.

COMBUSTION CHAMBER: Conventional single annular.

TURBINES: Single-stage HP, three-stage LP. Entry gas temperature "100°F (37.8°C) lower than competitor engines".

JETPIPE: Integrated fixed-area mixer nozzle
CONTROL: FADEC
DIMENSIONS:

Fan diameter	1,397 mm (55.0 in)
Length (excluding nozzle)	2,515 mm (99.0 in)
WEIGHT, DRY:	about 1,769 kg (3,900 lb)
THRUST RATING:	89 kN (20,000 lb st) class

NEW ENTRY

This company is owned equally by the three participants. It was set up in 1989 to produce and subsequently support the MTR 390 engine, and to act as contractor for customers.

UPDATED

MTR 390

This turboshaft engine was selected to power the Franco-German Tiger anti-tank and Gerfaut escort/support helicopters. The engine is suitable for military and civil applications in helicopters and fixed wing aircraft in the form of single and twin installations.

The main characteristics of the modular engine are: ample emergency power reserve for OEI operation, high alternating output shaft power capability, low fuel consumption under part load, good acceleration, low life cycle cost, easy handling and simple maintenance. It has a high performance FADEC and an engine monitoring system for flight and maintenance crew support.

Design studies have been extended to derivatives for other applications. A 6,000 rpm drive version (MTR 390L) and a direct drive version (MTR 390T) have been defined.

First run took place at MTU in December 1989, and the first flight engines for the first Tiger prototypes were delivered in September 1990. First flights in a Panther testbed and the prototype Tiger took place on schedule in 1991. By 1995 more than 8,000 hours had been run, including 1,700 on flight test. Basic qualification testing was completed in 1993. The program continues with maturity and mission-simulation testing.

TYPE: Free turbine turboshaft.
COMPRESSOR: Two centrifugal stages for erosion and FOD resistance. Mass flow 3.2 kg (7.05 lb)/s. Pressure ratio 13.
COMBUSTION CHAMBER: Annular reverse-flow, with airblast fuel injectors for low emissions.
HP TURBINE: Single-stage gas generator turbine with high performance blade cooling, single-crystal blades and powder-metal disc.
LP TURBINE: Two-stage free power turbine with shrouded blades.
GEARBOX: Reduces the speed of the power turbine to the output shaft speed of 8,000 rpm. The accessory gearbox in the upper part provides the support and drive for the front- and top-mounted engine equipment.
CONTROL SYSTEM: A FADEC, with engine monitoring system.
LUBRICATION SYSTEM: Integral oil system, with engine-mounted tank and oil cooler with fan.
DIMENSIONS:

Length overall	1,078 mm (42.4 in)
Width overall	442 mm (17.4 in)
Height overall	682 mm (26.9 in)
WEIGHT, DRY:	169 kg (372.6 lb)
PERFORMANCE RATINGS (uninstalled, ISA, S/L):	
Super contingency (OEI, 20 s)	1,160 kW (1,556 shp)
T-O	958 kW (1,285 shp)
Max continuous	873 kW (1,171 shp)
SPECIFIC FUEL CONSUMPTION:	
T-O	77.74 µg/J (0.460 lb/h/shp)
Max continuous	78.93 µg/J (0.467 lb/h/shp)

1994

PS-ZMK

BPS: see under Slovakia
ZMKB: see under Ukraine

The DV-2 turbofan is a joint programme by these two organisations. It is described under ZMKB Progress, Ukraine.

Development began in 1978 in parallel with that of a new trainer to replace the L-39. Under an intergovernment agreement, the former Czechoslovakia was responsible for the aircraft and the former Soviet Union (then at the Lotarev MKB) for the engine. In 1982-87, 16 prototype DV-2 engines were tested. Series production began in 1989 at what are today PS Aero-Engine division and ZMKB Progress. Current development includes life extension and a FADEC.

This joint company was formed in June 1966 to control design, development and production programmes for the Adour two-shaft turbofan.

In 1980 Rolls-Royce Turbomeca launched the RTM 321 turboshaft demonstrator, leading to the RTM 322.

VERIFIED

ROLLS-ROYCE TURBOMECA ADOUR

US military designation: F405

The Adour was designed for the SEPECAT Jaguar. The whole engine is simple and robust and of modular design.

Bench testing began at Derby on 9 May 1967. Engines for Jaguars were assembled at Derby (RR) and Tarnos (Turbomeca) from parts made at single sources in Britain and France. Turbomeca makes the compressors, castings and external pipework.

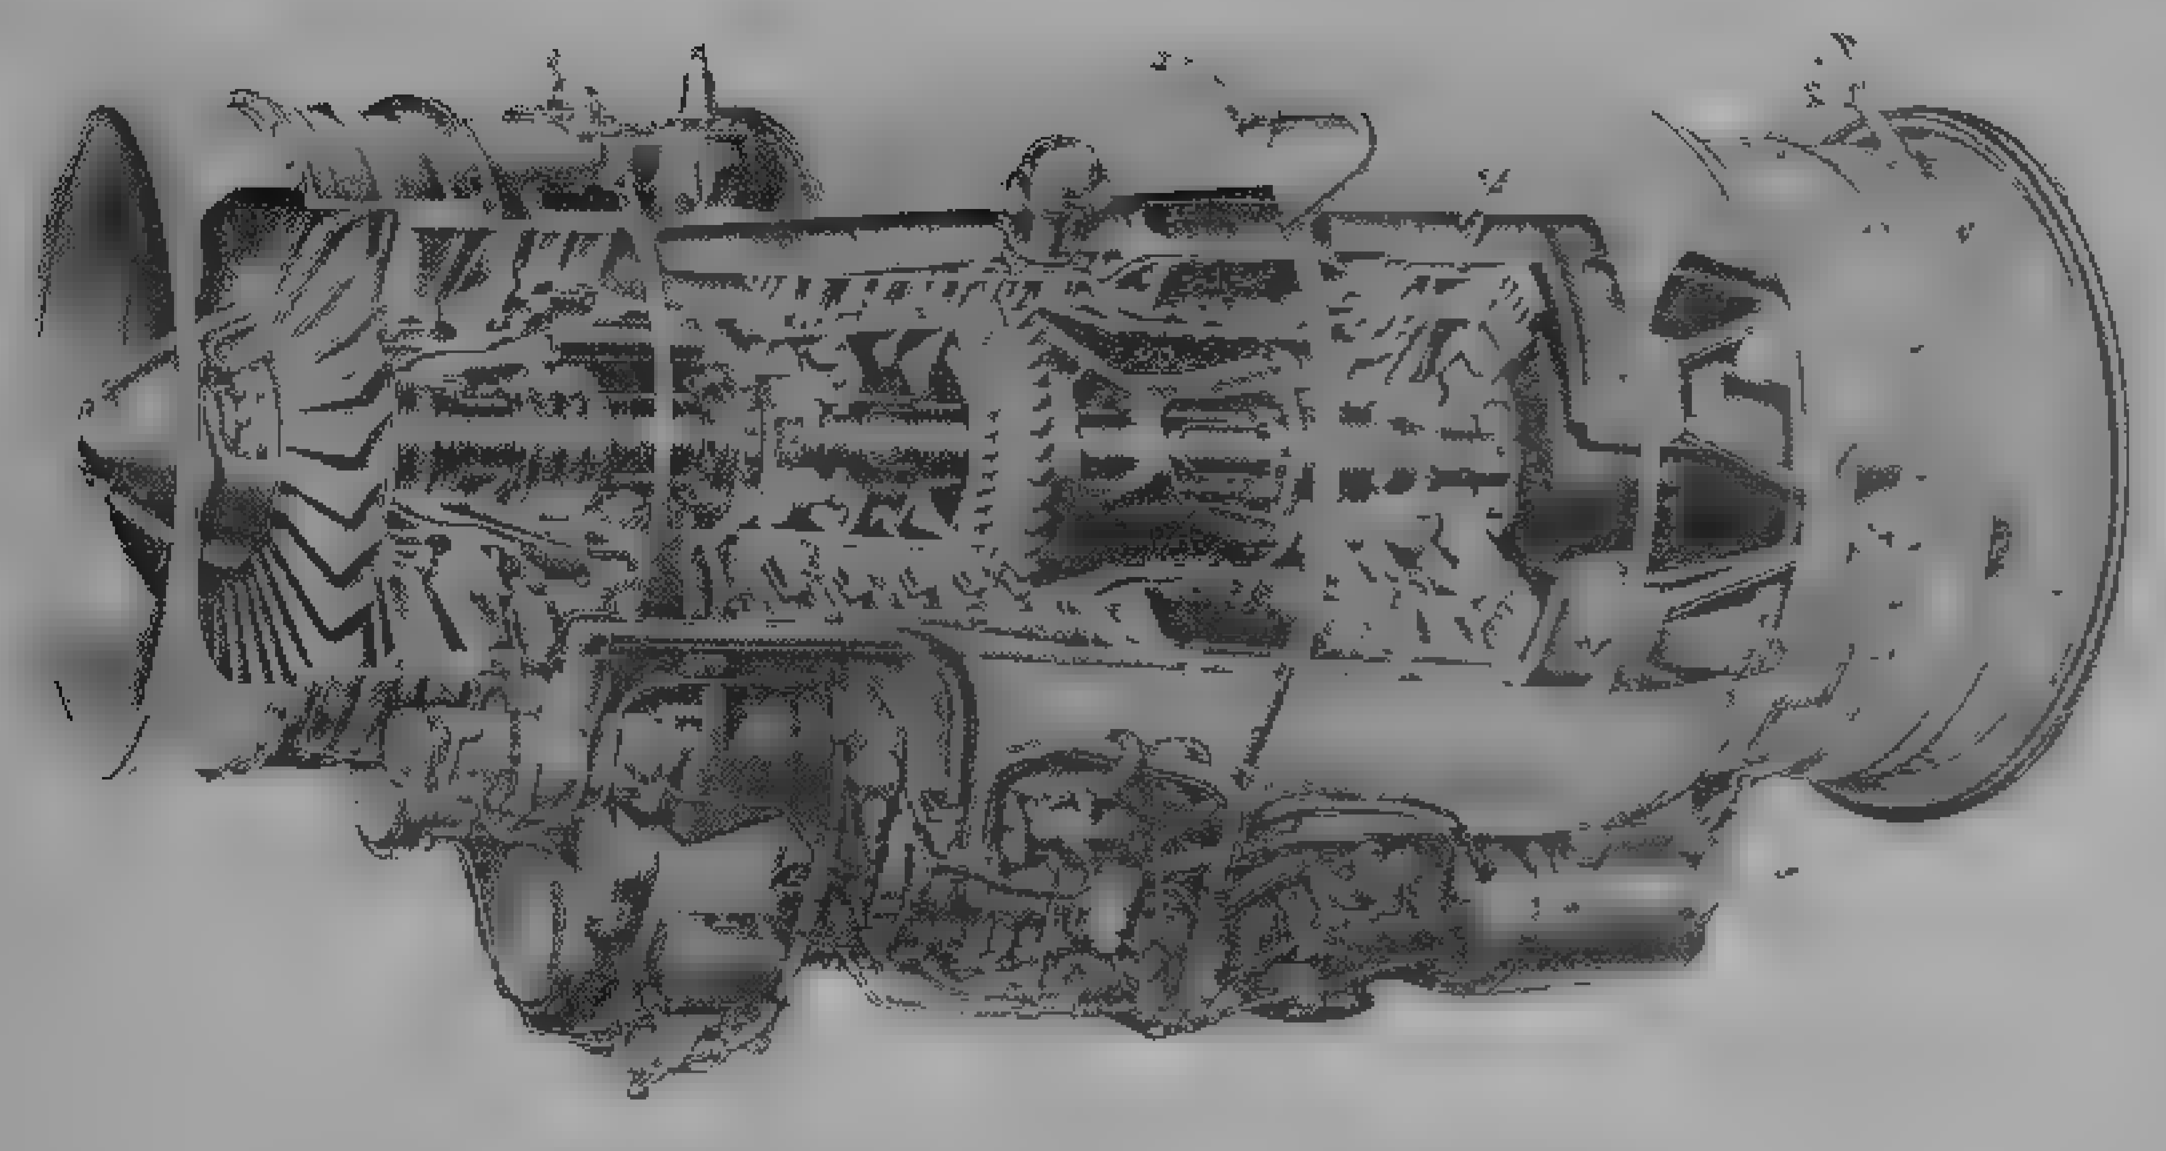
Following selection of the Adour for the Mitsubishi T-2 trainer and F-1 fighter/support aircraft, Ishikawajima-Harima Heavy Industries produced the Adour from 1970 under a licence agreement. In 1972 a non-afterburning Adour was selected to power the British Aerospace Hawk advanced trainer. More than 2,500 engines have been produced including licence manufacture in Finland, India and Japan. The two original partners have received orders for 2,145, of which they had delivered 2,092 by January 1995. Flight hours exceed 4 million.

Currently produced versions of the engine are as follows:

Mk 151. Non-afterburning version for Hawk. Internal components and certification temperatures identical to Mk 102 and Mk 801A. Qualified in 1975.

Mk 801A. Japanese designation TF40-IHI-801A. For Mitsubishi T-2 and F-1. Qualified in 1972.

Mk 804. Uprated engine for Jaguar International. Rating with full afterburner at Mach 0.9 at S/L, ISA, increased by 27 per cent. Qualified in 1976.



Cutaway drawing of Rolls-Royce Turbomeca Adour Mk 871 turbofan

1991

Mk 811. Uprated version for Jaguar International. Revised compressor aerodynamics and hot-end improvements. Assembled by Hindustan Aeronautics, with increasing Indian manufactured content.

Mk 815C. Mk 804 uprated to Mk 811 performance level by conversion at overhaul.

Mk 851. Non-afterburning version of Mk 804 for export Hawk.

Mk 861. Non-afterburning version of Mk 811, first deliveries 1981.

Mk 861-49. US designation **F405-RR-400**. Derated version of Mk 861 for prototype McDD/BAe T-45A Goshawk for US Navy. Certificated 1988.

Mk 871. Uprated version for BAe Hawk Series 100 and 200. Certificated late 1990.

F405-RR-401. US version of Mk 871 with minor changes for production T-45A Goshawk.

The following refers to non-afterburning versions, except where indicated.

TYPE: Two-shaft turbofan for subsonic aircraft.

FAN: Two-stage. Full length bypass duct. Bypass ratio 0.75-0.80.

COMPRESSOR: Five stages. Overall pressure ratio 11.

COMBUSTION CHAMBER: Annular, with 18 air spray fuel nozzles and two igniter plugs. Lucas engine fuel system.

HP TURBINE: Single-stage, air-cooled.

LP TURBINE: Single-stage. Squeeze-film bearings.

DIMENSIONS:

Length overall:	
Mks 102, 801A, 804, 811	2,970 mm (117 in)
Mks 151, 851, 861, 861-49, 871	1,956 mm (77 in)
Inlet diameter (all)	559 mm (22 in)
Max width (all)	762 mm (30 in)
Max height (all)	1,041 mm (41 in)

WEIGHT, DRY:

Mk 102, 801A	704 kg (1,552 lb)
Mk 104, 804	713 kg (1,571 lb)
Mk 151	553 kg (1,220 lb)
Mk 851	568 kg (1,252 lb)
Mk 861	577 kg (1,273 lb)
Mk 811	738 kg (1,627 lb)
Mk 871	603 kg (1,330 lb)

PERFORMANCE RATINGS (S/L, T-O):

Mk 102, 801A	32.5 kN (7,305 lb st)*
Mk 104	35.1 kN (7,900 lb st)*
Mk 151, 851	23.1 kN (5,200 lb st)
Mk 804	35.8 kN (8,040 lb st)*
Mk 861	25.4 kN (5,700 lb st)
Mk 861-49	24.2 kN (5,450 lb st)
Mk 811	37.4 kN (8,400 lb st)*
Mk 871	26.2 kN (5,900 lb st)

*With afterburner

SPECIFIC FUEL CONSUMPTION (Mk 102):

S/L, static, dry	21 mg/Ns (0.74 lb/h/lb st)
Mach 0.8, 11,890 m (39,000 ft)	27 mg/Ns (0.955 lb/h/lb)

UPDATED

ROLLS-ROYCE TURBOMECA RTM 322

Rolls-Royce and Turbomeca combined their extensive experience in helicopter gas turbines to produce the RTM 322 family of engines. Since 1986, Piaggio of Italy has been a 10 per cent participant. The launch engine is the RTM 322-01 turboshaft, which is conservatively rated at 1,566 kW (2,100 shp) with easy growth potential to 2,237 kW (3,000 shp).

The family, which will include turboprop and turbofan derivatives, is configured to combine simple design, reliability, low fuel consumption, light weight and low cost of ownership. A turboprop using the RTM 322-01 core would produce 1,193 to 1,491 kW (1,600 to 2,000 shp), with potential for growth to 2,088 kW (2,800 shp). It is therefore suitable for aircraft in the 35 to 70 seat range.

The turboshaft itself has full-authority digital electronic control, availability of different output drive configurations, a choice of three starting systems, and options for an inlet particle separator and infra-red suppressor. Combined with engine mounts configured for compatibility with a number of existing airframes, these features give the unit a wide range of potential civil and military applications in the 7 to 15 tonne class. Examples are EH 101, Sikorsky S-92, Black Hawk and Seahawk series, European NH 90, Westland WS 70 and AH-64 Apache. The engine has been studied by the US Army as a potential growth power plant for the Black Hawk and Apache, and during 1987 the US Navy carried out an operability study in an SH-60B. In 1985 UTC (Pratt & Whitney) signed a licence agreement for US and Canadian markets.

In 1988 a major competition was held between Rolls-Royce Turbomeca and General Electric for the production engine contract of all UK EH 101 helicopters. In September 1988 the Minister of Defence Procurement announced that Rolls-Royce Turbomeca had won this competition for approximately 500 engines, as it provided 'the best value for money'. The first flight on the EH 101 took place on 6 July 1993. In June 1995 the AH-64D Longbow Apache was ordered for the British Army with RTM 322 engines. Another application is the twin-engined Kamov Ka-62R.

The first complete RTM 322-01 ran on 4 February 1985. Over 1,790 kW (2,400 shp) has been demonstrated. A total of over 10,000 hours running have been completed, which includes 1,100 hours of flight development in the S-70C (from 14 June 1986) and then in the SH-60B. UK military certification was completed in October 1988, and was followed by civil certification in May 1992. Orders totalled 182 by January 1995, production deliveries yet to begin.

The following particulars apply to the RTM 322-01 turboshaft:

COMPRESSOR: Three-stage axial and single-stage centrifugal.

COMBUSTOR: Annular reverse flow. Ignition by Lucas Aerospace exciter.

TURBINES: Two-stage gas generator turbine. Cooling is applied to the first and second stage stators and first stage rotor. The second stage rotor is made of single crystal material and is uncooled. Two-stage power turbine with drive to front or rear.

DIMENSIONS:

Length overall	1,171 mm (46 in)
Diameter	604 mm (23.8 in)

WEIGHT, DRY: 240 kg (538 lb)

PERFORMANCE RATINGS (S/L):

Max contingency	1,724 kW (2,312 shp)
Max T-O	1,566 kW (2,100 shp)
Typical cruise	940 kW (1,260 shp)

SPECIFIC FUEL CONSUMPTION:

Cruise (as above)	81 μg/J (0.48 lb/shp/h)

Telephone: 49 (89) 666920
Fax: 49 (89) 66692 200
CHAIRMAN: C H Green
MANAGING DIRECTOR: Heinz Pfingstgraef

Formed in 1969 as a European engine consortium comprising Rolls-Royce plc (40 per cent) of the UK, MTU Motoren- und Turbinen-Union München GmbH (40 per cent) of Germany and FiatAvio SpA (20 per cent) of Italy. The consortium was established to design, develop, manufacture and support the RB199 turbofan for the Panavia Tornado aircraft.

VERIFIED

TURBO-UNION RB199

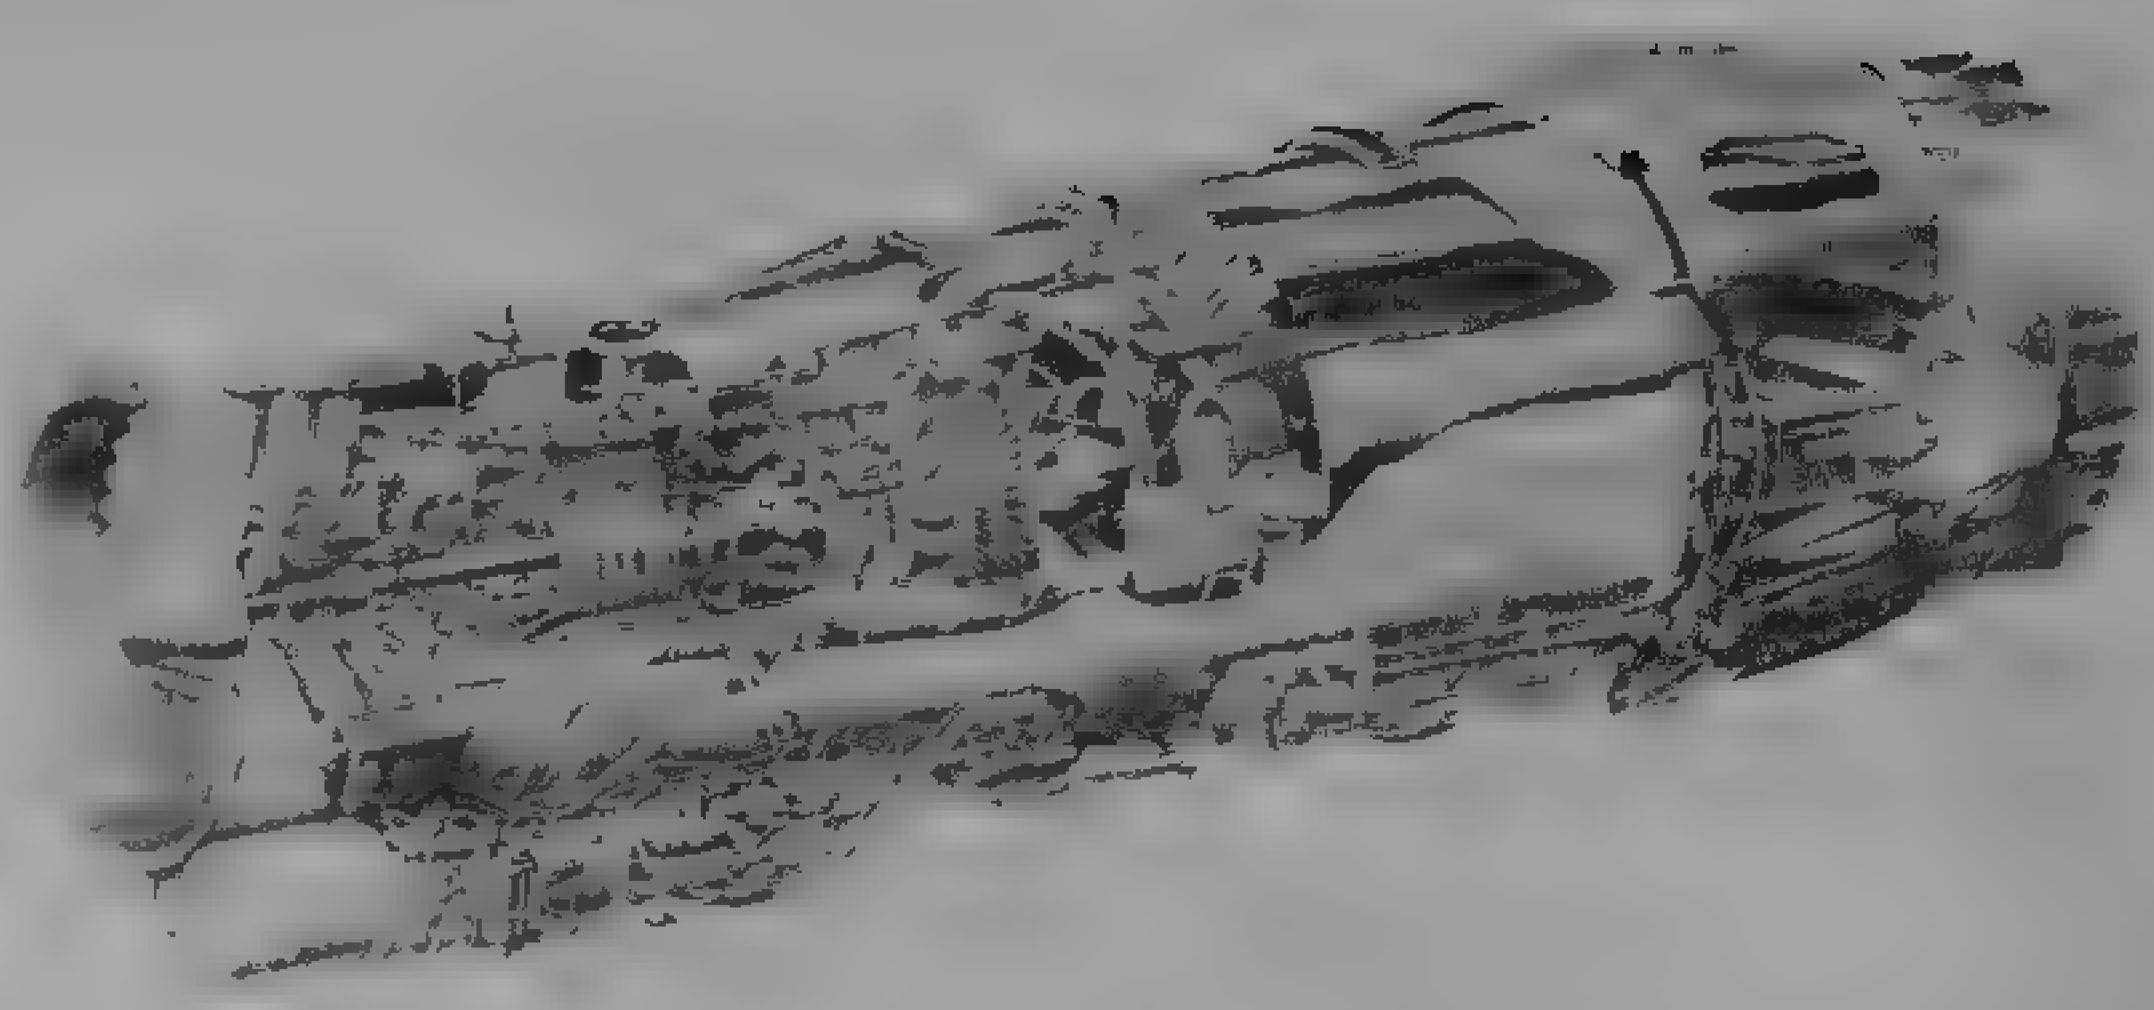
The RB199 is a three-spool turbofan offering low fuel consumption for long-range dry cruise and approximately 100 per cent thrust augmentation with full afterburner for short take-off, combat manoeuvre and supersonic acceleration. An integral thrust reverser system is available. It was the first military engine with FADEC without hydromechanical back-up.

In-service experience of over 3 million flying hours, at low level in the most arduous conditions, has proven the resilience of the RB199 to birdstrike and foreign object damage (FOD). This is a direct result of the relatively short, rigid rotating assemblies held between the small bearing spans in a three-spool layout.

Over 2,400 engines have been produced, with the present engine family comprising:

Mk 103. Standard production engine, with integral thrust reverser, for Panavia Tornado IDS variants.

Mk 104. Identical to the Mk 103 other than the jetpipe, which is extended by 360 mm (14 in) to provide up to 10 per



Cutaway drawing of Turbo-Union RB199 Mk 104 three-shaft augmented turbofan *1989*

cent greater thrust and reduced specific fuel consumption The Mk 104 is the standard production engine for Tornado ADV variants

Mk 104D The power plant for the BAe experimental aircraft programme (EAP) advanced technology demonstrator

Mk 104E. Selected as the interim engine for the Eurofighter 2000, the RB.199 is being used to flight test first two prototypes

Mk 105 Similar to the Mk 103, the Mk 105 incorporates an increased mass flow LP compressor producing higher pressure ratios, and single-crystal HP turbine blades In addition to a 10 per cent thrust increase, these improvements also give significant reductions in life cycle cost In service as the power plant for the German Tornado ECR

The following description refers to the Mk 105

TYPE: Three shaft turbofan with afterburner and reverser

LP COMPRESSOR Three-stage axial of titanium alloy Casing of three bolted sections Rotor of three discs welded together Rotor blades secured by dovetail roots, all with snubbers. Mass flow approximately 74.6 kg (164 lb)/s Bypass ratio about 1 1

IP COMPRESSOR. Three stages of titanium alloy Rotor has welded discs in which blades are secured by dovetails

HP COMPRESSOR Six-stage, material changes from titanium at front to heat resisting alloy at rear, except stator blades are heat resisting steel throughout Rotor discs secured by 10 through-bolts, carrying blades by dovetail roots. Bevel drive to gearbox Overall pressure ratio greater than 23

BYPASS DUCT Fabricated in titanium

COMBUSTION CHAMBER Annular flame tube fabricated from nickel alloy, bolted at rear end between outer casing forged and chemically milled in nickel-iron alloy, and inner casing of nickel alloy. Carries 13 double-headed fuel vaporisers which give combustion without visible smoke Two igniter plugs. Hot-streak injector for afterburner ignition

HP TURBINE. Shrouded single stage Entry temperature over 1,327°C Rotor blades and stator vanes air-cooled

IP TURBINE Shrouded single stage. Air-cooled stator vanes and rotor blades

LP TURBINE. Two-stage with shrouded hollow uncooled rotor blades

AFTERBURNER Front end of titanium fabricated jetpipe carries afterburner in which bypass air and core gas burn concurrently, without a mixing section For core flow, two gutter flameholders fed by upstream atomisers. For bypass flow, reverse colander with radial extensions, each containing vaporising primary burner, between which multiple jets inject remainder of afterburner fuel. Fully modulated augmentation

NOZZLE Variable area, short petal, convergent nozzle operated by shroud actuated by four screwjacks, driven by fourth stage HP air motor via flexible shafting Each of 14 master and 14 secondary petals is precision cast in cobalt alloy which minimises friction

REVERSER External two bucket type driven via flexible shafts by motor using HP air In stowed position outer skins form aircraft profile Deployment takes 1 second at any thrust setting from idle to maximum dry

ACCESSORY DRIVES. Accessory gearbox on underside of intermediate casing (quick attach/detach coupling) carries hydromechanical portions of main and afterburner fuel systems, oil tank and pump, and output shaft to aircraft gearbox carrying KHD gas-turbine starter/APU

FUEL SYSTEM. Electronic main engine control unit uses signals from pilot's lever and power plant sensors. Afterburner fuel from engine-driven vapour core pump

DIMENSIONS

Length overall Mk 103	3,251 mm (128 in)
Mk 104	3,607 mm (142 in)
Mk 105	3,302 mm (130 in)
Intake diameter Mks 103, 104	719 mm (28 3 in)
Mk 105	752 mm (29 6 in)

WEIGHT DRY (excl reverser)

Mk 103	965 kg (2,107 lb)
Mk 104	976 kg (2,151 lb)
Mk 105	980 kg (2,160 lb)

VM Motori specialises in high-speed lightweight diesel engines. Following automotive production, the company entered the aeronautical field with a range of horizontally opposed engines. All are air-cooled four-stroke compression ignition engines, cooled by a propylenic glycol mixture and burning Jet A 1, JP 4, JP 5, JP-8 or similar fuel with direct injection by camshaft-driven plunger pumps. Each engine is turbocharged for operation to 8,850 m (29,000 ft). The engines are fully modular and are being offered with an initial TBO of 3,000 h. Cylinder size is 130 mm (5.1 in) by 110 mm (4.33 in) and compression ratio 18. Specific fuel consumption (econ cruise) is 106.4 µg/J (0.63 lb/h/hp).

PRESIDENT (ASO): Tohru Ishikawa
ASSISTANT GENERAL MANAGER, BUSINESS PLANNING:
Kunihiko Terao

IHI's Aero-Engine & Space Operations specialises in the development and manufacture of aero-engines, space-related equipment, and land/marine gas turbines, as well as maintenance and repair. It has three plants and 3,650 employees. The number of jet engines so far produced totals about 4,000.

IHI began production of the J3 turbojet using Japan's own technology in 1959. This was followed by the licenced production of the J79, T64, T58 and TF40 (Adour) engines. In recent years, the F100, T56, F3 and T700 have been added to the product line.

The company has been involved in numerous engine development projects including the national project for the FJR710 and the Japan Britain joint project for the RJ500. Currently, as the leader of a Japanese consortium, IHI is participating in the IAE V2500.

IHI is actively involved in many aspects of spaceflight.

UPDATED

IHI F3

Development of this turbofan began in 1976, with funding by the JDA's Technical Research & Development Institute. The Phase 1 **XF3-1** form has a single-stage fan with bypass ratio of 1.9, five-stage transonic compressor, 12-burner combustor and single-stage HP and LP turbines. Rating is 11.79 kN (2,650 lb st).

In 1977 JDA contracted with IHI for the **XF3-20**, with reduced bypass ratio and higher turbine temperature to give a rating of 16.28 kN (3,660 lb st). This was followed by the **XF3-30**, which in 1982 was selected by the JASDF as the engine for the T-4 trainer. XF3-30 qualification was completed in March 1986. The engine is now redesignated **F3-IHI-30**, and the first production engine was delivered to JDA on 17 December 1987.

TYPE: Two-shaft turbofan

FAN: Two-stage axial. No inlet guide vanes. Mass flow 34 kg (75 lb)/s. Pressure ratio 2.6. Bypass ratio 0.9

COMPRESSOR: Five stages. First two stators variable. Overall pressure ratio 11

COMBUSTION CHAMBER: Annular, with 12 duplex fuel nozzles

HP TURBINE: Single-stage, air-cooled rotor blades

LP TURBINE: Two-stage, tip shrouded

FUEL SYSTEM: Hydromechanical, with electronic supervisor

DIMENSIONS:

Length	1,340 mm (52.76 in)
Inlet diameter	560 mm (22.0 in)
WEIGHT, DRY:	340 kg (750 lb)
PERFORMANCE RATING (T-O, S/L):	16.37 kN (3,680 lb st) class
SPECIFIC FUEL CONSUMPTION:	19.83 mg/Ns (0.7 lb/h/lb st)

In 1967 KHI started manufacturing T53 turboshafts. Deliveries of the resulting KT5311A, KT5313B and T53-K-13B engines totalled 355 by 1992. KHI now licence-builds the T53-K-703 (128 by 1993) and T55-K-712 (133 by 1994). Kawasaki shared in parts manufacturing for the Adour, F100 and T56. It is a member of the IAE consortium (see under International heading), and is a risk-sharing partner on the PW4000 and RR Trent.

Between January 1973 and June 1981, under licence agreement with Pratt & Whitney, MHI delivered 72 JT8D-M-9 turbofans. MHI entered into a risk- and revenue-sharing agreement on the JT8D-200 in 1984, and on the PW4000 in 1989. In collaboration with IHI and Kawasaki, MHI participates in the V2500 (see IAE in the International part of this section). Since 1991, MHI has been developing the XTSI-1 engine for the Japanese Defence Agency

IL D-18A

This completely new engine was first run on 16 April 1992

TYPE Two shaft turbofan
AIR INTAKE Direct pitot intake without inlet guide vanes
FAN. Two-stage axial, with steel blades and stators. EB-welded steel rotor carried in ball and roller bearings. Pressure ratio 2 07 Bypass ratio 0.7
COMPRESSOR Five-stage compressor on HP shaft. Steel blades and stators. Rotor consists of two parts bolted together, both EB-welded, connected with HP turbine by Hirth coupling Overall pressure ratio 8
COMBUSTION CHAMBER Annular type with 18 integral vaporisers, six starting atomisers and two high energy igniters
FUEL SYSTEM Full-authority digital electronic control
TURBINE Single-stage HP and single-stage LP, both carried in roller bearings between rotors. Gas temperature 900°C before HP turbine
JET PIPE Plain fixed convergent nozzles for both core gas and bypass flow.
ACCESSORY DRIVES Accessory gearbox driven by power off-take from front of HP shaft
LUBRICATION SYSTEM Integral oil system with vane pumps Oil/fuel heat exchanger
OIL SPECIFICATION: Synthetic, type SDF
MOUNTING Two main pads on intermediate casing. One rear strut on either side of centreline
STARTING 9 kW (12 hp), 27 V starter-generator driven by aircraft battery or ground power unit

DIMENSIONS	
Length	1,940 mm (76.37 in)
Width	750 mm (29 52 in)
Height	900 mm (35 43 in)
WEIGHT DRY	380 kg (837 7 lb)
PERFORMANCE RATING	
T-O	17 65 kN (3,968 lb st)
SPECIFIC FUEL CONSUMPTION	
At T-O rating	20 96 mg/Ns (0.74 lb/h/lb st)

IL K 15

This turbojet was announced in Summer 1988 It is being produced by WSK PZL Rzeszów to power the I-22 Iryda in its production form, preseries aircraft having PZL-5s.

TYPE. Single-shaft turbojet
COMPRESSOR Six stages. Rotor blades (stages 1 to 3) titanium (4 to 6 and shrouded stator blades) stainless steel. Two blow-off valves. Pressure ratio 5 3. Mass flow 23.5 kg (51 8 lb)/s
COMBUSTION CHAMBER Short annular type, with 18 vaporising burners and six starting atomisers. Electric ignition
FUEL SYSTEM Hydromechanical with electronic blow-off valve control and overspeed and overtemperature limiters

IL K-15 single-shaft turbojet

1995

FUEL GRADE: Kerosene PSM-2 or TS-1
TURBINE: Single-stage. Disc attached by Hirth coupling
LUBRICATION SYSTEM: Self-contained recirculatory system except total loss for rear bearing. Fully aerobatic
OIL SPECIFICATION: Type SDF synthetic
ACCESSORY DRIVES: Gearbox at bottom of intake casing driven by spur gear from front of compressor

STARTING: 27 V starter/generator in nose bullet
DIMENSIONS:

Length overall	1,560 mm (61.42 in)
Width	725 mm (28.54 in)
Height	892 mm (35.12 in)
WEIGHT, DRY:	320 kg (705.5 lb)

PERFORMANCE RATINGS:

T-O	14.7 kN (3,305 lb st) at 15,900 rpm
Max continuous	11.5 kN (2,585 lb st) at 15,025 rpm

SPECIFIC FUEL CONSUMPTION:

PZL KALISZ

WYTWÓRNIA SPRZETU KOMUNIKACYJNEGO PZL KALISZ

ul. Czestochowska 140, PL-62 800 Kalisz
Telephone: 48 (62) 656100
Fax: 48 (62) 37084, 37453
Telex: 046 2231
GENERAL DIRECTOR: Wlodzimierz Jerzyk

In 1952 the Soviet Union transferred responsibility for manufacture and service support of Soviet air-cooled radial piston engines (transport equipment manufacturing centre) at Kalisz. Current production is centred on the following, plus the TWD-10B turboprop (described under WSK PZL Rzeszów), which was supplied to the USSR. Kalisz also overhauls the TWD-10B.

UPDATED

PZL (IVCHENKO) AI-14R

The original 260 hp AI-14R version of this nine-cylinder air-cooled radial engine was produced in very large quantities, in the Soviet Union, China and Poland. Subsequent versions are:

AI-14RA. Rated at 191 kW (256 hp). Piston compressor drive and pneumatic starter. For Yak-12, Yak-18, PZL-101A Gawron and PZL-104 Wilga 35.

AI-14RA-KAF. RA with carburettor further aft, for Wilga 80.

AI-14RD. Rated at 206 kW (276 hp). Electric starter. For PZL-104 Wilga and PZL-130 Orlik.

AI-14RDP. With pneumatic starter. For PZL-104 Wilga and prototypes of PZL-130 Orlik.

K8-AA. Rated at 246 kW (330 hp). Direct-drive and pneumatic starter. Aerobatic. For PZL-130 Orlik until piston engine abandoned in favour of turboprop.

The following description refers to the AI-14RA.

TYPE: Nine-cylinder air-cooled radial
CYLINDERS: Bore 105 mm (4.125 in). Stroke 130 mm (5.125 in). Capacity 10.16 litres (620 cu in). Compression ratio 5.9
FUEL GRADE: 91 to 100 octane
PROPELLER DRIVE: Planetary gears, ratio 0.787
DIMENSIONS:

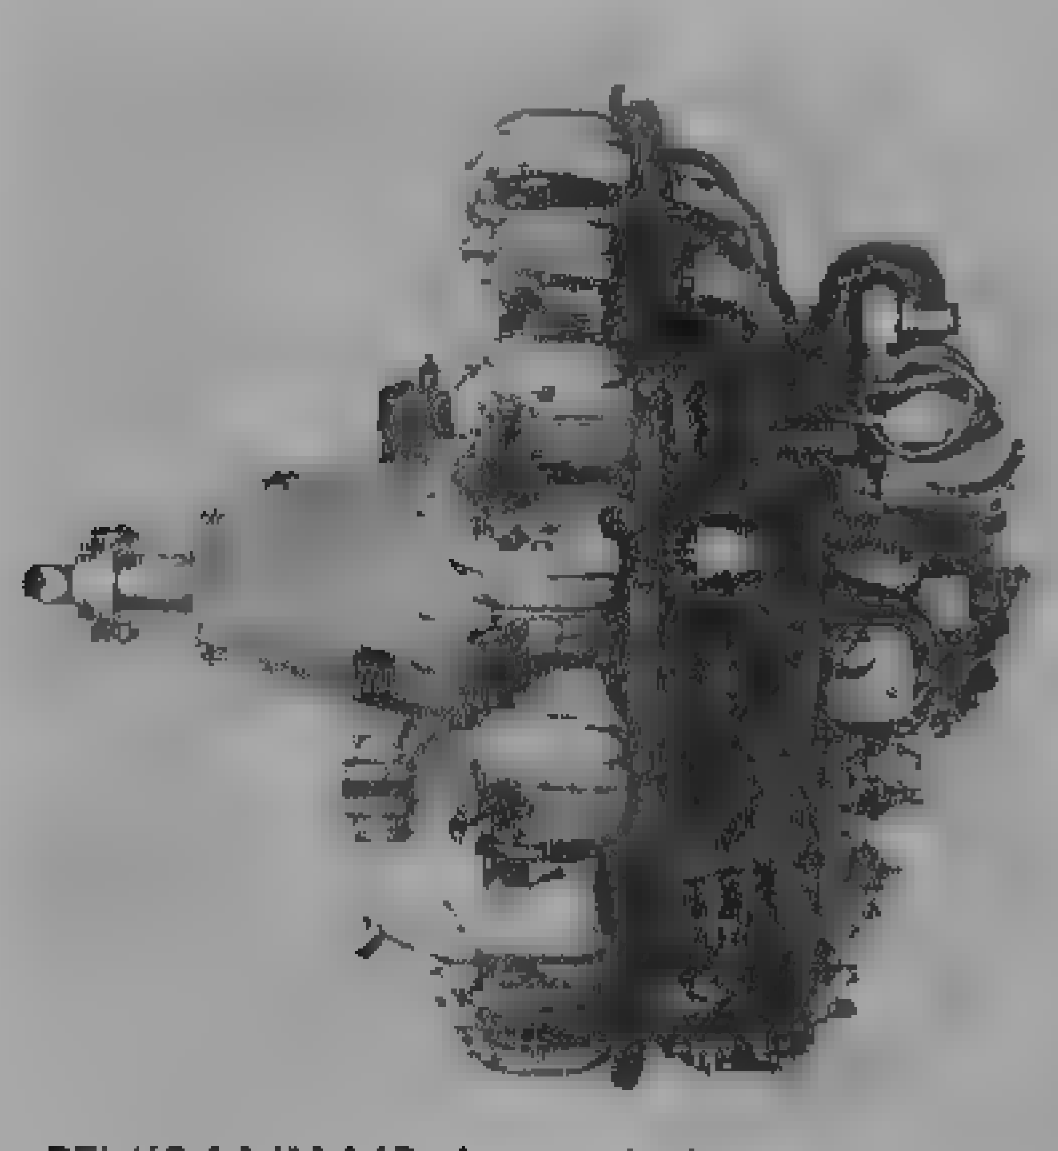
Length	956 mm (37.63 in)
Diameter	985 mm (38.78 in)
WEIGHT, DRY:	200 kg (441 lb)

PERFORMANCE RATINGS:

T-O	191 kW (256 hp) at 2,350 rpm
Rated	162 kW (217 hp) at 2,050 rpm

SPECIFIC FUEL CONSUMPTION:

T-O	95-104.3 µg/J (0.562-0.617 lb/h/hp)



PZL K8-AA (M-14Pm) nine-cylinder piston engine *1989*

PZL (SHVETSOV) ASz-62IR

Power plant of the An-2 transport biplane, the ASz-62IR was developed in the Soviet Union as the ASh-62. Current versions follow:

ASz-62IR-16. Centrifugal oil filter. For An-2 and PZL-106 Kruk.

ASz-62IR-M18. Hydraulic airframe pump drive. For PZL M-18 Dromader.

ASz-62IR-M18/DHC-3. As M18 plus vacuum pump. For DHC-3 Otter retrofit.

K9-AA. Uprated engine designed at Kalisz, 860 kW (1,170 hp) at 2,300 rpm. Electric starter and hydraulic airframe pump. For PZL M-24 Super Dromader.

K9-BA. First of B-series, with improved cylinders and piston rings. Hydraulic and vacuum pumps and provision for feathering propeller, for C-47/DC-3 conversion.

K9-BB. Improved engine for M-24 Super Dromader.

K9-BC. Improved engine for An-2 and PZL-106 Kruk.

TYPE: Nine-cylinder air-cooled radial
CYLINDERS: Bore 155 mm (6.10 in). Stroke 174 mm (6.85 in). Capacity 29.87 litres (1,823 cu in). Compression ratio 6.4
FUEL GRADE: 91 to 100 octane
PROPELLER DRIVE: Planetary gears, ratio 0.687
The following relates to the IR-16.
DIMENSIONS:

Length overall	1,130 mm (44.50 in)
Diameter	1,375 mm (54.13 in)

WEIGHT, DRY:

Without power take-off	580 kg (1,279 lb)

PERFORMANCE RATINGS:

T-O	735 kW (985 hp) at 2,200 rpm
Rated power	603 kW (809 hp) at 2,100 rpm

SPECIFIC FUEL CONSUMPTION:

T-O	112 µg/J (0.661 lb/h/hp)

PRESIDENT, GENERAL DIRECTOR: Eng Tadeusz Cebulak

Current production at WSK Rzeszów is centred on the PZL-10W with WR-3 reduction gear for the PZL Sokół, TWD-10B (also produced by Kalisz) for the An-28, GTD-350 with WR-2 reduction gear for the Mi-2, K-15 for the M-93 Iryda, SO-3 for the TS-11 Iskra, PZL-3S for ag aircraft and PZL-Franklin engines.

UPDATED

TWD-10B turboprop *1995*

TWD-10B

The Soviet designed OMKB/Glushenkov TVD-10B turboprop (see Mars under Russia), rated at 716 kW (960 shp), is made under licence in Poland for the An-28 STOL light transport built at WSK PZL Mielec.

TYPE: Free turbine turboprop
AIR INTAKE: Three radial struts, inlet guide vanes and starter de-iced by bleed air from combustion chamber
COMPRESSOR: Six axial stages and one centrifugal. Stage 1 has front bearing journal, bolted to stages 2 to 6 which are pinched by compressor shaft used as tie bolt. Blades in dovetail roots. Pressure ratio 7.4. Mass flow 4.6 kg (10.14 lb)/s at 29,600 rpm
COMPRESSOR CASING: Forward upper and lower halves in titanium, rear section welded from sheet steel and containing anti-surge bleed valve and radial diffuser
COMBUSTION CHAMBER: Annular with centrifugal burner, and two starting units each with semiconductor igniter and auxiliary burner
FUEL SYSTEM: Comprises supply pump, filter, pump governor, acceleration control, signaling block and thermo-corrector
FUEL GRADE: T-1, T-2, TS-1, RT, PSM-2, Jet A-1
COMPRESSOR TURBINE: Two-stage axial. Blades held by fir tree roots. Inlet guide vanes of hollow sheet with air cooling. Casing has ceramic liner
POWER TURBINE: Single-stage axial, blades with fir-tree roots, held in front roller and rear ball bearing
REDUCTION GEARS: Single-stage spur high-speed gear to accessory box and propeller gear; under the high-speed gear is the feathering pump oil tank. Accessory box drives 16 kW alternator, propeller tachometer and reduction gear oil pump, with propeller brake. Upper driveshaft to single-stage planetary reduction gear
ENGINE ACCESSORIES: Box contains oil centrifuge, and drives tachometer, oil pump, fuel pump and pump governor. The starter is on the front with a claw clutch
OIL SYSTEM: Closed and pressurised. Gas generator and reduction gear pumps. Oil tank capacity 16 litres (4.2 US gallons; 3.5 Imp gallons)
OIL GRADE: Oil mixture. 25 per cent MK-22 or MS-20, 75 per cent MK-8, MK-8P or MS-8P

DIMENSIONS
Length without airframe jetpipe 2,060 mm (81.1 in)
Width 555 mm (21.9 in)
Height 900 mm (35.4 in)
WEIGHT DRY: Bare 230 kg (507 lb)
Complete engine (max) 300 kg (661 lb)
PERFORMANCE RATINGS
T-O 754 kW (1,011 shp)
Nominal 613 kW (823 shp)
Max cruise 543 kW (728 shp)
SPECIFIC FUEL CONSUMPTION (T-O)
96.4 µg/J (0.570 lb/h/shp)

VERIFIED

PZL-10W

This is the helicopter version of the TWD-10B, two of which power the PZL Swidnik Sokól. It holds numerous Polish, Russian, US and German certificates, and uses the same gas generator, with the following differences

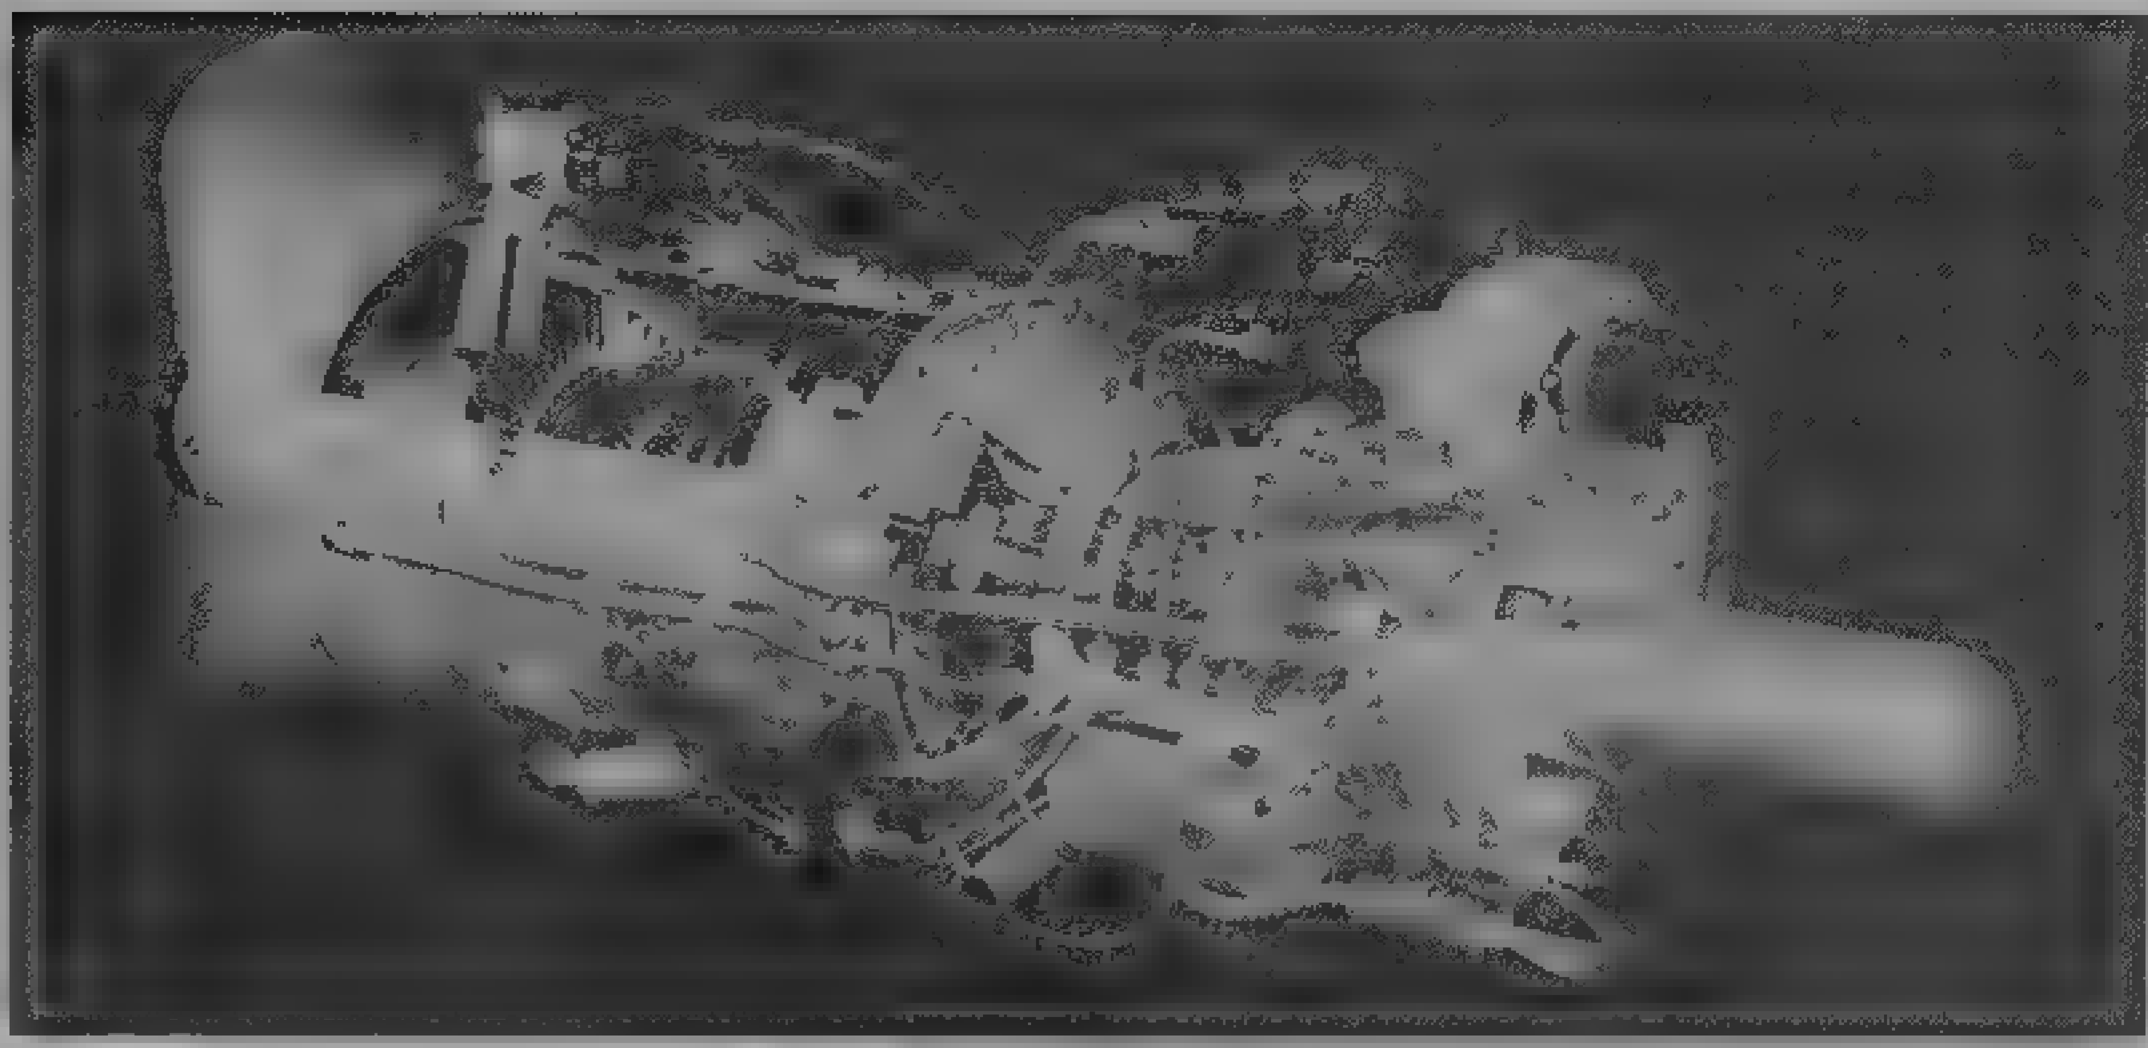
TYPE: Free turbine turboshaft engine
POWER TURBINE: Single-stage axial, with blades held in fir-tree roots. Speed maintained at 22,490 rpm
FUEL SYSTEM: Pump governor provides automatic operation at selected constant helicopter rotor speeds, as well as control of anti-surge bleed valve, maintaining constant fuel flow in starting cycle, limiting shaft speed and gas temperature and automatic switch-off of faulty engine and selection of emergency power on remaining unit
FUEL GRADE: T1, T2, TS-1, RT, PSM-2, Jet A-1
OIL SYSTEM: Closed and pressurised, with one delivery and four-section scavenge pump. Oil tank airframe-mounted, normal capacity 14 litres (3.7 US gallons, 3.08 Imp gallons)
OIL GRADE: B-3W synthetic, Castrol 599 or 5000, Aeroshell or Elf turbine oil, or oil mixture 25 per cent MK-22 or MS-20 and 75 per cent MK-8, MK-8P or MS-8P
ACCESSORIES: Integral cast box drives 5 kW starter/starter unit, electronic temperature limiter, vibration sensor, tachometer generator, oil pumps and centrifuge, phase torquemeter, de-icing valve, power-turbine speed limiter and operation time counter
DIMENSIONS
Length with jetpipe 1,875 mm (73.8 in)
Width: left engine 740 mm (29.0 in)
right engine 765 mm (30.1 in)
WEIGHT, DRY 141 kg (310 lb)
PERFORMANCE RATINGS (ISA)
2.5 min 846 kW (1,134 shp)
30 min 736 kW (986 shp)
T-O 662 kW (888 shp)
Continuous 574 kW (769 shp)
SPECIFIC FUEL CONSUMPTION
T-O 101.1 µg/J (0.60 lb/h/shp)

UPDATED

GTD-350

The **GTD-350** is a helicopter turboshaft. In the Mi-2, the drive is taken from the rear. Though developed by the Isotov bureau in the former Soviet Union, it is in production only in Poland. PZL Rzeszów has developed a new version rated at 309 kW (414 shp) and designated **GTD-350W**. Technical life of the GTD-350 is 4,000 hours

TYPE: Axial/centrifugal flow free turbine turboshaft
AIR INTAKE: Stainless steel. Automatic de-icing of inlet guide vanes and bullet by air bleed
COMPRESSOR: Seven axial stages and one centrifugal, all of steel. Pressure ratio 6.05. Mass flow 2.19 kg (4.83 lb)/s at 45,000 rpm
COMBUSTION CHAMBER: Reverse-flow type with air supply through two tubes. Centrifugal duplex single-nozzle burner. Semi-conductor igniter plug



Cutaway PZL-10W turboshaft
1994

FUEL SYSTEM: NR-40TA pump governor; RO-40TA power turbine governor; DS-40 controlling bleed valves, and electromagnetic starting valve
FUEL GRADE: TS-1, TS-2 or Jet A-1
COMPRESSOR TURBINE: Single-stage. Shrouded blades with fir tree roots. Temperature before turbine 940°C (GTD-350P, 985°C)
POWER TURBINE: Two-stage constant-speed (24,000 rpm). Shrouded blades with fir tree roots. Discs bolted together. Turbine stators integrally cast
REDUCTION GEARING: Two sets of gears, with ratio of 0.246:1 in magnesium alloy casing. Output speed 5,900 rpm
LUBRICATION SYSTEM: Closed type. Gear type pump with one pressure and four scavenge units. Cooler and tank, capacity 12.5 litres (3.30 US gallons; 2.75 Imp gallons)
OIL GRADE: B3-W (synthetic), Castrol 98 or 5000, Elf Turbojet II or Shell Turbine Oil-500
ACCESSORIES: STG3 3 kW starter/generator, NR-40TA governor pump, D1 tachometer and oil pumps driven by gas generator. RO-40TA speed governor, D1 tachometer and centrifugal breather driven by power turbine
STARTING: STG3 starter/generator suitable for operation at up to 4,000 m (13,125 ft) altitude
DIMENSIONS
Length overall 1,385 mm (54.53 in)
Max width 520 mm (20.47 in)
Width, with jetpipes 626 mm (24.65 in)
Max height 630 mm (24.80 in)
Height, with jetpipes 760 mm (29.9 in)
WEIGHT, DRY
Less jetpipes and accessories 139.5 kg (307 lb)
PERFORMANCE RATINGS
T-O rating (6 min) at 96% max gas generator rpm
GTD-350 294 kW (394 shp)
Nominal rating (1 h) at 90% gas generator rpm
GTD-350 236 kW (316 shp)
Cruise rating (I)
210 kW (281 shp) at 87.5% gas generator rpm
Cruise rating (II)
173 kW (232 shp) at 84.5% gas generator rpm
SPECIFIC FUEL CONSUMPTION

GENERAL DIRECTOR: Serban Ciorapciu

Founded in 1975, this factory produces under licence the Rolls-Royce Viper 632-41 and 633-47 and Spey 512-14DW, Turbomeca Turmo IVC, and helicopter gearboxes and rotor heads.

VERIFIED

RUSSIA

Since 1989 the entire industry of the former Soviet Union has been undergoing great changes. Of course, the most profound changes have reflected the breakup of the Soviet Union into separate republics. As in the Aircraft Section, engine centres are now listed under the name of the republic in which they are situated. Most are in this section, but several will be found under Ukraine. In addition, the entire management of the industry has been revolutionised. The changes are generally intended to increase commercial viability, and they are superimposed on changes of name caused by the replacement of deceased or retired chief constructors by their successors. For nearly 70 years the procedure was for new engines to be designed at a KB (construction bureau) always identified by the name of the bureau head, or chief constructor. Their work had the benefit of support from the laboratories of the Central Institute of Aviation Motors. Once cleared for production, an engine would be assigned to a factory for series production. The factory (or factories) remained anonymous, though its GAZ (state aviation factory) number might become known (for example see introduction to Klimov). Today the production plants are being named, many even have a chief designer, and they are taking display stands at exhibitions alongside the KBs. Meanwhile, confusion is increased further by the fact that some of the KBs have received names in honour of former chief designers or based on the city where they are located. As in the case of aircraft, each bureau no longer has guaranteed large home orders but has to fend for itself. This is reflected in the pages that follow. One immediate result is the formation of **ASSAD** in March 1992. This Union of Aviation Engine Producers is intended to assist strategic planning throughout the Independent States, and develop foreign economic links. ASSAD has been established by Viktor Chuiko, formerly Deputy Minister of the Soviet Aviation Industry. It is open to membership by major foreign (mainly engine) companies.

JSC 'AVIADVIGATEL'

PERM SCIENTIFIC AND PRODUCTION ENTERPRISE 'AIRCRAFT ENGINES'

93 Komsomolsky Prospect (PO Box 624), 614600 Perm
Telephone: 7 (83422) 452151
Fax: 7 (83422) 459777
Telex: 134802 LAVA SU
Teletype: 134135 LAVA
GENERAL DESIGNER: Mikhail I Kuzmenko

This large design bureau, until 1990 named MKB engine design bureau and now Joint Stock Company 'Aviadvigatel', was founded before the Second World War by Shvetsov (which see), who was followed in 1953-89 by Soloviev. The engines created by Shvetsov and Soloviev powered 26 types of production aeroplanes and helicopters. Total flying time of their gas-turbine engines exceeds 48 million hours. They are fitted to the Tu-124, Tu-134, Tu-154M, Il 76, Il-62M, MiG-31, and Mi-6 and Mi-10 helicopters. These are flown by 39 countries.

The PS-90A, Soloviev's last design, is fitted to the Tu-204 and Il 96-300. The engines designed by 'Aviadvigatel' are manufactured by two large-scale production plants in Perm and Rybinsk. Many of the new designs are based on the PS-90A core: the PS-90A10, PS-90A12, PS-90A76, D-100, D-110, and D-112. Attention is also being paid to propfans with contrarotating fans, with a bypass ratio of about 15. Another area of design is industrial gas-turbine plant for gas pumping and power generation. Aviadvigatel has been able to preserve its personnel, and is developing international links.

UPDATED

D-20P

The D-20P was the first turbofan in the USSR to enter scheduled airline service. A two-shaft engine, it was qualified in 1962 to power the Tu-124 at a rating of 52.96 kN (11,905 lb st). A full description last appeared in *Jane's* in 1987-88.

VERIFIED

D-25V

D-25V is the turboshaft which powers the Mi-6 and Mi-10 and -10K helicopters. It is no longer in production, details last appearing in the 1994-95 *Jane's*.

UPDATED

1992

Aviadvigatel (Soloviev) PS-90A two-shaft turbofan

1992

D-30

The D-30 has powered the Tu-134 since 1966. Since 1972 the Tu-134A has been powered by the **D-30 II** with reverser. Since 1982 the Tu-134A-3 has been powered by the **D-30 III** with an LP zero stage, providing the existing ratings at reduced gas temperature and maintained to ISA + 25°C.

TYPE: Two-shaft turbofan (bypass turbojet).

FAN: Four-stage axial (LP compressor) (III: five stages). First stage has shrouded titanium blades held in disc by pinned joints. Pressure ratio (T-O rating, 7,700 rpm, S/L, static), 2.65. Mass flow 126.8 kg (279.5 lb)/s. Bypass ratio 1.

COMPRESSOR: Ten-stage axial (HP compressor). Drum and disc construction, largely of titanium. Pressure ratio (T-O rating, 11,600 rpm, S/L, static), 7.1. Overall pressure ratio, 17.65.

COMBUSTION CHAMBER: Can-annular, with 12 flame tubes fitted with duplex burners.

FUEL GRADE: T-1 and TS-1 to GOST 10227-62 (equivalent to DERD.2494 or MIL-F-5616).

TURBINE: Two-stage HP turbine. First stage has cooled blades in both stator and rotor. LP turbine also has two stages. All blades shrouded and bearings shock-mounted.

JETPIPE: Main and bypass mixer with curvilinear ducts. D-30-II engine of Tu-134A fitted with twin-clamshell reverser.

LUBRICATION: Open type, with oil returned to tank.

OIL GRADE: Mineral oil MK-8 or MK-8P to GOST 6457-66 (equivalent to DERD 2490 or MIL-O-6081B).

ACCESSORIES: Automatic ice protection system, fire extinguishing for core and bypass flows, vibration detectors on casings, oil chip detectors and automatic limitation of exhaust gas temperature to 620°C at take-off or when starting and to 630°C in flight (5 minute limit). Shaft-driven accessories driven via radial bevel gear shafts in centre casing, mainly off HP spool. D-30-II carries constant-speed drives for alternators.

STARTING: STM-10 pneumatic starter fed by ground supply.

DIMENSIONS:

Length overall	3,983 mm (156.8 in)
Base diameter of inlet casing	1,050 mm (41.3 in)

WEIGHT, DRY: 1,550 kg (3,417 lb)

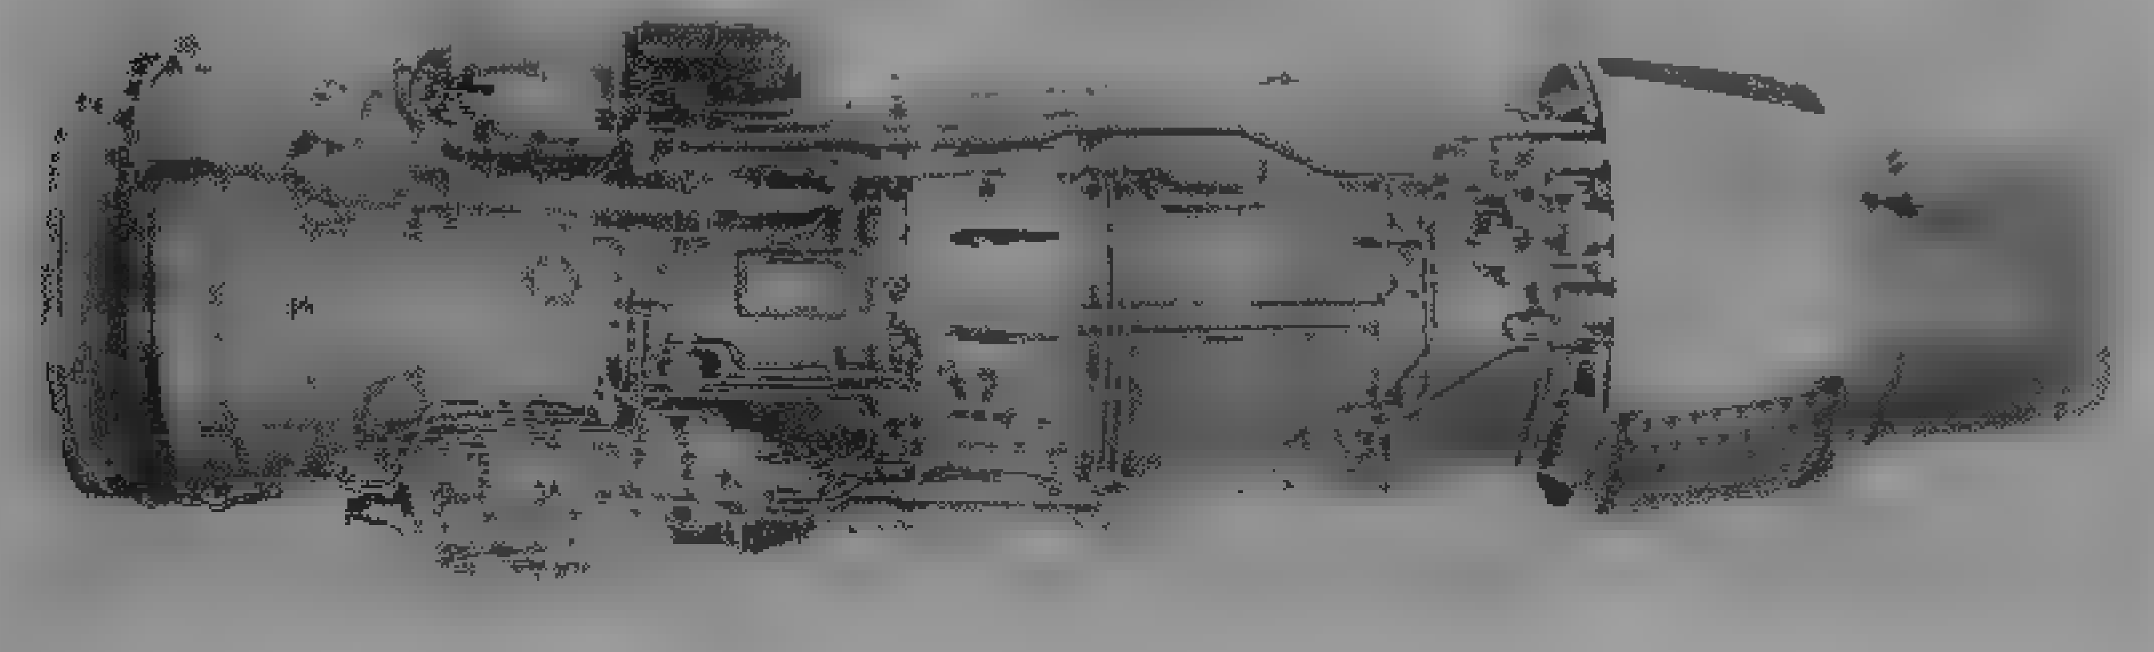
PERFORMANCE RATINGS:

T-O	66.68 kN (14,990 lb st)
Long-range cruise rating, 11,000 m (36,000 ft) and Mach 0.75	12.75 kN (2,866 lb)

SPECIFIC FUEL CONSUMPTION:

T-O	17.22 mg/Ns (0.608 lb/h/lb st)
Cruise, as above	22.38 mg/Ns (0.79 lb/h/lb)

VERIFIED



Aviadvigatel (Soloviev) D-30 III two-shaft turbofan with reverser

1992

D-30K

Despite its designation, this turbofan is much larger and more powerful than the D-30. The basic **D-30KU** replaced the NK-8-4 as power plant of the Il-62M in 1974. The **D-30KU II**, or **KU-154**, is configured to suit the Tu-154M and is derated to 104 kN (23,380 lb st) up to ISA + 15°C. The **D-30KP**, rated at 117.7 kN (26,460 lb st), up to ISA + 15°C, was the original engine of all versions of the Il-76. Clamshell reversers are fitted to all four engines of this aircraft, and to the outer engines of the Il-62M. These reversers are airframe assemblies incorporated in the nacelle. In 1980 the KP was replaced in production by the **KP II** which maintains full power to ISA + 23°C. The **D-30KPV**, rated at 117.7 kN (26,460 lb st) and without reverser, powers the Beriev A-40 Albatross.

The following refers to the D-30KU:

TYPE: Two-shaft turbofan, with mixer and reverser.

FAN (LP COMPRESSOR): Three stages, mainly of titanium alloy. First-stage rotor blades with part-span snubbers. Mass flow, 269 kg (593 lb)/s at 4,730 rpm (87.9 per cent), with bypass ratio of 2.42.

HP COMPRESSOR: Eleven stages, first two having part-span snubbers. Guide vanes turn 30° over 7,900 to 9,600 rpm, while air is bled from fifth and sixth stages. Overall pressure ratio (S/L, static) 20 at HP speed of 10,460 rpm (96 per cent).

COMBUSTION CHAMBER: Can-annular type with 12 flame tubes. Each tube comprises hemispherical head and eight short sections welded with gaps for dilution air. Single swirl type main/pilot burner centred in each tube. Igniter plugs in two tubes.

FUEL GRADE: T-1, TS-1, GOST-10227-86, A-1 (D1655/63t), DERD 2494 or 2498, Air 3405/B or 3-GP-23e.

TURBINES: Two-stage HP turbine with cooled blades in both stages. Second-stage rotor blades tip shrouded. Maximum gas temperature 1,122°C. Four-stage LP turbine with shrouded blades.

LUBRICATION: Closed type. Fuel/oil heat exchanger and centrifugal air separator with particle warning.

OIL GRADE: MK-8 or MK-8P to GOST 6457-66 (mineral) or BNII NP-50-1-4F to GOST 13076-67 (synthetic).

ACCESSORIES: Front and rear drive boxes under engine carry all shaft-driven accessories. Differential constant speed drive to alternator and air turbine starter.

STARTING: Pneumatic starter fed by ground supply, APU or cross-bleed.

DIMENSIONS:

Length with reverser	5,700 mm (224 in)
Inlet diameter	1,455 mm (57.28 in)
Max diameter of casing	1,560 mm (61.4 in)

WEIGHT, DRY:

With reverser	2,668 kg (5,882 lb)
Without reverser	2,318 kg (5,110 lb)

PERFORMANCE RATINGS (ISA):

T-O	107.9 kN (24,250 lb st) to 21°C
Cruise at 11,000 m (36,000 ft) and Mach 0.8	27 kN (6,063 lb)

SPECIFIC FUEL CONSUMPTION:

At T-O rating	13.83 mg/Ns (0.49 lb/h/lb st)
Cruise, as above	19.83 mg/Ns (0.70 lb/h/lb)

VERIFIED

PS-90A (D-90A)

This high-bypass ratio turbofan is not derived from any existing engine. It is assembled from 11 modules, and is designed for long life, high reliability and low fuel burn.

Bench testing began in 1984. Flight testing was in progress in 1987 with an engine replacing the starboard inner D-30KP in an Il-76. Certification was completed in 1992, the

certificate being received in April 1992. The PS-90A powers the Il-96-300, first flown on 28 September 1988 with engines derated to 132.4 kN (29,762 lb st), and the Tu-204, first flown on 2 January 1989 with fully rated PS-90As. The Il-96-300 was certified in December 1992 and the Tu-204 in December 1994. This engine is the first to have a designation reflecting the name of the General Designer (Soloviev).

Modifications effected during development included modifying blade profiles, and adding a third stage to the LP compressor. For reliability reasons the variable HP stators have been changed from hydraulic to pneumatic operation. Many parts, including the nose spinner and titanium honeycomb nozzle, have been changed to composite material. There are numerous planned variants.

PS-90A-76 For Il-76TD and Il-76MF, derated to 142.2 kN (31,967 lb), flat rated to 30°C, with full 16 tonne thrust available when required.

TYPE: Two-shaft turbofan with mixer and fan reverser.

FAN: Single stage, with 33 titanium blades, with snubbers. Hub/tip ratio 0.34. Bypass ratio (T-O) 4.6, (cruise) 4.8.

LP COMPRESSOR: Two-stage booster bolted to rear of fan.

HP COMPRESSOR: Thirteen-stage spool with variable inlet guide vanes and first two stators. Overall pressure ratio (cruise) 35.5. Speed (maximum) 11,820 rpm.

COMBUSTION CHAMBER: Can-annular with 12 flame tubes with vaporising burners and two igniters.

HP TURBINE: Two stages, with advanced blades cooled by air passed through cold heat exchanger. Entry gas temperature 1,640°K (1,367°C).

LP TURBINE: Four stages.

JETPIPE: Mixer combines core and bypass flows to single nozzle.

CONTROL SYSTEM: Full-authority digital electronic.

REVERSER: Multiple blocker doors close off fan duct as translating mid-section of cowl moves to rear, to uncover all round reverser cascades. No core reverser.

DIMENSIONS:
- Fan diameter: 1,900 mm (74.8 in)
- Length overall: 4,964 mm (195.4 in)

WEIGHT, DRY: 2,950 kg (6,503 lb)

PERFORMANCE RATINGS (ISA):
- T-O, S/L: 156.9 kN (35,275 lb st) to 30°C
- Cruise at 11,000 m (36,000 ft) and Mach 0.8: 34.32 kN (7,716 lb)

SPECIFIC FUEL CONSUMPTION:
- Cruise, as above: 16.85 mg/Ns (0.595 lb/h/lb)

UPDATED

PS-90A10

The PS-90A10 was developed to power short-range aircraft with 100 to 140 passengers.

TYPE: Two-shaft turbofan with mixer and clamshell reverser.

FAN: Single-stage, 33 titanium blades with snubbers. Bypass ratio (T-O) 3.76, (cruise) 3.58. No intershaft bearing in the fan drive, and no booster stages.

HP COMPRESSOR: As PS-90A without first stage: two rows of variable inlet guide vanes, active clearance control. Overall pressure ratio (climb) 23.1.

COMBUSTION CHAMBER: Annular.

HP TURBINE: Two-stage, with controlled air cooling and active clearance control. Gas exhaust temperature 1,513°K (1,240°C).

LP TURBINE: Two-stage, with active clearance control.

EXHAUST SYSTEM: Lobe-type mixer, integrated nozzle.

REVERSER: Clamshell-type, reverse factor 0.4.

CONTROL SYSTEM: Full-authority digital electronic.

DIMENSIONS:
- Fan diameter: 1,400 mm (55.13 in)
- Total length: 4,280 mm (168.5 in)

DRY WEIGHT: 1,900 kg (4,180 lb)

PERFORMANCE RATINGS (ISA):
- T-O, S/L: 90.2 kN (20,283 lb st) flat rated to +30°C, 730 mm Hg
- Cruise at 11,000 m (36,000 ft) and Mach 0.8: 19.32 kN (4,343 lb)

NEW ENTRY

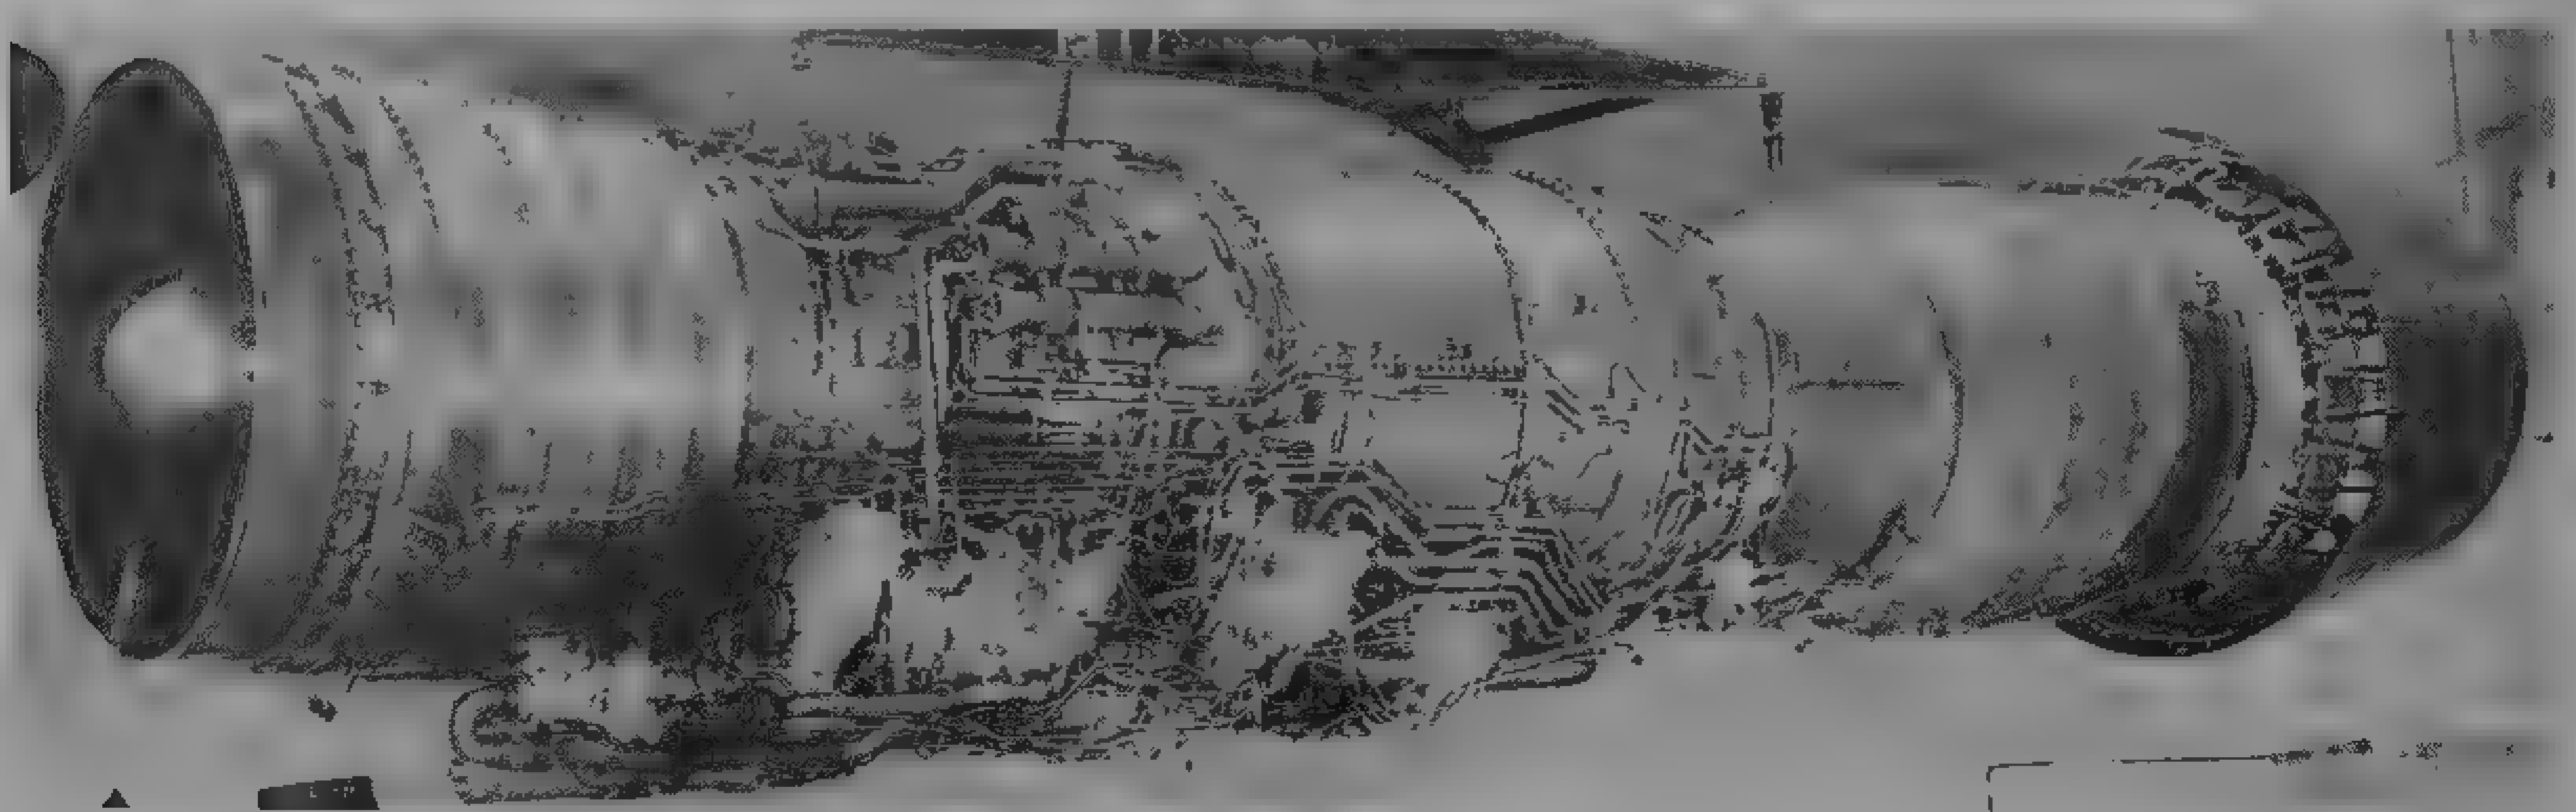
PS-90A12

This engine has been developed to power the Yak-242. Booster (LP) stages are eliminated, and the moderate cycle parameters make gas-generator operating conditions easier, in comparison with the PS-90A, and meet environmental requirements. The developed gas generator provides low life cycle cost.

TYPE: Two-shaft turbofan, with mixed bypass and core airflows, reverser in bypass duct.

FAN: Single-stage. By-pass ratio (T-O) 5.05, (cruise) 4.9. No intershaft bearing.

HP COMPRESSOR: Identical to PS-90A, with three variable guide vanes and active control of radial clearance. Engine pressure ratio (climb) 25.3.



Perm (Aviadvigatel) D-30F6 augmented two-shaft bypass turbojet

1992

COMBUSTION CHAMBER: Annular

HP TURBINE: Two stages, with air cooling and active clearance control. Entry gas temperature 1,558°K (1,285°C).

LP TURBINE: Three stages, with an active clearance control.

EXHAUST SYSTEM: Lobe type mixer and integrated nozzle.

REVERSER: Cascade vanes in bypass duct. No core reverser.

CONTROL SYSTEM: Full-authority digital electronic.

DIMENSIONS:

Fan diameter	1,670 mm (65.76 in)
Length	4,795 mm (188.82 in)

WEIGHT, DRY: 2,300 kg (5,071 lb)

PERFORMANCE (ISA):

T-O, S/L: 117.7 kN (26,455 lb st) to 30°C, 730 mm Hg

Cruise at 11,000 m (36,000 ft) and Mach 0.8: 22.55 kN (5,071 lb)

SPECIFIC FUEL CONSUMPTION (installed):

Cruise, as above: 16.48 mg/Ns (0.582 lb/h/lb)

NEW ENTRY

D-30F6

This large supersonic engine was designed from 1972 expressly for the MiG-31. Requirements included Mach 2.83 cruise at 11,000 to 21,000 m (36,100 to 68,900 ft) with the lowest possible fuel consumption, and Mach 1.25 at S/L. The engine comprises seven interchangeable modules. It has attained an outstanding standard of reliability in several hundred thousand flight hours.

An unaugmented derivative, the D-30-10V, rated at 88.2 kN (19,840 lb st), powers the subsonic high-altitude Myasishchev M-55. A modified version is being developed to power the Sukhoi S-21 (see D-21A1).

TYPE: Two-shaft augmented turbofan (bypass turbojet).

LP COMPRESSOR: Five stages, fixed inlet guide vanes. Mass flow 150 kg (331 lb)/s. Pressure ratio 3. Bypass ratio 0.57.

HP COMPRESSOR: Ten stages, first row variable stators and bypass doors behind stages 4 and 5. Pressure ratio 7.05. Overall pressure ratio 21.15.

COMBUSTION CHAMBER: Can-annular with 12 interlinked flame tubes.

TURBINES: Two-stage HP, with entry temperature 1,367°C. Cooling air bled from HP stages 5, 10, cooled in heat exchanger in bypass duct. Two-stage LP.

AFTERBURNER: High volume, with four flameholder rings.

NOZZLE: Multiflap type with large variable area and cooling flows. Flow stabilised by auxiliary valve plates in divergent petals.

CONTROL SYSTEM: FADEC mounted on airframe.

AUXILIARIES: Independent gas-turbine APU under compressor used for starting (one per engine). Independent lubrication system.

DIMENSIONS:

Inlet diameter	1,020 mm (40.2 in)
Length	7,040 mm (277.2 in)

WEIGHT, DRY: 2,416 kg (5,326 lb)

PERFORMANCE RATINGS (S/L static):

Dry	93.2 kN (20,944 lb st)
Augmented	152.1 kN (34,215 lb st)
Frontal (max)	186.1 kN (41,843 lb st)
Power/frontal area	18,900 kg/m² (3,871 lb/sq ft)

SPECIFIC FUEL CONSUMPTION:

Dry	20.4 mg/Ns (0.72 lb/h/lb st)
Augmented	53.8 mg/Ns (1.9 lb/h/lb st)

UPDATED

D-21A1

The D-21A1 is a bypass engine equipped with a mixer and an axially symmetric supersonic nozzle. It is designed to power the Sukhoi S-21 high-altitude supersonic business jet.

The D-21A1 is a non-augmented modification of the D-30F6. It conforms to requirements concerning emission and noise levels (Chapter 3). Its effect upon the ozone layer is minimal. One of the main advantages of the design is a short-term period of engineering, and minimum cost of development.

TYPE: Two-shaft, bypass turbofan.

LP COMPRESSOR: Five-stage, fixed inlet guide vanes. Pressure ratio 2.99 (climb, 12,000 m, 39,370 ft, Mach 1.2).

HP COMPRESSOR: Ten-stage spool, variable inlet guide vanes, 4th and 5th-stage air bleeds. Pressure ratio 20.15. Bypass ratio 0.83 (maximum cruise, 15,800 m; 51,850 ft, Mach 2, ISA+10°C).

COMBUSTION CHAMBER: Can-annular with 12 flame tubes.

TURBINES: Two-stage HP and two-stage LP, exhaust gas temperature 1266°C at maximum cruise.

NOZZLE: Multiflap, supersonic.

DRY WEIGHT: 2,100 kg (4,630 lb)

PERFORMANCE RATINGS:

T-O, S/L: 52.27 kN (11,750 lb)

Subsonic cruise, 11,000 m (36,000 ft) Mach 0.9, ISA+10°C: 10.10 kN (2,270 lb)

Max acceleration, 12,000 m (39,370 ft) Mach 1.2, ISA+10°C: 28.44 kN (6,393 lb)

Max mode, 15,800 m (51,850 ft), Mach 2, ISA+10°C: 23.34 kN (5,247 lb)

SPECIFIC FUEL CONSUMPTION (engine installed):

Subsonic cruise	26.9 mg/Ns (0.95 lb/h/lb)
Max mode	33.7 mg/Ns (1.19 lb/h/lb)

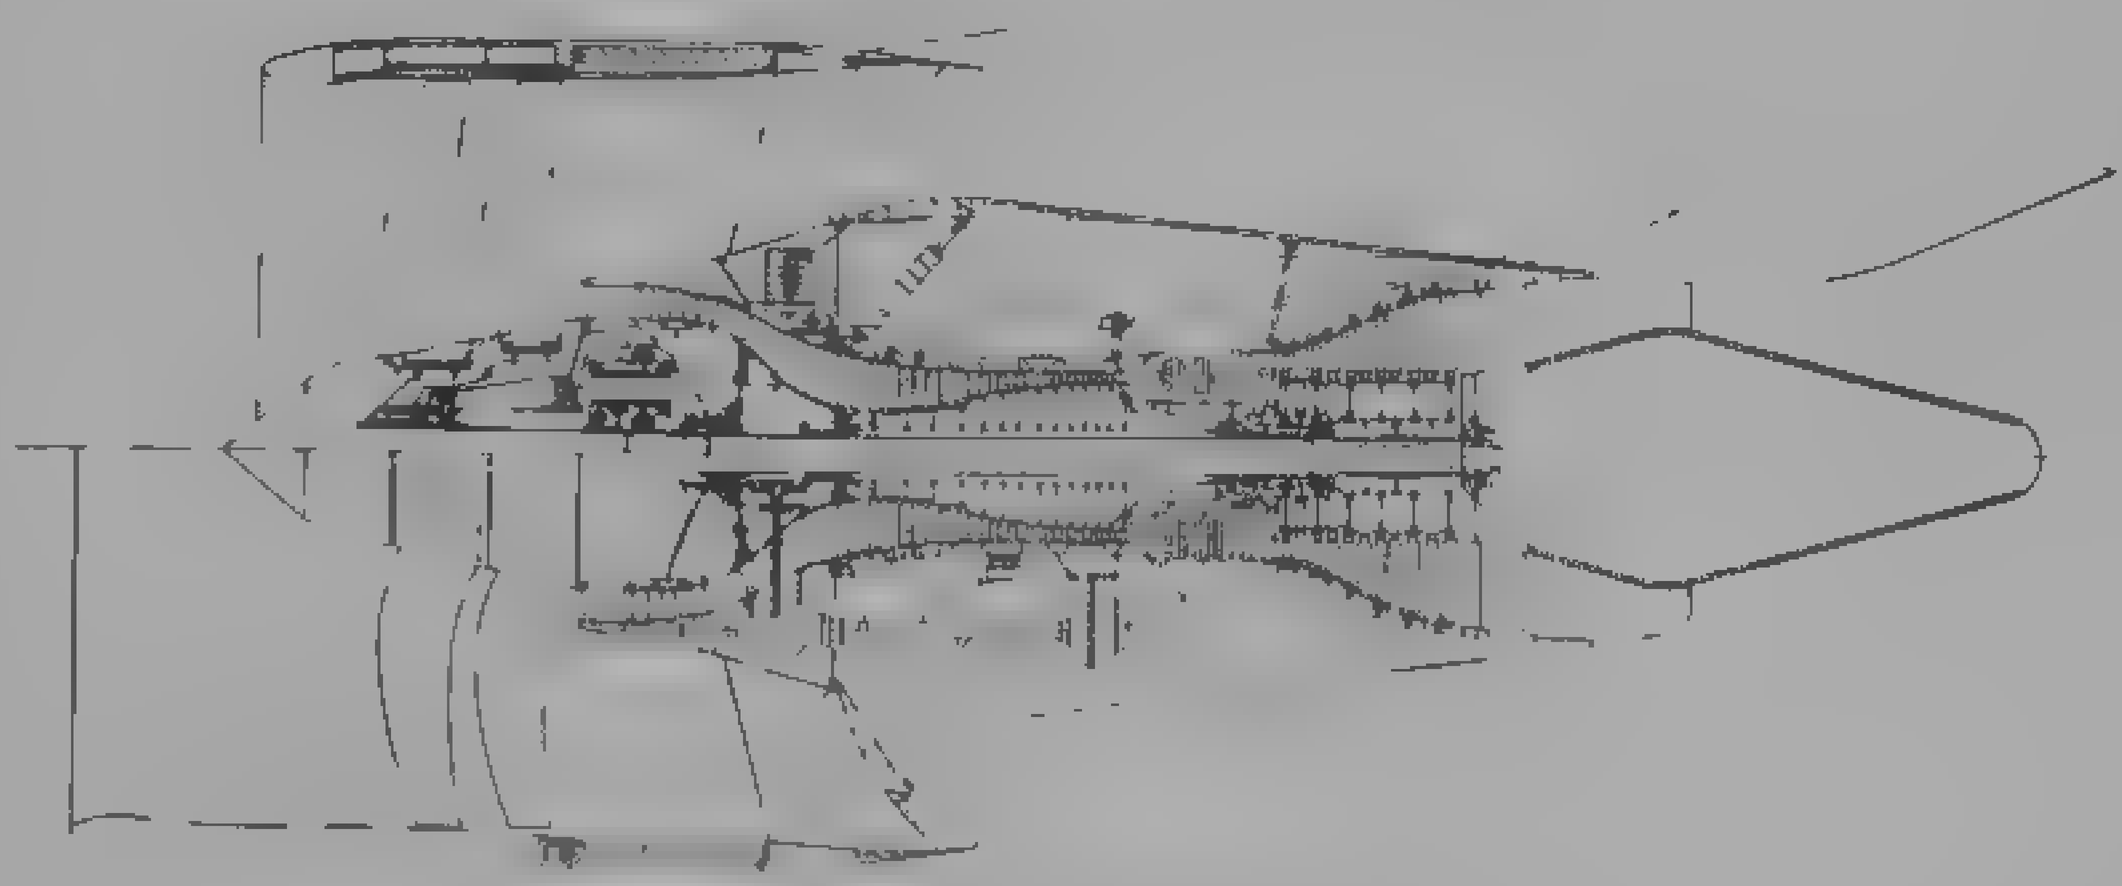
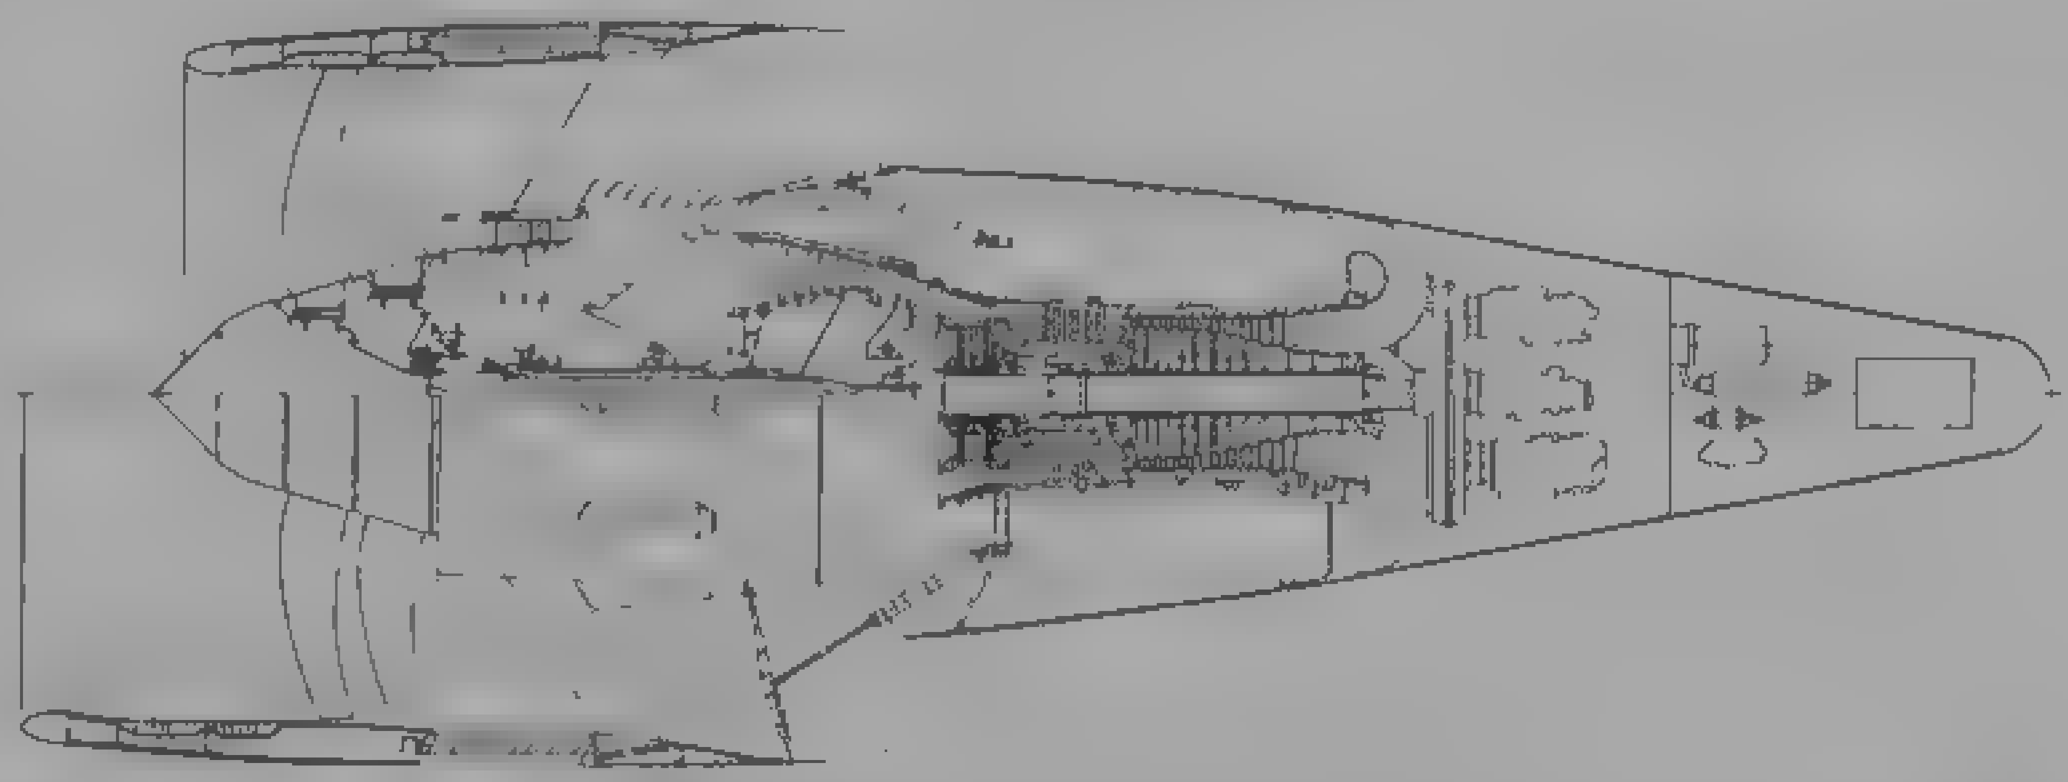
1992



Aviadvigatel D-110 geared contrarotating propfan

1992



Aviadvigatel D-112 reverse-flow gearless propfan

1992

D-200 geared propeller version with Hartzell propeller (*Piotr Butowski*)

1994

D-100/110/112

The D-100 and D-110 are turbofans for the 1990s, based on the PS-90A core. The **D-100** would have a fan with a diameter of 2,350 mm (92.52 in), the bypass ratio being about 8. Overall pressure ratio would be 35, TET 1,310°C, dry weight 3,350 to 3,550 kg (7,385 to 7,826 lb), T-O thrust 19 to 20 tonnes (186.3 to 196.1 kN, 41,890 to 44,090 lb st) and sfc (cruise, 11 km, 36,000 ft, Mach 0.8) of 15.30 mg/Ns (0.54 lb/h/lb).

The **D-110** is a more advanced engine with a geared fan of 2,670 mm (105 in) diameter, giving a bypass ratio of 12 to 13. Overall pressure ratio would be 31, TET 1,282°C, dry weight 3,520 kg (7,760 lb), T-O thrust 20 tonnes (196.1 kN, 44,090 lb st) and sfc (cruise, same conditions) 14.73 mg/Ns (0.52 lb/h/lb).

Accompanying illustrations show the two engines together with an alternative gearless propfan, the **D-112**. This has some features resembling the Garrett ATF3, with the same double reverse-flow arrangement, accessories being at the rear and the core jet being turned 180° to escape into the fan duct. This enables existing gas generator modules to be used for engines of super high-bypass ratio, typically 15, as the fan shafts are not passed through the core.

UPDATED

D-200

This engine is based on the VAZ-4305 (see under VAZ on later page). It is being marketed for the Mi-34V helicopter and for other light multipurpose aircraft. The data refer to the propeller version as illustrated.

TYPE: Liquid-cooled twin-rotor engine

FUEL: Mogas 91 to 95 octane

IGNITION: Dual coil/plug per rotor

DIMENSIONS:

Length	990 mm (39.0 in)
Width	623 mm (24.5 in)
Height	690 mm (27.2 in)
WEIGHT, DRY:	145 kg (320 lb)
RATING:	162 kW (217 hp)
OUTPUT SPEED:	2,700 rpm
TORQUE:	28 kg-m (202.5 lb-ft)
OPERATING LIMITS:	±50°C, 0-4000 m (13,123 ft)
SPECIFIC FUEL CONSUMPTION:	85.4 µg/J (0.506 lb/h/hp)

VERIFIED

NK-12M

Designed at Kuibyshev in 1947-52 as the **TV-12**, under N. D. Kuznetsov and former German engineers, the NK-12M is the most powerful turboprop in the world. The **NK-12M** developed 8,948 ekW (12,000 ehp). The **NK-12MV** is rated at 11,033 ekW (14,795 ehp) and powered the Tu-114, driving four-blade contrarotating propellers of 5.6 m (18 ft 4 in)

diameter. As the **NK-12MA**, rated at 11,185 kW (15,000 shp), it powers the An-22, with propellers of 6.2 m (20 ft 4 in) diameter. A further application is in the Tupolev Tu-95/-142 bomber and its derivatives, and Tu-126, all usually powered by the NK-12MV. A single **NK-12MK** provides propulsion for the Orlyonok family of Ekranoplans. Tandem engines provide cruise propulsion for the Sukhoi S-90-200.

The NK-12M has a 14-stage axial flow compressor. Pressure ratio varies from 9 to 13 according to altitude, and variable inlet vanes and blow-off valves are necessary. A can-annular type combustion system is used: each flame tube is mounted centrally on a downstream injector, but all tubes merge at their maximum diameter to form an annular secondary region. The single turbine is a five-stage axial. Mass flow is 65 kg (143 lb)/s.

The casing is made in four portions, from sheet steel, precision welded. An electric control for variation of propeller pitch is incorporated, to maintain constant speed.

DIMENSIONS

Length	6,000 mm (236.2 in)
Diameter	1,150 mm (45.3 in)
WEIGHT, DRY:	2,350 kg (5,181 lb)

PERFORMANCE RATINGS (NK-12MV)

T-O	11,033 ekW (14,795 ehp)
Nominal power	8,826 ekW (11,836 ehp) at 8,300 rpm
Idling speed	6,600 rpm

KKBM NK-12MV turboprop *(Piotr Butowski)*

1992

NK-8

The NK-8 was developed through a number of variants, the most powerful of which is the NK-144. Basic versions are the 99.1 kN (22,273 lb st) **NK-8-4**, later uprated to 103 kN (23,150 lb st), which originally powered the Il-62, and the 93.2 kN (20,950 lb st) **NK-8-2** which was the original engine of the Tu-154. The **NK-8-2U** powered the Tu-154B-2. The NK-8-4 remains in service with several Il-62 (not Il-62M) operators. It led to the NK-86 described later. Twin **NK-8-4K** engines provide starting power for the Orlyonok family of Ekranoplans.

TYPE: Two-shaft turbofan.

FAN: Two-stage axial, with anti-flutter sweptback blades on first rotor stage. Pressure ratio 2.15 at 5,350 rpm. Bypass ratio 1.02 (NK-8-2, 1.00).

COMPRESSOR: Two IP stages on fan shaft. Six-stage HP compressor. Construction almost wholly of titanium. Core pressure ratio, 10.8 at 6,950 HP rpm (NK-8-2, 10 at 6,835 rpm).

COMBUSTION CHAMBER: Annular, with 139 burners.

FUEL GRADE: T-1 and TS-1 to GOST 10227-62 or T-7 to GOST 12308-66 (equivalent to Avtur 50).

TURBINE: Single-stage HP turbine, two-stage LP turbine, all with shrouded rotor blades, air-cooled discs and hollow nozzle blades (stators). Gas temperature, not over 870°C (1,143°K) ahead of turbine, not over 670°C (NK-8-2, 650°C) downstream.

JETPIPE: Mixer leads bypass flow into common jetpipe which may be fitted with blocker/cascade type reverser giving up to 48 per cent (NK-8-2, 45 per cent) reverse thrust, and noise suppressor.

LUBRICATION: Continuous pressure feed and recirculation. Pressure not less than 2.28 bars (33 lb/sq in).

OIL GRADE: Mineral oil MK-8 or MK-8P to GOST 6457-66 (DERD 2490 or MIL-O-6081B).

ACCESSORIES: These include automatic flight deck warning of vibration, ice and fire. All grouped beneath fan duct casing. RTA-26-9-1 turbine temperature controller by Smiths Industries.

STARTING: HP spool driven by constant-speed drive type PPO-62M, or started pneumatically by air from TA-6 APU from ground hose or by air bleed (NK-8-2, pneumatic only).

DIMENSIONS

NK-8-4: Length, no reverser	5,100 mm (201 in)
NK-8-2: Length, with reverser	5,288 mm (208.19 in)
Length, no reverser	4,762 mm (187.48 in)
Diameter	1,442 mm (56.8 in)

WEIGHT, DRY:

NK-8-4: no reverser	2,100 kg (4,629 lb)
with reverser	2,400 kg (5,291 lb)
NK-8-2: no reverser	2,100 kg (4,629 lb)
with reverser	2,350 kg (5,180 lb)

PERFORMANCE RATINGS:

NK-8-4: T-O rating	103.0 kN (23,150 lb st)
Cruise rating at 11,000 m (36,000 ft) and 458 kts (850 km/h; 530 mph)	27.0 kN (6,063 lb)
NK-8-2: T-O rating	93.2 kN (20,950 lb st)
NK-8-2U: T-O rating	103.0 kN (23,150 lb st)

SPECIFIC FUEL CONSUMPTION:

At cruise rating at 11,000 m (36,000 ft) and 458 kts (850 km/h; 530 mph)

NK-8-4	22.1 mg/Ns (0.78 lb/h/lb)
NK-8-2	21.53 mg/Ns (0.76 lb/h/lb)

NK-22

Two-shaft augmented turbofan qualified 1967 at 158.9 kN (35,715 lb st) dry and 215.76 kN (48,500 lb st) maximum.

NK-25

Two-shaft augmented turbofan qualified 1977 at 186.4 kN (41,900 lb st) dry and 245.2 kN (55,115 lb st) maximum.

VERIFIED

NK-44

Projected three-shaft turbofan, 392 kN (88,180 lb st).

VERIFIED

NK-86

This turbofan of 127.5 kN (28,660 lb st) is closely related to the NK-8 series. Four power the Il-86 with combined reversers and noise attenuators.

NK-144

Brief details of this family of SST engines last appeared in the 1991-92 *Jane's*.

KLIMOV CORPORATION

ST PETERSBURG NPO IM. KLIMOV

13 Kantemirovskaya Street, 184100 St Petersburg
Telephone: 7 (245) 00 35
Fax: 7 (245) 33 55
Telex: 121282 JET SU
GENERAL DESIGNER: Alexander Alexandrovich Sarkisov
CHIEF DESIGNER: Piotr D. Gavra
DEPUTY GENERAL MANAGER: Andrei P. Listratov

The great design bureau and factory at what used to be Leningrad, the former Factory No. 117, was a major centre for high-power piston engines developed under Vladimir Yakovlyevich Klimov. In 1946 it was selected to build the Rolls-Royce Nene turbojet, later developed as the Klimov VK-1. Klimov was succeeded by his deputy, Sergei Pietrovich Isotov, who developed gas turbines mainly for helicopters but who in 1968 moved into the field of fighters. Isotov died in 1983 and was succeeded by Vladimir Styepanov (who retired early) and Alexander Sarkisov, but today the bureau has been renamed for its founder, and the '117' is continued in its engine designations.

Engines designed by NPO Klimov are manufactured at Perm (Sverdlov) and Zaporozhye (Motorostroitel), except for the TV7-117 which is in production at the Chernishov factory (Moscow) and Mars (Omsk), and the RD-33, made by Chernishov. June 1993 link with P&W Canada.

VERIFIED

TV2-117

The power plant of the Mi-8 comprises two **TV2-117A** engines coupled through a VR-8A gearbox. The complete package incorporates a control system (separate from the control system of each gas generator) which maintains desired rotor speed, synchronises the power of both engines, and increases the power of the remaining engine if the other should fail.

TV2-117TG Qualified to operate on a normal gas turbine fuels, and on gasoline (petrol), benzine, diesel or liquefied natural gas, propane or butane gas. Flown on Mi-8TG ratings unchanged, and selected as interim engine for Mi-38. A foreign production facility is sought.

TYPE: Free turbine helicopter turboshaft.

COMPRESSOR: Ten-stage axial. Inlet guide vanes and stators of stages 1, 2 and 3 are variable. Pressure ratio 6.6 at 21,200 rpm.

COMBUSTION CHAMBER: Annular, with eight burner cones.

FUEL GRADE: T-1 or TS-1 to GOST 10227-62 specification (Western equivalents, DERD 2494, MIL-F-5616).

TURBINE: Two-stage axial compressor turbine with solid blades. Two-stage free power turbine.

OUTPUT SHAFT: Conveys torque from the free turbine to the overrunning clutch of the main gearbox (VR-8A) and also to the speed governor. Maximum output speed 12,000 rpm, main rotor speed 192 rpm.

ACCESSORIES: Engine control system includes fuel, hydraulic anti icing, gas temperature restriction, engine electric supply and starting, and monitoring systems. Up to 1.8 per cent of the mass flow can be used to heat the intake and other parts liable to icing. Fire extinguishant can be released by the pilot

LUBRICATION: Pressure circulation type. Oil is scavenged from the five main bearings by the lower pump, returned through the air/oil heat exchanger and thence to the tank

OIL GRADE: Synthetic, Grade B-3V to MRTU 38-1-157-65 (nearest foreign substitute Castrol 98 to DERD 2487)

STARTING: The SP3-15 system comprises DC starter/generator, six storage batteries, control panel, ground supply receptacle, and control switches and relays; airframe mounted except the GS-18TP starter/generator. The ignition unit comprises a control box, two plugs, solenoid valve, and switch. The starting fuel system comprises an automatic unit on the NR 40V pump, constant pressure valve, and two igniters

DIMENSIONS:

Length overall	2,835 mm (111.5 in)
Width without jetpipe	547 mm (21.5 in)
Height	745 mm (29.25 in)

WEIGHT, DRY:

Engine, without generator etc	338 kg (745 lb)
VR-8A gearbox, less entrapped oil	745 kg (1,642 lb)

PERFORMANCE RATINGS:

Max	1,250 kW (1,677 shp)
T-O (S/L, static)	1,118 kW (1,500 shp)
Max continuous	895 kW (1,200 shp)
Cruise (122 kts, 225 km/h; 140 mph at 500 m, 1,640 ft)	746 kW (1,000 shp)

SPECIFIC FUEL CONSUMPTION:

T-O, as above	102.4 µg/J (0.606 lb/h/shp)
Cruise, as above	115.4 µg/J (0.683 lb/h/shp)

VERIFIED

TV3-117

This second-generation turboshaft has been produced in very large numbers. Bench testing began in 1974, the first flight was in 1976 and series production began in 1978.

TV3-117BK. Electronic control. Rated at 1,618 kW (2,170 shp). Powers some Ka-27s and Ka-28.

TV3-117MT. 1,434 kW (1,923 shp). Powers Mi-8T/TB/TBK, -14, -17, -24.

TV3-117V. 1,633 kW (2,190 shp). Powers some Ka-27s, -29 and -32.

TV3-117VK. Electronic control. Rated at 1,618 kW (2,170 shp). Powers Ka-50.

TV3-117VM. Electronic control. Rated at 1,545 kW (2,070 shp) to 3,600 m (11,810 ft). Powers Mi-17-1VA, -25, -28 and -35.

Data below refer mainly to the MT.

TYPE: Free turbine turboshaft

COMPRESSOR: Ten-stage axial. Inlet guide vanes and first three stators variable. Pressure ratio 7.5

COMBUSTION CHAMBER: Annular, improved version of TV2-117

TURBINES: Two-stage gas generator turbine, improved from TV2-117. Two-stage power turbine

OUTPUT: As TV2-117 but more compact jetpipe

STARTING: BK, MT, pneumatic air turbine; V, VK, VM electric

DIMENSIONS:

Length	2,085 mm (82.1 in)
Width	640 mm (25.2 in)
Height	725 mm (28.5 in)

WEIGHT, DRY: 285 kg (628 lb)

PERFORMANCE RATINGS (S/L, max T-O): See variants

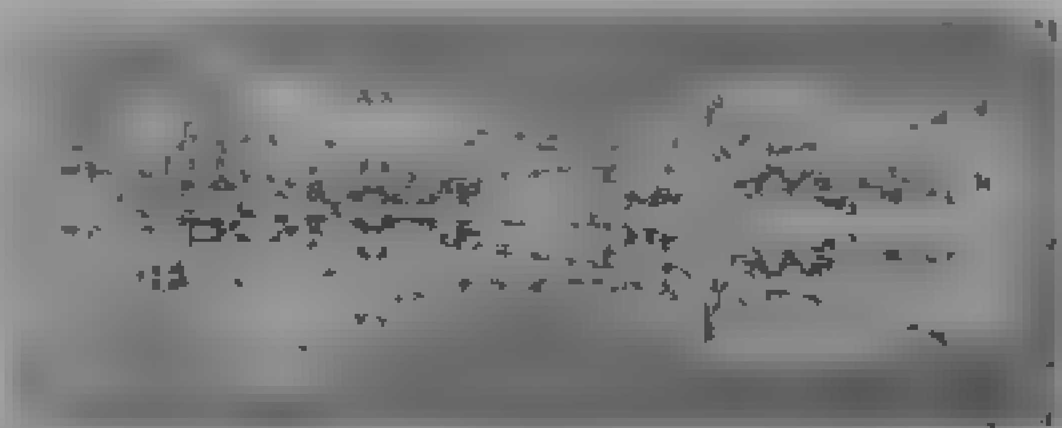
VERIFIED

TV7-117

Described as a third generation engine, the TV7-117 has a modular core incorporating advanced features and materials and envisaged as the basis for various jet and shaft engines. The initial turboprop version was flight tested on two Il-76s and the prototype Il-114. Drives Stupino SV-34 propeller with six composite blades. To have been certificated August 1992, with series production at Chernyshov and Mars (Omsk).



Longitudinal section of Klimov TV7-117V helicopter turboshaft

1999

TV7-117S. Turboprop version, selected (as **TV7-117-3**) to power the Il-114, produced in collaboration with Polish industry.

TVD-117E. Turboprop tailored to Ekranoplan propulsion, rated at 1,840 kW (2,467 shp). Three power the Raketa 2.2.

TV7-117V. Turboshaft version. Flat rated at 1,728 kW (2,318 shp) to 2,700 m (8,860 ft). OEI contingency 2,610 kW (3,500 shp) at S/L only. Powers Mi-38. Subject of agreement with Eurocopter (see Mil in aircraft section).

L-3000. Uprated version for Chinese aircraft at present powered by WJ5.

A growth core with two centrifugal stages is under development. Output will be in the 2,237 kW (3,000 shp) class, and will be unaffected by sand or dust. Other developments include liquefied gas fuels and a turbofan with T-O rating of 15.68 kN (3,527 lb st).

The following description refers to the basic Il-114 engine.

TYPE: Free turbine turboprop

COMPRESSOR: Annular ram inlet around reduction gear tapers to entry to five-stage axial compressor, with variable inlet guide vanes and next two stators, followed by centrifugal stage on same shaft. Pressure ratio 16

COMBUSTION CHAMBER: Annular folded reverse flow. Minimum pollution with wide range of fuels, including LNG and LPG

TURBINES: Two-stage gas generator turbine with cooled blades. Entry temperature 1,242°C. Two-stage power turbine

REDUCTION GEAR: Planetary type, with new tooth profiles and anti-vibration mountings

CONTROL SYSTEM: Full authority electronic, with separate automatic control for ground and flight operation

STARTING: Pneumatic air turbine, mass flow 0.2 kg (0.44 lb)/s

DIMENSIONS:

Length	2,143 mm (84.37 in)
Height	940 mm (37.0 in)
Width	886 mm (34.88 in)

WEIGHT, DRY: 520 kg (1,146 lb)

PERFORMANCE RATINGS:

Max T-O	1,839 kW (2,466 shp) to 35°C and 250 m (820 ft)
Cruise (6,000 m; 19,685 ft at 270 kts, 500 km/h, 311 mph)	1,342 kW (1,800 shp)

SPECIFIC FUEL CONSUMPTION:

Cruise, as above	67.09 µg/J (0.397 lb/h/shp)

VERIFIED

Klimov TV7-117-3 (117C) turboprop with six blade propeller for Ilyushin Il-114 *(Piotr Butowski)*

1994

TV7-46

Tupolev gave this as the designation of the large turbofan, burning refrigerated LNG fuel, chosen to power the Tu-306 wide-body transport project. No relation to TV7 turboprop.

NEW ENTRY

PK6A

Licensed P&WC PT6A turboprops include the PK6A-65B for the Be-32, PT6K-62 for PZL Orlik, PT6K-25A for Euromil TVA-3000, PT6K-66 for Myasishchev M-102 and PT6K-67

NEW ENTRY

PK100

The first of this family is the PK127, for export versions of An-140. A more powerful (turboshaft) version will be an option on the Mi-38 helicopter

NEW ENTRY

RD-33

The contract for this important fighter engine was won in competition with two other engine bureaux, and it was designed before Isotov's death. Detail design began in 1968, meeting the requirements of the MiG-29, and the first bench run took place in 1972. Deliveries were initiated in 1976, and mass production at Chernyshov and Omsk followed in 1981. It powers all known MiG-29 versions and is offered as the engine of an upgraded MiG-21.

RD-33K. Uprated version, with greater air flow and increased turbine entry temperature, 86.0 kN (19,335 lb st). Powers MiG-29K and -29M.

RD-33/191 Hot-end improvements to extend TBO from 800 to 1,200 hours. Adopted by Luftwaffe.

The following refers to the original production RD-33

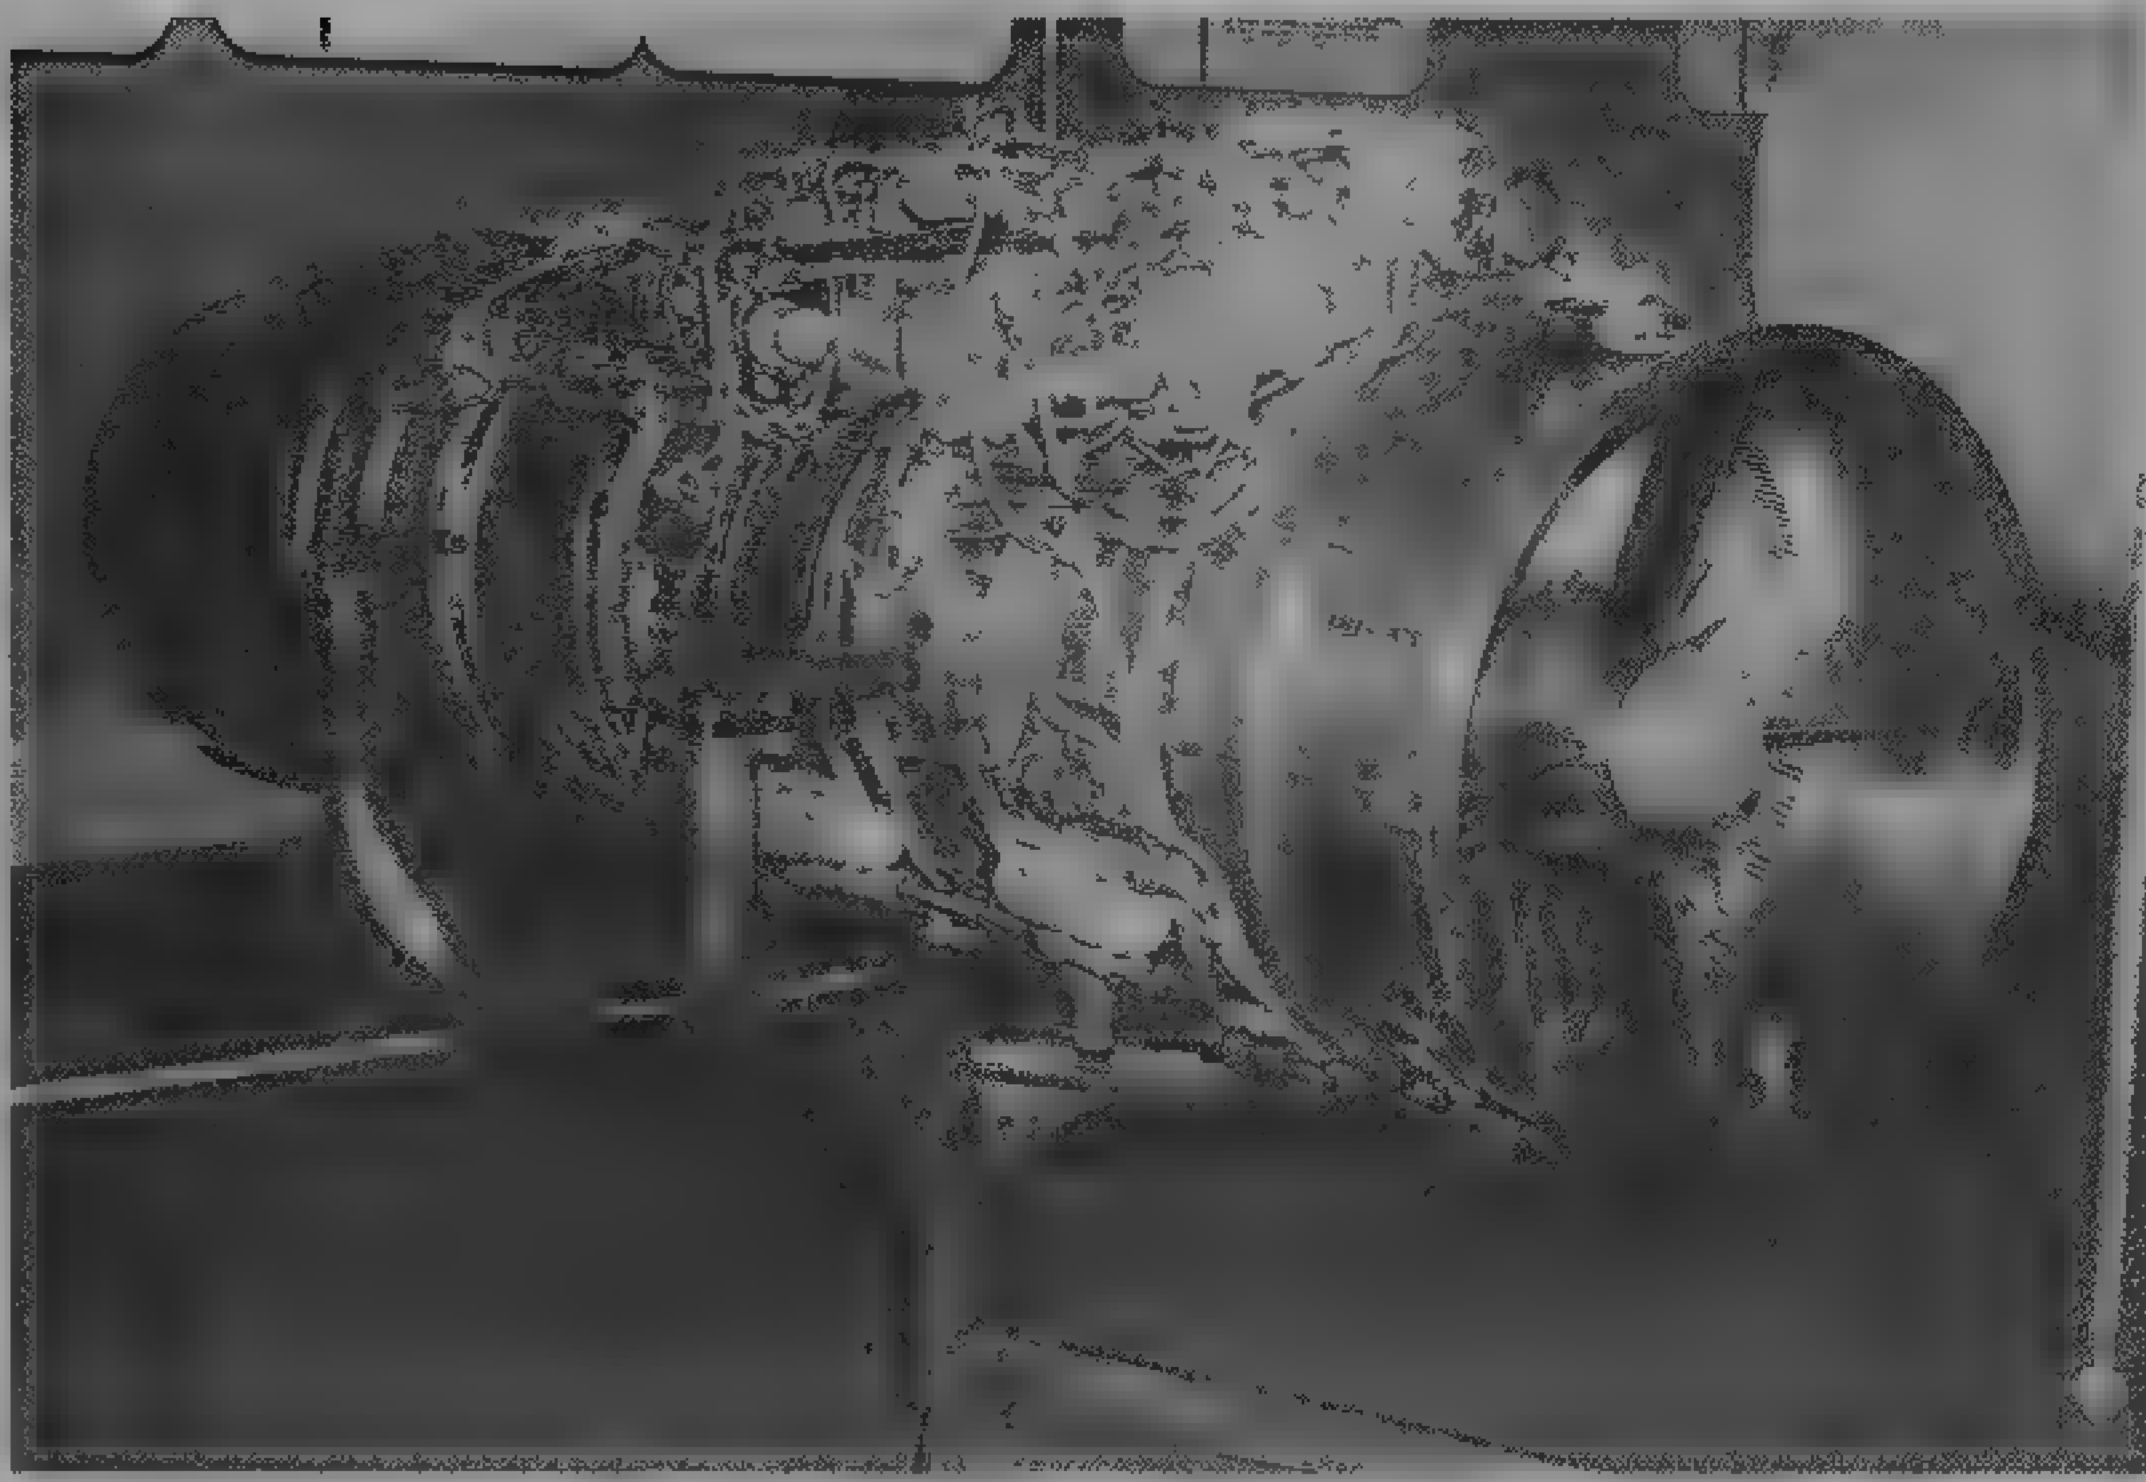
TYPE: Two-shaft afterburning bypass turbojet (low ratio turbofan)

LP COMPRESSOR: Four stages. Front bearing carried in four-strut nose, but no inlet guide vanes. Maximum air flow 76.0 kg (167.5 lb)/s. Bypass ratio 0.4

HP COMPRESSOR: Nine stages. Overall pressure ratio 20

COMBUSTION CHAMBER: Annular with air-blast fuel nozzles giving generally smokeless combustion of a range of fuels

TURBINES: Single-stage HP turbine with single-crystal cooled blades. Entry gas temperature 1,397°C. Single-stage LP turbine



Klimov RD-33 augmented bypass turbojet *(Paul Jackson)*

1995

AFTERBURNER: Combustion in both core and bypass flows. Nozzle with fully variable area and profile in primary and secondary flows. Outer nozzle has 24 flaps. Vectoring nozzles under preliminary development by CIAM and Soyuz

ACCESSORIES: Oil tank, hydromechanical fuel control and auxiliaries grouped above engine to reduce cross-section. Closed lubrication system functions under all positive or negative g-loads. Multipurpose self-diagnostic system

Klimov RD-60A two-shaft turbofan *(Piotr Butowski)*

1992

RD-93

Reported designation for power plant of Chengdu FC-1 fighter, revealed June 1995 and stated to be development of RD-33. Chinese sources quote augmented thrust of 81.4 kN (18,300 lb st)

NEW ENTRY

KLIMOV/AEROSUD SMR-95

This fighter engine is a derivative of the RD-33, with identical thrust values, developed in partnership with Aerosud of South Africa. It is part of a larger collaboration including Mikoyan and Atlas. The SMR-95 is being tested in a Mirage F1, and is aimed at this aircraft, as well as the Cheetah D (flight trials due 1995) and upgrades of the MiG-2

NEW ENTRY

KLIMOV RD-60A

In 1990 the RKBM (Novikov) RD-60 was developed into the RD-60A two-shaft turbofan of 24.21 kN (5,511 lb st) for use in a future advanced trainer to replace the Czech L-29 and L-39, for which five airframe OKBs were competing in 1992. In the MiG-AT this engine has now been replaced by the French Turbomeca-SNECMA Larzac, an engine dating from 1968

Telegraph. Omsk 21 MARS
Teletype. Omsk 3274 MARS
Telex. 133112 + MARS SU

This bureau was formerly headed by Glushenkov. Development, in partnership with CIAM (Central Institute for Aviation Motors) began in 1957. The first product was the 224 kW (300 hp) GTD-1, followed by the GTD-5 and -5M, which continue in production. The first major engine for aircraft propulsion was the GTD-3, produced from 1964 as a twin package plus common reduction gear for helicopters. In 1970 came the TVD-10 turboprop. Apart from APUs, the latest Mars engines are the TVD-20 and TV-O-100 (see Soyuz).

The associated Omsk (OMKB) production factory produces several types of engine, including the RD 33 and TV7-117.

VERIFIED

TVD-10

Military designation GTD-3

This free turbine engine was developed to power the Kamov Ka-25 helicopter. The civil turboshaft was licensed to Poland for production, and a description appears under WSK-PZL Rzeszow. Ka-25 engines were made in the Soviet Union, the **GTD-3F** being rated at 671 kW (900 shp) and the **GTD-3BM** at 7[illegible] kW (990 shp).

The **TVD-10B** is the turboprop version selected to power the An-28 and Aeroprogress/Roks-Aero T-101, and is a candidate engine for the T-106 and T-501. This engine is produced in Poland as the **TWD-10B**, as described under WSK-PZL Rzeszów. The Omsk design bureau is developing the **TVD-10BA**, rated at 790 kW (1,060 shp) for the An-28A for Polar operations.

UPDATED

TVD-20

This turboprop was to be fitted to the production An-3, and has been selected to power the Aeroprogres Roks-Aero T-101V. It uses a derivative of the TVD-10B gas generator, with a zero stage (to a total of seven) on the compressor and a second stage on the power turbine.

COMPRESSOR: Seven axial stages plus one centrifugal. Inlet faces aft.

COMBUSTION CHAMBER: As TVD-10B.

TURBINES: Two-stage gas-generator turbine. Two-stage free power turbine.

PROPELLER DRIVE: Quill shaft leads forward from power turbine to drive two-stage gearbox with accessory drives above. Drive to AV-17 reversible-pitch propeller incorporates brake for safe loading of chemicals with engine running.

ACCESSORIES: Two 27 V electric starters, provision for dusting or spraying pumps.

DIMENSIONS:

Length	1,770 mm (69.7 in)
Width	850 mm (33.5 in)
Height	845 mm (33.3 in)
WEIGHT, DRY:	285 kg (628 lb)

PERFORMANCE RATING (S/L):

T-O	1,029 kW (1,380 shp)

SPECIFIC FUEL CONSUMPTION:

T-O as above	85.4 μg/J (0.506 lb/h/shp)

NOVIKOV RD-60

This turbojet is a derivative of the RD-36-35FVR modified for operation in the horizontal attitude, with a long-life lubrication system and other changes It is the take-off booster fitted to the prototype Beriev A-40

PERFORMANCE RATING	29 85 kN (6,581 lb st)

VERIFIED

RKBM PROJECT

In 1990 RKBM revealed plans for a range of engines based on a core already developed This single-shaft core has a nine-stage compressor driven by a single-stage turbine. Mass flow is 22 5 kg (49 6 lb)/s, pressure ratio 12 4 and TET 1,547°C. Three derived engines would be: a helicopter turboshaft rated at 4 480 to 5,970 kW (6,000 to 8,000 shp), a high-bypass ratio turbofan in the 12 tonne (117 5 kN, 26,455 lb st) class, and an advanced propfan, with three core booster stages, giving a thrust of 12 to 15 tonnes (117 5 to 147 1 kN 26.455 to 33 070 lb st)

UPDATED

TVD-1500

This new gas generator has been developed as a core suitable to power turboshaft, turboprop and turbofan engines. Features include minimal number of parts, advanced materials (new titanium alloys, new refractory materials and new composites), full-authority digital control and modular construction Prototypes are running of the shaft and propeller versions. There is no immediate plan to build a turbofan, but this would be in the 7 85 to 9 81 kN (1,764 to 2,205 lb st) class

The basic engine powers the Antonov An-38. Certification in this application was scheduled for 1995 The **TVD-1500S** turboprop would power the Sukhoi S-80. The **TVD-1500SKh** would power the Antonov SKhS agricultural aircraft. The **TVD-1500T** pusher propfan would power the Ilyushin Il Kh Two **RD-600S (TVD-1500A)** turboshaft engines would be installed in the rear fuselage of the Myasishchev Yamal amphibian, driving (via shafts) a pusher propeller behind the rudder. The **TVD-1500V** turboshaft (also described as **RD-600**) will power the Kamov V-62 helicopter, a near-term programme, and the later Ka-52

TYPE: Free turbine turboshaft or turboprop

COMPRESSOR: Three axial stages with inlet guide vanes and both stators variable, followed by one centrifugal Pressure ratio 14 4 Electrochemically machined blades, electron-beam welded rotors and precision-cast casing.

COMBUSTION CHAMBER: Annular reverse-flow Multifuel capability.

TURBINES: Two-stage compressor turbine with monocrystal or directionally solidified blades Entry temperature 1,267°C. Two-stage power turbine with shaft passing through the engine to front drive

REDUCTION GEAR: On turboprop, two-stage spur gear followed by single-stage planetary

SAMARA

SAMARA STATE SCIENTIFIC & PRODUCTION ENTERPRISE

443026 Samara 36 (Kuibyshev)

PRESIDENT: Evgenii A. Gritsenko

This company, also known as SSPE Trud (labour or toil), is the successor to the large KB formerly headed by Kuznetsov (which see), and it has retained his NK initials on engines whose design was begun under his direction. See also KKBM

VERIFIED

SAMARA NK-88

Samara/Trud has been working since about 1968 on the use of LH/LNG (liquid hydrogen and liquefied natural gas) for various gas-turbine engines. A particularly important development programme was the conversion of an NK-8-2 engine (see KKBM) to burn either of the two new liquids, and of the tankage, piping and control system of a Tu-154 to accept such an engine. The result was the Tu-155 aircraft, which on 15 April 1988 became the first aircraft to fly with an engine burning liquid hydrogen. This was fed to the modified engine, designated an **NK-88**, installed in the right-hand (not centre) position. After 12 flights the aircraft was converted to feed LNG to the test engine, thereafter flying to Nice, Hanover and Berlin. Samara would like to test these fuels on an A310 with JT9D engines, followed by PW4000s

VERIFIED

SAMARA NK-92

This is a variant of the NK-93 described below. It could be used on the projected twin-engined 150/220-seat Il-90

VERIFIED

SAMARA NK-93

This is the most powerful propfan known to be under development anywhere in the world. Parametric studies began in 1985, and confirmed a 7 per cent advantage in propulsive efficiency for a two-stage contrarotating ducted propfan over open-rotor and ducted single-stage propfans. The NK-93 entered preliminary design in 1988. The first complete engine, incorporating both the gas generator and the propfans, went on test in December 1989. By early 1992 five complete engines had run, with about 15 more expected to be required to complete certification. Samara/Trud describe the NK-93 as similar in concept to the MTU/Pratt & Whitney CRISP, but much later in the stage reached, possible co-operation is being discussed.

The immediate applications envisaged for the NK-93 include the Il-96M and Tu-204. Flight development was scheduled to begin in 1994, with a single engine mounted on an Il-76 testbed aircraft. Certificated series produced NK-93 engines are planned for 1997

TYPE: Three-shaft geared contrarotating shrouded propfan

FAN: Two stages, contrarotating, same directions as Tu-95 ('Bear') propellers. Front fan (40 per cent power) eight blades, rear (60 per cent power) 10 blades. Blades swept 30°, pitch range 110°. Prototype blades solid magnesium production blades (by Stupino propeller factory) solid sparless graphite-epoxy composite retained by short steel root slotted into disc. Blade length 1,050 mm (41.34 in). Mass flow (cruise rpm, S/L) 1,000 kg (2,205 lb)/s. Bypass ratio 17

GEARBOX: Planetary, transmitting 22 370 kW (30 000 shp) through seven satellite pinions. Designed for service life of 20,000 hours

COMPRESSORS: Seven-stage LP, titanium discs and blades. Eight-stage HP, first five titanium, last three steel. Pressure ratio 37

COMBUSTION CHAMBER: Fully annular with vaporising burners. Being studied for use of LNG (liquefied natural gas) fuel

TURBINES: Single-stage HP with cooled single-crystal blades drives HP compressor. Single-stage IP drives LP compressor. Three-stage LP drives propfan gearbox

DIMENSIONS:

Length	about 5,500 mm (216.5 in)
Inlet diameter	1,455 mm (57.28 in)
Propfan diameter	2,900 mm (114.2 in)
Shroud external diameter	3,150 mm (124.0 in)
WEIGHT, DRY:	3,650 kg (8,047 lb)
PERFORMANCE RATING (ISA, S/L):	
Max T-O	176.5 kN (39,683 lb st)
SPECIFIC FUEL CONSUMPTION (cruise, 11,000 m, 36,090 ft, M 0.75)	13.89 mg/Ns (0.49 lb/h/lb)

VERIFIED

SAMARA NK-321

This carefully planned long range bomber engine is the power plant of the Tupolev Tu-160 ('Blackjack'). It was designed entirely by the Samara/Trud team, and was derived from the NK-32 gas generator. Design began around 1977, and the first prototype NK-321 went on test in 1980. It has been in production since 1986, and is still being made at a modest rate

TYPE: Three-shaft bypass augmented turbojet (low bypass ratio turbofan)

COMPRESSORS: Three-stage LP (fan), five-stage IP, seven-stage HP. Designed for maximum efficiency and highest overall pressure ratio. First stage also designed for minimal radar reflectivity of any radiation managing to reach it. Materials titanium, steel and (final stages) high-nickel alloy. Mass flow 365 kg (805 lb)/s. Pressure ratio (T-O) 28.4. Bypass ratio 1.4

COMBUSTION CHAMBER: Annular, vaporising burners, no visible smoke and near perfect uniformity of temperature at HP turbine face

TURBINES: Single-stage HP, diameter about 1,000 mm (39.34 in), cooled blades of single crystal material. Entry gas temperature 1,630°K (1,357°C). Single-stage IP, DS blades. Two-stage LP, DS blades

AFTERBURNER: Designed for peak efficiency and maximum thrust for lowest gas temperature to minimise IR signature. No visible smoke. Downstream of multi-lobe flow mixer. Fully variable con/di nozzle

CONTROL SYSTEM: Electrical, with hydromechanical back-up. Studies in progress for later switch to FADEC

DIMENSIONS:

Length	about 6,000 mm (236 in)
Inlet diameter	1,460 mm (57.5 in)
WEIGHT, DRY:	about 3,400 kg (7,496 lb)
PERFORMANCE RATINGS (ISA, S/L):	
Max T-O	245 kN (55,077 lb st)
Max dry	137.2 kN (30,843 lb st)

This bureau was previously named for its famous founder, Arkhip M. Lyulka. In addition to the engines listed below this bureau is responsible for the D-57 reusable LH_2/LO_2 rocket engine for space vehicles (40 t thrust, engine life 800 s) and the TP-22 engine which drives hydraulic pumps on the Energiya vehicle, running on GH_2 from main engine cooling (20 to 150 kW).

VERIFIED

AL-7

Details of this widely used turbojet appeared in the 1993-94

VERIFIED

AL-21

This important engine, in various **AL-21F-3** versions, has been produced in thousands for such aircraft as the MiG-23, Su-24 and Su-17/20/22. Developed from the AL-7 in the 1960s and cleared for production in 1970-74, it is noteworthy for its major advances in the design of the compressor, combustion chamber, turbine and afterburner.

TYPE: Single-shaft turbojet, with afterburner.

COMPRESSOR: Fourteen-stage axial. Inlet frame carries front bearing, with hot-air de-icing of fixed inlet vanes. Variable stators downstream pivoted to casing and central bullet. Variable stators ahead of first five stages. Parallel HP section with independently scheduled variable stators ahead of stages 10, 11, 12, 13 and 14. Mass flow 104 kg (229 lb)/s. Pressure ratio 14.75.

COMBUSTION CHAMBER: Can annular type, with 12 flame tubes each with duplex downstream burners.

TURBINE: Three stages with air-cooled first stage blades. Entry temperature 1,112°C. Rotor assembly supported by rear bearing held in eight-strut rear frame and drives via cone coupled to rear of compressor shaft.

Saturn (Lyulka) AL 31F two-shaft augmented bypass turbojet

1996

AFTERBURNER: Rapid combustion downstream of three injector/flameholder rings. Corrugated insulated liner with ceramic coating. Fully variable nozzle with 24 flaps driven by six rams. Full regime control giving smooth light-up and modulated power over whole range from flight idle to maximum afterburner.

DIMENSIONS:

Length	5,160 mm (203 in)
Inlet inner diameter	885 mm (34.8 in)

WEIGHT, DRY: 2,005 kg (4,420 lb)

PERFORMANCE RATINGS (S/L):

Military power	76.5 kN (17,200 lb st) at 8,316 rpm
Max afterburner	110.5 kN (24,800 lb st)

SPECIFIC FUEL CONSUMPTION (S/L):

Military power	21.47 mg/Ns (0.76 lb/h/lb st)
Max afterburner	52.5 mg/Ns (1.86 lb/h/lb st)

VERIFIED

AL-31

This was A. Lyulka's last and greatest engine. With afterburner, as the **AL 31F**, it powers all the initial production versions of the Su-27, for which it entered series production in 1984. Slightly modified engines might power the prototype Sukhoi S-21 SSBJ. Engines designated **R-32** (the Service designation for AL-31 engines) were fitted to the P-42, an Su-27 development aircraft, which set rate of climb records in 1986. A high proportion of the engine is titanium or stainless steel. Production by Salyut MMPO.

AL 31FM. Developed version offering higher thrust and better fuel economy. Powers initial version of Su-35. T-O rating 130.4 kN (29,320 lb st). Data for AL-31F.

TYPE: Two-shaft augmented turbofan.

FAN: Inlet has 23 variable guide vanes. Four fan stages slotted into discs. Bypass ratio 0.6.

COMPRESSOR: Variable inlet guide vanes followed by nine-stage HP spool with first three stators variable. Easy field replacement of damaged blades. Mass flow 110 kg (243 lb)/s. Overall pressure ratio 23.

COMBUSTION CHAMBER: Annular, with 28 downstream burners fed from inner manifold. Auto continuous ignition during missile launch.

TURBINES: Single-stage HP with cooled blades, using air/air heat exchanger in bypass duct. Entry gas temperature up to 1,427°C. Two-stage LP with cooled blades. Both turbines have active tip clearance control.

JETPIPE: Short mixer section to combine core and bypass flows upstream of afterburner.

AFTERBURNER: Two flameholder rings downstream of multiple radial spray bars. Interlinked primary and secondary multiflap nozzles are angled about 5° downwards.

CONTROL SYSTEM: Hydromechanical full regime control giving smooth power from flight idle to maximum afterburner in all manoeuvre conditions. Auto elimination of surge 'at Mach numbers 2 to 2.5 when normal, flat and inverted spins occur'. Linked via software to Su-27 fly-by-wire flight control system. All accessories grouped above engine.

DIMENSIONS:

Length	4,950 mm (195 in)
Diameter	1,220 mm (48.0 in)

WEIGHT, DRY: 1,530 kg (3,373 lb)

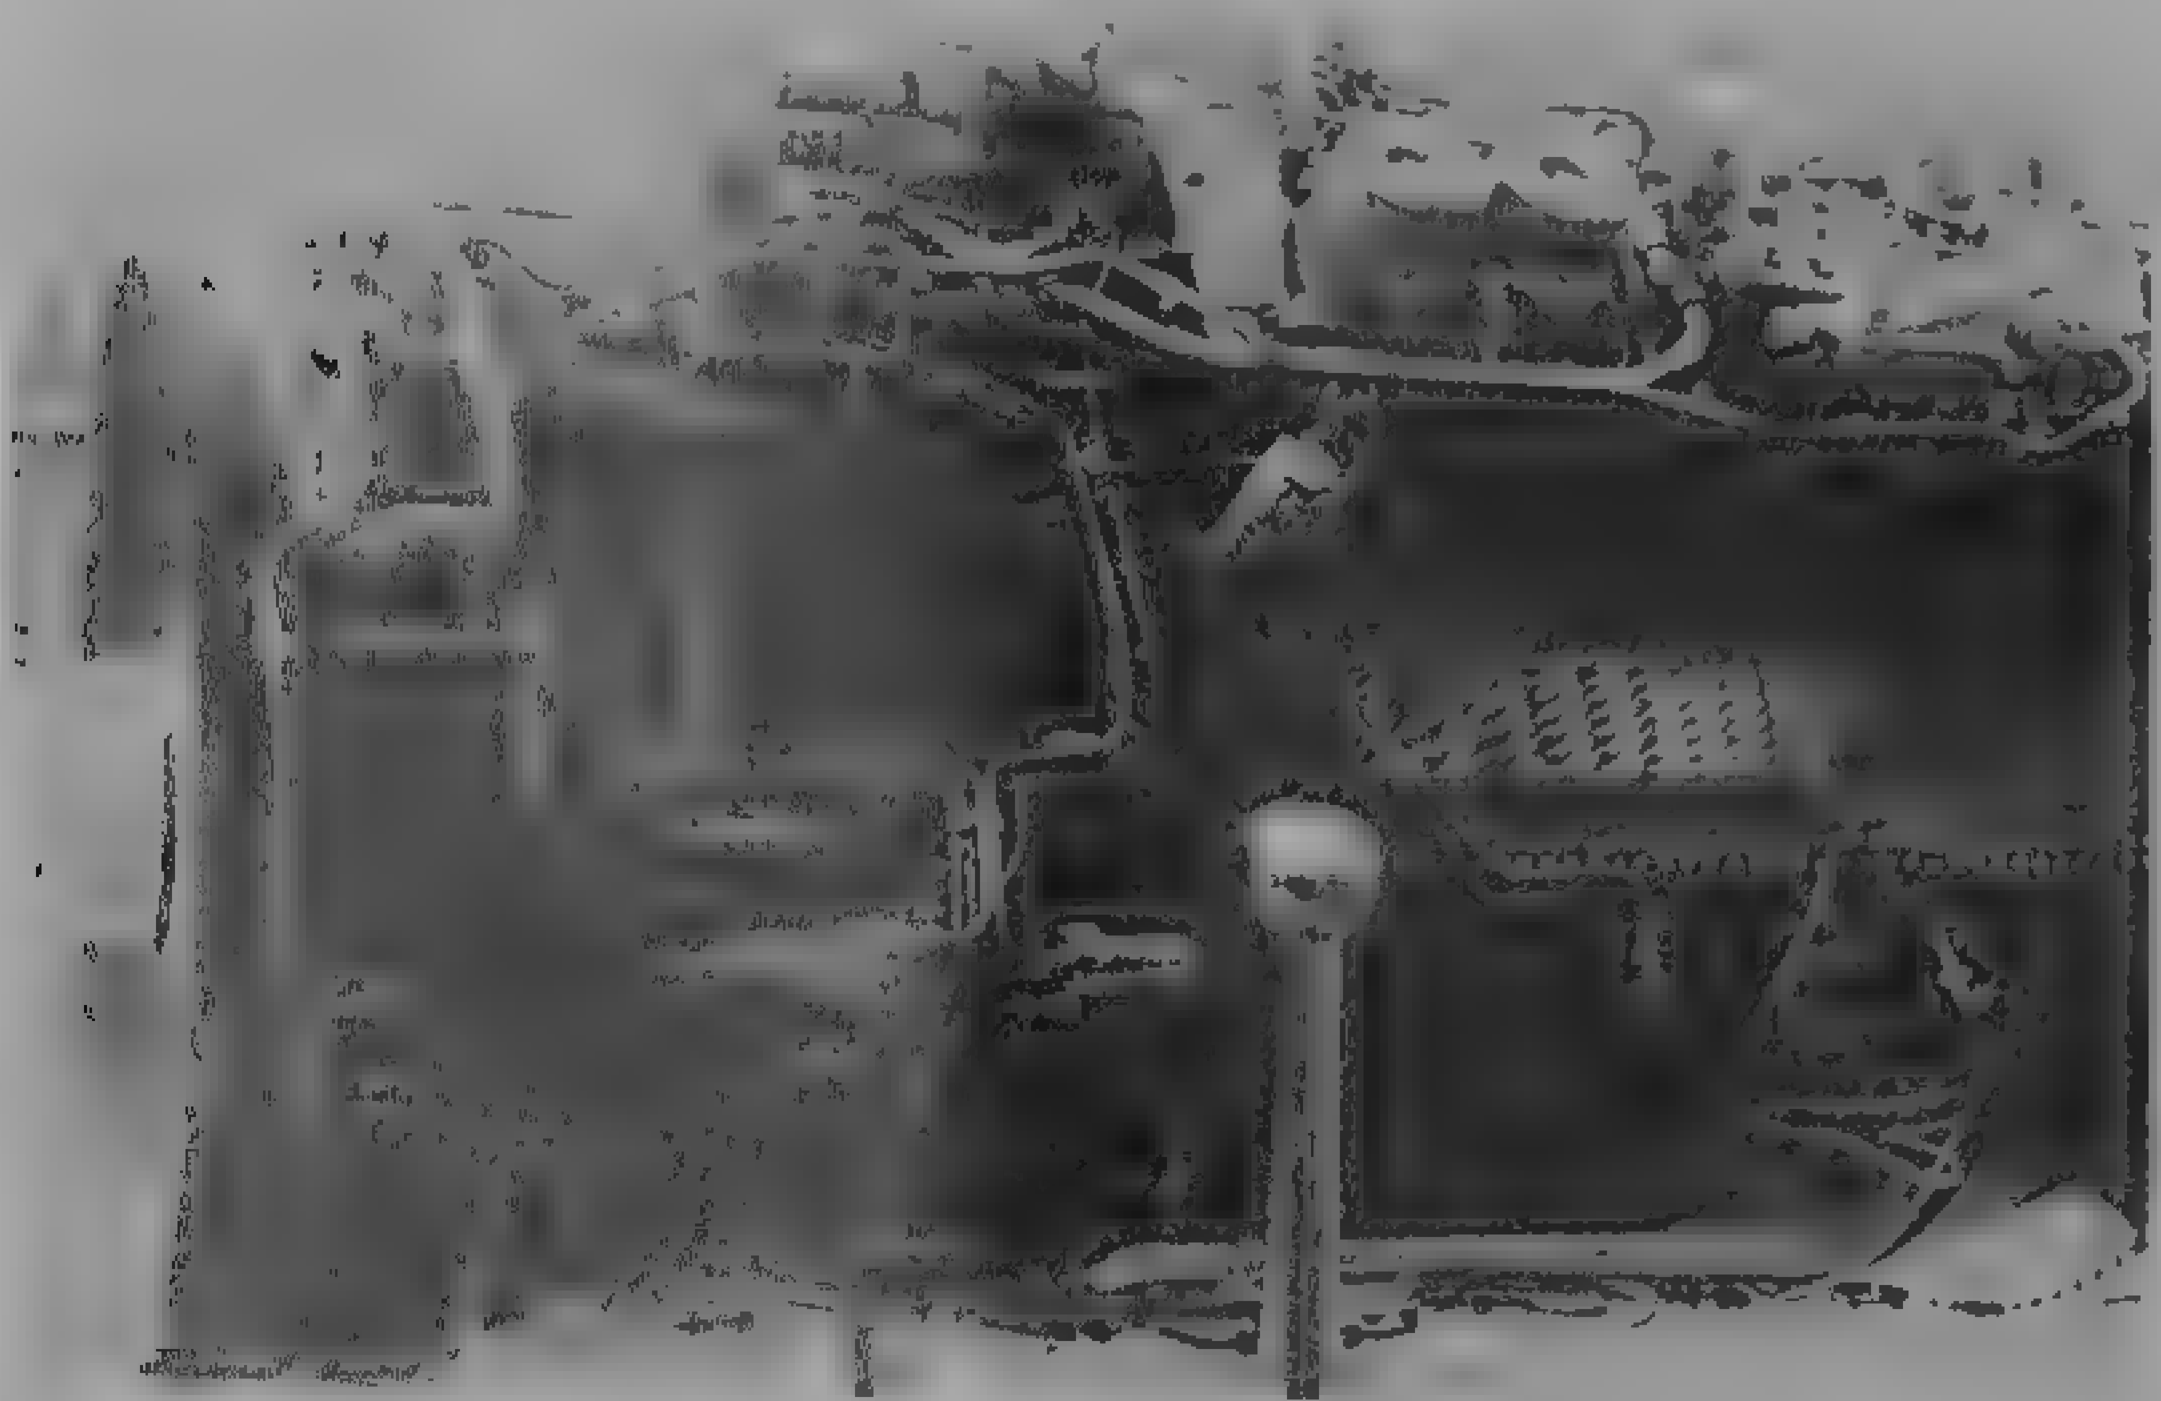
PERFORMANCE RATINGS:

Max augmented	122.6 kN (27,560 lb st)
Max dry	79.43 kN (17,857 lb st)

SPECIFIC FUEL CONSUMPTION:

Max dry	18.98 mg/Ns (0.67 lb/h/lb st)

VERIFIED



Saturn (Lyulka) AL 31F sectioned display engine (*Piotr Butowski*)

1996

1996

AL-34

This turboprop in the 410 kW (550 shp) class was reported in 1990 to have been selected to power the Sukhoi S-86 executive aircraft (rated at 522 kW, 700 shp). In the S-86, the AL-34 would drive a pusher contraprop.

UPDATED

AL-35

Two AL-35F engines, each rated at 133 kN (29,900 lb st), power the Su-32FN and Su-35 (see AL-31FM).

UPDATED

SAT-41

This completely new engine in the 20 tonne class is being developed to power advanced tactical fighters of the late 1990s. It will provide for long term sustained supersonic flight, STOL, enhanced combat manoeuvrability and economical operation with low specific weight. Features include a small parts count (for example by using few stages of compression), an advanced combustion chamber with 'effective mixture formation and cooling', a highly loaded turbine with single-crystal blades incorporating 'a new cooling concept' and a multimode variable nozzle.

VERIFIED

SATURN RTWD-14

The RTWD-14 is the primary source of shaft power on the Buran spacecraft. Three are installed, two active and one on standby. These engines run on hydrazine and are rated at 10 to 150 kW (13.4 to 201 shp).

VERIFIED

SHVETSOV

FOUNDER OF BUREAU: Arkadiya Dmitrievich Shvetsov

A. D. Shvetsov was responsible for the M-11 five-cylinder air-cooled radial engines made in enormous numbers in 1928-59 at powers from 74.6 kW (100 hp) to 149 kW (200 hp). He later developed larger radials, the most important being the ASh-82, which at ratings up to 1,491 kW (2,000 hp) powered Lavochkin fighters, the Tu-2 and Tu-4 bombers, Il-12 and -14 transports and Mi-4 and Yak-24 helicopters. The ASh-62 was made in large numbers at ratings in the 750 kW (1,000 hp) class for the Li-2 and An-2. The ASh-62M agricultural version, developed by Vedeneyev, and all An-2 engines after 1952, were transferred to Poland (see WSK-PZL Kalisz and WSK-PZL Rzeszów).

Another important engine was the 545 kW (730 hp) ASh-21 fitted to the Yak-11. All these have been described in earlier editions. The ASh-62 and ASh-82 have been produced under licence in China, as described in appropriate Chinese entries in this section. Today the bureau is PNPP Perm, which see for later engines.

Fax: 7 (095) 242 5702
Teletype: 207022 Kabina

GENERAL DESIGNER: Vassili K. Kobchyenko

This design bureau is today known as the AMNTK Moscow Scientific Production Corporation 'Soyuz' (Alliance). The longest established engine KB in Russia, it was founded in 1943 by A. A. Mikulin, who was General Constructor until 1955 during the design of the AM-3. He was succeeded, successively, by Tumansky (1955-73), Favorski (1973-87) and now by V. K. Kobchyenko. Their engines, totalling over 26,000, have flown over 28 million hours and set over 100 world records. The names of several Chief Designers appear in the entries listing their engines.

UPDATED

TUMANSKY R-11

Service designation: R-37

This turbojet powered many versions of the MiG-21, Yak-28 and Su-15, some 20,000 were delivered. Details were given in the 1993-94 *Jane's*. The WP7 version is described under LM and LMC of China.

UPDATED

GAVRILOV R-13

This two-spool turbojet powered versions of MiG-21, Su-15 and Su-25. Fuller details will be found in the entry on the Chinese WP13.

GAVRILOV R-195

This simple turbojet was developed from the R-13 to power the Su-25 and Su-28 family of attack and training aircraft from 1979. The entire engine was designed to resist 23 mm gunfire, and to continue to operate after suffering damage in eight places.

TYPE: Two-shaft turbojet.
LP COMPRESSOR: Three stages. No inlet guide vanes or variable stators.
HP COMPRESSOR: Five stages. No variable stators, but auto bleed valves.
COMBUSTION CHAMBER: Can-annular with multiple duplex burners. Cleared for kerosene, diesel oil and MT petrol.
TURBINES: Single-stage HP, single-stage LP.
JETPIPE: No afterburner, simple fixed-area nozzle.
DIMENSIONS:

Length	3,300 mm (130 in)
Diameter	914 mm (36 in)

WEIGHT, DRY: 990 kg (2,183 lb)
PERFORMANCE RATING:

T-O	44.13 kN (9,921 lb st)

1978

Gavrilov R-195 two-shaft turbojet
(Flight International)
1990

TUMANSKY R-15

This single-shaft afterburning turbojet was developed from 1959 for supersonic applications. Details appeared in the 1993-94 *Jane's*.

VERIFIED

TUMANSKY RU-19

Service designation: TRD-29

This single-shaft turbojet has been used to power aircraft and as an APU and emergency booster (in the An-26). Details appeared in the 1993-94 *Jane's*.

VERIFIED

GAVRILOV R-25

This two-spool turbojet was a new design and its compressor of higher (9.55) pressure ratio confers a markedly lower sfc than the R-13. The R-25 has redesigned accessory systems but is installationally interchangeable with the R-13. The first LP compressor stage has 21 titanium blades of large chord. The afterburner has two stages (the R-11 and R-13 having one) and so can be used in combat at high altitudes. The **R-25-300** powers the Su-15bis and MiG-21bis, with ratings of 40.26 kN (9,050 lb st) dry and 69.62 kN (15,650 lb st) with afterburner. No longer made, except under licence by HAL of India for MiG-21bis.

VERIFIED

R-27

This engine was a natural growth development from the R-11, -13, -25 series. It entered production in 1970 to power the initial series versions of the MiG-23.

R-27F2M-300. Engine of MiG-23MF, MS and UB. Developed under Khachaturov. Fitted with afterburner and water injection.

R-27V-300. Afterburner replaced by bifurcated nozzles each rotating through about 100° (cycle time 8 seconds), driven by two hydraulic motors linked by cross-shaft with spring synchronisation. Provides lift/cruise propulsion of Yak-38. Developed under Tumansky.

TYPE: Two-shaft turbojet.

LP COMPRESSOR: Five stages. No inlet guide vanes or variable stators. Circulation bleed over first-stage rotor.

HP COMPRESSOR: Six stages. No variable stators.

COMBUSTION CHAMBER: Annular, burners fed from inner manifold. Water injection with maximum afterburner.

TURBINES: Single-stage HP with air-cooled blades, single-stage LP.

JETPIPE: Afterburner with profiled multiflap primary and secondary nozzles. R-27V, plenum chamber and two vectoring nozzles.

DIMENSIONS:

Length: R-27	4,850 mm (191 in)
R-27V	3,706 mm (145.9 in)
Diameter: R-27	1,060 mm (41.73 in)
R-27V	1,012 mm (39.84 in)

WEIGHT, DRY:

R-27	1,500 kg (3,300 lb)
R-27V	1,350 kg (2,976 lb)

PERFORMANCE RATINGS:

R-27F2M-300 max T-O	98 kN (22,045 lb st)
R-27F2M-300 max dry	63.725 kN (14,320 lb st)
R-27V-300 max T-O	65.70 kN (14,770 lb st)

UPDATED

FAVORSKI R-28

Previously designated R-27VM-300, this is the lift/cruise engine of the Yak-38M; the air flow is increased.

PERFORMANCE RATING:

Max T-O	68.0 kN (15,300 lb st)

UPDATED

KHACHATUROV R-29

This augmented turbojet is simpler than the corresponding American F100, with fewer compressor stages and a lower pressure ratio; but it is more powerful and costs much less. Different subtypes were fitted to former MiG-23 and MiG-27 versions former Warsaw Pact front-line use, and to the Su-22. In all these aircraft water injection is used on take-off, the MiG-23MF water tank having a capacity of 28 litres (7.4 US gallons; 6.2 Imp gallons).

The following versions have been identified:

R-29-300. Original full rated production engine for MiG-23MF and related versions.

R-29PN. This replaced the R-29B as the standard engine of non-export MiG-23 aircraft.

R-29B-300. Simplified engine with small afterburner and short two-position nozzle for subsonic low-level operation. Fitted to all MiG-27 versions, with fixed or variable inlet ducts.

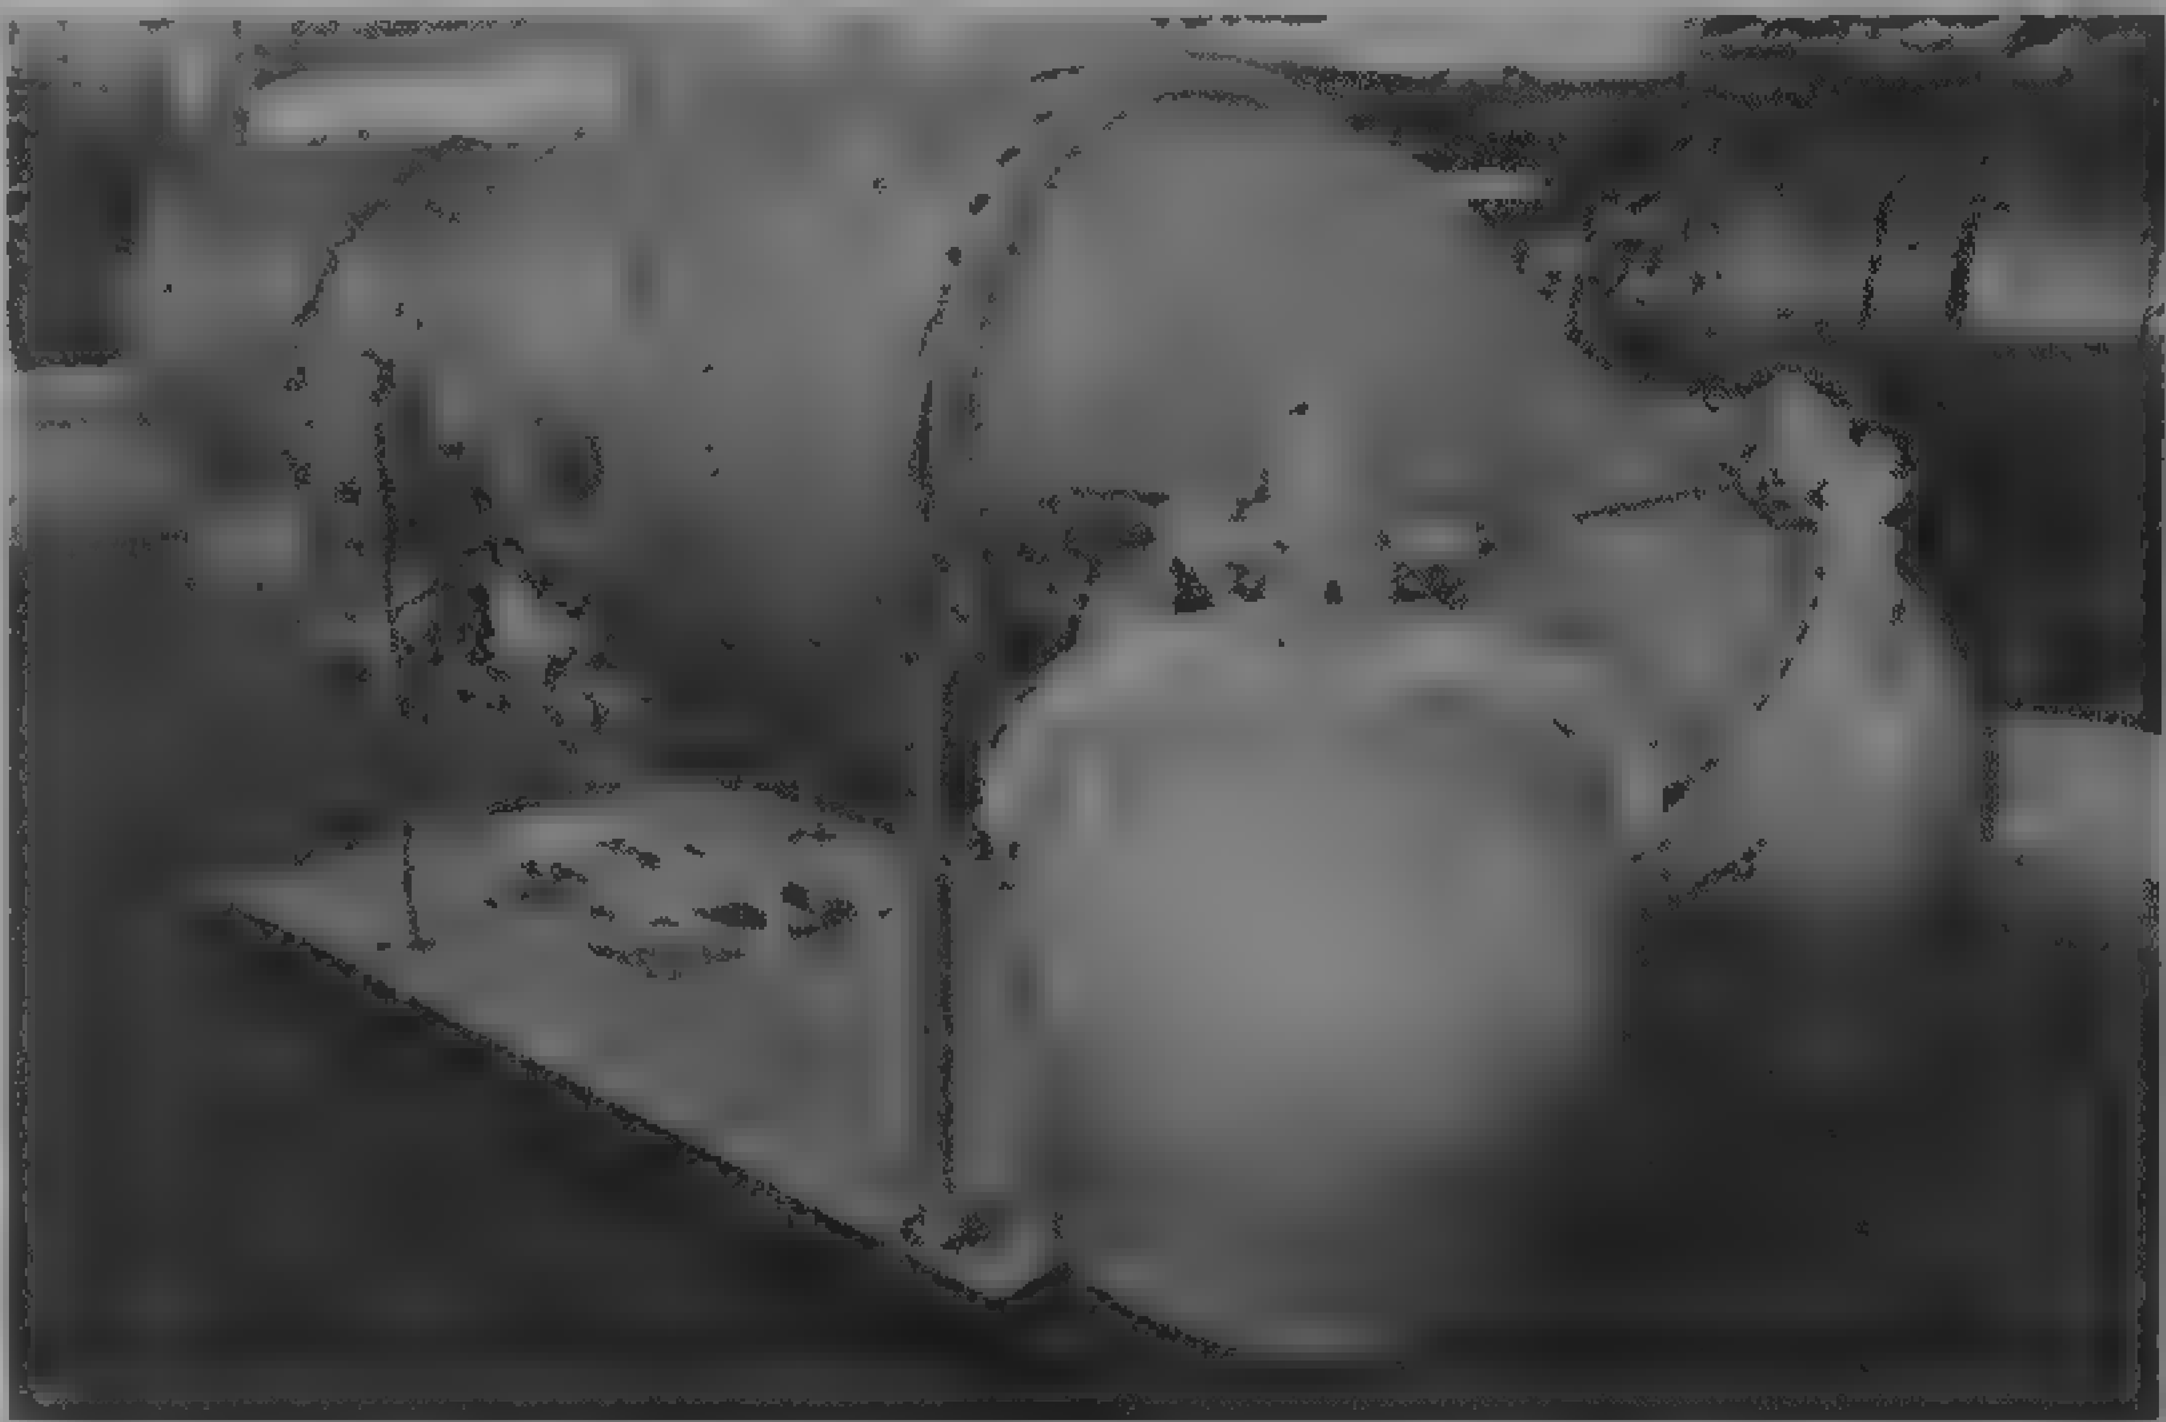
R-29BS-300. This is the engine of the Su-22 (export Su-17 versions).

COMPRESSOR: Five-stage LP, six-stage HP. Overall pressure ratio (29B) 12.4, (29-300) 13.1. Mass flow (29B) 105 kg (235 lb)/s, (R-29-300) 110 kg (242.5 lb)/s.

COMBUSTION CHAMBER: Annular, vaporising burners.

Gavrilov R-25-300 afterburning turbojet (*Flight International*)

1992



Khachaturov R-27V-300 vectored-thrust turbojet (box above left nozzle is added for demonstration purposes) (*Flight International*)

1994

TURBINES: HP has single-stage with air-cooled blades, maximum 8,800 rpm. Single-stage LP, maximum 8,500 rpm.

AFTERBURNER: Fuel rings with separate light-up give modulated fully variable augmentation. Fully variable nozzles differ in different installations (see variants).

DIMENSIONS (R-29-300):

Length	4,960 mm (195 in)
Max diameter	912 mm (35.9 in)

WEIGHT, DRY:

R-29B	1,760 kg (3,880 lb)
R-29-300	1,880 kg (4,145 lb)

PERFORMANCE RATINGS:

Max S/L unaugmented	78.45 kN (17,635 lb st)
Min with afterburner	97.1 kN (21,825 lb st)
Max T-O, wet (R-29B-300)	112.8 kN (25,350 lb st)
Max T-O, wet (R-29-300)	122.3 kN (27,500 lb st)

UPDATED

KHACHATUROV R-35

KOBCHYENKO R-79

This engine was built to a new design as the lift/cruise power plant of the Yak 141. Though development of this supersonic carrier-based VTOL aircraft was suspended in 1991, development of the R-79 is continuing – according to Mr Kobchyenko, "with funds from sources outside the Russian government"

By 1993 the 12 engines had run about 3,500 hours, including over 500 hours in flight Engine fitted to the Yak-141 is designated **R-79V-300** Work is also proceeding on the upgraded **R-79M**, rated at about 176 2 kN (39,600 lb st), with FADEC control new combustion chamber, and (for STOL applications) a fixed axi-symmetric nozzle limited to vector angles of 20° up and 20° down for flight-control augmentation

TYPE. Two-shaft augmented turbofan with vectoring nozzle

COMPRESSOR. Five-stage LP (fan). Mass flow 120 kg (265 lb)/s. Six-stage HP Bypass ratio 1 0. HP bleed from two stages to provide aircraft hover control power

COMBUSTION CHAMBER Annular with vaporising burners fed from an inner manifold, giving very low emissions. Non-traditional double-zone design

TURBINES Single-seat HP with air-cooled single-crystal blades. Maximum entry gas temperature exceeds 1,600°C HP/LP turbines rotate in different directions

AFTERBURNER. Fuel burner rings just behind LP turbine light up in sequence to give fully modulated variable augmentation Can be used with the nozzle in the 95° position for hovering flight

NOZZLE Convergent/divergent type with variable primary and secondary profile and area. Connected to bypass duct periphery by two tapering-wedge pipe sections which rotate in opposite directions to vector nozzle from 0° (forward flight) to 63° (STO) and 95° (VL and hovering)

Kostogriz TV-O-100 turboshaft *(Piotr Butowski)*

1994

CONTROL SYSTEM. Three-channel electronic, with duplicated hydromechanical units. Automatically varies engine thrust to trim aircraft in pitch, supplies modulated air to roll and yaw control jets, supplies bleed air to start lift engines, and controls main engine fuel flow and drives to main hydraulic and electric power

DIMENSIONS

Inlet (fan) diameter	1,100 mm (43 31 in)
Max diameter (external)	1,716 mm (67 56 in)
Length	5,229 mm (205 87 in)

WEIGHT DRY about 2,750 kg (6 063 lb)

PERFORMANCE RATINGS (ISA, S/L)

Max dry	107 63 kN (24,200 lb st)
Max afterburner	152 0 kN (34 170 lb st)
Max (full aircraft control bleed)	137 3 kN (30,864 lb st)

SPECIFIC FUEL CONSUMPTION

Max dry, as above	8 70 mg/Ns (0 66 lb/h/lb st)

UPDATED

KOSTOGRIZ TV-O-100

This engine, was developed to provide a modern core in the 537 kW (720 shp) class Its initial application is in the single turbine Ka-126 helicopter Series production is by Mars at Omsk Future development of the engine to 619 kW (830 shp), with pressure ratio about 10 2 and turbine entry temperature of 1 077°C, may be carried out in collaboration with that country A derated version (530 kW, 710 shp) is a candidate engine for the Ka-118 The **TVD 100** turboprop version could be a candidate for the twin-engined Sukhoi S-86 and Aeroprogress/Roks-Aero T 610 It could drive tractor or pusher propellers. CIAM, the national aero-engine research organisation, is testing a heat exchanger with which specific fuel consumption may be reduced by 15 to 20 per cent

TYPE Free turbine turboshaft Modular construction

COMPRESSOR Inlet above engine leads via large dust/sand extractor to two-stage axial compressor, with inlet and intermediate stator stages variable, and single centrifugal stage. Pressure ratio 9 2

COMBUSTION CHAMBER Annular folded reverse flow

TURBINES Single-stage gas generator turbine with uncooled blades Turbine entry temperature 1,027°C Single-stage power turbine

CONTROL SYSTEM Dual-channel electronic

OUTPUT SHAFT Central quill shaft drives gear train at front with triple spur gears to 6,000 rpm output shaft at top

DIMENSIONS

Length	1,275 mm (50 2 in)
Width	780 mm (30 7 in)
Height	735 mm (28 9 in)

WEIGHT DRY (equipped): 160 kg (353 lb)

1992

PERFORMANCE RATINGS (S/L):
Max 537 kW (720 shp)
Cruise 343 kW (460 shp)
SPECIFIC FUEL CONSUMPTION:
Cruise 109.2 µg/J (0.646 lb/h/shp)

UPDATED

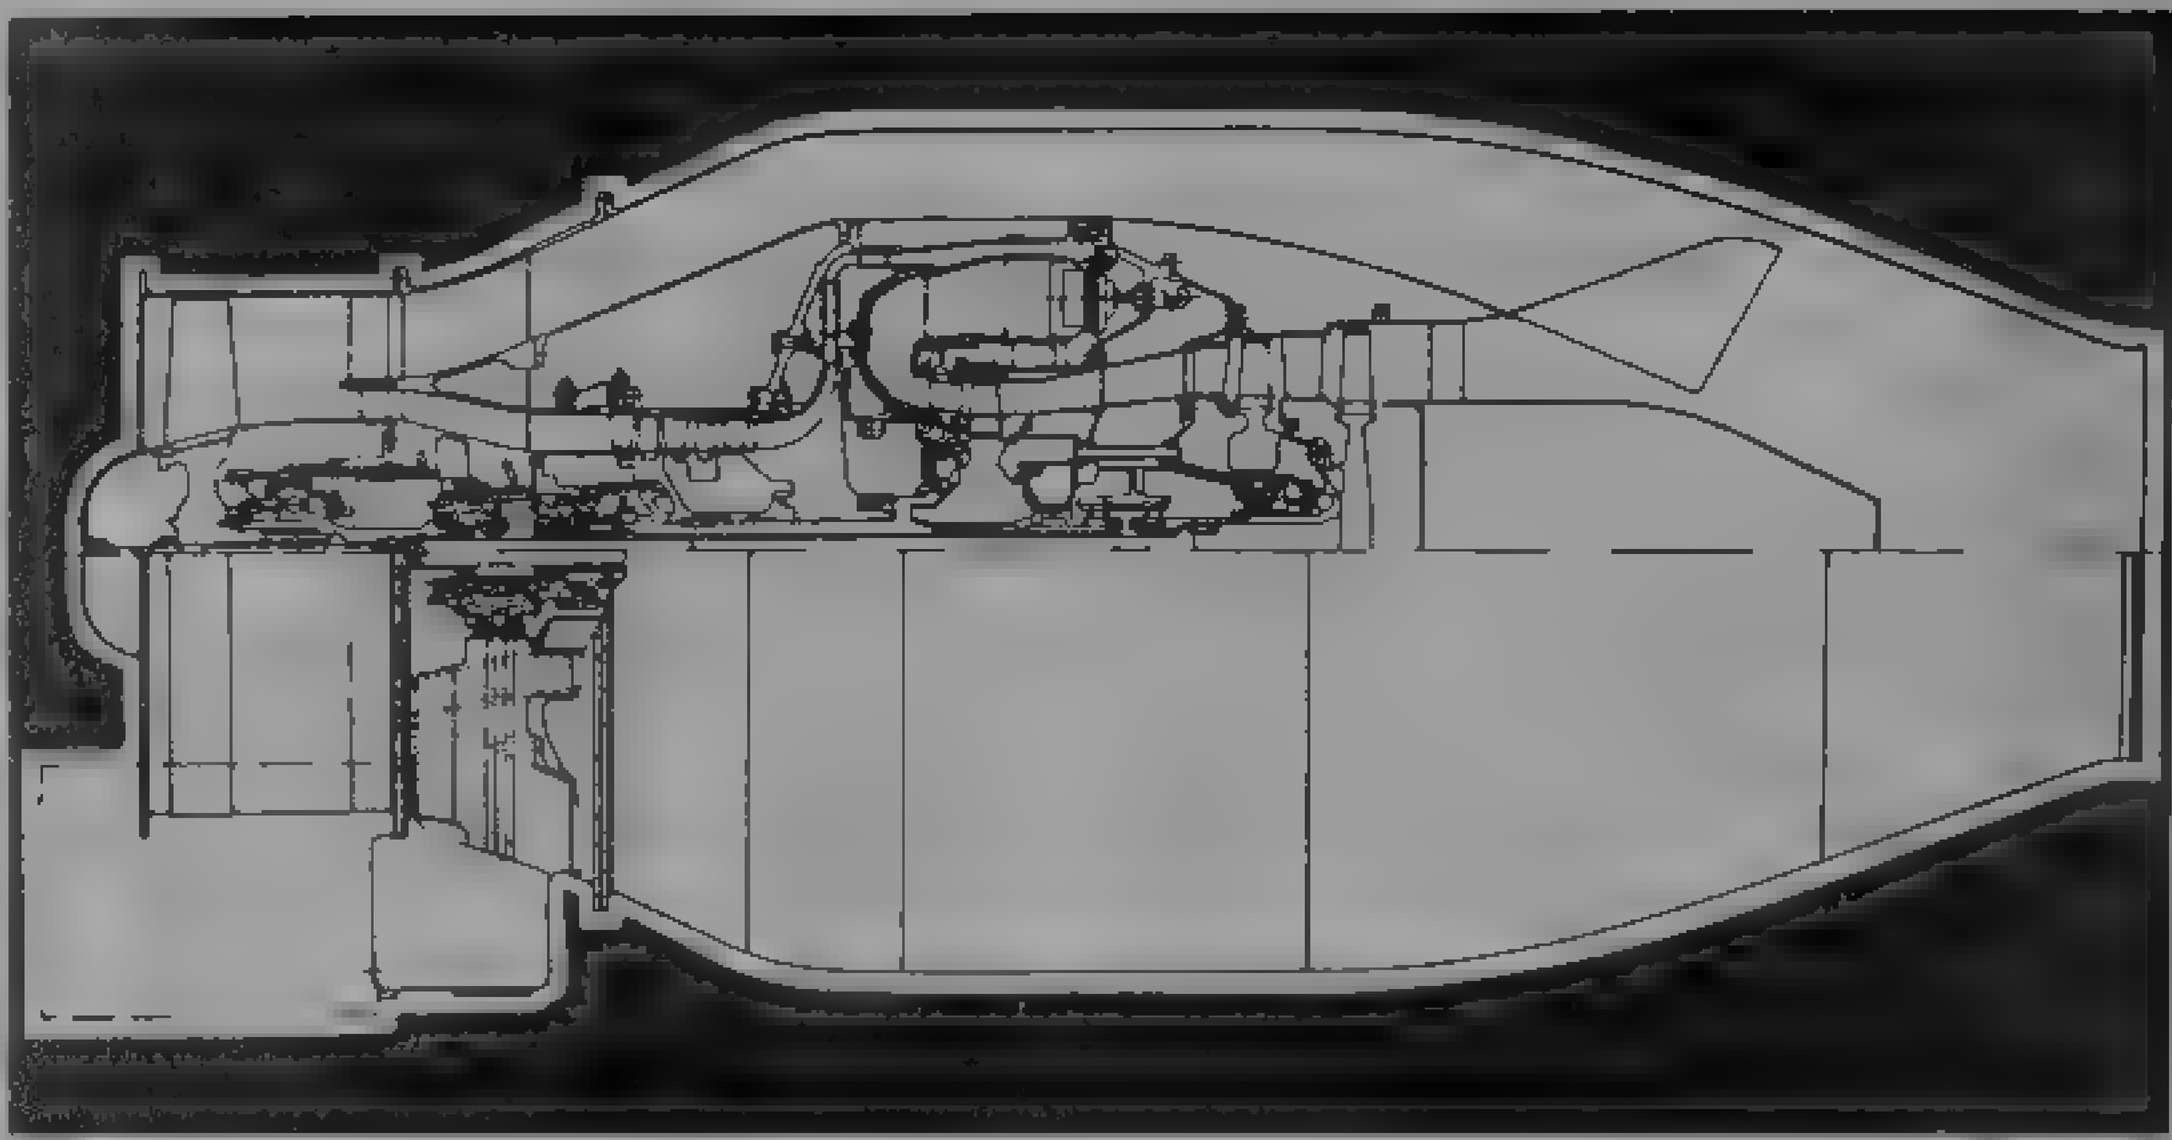
SOYUZ GTE-400

This new turboshaft, rated at 298 kW (400 shp), has been selected for the twin-engined version of the Ka-118.

SOYUZ TVD-450

This turboprop may use the same core as the GTE-400. A twinned version, driving through a coupling gearbox to a single propeller, powers the Sukhoi S-86, as an alternative to the Saturn AL-34. Each power section is rated at 336 kW (450 shp).

VERIFIED



Longitudinal section of Soyuz R123-300 (provisional)

1992

SOYUZ R123-300

Projected engine for low-cost propulsion of light high subsonic aircraft.
TYPE: Two-shaft turbofan.
FAN: Single-stage. Bypass ratio about 6.
COMPRESSOR: Two axial stages, with variable inlet vanes, and single centrifugal.
COMBUSTION CHAMBER: Annular folded reverse flow.
TURBINES: Single-stage HP, single-stage LP.
JETPIPE: Mixer leads to combined nozzle.
PERFORMANCE RATING: To be agreed, probably in 13.4 to 14 kN (3,000 to 3,150 lb st) class.

SOYUZ R126-300

This engine is intended for large business jets and regional transports. Tupolev has selected it for the projected Tu-324.
TYPE: Two-shaft turbofan.
FAN: Single stage.
COMPRESSOR: Five axial stages with variable stators, one centrifugal.
COMBUSTION CHAMBER: Annular folded reverse flow.
TURBINES: Two-stage HP, three-stage LP.
JETPIPE: Mixer leading to combined nozzle. Provision for reverser.
PERFORMANCE RATING (ISA, S/L):
T-O 39.2 kN (8,818 lb st)

NEW ENTRY

SOYUZ R127-300

This engine is intended for smaller business jets.
TYPE: Two-shaft turbofan.
FAN: Single stage. Mass flow 31 kg (68.3 lb)/s. Bypass ratio 4.8.
COMPRESSOR: Two centrifugal stages.
COMBUSTION CHAMBER: Annular folded reverse-flow.
TURBINES: Two-stage HP, two-stage LP.
JETPIPE: Mixer leading to combined nozzle. Provision for reverser.
PERFORMANCE RATING (ISA, S/L):
T-O 8.83 kN (1,985 lb st)

NEW ENTRY

Meaning labour or toil, this is the name of the production factory on the Samara river at Kuibyshev for Kuznetsov engines. See Samara and KKBM.

TUMANSKY

Academician Sergei Konstantinovich Tumansky, who died in 1973, was a noted designer of piston engines. His RD-9 axial turbojet went into production in 1953. On Mikulin's disgrace in 1956, Tumansky was appointed head of the bureau. Production of his subsequent engines exceeded 40,000. His engines are produced by Soyuz and UMKPA (which see).

UPDATED

UMKPA

CHIEF DESIGNER: Alexei Ryzhov

The Ufa Engine-Manufacturing Production Association is a principal source of engines designed by the Tumansky (Soyuz) KB. Their catalogue and exhibit material lists engines as 'products'. **Product 25-11** (69.2 kN, 15,555 lb st combat rating) is the R-25-300; **Product 55B** (117 kN, 26,300 lb st combat rating) is the R-35F-300, **Product 95-I** (64.5 kN, 14,500 lb st 'first reheat rating') is the R-13-300; and **Product 95-III** (T-O 40.2 kN, 9,037 lb st) is the R-195.

VERIFIED

VAZ

The Togliatti (Fiat) car plant has designed two RC (rotary combustion) Wankel type engines for surface applications, and has now produced a fresh design for aircraft.

VERIFIED

VAZ-413

This twin-rotor engine is rated at 103 kW (138 hp). Two power the Volga-2 Ekranoplan.

VERIFIED

D-200/VAZ-430

This liquid-cooled twin-rotor aircraft engine has been developed from the VAZ-4304 automotive engine designed by the RPD NTS VAZ bureau. Its first application is the Mi-34V helicopter, in which the Vedeneyev M-14V radial is replaced by two rotary engines. Mil general designer Marat Tishchenko said "We could not find a gas turbine small enough". As the D-200 this engine is being produced by JSC 'Aviadvigatel', which see.

ITP was formed in 1989 as Spain's aero-engine company to participate in the design, development, manufacture, sale and support of gas-turbine engines. Shareholders are IBV Corporation (4 per cent), Rolls-Royce plc (45 per cent) and Turbo 2000 SA (51 per cent), the latter being in turn owned by Bazan (Spanish government) and Sener (private sector). The Ajalvir plant near Madrid, acquired from CASA, overhauls engines and accessories (GE, PWC, AlliedSignal, Turbomeca, SNECMA and Allison). The newly constructed Zamudio plant near Bilbao manufactures components for civil and military engines. Deliveries began December 1991. ITP is the Spanish participant (13 per cent) in the EJ200 engine programme to power the Eurofighter 2000. It also participates in the Trent, BR710 and 715, and produces components for the RB211-524, RR535 and V2500.

Volvo Aero produces aircraft engines and space propulsion components. Since 1980 it has been a risk- and revenue-sharing partner with General Electric on the CF6-80A and 80C for wide-body transports. Volvo also participates in development and production of the Garrett TFE731-5 turbofan and TPE331-14/15 turboprop. The company also has agreements with Pratt & Whitney on the JT8D-200, PW2000 and V2500, and with Rolls-Royce on the Tay, making combustors for the Tay 650-650 and compressor intermediate casings for the Mk 670. In Malmö Volvo Aero Turbines develops and markets small gas turbines. Volvo Aero Engine Services is a commercial maintenance company, and in Arboga Volvo Aero Support maintains military engines, such as the RM8 (1992-93 *Jane's*).

UPDATED

Volvo RM12 two-shaft augmented turbofan
1994

VOLVO RM12

The RM12 is a version of the F404 developed jointly by General Electric and Volvo to power the JAS 39 Gripen. General Electric retains rights to the design, and supplies approximately 60 per cent by value of parts.

Volvo Aero is a partner in all F404 applications. It supplies parts to General Electric similar to those parts that it manufactures for the RM12.

The RM12 thrust improvement has been achieved by increasing the turbine inlet temperature by up to 105°C and by increasing fan air flow. The fan meets more stringent bird strike requirements, and this has required changes to the control system, with built in redundancy to ensure get-home power. Increased temperature and pressure have required changes to hot section materials. RM12 testing started at GE in June 1984, and the Gripen first flew on 9 December 1988. Eight flight-rated prototypes and seven production engines had been delivered by September 1994 from over 150 then on order.

Studies were under way in 1994 into a possible 'RM12+' with turbine and afterburner improvements for the third production batch of Gripens.

Sectioned drawing of Volvo RM 12

1995

The following are features of the RM12:

FAN: Variable first-stage stator. Air flow 68 kg (150 lb)/s. Bypass ratio 0.28

WEIGHT, DRY: 1,050 kg (2,315 lb)

PERFORMANCE RATINGS:

Max T-O dry	54 kN (12,140 lb st)
augmented	80.5 kN (18,100 lb st)

Telephone: 7 (612) 656105

Zaporozhye Machine-Building Design Bureau was founded by Ivchenko in May 1945. From 1968 it was headed by Lotarev, and since 1988 by Muravchenko.

Until 1991 Progress was a member of the group of enterprises of the USSR Aviation Industry Ministry. Now it is a state enterprise of Ukraine.

Progress carries out the complete cycle of creation of gas-turbine engines, the cycle comprising the design, development, manufacture of the development batch and certification, as well as supervision of series production and operation. Series production of engines designed and developed by ZMKB Progress is carried out by the Motor Sich enterprise (formerly, Zaporozhye Industrial Association Motorostroitel).

Not including Ivchenko's AI-14 and AI-26 piston engines (see PZL Kalisz and Rzeszów in Polish section), over 20 types of Progress engines are in service on 42 types of aircraft. These engines are in service in 60 countries. The total of more than 30,000 Progress aircraft gas-turbine engines has accumulated over 300 million hours in service.

UPDATED

PROGRESS AI-20

This turboprop was the first gas-turbine engine designed by Zaporozhye collective, headed by Ivchenko. AI-20 was developed in 1955-57 as a competitor of the NK-4 by Kuznetsov design bureau for the Il-18 aircraft, using the experience of Mikulin design bureau in developing the AM-3M engine, and the expertise of CIAM. Mass production of AI-20 began in 1958 for Il-18 and An-10A. Several modifications were developed.

AI-20K. For Il-18V, An-10A and An-12. Rated at 2,983 ekW (4,000 ehp) at S/L, ISA. Produced at SMPMC in China as WJ6.

AI-20M. Known as AI-20 Series 6. Initial T-O rating 3,126 ekW (4,192 ehp), later increased to 3,169 ekW (4,250 ehp). Fitted to An-12 and Il-18/20/22/38. Differs from AI-20 by shrouded turbine blades.

AI-20DK. Known as AI-20D Series 3. Rated at 3,124 ekW (4,190 ehp), navalised for An-8 and Beriev Be-12.

AI-20DM. Known as AI-20D Series 4. Rated at 3,863 ekW (5,180 ehp). Fitted to An-8 and Be-12.

AI-20D Series 5. Developed for An-32 with 3,863 ekW (5,180 ehp), to operate from −60 to +55°C with automatic variation of propeller pitch.

Service life and TBO of different modifications depend on service conditions and are: service life from 6,000 hours (AI-20DM) to 20,000 hours (AI-20M); TBO 7,000 hours (AI-20M).

The following description refers to the AI-20M:

TYPE: Single-shaft turboprop.

COMPRESSOR: Axial, 10 stages, with four bypass valves, which are used at starting and transient ratings. Pressure ratio from 7.6 at T-O (ground) to 9.2 (cruise). Mass flow 20.7 kg (45.6 lb)/s. Stator casing of sheet stainless steel.

COMBUSTION CHAMBER: Annular with 10 burner cones and two pilot burners and igniter plugs. The casing is one of the load-carrying elements of the engine.

TURBINE: Axial, three stages. Rotor blades shrouded at inner and outer ends and installed in pairs in slots of air-cooled discs. First guide vanes and discs are cooled by secondary air from combustion chamber. Maximum entry temperature is 900°C at S/L (937°C for AI-20DM). Rotor speed 12,300 rpm, except 10,400 at ground idle.

REDUCTION GEAR: Planetary type, two-stage, incorporating a six-cylinder torquemeter and negative-thrust transmitter (IKM type). Reduction ratio 0.08732.

LUBRICATION: Pressure-feed type with full recirculation.

OIL GRADE: 75 per cent MK-8 or MK-8P to GOST-6457-66 (DERD 2490 or MIL-O-6081B) and 25 per cent MS-20 or MK-22 to GOST 21743-76 (DERD 2472 or MIL-O-6082B).

STARTING: Two electric starter/generators, Type STG-12 TMO-1000, supplied from ground or TG-16 or AI-8 APU.

FUEL GRADE: T-1, TS-1, T-2, RT, to GOST-10227-86 (DERD 2494, JP-1 to MIL-F-5616).

DIMENSIONS:

Length	3,096 mm (121.89 in)
Width	842 mm (33.15 in)
Height	1,180 mm (46.46 in)

WEIGHT, DRY: 1,040 kg (2,293 lb)

PERFORMANCE RATINGS:

T-O (S/L, static)	3,169 ekW (4,250 ehp)
Max cruise (340 kts, 630 km/h, 391 mph at 8,000 m 26,250 ft)	1,938 ekW (2,600 ehp)

SPECIFIC FUEL CONSUMPTION:

T-O	89.42 μg/J (0.529 lb/h/ehp)
Cruise, as above	73.3 μg/J (0.434 lb/h/ehp)

UPDATED

Progress (Ivchenko) AI-20M single-shaft turboprop

1972

PROGRESS AI-24

This turboprop was designed in 1960 to power the An-24 and its derivatives. There are four main versions:

AI-24 (Series 2). Installed on An-24A, An-24B, An-24V, An-24T and An-24PV. Rotor 15,100 rpm except 13,900 at ground idle. Production began in 1964. The description relates to this version.

AI-24P. Multifuel version for Ekranoplan cruise propulsion. Rated at 1,840 kW (2,467 shp). One powers the SM-6 series and two power Meteor 2.

AI-24T. Powers the An-24A, -24B and -24T with water injection. T-O rating 2,103 ekW (2,820 ehp). Rotor 15,800 rpm except 14,050 at ground idle. Production from 1966.

AI-24VT. Powers the An-26 and An-30. Production began in 1970.

TYPE: Single-shaft turboprop.

COMPRESSOR: Ten-stage axial. Pressure ratio, 7.55 (AI-24T) 7.85. Mass flow 13.1 kg (28.9 lb)/s (AI-24T, 14.4 kg, 31.7 lb/s).

COMBUSTION CHAMBER: Annular, with eight simplex burners and two starting units, each comprising a body, pilot burner and igniter plug.

FUEL GRADE: T-1, TS-1 to GOST 10227-86 (DERD 2494 or MIL-F-5616).

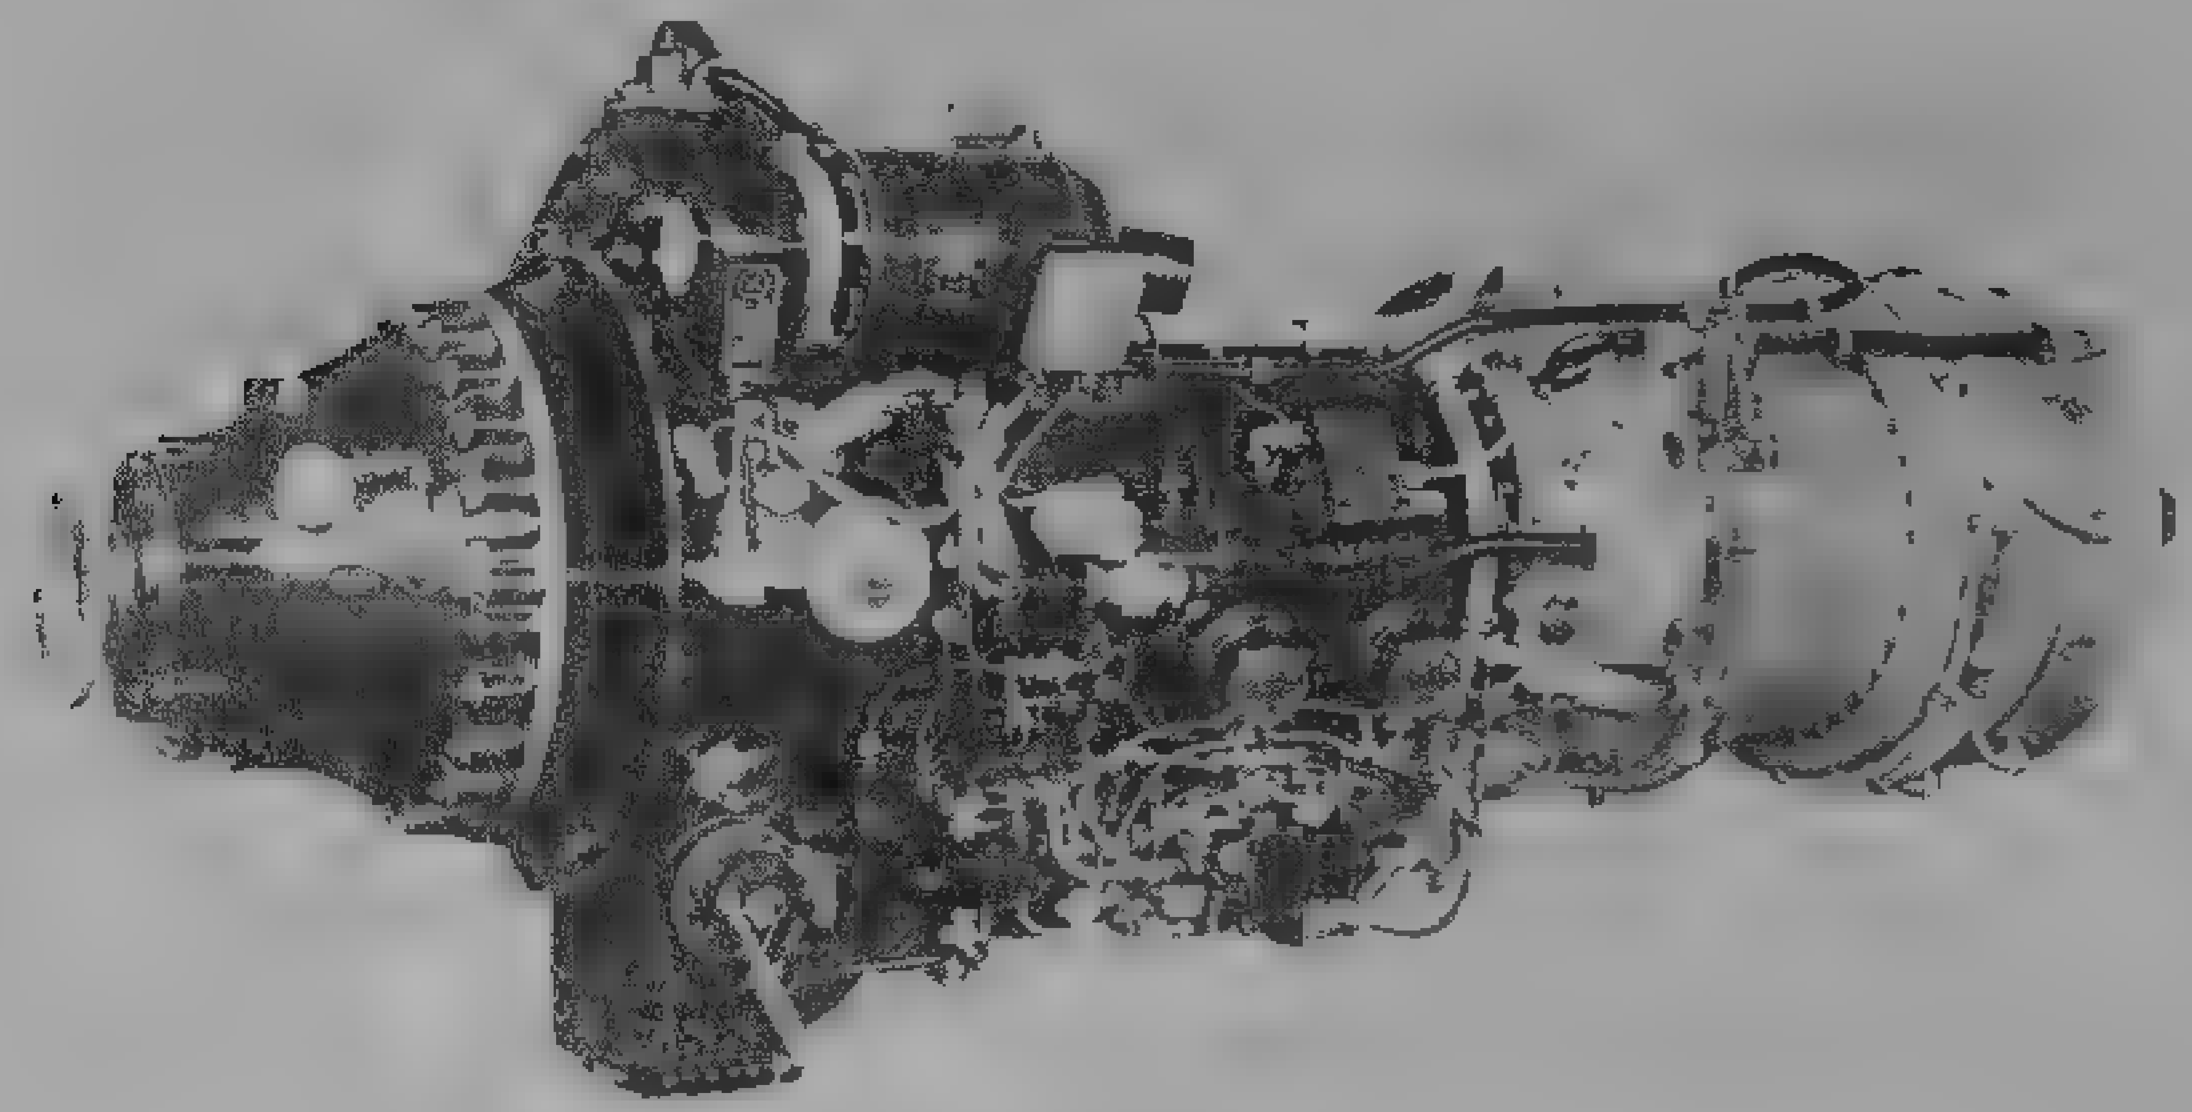
TURBINE: Three-stage axial with solid blades. Rotor/stator sealing effected by soft inserts mounted in grooves in nozzle assemblies. Entry temperature 877°C.

REDUCTION GEAR: Planetary type, incorporating hydraulic torquemeter and electromagnetic negative thrust transmitter for propeller autofeathering. Type AV-72 propeller (AI-24T, AV-72T). Ratio 0.08255.

LUBRICATION: Pressure circulation system.

OIL GRADE: 75 per cent GOST 6457-66 or MK-8 (DERD 2490 or MIL-O-6081B) and 25 per cent MS-20 or MS-22 (DERD 2472 or MIL-O-6082B).

ACCESSORIES: Mounted on front casing are starter/generator, alternator, aerodynamic probe, ice detector, negative thrust



Progress (Ivchenko) AI-24 single-shaft turboprop

1972

feathering valve, torque transmitter, oil filter, propeller speed governor and centrifugal breather Below casing are oil tank, air separator, LP and HP fuel pumps and drives to hydraulic pump and tachometer generators

STARTING. Electric STG-18TMO starter/generator supplied from ground power or from TG-16 APU

DIMENSIONS

Length overall	2,346 mm (92.36 in)
Width	677 mm (26.65 in)
Height	1 075 mm (42.32 in)

OIL CONSUMPTION	0 85 kg (1 87 lb)/h

UPDATED

PROGRESS AI-25

This bypass engine powers the Yak-40 Series production began in 1967

TYPE Two-shaft bypass engine Bypass ratio 2 1

FAN Three-stage axial subsonic; drum-and-disc with pin jointed blades. Pressure ratio 1 7 at 10,560 rpm

COMPRESSOR Eight-stage, drum-and-disc rotor Pressure ratio 4 7 at 16,640 rpm Total pressure ratio at T-O rating (S/L) 8

COMBUSTION CHAMBER. Annular, with 12 centrifugal fuel nozzles

HP TURBINE Single-stage, shrouded, with cooled nozzle guide vanes. Maximum rotor inlet temperature 933°C

LP TURBINE Two-stage, shrouded, cooled discs

CONTROL SYSTEMS: Automatic hydromechanical, main and emergency

STARTING: SV-25 air starter

OIL SYSTEMS Autonomous, recirculation type

DIMENSIONS

Length	1,993 mm (78.46 in)
Width	820 mm (32.28 in)
Height	896 mm (35 28 in)
WEIGHT, DRY:	320 kg (705 lb)
PERFORMANCE RATINGS	
T-O (S/L)	14 71 kN (3,307 lb st)
Long-range cruise (296 kts, 550 km/h, 342 mph at 6,000 m, 20,000 ft)	4 34 kN (976 lb)
SPECIFIC FUEL CONSUMPTION	
T-O	16.14 mg/Ns (0.57 lb/h/lb st)
Cruise as above	22.51 mg/Ns (0.795 lb/h/lb)

PROGRESS AI-25TL

This modified engine powers the L-39 trainer Series production began in 1973 Bypass ratio 2 Differs from the AI 25 by

COMPRESSOR. Nine-stage. Total pressure ratio at maximum continuous rating (S/L, ISA) 9 5

HP TURBINE: Single-stage, cooled, maximum rotor inlet temperature 1,037°C.

EXHAUST UNIT Extension pipe, common nozzle.

CONTROL SYSTEM. Hydromechanical Duplicated by a standby and an autonomous emergency system

WEIGHT DRY:	350 kg (772 lb)
PERFORMANCE RATING	
T-O (S/L, ISA)	16.87 kN (3,792 lb st)
SPECIFIC FUEL CONSUMPTION	
T-O	17 00 mg/Ns (0 60 lb/h/lb st)

UPDATED

PROGRESS DV 2

This small turbofan was designed by Progress and developed jointly with ZVL (now PS, which see under Slovakia) to replace the AI 25TL as the engine of the Aero L-59 (previously L-39 MS) trainer The engine was designed to fit the existing engine bay, so that L-39s can be re-engined.

The same core is to be used in several engines.

DV 2 Basic turbofan The description below applies to this engine Powers L-59 and selected to power Yak-130, Il 108 business jet and Chinese NAMC K 8 single-engined trainer/attack aircraft

DV-2B Larger fan, with bypass ratio 2. T-O rating 24 03 kN (5,401 lb st) to +30°C, sfc 15.17 mg/Ns (0 536 lb/h/lb st); dry weight about 500 kg (1,102 lb)

DV-2F Afterburning engine for supersonic applications. Bypass ratio 1.46, maximum thrust 36 09 kN (8,113 lb st); sfc 64.5 mg/Ns (2 28 lb/h/lb st); dry weight about 630 kg (1,389 lb)

DV-12. Turboshaft for helicopters and tilt-rotor aircraft. Large curved jetpipe to side, free turbine driving rear gearbox and output shaft. Maximum contingency power 5,595 kW (7,500 shp), sfc 70 8 µg/J (0.419 lb/h/shp); dry weight 675 kg (1,488 lb)

DV-22. Turbofan for transport aircraft. Mass flow 140 kg (309 lb)/s; bypass ratio 5, T-O thrust 37 95 kN (8 532 lb st) to 30°C; sfc 10 5 mg/Ns (0 37 lb/h/lb st); dry weight 700 kg (1,543 lb). Also called **AI-22**

TYPE: Two-shaft turbofan

FAN: Single stage, overhung, supersonic, made as blisk of aluminium alloy with blades of large chord, without snubbers, hub/tip ratio 0.37, bypass ratio 1 46. Diameter 645 mm (25 4 in). Mass flow 49 5 kg (109 lb)/s. Pressure ratio 2 3

LP COMPRESSOR Two stages, rotating with fan

HP COMPRESSOR. Seven stages. Two-position IGVs, stators cantilevered stages 3 to 6. Three bypass valves. Overall pressure ratio 13 5

COMBUSTION CHAMBER. Annular, 16 fuel nozzles, giving low emissions

HP TURBINE: Single stage, convective cooling, maximum gas temperature 1,147°C

LP TURBINE: Two-stage, first nozzle vanes cooled

STARTING Air turbine

CONTROL SYSTEM Main electronic-hydromechanical, with digital block, plus reserve and emergency hydromechanical systems. System developed jointly with Yugostroy (Czech), which makes production system

LUBRICATION. Autonomous, recirculating, aerobatic

DIMENSIONS.

Length	1,721 mm (67.75 in)
Width	994 mm (39.1 in)
Height	1,037 mm (40 8 in)
WEIGHT DRY:	450 kg (992 lb)
PERFORMANCE RATING (S/L, T-O):	21 58 kN (4,852 lb st)
SPECIFIC FUEL CONSUMPTION.	16 84 mg/Ns (0 595 lb/h/lb st)

UPDATED

PROGRESS D-36

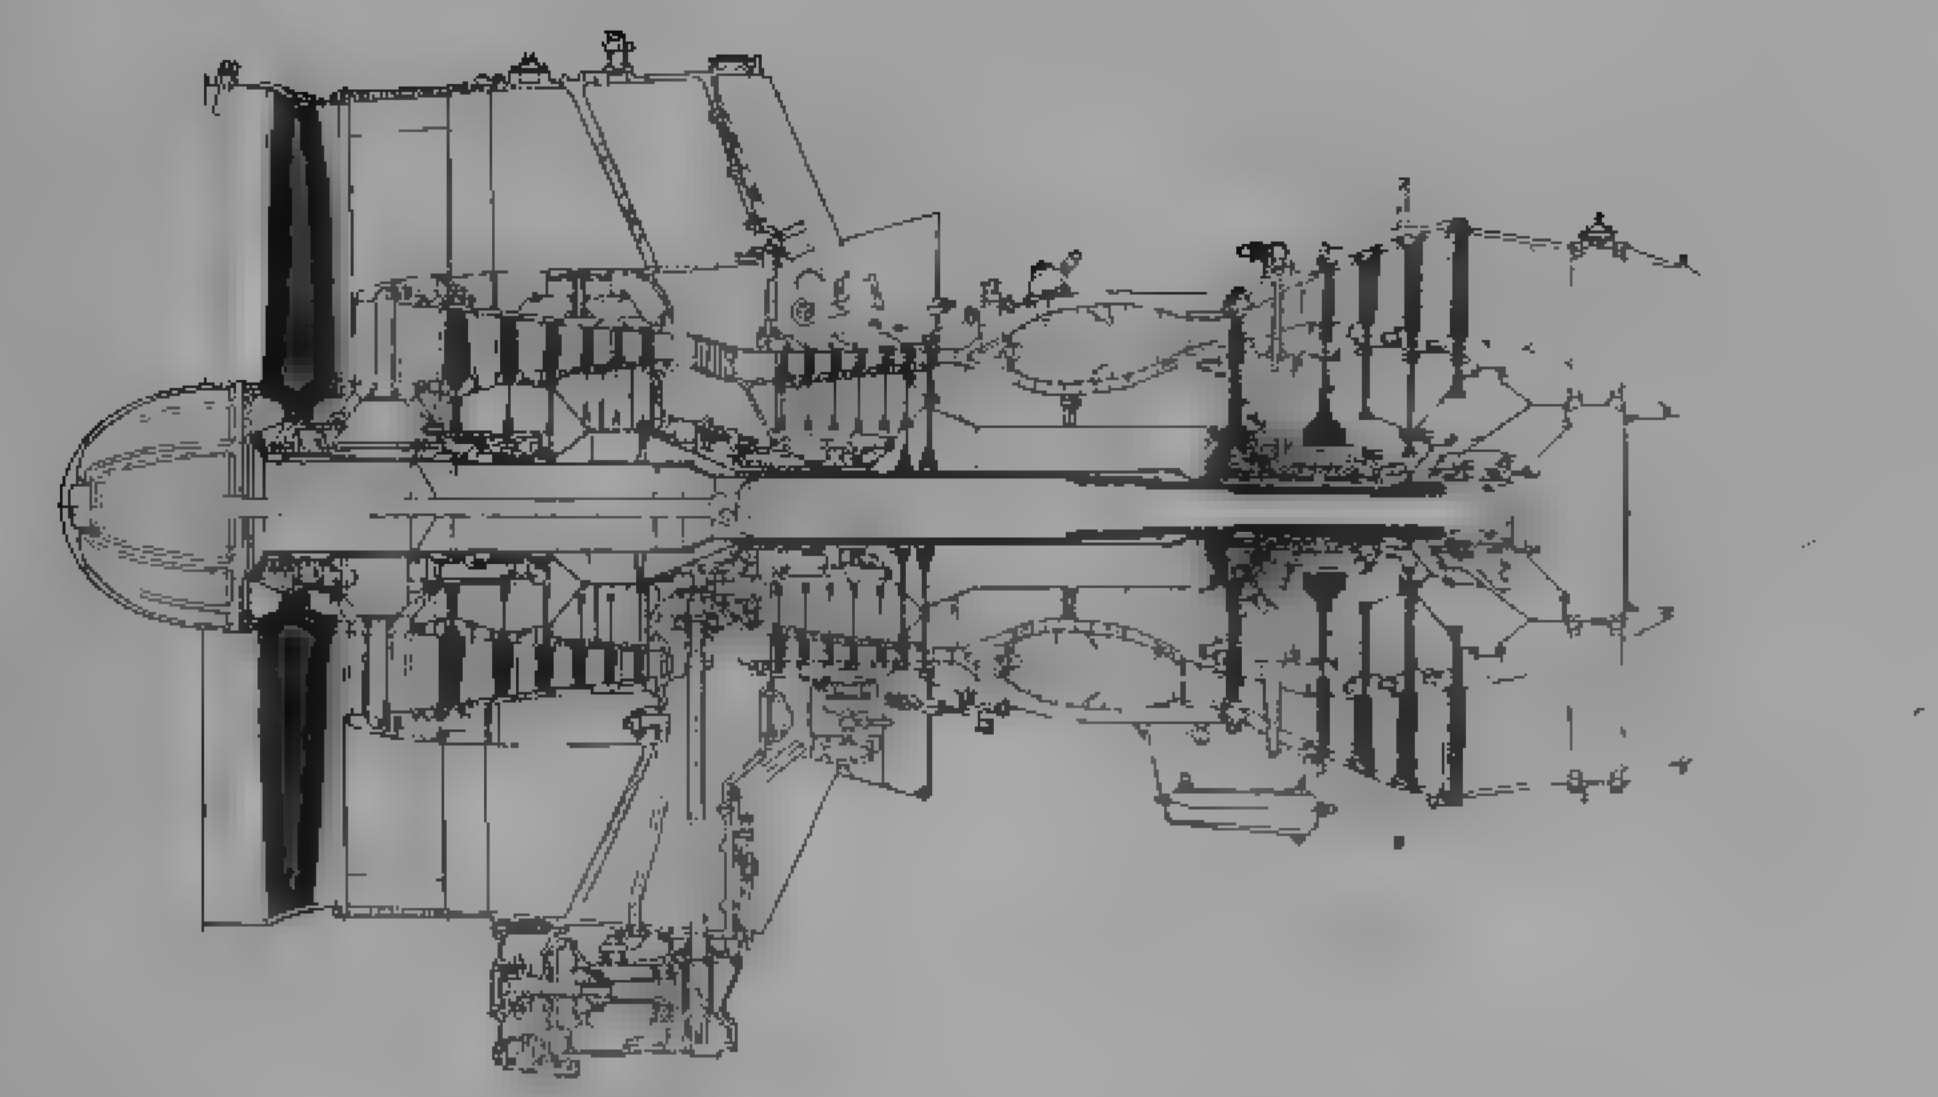
The D-36 was the first Soviet engine with a high bypass ratio. Bench tests began in 1971, flight tests in 1974, and series production in 1977

It is the base engine for a whole family: the **D-136** turboshaft; **D-236** propfan demonstrator; **D-336** industrial engine; and **D-436K/T**, **D-436T1/T2** turbofans. The D 36 was also used as a model for attaining design objectives of the D-18T. The D-36 powers the Yak-42 (three), and An-72 and An-74 and the Kometa 2 and Vykhr 2 Ekranoplans (all two each).

TYPE Three-shaft turbofan

CONFIGURATION Three-shaft, with minimum number of bearings (6) and without intershaft bearings. The bearings are resilient and resilient/damping Their oil cavities have contact radial face seals. Made of 12 modules. Bypass ratio 6 3

FAN. Single stage, transonic, 29 titanium blades with part-span shrouds, 48 outlet guide vanes (the number of blades and vanes chosen for minimum noise). Blade containment by winding Kevlar fibre on the fan casing Maximum speed 5,400 rpm. Mass flow 255 kg (562 lb)/s



Longitudinal section through Progress D-36 turbofan

1992

IP COMPRESSOR: Six stages with inlet guide vanes adjusted on the bench, then fixed in position. Three blow-off valves. Discs and rotor blades of titanium, stator vanes of steel. Maximum speed 10,500 rpm.

HP COMPRESSOR: Seven-stage, with adjustable inlet guide vanes. Three blow-off valves. Rotor blades and discs of two aft stages of steel. Maximum speed 14,170 rpm. Pressure ratio (overall) 18.7.

INTERMEDIATE CASE: Cast magnesium alloy. Forms connecting duct from LPC to HPC and bypass duct, and used for locating HPC front bearing and mounting LPC and HPC casings. Inside is a drive from HP rotor to accessory gearbox on intermediate case under nacelle cowl. The front engine mount is attached to the case.

COMBUSTION CHAMBER: Annular, with 24 burners and two igniters. Integral with HPT nozzle guide vanes (they form a single module). Combustion chamber case made by explosion stamping. Flame tube elements rolled and welded into one unit.

HP TURBINE: Single stage. Maximum inlet 1,137°C. Rotor blades tip-shrouded, convective-film cooling system, attached by fir-tree with two blades in each groove. Nozzle vanes have convective cooling.

IP TURBINE: Single stage. Uncooled, tip-shrouded, rotor blades. Nozzles guide vanes cooled by third-stage HPC air.

TURBINE SUPPORT HOUSING: Module located between HPT and IPT rotors and combined with wide IPT nozzle vanes. Outer casing attached to inner casing by spokes passing through wide hollow nozzle vanes. Inner casing carries rear bearings of HP and IP rotors. Oil supplied through hollow nozzle vanes.

FAN (LP) TURBINE: Three-stage with tip-shrouded blades, air-cooled discs.

EXHAUST UNIT: Consists of rear-bearing housing and main duct nozzle. Rear engine mount attached to housing.

MOUNTING: Universal under and over the wing, in the fuselage and on both sides without changing engine.

CONTROL SYSTEM: Hydromechanical, with inner redundancy and electronic unit controlling gas temperature and rotor speeds. Compressor blow-off valves controlled by independent pneumonic (bubble memory) system located near the valves. Engine compressor air is the operating medium. The D-36 is provided with sensors sufficient for FADEC control. Testing with DSIC FADEC began August 1992.

STARTING: By air-turbine starter, on accessory gearbox, from ground source, APU or operating engine. In-flight starting can be assisted by starter.

COWLING: On Yak-42, nacelle with short fan duct. On An-72 and An-74 nacelle has common nozzle of fan and core ducts.

DIMENSIONS:

Length	3,470 mm (136.6 in)
Diameter	1,373 mm (54.06 in)

WEIGHT, DRY: 1,109 kg (2,445 lb)

PERFORMANCE RATINGS (ISA):

T-O static	63.74 kN (14,330 lb st)
Max cruise at 8,000 m (26,250 ft) at Mach 0.75	15.7 kN (3,527 lb)

SPECIFIC FUEL CONSUMPTION:

T-O	10.195 mg/Ns (0.360 lb/h/lb st)
Max cruise, as above	18.4 mg/Ns (0.65 lb/h/lb)

UPDATED

PROGRESS D-136

This turboshaft engine was designed for the Mi-26 transport helicopter. Bench testing started in 1977, and series production in 1982. It is composed of 10 modules, each of which (except for main module) can be removed and replaced without disturbing neighbouring modules on installed engine. Five gas-generator modules are identical with those of D-36.

TYPE: Two-spool free turbine turboshaft.

GAS GENERATOR: As D-36 but with redesigned intermediate case between LPC and HPC (no fan duct). Accessory gearboxes at top and bottom on intermediate case. Speed (maximum): LPC 10,950 rpm, HPC 14,170 rpm.

FREE TURBINE: Two-stage with uncooled nozzle guide vanes and tip-shrouded blades, with air-cooled discs. Combined as separate module with support housing, outer and inner casings connected by 11 wide load-bearing struts. Inner casing contains front roller and rear ball bearings of free turbine. Struts carry oil pipes and speed sensor drive.

DRIVE SHAFT: Flexibly mounted shaft at rear, transmits torque from free turbine rotor to helicopter transmission by splines.

EXHAUST NOZZLE: Curved to side.

STARTING: By air turbine starter.

CONTROL SYSTEM: Hydromechanical speed governor of free turbine with power synchroniser of both Mi-26 engines. Free turbine speed maintained at 8,300 rpm, changed by pilot command in range of ±300 rpm. Electronic control of gas temperature and speed of free turbine and gas generator rotors. Compressor blow-off valves controlled by self-contained pneumonic system. On Mi-26, engine is equipped with particle separator.

DIMENSIONS:

Length	3,715 mm (146.26 in)
Width	1,403 mm (55.24 in)
Height	1,133 mm (44.61 in)

WEIGHT, DRY: 1,050 kg (2,315 lb)

PERFORMANCE RATINGS (ISA, S/L):

Max contingency	8,500 kW (11,400 shp)
T-O	74.57 kW (10,000 shp)
Max cruise	6,338 kW (8,500 shp)

SPECIFIC FUEL CONSUMPTION: 77.09 μg/J (0.456 lb/h/shp)

UPDATED

PROGRESS D-236

This propfan demonstrator was designed on the base of the D-36 core, but it incorporates a reduction gearbox to drive the SV-36 contrarotating propfan. Design began in 1979. The aim is to create a demonstrator for studying the geared propfan. Bench tests began in 1985, and the tests in the Il-76 flying testbed began in 1987.

The Yakovlev design bureau has been working on propfan integration since 1987. The Yak-42E-LL flying testbed with a D-236 replacing one D-36 first flew in March 1991.

CONFIGURATION: Three-shaft, the propfan being driven by a separate turbine.

GAS GENERATOR: Generally as D-136.

REDUCTION GEAR: Planetary, single-stage, ratio 5.64; contra-rotating output shafts, ratio of outer to inner shaft torque is 41 to 59 per cent.

PROPFAN TURBINE: Three-stage, shrouded rotor blades.

CONTROL SYSTEM: D-36 type, hydromechanical with electronic unit limiting gas temperature and rotor speeds. Independent pneumonic (bubble memory) system controlling compressor blow-off valves.

PROPFAN: SV-36, by Stupino Design Bureau of Machine-Building. Blades of composites without metal elements. Front propeller eight, rear propeller six blades. Rotation speed, T-O 1,100 rpm, cruising ratings 960 rpm, ground idle 500 to 600 rpm. Front and rear propeller speeds maintained equal at all ratings. Blade angle control, digital electronic with hydraulic back-up. At maximum cruise rating (as below) propeller efficiency 0.87, at take-off rating thrust to power ratio 0.94. Propfan diameter 4.20 m (165.4 in).

PERFORMANCE RATINGS:

T-O (S/L, ISA)	8,090 kW (10,850 shp)
Max cruise (11,000 m, 36,100 ft, Mach 0.7)	4,730 ekW (6,340 ehp)

SPECIFIC FUEL CONSUMPTION:

T-O, as above	78.1 μg/J (0.462 lb/h/shp)
Cruise, as above	60.67 μg/J (0.359 lb/h/shp)

and Yakovlev design bureaux for further development of the An-72, An-74 and Yak-42, was designated **D-436K**

This first ran in 1985, when the total service time of the D-36 was 1 million hours. In 1987 the D-436K was certificated in accordance with USSR airworthiness regulations.

Later, the **D-436T** and derivatives, for the Tu-334-1, were developed in accordance with more precise requirements. They differ from the D-436K in the accessory gearbox design and mix of accessories, the provision of the D-18T type reverser on the D-436T and some changes in the aerodynamics of components.

The D-436T has been bench tested since the beginning of 1990. The following description refers to this version.

TYPE: Three-shaft turbofan.

CONFIGURATION: Six rotor bearings without intershaft bearings. Bearings are resilient and resilient/damping.

FAN: As D-36, with improved performance. Fan speed increased to 5,850 rpm.

COMPRESSORS AND INTERMEDIATE CASING: Modules same as D-36. Speeds and pressure ratio increased.

COMBUSTION CHAMBER: Redesigned for increased gas temperature, reduced emissions and easier high-altitude start. 18 single-orifice nozzles, some with pneumatic atomisers.

HP TURBINE: As D-18T.

IP AND FAN TURBINES: Almost identical to D-36.

REVERSER: As D-18T.

CONTROL SYSTEM: As D-36.

STARTING: Pneumatic, as D-36.

MOUNTING: Universal, as D-36.

Taking into consideration the requirements of Western aircraft manufacturers for regional and medium-range aircraft, the **D-436T1/T2** modification was proposed in 1991. D-436T1 and D-436T2 are practically the same in design, but differ in performance and date of certification. Changes in D-436T1/T2 compared with D-436T are:

FAN: D-18T type but higher performance. Diameter as D-436, but speed increased.

COMPRESSOR: Compressor booster stage driven by fan shaft. Total pressure ratio of core increased, while HP and IP rotor speeds remain unchanged.

COMBUSTION CHAMBER: Changed to ensure moderate gas temperature rise, and reduction of emissions to meet most strict requirements.

HP TURBINE: Aerodynamics changed. Three-dimensional airfoils of nozzle guide vanes. Blade and disc cooling system improved.

IP TURBINE: Some improvement in nozzle guide vane aerodynamics.

FAN TURBINE: Disc strengthened for increased speed.

ACOUSTIC LINING: Area of acoustic panels in bypass duct and air intake is twice that of D-36. Noise level meets latest requirements.

CONTROL SYSTEM: Sensors on engine allow a FADEC system.

COWLING: Nacelle of 3/4 type, as D-18T.

UPDATED

PROGRESS D-18T

The D-18T is a large HBPR turbofan. It powers the An-124 Ruslan) and An-225 (Mriya). This engine incorporates design and technological improvements achieved during design, development and operation of the D-36 engine.

D-18T design began in 1977, and a single spool core engine was tested in 1979. A two-spool core engine was developed, and the first run of a full-scale engine was accomplished in September 1980. First flight on the Il-76T flying testbed was carried out in March 1982. On 24 December 1982 the An-124 made its first flight.

TYPE: Three-shaft turbofan.

CONFIGURATION: Each of the three rotors is carried on two bearings (total 6). The bearings are resilient and resilient/damping. Oil cavities of the fan and IPC bearings are provided with labyrinth seals, others with radial-face contact seals. The engine comprises 17 modules.

FAN: Single-stage, supersonic, with 33 titanium blades with part-span shrouds. Stator has 56 carbon-glass composite plastic vanes, with epoxide matrix and inner and outer titanium shrouds. Leading-edge protected by stainless-steel strip. Containment of separated blade provided by winding Kevlar-type fibre on the inside surface of the case. Blades attached by fir-tree roots in disc slots. Speed (maximum) 3,450 rpm. Mass flow 765 kg (1,687 lb)/s. Bypass ratio 5.6.

IP COMPRESSOR: Seven-stage, transonic, with variable inlet guide vanes and eight blow-off valves on case. Titanium blades and steel vanes. Speed (maximum) 5,900 rpm.

HP COMPRESSOR: Seven-stage with adjustable inlet guide vanes. Blades of first four stages of titanium, remainder of steel. Speed (maximum) 9,100 rpm. Overall pressure ratio (T-O) 25, (cruise) 27.5.

INTERMEDIATE CASE: Intended to form transition path from IPC to HPC and fan duct as well as attachment of HPC bearing and IPC and HPC cases. Drive from HP rotor to accessory gearbox in lower part of case. Front engine mounts attached to inner case. Aluminium outer shell riveted. Inner shell and struts of titanium.

COMBUSTION CHAMBER: High temperature, annular, with 22 main fuel nozzles and two igniters. Integrated with HPT NGVs (a separate module). Case consists of outer and inner shells. Cooling air (for IPT) passes between them. Combustion chamber specially modified for low emissions.

HP TURBINE: Single-stage with tip-shrouded blades with convection-film air cooling. Blades mounted by fir-tree roots (a pair in each slot). Turbine support housing with IP and HP rotor bearings. Vanes air-cooled.

IP TURBINE: Single stage with tip-shrouded blades with convective air cooling.

FAN TURBINE (LPT): Four-stage with uncooled blades with tip shrouds. Rotor of drum-disc type. Outer case cooled by air from fan duct.

EXHAUST UNIT: Comprises rear support case with LPT bearing and rear engine mount, and core nozzle. Struts shaped to untwist turbine outlet flow.

REVERSER: Attached to rear flange of intermediate case, with 12 doors pulled inwards and blocking fan duct by axial movement of translating cowl section, which simultaneously opens peripheral cascade rings. Control and drives are hydromechanical, using engine oil.

LUBRICATION SYSTEM: Self-contained continuous circulation under pressure.

CONTROL SYSTEM: Similar to D-36. Self-contained pneumatic system controls blow-off valves and HPC inlet guide vanes. Engine control provides automatic starting and maintaining given rating over complete operating range.

ACCESSORIES: Accessory gearbox drives constant speed generator and two hydraulic pumps.

DIMENSIONS:

Length	5,400 mm (212.6 in)
Fan diameter	2,330 mm (91.73 in)
Width	2,792 mm (109.9 in)
Height	2,937 mm (115.6 in)

WEIGHT, DRY: 4,100 kg (9,039 lb)

PERFORMANCE RATINGS:

T-O (S/L, ISA+13°C)	229.8 kN (51,660 lb st)
Max cruise (11,000 m, 36,100 ft, Mach 0.75, ISA)	47.67 kN (10,716 lb)

SPECIFIC FUEL CONSUMPTION:

T-O	10.195 mg/Ns (0.360 lb/h/lb st)
Cruise, as above	16.142 mg/Ns (0.570 lb/h/lb)

UPDATED

PROGRESS D-18T1

The D-18T1 is intended to power the An-218. It is a derivative of the production D-18T Series 3. Differences from the basic engine are:

The engine has a maximum contingency rating used in the event of failure of the other engine during take-off.

FADEC type control is provided.

Some units (including accessory gearbox, thrust reverser, engine aircraft attachment panels, pipes and electric connections) have been modified.

DIMENSIONS, WEIGHT: As D-18T

PERFORMANCE RATINGS:

Max contingency (S/L, 30°C, 730 mm Hg)	255.0 kN (57,320 lb st)
T-O (S/L, 30°C, 730 mm Hg)	214.2 kN (48,148 lb st)
Max cruise (11,000 m, Mach 0.8, ISA +10°C)	51.58 kN (11,596 lb st)

SPECIFIC FUEL CONSUMPTION:

Max cruise	17.42 mg/Ns (0.615 lb/h/lb)

NEW ENTRY

PROGRESS D-18TM and D-18TR

The D-18TM is intended to power the An-218. The D-18TR is a further modification. The two engines are of the same design, but have different ratings.

TYPE: Three-shaft turbofan.

CONFIGURATION: Each of the three rotors is carried on two bearings (total six).

FAN: Single stage, with 35 shrouded titanium blades.

IP COMPRESSOR: Seven-stage, with variable inlet guide vanes and first- and second-stage stator vanes, and blow-off valves behind the third-stage.

HP COMPRESSOR: Seven-stage, with blow-off valves behind the 4th stage.

HP TURBINE: Single-stage.

IP TURBINE: Single-stage.

FAN TURBINE: Four-stage.

CONTROL SYSTEM: FADEC type.

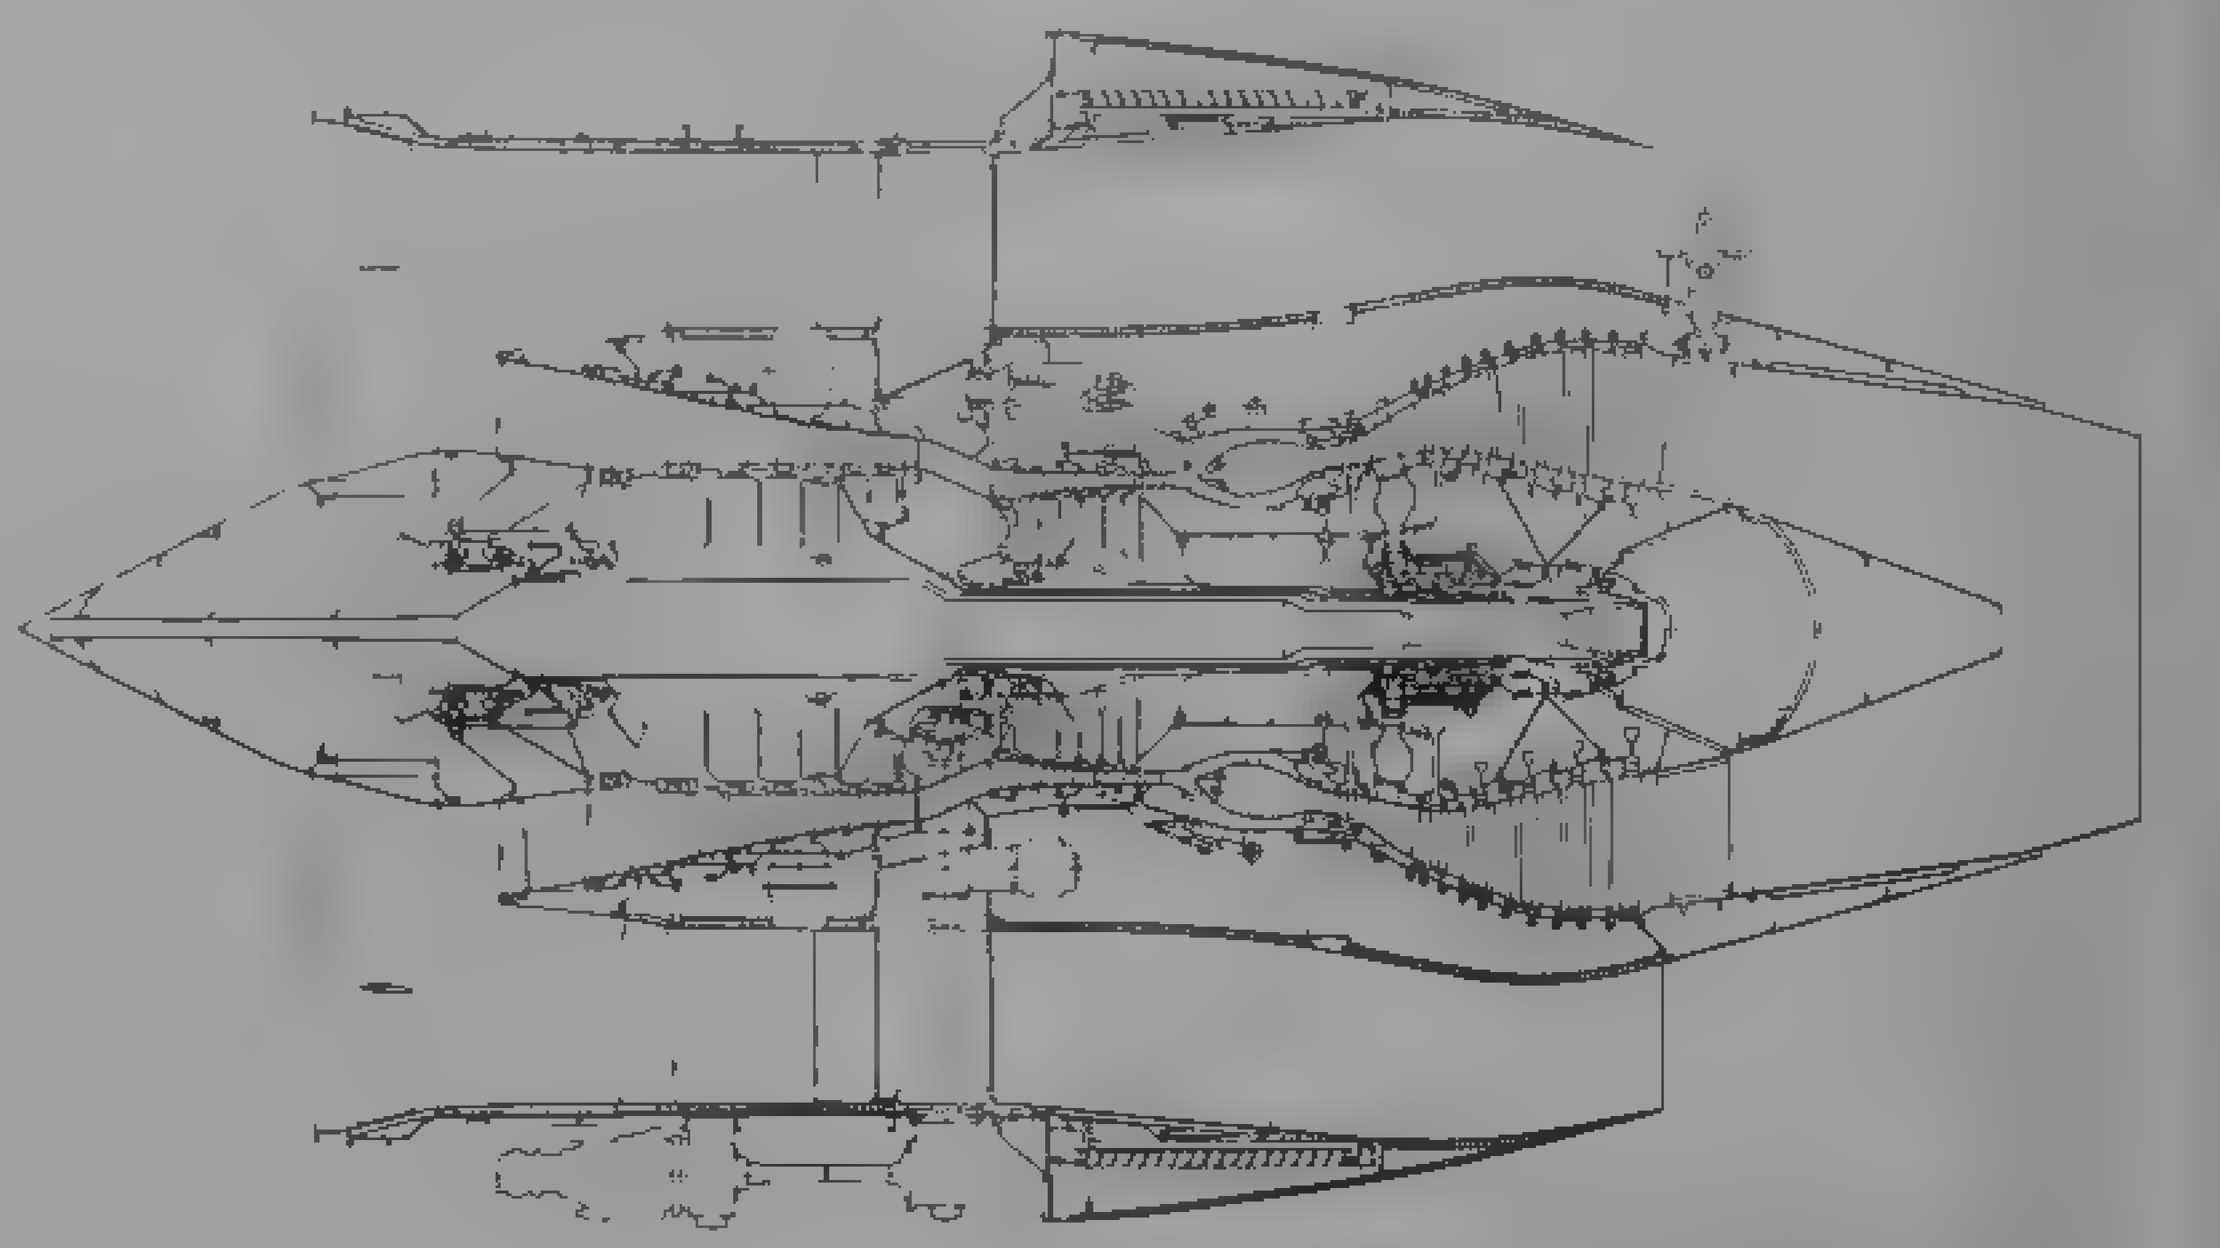
DIMENSIONS:

Length	5,700 mm (224.5 in)
Width	2,982 mm (117.4 in)
Height	2,986 mm (117.6 in)

WEIGHT, DRY: 4,750 kg (10,472 lb)

PERFORMANCE RATINGS:

T-O: D-18TM (Series 3) (S/L, +30°C, 730 mm Hg) 248.1 kN (55,777 lb st)



Longitudinal section through Progress D-18TM turbofan (D-18TR similar)

1995

D-18TR (Series 3) 269.7 kN (60,627 lb st)
Max cruise, D-18TM (Series 3) (11,000 m, Mach 0.8, ISA) 51.49 kN (11,574 lb)
D-18TR (Series 3) 54.33 kN (12,213 lb)

SPECIFIC FUEL CONSUMPTION:
Max cruise, as above 16.57 mg/Ns (0.585 lb/h/lb)

NEW ENTRY

PROGRESS D-27

Since 1985 work has been under way to create a gas generator (named later 27) with high cycle parameters intended to create a family of medium-size engines (similar to the D-36 family). Specific fuel consumption is 25 to 30 per cent lower than current turbofans.

The design envisages the creation of engines of different configuration with minimum changes to the core.

The D-27 has SV-27 contrarotating tractor propfans developed by Stupino Design Bureau of Machine Building. This engine is intended for cargo and passenger aircraft, with improved take-off and landing performance.

In comparison with the SV-36 installed on the D-236 demonstrator, the SV-27 has blades of greater sweep, higher efficiency at cruising ratings and improved acoustics. Rotational speed: (T-O) 1,000 rpm, (cruise) 850 rpm.

The tractor installation is used on the An-70T, which first flew on 16 December 1994, and is specified for the An-180.

PERFORMANCE RATING:

Progress D-27 propfan with SV-27 propeller (*Piotr Butowski*) *1994*

PROGRESS D-127

The D-127 turboshaft engine is intended to improve the performance of the Mi-26 helicopter and its modifications, as well as to power new advanced heavy-weight helicopters. It is a two-spool gas engine with a free power turbine. The core is based on the gas generator of the D-27 propfan.

The D-127 is of modular design and has automatic FADEC control.

PERFORMANCE RATING:
T-O 10,700 kW (14,350 shp)

NEW ENTRY

Longitudinal section through Progress D-27 propfan *1995*

PROGRESS D-727

The D-727 turbofan with super high-bypass ratio is intended to power long-range passenger and cargo aircraft. It is being developed on the base of the D-27 propfan two-spool gas generator. The D-727 fan has wide-chord unshrouded blades, and is driven by a three-stage turbine through a reduction gear. Such a configuration allows a bypass ratio of 13.

When designing the D-727 substantiated technical solutions were used which minimised risk and shortened development time. The engine is of modular design and has automatic FADEC control.

A modification is being developed with a T-O rating of 113.0 kN (25,397 lb st), with a maximum contingency rating of 131.0 kN (29,453 lb st). The increased thrust is achieved by modifying the LP compressor.

PERFORMANCE RATING:
T-O, S/L 98.0 kN (22,046 lb st)

Rolls-Royce is a world leader in the design, development and manufacture of aero, industrial and marine gas turbines. It is also involved in product fields as diverse as power generation, nuclear engineering and materials handling. The two business groups, Aerospace and Industrial Power, employ 40,700.

Rolls-Royce civil and military aero gas turbines are used by more than 320 airlines, 120 armed forces and 640 executive customers. Aero gas-turbine activities are based at Derby, Glasgow, Bristol and Coventry. Rolls-Royce is involved with several collaborative partners in joint ventures such as BMW Rolls-Royce, Rolls-Royce Turbomeca, MTR, Eurojet, IAE, Turbo-Union and Williams Rolls Inc.

On 24 March 1995 Rolls-Royce announced that it had completed the purchase of Allison Engine Company (see under USA in this section). The £331 million acquisition was to be financed with equity.

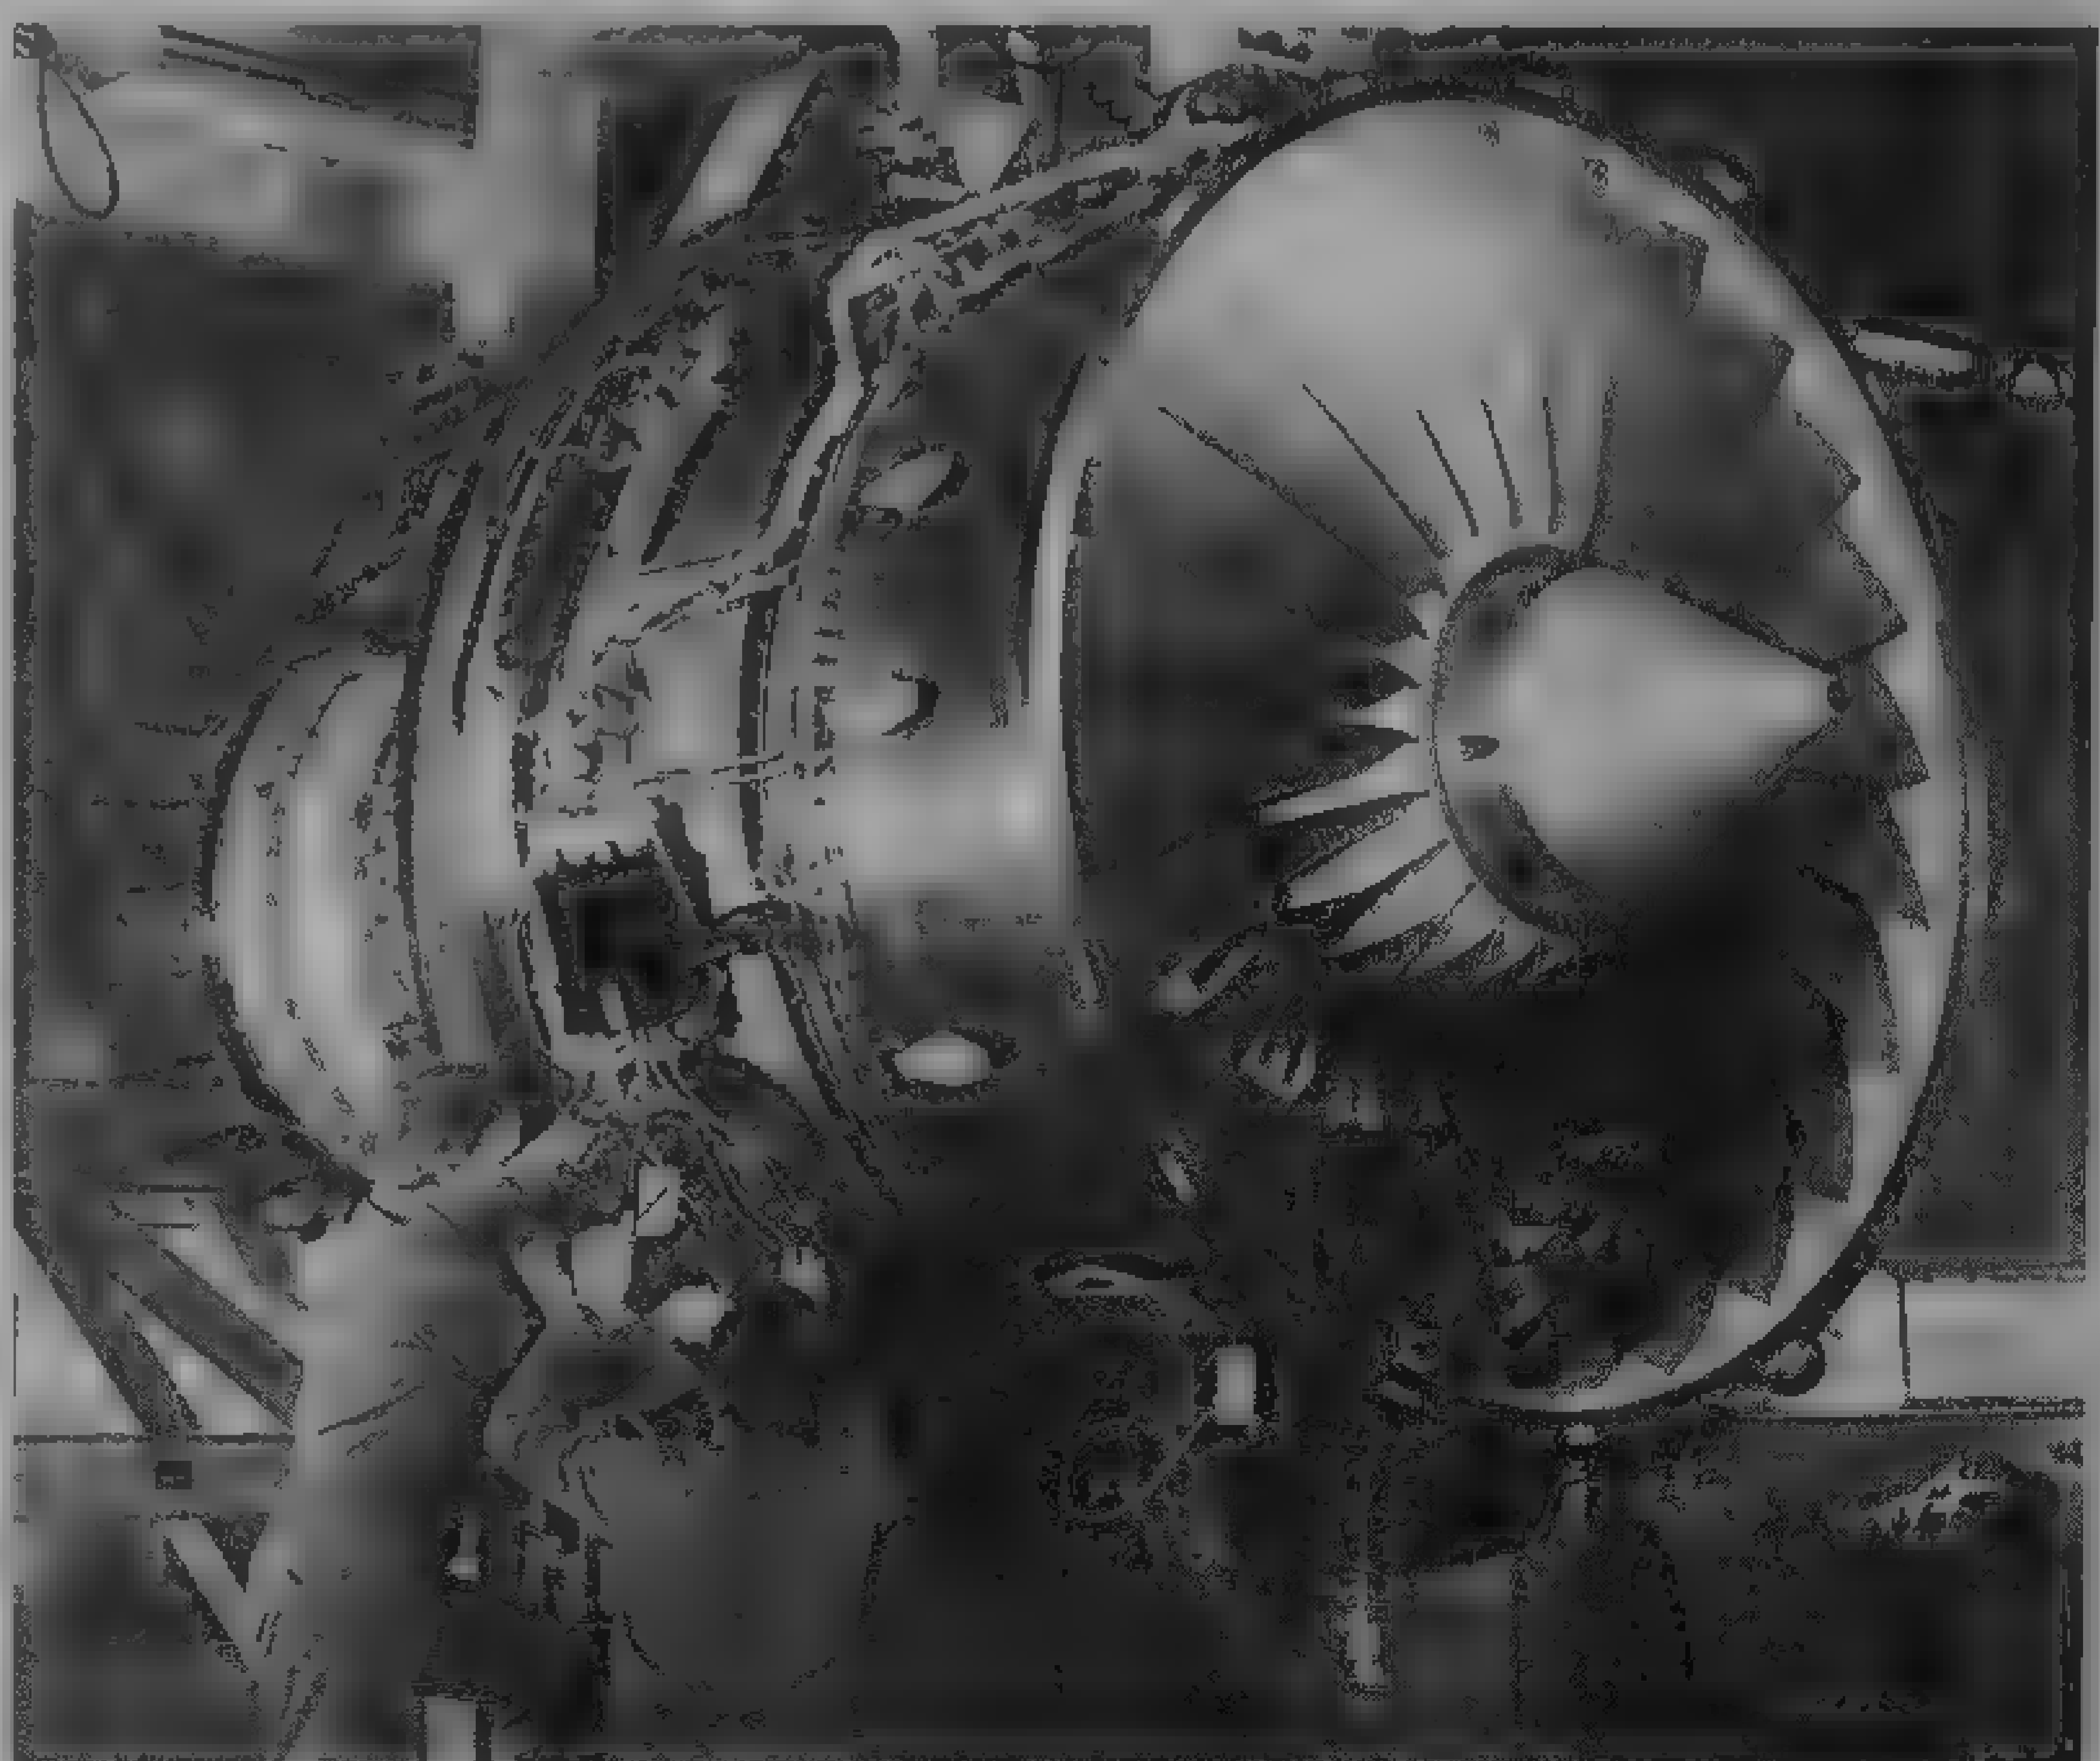
1987



Rolls-Royce RB211-524G three-shaft turbofan

1989

ROLLS-ROYCE RB211

The designation RB211 applies to a family of three-shaft turbofans of high bypass ratio and high-pressure ratio, ranging in thrust from 166.4 kN (37,400 lb st) to over 445 kN (100,000 lb st). Service experience exceeds 60 million hours. The derived 535 and Trent, are described separately. For all applications Rolls-Royce retains responsibility for the complete propulsion system.

The **RB211-22B** fitted to the L-1011-1 and -100 TriStar is flat rated at 186.8 kN (42,000 lb st) to 29°C. Certificated in February 1972 by the CAA and in April 1972 by the FAA. Production ceased in 1982 with over 670 engines delivered.

The **RB211-524** series of engines was developed from the RB211-22B and covers a range of thrusts from 222.4 kN (50,000 lb st) to 269.6 kN (60,600 lb st). The -524 entered airline service in 1977 with the L-1011 and 747. By the end of 1994 over 1,000 engines had been delivered.

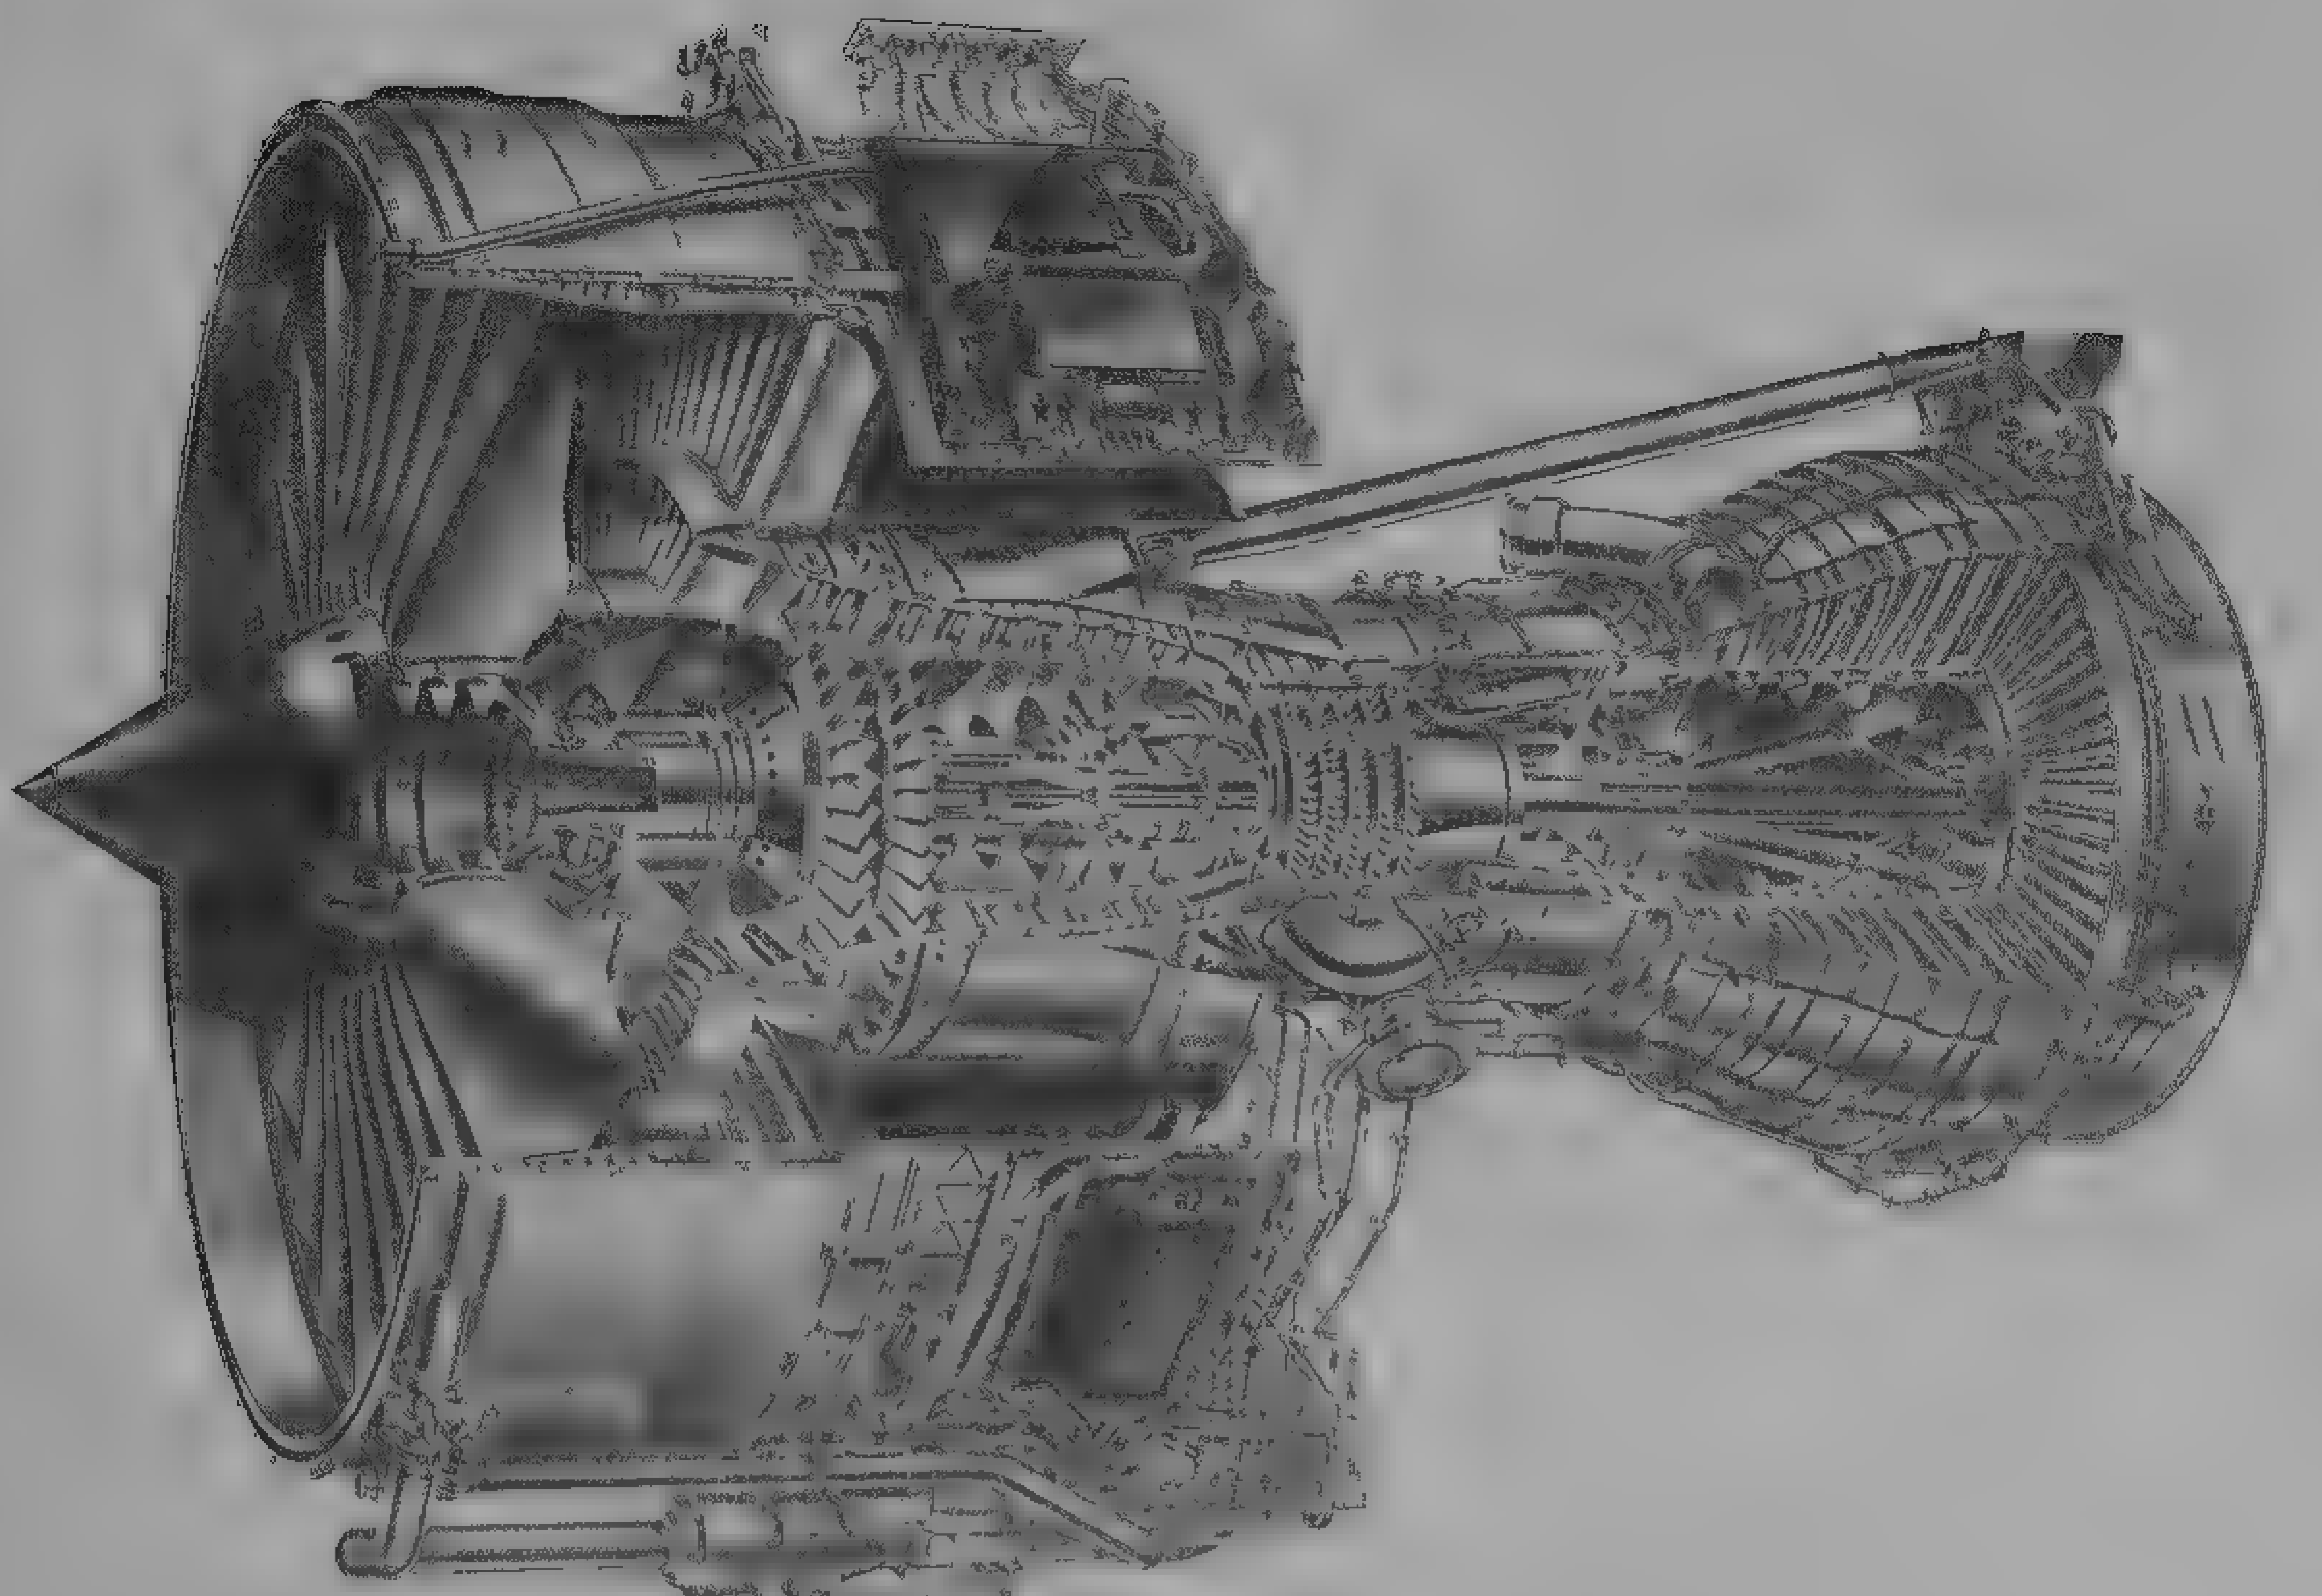
The **RB211-524B**, which powers the L-1011-200, L-1011-500 and 747, is certificated at 222.4 kN (50,000 lb st) to 28.9°C. A 524B4 completed over 27,500 hours on a Delta L-1011 without removal - an industry record.

The **RB211-524C** offers increased thrust ratings for the 747. It entered service in April 1980 with a rating of 229.1 kN (51,500 lb st).

The **RB211-524D4** is an improved engine rated at 235.75 kN (53,000 lb st) for the 747.

The **RB211-524G** incorporates advanced features proven on the 535E4, such as the wide-chord fan, 3D aerodynamics, directionally solidified HP and IP turbine blades and integrated mixer nozzle. Another new feature is a full-authority digital control system. The engine can operate at G rating (258 kN, 58,000 lb st) or H rating (269.6 kN, 60,600 lb st) and powers the 747-400 and 767-300, with 180 minute ETOPS clearance.

The **RB211-524H**, rated at 269.6 kN (60,600 lb st) entered service on the Boeing 747-400 and 767-300 in February 1990, and is mechanically identical to the 524G.



Cutaway drawing of Rolls-Royce Trent 800

1995

The following description relates to the RB211-524G/H

TYPE: Three-shaft axial turbofan. Overall pressure ratio 33

FAN: Single-stage overhung, driven by LP turbine. Composite nosecone, 24 hollow wide-chord blades in titanium alloy, controlled diffusion outlet guide vanes. Aluminium casing with Armco containment ring. Mass flow 728 kg (1,604 lb)/s. Bypass ratio 4.3.

IP COMPRESSOR: Seven-stage, driven by IP turbine. Two drums, one of titanium discs welded together and the other of welded steel discs, bolted to form one rotor, carrying titanium blades. Aluminium and steel casings carry steel stator blades. Single-stage titanium variable inlet guide vanes

HP COMPRESSOR: Six-stage, driven by HP turbine. Welded titanium discs, single steel disc and welded nickel alloy discs bolted together carrying titanium, steel and nickel alloy blades. Steel casing carries steel and Nimonic stator blades

COMBUSTION CHAMBER: Fully annular, with steel outer casings and nickel alloy combustor. Downstream fuel injection by 18 airspray burners with annular atomisers. High-energy igniter plugs in Nos 8 and 12 burners

HP TURBINE: Single stage, with directionally solidified nickel alloy rotor blades, both convection- and film-cooled, mounted in nickel alloy disc by fir tree roots

IP TURBINE: Single stage, with directionally solidified nickel alloy rotor blades fir-tree-mounted in nickel alloy disc.

LP TURBINE: Three-stage, with nickel alloy rotor blades fir tree-mounted in steel discs.

EXHAUST NOZZLE: Integrated nozzle with deep-chute forced mixer

ACCESSORY DRIVES: Radial drive from HP shaft to gearbox on fan casing. Accessories include integrated drive generator and aircraft hydraulic pumps

LUBRICATION SYSTEM: Continuous circulation dry sump system supplying oil to four bearing chambers with a combination of ball and roller bearings. 27 litre (57.6 US pint; 48 Imp pint) oil tank integral with gearbox

DIMENSIONS:

Length overall

RB211-22B, -524C2	3,033 mm (119.4 in)
RB211-524B4, -524D4	3,106 mm (122.3 in)
RB211-524G, -524H	3,175 mm (125.0 in)

Fan diameter

RB211-22B, -524C2	2,154 mm (84.8 in)
RB211-524B4, -524D4	2,180 mm (85.8 in)
RB211-524G, -524H	2,192 mm (86.3 in)

WEIGHT, DRY:

RB211-22B	4,171 kg (9,195 lb)
RB211-524B4, B4 Improved	4,452 kg (9,814 lb)
RB211-524C2	4,472 kg (9,859 lb)
RB211-524D4, D4 Upgrade, -524G/H	4,479 kg (9,874 lb)

PERFORMANCE RATINGS:

T-O: see model listings

Cruise at 10,670 m (35,000 ft) and Mach 0.85 (uninstalled)

RB211-22B	42.2 kN (9,495 lb)
RB211-524B4, B4 Improved	48.9 kN (11,000 lb)
RB211-524C2	51.1 kN (11,490 lb)
RB211-524D4 (all models)	50.0 kN (11,230 lb)
RB211-524G, -524H	52.5 kN (11,813 lb)

SPECIFIC FUEL CONSUMPTION (cruise):

RB211-22B	17.79 mg/Ns (0.628 lb/h/lb)
RB211-524B4	17.56 mg/Ns (0.620 lb/h/lb)
RB211-524B4 Improved	17.16 mg/Ns (0.606 lb/h/lb)
RB211-524C2	18.21 mg/Ns (0.642 lb/h/lb)
RB211-524D4	17.48 mg/Ns (0.617 lb/h/lb)
RB211-524D4 Upgrade (1987)	17.02 mg/Ns (0.601 lb/h/lb)
RB211-524G, -524H	16.15 mg/Ns (0.570 lb/h/lb)

UPDATED

ROLLS-ROYCE TRENT

This is the most powerful Rolls-Royce aircraft engine. Its detailed engineering design began in 1988 to meet the propulsion requirements of the Airbus A330 and Boeing 777. To meet the requirements for these aircraft a range of Trent engines has been developed

Trent Designation	Take-off Thrust	Application
764	284.7 kN (64,000 lb st)	MD-12
768	300.3 kN (67,500 lb st)	A330
772	316.3 kN (71,100 lb st)	A330
775	334.3 kN (75,150 lb st)	A330
875	346.53 kN (77,900 lb st)	777
877	356.23 kN (80,080 lb st)	777
884	384.8 kN (86,500 lb st)	777
890	406.14 kN (91,300 lb st)	777

The Trent features an increased diameter, improved wide chord fan, increased-flow compressors and FADEC. The core incorporates proven advanced technology for high reliability and lowest cost operation

The Trent first ran in August 1990, and since then a total of eight engines have entered the Trent 700 Development Programme, with thrust levels in excess of 80,000 lb st having been regularly achieved. This is in excess of the thrust required for growth versions of the A330. Flight testing continued through 1994, with aircraft certification completed by December and 90 minute ETOPS approved in February 1995. The Trent 800 began engine testing in September 1993, and demonstrated a world record 106,087 lb st on 28 January 1994. The engine was certified in January 1995, three months early, and with thrust increased from 84,000 to 90,000 lb, the first in the world at this level. The first Boeing 777 with Trent 800 engines flew in June 1995, and service entry is due in January 1996

By late 1994 orders and options for the Trent stood at over 200 engines. Risk- and revenue-sharing partners for the Trent are BMW Rolls-Royce, Hispano Suiza, Ishikawajima Harima Heavy Industries (IHI), Industria de Turbo Propulsores (ITP), Kawasaki Heavy Industries (KHI), Lucas and Simera

FAN: Single-stage with 26 wide-chord blades of titanium. Blades made by superplastic forming and diffusion bonding to form a hollow blade with integral canted spars running from root to tip

IP COMPRESSOR: Eight stages, giving increased core air flow. Variable inlet guide vanes and first two stator stages

HP COMPRESSOR: Six-stage design offering high efficiency with improved tip clearance control based on V2500 technology

COMBUSTION CHAMBER: Based on latest technology, optimised for reduced emissions

HP TURBINE: Fitted with single-crystal blading of the latest three-dimensional design

IP TURBINE: Increased annulus design with single-crystal uncooled blades on both versions

LP TURBINE: Trent 700 has four stages with three-dimensional aerodynamically designed blading. Trent 800 has five stages

GEARBOX: Single-piece casing with gears and bearings individually replaceable without disturbance of adjacent gears. Separate oil tank and filler

REVERSER: Four door type on 700, cascade type on 800.

MOUNTING: Trent 700 core-mounted. Trent 800 front fan case mount. Rear core mount with thrust struts to front of core. Design for enhanced rigidity: reduced distortion of fan case and reduced engine weight

ENGINE CONTROL: Full-Authority Digital Engine Control (FADEC). Gives improved fuel consumption, better engine control and reduces pilot workload by interaction with aircraft computers.

DIMENSIONS:

Length overall:

700	3,912 mm (154 in)
800	4,369 mm (172 in)

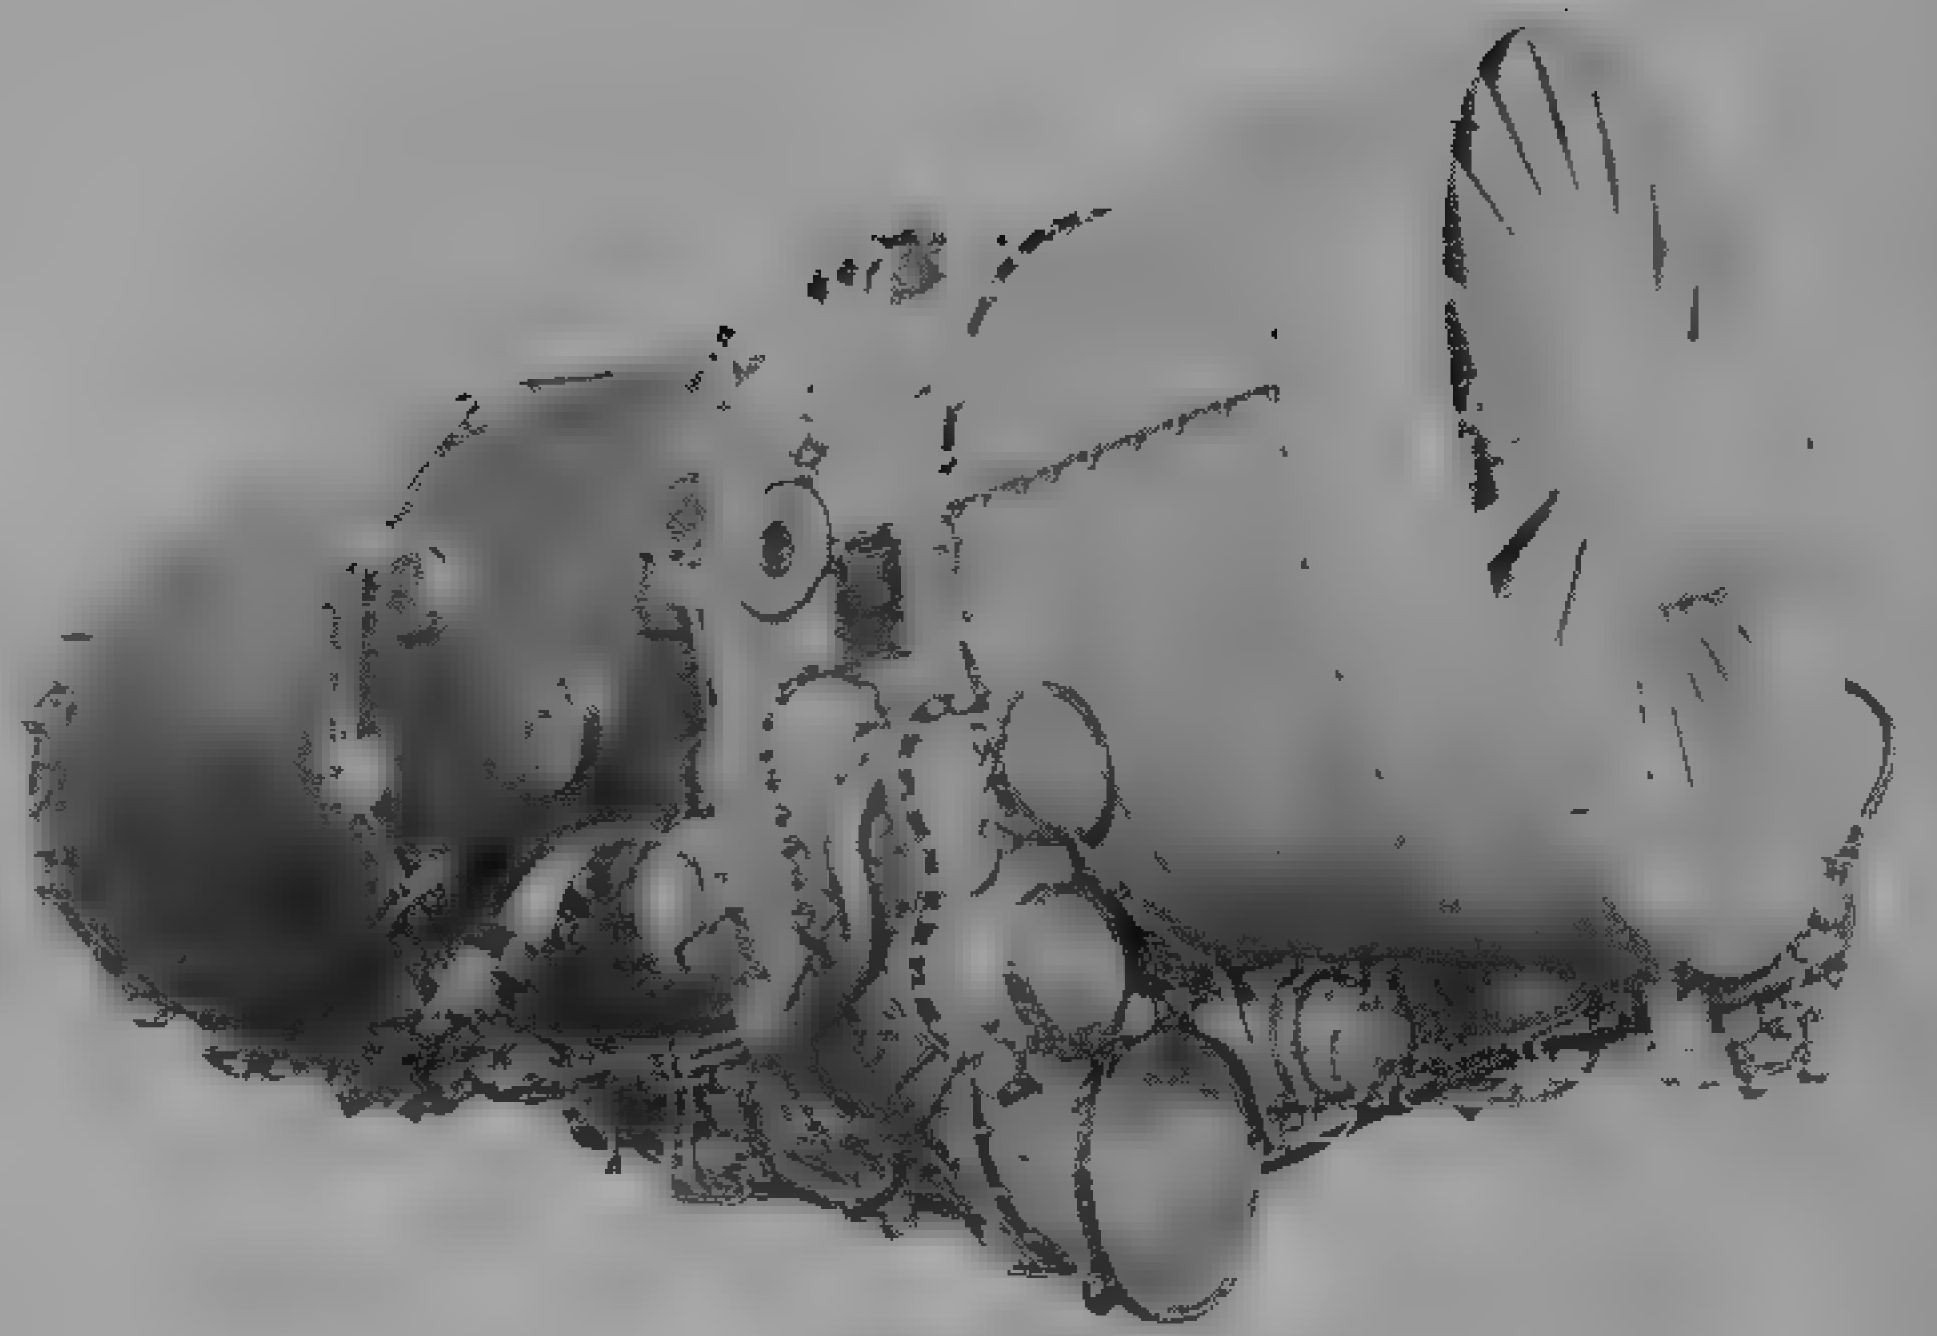
Fan diameter:
700 2,474 mm (97.4 in)
800 2,794 mm (110 in)

WEIGHT, DRY:
700 4,785 kg (10,550 lb)
800 5,957 kg (13,133 lb)

PERFORMANCE RATINGS:
T-O see above
Cruise (10,670 m, 35,000 ft, Mach 0.82 (0.83 for Trent 800)
700 51.16 kN (11,500 lb)
800 57.83 kN (13,000 lb)

SPECIFIC FUEL CONSUMPTION:
700 16.00 mg/Ns (0.565 lb/h/lb)
800 15.77 mg/Ns (0.557 lb/h/lb)

UPDATED



Rolls-Royce Spey Mk 807 two-shaft turbofan

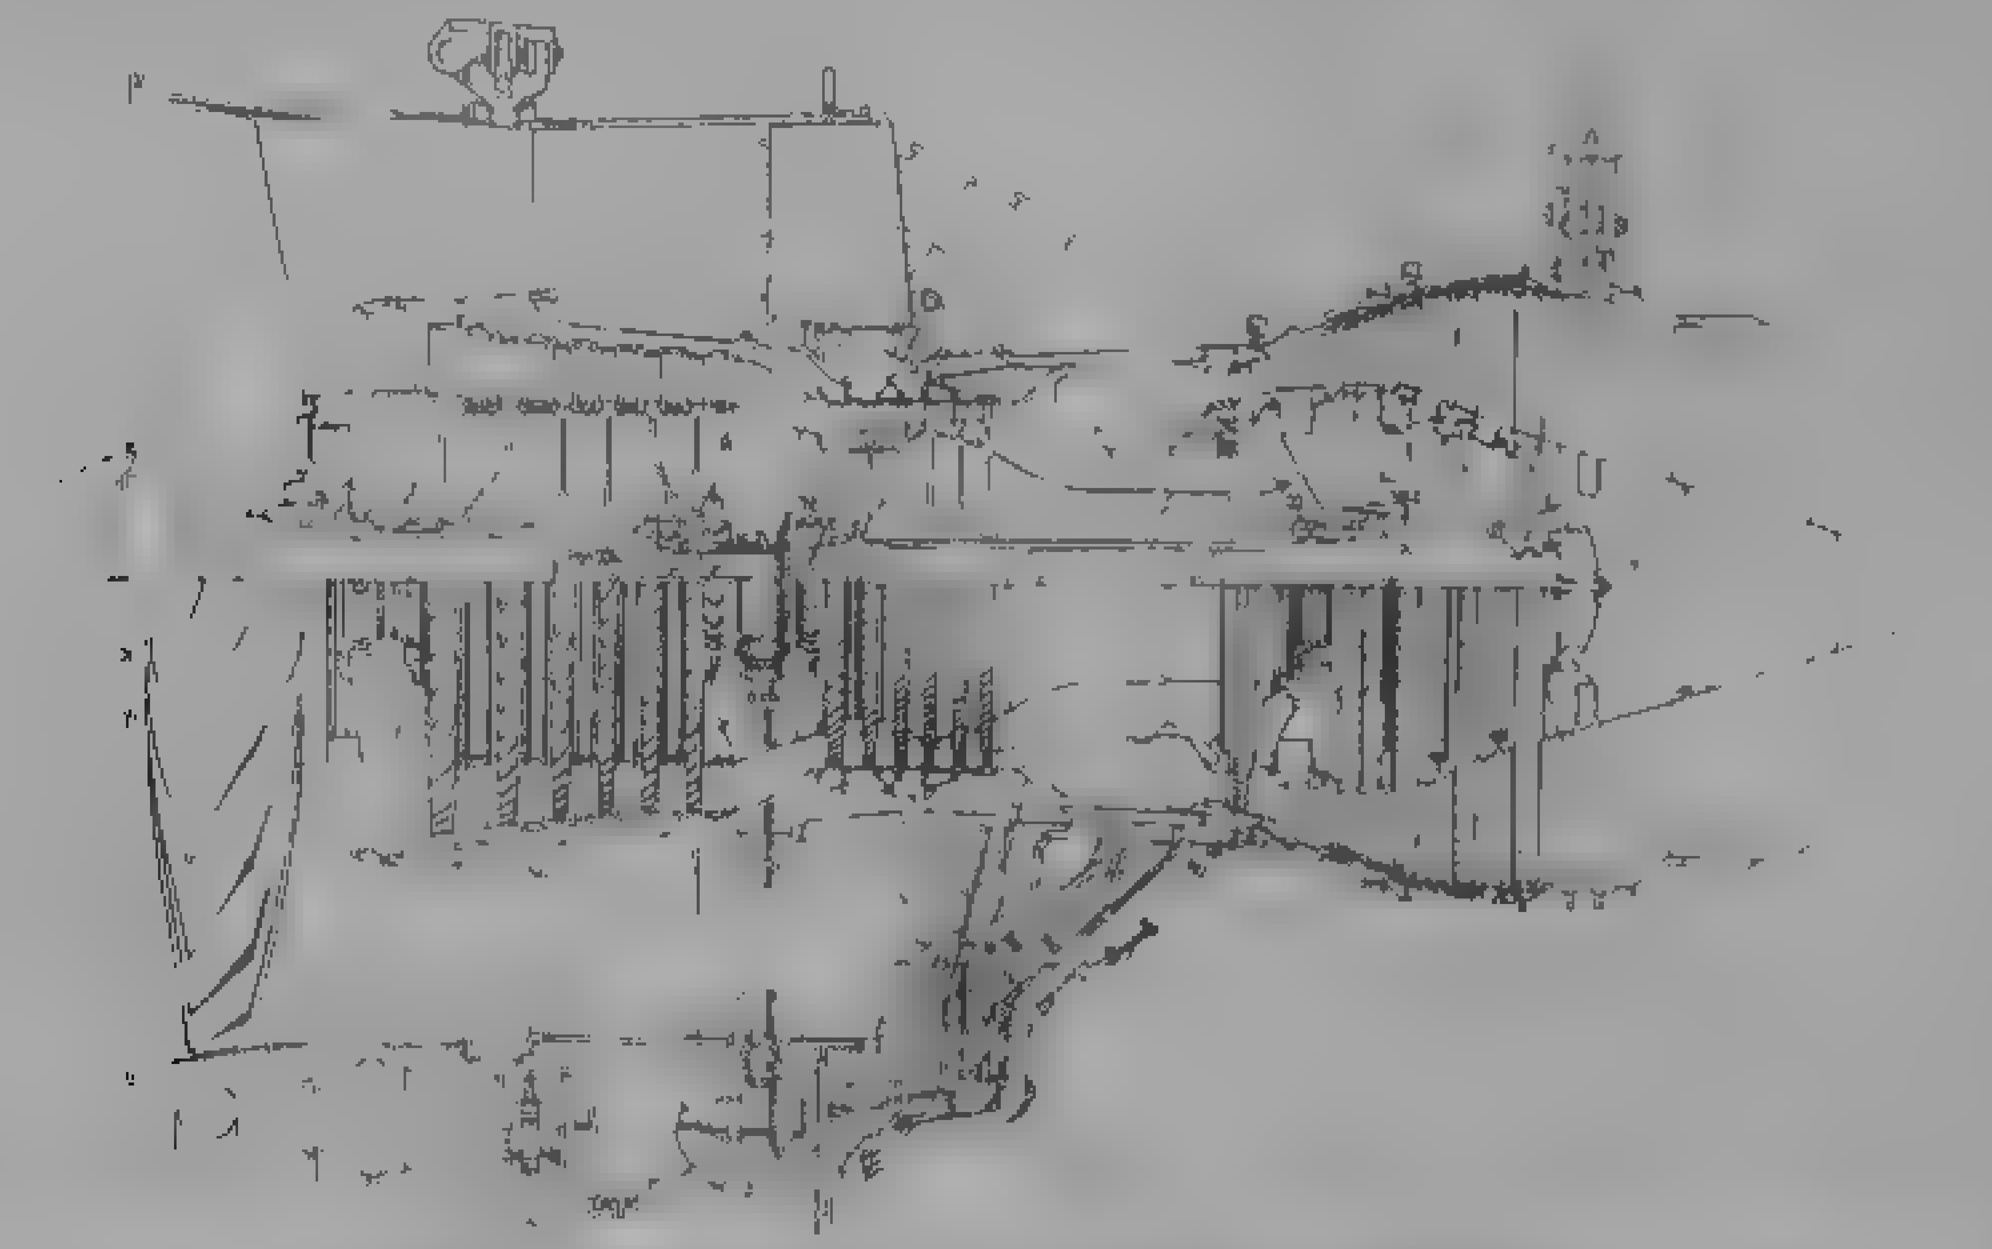
1983

ROLLS ROYCE 535

The **535C** was launch engine for the Boeing 757. It has an HP module based on the RB211 22B, six-stage IP compressor without variable stator vanes, and a scaled down -524 fan. Fan air flow is 18 per cent lower than that of the -22B and core air flow 12 per cent lower. The 535C entered service on 1 January 1983.

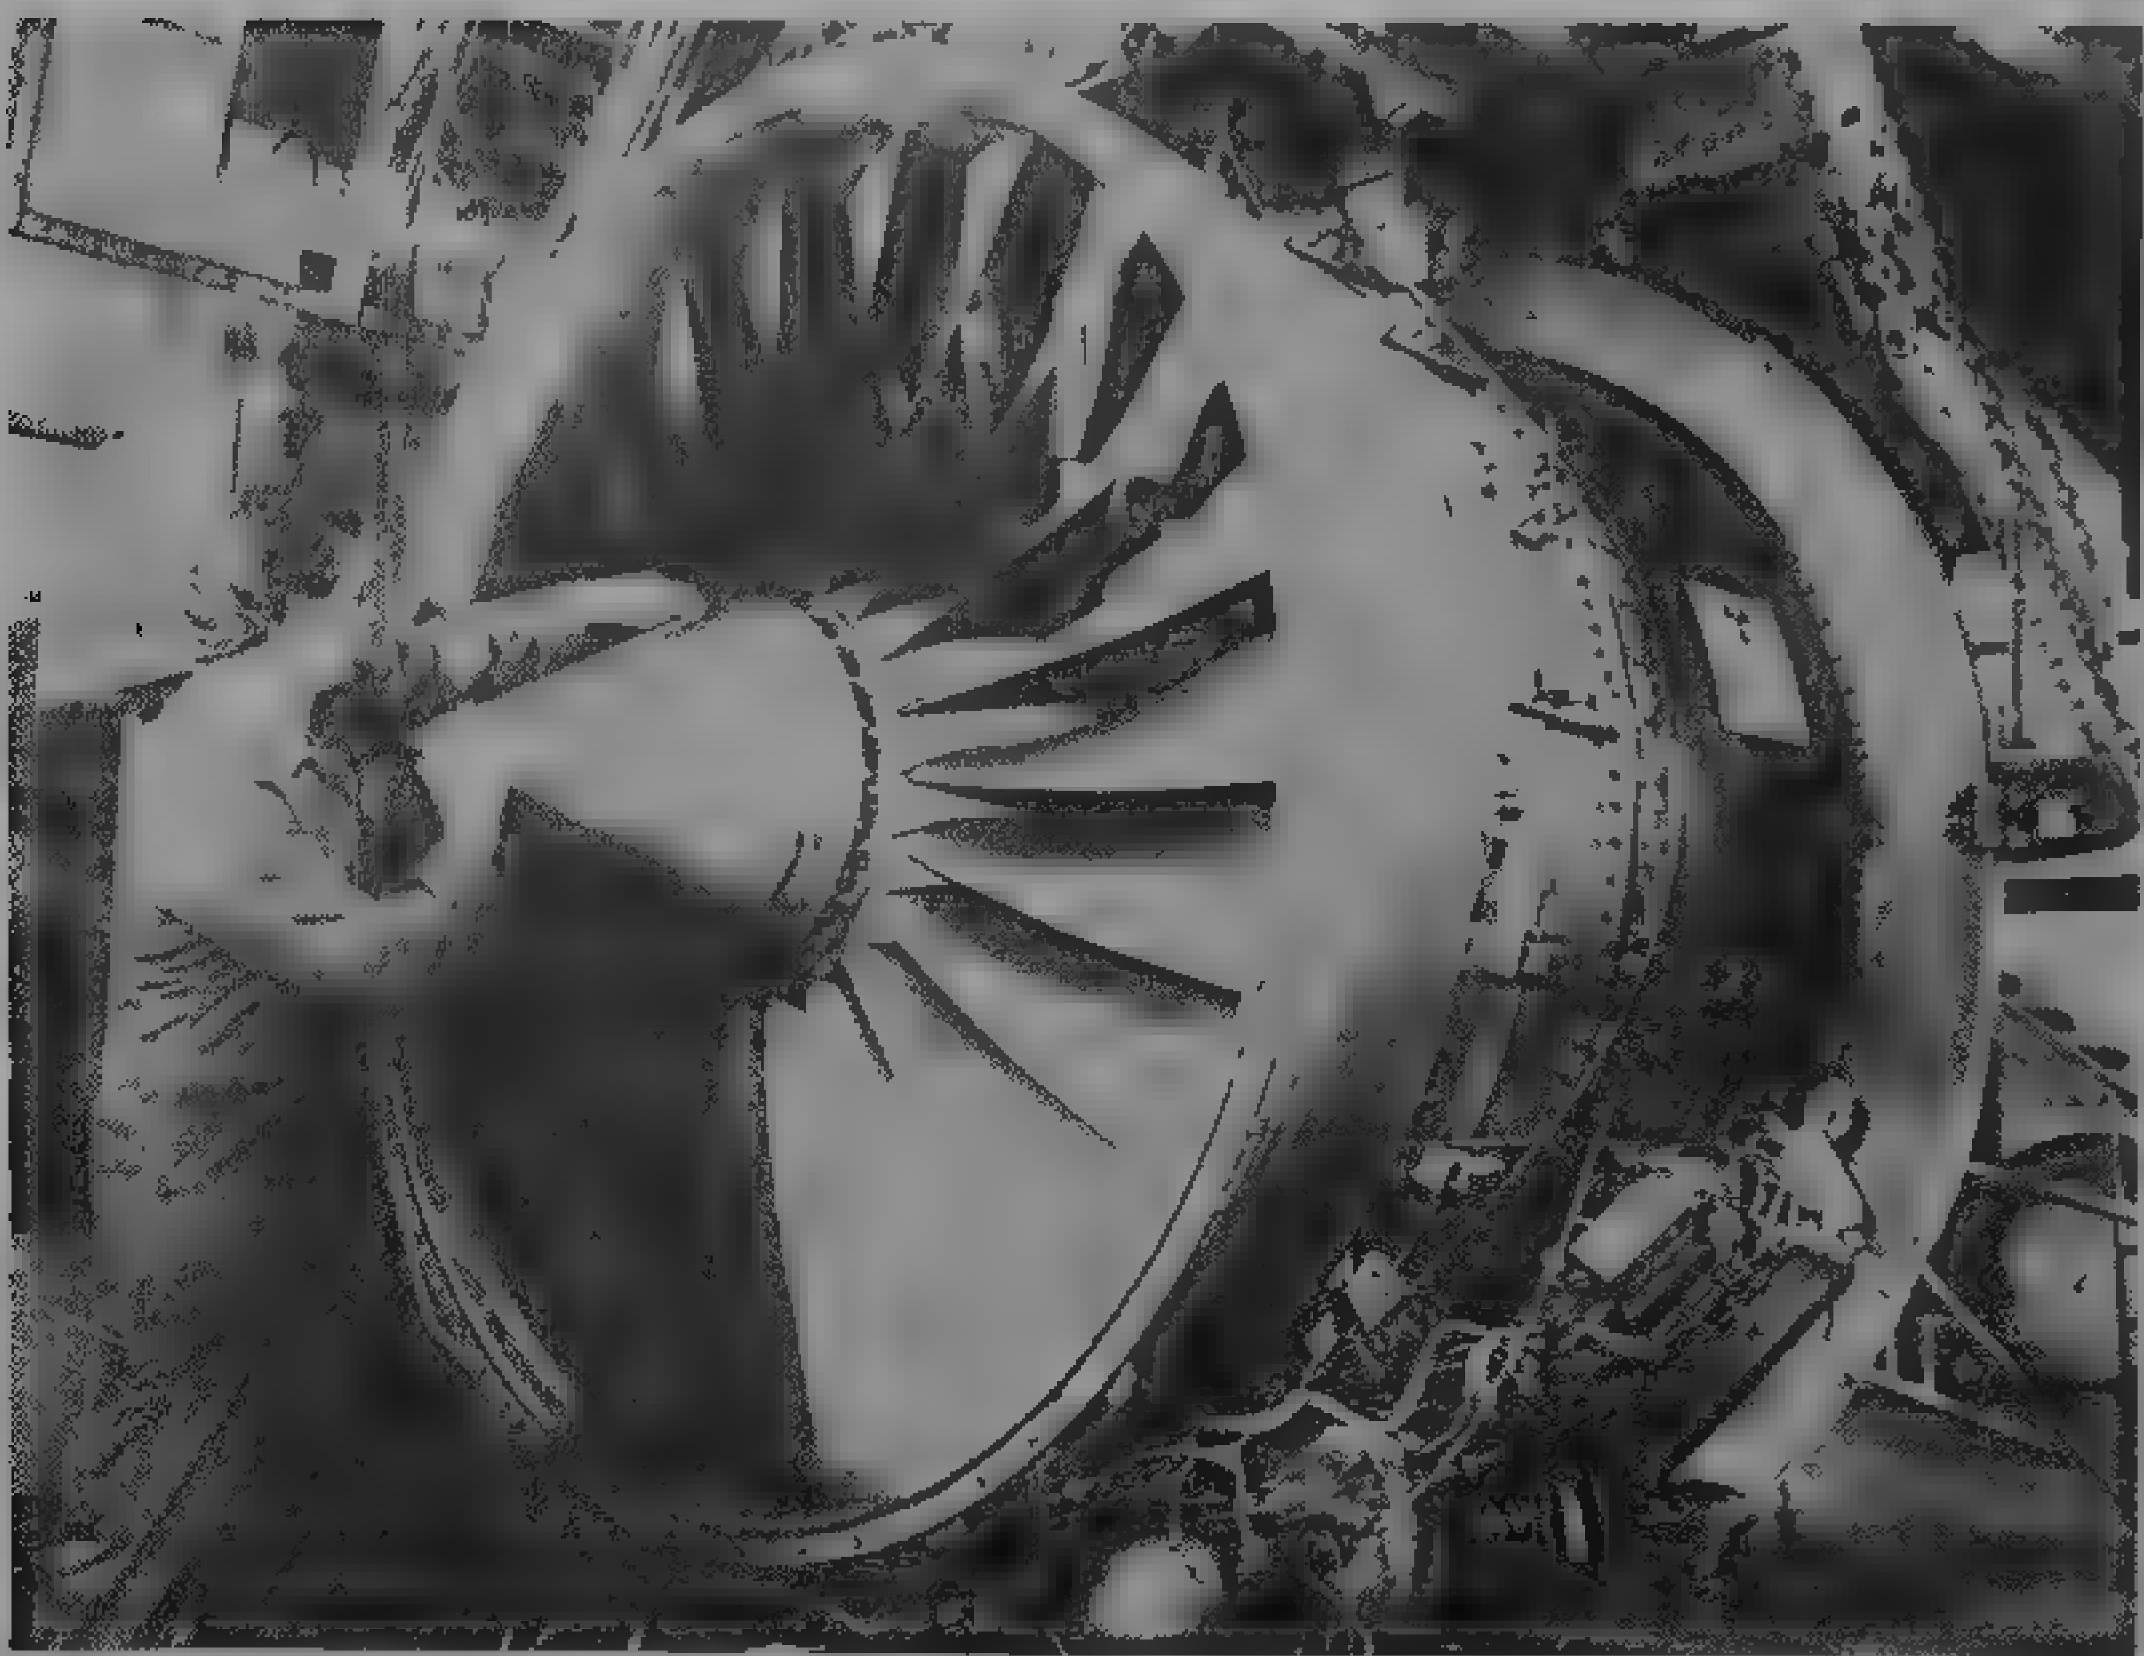
The **535E4** is an advanced version offering increased thrust, together with reduced fuel consumption relative to the 535C. The E4 allowed 757s powered by it to be cleared for 120 minute ETOPS in December 1986, extended to 180 minutes in 1990.

An uprated 535E4 entered service in August 1989. Its T-O rating of 192 kN (43,100 lb st) enables the 757 to carry heavier payloads from the most noise-sensitive airports. By April 1995 over 50 operators had exceeded 10 million hours on 535 engines, including over 1 million for ETOPS fleets. An America West engine was overhauled in 1995 after 24,100 hours of uninterrupted operation in 8,742 flights.



Longitudinal section and cutaway of Rolls-Royce 535E4

1989



Rolls-Royce 535E4 three-shaft turbofan

1984

The following description relates to the 535E4:

TYPE: Three-shaft turbofan.

FAN: Single stage, with only 22 wide-chord blades, without snubbers, each of activated diffusion bonded titanium skins on titanium honeycomb core. Fan case of Rohrbond with Kevlar containment. Mass flow 522 kg (1,150 lb)/second. Bypass ratio 4.3 (535C, 4.4).

IP COMPRESSOR: Six stages of controlled diffusion design. No variable vanes.

HP COMPRESSOR: Six stages of end-bend blading, with stage 4, 5 and 6 discs in titanium super alloy. Low expansion casing for improved tip clearance control. Overall engine pressure ratio 25.8 (535C, 21.1).

COMBUSTION CHAMBER: Annular, 18 airspray nozzles, flexible liner mountings, heatshields and thermal barrier coatings.

HP TURBINE: Single stage. Rotor blades, directionally solidified, cast with HP leading-edge cooling, HP and LP internal air cooling passages both with triple pass system. Nozzle guide vanes with curved stacking, highly cooled and with thermal barrier coating on platforms.

IP TURBINE: Single stage. Cooled NGVs with multilean stacking for improved air flow onto high-aspect ratio blades.

LP TURBINE: Three stages. All turbine casings double wall and cooled.

JETPIPE: Core and bypass flows mixed in integrated nozzle.

REVERSER: Fan reverser only. Jacks move translating cowl to rear, blocker deals seal fan duct and uncover cascade vanes. Over expansion reduces core thrust.

GEARBOX: Mounted under fan case, driven from HP spool.

DIMENSIONS:
Length: 535C 3,010 mm (118.5 in)
535E4 2,995 mm (117.9 in)
Inlet diameter: 535C 1,877 mm (73.9 in)
535E4 1,892 mm (74.5 in)

WEIGHT, DRY:
535C 3,309 kg (7,294 lb)
535E4 3,295 kg (7,264 lb)

PERFORMANCE RATINGS (note: flexible T-O ratings involving considerable derating are used in operation):
T-O (S/L, ISA): 535C 166.4 kN (37,400 lb st)
535E4 178.4-192 kN (40,100-43,100 lb st)
Max climb (10,670 m, 35,000 ft, Mach 0.80):
535C 40.1 kN (9,023 lb)
535E4 41.4 kN (9,300 lb)
Max cruise (10,670 m, 35,000 ft, Mach 0.80):
535C 37.6 kN (8,453 lb)
535E4 38.7 kN (8,700 lb)

SPECIFIC FUEL CONSUMPTION (cruise, as above):
535C 18.30 mg/Ns (0.646 lb/h/lb)
535E4 16.94 mg/Ns (0.598 lb/h/lb)

UPDATED

ROLLS-ROYCE RB168 SPEY

The RB168 military versions of the Spey are as follows:

Mk 101. Developed from civil Mk 505. Fitted to BAe Buccaneer.

Mk 202/203. Supersonic fighter engine with augmentation. Fitted to Phantom FG 1/FGR 2 and to Chinese H-7 (B-7) prototypes.

Mk 250/251. Fully marinised. Fitted to BAe Nimrod MR 1, R 1 and MR 2.

Mk 807. Mk 101 rotors within Mk 555 structure. Produced under licence in Italy with Brazilian participation for AMX aircraft.

DIMENSIONS:
Length: Mk 101 2,911 mm (114.6 in)
Mk 202, 203 5,204 mm (204.9 in)
Mk 250, 251 2,972 mm (117.0 in)
Mk 807 2,456 mm (96.7 in)
Diameter 825 mm (32.5 in)

WEIGHT, DRY
Mk 101 1,121 kg (2,471 lb)
Mk 202, 203 1,857 kg (4,093 lb)
Mk 250, 251 1,243 kg (2,740 lb)
Mk 807 1,096 kg (2,417 lb)
PERFORMANCE RATINGS (max T-O)
Mk 101, 807 49 1 kN (11,030 lb st)
Mk 202, 203: dry 54 5 kN (12,250 lb st)
augmented 91 2 kN (20,515 lb st)
Mk 250, 251 53 3 kN (11,995 lb st)

VERIFIED

ROLLS-ROYCE TAY

The Tay turbofan is designed around the core and external gearbox of the RB183 Mk 555. The LP system has been tailored to complement this by maintaining core inlet and outlet conditions similar to those of the original engine. The wide-chord fan and three-stage IP compressor are driven by a three-stage LP turbine which uses the latest proven technology. The cold bypass air and hot exhaust are combined in a forced mixer The bypass duct is carbonfibre composite The engine is completely modular

The initial production versions are the **Tay 611** and **620** The **Tay 650** gives a 9 per cent increase in maximum take-off thrust and a 15 per cent increase in maximum continuous, climb, and cruise thrusts, achieved by a small increase in fan diameter and an advanced HP turbine

The initial versions received certification from the CAA in June 1986 Over 1,200 Tay engines had accumulated 3 8 million hours in service by 1 January 1995. Certification of the Tay 650 was achieved ahead of schedule in June 1988

The Tay easily meets all current emission standards, and enables aircraft to comply with FAR Pt 36 Stage 3 noise requirements with large margins In six years of operation the Tay has been more reliable than any other civil engine

Tay 611. Selected for Gulfstream IV

Tay 620-15. Selected for Fokker 70 and 100

Tay 650-14. Selected to re-engine BAe One-Eleven

Tay 650-15. Specified for higher performance versions of Fokker 100 Entered service October 1989

Tay 651-54. Selected to re-engine 727-100

TYPE: Two-shaft turbofan

FAN: Single-stage with wide-chord blades. Diameter (620) 1,118 mm (44 in), (650) 1,138 mm (44.8 in)

LP COMPRESSOR: New design with three stages on fan shaft

HP COMPRESSOR Twelve-stage axial (RB183 Mk 555)

COMBUSTION CHAMBER Tubo-annular with 10 flame tubes each with one burner

FUEL SYSTEM: As RB183 Mk 555 but with improved fuel control unit

HP TURBINE All Mks except 650 and 651, two stages as RB183 Mk 555 Tay 650 and 651 advanced two-stage design.

LP TURBINE New design with three stages

BYPASS DUCT Carbonfibre composite

MIXER Forced deep chute type with 12 lobes

DIMENSIONS
Length: Tay 611, 620, 650, 651 2,405 mm (94 7 in)
Fan diameter: Tay 611, 620 1,118 mm (44 0 in)
Tay 650 1,138 mm (44 8 in)
WEIGHT DRY
Tay 611 1,422 kg (3,135 lb)
Tay 620 1,445 kg (3,185 lb)
Tay 650 1,515 kg (3,340 lb)
Tay 651 1,533 kg (3,380 lb)
PERFORMANCE RATING (T-O)
Tay 611, 620-15 61 61 kN (13 850 lb st) to 30°C
Tay 650 67 17 kN (15,100 lb st) to 30°C
Tay 651 68 51 kN (15 400 lb st) to 28°C
SPECIFIC FUEL CONSUMPTION (cruise)
Tay 611 (13,100 m; 43,000 ft, Mach 0 8)
20 1 mg/Ns (0.71 lb/h/lb)
Tay 620 and 650 (9,145 m, 30,000 ft, Mach 0.73)

ROLLS-ROYCE TYNE

The 4,549 ekW (6,100 ehp) Tyne two-shaft turboprop was produced by a consortium comprising SNECMA, MTU Techspace Aero and Rolls-Royce The Mk 21 engine powers the Atlantique and the Mk 22 the Transall. Upgrades are being considered

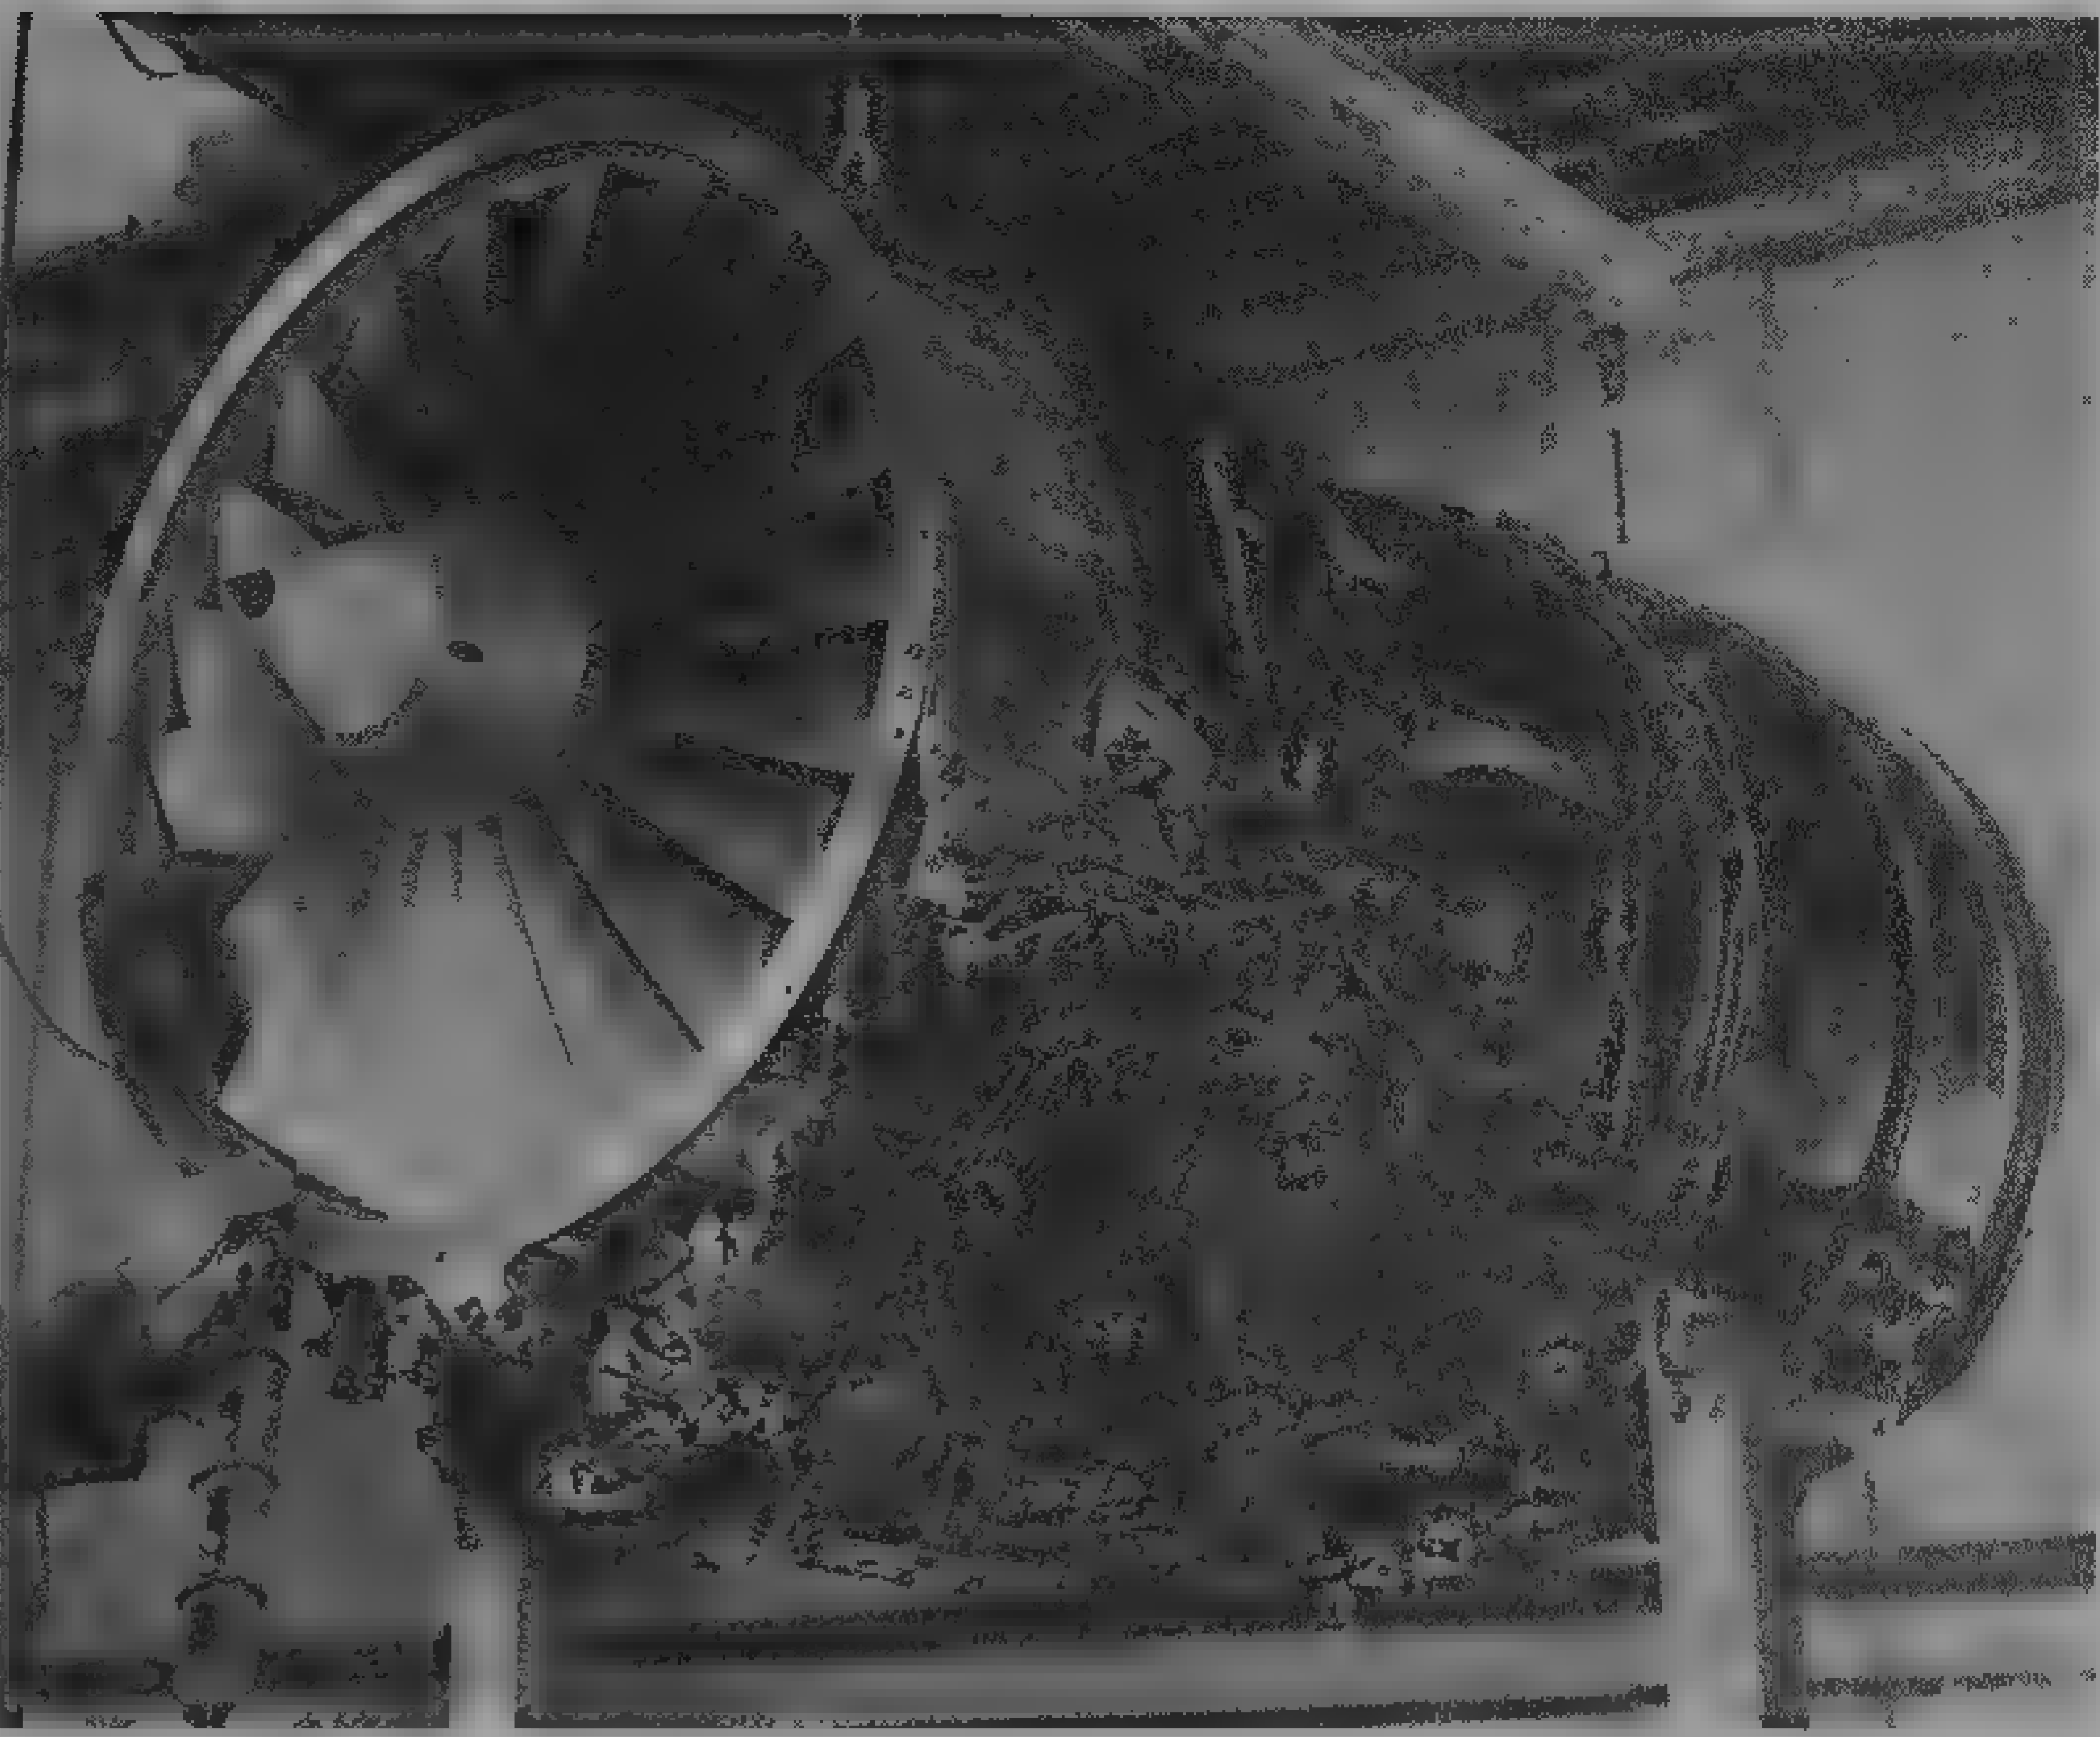
UPDATED

ROLLS-ROYCE VIPER

This turbojet remains in production More than 5,000 are in civil and military operation

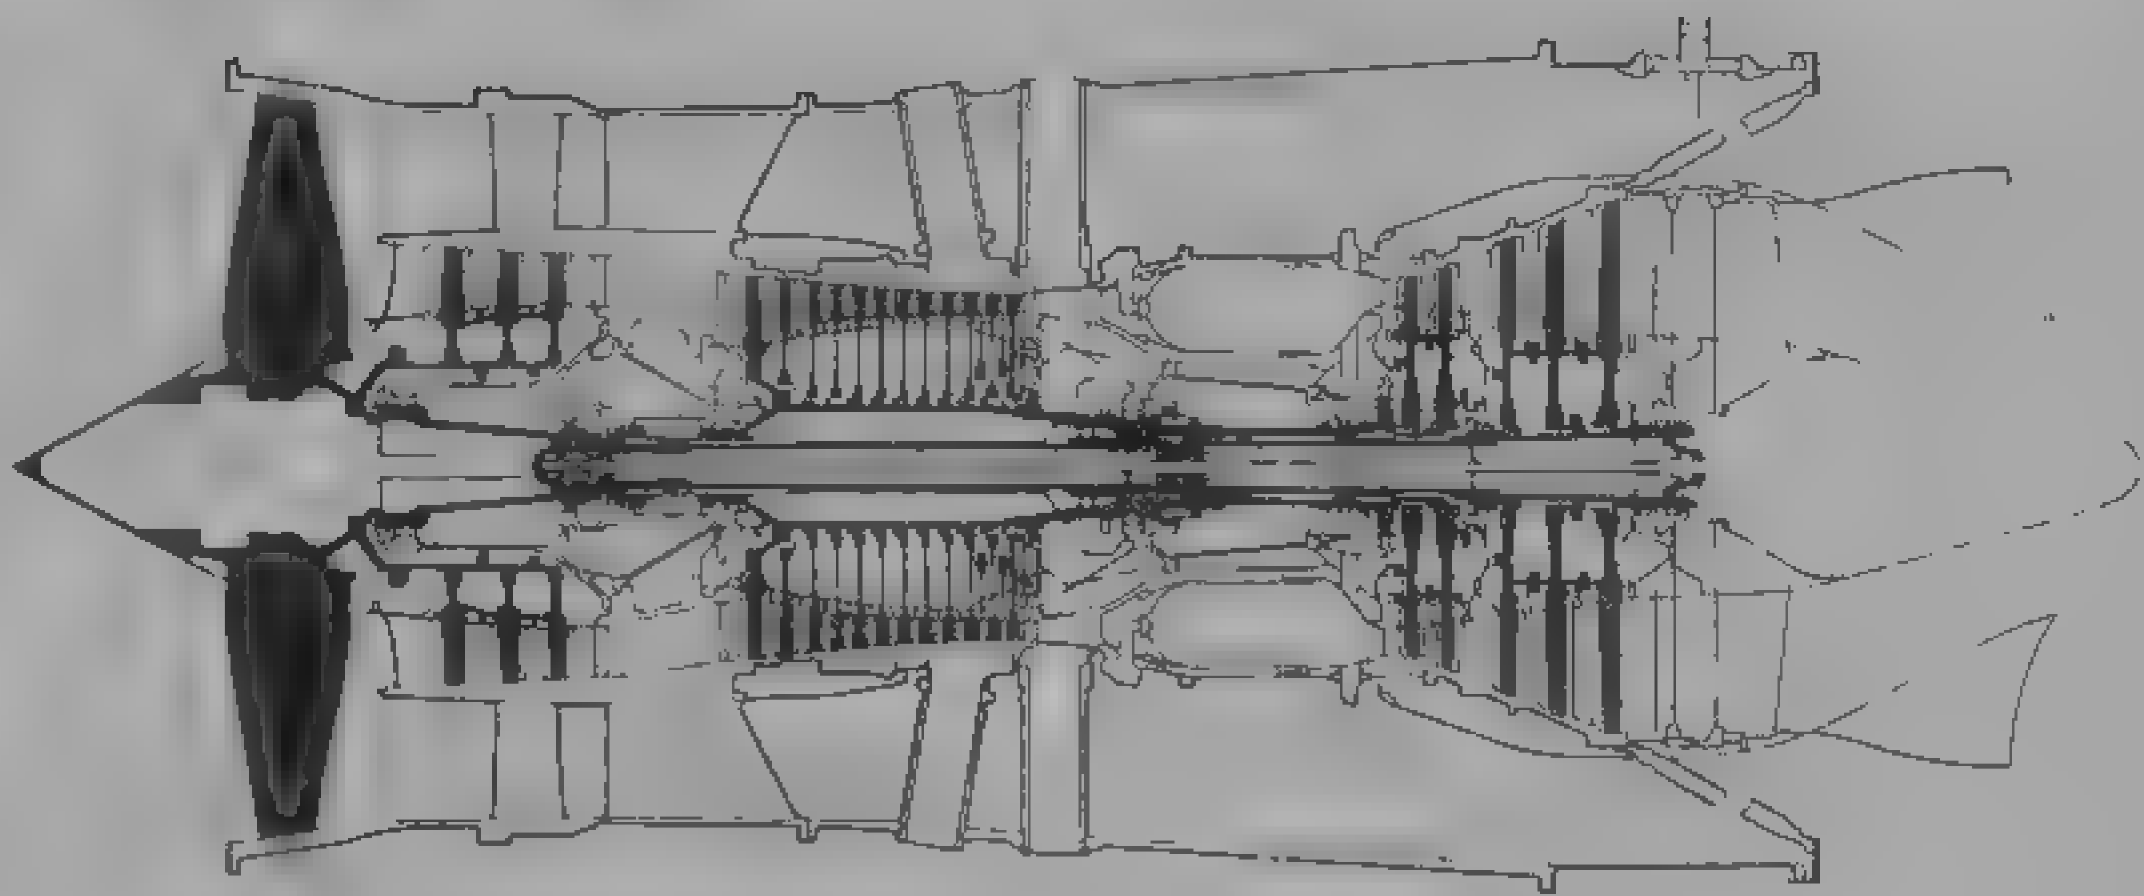
Current versions are as follows

Viper 11 (Mk 200 Series). Single-shaft seven stage axial compressor driven by single-stage turbine Mass flow 20 kg (44 lb)/s. Type tested at 11.12 kN (2,500 lb st) and powers Jindivik Mk 3 drone, Jet Provost T 4 and 5, SOKO Galeb and HJT-16 Kiran Mk I/IA Viper 202s from Jet Provosts are being converted to Mk 210C to power 18 new Jindivik targets from 1996



Rolls-Royce Tay two-shaft turbofan

1990



Longitudinal section of Rolls-Royce Tay 650 two-shaft turbofan

1995

A Viper 11 version, the 22 1, was built under licence in Italy by Piaggio and HDH of Australia for the Aermacchi MB-326

Viper 500 Series. Development with zero stage on compressor. Major applications include early HS 125 (Mks 521, 522) and PD 808 executive aircraft (Mk 526), and Strikemaster (Mk 535), MB-326 (Mk 540) and Jastreb (Mk 531) training and light combat aircraft. Mk 540 built under licence by Piaggio

Viper 600 Series. Eight stage compressor driven by two-stage turbine, annular vaporising combustion chamber Take-off rating 16.7 kN (3,750 lb st) civil and 17.8 kN (4,000 lb st, military Agreement signed with Fiat (Italy) in July 1969 for technical collaboration (see FiatAvio)

The civil Viper 601 powers the BAe 125-600; the military 632 is fitted to the G-4 Super Galeb, MB-326K and MB-339 The 632-41 powers the Orao/IAR-93A and IAR-99. The 632 is built under licence in Italy, Romania and former Yugoslavia. The 633 has an afterburner of the two-gutter type with hot streak ignition, rating 22 3 kN (5 000 lb st

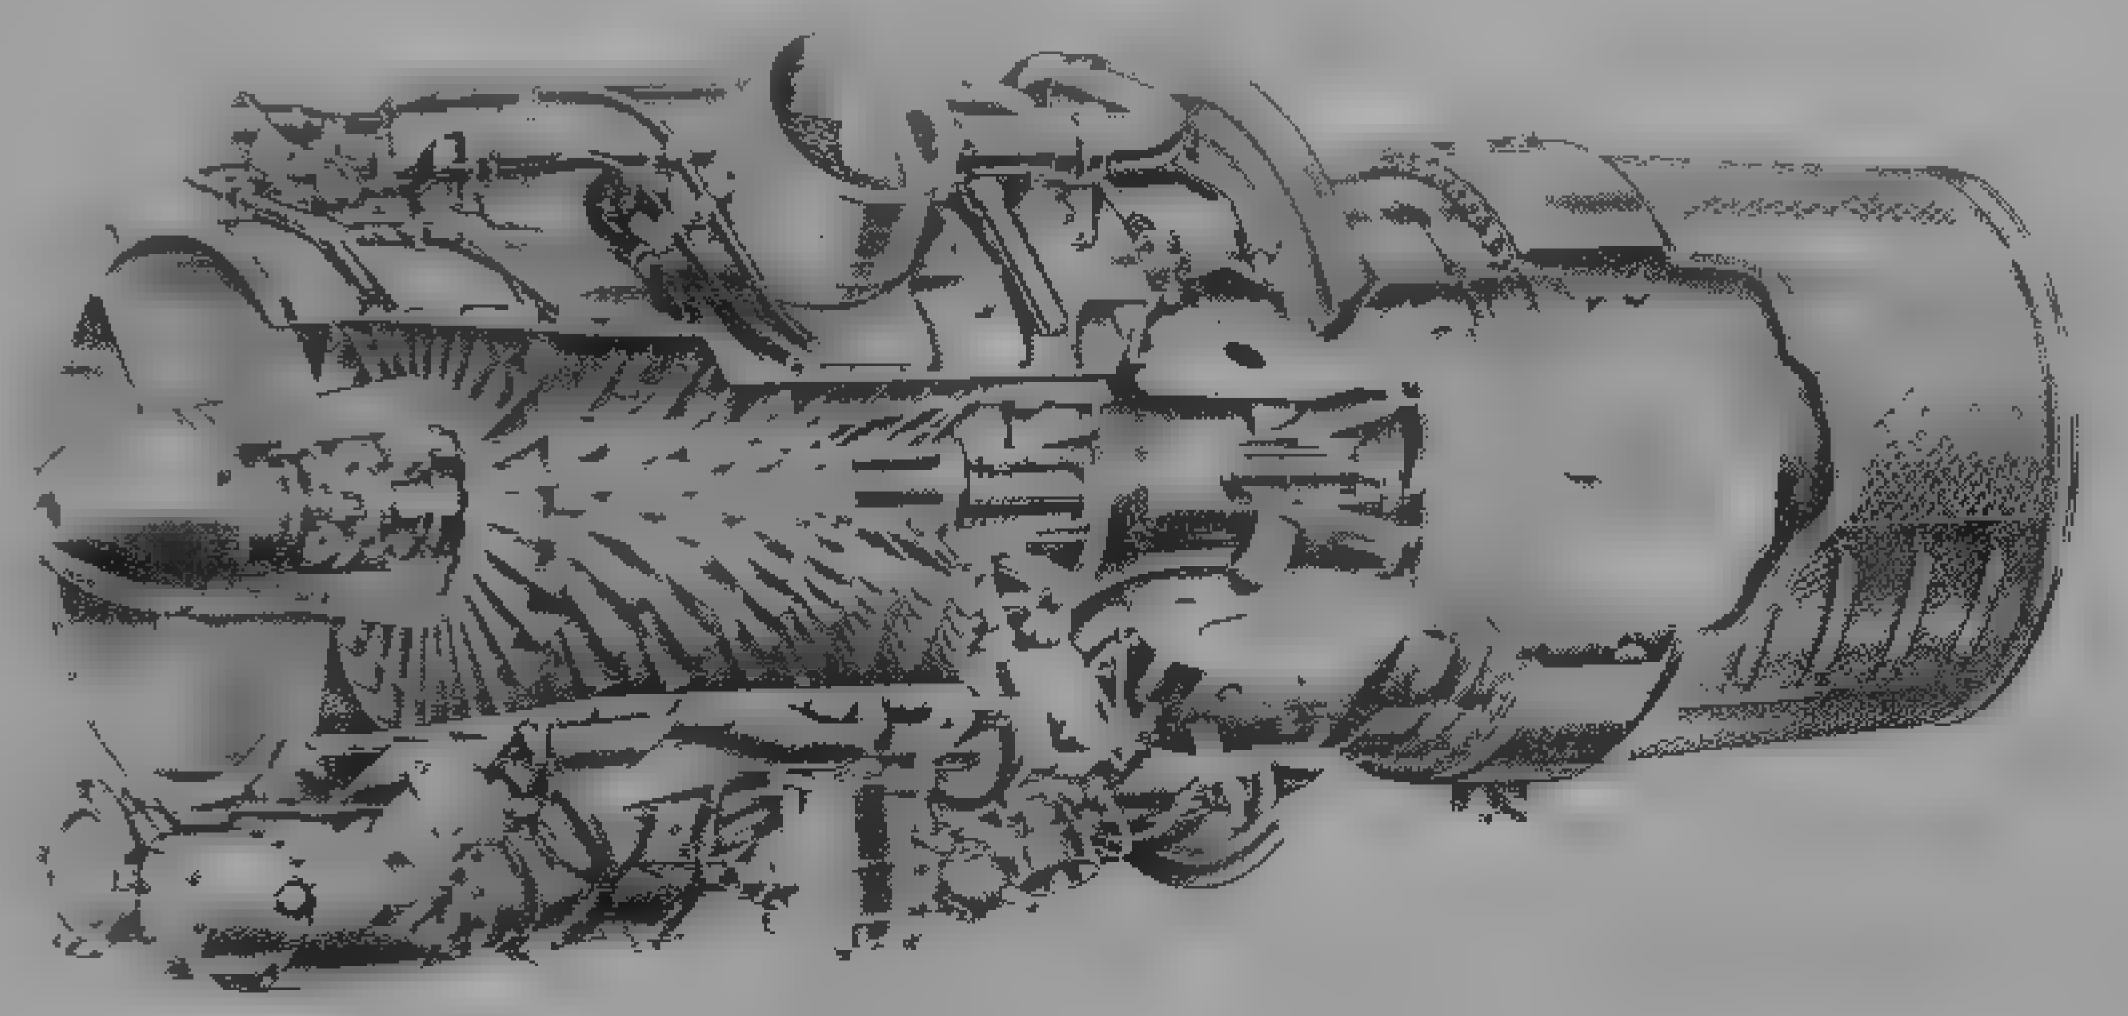
The **Viper 680** is the latest variant for the MB-339 It produces 10 per cent more thrust than the Viper 632

The following details apply to the Viper 600 Series

TYPE Single-shaft axial turbojet

COMPRESSOR. Eight-stage. Steel drum type rotor with disc assemblies. Magnesium alloy casing with blow-off valve

COMBUSTION CHAMBER Short annular type with 24 vaporising burners and six starting atomisers Electric ignition



Cutaway drawing of Rolls-Royce Viper 632 single-shaft turbojet

1980

FUEL SYSTEM: Hydromechanical, with pump, barometric control and air/fuel control
TURBINE: Two-stage axial. Shrouded blades attached to discs by fir-tree roots and locking strips
ACCESSORY DRIVES: Gearbox driven from front of compressor by bevel gear
LUBRICATION SYSTEM: Self-contained recirculatory system. Military version fully aerobatic
STARTING: 24 V starter/generator
DIMENSIONS:

Length (flange to flange)	
Viper 531, 535, 632, 680	1,806 mm (71.1 in)
Max width	749.3 mm (29.5 in)
Height	901.7 mm (35.5 in)

WEIGHT, DRY:

Viper 11	281 kg (620 lb)
Viper 531, 535, 540	358 kg (790 lb)
Viper 601, 632	376.5 kg (830 lb)
Viper 680	379 kg (836 lb)

PERFORMANCE RATINGS (T-O):

Viper 11	11.12 kN (2,500 lb st)
Viper 531	13.9 kN (3,120 lb st)
Viper 535, 540	14.9 kN (3,360 lb st)
Viper 601	16.7 kN (3,750 lb st)
Viper 632	17.66 kN (3,970 lb st)
Viper 680	19.39 kN (4,360 lb st)

SPECIFIC FUEL CONSUMPTION (T-O):

Viper 11	30.3 mg/Ns (1.07 lb/h/lb st)
Viper 500 series	28.3 mg/Ns (1.00 lb/h/lb st)
Viper 601	26.9 mg/Ns (0.95 lb/h/lb st)
Viper 632	27.5 mg/Ns (0.97 lb/h/lb st)

UPDATED

ROLLS-ROYCE PEGASUS

USMC designation: F402

The Pegasus is a two-shaft turbofan designed for short take-off/vertical landing (STOVL) applications. It powers all versions of the Harrier attack aircraft. The Pegasus provides both lift and propulsive thrust through four swivelling exhaust nozzles which vector engine thrust from horizontal for conventional (wingborne) flight, to vertical, for jetborne flight. To minimise aircraft control problems in jetborne flight, thrust is divided between the engine nozzles to ensure the resultant thrust passes through a fixed point irrespective of nozzle angle. LP and HP spools rotate in opposite directions, to minimise gyroscopic effects, and HP bleed air is used for aircraft stabilisation.

The Pegasus entered service in the BAe Harrier in 1969 as the Pegasus 6 Mk 101, progressing through Pegasus 10 Mk 102 in 1971 to **Pegasus 11 Mk 103** by 1974.

The Pegasus 11-21 was developed for the McDonnell Douglas/BAe Harrier II. Developed from the Pegasus 11, the 11-21 provided much improved reliability, a substantially reduced maintenance burden and offered a small thrust increase. Delivery of Pegasus 11-21 began in December 1984. Since 1986 Pegasus 11-21 engines for the Harrier II AV-8B and GR.5/7 have been fitted with FADEC.

The latest production version is the 11-61, offering higher thrust, up to 15 per cent more than 11-21 at high ambient temperatures. To reduce the cost of engine ownership the 11-61 has twice the overhaul life of the 11-21. Maintenance activity is minimised through use of proven digital engine control and engine monitoring systems, improved inspection facilities and modular construction.

Total Pegasus experience exceeds 1 million hours on over 1,000 engines. Principal in-service engine designations:

Engine Mark	Operator	Designation
Pegasus 11	Royal Navy	Mk 103
		Mk 104
	Spanish Navy	Mk 150
	Indian Navy	Mk 151-32
Pegasus 11-21	Royal Air Force	Mk 105
	Royal Navy	Mk 106
	US Marine Corps	F402-RR-406A
	Spanish Navy	Mk 152-42
Pegasus 11-61	US Marine Corps, Spanish Navy and Italian Navy	F402-RR-408A

The following details apply to the Pegasus 11-61.
TYPE: Two-shaft vectored thrust turbofan.
FAN: Three-stage, overhung ahead of front bearing. Titanium alloy blades with advanced circumferential snubbers.
HP COMPRESSOR: Eight-stage with titanium alloy rotor blades and discs.
COMBUSTION SYSTEM: Annular with 'T shaped' fuel vaporisers.
FUEL SYSTEM: FADEC comprising duplicated digital engine control units (DECU) and a hydromechanical fuel metering unit (FMU). FMU includes a cockpit selectable manual fuel control system.
TURBINES: Two-stage cooled HP turbine incorporating single-crystal blading. Two-stage uncooled LP turbine with single-crystal material in first stage.
THRUST NOZZLES: Two fabricated steel zero-scarf front (cold) nozzles and two Nimonic rear (hot) nozzles rotated simultaneously by bleed air driven air motor under pilot command.
LUBRICATION SYSTEM: Self-contained with fuel-cooled oil cooler.
STARTING: Gas-turbine starter/APU driving through engine gearbox.
DIMENSIONS:

Width, including nozzles	2,510 mm (98.8 in)
Length, including nozzles	3,485 mm (137.2 in)
Diameter, intake	1,222 mm (48.1 in)
WEIGHT, DRY (including nozzles):	1,932 kg (4,260 lb)
PERFORMANCE RATING (T-O, S/L, static):	
Pegasus 11-61	106 kN (23,800 lb st)

VERIFIED

ROLLS-ROYCE GEM

The Gem was developed for the Westland Lynx helicopter. Current applications are in the Westland Super Lynx and Agusta A 129. The Gem 41 series has been civil certified. The choice of a two-spool gas generator gives fast response to power demand without the need for a complex control system. There are seven major modules, each assembled, tested and released as an interchangeable unit.

The following versions are in use:

Gem 2 Series. Mk 1001 for Brazilian Navy; no longer in production. Mk 1004 for A 129. Direct drive in place of reduction gearbox and electronic instead of hydromechanical control. Production under licence by Piaggio. Rated at 671 kW (900 shp).

Gem 41 Series. Modified compressor to increase mass flow by about 10 per cent plus small increase in TET. Mk 202 for French Navy (converting to Gem 42). Mk 101 for German Navy. Rated at 746 kW (1,000 shp). Engines no longer in production.

Gem 42 Series. Improved reliability and power retention over Gem 41. Current production standard for Westland Super Lynx. Mks 204, 205 for British forces (new and conversion engines). Mk 1017 in service from new with two operators and following conversion with four more. Rated at 746 kW (1,000 shp).

Gem 43 Series. As Gem 41 with added electronic engine control. Mk 1020 for Nigerian Navy. Rated at 746 kW (1,000 shp).

Cutaway drawing of Rolls-Royce Gnome H.1400-1 free turbine turboshaft
1979

ROLLS-ROYCE GNOME

General Electric T58 developed by Rolls-Royce under licence. More than 2 300 have been delivered in the following versions

H 1000 Initial version, rated at 783 kW (1,050 shp) for Whirlwind and Agusta-Bell 204B

H 1200. Rated at 932 kW (1,250 shp) Used in Agusta-Bell 204B, Boeing 107 and some Kawasaki KV107-II 5s Coupled version for Wessex comprises two H 1200s driving through a coupling gearbox

H.1400. Rated at 1,044 kW (1,400 shp). Based on the H 1200, with modified compressor to increase air flow

H 1400-1. Rated at 1,145 kW (1,535 shp) Increased gas-generator speed and improved gas-generator turbine blades In production for Sea King and Commando

H 1400-1T. Tropical model, turbine nozzle adjusted for better high-ambient performance

The following description refers to the H 1400-1
TYPE Free turbine turboshaft
COMPRESSOR: Ten-stage axial Variable inlet guide vanes and first three stator rows. Mass flow 6.26 kg (13 8 lb)/s
COMBUSTION CHAMBER Annular with 16 Simplex injectors, eight on each of two sets of manifolds One Lodge high-energy igniter
FUEL SYSTEM. Lucas hydromechanical controlled by HSDE computer
FUEL GRADE DERD 2452, 2453, 2454, 2486, 2494 and 2498 (NATO F44, F34, F40, F35 and F43)
GAS PRODUCER TURBINE Two-stage
POWER TURBINE Single-stage free turbine
REDUCTION GEAR Optional double helical gear providing reduction from nominal 19,500 rpm power turbine speed to 6,600 rpm at left or right output shaft
ACCESSORY DRIVES. Fuel and lubrication systems mounted beneath compressor casing. Power take-off shaft up to 100 shp
LUBRICATION Scavenged gear pumps Serck oil cooler
STARTING Rotax electric starter in nose bullet
DIMENSIONS (H 1400-1)
Length 1,392 mm (54.8 in)
Max height 549 mm (21 6 in)
Max width 577 mm (22 7 in)
WEIGHT DRY

This company manages the plant at the above address making what were marketed as Garrett engines It is also a partner in two collaborative enterprises, LHTEC which produces the T800 helicopter engine and CFE which produces the CFE738 turbofan, both of which are listed alphabetically in this section.

NEW ENTRY

ALLIEDSIGNAL ATF3

US military designation: F104-GA-100

The ATF3 was the first engine to combine three-spool design with a reverse flow combustion system and turbines, and mixed flow exhaust A total of 216 were delivered Details appeared in the 1994-95 *Jane's*

UPDATED

ALLIEDSIGNAL TFE109

US military designation: F109-GA-100

Based on the core of the T76/TPE331 turboprops, with performance improvements, this turbofan was selected in July 1982 as the engine of the US Air Force's Fairchild T-46A This was subsequently cancelled, but the engine was certificated and a small number of production engines delivered Details appeared in the 1994-95 *Jane's*

UPDATED

ALLIEDSIGNAL TFE731

Announced in April 1969, the TFE731 is a two-spool geared turbofan designed for business jet aircraft. Use of a geared fan confers flexibility in operation and yields optimum performance at up to 15,545 m (51,000 ft).

TFE731-2. First production model Deliveries for the Falcon 10 took place in August 1972. Also powers CASA C-101, IA 63 and AT-3 Dash 2A powers Chinese K 8 and -2B powers Pampa 2000, in each case with digital control.

TFE731 3 Increased turbine temperature First delivered in 1974 for re-engined JetStar II Also selected for the Learjet 54/56, Cessna Citation III, Dassault Falcon 50, BAe 125-700, IAI Westwind 1 and 2 and Astra, Rockwell International's Sabreliner 65A, CASA C 101 and IA 63

TFE731 4 Powers Citation VII Certificated late 1991 Powers Czech L-139 with digital control

TFE731-5. Higher bypass ratio fan, driven by new LP turbine. Digital control Certificated in November 1983 for BAe (Hawker) 125-800 and CASA C 101

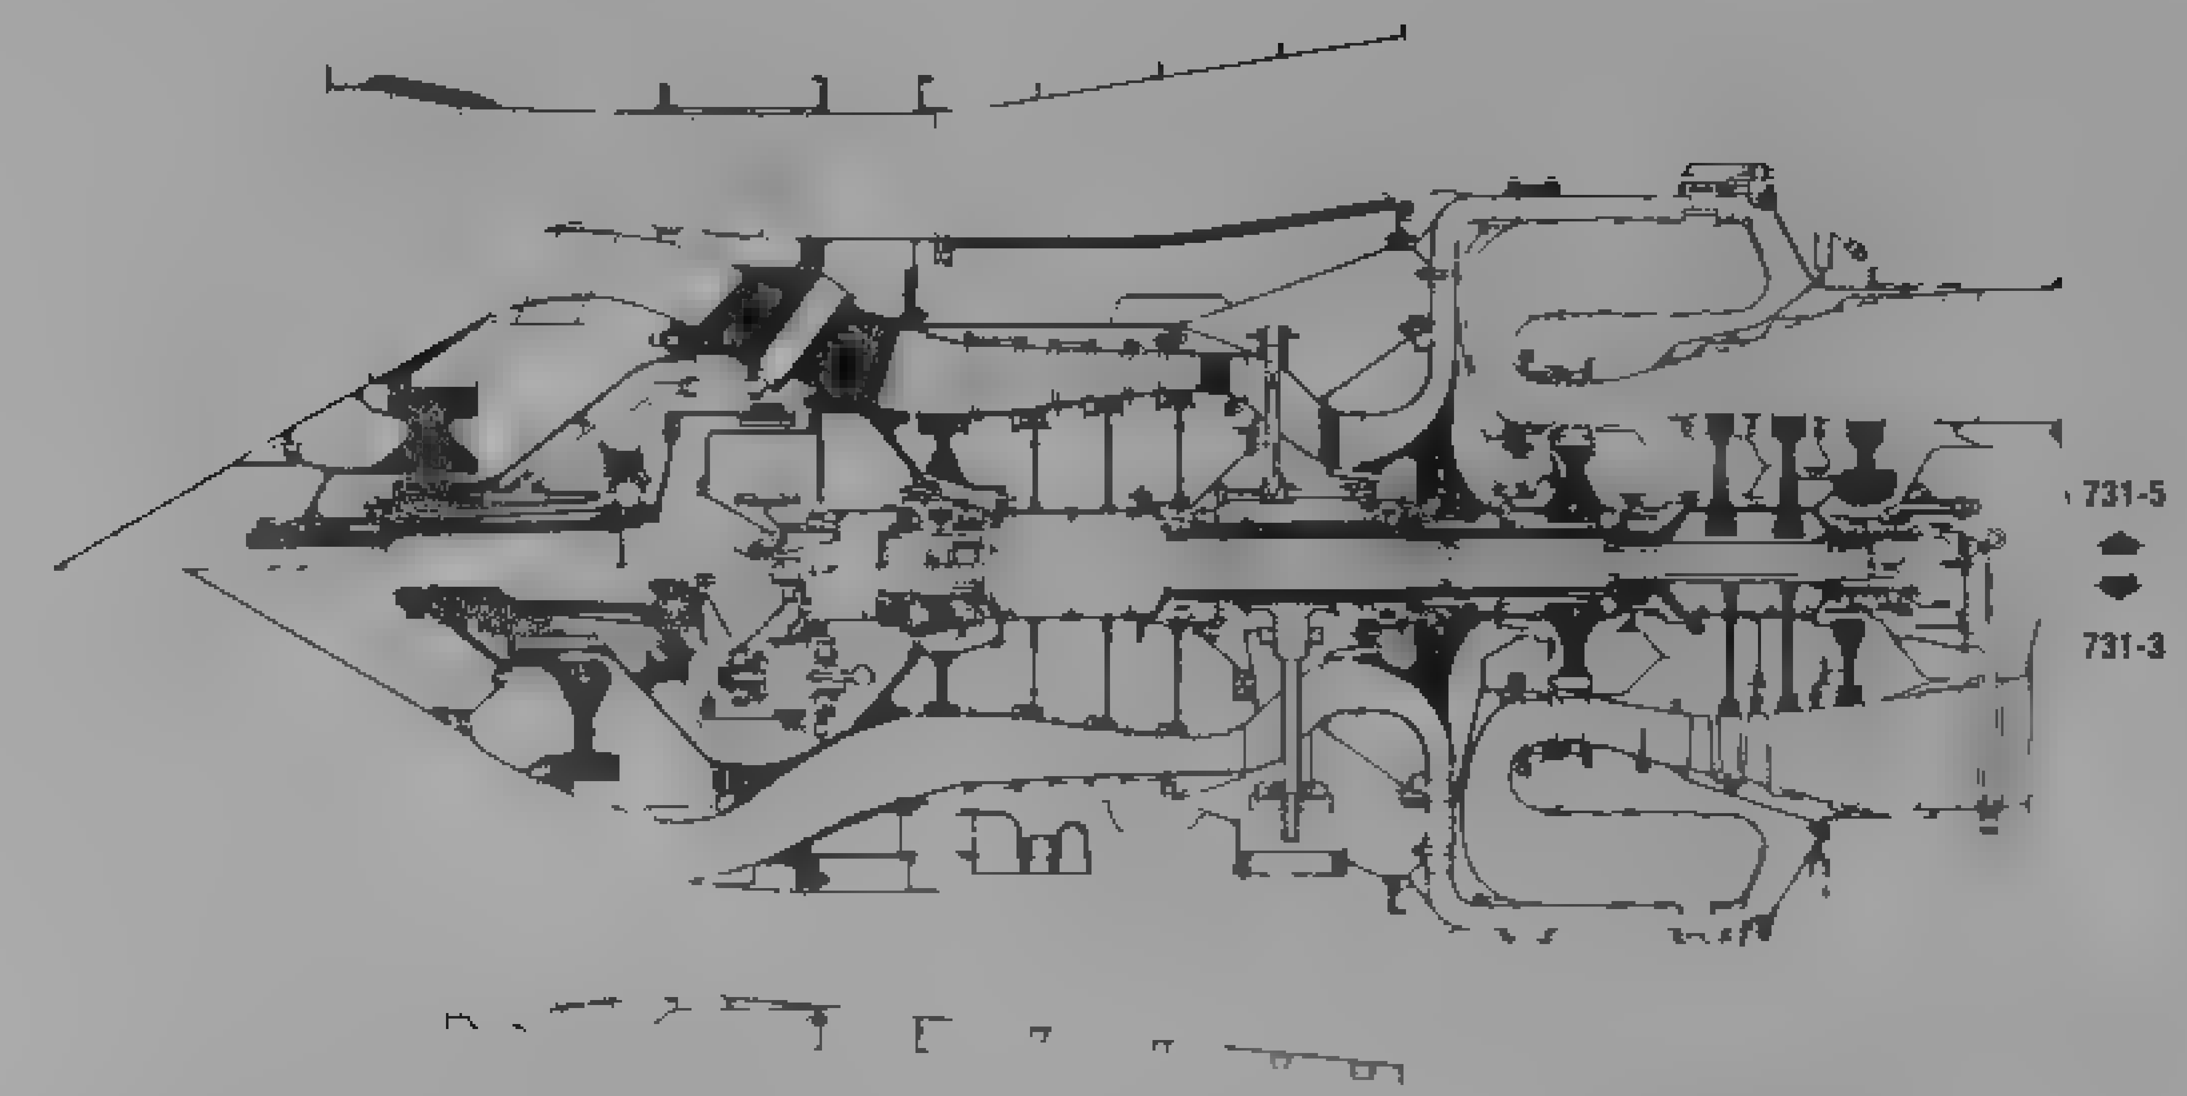
TFE731-5A. Mixer nozzle reducing sfc and raising standard thrust to that of the APR rating Certificated in December 1984 for Dassault Falcon 900, and offered as retrofit for Falcon 20 Volvo Aero has a 5 6 per cent share of the 731 5 production programme.

TFE731 5B Uprated version, certificated in 1990 for Falcon 900B and Falcon 20 retrofit 5BR for Hawker 800XP

TFE731 20 First of new series scheduled for certification 1995 Changes include smaller 5 fan, new HP compressor, HP turbine and gearbox, FADEC. Selected for Learjet 45.

Over 7,020 engines in service by early 1994 had flown a total of 27,100,000 hours

TYPE Turbofan with two shafts and geared front fan
FAN Single stage axial titanium fan, with inserted blades. The fan shaft is connected directly to the planetary gearbox ring gear. Mass flow, sea level static, TFE731-2, 51 25 kg (113 lb)/s; 3, 53.7 kg (118 3 lb)/s; -5, 64 86 kg (143 lb)/s, 20, 55 8 kg (123 lb)/s Bypass ratio, -2, 2 66, 3, 2 80; -5, 3.48, -20, 3 70



Longitudinal section of AlliedSignal TFE731-5 (top half) and TFE731-3 (bottom half) geared turbofans *1985*

COMPRESSOR. Four-stage LP, followed by centrifugal HP on separate shaft running at higher speeds. Overall pressure ratio (S/L, static): -2, 14.0; -3, 14.6; -20, 14.3

COMBUSTION CHAMBER: Annular reverse flow type, with 12 nozzles injecting tangentially. Meets EPA/FAA emission requirements

FUEL SYSTEM. Hydro-electronic, with single lever control; -20, FADEC. All engines have hydromechanical back-up

TURBINES. Single-stage HP and three-stage LP. Average HP turbine gas temperature (S/L, maximum T-O, -2, 860°C; -3 [illegible]; -5 [illegible]; -20, 941°C

ACCESSORY DRIVES. Pads provided for hydraulic pump, starter/generator or starter motor and alternators. Pads on rear side of drive fuel control and oil pump

UPDATED

ITEC TFE1042-70

US military designations: Dry F124-GA-100, afterburning F125-GA-100

This engine was developed by the ITEC (International Turbine Engine Co) as the power plant of the AIDC Ching Kuo IDF (Indigenous Defensive Fighter). Fully modular, it has matured as a family of engines to be marketed by AlliedSignal. The basic engine, the 1042-70, had by 1994 completed over 18 000 hours of testing. Initial flight release was achieved in February 1989, with full qualification in September 1991; production deliveries began a month later.

The following are existing and planned versions:

TFE1042-70. Basic version, in production by ITEC for Ching-Kuo IDF. Description below applies to this version.

F125-GA-100. Similar to TFE1042-70. Being marketed at 26.8 kN (6,025 lb st) intermediate thrust and 41.15 kN (9,250 lb st) maximum.

F125X. Near-term growth version. Maximum rating 54.49 kN (12,250 lb st).

F125XX. Long-term growth engine. Maximum thrust 71.17 kN (16,000 lb st).

F124-GA-100. A non-afterburning version of the F125, the F124 is being offered for advanced trainer and light combat aircraft. Air flow 42.7 kg (94.1 lb)/s, length 1,925 mm (75.8 in), T-O rating 28.02 kN (6,300 lb st). Selected for export Aero L-39.

F124X. F124 near-term growth engine. Maximum thrust 36.12 kN (8,120 lb st).

F124XX. F124 long-term growth engine. Maximum thrust 51.16 kN (11,500 lb st).

Data for 1042-70:

TYPE: Two-shaft augmented turbofan

FAN: Three stages with rotating spinner. Maximum air flow 43.29 kg (95.4 lb)/s. Bypass ratio 0.3

COMPRESSOR: Four axial stages followed by one centrifugal

COMBUSTION CHAMBER: Annular

TURBINES. Single-stage air-cooled HP and LP turbine.

AUGMENTOR. Reheat in bypass and core flows. Three mechanical actuators drive 10-flap variable nozzle.

DIMENSIONS
Inlet diameter — 591 mm (23.25 in)
Length — 3,561 mm (140.2 in)
Max nozzle diameter — 782 mm (30.8 in)

WEIGHT, DRY: — 617 kg (1,360 lb)

PERFORMANCE RATINGS
Intermediate — 26.80 kN (6,025 lb st)
Max augmented — 41.15 kN (9,250 lb st)

SPECIFIC FUEL CONSUMPTION
TFE1042-70 (intermediate) — 22.66 mg/Ns (0.80 lb/h/lb st)

UPDATED

ALLIEDSIGNAL TPE331

US military designation: T76

Based upon experience with APUs, this was the first Garrett engine for aircraft propulsion. Deliveries of all versions exceed 13,000.

The following are major versions:

TPE331 series I, II. FAA certificated in February 1965. Rated at 451 ekW, 429 kW plus 0.33 kN (605 ehp, 575 shp plus 75 lb st). Redesignated **TPE331-25/61** and **-25/71** and produced until 1970. Powers MU-2 (A to E models), Porter, Jet Liner, Super Turbo 18, FU-24, Hawk Commander and 680, and Turbo Beaver.

TPE331-1 series. Certificated December 1967 at 526 ekW, 496 kW plus 0.44 kN (705 ehp, 665 shp plus 100 lb st). Powers MU-2 (F and G), Turbo-Porter and AU-23A Peacemaker, CJ600, Turboliner, Interceptor 400, Turbo Commander and (customer option) Thrush Commander, Merlin IIB and Fletcher 1284, Turbo Thrush and Turbo Ag-Cat.

TPE331-2 series. Certificated in December 1967 at 563 ekW; 533 kW plus 0.45 kN (755 ehp, 715 shp plus 102 lb st). Powers Skyvan, CASA 212 preseries, Turbo Goose and Turbo Beaver.

TPE331-3 series. Certificated in March 1970 at 674 ekW, 626 kW plus 0.71 kN (904 ehp, 840 shp plus 159 lb st). Uprated gas generator with increased air flow and pressure ratio, but same turbine temperature as in original TPE331. Powers Merlin III, IV and Metro, and Jetstream III.

TPE331-5/6 series. The -5 was certificated in March 1970; this matches the gas generator of the -3 with the 715 shp gearbox, and is flat rated to 2,135 m (7,000 ft). Powers MU-2, King Air B100 (-6), CASA 212 (-5), Dornier 228 (-5), and Commander 840/900. The -5 designation indicates output speed of 1,591 rpm; the -6 has an output speed of 2,000 rpm.

TPE331-8. Matches compressor and gearbox of -3 with new turbine section. Thermodynamic power of 676 ekW, 645 kW (905 ehp; 865 shp) plus 0.47 kN (105 lb st), but flat rated at 533 kW (715 shp) to 36°C. Certification was received in November 1976. Powers Conquest II.

TPE331-9. Thermodynamic rating 645 kW (865 shp).

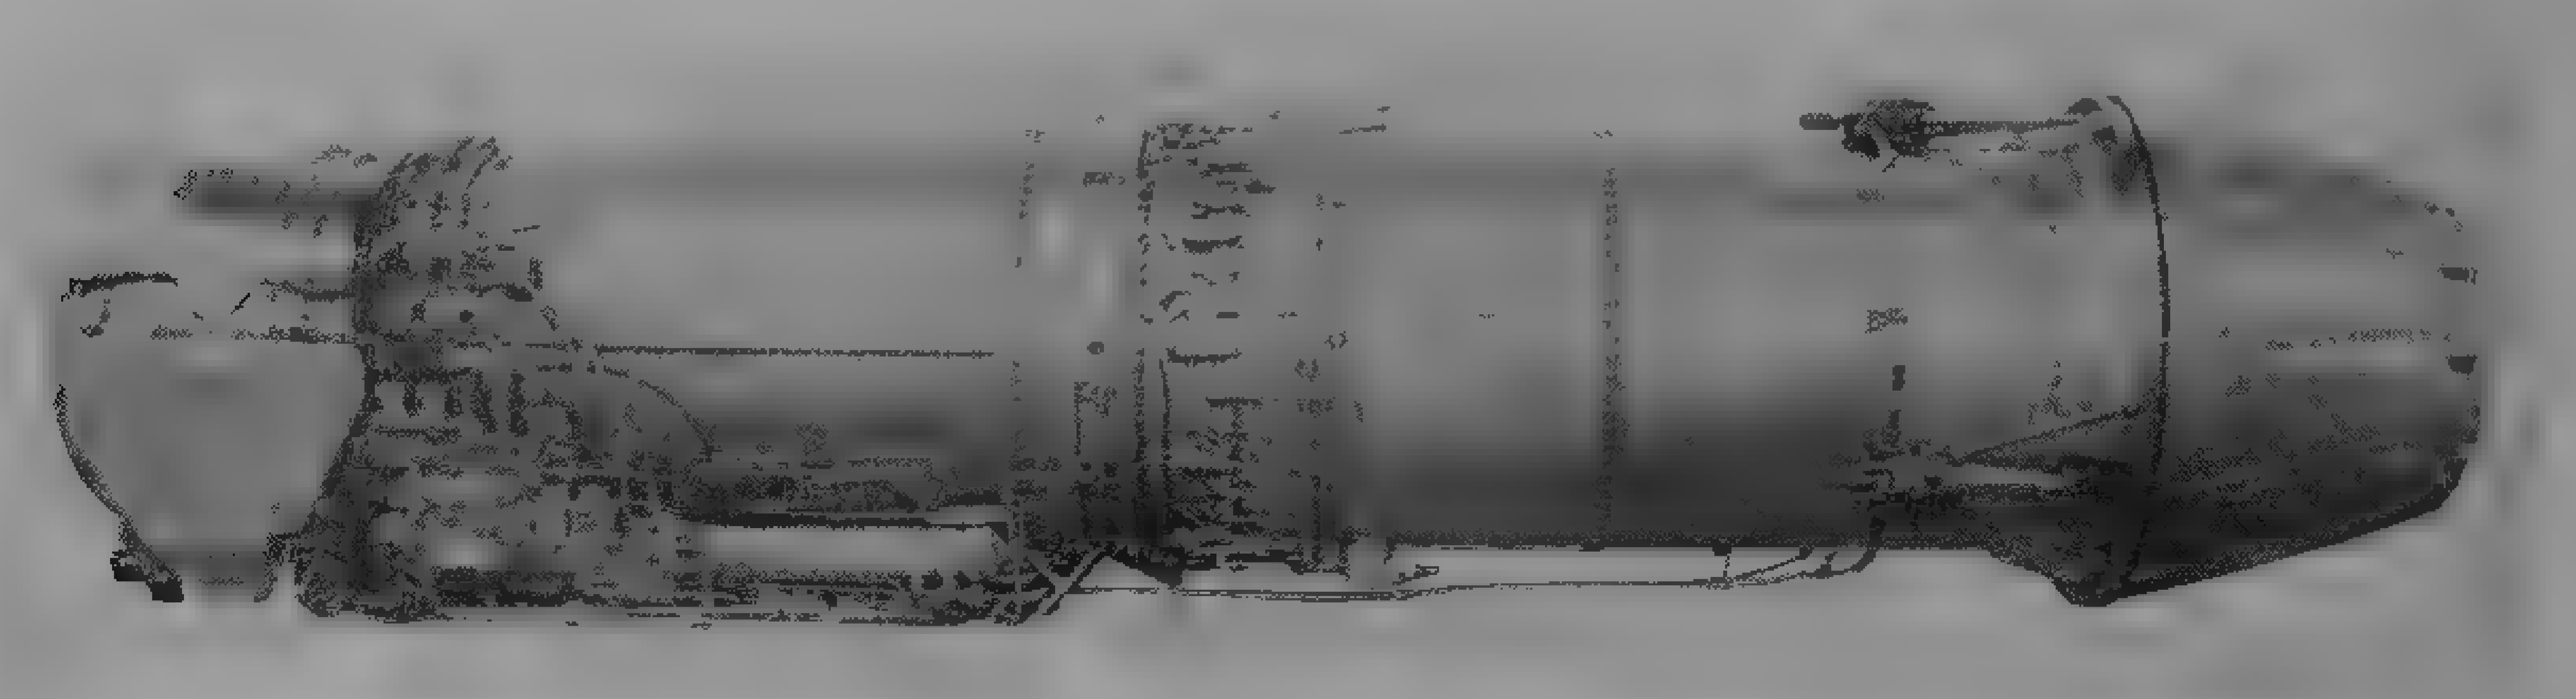
TPE331-10. Rated at 746 kW (1,000 shp). Certificated January 1978. Powers Marquise and Solitaire, Commander 980/1000, Merlin IIIC, CASA 212-200 and Jetstream 31.

TPE331-11. Certificated 1979. Higher gearbox limit, wet rating 820 kW (1,100 shp). Powers Metro III.

TPE331-12. Same size as -10 but offers 834 kW (1,100 shp). Certificated December 1984. Powers Jetstream Super 31 and Metro 23. The **TPE331-12B** powers the Shorts Tucano. Rolls-Royce made 30 per cent by value of engines for Shorts, and supports RAF engines in service.

TPE331-14/15. Scaled-up models, with thermodynamic power in the 1,227 kW (1,645 shp) class. The -14 was certificated in April 1984 and is flat rated at 746 kW (1,000 shp) for the Cheyenne 400. TPE331-15AW powers one version of re-engined S-2 Tracker.

TPE331-14GR/HR. Handed (clockwise/anti-clockwise) for Jetstream 41 and candidate for An-38. T-O rating 1,312 kW (1,759 shp); APR rating 1,462 kW (1,960 shp).



ITEC 1042-70 augmented turbofan *1994*

T76 Military engine, with gas generator similar to TPE331-1 but with front end inverted, to give inlet above spinner. All models power OV-10 Bronco.

Except for the TPE331-14/15, all versions are of similar frame size, and the following data apply generally to all:

TYPE: Single-shaft turboprop.

PROPELLER DRIVE: Two-stage reduction gear, one helical spur and one planetary, with overall ratio of 20.865 or 26.3.

COMPRESSOR: Tandem two-stage centrifugal made from titanium. Mass flow, 2.61 kg (5.78 lb)/s for -25/61, -25/71; 2.81 kg (6.2 lb)/s for -1, 2.80 kg (6.17 lb)/s for -2 and T76, 3.52 kg (7.75 lb)/s for -5, and 3.54 kg (7.8 lb)/s for -3. Pressure ratio 8.0 for 25/61, 25/71, 8.34 for -1, 8.54 for -2 and T76, 10.37 for -5 and -3.

COMBUSTION CHAMBER: Annular, with capacitor discharge igniter plug on turbine plenum.

FUEL SYSTEM: Woodward or Bendix control. Maximum fuel pressure 41.4 bars (600 lb/sq in).

FUEL GRADE (TPE331): ASTM designation D1655-64T types Jet A, Jet B and Jet A-1, MIL-F-5616-1 Grade JP-1.

TURBINE: Three-stage axial. In early models blades cast integrally with disc. In -10, -11, -12 first-stage disc with inserted blades. In -14/-15 inserted blades in all three stages. Inlet gas temperature, 987°C for 25/61, 25/71, 993°C for T76, 1,005°C for all other models.

ACCESSORIES: AND 20005 Type XV-B tachometer generator, AND 20002 Type XII-D starter/generator, AND 20010 Type XX-A propeller governor and AND 20001 Type XI-B hydraulic pump.

LUBRICATION SYSTEM: Medium pressure dry sump system. Normal oil supply pressure 6.90 bars (100 lb/sq in).

OIL SPECIFICATION: MIL-L-23699-(1) or MIL-L-7808.

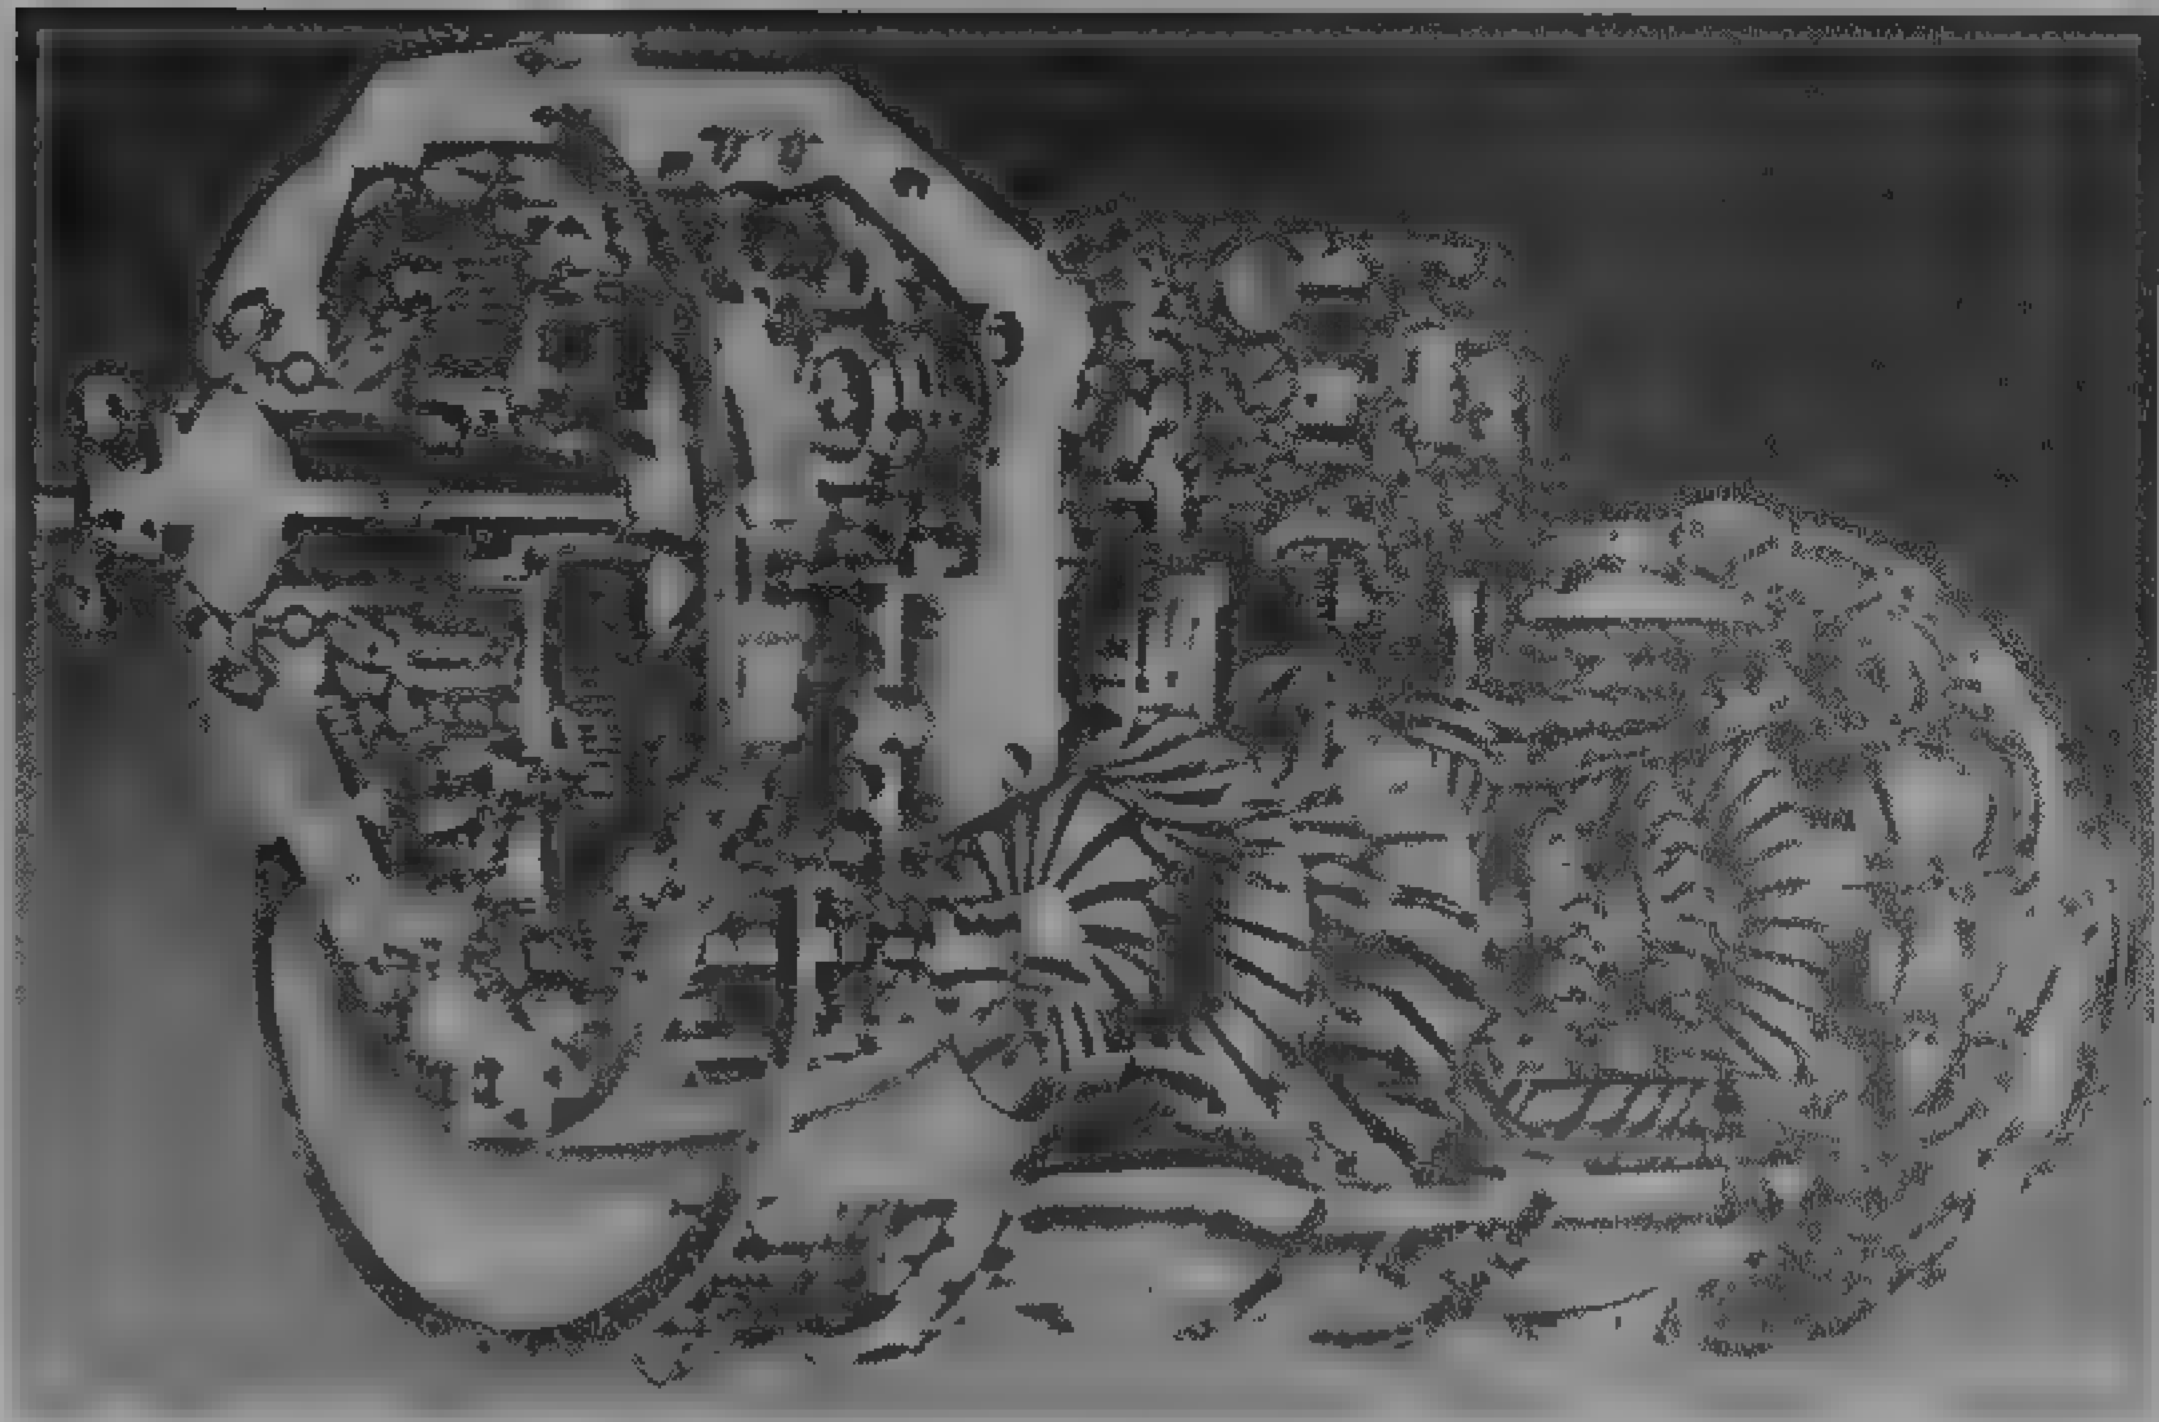
STARTING: Pad for 399A starter/generator.

DIMENSIONS (approx):

Length overall:	
TPE331	1,092-1,333 mm (43-52.5 in)
T76	1,118 mm (44 in)
Width: TPE331	533 mm (21 in)
T76	483 mm (19 in)
Height: TPE331	660 mm (26 in)
T76	686 mm (27 in)

WEIGHT, DRY:

TPE331-25/61, 71	152 kg (335 lb)
TPE331-1, -2	152.5 kg (336 lb)
T76	155 kg (341 lb)
TPE331-3	161 kg (355 lb)
TPE331-5	163 kg (360 lb)
TPE331-8	168 kg (370 lb)
TPE331-10	172 kg (380 lb)
TPE331-11	181 kg (400 lb)
TPE331-12	181 kg (400 lb)
TPE331-14, 14GR, -15	281 kg (620 lb)



Cutaway drawing of AlliedSignal TPE331-14 turboprop

1987

PERFORMANCE RATINGS:

T-O: see under model listings

Military (30 min): T76-G-410/411: 533 kW, 563 ekW (715 shp, 755 ehp)

Normal: T76-G-410/411: 485 kW, 514.5 ekW (650 shp, 690 ehp)

Max cruise (ISA, 3,050 m, 10,000 ft and 250 kts, 463 km/h, 288 mph):

TPE331-25/61, 71	332 kW (445 shp)
TPE331-1	404 kW (542 shp)
TPE331-2, T76	430 kW (577 shp)
TPE331-3, -5	530 kW (710 shp)

SPECIFIC FUEL CONSUMPTION:

At T-O rating:

TPE331-25/61, 71	111.5 µg/J (0.660 lb/h/shp)
TPE331-1	102.2 µg/J (0.605 lb/h/shp)
TPE331-2	99.4 µg/J (0.588 lb/h/shp)
TPE331-3	99.7 µg/J (0.590 lb/h/shp)
TPE331-5	101.7 µg/J (0.602 lb/h/shp)
TPE331-8	96.7 µg/J (0.572 lb/h/shp)
TPE331-10	94.6 µg/J (0.560 lb/h/shp)
TPE331-11	94.3 µg/J (0.558 lb/h/shp)
TPE331-12	92.5 µg/J (0.547 lb/h/shp)
TPE331-14/-15	84.8 µg/J (0.502 lb/h/shp)
T76-G-410/411	101.4 µg/J (0.600 lb/h/shp)

OIL CONSUMPTION:

Max: 0.009 kg (0.02 lb)/h

UPDATED

ALLIEDSIGNAL TPF351

This free turbine turboprop was being developed initially as the **TPF351-20** for pusher installation in the Embraer/FAMA CBA-123. On abandonment of the CBA-123 programme in 1994 prior to construction of a prototype, AlliedSignal decided to discontinue the TPF351. Details of the engine appeared in the 1994-95 *Jane's*.

UPDATED

LYCOMING TURBINE ENGINES

550 Main Street, Stratford, Connecticut 06497
Telephone: 1 (203) 385 2000
Fax: 1 (203) 385 3255

Formerly owned by Textron, this division was purchased by AlliedSignal in 1994. When part of Textron an agreement was reached with GE for joint development of shaft-drive gas turbines for aero and surface applications. Another agreement was reached with Russia's Yakovlev Corporation for developments of the Yak-40.

NEW ENTRY

ALLIEDSIGNAL ALF 502

The ALF 502 was launched in 1969, primarily for commercial and executive aircraft. The core is the T55, and construction is modular.

Current versions are as follows:

ALF 502L First commercial version. FAA certificated in February 1980. Powers Canadair Challenger 600 in ALF 502L-2 form. L-2A, L-2C and L-3 certificated 1982-3.

ALF 502R. Reduced rating. FAA certificated January 1981 as R-3 to power BAe 146. Improved R-3A, R-4 and R-5 certificated 1982-3. R-6 certificated 1984.

By 1994 ALF 502 engines had flown over 8 million hours. The ALF 502 and LF 507 operate on-condition.

TYPE: High-bypass ratio, two-shaft geared turbofan.

FAN MODULE: Cast frame includes four engine mounts 90° apart, and may carry reverser. Fan rotor blades are base and part span shrouded. Mounted directly behind rotor (6,700 lb st engines) is a single or (7,500 lb st engines) two stages of compression. Anti-icing of LP compressor inlet by bleed air. Accessory gearbox on fan frame takes HP shaft power. Reduction gear couples LP turbine to fan. Bypass ratio: 502R-3, 5.71; 502R-5, 5.6, 502L, 5.0.

COMPRESSOR: HP compressor has seven stages and single centrifugal. Acceleration bleed between stages 6 and 7 operated by main fuel control. Overall pressure ratio: R-3, 11.6, R-5, 12.0; L-2, 13.6.

TURBINE: HP has two air-cooled stages. LP has two stages. All rotor blades base shrouded. LP tip shrouded.

COMBUSTION CHAMBER: One-piece annular combustor wraps around turbine. Atomising nozzles inserted through outer chamber at rear. Disconnecting permits removal of combustor/turbine module, providing access to HP turbine.

ACCESSORY DRIVES: Accessory gearbox carries main fuel control, oil pump and filter, tachometer (if required) and provisions for customer accessories.

DATA: See table.

UPDATED

ALLIEDSIGNAL LF 500

This family of commercial turbofans is based on the ALF 502R, using the same core. The engines will range from 31.14 kN (7,000 lb st) to 62.28 kN (14,000 lb st), the most powerful versions requiring an increase in fan diameter. The **LF 507-1H**, the first engine in the family, was certificated in

‡Emergency rating (60 minutes) 3,472 kW (4,652 shp), contingency rating (2½ minutes) 3,780 kW (5,069 shp)

October 1991. The **LF 507 1F** was certificated in March 1992 and entered airline service with the Avro RJ85 in April 1993. Over 150 engines had been produced by 1994

Features include an additional supercharger stage, machined combustor liner, cast fourth nozzle, reduced turbine inlet temperature, steel compressor casing, improved reduction gear lubrication and FADEC. Data, see table

UPDATED

ALLIEDSIGNAL LP512

This turboprop/turboshaft engine in the 5,593 kW (7,500 shp) class was announced in February 1994 The turboprop version is described as 'several feet shorter and much lighter' than competitor engines

UPDATED

ALLIEDSIGNAL LTC1

US military designation: T53

The T53 was developed under a joint US Air Force/Army contract. More than 19,000 have logged over 46 million hours since 1956

Licences for manufacture of the T53 are held by BMW Rolls-Royce in Germany, Piaggio in Italy, Kawasaki in Japan, and in Taiwan

Current versions are as follows

T53-L-13 Uprated L-11 Redesigned 'hot end' and initial stages of compressor Four turbine stages, compared with two in earlier models, and variable inlet guide vanes combined with redesigned first two compressor stages. Atomising combustor to facilitate operation on a wider range of fuels. Powers Bell UH-1M and UH-1H and AH-1F HueyCobra. The **T5313A** commercial version has been superseded by the **T5313B**

T53-L-701. Turboprop incorporating 'split power' reduction gear

T53-L-703. Improved durability L-13 Thermodynamic rating 1,343 kW (1,800 shp)

LTC1K-4K. Direct drive L-13 suitable for operation from 105° nose up to 90° nose down

T5317A. Improvements over L-13 include improved cooling of first gas producer turbine nozzle plus air-cooled blades in first turbine rotor

The following details apply to the T53 L-13 and L-701

TYPE Free turbine turboshaft

COMPRESSOR Five axial stages followed by single centrifugal stage. Variable inlet guide vanes. Pressure ratio 7 2 Mass flow 5 53 kg (12 2 lb)/s at 25,150 gas producer rpm

COMBUSTION CHAMBER Annular reverse flow, with 22 atomising injectors

FUEL CONTROL SYSTEM Chandler Evans TA-2S and TA-7 system with one dual fuel pump, 41.4 bars (600 lb/sq in) Interstage air bleed control

FUEL GRADE: ASTM A-1, MIL-J-5624, MIL-F-26005A, JP-1, JP-4, JP 5, CITE

TURBINE. First two stages, driving compressor, use hollow air-cooled stator vanes and cored-out cast steel rotor blades Second two stages, driving reduction gearing, have solid steel blades

ACCESSORIES. Electric starter or starter/generator. Bendix-Scintilla TGLN high-energy ignition unit

LUBRICATION. Recirculating system, with gear pump, 4 83 bars (70 lb/sq in)

OIL GRADE MIL-L-7808, MIL-L-23699

DATA: See table

UPDATED

ALLIEDSIGNAL LTC4

US military designation: T55

This engine is based on the T53 with higher mass flow Total operating time by 1993 on 4,416 engines was over 6 million hours

Current versions are as follows

LTC4B 8D Modified T55 L-7C

T5508D Commercial version of LTC4B 8D

T55-L-11 (LTC4B-11B) series. Uprated L-7, with variable inlet guide vanes and two-stage compressor turbine.

T55-L-712. Improved L-11D. Wide-chord compressor blades without inlet guide vanes, and one-piece rotor.

AL5512. Commercial L-712, with engine out contingency rating of 3,250 kW (4,355 shp)

T55-L-714. Growth version with cooled gas-generator turbine blades, FADEC and improved torquemeter. OEI rating (contingency) 3,780 kW (5,069 shp); maximum continuous 3,108 kW (4,168 shp)

T55-L-714A. L-714 plus latest RAM-D improvements, such as marinization and longer-life rotating parts

The following description applies to the T55-L-714

TYPE Free turbine turboshaft

COMPRESSOR: Seven axial stages followed by single centrifugal stage. Pressure ratio 9 3, Mass flow 13.19 kg (29 08 lb)/s

COMBUSTION CHAMBER Annular reverse flow Twenty-eight atomizing nozzles

FUEL SYSTEM Chandler Evans FADEC type EMC-32T-2, consisting of hydromechanical unit with gear type pump and DECU

FUEL GRADE MIL-J-5624L grade JP-4, JP-5, MIL-T-83133 grade JP-8 or CITE.

TURBINE Gas-generator turbine has two stages with cooled blades and cooled shrouds to give tip clearance control Two-stage power turbine

ACCESSORIES: Electric starter or starter/generator, or air or hydraulic starter. Bendix-Scintilla TGLN high-energy ignition unit. Four igniter plugs

LUBRICATION Recirculating Integral tank and cooler

OIL GRADE. MIL-L-7808, MIL-L-23699

DATA See table on this page

UPDATED

ALLIEDSIGNAL LT 101

US military designation YT702-LD-700

The LT 101 is designed for low life cycle costs and fuel efficiency. Each engine comprises an accessory reduction gearbox, gas generator and combustor/power turbine module The engine has a single axial compressor stage followed by a single centrifugal stage, a reverse flow annular combustor, a single-stage gas-generator turbine, and a single-stage power turbine. Front gearboxes provide output speeds of 1,925, 6,000 or 9,545 rpm. The 6,000 rpm gearbox has both forward

and aft drives. The engine has either a scroll or radial inlet. Mass flow is 2.31 kg (5.1 lb)/s, and pressure ratio 8.5.

Current production versions include turboshaft (LTS) and turboprop (LTP) models, with maximum power in the 459 to 548 kW (615 to 735 shp) range. All are certificated under FAR Pt 33 for 2,400 hours TBO or on-condition maintenance. During 1994 **LT101 Plus I** introduced a forged axial rotor, single-crystal gas-generator turbine blades, insertable power turbine blades and a new fuel manifold. **Plus II** embodies further detail improvements.

UPDATED

ALLIEDSIGNAL LTS 101

The **LTS 101-600A-2** is a 6,000 rpm power plant for the Eurocopter AS 350D AStar. The **650C-2/C-3** is a 9,545 rpm power plant for the Bell 222. The **650B-1**, a 6,000 rpm engine with a radial inlet for the Eurocopter/Kawasaki BK117A. The **750B-1** powers the BK117B. The **600A-3** powers the AS 350D Mk 3. A growth version, the **750C-1**, powers the Bell 222B and 222UT. The **750B-2**, with radial inlet, powers the AS 366/HH-65A Dolphin.

ALLIEDSIGNAL LTP 101

The LTP 101 turboprop incorporates a free power turbine, provisions for tractor or pusher installation, hydraulic propeller governor, radial screened inlet and anti-icing protection. Output speed is 1,700 to 1,950 rpm. The **LTP 101-600A-1A** and **-700A-1A** power the P 166-DL3, Air Tractor and Cresco agricultural aircraft, Riley Cessna 421 and Page Turbo Thrush and Ag-Cat. It has flown in Piper Brave, Turbine Islander and Dornier 128-6 prototypes.

DIMENSIONS:
Length 949 mm (37.37 in)
Diameter 592 mm (23.3 in)
WEIGHT, DRY: 147 kg (325 lb)
PERFORMANCE RATINGS (T-O, S/L):
LTP 101-600 462 ekW (620 ehp)
LTP 101-700 522 ekW (700 ehp)
SPECIFIC FUEL CONSUMPTION (T-O, S/L):
LTP 101-600, -700 92 µg/J (0.544 lb/h/ehp)

ALLISON

ALLISON ENGINE COMPANY

PO Box 420, Indianapolis, Indiana 46206-0420
Telephone: 1 (317) 230 2000
Fax: 1 (317) 230 3562
CHAIRMAN AND CEO: Dr F Blake Wallace
DIRECTOR PUBLIC RELATIONS: Eric Q Dickerson

Following a management buyout from its previous owners, General Motors, the resulting Allison Engine Company was itself purchased for $525 million by Rolls-Royce plc, the purchase being agreed in November 1994. The UK company intends to continue and expand Allison without change in name, programmes or workforce.

Allison Engine has 4,400 employees producing gas-turbine engines and components for aircraft, vehicular and industrial/marine applications.

A major research effort is in hand to develop a lift fan for the future Lockheed ASTOVL aircraft driven by hot gas from a P&W/RR F119 derived engine. Collaboration on the T800 engine with Garrett (AlliedSignal) is described under LHTEC on a later page.

UPDATED

ALLISON 250

US military designations: T63 and T703

The Allison 250 is a small turboshaft/turboprop. Deliveries exceed 25,000, logging over 89 million hours.

A development contract for the T63 military version was received by Allison in June 1958. Details of early versions last appeared in the 1978-79 *Jane's*, the following are current models.

T63-A-720. Military turboshaft engine with hot-end improvements, increasing T-O rating to 313 kW (420 shp), for the Bell OH-58C.

T703-AD-700. Military turboshaft engine corresponding to 250-C30R, for Bell OH-58D.

250-B17. Uprated version of B15 turboprop. The **B17B** operates at 17°C higher turbine gas temperature with hot-end improvements which maintain full power at high ambient temperatures. Produced from 1974 for Turbostar 402 conversions, Turbostar 414, ASTA Nomad N22 and 24, SIAI Marchetti SM 1019E and various agricultural aircraft. **B17C** introduced improved gearbox allowing use of 313 kW (420 shp) on T-O. Produced for Nomad N22 and 24, SF.260TP and 600TP, Turbostar 402/414, Allison Bonanza, LoPresti Piper SwiftFury, AASI Jetcruzer prototype, Glasair III, Advanced Airship ANR, BN-2T Turbine Islander, Composite Eagle, AP 68TP Viator and Maule MX 7. **B17D** produced for SF 260TP, Aucán, Redigo, Fuji T-5, HTT-34 and Mentor 420. **B17F**, with new compressor as in -C20R for increased T-O power, introduced in 1985 for BN-2T, SF 600TP, HX-1, Redigo, Turbine P-210 and A36 Bonanza.

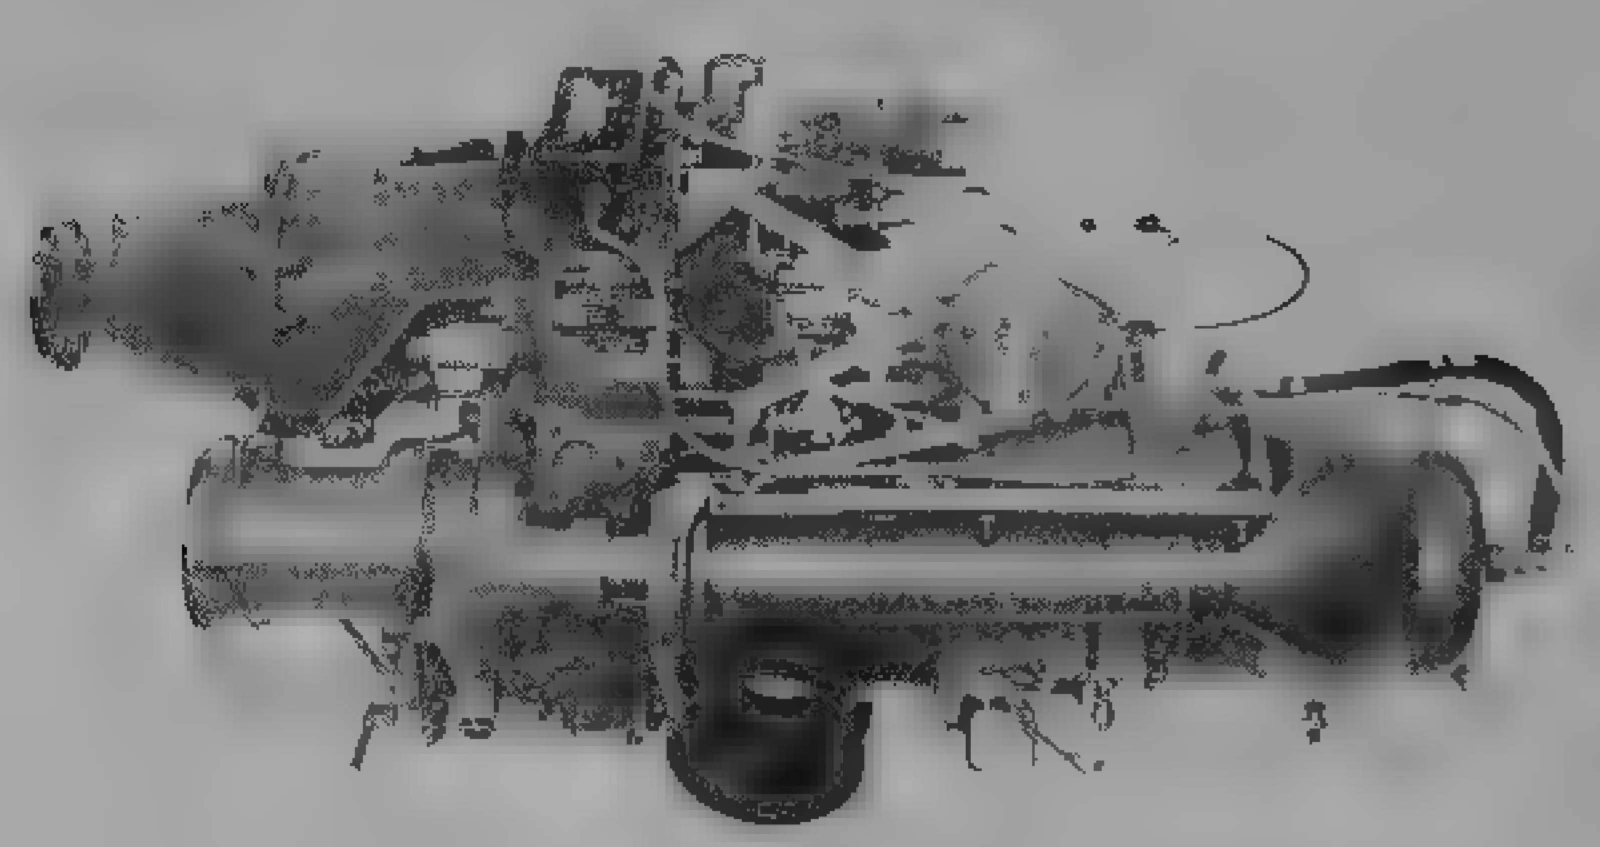
250-C20B. Introduced 1974, and rated at 313 kW (420 shp). For Bell and Agusta-Bell 206B JetRanger III and 206L LongRanger, MD 500D, BO 105CBS and E, Kitty Hawk, FH-1100 and UH-12E, Ka 226, RFB Fantrainer 400 and Bell 47G conversions.

250-C20F. For AS 355 Ecureuil 2/TwinStar.

250-C20J. For Bell and Agusta Bell 206B JetRanger III.

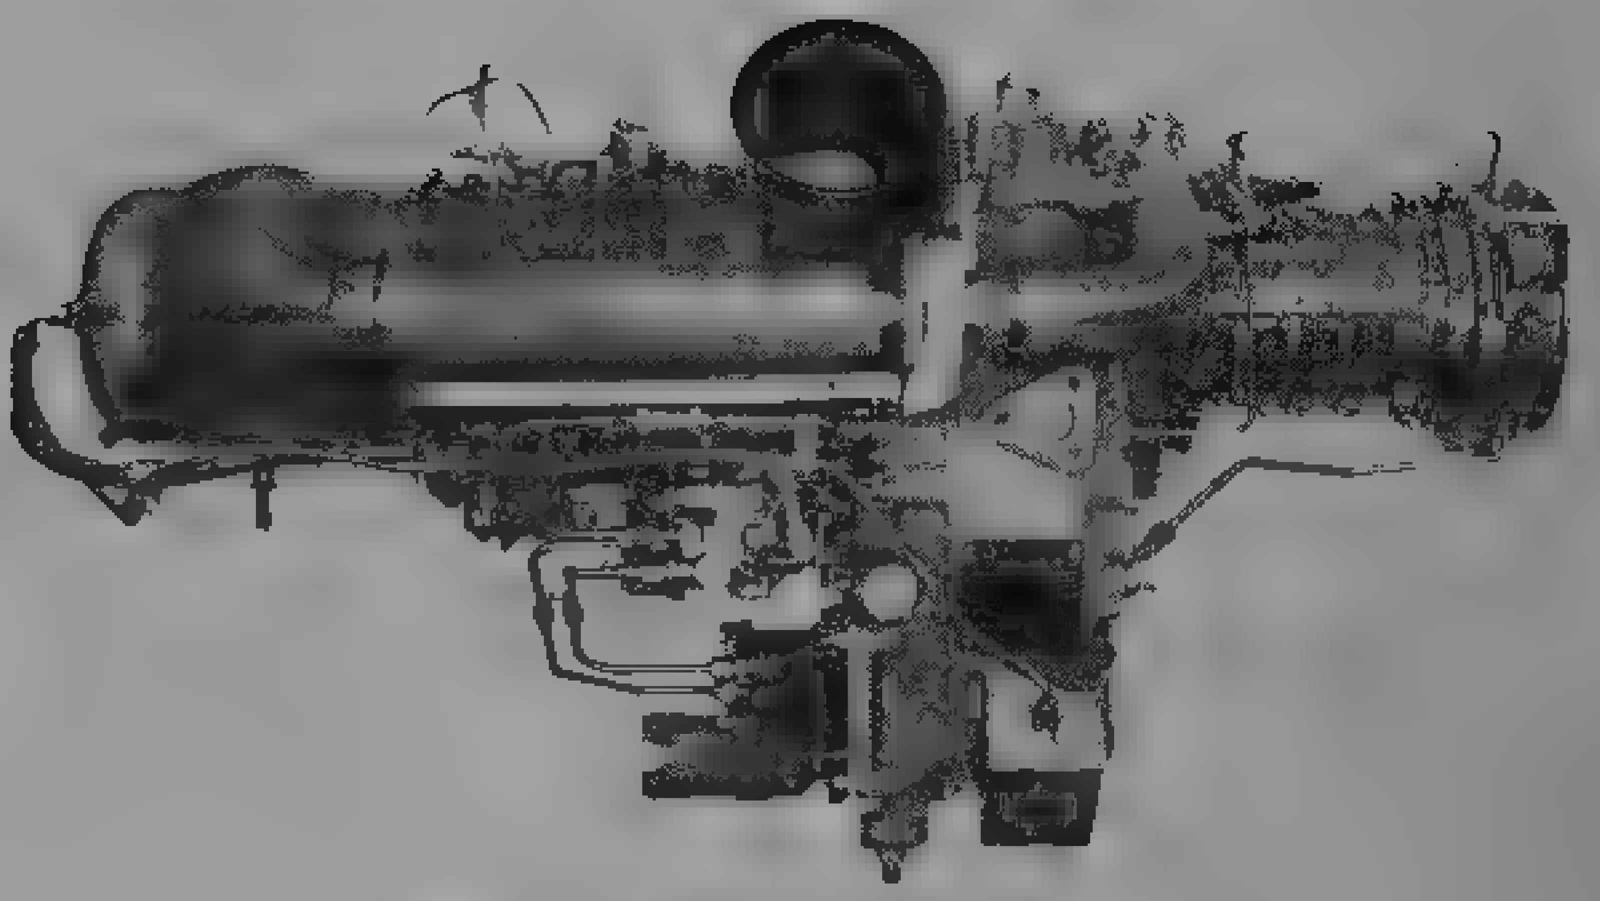
250-C20R. Derivative of C20B with new axial-centrifugal compressor. **C20R/1** with redundant overspeed system for twin-engine applications certificated September 1986 for A 109A Mk II and Gemini ST. **C20R/2** for single-engine helicopters certificated early 1987 for MD 500ER, JetRanger III, LongRanger and MD 520N. **C20R/9** with improved gas path and FADEC. In flight test on A 109A.

250-C20S. Turboprop for Soloy Turbine Pac conversions of Cessna 185, 206 and 207. **C20W** powers Schweizer TH-330 and Enstrom 480.



Allison 250-B17C free turbine turboprop

1984



Allison 250-C20R free turbine turboshaft

1987

250-C22 Improved gas path and FADEC

250-C28 Major redesign with single centrifugal compressor only, with increased air flow. Reduced noise and emissions and minimal infra-red signature. New main gearbox. Certificated December 1977

250-C28B. With particle separator; 2½ minute rating of 410 kW (550 shp). Powers Bell LongRanger I

250-C28C. Improved model with plain inlet, 2½ minute rating of 410 kW (550 shp). Powers BO 105 LS

250-C30. Advanced single-stage compressor and dual ignition. Initial rating 485 kW (650 shp), with a 2½ minute rating of 522 kW (700 shp). Certification completed March 1978. Produced for S-76 and MD 530G

250-C30G. Produced for Heli-Air Bell 222, C30G2 for Bell 230

250-C30L. With digital control, produced for Bell 406CS

250-C30M Produced for AS 350

250-C30P Produced for LongRanger III and IV

250-C30R. With digital control, produced for AHIP OH-58D. **C30R/1** increased air flow for uprated hot-day power for OH-58D; certificated early 1994. **C30R/2** better turbine cooling and simpler shaft drive for further hot-day improvement

250-C30S Produced for S-76A

250-C40 As C30R/2 but uprated gearbox and FADEC for Bell 430

250-C47. C40 variant for Bell 407

TYPE: Light turboshaft or turboprop

COMPRESSOR: C20, C20B and B17B have six axial stages and one centrifugal. B17F and C20R have four axial stages and one centrifugal. C28 and C30 models have single-stage centrifugal compressor only. Pressure ratio: C20B, B17 7.2; C28B/C, C30, 8.4. Mass flow: C20B, B17C, 1.56 kg (3.45 lb)/s; C28B/C, 2.02 kg (4.45 lb)/s; C30, 2.54 kg (5.6 lb)/s

COMBUSTION CHAMBER: Single can type at rear. Single duplex fuel nozzle in rear face. One igniter on C20B, B17C, C28B/C and C30L/M/P/R. Dual igniters on C30 and C30S, optional on C28B/C

TURBINES: Two-stage gas-generator turbine and two-stage free power turbine. Integrally cast rotor blades and wheels

CONTROL SYSTEM: Pneumatic-mechanical system (B17C hydromechanical, C20B, C28, C30/30M/P/S, pneumatic mechanical, C30L, C30R, supervisory electronic; C20R/9 and C40 FADEC)

FUEL: Primary fuels are ASTM-A or A-1 and MIL-T-5624 JP-4, JP-5, JP-8, DF 1 and -2 and Arctic Diesel

LUBRICATION: Dry sump

OIL SPECIFICATION: MIL-L-7808 and MIL-L-23699

DIMENSIONS:

Length: B17C	1,143 mm (45.0 in)
C20B, R	985 mm (38.8 in)
C28C	1,201 mm (47.3 in)
C30	1,041 mm (41.0 in)
Width: B17C, C20B	483 mm (19.0 in)
C28, C30	557 mm (21.94 in)
Height: B17C	572 mm (22.5 in)
C20B	589 mm (23.2 in)
C28, C30	638 mm (25.13 in)

WEIGHT, DRY: B17C	88.4 kg (195 lb)
C20B	71.5 kg (158 lb)
C20R	76.0 kg (168 lb)
C28	99.3 kg (219 lb)
C28B, C	104 kg (230 lb)
C30	109.3 kg (240 lb)

PERFORMANCE RATINGS (S/L, ISA):

T-O:	
B17C, C20B, C20J, C20S (5 min)	313 kW (420 shp)
B17F, C20R (5 min to 26.7°C)	335 kW (450 shp)
C20F	313 kW (420 shp)
C28, 28B, 28C (30 min)	373 kW (500 shp)
C30 (5 min)	485 kW (650 shp)
Max continuous: B17C (cruise)	275 kW (369 shp)
C20B	276 kW (370 shp)
C20R	283 kW (380 shp)
C28	368 kW (494 shp)
C30	415 kW (557 shp)
Cruise B (75 per cent): B17C	206 kW (277 shp)
C20B	207 kW (278 shp)
C20R	236 kW (317 shp)
C28	274 kW (367 shp)
C30	312 kW (418 shp)

SPECIFIC FUEL CONSUMPTION:

At T-O rating: B17C	111 μg/J (0.657 lb/h/shp)
C20B	110 μg/J (0.650 lb/h/shp)
C20R	103 μg/J (0.608 lb/h/shp)
C28	102.5 μg/J (0.606 lb/h/shp)
C30	100 μg/J (0.592 lb/h/shp)
At cruise B rating: B17C	120.8 μg/J (0.715 lb/h/shp)
C20B	120 μg/J (0.709 lb/h/shp)
C20R	112.5 μg/J (0.666 lb/h/shp)
C28	112 μg/J (0.664 lb/h/shp)
C30	111 μg/J (0.657 lb/h/shp)

UPDATED

ALLISON T56 and 501

US military designation: T56

Current versions of the T56 are as follows:

T56-A-14. Rated at 3,661 ekW (4,910 ehp). Generally similar to T56-A-15, but seven-point suspension and detail changes. Powers the P-3B and C Orion

T56-A-15 Rated at 3,661 ekW (4,910 ehp). Introduced air-cooled turbine blades. Powers current C-130H and related variants

T56-A-423 and **A-16**. Rated at 3,661 ekW (4,910 ehp). Powers US Navy versions of the C-130

T56-A-425. Rated at 3,661 ekW (4,910 ehp). Powers C-2A Greyhound and early E-2C Hawkeye

T56-A-427. Rated at 3,915 kW (5,250 shp) with 13 per cent improvement in specific fuel consumption. Digital electronic supervisory control and modified propeller drive to maintain 1,106 rpm output with 14,239 power section rpm. Powers E-2C delivered since 1987

501-D22A. Rated at 3,490 ekW (4,680 ehp). Commercial version of T56-A-15. Powers Lockheed L-100

501-D22G. Powers Super-580 and Kelowna CV-5800

Including the Allison 501 commercial engines, production of these engines reached 15,250 by 1994, flying over 170 million hours

The following details apply to the T56-A-15:

TYPE: Axial flow turboprop

PROPELLER DRIVE: Combination spur/planetary gear type. Overall gear ratio 13.54. Power section rpm 13,820. Weight of gearbox approximately 249 kg (550 lb) with pads on rear face for accessory mounting

COMPRESSOR: Fourteen-stage axial flow. Pressure ratio 9.5. Mass flow 14.70 kg (32.4 lb)/s. Constant speed 13,820 rpm

COMBUSTION CHAMBER: Six stainless steel can-annular type perforated combustion liners within one-piece stainless steel outer casing. Two ignitors in diametrically opposite combustors

FUEL SYSTEM: High-pressure type. Bendix control system. Water/alcohol augmentation system available

FUEL GRADE: MIL-J-5624, JP-4, JP-5 or JP-8

TURBINE: Four stage. Rotor assembly consists of four stainless steel discs, with first stage having hollow air-cooled blades, secured by fir tree roots. Gas temperature before turbine 1,076°C

ACCESSORY DRIVES: Accessory pads on rear face of reduction gear housing

LUBRICATION SYSTEM: Low pressure. Dry sump. Pesco dual-element oil pump. Normal oil supply pressure 3.8 bars (55 lb/sq in)

OIL SPECIFICATION: MIL-L-7808

MOUNTING: Three-point suspension

STARTING: Air turbine, gearbox mounted

DIMENSIONS:

Length (all current versions)	3,708 mm (146 in)
Width (all current versions)	686 mm (27 in)
Height: A-15, A-16, A-425, D-22A	991 mm (39 in)
A-14	1,118 mm (44 in)
WEIGHT, DRY: A-14	855 kg (1,885 lb)
A-15	828 kg (1,825 lb)
A-16	835 kg (1,841 lb)
A-425	860 kg (1,895 lb)
D22A	832 kg (1,834 lb)

PERFORMANCE RATINGS (S/L, ISA, static):

T-O: A-14, A-15, A-16, A-423, A-425
3,661 ekW, 3,424 kW (4,910 ehp, 4,591 shp)

501-D22A: 3,490 ekW (4,680 ehp)

Normal: A-14, A-15, A-16, A-425, D22A
3,255 ekW; 3,028 kW (4,365 ehp; 4,061 shp)

SPECIFIC FUEL CONSUMPTION:

At max rating:	
A-14, A-15, D22A	84.67 μg/J (0.501 lb/h/ehp)
At normal rating:	
A-14, A-15	87.4 μg/J (0.517 lb/h/ehp)

OIL CONSUMPTION:

A-14, A-15:
1.3 litres (0.35 US gallon, 0.29 Imp gallon)/h

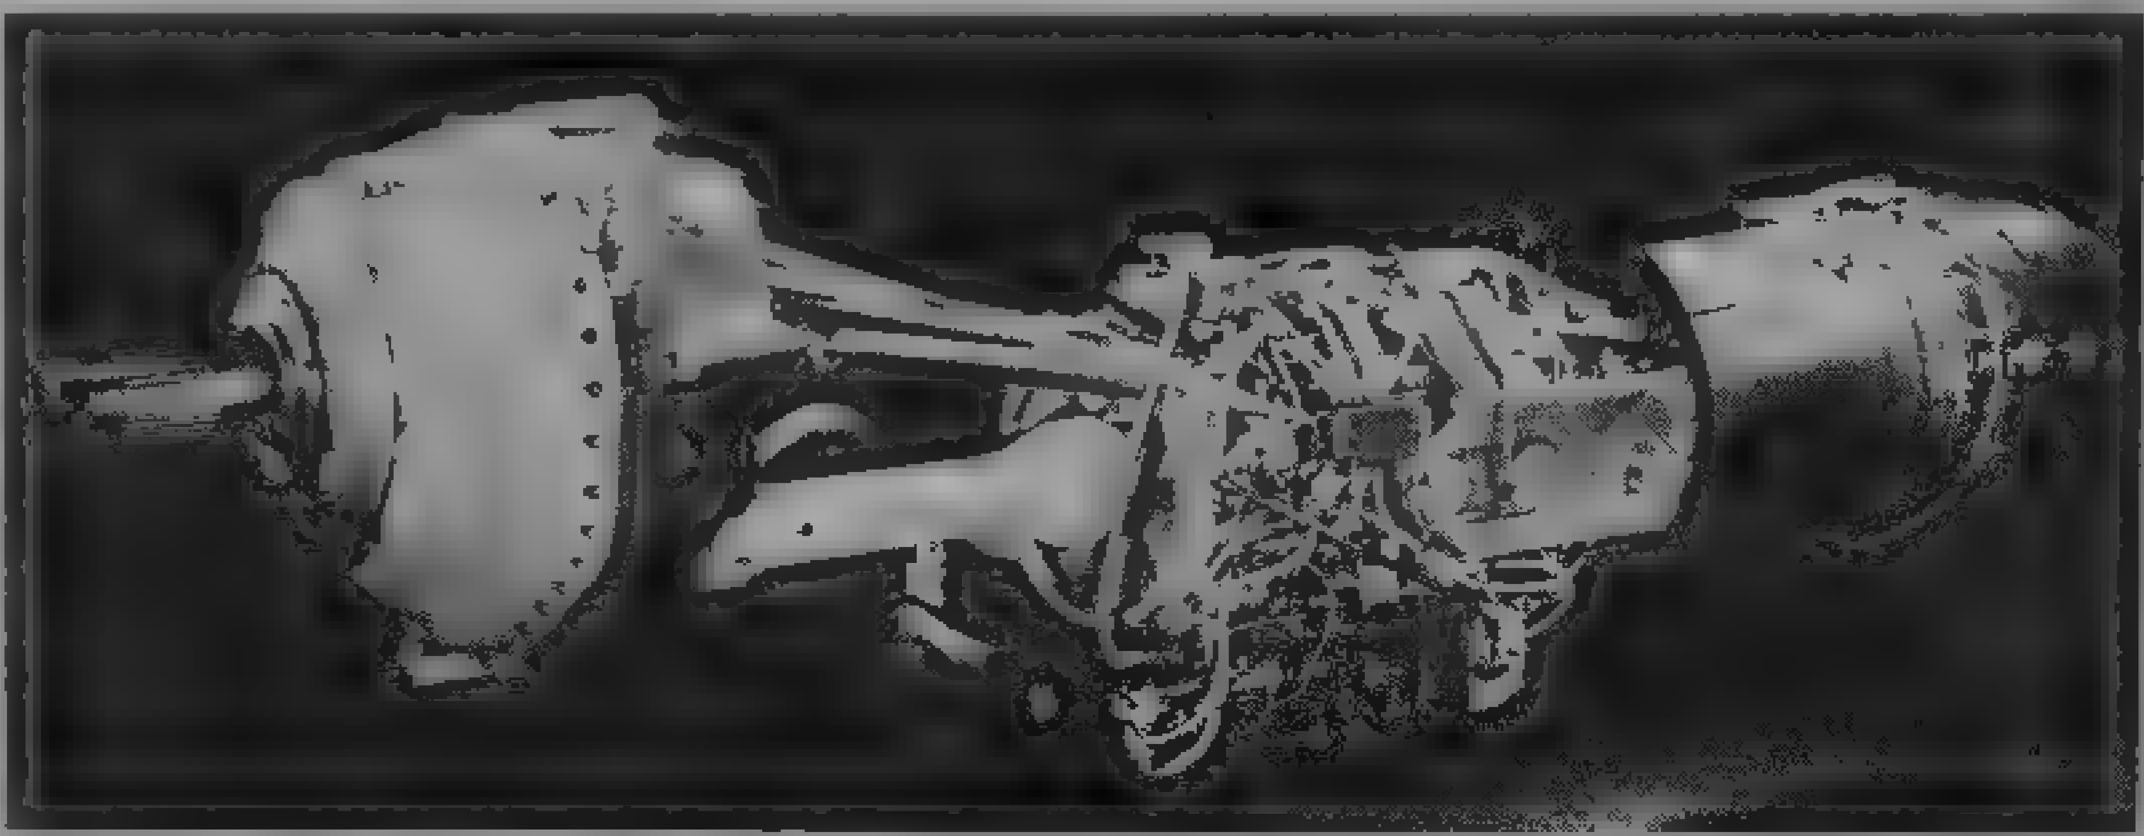
UPDATED

ALLISON AE 1107

US military designation: T406-AD-400

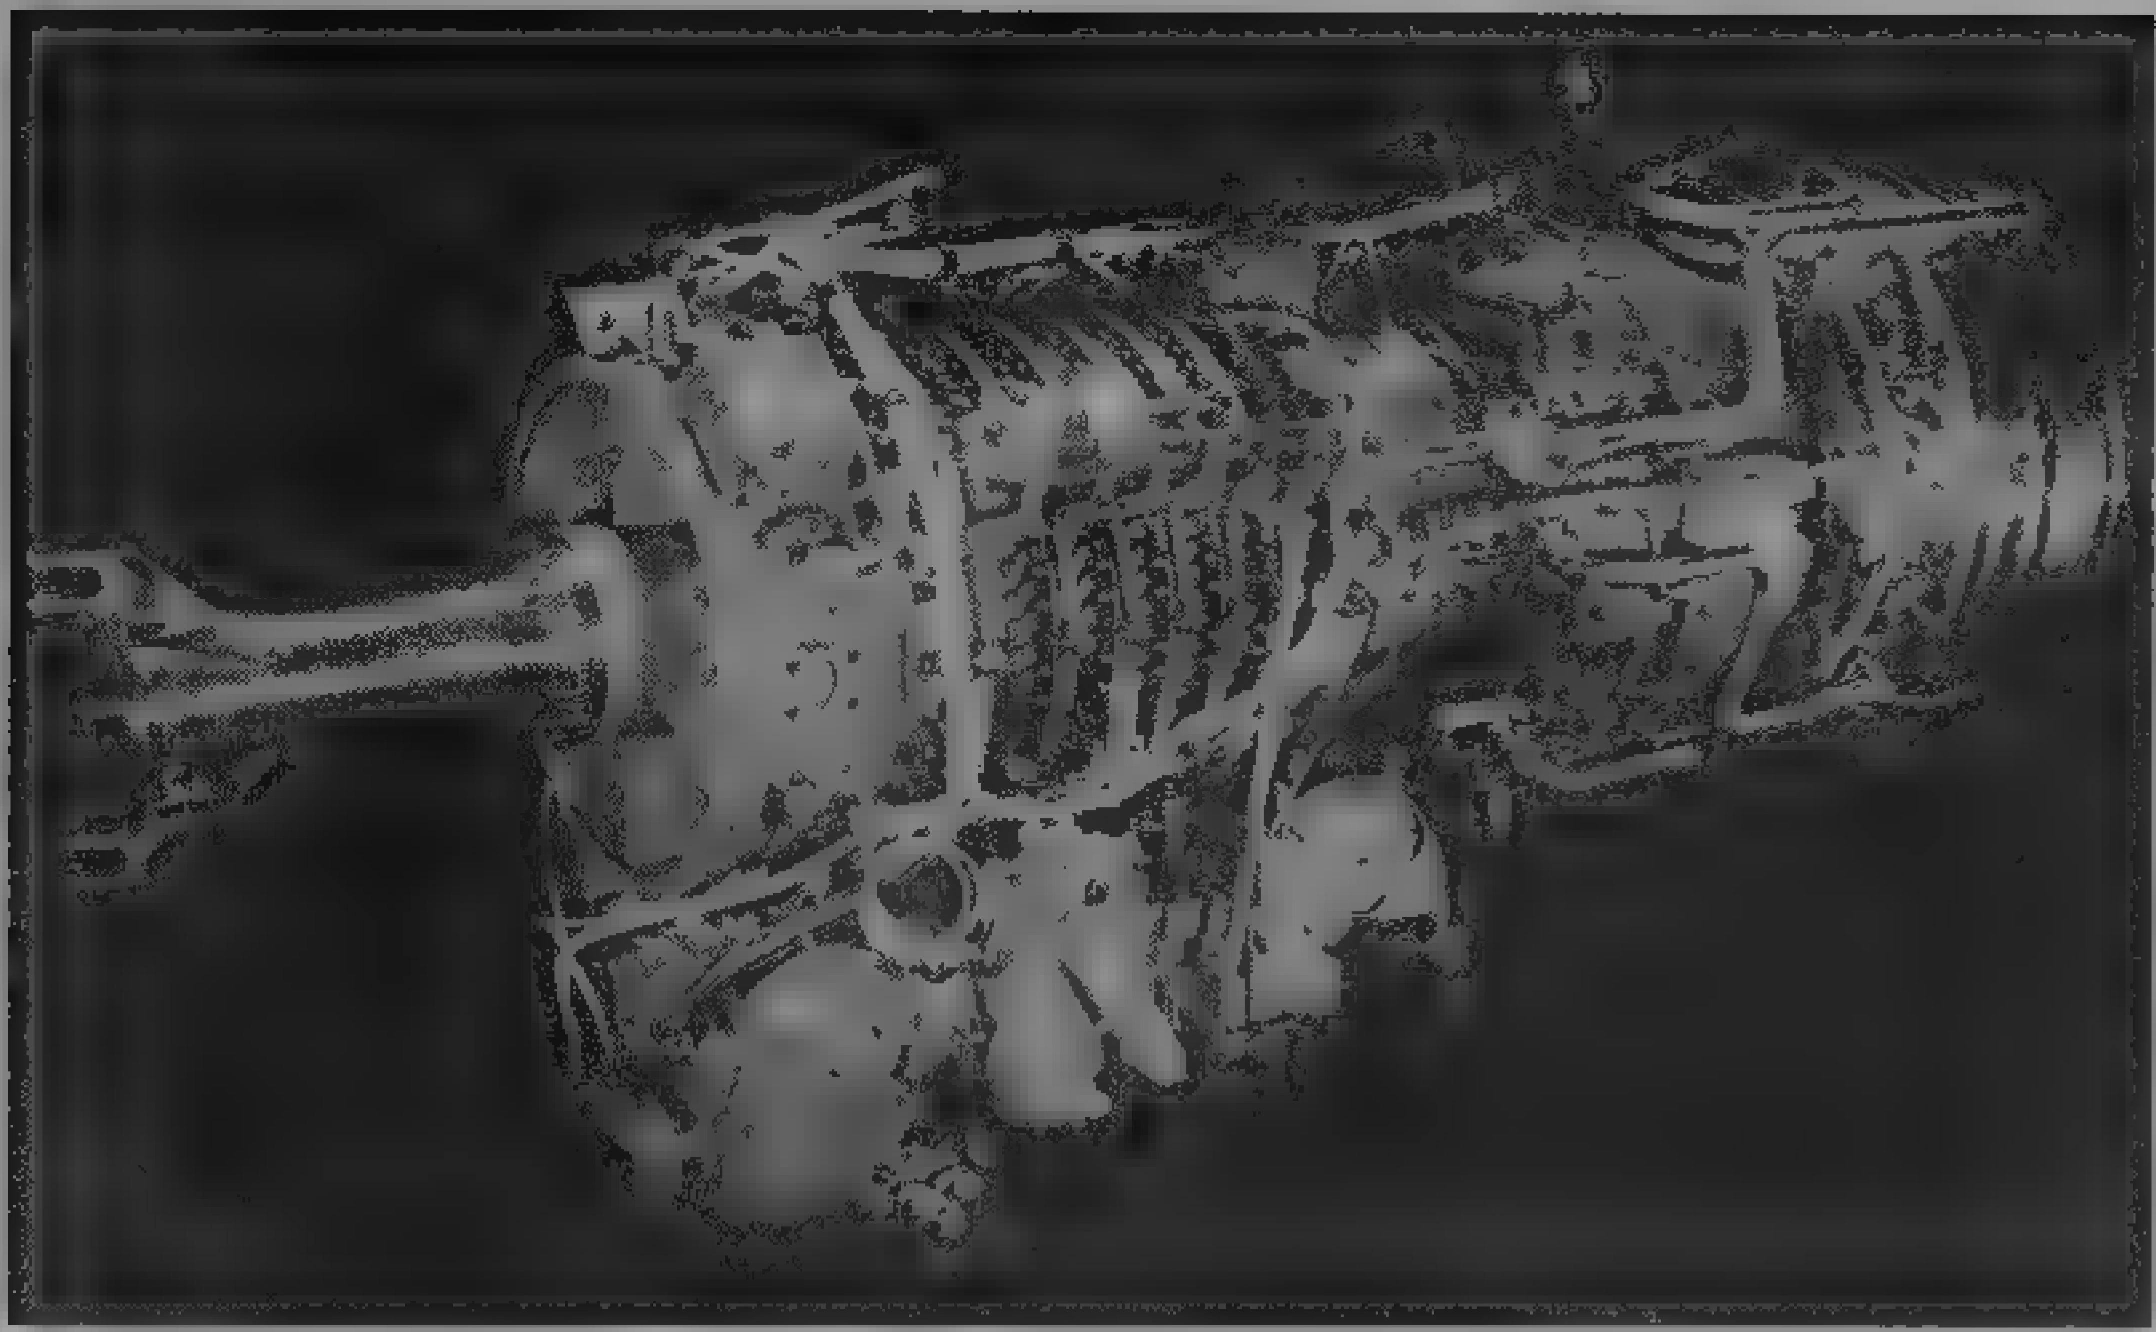
The T406 turboshaft, developed for the tilt-rotor V-22 Osprey, was derived from the T56/501. It is the basis for the AE 1107 turboshaft, AE 2100 turboprop and AE 3007 turbofan. The last two are described separately.

The T406-AD-400 is a free turbine, front drive 4,588 kW (6,150 shp) turboshaft incorporating high-efficiency components and reduced maintenance features required for operation in the V-22 Osprey. It features six rows of variable compressor stators, dual full authority digital electronic fuel controls, self-contained oil system capable of engine operation in the vertical position and modular construction. The T406 has completed its flight rating tests and 21 engines were



Allison T56-A-427 single-shaft turboprop

1984



Allison T406-AD-400 free turbine turboshaft

1994

delivered for the V-22 flight test programme, a further 12 are to be delivered in 1997

The T406 is applicable to other helicopter and tilt rotor aircraft as the **AE 1107**. This engine is undergoing FAA certification

TYPE: Axial flow turboshaft

COMPRESSOR: Fourteen-stage axial flow, with variable inlet guide vanes and first five stator rows. Pressure ratio 16.7. Mass flow 16.1 kg (35.5 lb)/s

COMBUSTOR: Annular effusion-cooled, with 16 airblast-type fuel nozzles providing smoke-free operation. Dual capacitor discharge ignition

CONTROL SYSTEM: Full-authority digital

FUEL GRADE: MIL-T-5624, grades JP-4, JP-5 and MIL-T-83188; JP 8

TURBINE: Gas-generator turbine has two axial stages with air cooled single-crystal blading, both stages overhung to the rear of the gas-generator thrust bearing. Power turbine has two axial stages on a straddle-mounted shaft which runs the entire length of the engine. Film-damped bearings eliminate the need for a centre bearing

OUTPUT: Power turbine forward shaft drives a torquemeter assembly which is directly coupled to the V-22 rotor gearbox. The torque tube housing serves as the front engine mount

ACCESSORY DRIVES: An engine accessory gearcase is mounted beneath the air inlet housing. It provides for engine starter generator, oil pump and fuel pump metering unit drives

LUBRICATION SYSTEM: Self-contained, featuring positive scavenging sumps, 3 µm filtration, and a bottom mounted, all attitude oil reservoir with service scuppers on each side of the engine

OIL GRADE: MIL-L-7808 or MIL-L-23699

DIMENSIONS:

Length overall, without gearbox	1 958 mm (77 08 in)
Length from inlet flange	1,521 mm (59 88 in)
Width	671 mm (26 40 in)
Height	864 mm (34 00 in)

WEIGHT, DRY: 440 4 kg (971 lb)

PERFORMANCE RATINGS:

Max power (S/L) 4 586 kW (6,150 shp) to 43°C

Max continuous power (static 1,219 m, 4 000 ft) 3,253 kW (4,362 shp) to 25°C

SPECIFIC FUEL CONSUMPTION:

Max cont power as above 72.0 µg/J (0 426 lb/h/shp)

UPDATED

ALLISON AE 2100

The AE 2100 turboprop has been developed for high speed regional aircraft as well as military transports and maritime patrol aircraft. It combines the T406 power section with a new propeller reduction gearbox based on the T56/501 design. It was selected by Saab (derated to 3,096 kW, 4,152 shp) to power the Saab 2000, by Lockheed for the L-100J/C-130J and by IPTN to power the N 250-100

AE 2100A The first AE 2100 went on test in June 1988. A prototype engine successfully completed flight testing on a P-3A aircraft in late 1990. The prototype consisted of a T406 power section, the new reduction gearbox and a flange-mounted Dowty Aerospace six-bladed propeller. Ten flight test and 33 production engines had been delivered by January 1995. FAA certification for the Saab 2000 was gained on 23 April 1993

AE 2100C. This version powers the Indonesian IPTN N 250-100, for which production flight test engines have been delivered

AE 2100D3. Engine for C-130J matched with Dowty R391 six bladed propeller. Test installation on C-130J demonstrator rebuilt by Marshall Aerospace, on flight test from 24 March to May 1994. Ordered for Royal Air Force

The AE 2100 is also a candidate engine for P-3 Orion fleet modernization and for several high speed 70-passenger projects

TYPE: Free turbine, axial flow turboprop

COMPRESSOR: Fourteen-stage, axial flow, with variable inlet guide vanes and first five stator rows

COMBUSTOR: Annular design with 16 airblast fuel nozzles

CONTROL SYSTEM: Full authority digital (FADEC), co-ordinating engine and propeller functions

HP TURBINE: Two-stage axial design with air cooled single-crystal blading

POWER TURBINE: Two uncooled stages on straddle-mounted shaft

PROPELLER DRIVE: Completely new design saving 68 kg (150 lb) weight, with life of 30,000 hours. Accessories grouped on rear face

DIMENSIONS:

Diameter overall	1,151 mm (45 3 in)
Length overall	2 743 mm (108 in)

WEIGHT, DRY: 702.2 kg (1 548 lb)

PERFORMANCE RATINGS:

S/L, T-O 4,474 kW (6,000 shp)

SPECIFIC FUEL CONSUMPTION:

S/L, T-O 69 31 µg/J (0 41 lb/h/shp)

UPDATED

ALLISON AE 3007

The AE 3007 turbofan is being developed to power regional airliners and medium/large business jets. The engine utilises the high-pressure spool from the T406/2100 with a new low-pressure spool. The 3007 was selected in 1990 by Embraer to power the EMB-145, and by Cessna for the Citation X. Growth versions are planned with ratings exceeding 62.3 kN (14,000 lb st), see AE 3012

The first AE 3007 went on test in July 1991. Additional development during 1992 included full altitude calibration, acoustic tests, initial endurance testing and initiation of flight testing on a Cessna Citation VII. Eleven active engines in the programme had accumulated over 3,500 hours by 1995, five were involved in the Citation X flight programme which began in December 1993. Certified early 1995

TYPE: Two-shaft subsonic turbofan

FAN: Single-stage, direct drive featuring wide-chord, clapperless blades. Bypass ratio of 5 0. Blades replaceable on aircraft. Diameter 978 mm (38.5 in)

HP COMPRESSOR: Fourteen stage axial flow, with variable inlet guide vanes and first five stator rows, all steel. Overall pressure ratio 23

Allison AE 2100 free turbine turboprop

1994

Allison AE 3007 turbofan

1994

COMBUSTOR: Annular design with 16 airblast fuel nozzles. Dual capacitor discharge ignition
CONTROL SYSTEM: Full-authority digital (FADEC)
HP TURBINE: Two-stage axial with air-cooled single-crystal blading
LP TURBINE: Three-stage axial uncooled design
BYPASS DUCT: Single-piece full length composite with provisions for thrust reverser
DIMENSIONS:

Diameter overall	1,105 mm (43.5 in)
Length	2,705 mm (106.5 in)

WEIGHT, DRY (with bypass duct) 717.1 kg (1,581 lb)

PERFORMANCE RATINGS:
S/L, T-O 32.03 kN (7,200 lb st) to 30°C
SPECIFIC FUEL CONSUMPTION:
S/L, T-O 9.35 mg/Ns (0.33 lb/h/lb st)

UPDATED

ALLISON AE 301X/3012

The 301X is a high-thrust development of the 3007 with a new core, which will be used in the definitive AE 3012. The core has a CastCool HP turbine designed for higher temperatures. There are no changes in frame size or weight. The 301X is rated in the 44.48 kN (10,000 lb st) class, and has been on test since September 1994.

The AE 3012 will combine this core with a new LP spool having a 1,117 mm (44.0 in) fan and two-stage core booster (intermediate compressor) driven by a four-stage turbine. The 3012 will be in the 62.3 kN (14,000 lb) thrust class, and is scheduled for certification in 1998. It is proposed for the Canadair CRJ-X.

NEW ENTRY

CFE

CFE COMPANY

111 South 34th Street, PO Box 62332, Phoenix, Arizona 85082-2332
Telephone: 1 (602) 231 3285
Fax: 1 (602) 231 7722
PRESIDENT: Ron S. Harrelson

This company was formed jointly by Garrett Engine Division (now AlliedSignal Engine Co) and General Electric Aircraft Engines in June 1987. It is managing all phases of the development, manufacture, marketing and support of the CFE738 turbofan.

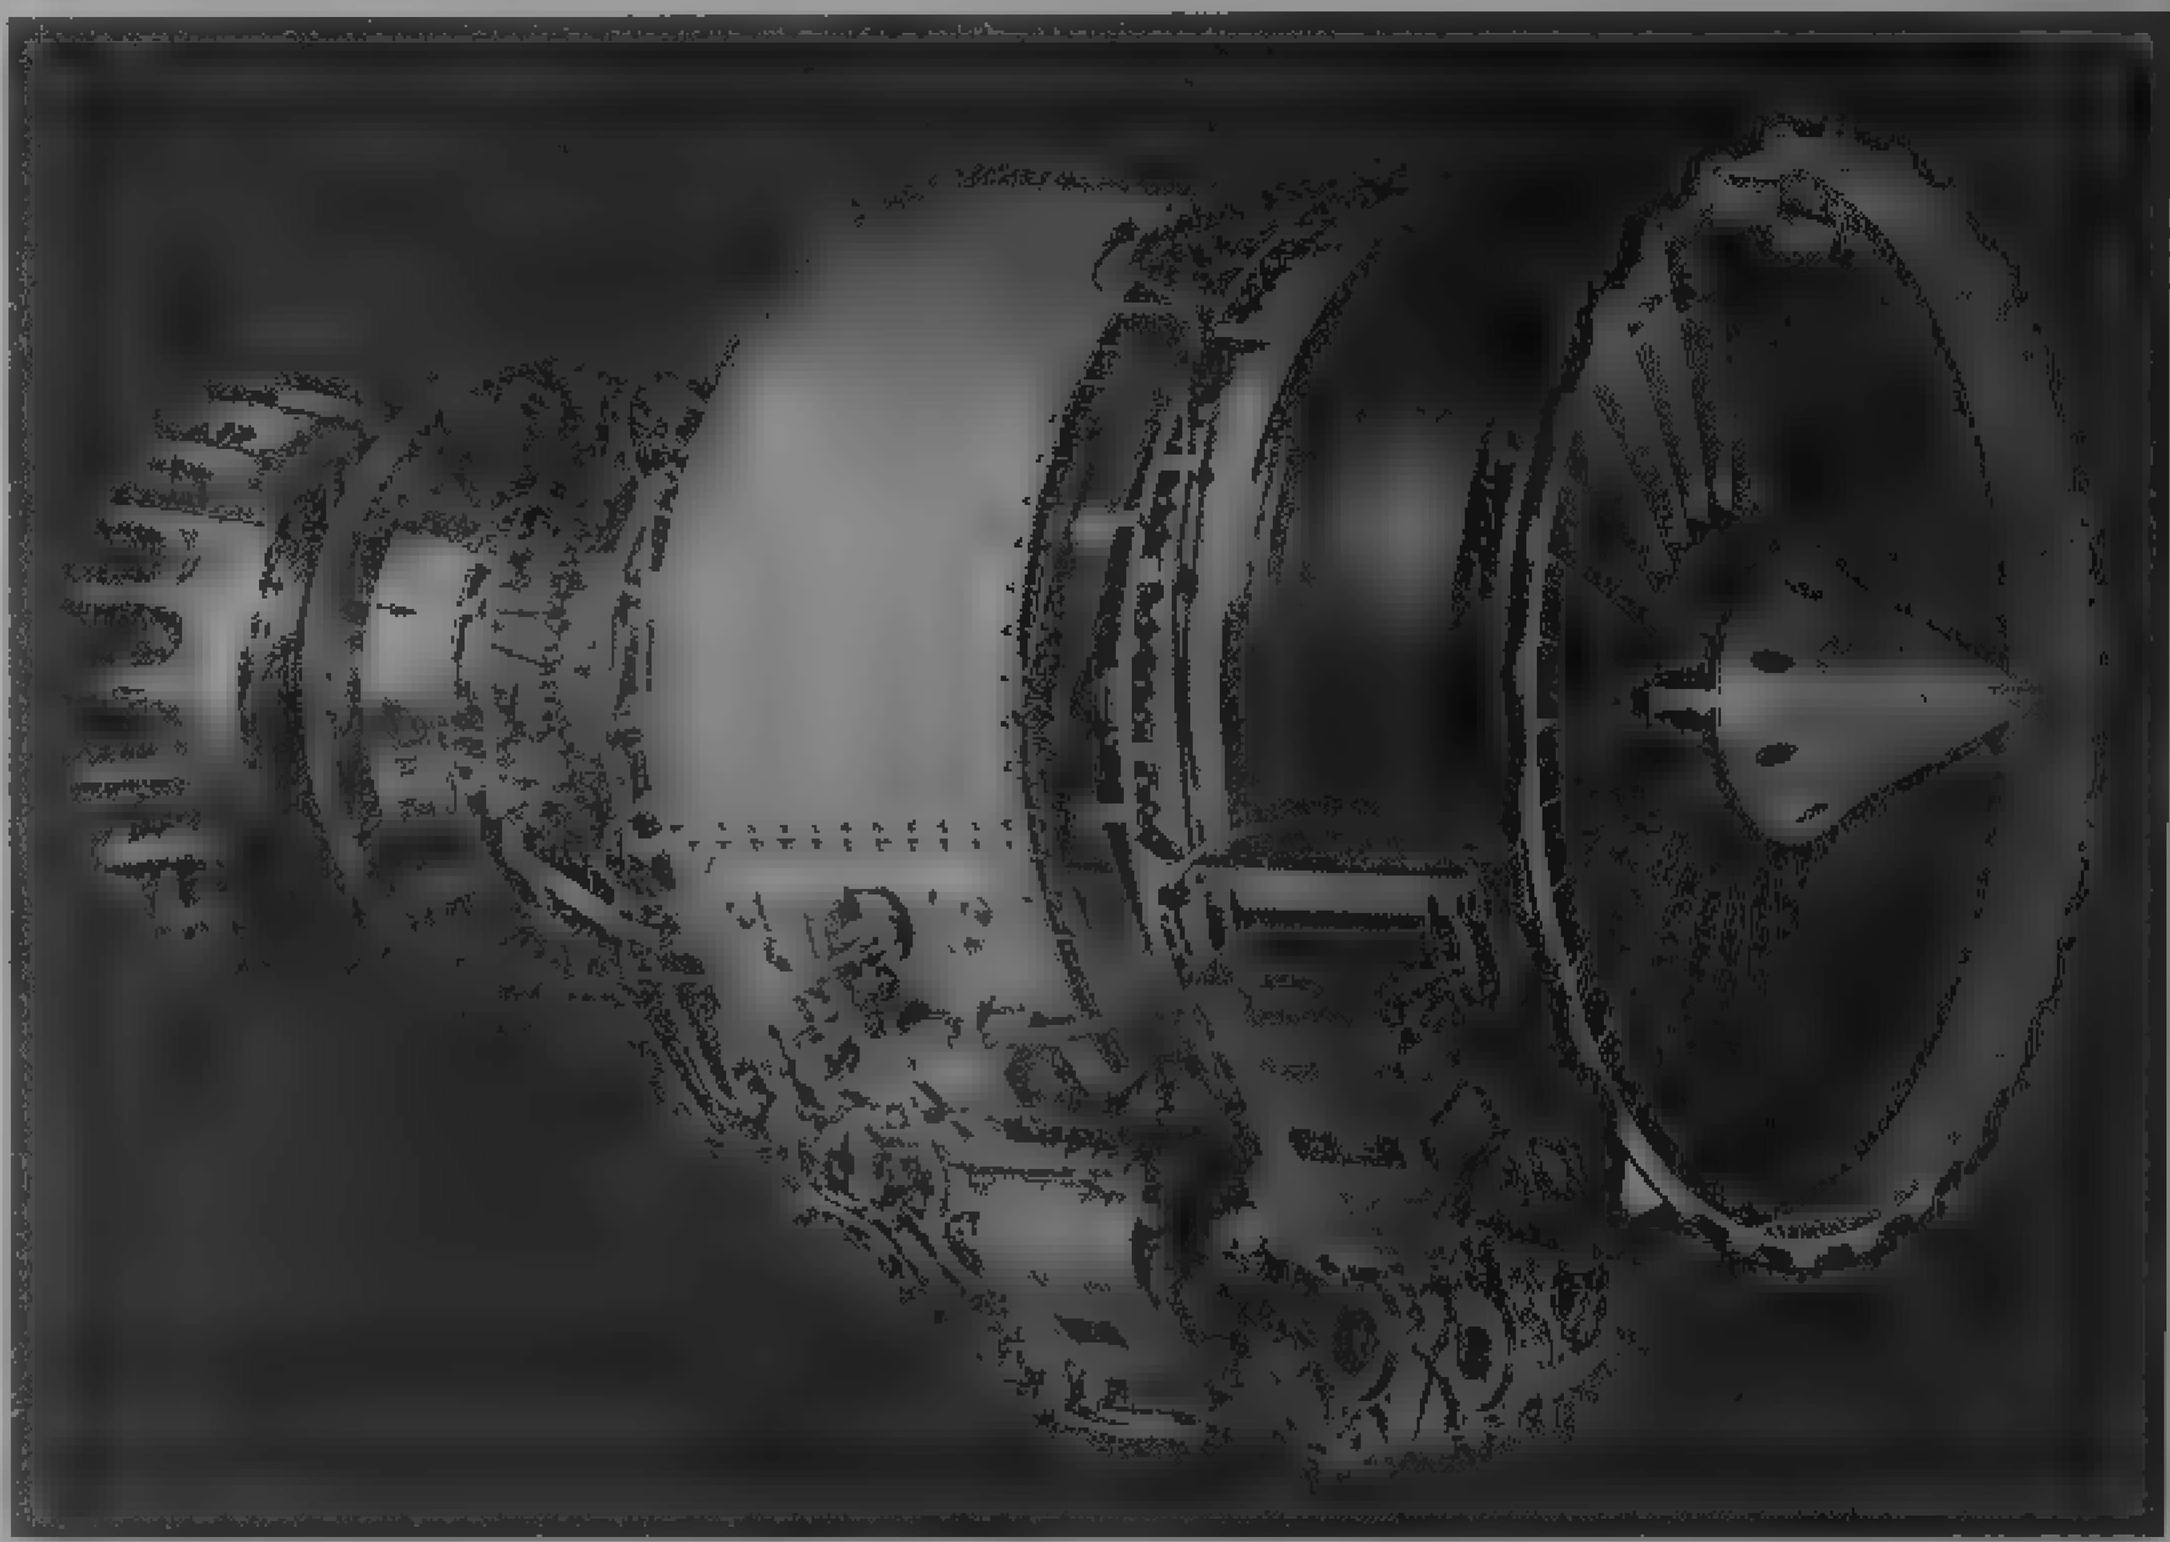
UPDATED

CFE738

This turbofan is being produced to power regional airliners and large business jet aircraft. The CFE738 is being designed to the latest airline standard technology, with modular construction for 'on wing' maintenance. Its core is essentially that of the GE27, developed under the US Army's MTDE (Modern Technology Demonstrator Engine) programme and part of the T407/GLC38 programme. Engine cores are shipped from GE to Phoenix complete with the engine control system. Garrett AlliedSignal is responsible for the fan, LP turbine and accessory gearbox, and for engine assembly and test. Complete engine testing for certification programmes will be shared equally by the two partners. The first version, CFE738-1, was FAA certificated on 17 December 1993. First Jet veries were then made to power the Dassault Falcon 2000.

The following data relate to the CFE738-1B. Growth versions are planned with thrust ratings exceeding 31.1 kN (7,000 lb).

TYPE: Two-shaft subsonic turbofan
FAN: Single stage with 28 inserted titanium blades with part-span dampers and rotating pointed spinner. Front end of LP shaft held in large-capacity ball bearing. Mass flow 95.3 kg (210 lb)/s. Pressure ratio 1.7. Bypass ratio 5.3
HP COMPRESSOR: Five axial stages followed by one centrifugal. First three stator stages variable. Overall pressure ratio, S/L 23, top of climb 35
COMBUSTION CHAMBER: Centrifugal diffuser leads into annular chamber with 15 fuel injectors



CFE738 two-shaft turbofan *1995*

HP TURBINE: Two stages with cooled blades
LP TURBINE: Three stages. Inter-turbine temperature (cruise) 861°C
JETPIPE: Fixed mixer assembly with 20 chutes for combining the hot and cold flows from core and bypass duct. Provision for reverser
CONTROL SYSTEM: Dual FADEC
DIMENSIONS:

Length	2,514 mm (99.0 in)
Width	1,092 mm (43.0 in)
Height	1,219 mm (48.0 in)

WEIGHT, DRY: 601 kg (1,325 lb)
PERFORMANCE RATINGS (uninstalled):
S/L, T-O 25.47 kN (5,725 lb st) to 30°C (86°F)
Cruise, 12,200 m (40,000 ft), Mach 0.8 6.51 kN (1,464 lb)
SPECIFIC FUEL CONSUMPTION:
S/L, T-O 10.54 mg/Ns (0.372 lb/h/lb st)
Cruise (as above) 18.13 mg/Ns (0.64 lb/h/lb)

PRESIDENT AND CEO: E. F. Murphy

Current products of GE Aircraft Engines include the F103, F110, F118, F404, F414, T64, T700 and TF34 for military use, and the GE90, CF6, CF34, CT7 and GLC38 for the commercial and general aviation market. A new turbofan is being developed in partnership with AlliedSignal and appears under CFE. In partnership with SNECMA of France a company was formed to develop and market the CFM56 turbofan, as described in the International part of this section under CFM International.

Details of the CF700, CJ610, F101, J79, J85, T58 and TF39 engines, which are no longer in production, can be found in earlier editions of *Jane's*.

UPDATED

GENERAL ELECTRIC F404

In May 1975 the US Navy selected McDonnell Douglas/Northrop to develop its F/A-18 Hornet, powered by two F404-GE-400 engines.

First F404 engine test took place in December 1976. Preliminary flight rating test took place in May 1978, first F/A-18 flight in November 1978 and MQT (model qualification test) in June 1979. The first production delivery took place in December 1979.

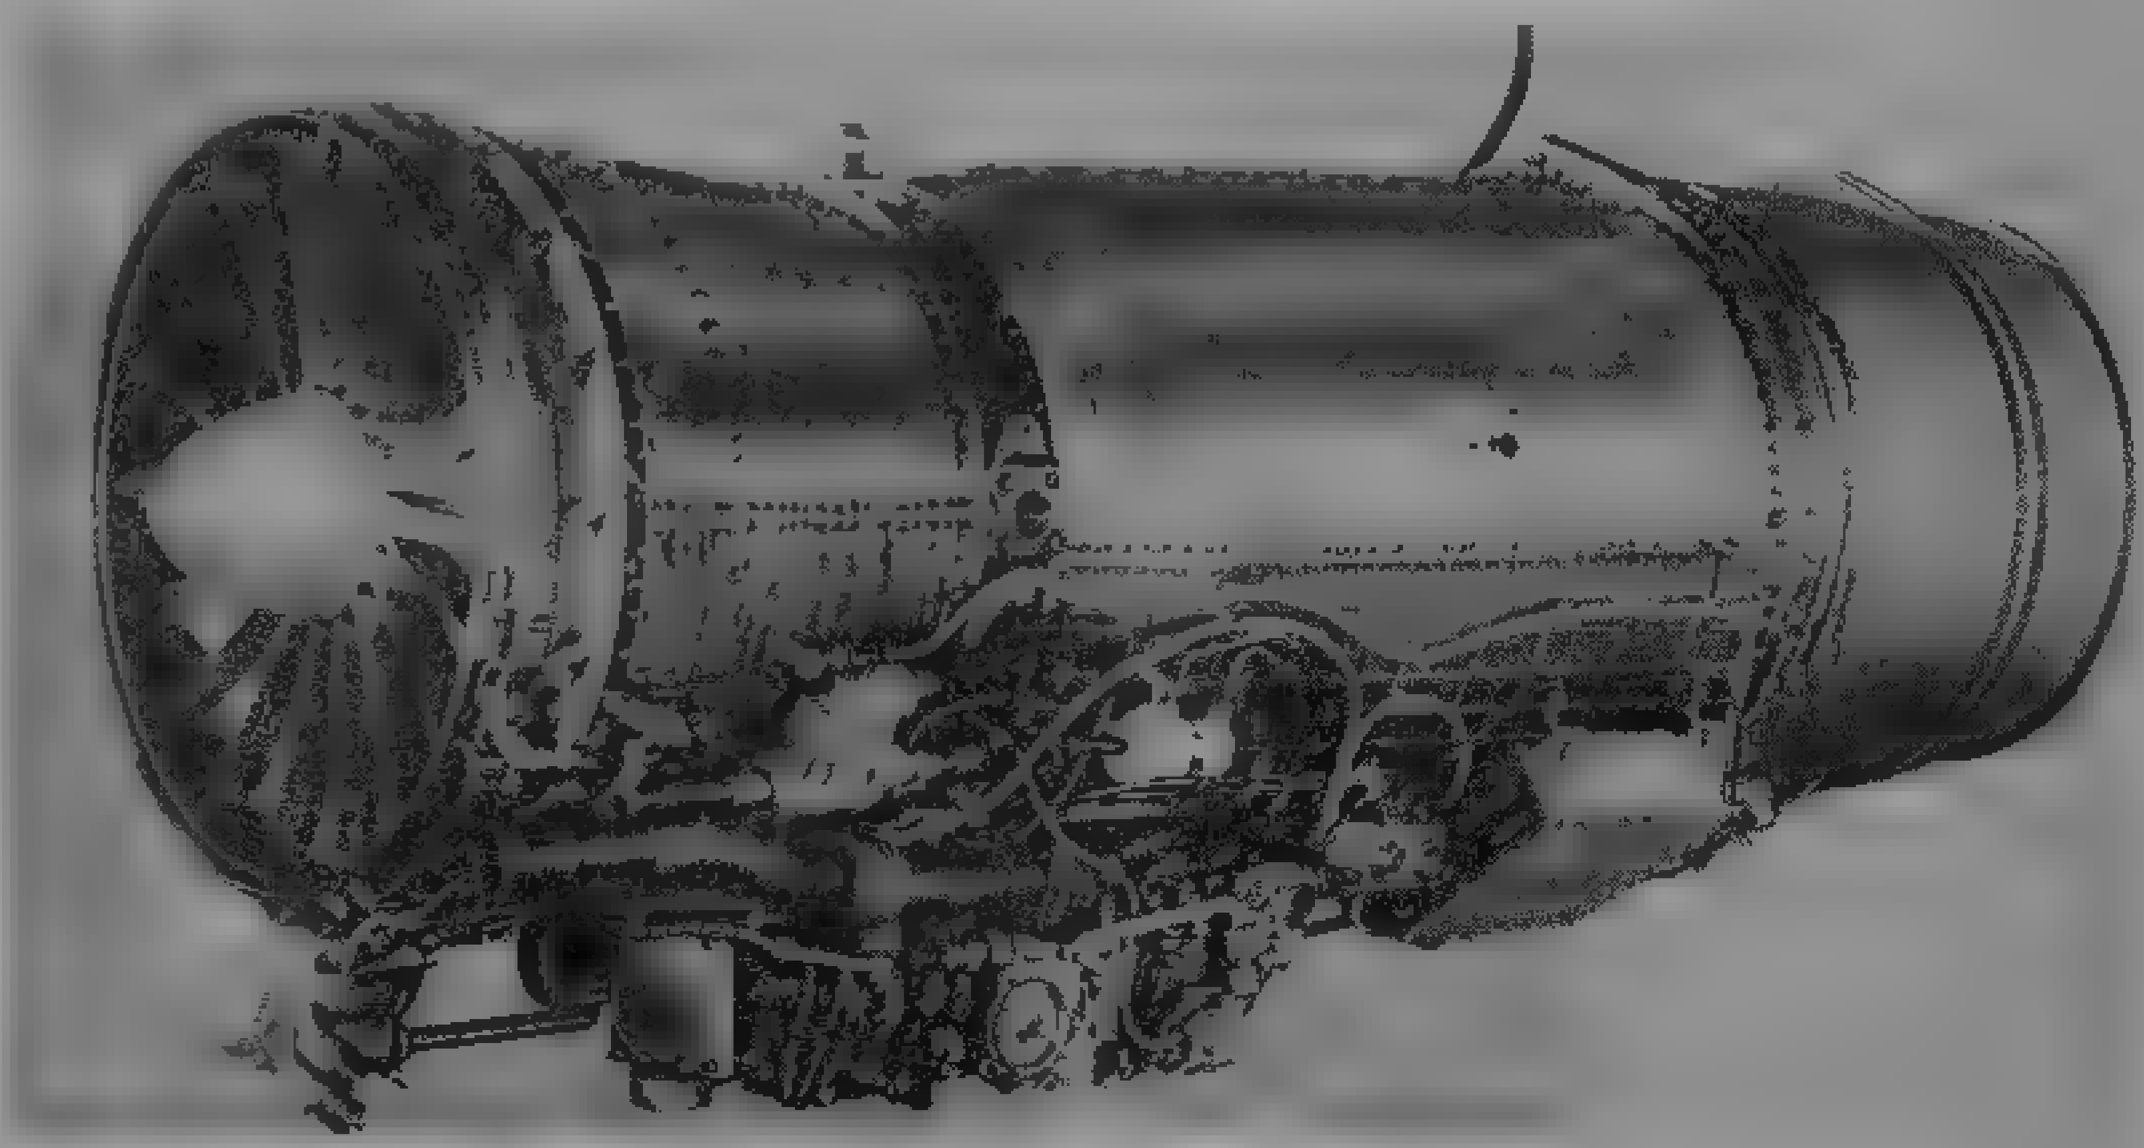
The following are current versions of the F404.

F404-GE-400. Original production engine for approximately 1,100 F/A-18A/B/C/D Hornets, including exports to Australia, Canada and Spain. Also powered Grumman X-29 and Rockwell/MBB X-31. Maximum rating 71.2 kN (16,000 lb st).

F404-GE-402. Enhanced Performance Engine (EPE) in the 79 kN (17,700 lb st) class; combines a 2,000 hour hot section with up to 25 per cent increase in thrust, achieved through higher temperature, increased fan speed and improved design and materials in the turbines and afterburner. In production for F/A-18C/D since 1991 (first flight, first Kuwaiti Hornet, 19 September 1991), US Navy from early 1992, plus exports to Finland, Malaysia and Switzerland.

F404-GE-100D. A 49 kN (11,000 lb st) non-afterburning derivative of F404-GE-400 with modified single-engine control system for Singapore Air Force A-4SU Super Skyhawk.

F404-GE-F1D2. A non-afterburning turbojet derivative



General Electric F404-GE-100D unaugmented turbofan *1990*

of the F404-GE-400 rated at 44.5 kN (10,000 lb st), powering the US Air Force F-117A

F404/RM12 An 80 kN (18,100 lb st) F404 derivative. Redesigned fan handles 10 per cent greater air flow and has increased resistance to foreign object damage. Increased turbine inlet temperature provides operating margin for lower right hand corner of flight envelope. Modified single-engine control system for JAS 39 Gripen. Selected to flight test Indian Light Combat Aircraft. See Volvo Aero, Sweden

F404-GE-400D. Unaugmented version of F404-GE-400 rated at 48.0 kN (10,800 lb st). Powered Grumman A-6F prototype

The following description applies to the F404-GE-402

TYPE: Two-shaft augmented low-bypass ratio turbofan (turbojet with continuous bypass bleed)

FAN: Three-stage. Bypass ratio 0.27. Mass flow 66.2 kg (146 lb)/s

HP COMPRESSOR: Seven-stage. Overall pressure ratio, 26 : 1 class

COMBUSTION CHAMBER: Single-piece annular

HP TURBINE: Single stage with air-cooled blades

LP TURBINE: Single stage

EXHAUST SYSTEM: Close coupled afterburner. Convergent-divergent exhaust nozzle with hydraulic actuation

CONTROL SYSTEM: Electrical hydromechanical

DIMENSIONS

Length overall	4,030 mm (158.8 in)
Max diameter	880 mm (34.8 in)
WEIGHT, DRY	1,035 kg (2,282 lb)
PERFORMANCE RATING	
Max T-O	79 kN (17,700 lb st)

GENERAL ELECTRIC F414

The F414 is the engine for the US Navy's F/A-18E/F Hornet multimission aircraft. Derived from the F404, the **F414-GE-400** is rated at 97.86 kN (22,000 lb st). Production qualification is planned for 1996, and shipments are due in 1998

VERIFIED

GENERAL ELECTRIC ASTOVL

A family of engines based on the YF120 low-bypass fighter turbofan for advanced STOVL aircraft. Various low spools are being mated with the YF120 core to provide propulsion for each candidate lift concept, including augmented lift (gas and shaft driven), direct lift and lift plus lift/cruise

GENERAL ELECTRIC TF34

This turbofan won a 1965 US Navy competition. In August 1972 the **TF34-GE-2**, the initial variant for the Lockheed S-3A Viking, completed its model qualification test (MQT) and entered fleet service in February 1974. In January 1975 GE began shipment of the **TF34-GE-400A/B**, which replaced the GE-2 as S-3A engine. In 1970 the TF34 was selected to power the A-10A attack aircraft as the **TF34-GE-100**, with a long fan duct and side mountings. In 1974 a third version was selected to provide auxiliary (thrust) power for the Sikorsky S-72 research aircraft

TYPE: Two-shaft high bypass ratio turbofan

FAN: Single-stage fan has blades forged in titanium. Mass flow (TF34-400A/B) 153 kg (338 lb)/s at 7,365 rpm with pressure ratio 1.5. Bypass ratio 6.2

COMPRESSOR: Fourteen-stage axial on HP shaft. Inlet guide vanes and first five stators variable. First nine rotor stages titanium, remainder high nickel alloy. Performance at maximum S/L rating, core air flow 21.3 kg (47 lb)/s at 17,900 rpm with pressure ratio 14, overall pressure ratio 21

COMBUSTION CHAMBER: Annular Hastelloy liner and front dome, with 18 carburetting burners.

TURBINE: Two-stage HP; four-stage LP with tip-shrouded blades. EGT 1,225°C maximum

FUEL SYSTEM: Hydromechanical with electronic amplifier. Fuel grade JP-4 or JP-5

DIMENSIONS

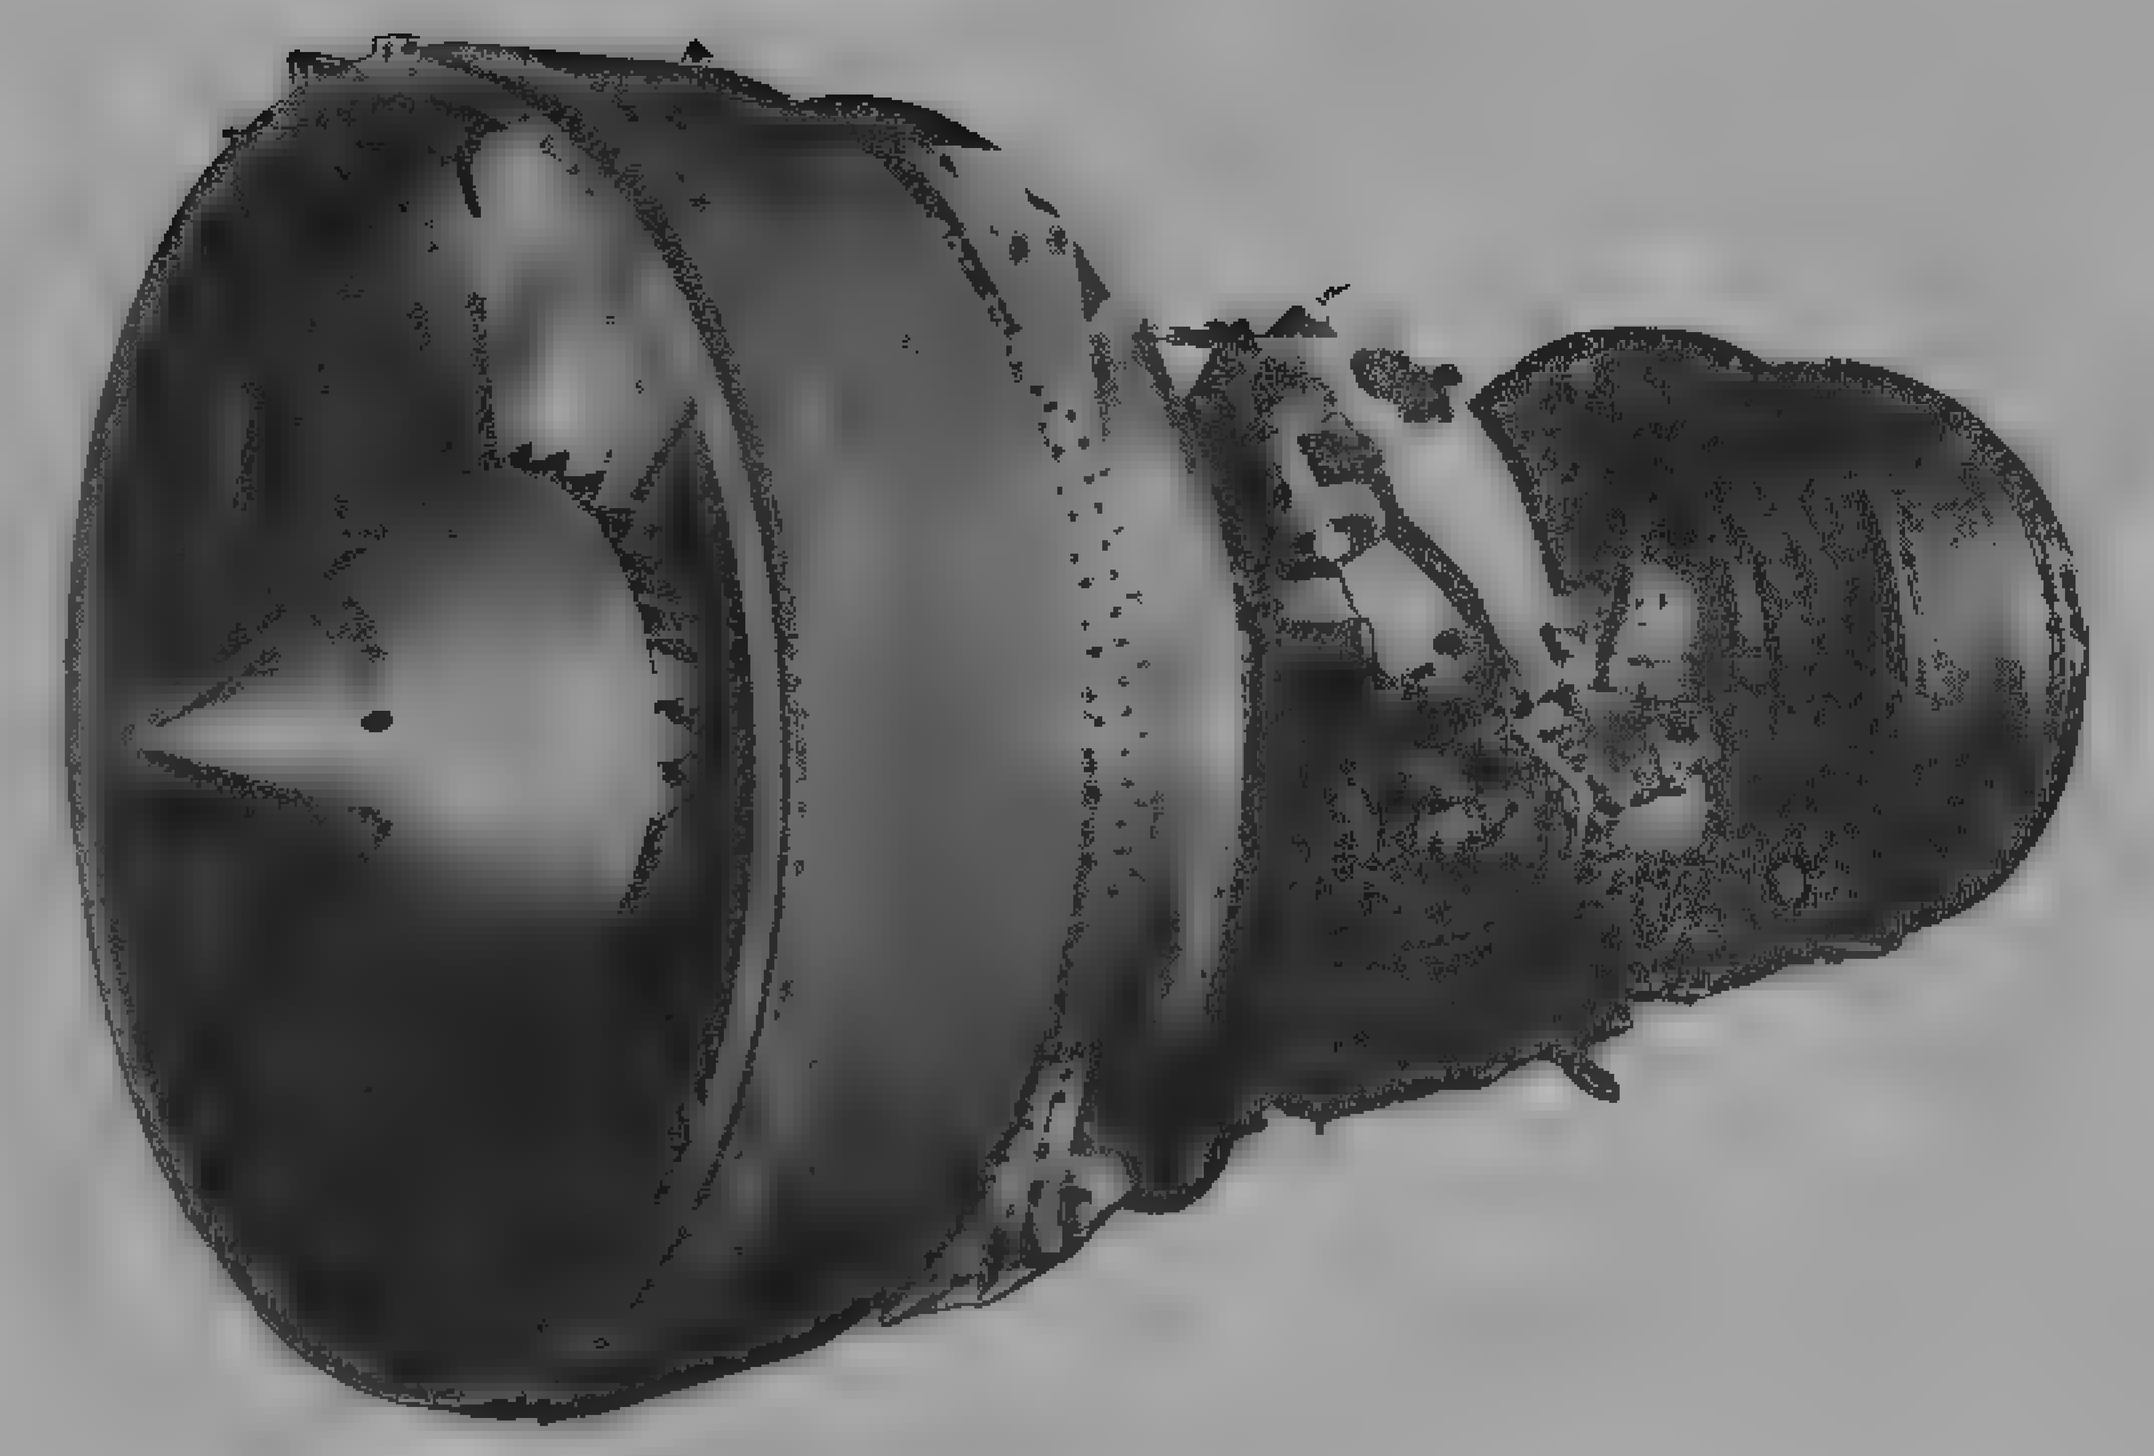
Max diameter:	
TF34-GE-400A/B	1,321 mm (52.0 in)
TF34-GE-100	1,245 mm (49.0 in)
Basic length (both)	2,540 mm (100.0 in)
WEIGHT, DRY	
TF34-GE-400A/B	670 kg (1,478 lb)
TF34-GE-100	653 kg (1,440 lb)
PERFORMANCE RATING (max T-O; S/L static)	
TF34-GE-400A/B	41.3 kN (9,275 lb st)
TF34-GE-100	40.3 kN (9,065 lb st)
SPECIFIC FUEL CONSUMPTION (max T-O, S/L static)	
TF34-GE-400A/B	10.3 mg/Ns (0.363 lb/h/lb st)
TF34-GE-100	10.5 mg/Ns (0.370 lb/h/lb st)

VERIFIED

GENERAL ELECTRIC CF34

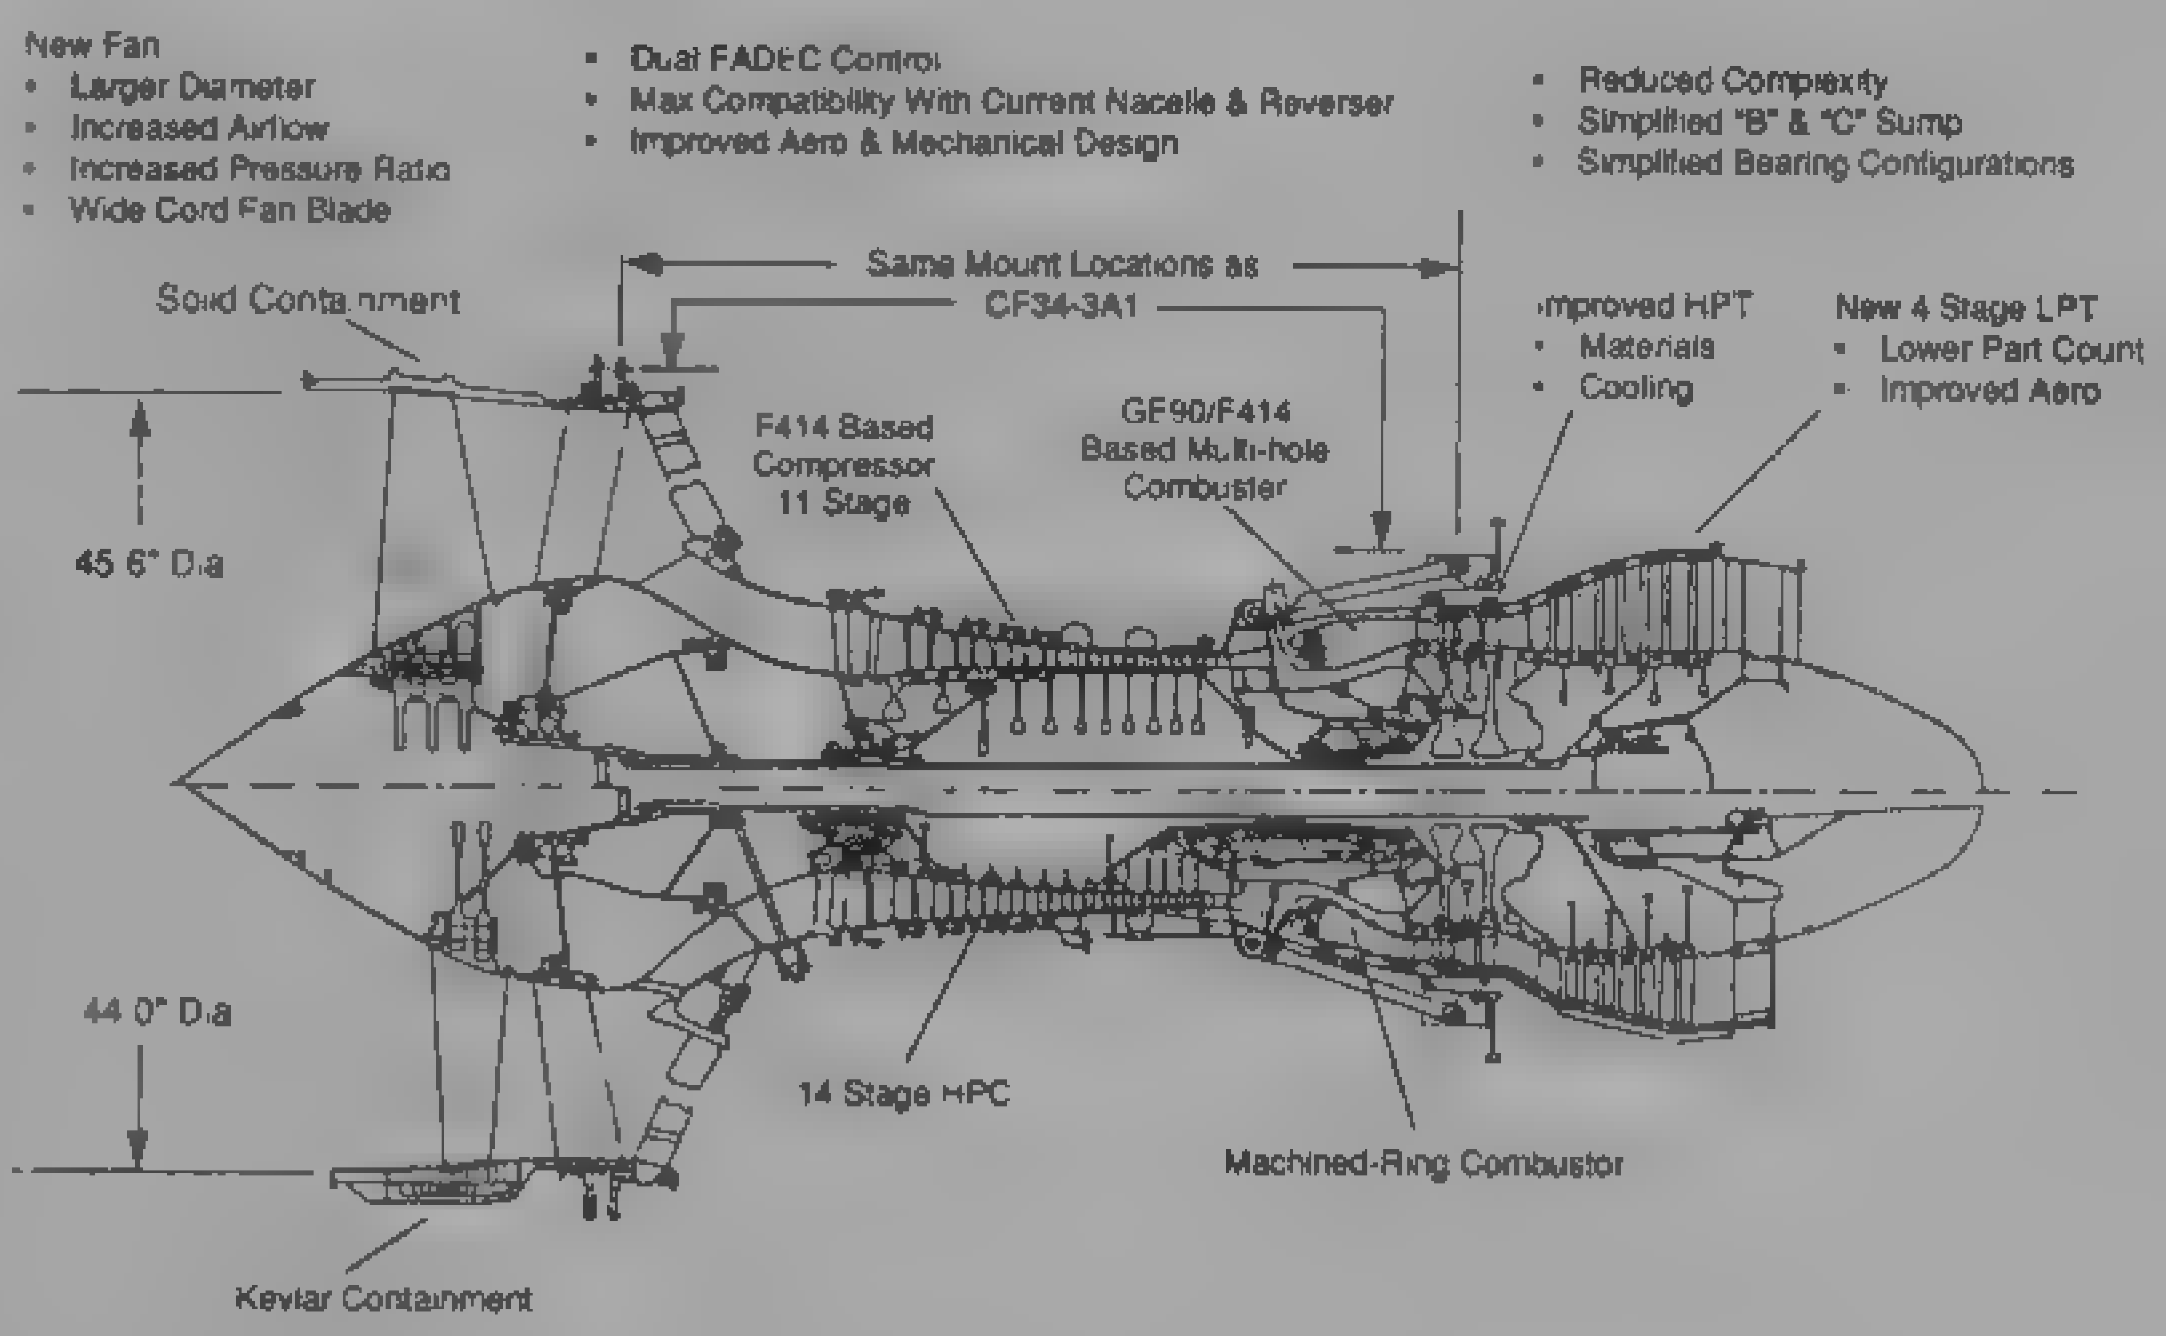
The CF34 is a commercial adaptation of the TF34. Total air flow at take-off power with automatic power reserve (APR) is 151 kg (332 lb)/s. Bypass ratio is 6.3

CF34-1A. Certificated August 1982. Powers Challenger 601-1A. Rated at 38.48 kN (8,650 lb st)



General Electric CF34-3A1 two-shaft turbofan

1985



Comparative sections through CF34-3A1 (bottom half) and CF34-8C (top half)

1995

CF34-3A. Powers Challenger 601-3A. Rated at 41.0 kN (9,220 lb st) with APR, or 38.8 kN (8,729 lb st) without

CF34-3A1. Powers Canadair RJ and Challenger 601-3R. Data below for this

CF34-3B. T-O rating as -3A1 but maintained to 30°C (86°F); climb and cruise thrusts increased; sfc 9.80 mg/Ns (0.346 lb/h/lb st). Certified in May 1995 for service entry on CL-604 in first quarter of 1996

CF34-3B1. CF34-3B with airline ratings. Was to be certified concurrently with CF34-3B

CF34-8C. Major upgrade with significant differences shown in section drawing. Most of the HP compressor comes from the F414, with most stage's blisks welded into pairs or groups. Likewise, the new LP turbine will probably be inertia-welded into two two-stage wheels. Control will be by two-channel FADEC. Specific fuel consumption is intended to be 8 per cent lower than the CF34-3A1. The Dash 8C is to have an initial T-O rating of 57.82 kN (13,000 lb st), with growth potential to 80.06 kN (18,000 lb st). Selected for Canadair CRJ-X

DIMENSIONS

Length overall	2,616 mm (103.0 in)
Max diameter (at mounts)	1,245 mm (49.0 in)
PERFORMANCE RATINGS (S/L, static)	
T-O (APR)	41.0 kN (9,220 lb st)
T-O (Normal)	38.8 kN (8,729 lb st)
SPECIFIC FUEL CONSUMPTION (as above)	
T-O (Normal)	10.11 mg/Ns (0.357 lb/h/lb st)

UPDATED

GENERAL ELECTRIC GE90

On 16 January 1990 GE announced that it was developing a high-bypass turbofan with thrust in the range 333 to 444 kN (75,000 to 100,000 lb st) capable of powering all new and derivative wide-body aircraft that may enter the market in the mid-1990s. The first GE90 to run reached the then record thrust of 468 kN (105,400 lb st) on 3 April 1993. Flight testing in a 747 began in September 1993

The GE90 was scheduled for certification at 388.8 kN (87,400 lb st) in May 1994 and entry into service at 350.1 kN (78,700 lb st) on the Boeing 777 in third quarter 1994. This schedule slipped seriously, certification finally being achieved in March 1995. Further delay was then caused by two fan failures, one in a blade-root severance test and the other in a simulated large bird strike

This new design is based on a compressor scaled directly from GE's Energy Efficient Engine programme, a joint GE/NASA-funded project aimed at establishing a technology base for engines of the 1990s. It features the largest fan yet built, with composite wide-chord blades

The large fan diameter increases the bypass ratio to 8.4, higher than that of any engine yet developed. The higher bypass ratio is claimed to achieve a 10 per cent improvement in specific fuel consumption compared to today's large turbofan engines, while providing reduced noise levels.

Improvements to the combustor design will result in significantly improved emissions (oxides of nitrogen)

The engine features a fan case mount with an integrally stiffened system that bypasses thrust loads around the short, stiff core. This system, in conjunction with the straddle-mounted core, will deliver improved performance retention and reduced airline operating costs

The compressor permits a shorter, lighter, stifter engine with a high overall cycle pressure ratio that also contributes to the significantly improved specific fuel consumption. The double-dome combustor was designed specifically for low NO_x emissions. Under low thrust, the outer combustor nozzles are used, as thrust is increased, the inner set of main nozzles begins operation. The high-pressure turbine features single-crystal blades, and the turbine discs are boltless, with smooth side plates for low windage losses

GE's partners include SNECMA, FiatAvio and IHI. Among the GE90's features are

General Electric GE90 two-shaft turbofan

1994

FAN: Low speed, low-pressure ratio with bypass ratio of 8.4 to 9.0; composite, unshrouded wide-chord rotor blades. Structural outlet guide vanes. Blade/vane quantities and spacing optimised for low acoustics.

LP COMPRESSOR: Three stages, low speed, moderate pressure ratio, low noise features.

HP COMPRESSOR: Ten stages, pressure ratio 23, derived from GE/NASA Energy Efficient Engine (E^3) technology demonstrator. Overall pressure ratio over 39.3 to 45.5.

COMBUSTOR: Double annular design for low NO_x emissions.

HP TURBINE: Two stages with monocrystal blades and powdered metal discs.

LP TURBINE: Six stages with relatively low stage loading for improved efficiency, low noise features.

FUEL SYSTEM: FADEC control of fuel flow, variable geometry and active clearance control systems.

DIMENSIONS:

Fan diameter	3,124 mm (123 in)
Length, flange to flange	4,902 mm (193 in)

WEIGHTS: Not stated

PERFORMANCE RATINGS:

Max T-O (S/L)	
GE90-76B	339.9 kN (76,400 lb st) to 32.8°C
GE90-85B	376.8 kN (84,700 lb st) to 30°C
Max climb (both, 10,670 m (35,000 ft), Mach 0.8)	83.68 kN (18,100 lb)
Max cruise (both, 10,670 m (35,000 ft), Mach 0.8)	77.85 kN (17,500 lb)

SPECIFIC FUEL CONSUMPTION:

Both (cruise, as above, bucket target) 14.73 mg/Ns (0.52 lb/h/lb)

UPDATED

GENERAL ELECTRIC CF6

US military designation (CF6-50E): F103-GE-100

On 11 September 1967 General Electric announced the commitment of corporate funding for development of the CF6 turbofan for wide-body transports. The CF6-6D for the DC-10-10 was launched on 25 April 1968. Details of this and other early versions appeared in the 1987-88 *Jane's*. The following are current versions:

CF6-50C2/E2. Rated 233.5 kN (52,500 lb st) to 30°C. Certification 1978. Military -50C2 powers KC-10; -50E2 powers Boeing E-4.

CF6-80A/A3. Improved sfc and performance retention, with length and weight reduced by elimination of turbine mid-frame and reduction in combustor and diffuser length. Engine rated at 213.5 kN (48,000 lb st) as the -80A/A1, and 222.4 kN (50,000 lb st) as the -80A2/A3. Fitted to 767 and A310. Programme launched November 1977, first engine ran October 1979 and certification October 1981. Production split between GE and SNECMA. The -80A and -80C2 on the 767 were first to receive FAA approval (January 1989) for 180 min ETOPS operations.

CF6-80C2. Described separately.

The following data relate to the CF6-50C2/E2, with -80 differences noted:

TYPE: Two-shaft high bypass ratio turbofan.

FAN: Single-stage with three-stage LP compressor both driven by LP turbine. The 38 fan rotor blades have antivibration shrouds at two-thirds span. Blades, discs, spool of titanium, exit guide vanes of aluminium, fan frame and shaft of steel, spinner and fan case of aluminium alloy. Total air flow 591 kg (1,303 lb)/s, bypass ratio 5.7. CF6-80A/A1 has better efficiency and birdstrike resistance, with Kevlar containment in fan case. Fan diameter 2,195 mm (86.4 in). Mass flow, CF6-80A/A1, 651 kg (1,433 lb)/s, -80A2/A3, 663 kg (1,460 lb)/s. Bypass ratio, -80A/A1, 4.7, -80A2/A3, 4.6.

LP COMPRESSOR: Three core booster stages, 12 bypass doors maintain flow matching between fan/LP and core by opening at low power settings, closed during take-off and cruise.

HP COMPRESSOR: Fourteen-stage with inlet guide vanes and first six stator rows having variable incidence. Core air flow 125 kg (276 lb)/s. Forward titanium and aft Inco 718 casings are horizontally split. CF6-80A series incorporate bore cooling for blade/casing clearance control, and a horizontally split full-length steel casing with insulated aft stages and short diffuser section. Overall pressure ratio (T-O), 29.13 (-50C), 30.1 (-50E), 28.0 (-80A/A1), 29.0 (-80A2/A3).

COMBUSTOR: Fully annular. CF6-80A has rolled ring combustor, 152 mm (6.0 in) shorter, mounted at aft flange.

HP TURBINE: Two-stage air-cooled, TET 1,330°C. CF6-80A has no turbine mid-frame and eliminates one main bearing, and HP case has active clearance control.

LP TURBINE: Four-stage constant tip diameter with nominal 871°C inlet temperature. Rotor blades tip-shrouded and not air-cooled. CF6-80A, new turbine with active clearance control.

THRUST REVERSER (FAN): Rear portion of fan outer cowl translates aft on rotating ballscrews to uncover cascade vanes. Blocker doors (16) flush-mounted in cowl on link arms hinged in inner cowl, rotate inwards to expose cascade vanes and block fan duct. CF6-80A1/A3 (A310) similar, 767 reverser by Boeing.

ACCESSORY DRIVE: Inlet gearbox in forward sump transfers energy from the core. Transfer gearbox on fan frame delivers power to the accessory gearbox on the core with starter, fuel pump, main engine control, lubrication pump, alternator and pads for aircraft hydraulic pumps and constant-speed drive. CF6-80A1/A3 gearbox on fan case.

FUEL SYSTEM: Hydromechanical, schedules acceleration and deceleration fuel flow, variable stator vane position and LP compressor variable bypass doors. CF6-80, electronic trimming.

FUEL GRADES: Fuels conforming to ASTM-1655-65T, Jet A, Jet A1 and Jet B, and MIL-T-5624G2 grades JP-4 or JP-5 are authorised, but Jet A is primary specification.

LUBRICATION SYSTEM: Dry sump centre-vented nominal pressure is 2.07-6.21 bars (30-90 lb/sq in).

STARTING: Air turbine starter mounted on the rear of core-mounted accessory gearbox. CF6-80A1/A3 starter in on the front of the fan-case gearbox.

NOISE SUPPRESSION: Acoustic panels integrated with fan casing, fan front frame and thrust reverser.

DIMENSIONS:

Max height (over gearbox)	2,675 mm (105.3 in)
Length overall (cold)	
CF6-50 series	4,394 mm (173.0 in)
CF6-80A	3,998 mm (157.4 in)

CF6-80C2 and 80E1 MODELS

Model	Thrust: Ideal nozzle	Thrust: Real nozzle	Application
CF6-80C2A1	262.5 kN (59,000 lb)	257.4 kN (57,860 lb) to 30°C	A300-601
CF6-80C2A2	238.0 kN (53,500 lb)	233.4 kN (52,460 lb) to 43.9°C	A310-200, -300

OIL CONSUMPTION: 0.9 kg (2.0 lb)/h

UPDATED

GENERAL ELECTRIC CF6-80C2

This engine is a major redesign for higher thrust and improved sfc, based on the CF6-80A1/A3 but with a 2,362 mm (93 in) diameter fan. It has a four-stage LP compressor and LP turbine redesigned aerodynamically with 5½ stages. The first CF6-80C2 ran in May 1982, and exceeded 276 kN (62,000 lb st) corrected thrust. Flight test on an A300 took place between August and December 1984, leading to certification on 28 June 1985. The engine entered revenue service on 5 October 1985.

Programme sharing agreements have been signed with SNECMA of France, MTU of Germany, Volvo Aero of Sweden and FiatAvio of Italy. Applications are shown in the table on the previous page.

The CF6-80C2 differs from earlier CF6 engines in the following features:

FAN: Single stage, with integrally mounted four-stage booster (LP compressor). Mainly titanium except for steel mid-fan shaft, aluminium spinner and blade-containment shroud of layers of Kevlar around aluminium case. Eighty composite exit guide vanes canted for better aerodynamic efficiency. Mass flow 802 kg (1,769 lb)/s, bypass ratio 5.05.

LP COMPRESSOR: Four stages with blades and vanes mounted orthogonally, with dovetail offset from centre of pressure to reduce bending.

HP COMPRESSOR: Fourteen-stage, with inlet guide vanes and first five stator rows with variable incidence. Blades in stages 1-5 titanium, 6-14 steel, vanes all steel. One-piece steel casing with insulated aft stages. Core air flow 154 kg (340 lb)/s. Overall pressure ratio 30.4.

COMBUSTOR: Annular, rolled ring construction, aft-mounted with film cooling.

HP TURBINE: Two-stage. Stage one blades directionally solidified. Casing with active and passive clearance control. No mid-frame.

LP TURBINE: Five stages, with cambered struts in rear frame to reduce exit swirl, effectively producing another half stage. Rear hub heated by exhaust gas to reduce thermal stress.

FUEL SYSTEM: FADEC or hydromechanical fan speed control with electronic supervision, one throttle position corresponds to each engine rating in all flight conditions.

ACCESSORY DRIVE: Drive enhanced on CF6-80C2B6FA to accommodate two 150 kVA alternators.

DIMENSION:
Length: 4,087 mm (160.9 in)

WEIGHT DRY: 4,144 kg (9,135 lb)

PERFORMANCE RATINGS (uninstalled, ideal nozzle)
Max T-O: See table
Max cruise (10,670 m, 35,000 ft, Mach 0.85): 50.4 kN (11,330 lb)

SPECIFIC FUEL CONSUMPTION
T-O, as above: 9.32 mg/Ns (0.329 lb/h/lb st)

UPDATED

GENERAL ELECTRIC CF6-80E1

This engine is a major redesign for higher thrust, based on the CF6-80C2 but with a 2,438 mm (96 in) diameter fan. It has a four stage LP compressor and LP turbine redesigned aerodynamically with 5½ stages. The first CF6-80E1 ran in December 1990 at over 320.3 kN (72,000 lb st) corrected thrust. Flight tested on an A300 early 1992, certified 25 May 1993. Entered service on A330 17 January 1994, JAA approved for 180-minute ETOPS 6 February 1995.

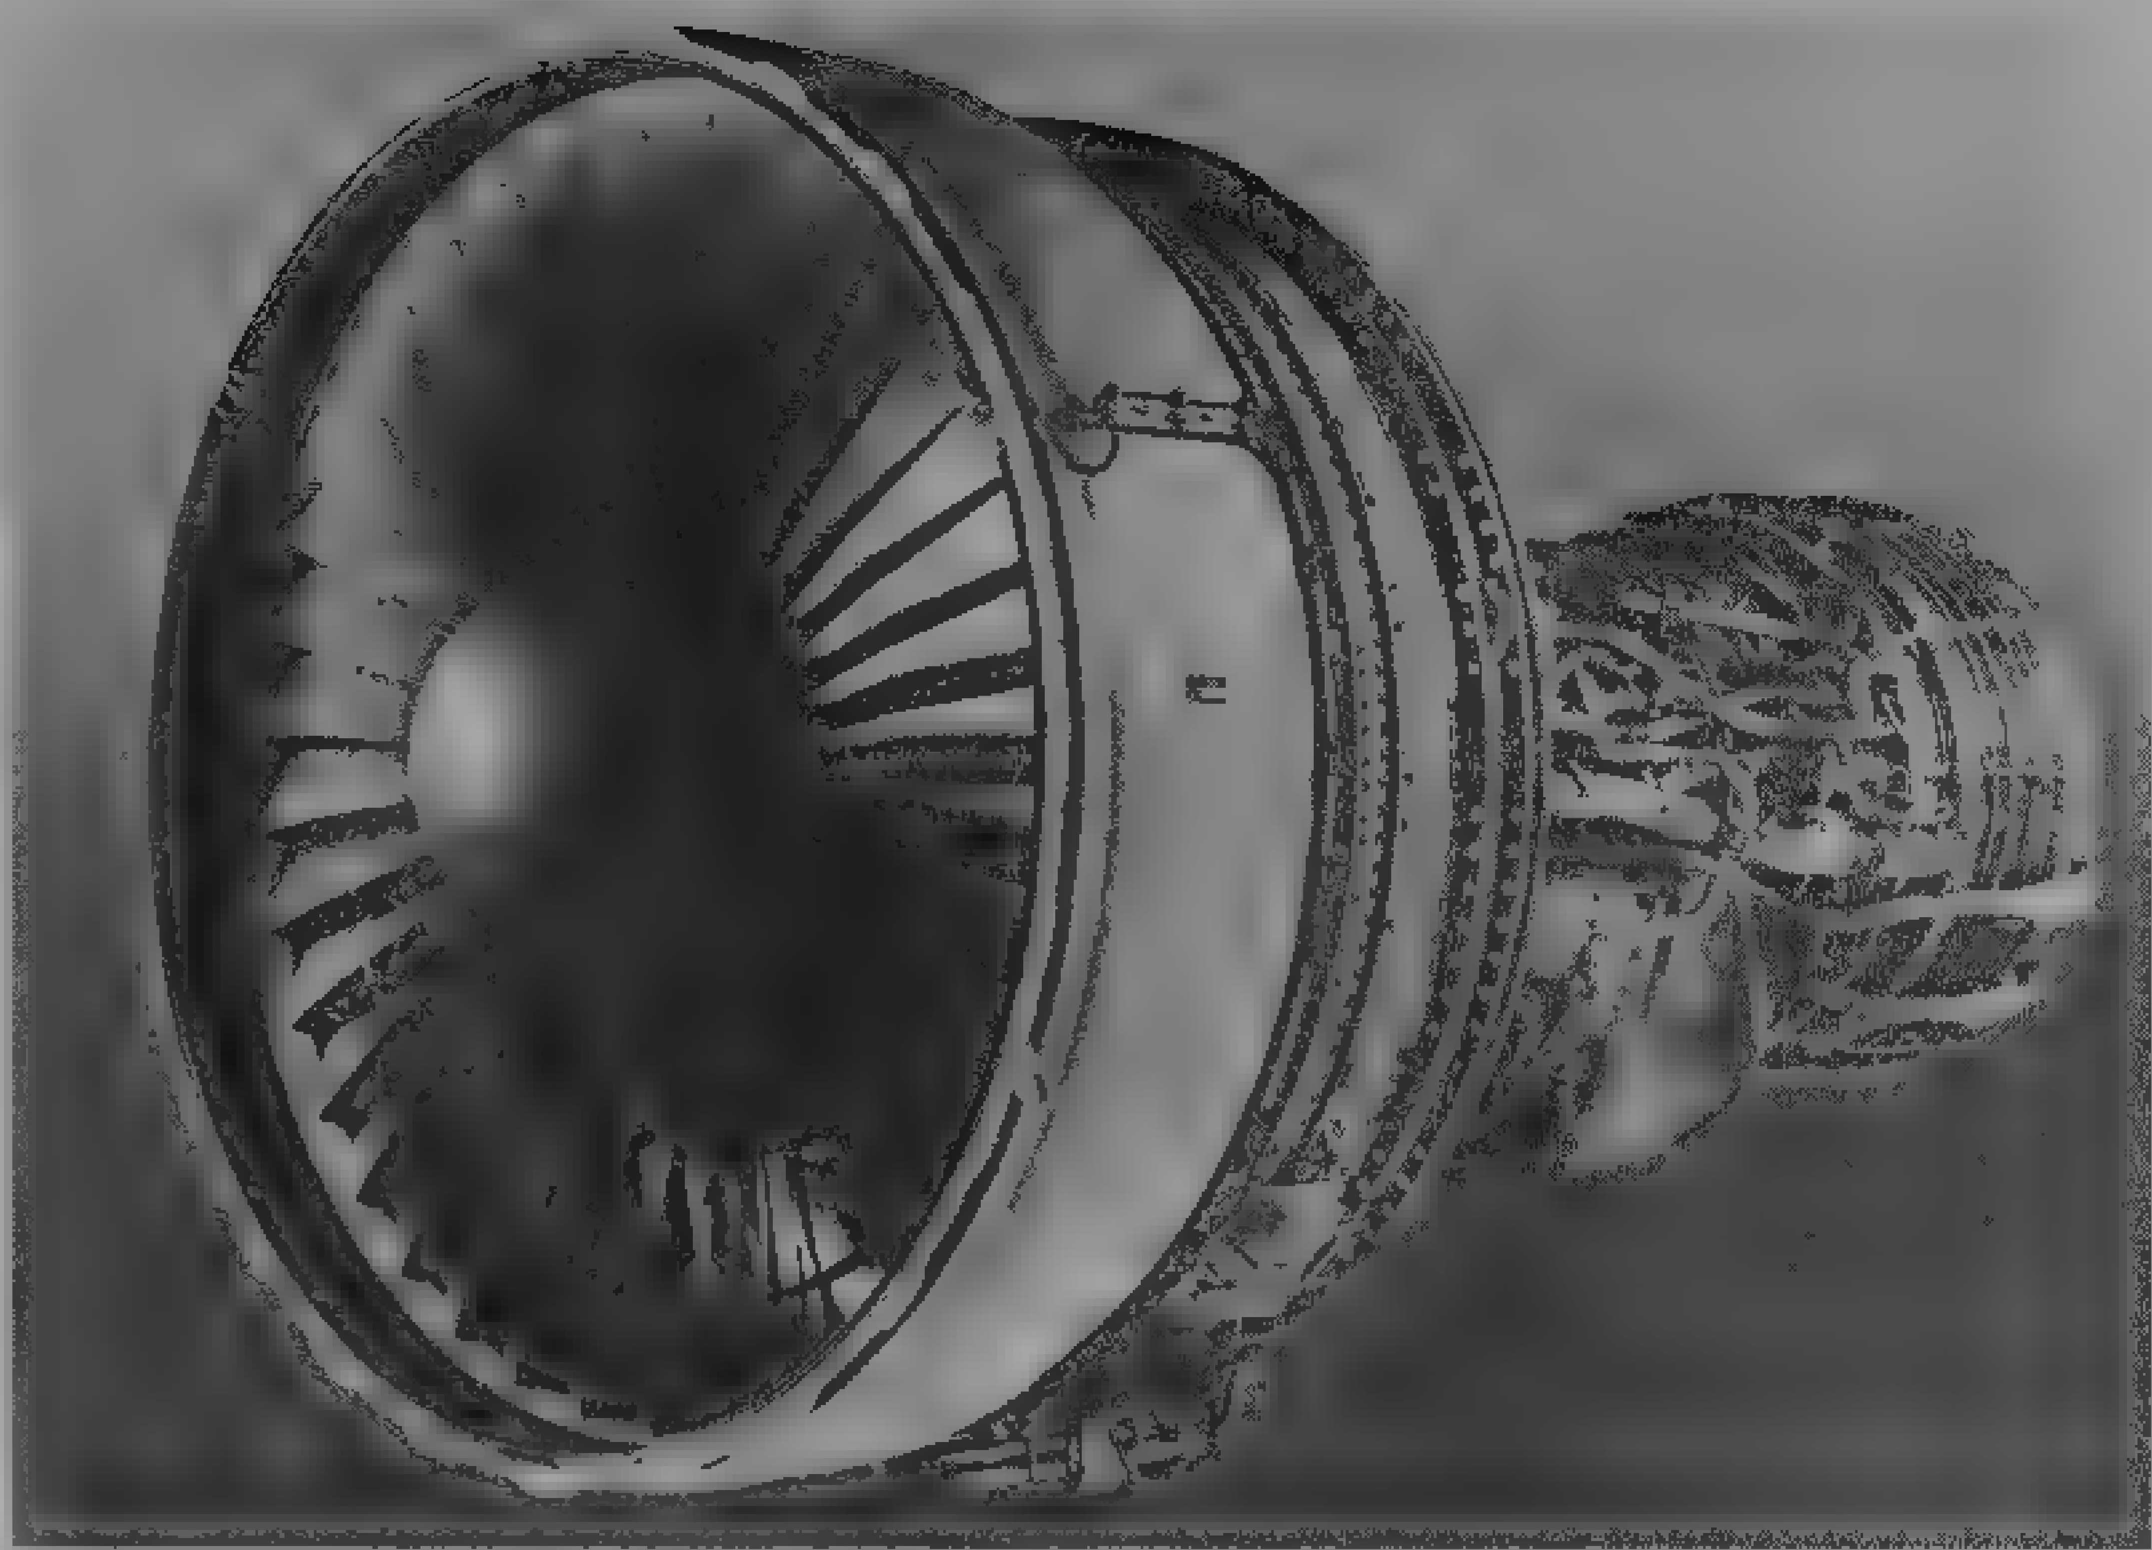
The CF6-80E1 development is being shared with SNECMA of France, MTU of Germany, Volvo Aero of Sweden, and FiatAvio of Italy.

The CF6-80E1 differs from the CF6-80C2 in the following features:

FAN: Diameter increased, number of blades reduced from 38 to 34.

LP COMPRESSOR: Flow capacity increased 9 per cent at a 12 per cent increased pressure ratio.

HP COMPRESSOR: High-temperature alloys in last stage. Overall pressure ratio: E1A2, 32.6, E1A3, 34.6.



General Electric CF6-80C2 two-shaft turbofan

1985

COMBUSTOR: No change.

HP TURBINE: High-temperature alloys and improved cooling.

LP TURBINE: High-temperature alloys, improved cooling changes and aerodynamic changes.

FUEL SYSTEM: Increased-capacity system with on-wing programmable FADEC.

DIMENSIONS

Length: Engine	4,405 mm (173.5 in)
Propulsion system	7,356 mm (289.6 in)

WEIGHT, DRY:

Engine	5,075 kg (11,189 lb)
Propulsion system	6,733 kg (14,844 lb)

PERFORMANCE RATINGS: See table

SPECIFIC FUEL CONSUMPTION (Max T-O):

E1A2	9.26 mg/Ns (0.327 lb/h/lb st)
E1A3	9.63 mg/Ns (0.340 lb/h/lb st)

UPDATED

GENERAL ELECTRIC F110

The **F110** (previously F101 DFE) is a fighter engine derivative of the F101. The first ran in late 1979. In early 1984 the USAF selected the F110 to power majority of future F-16 aircraft.

The following are current versions of the F110:

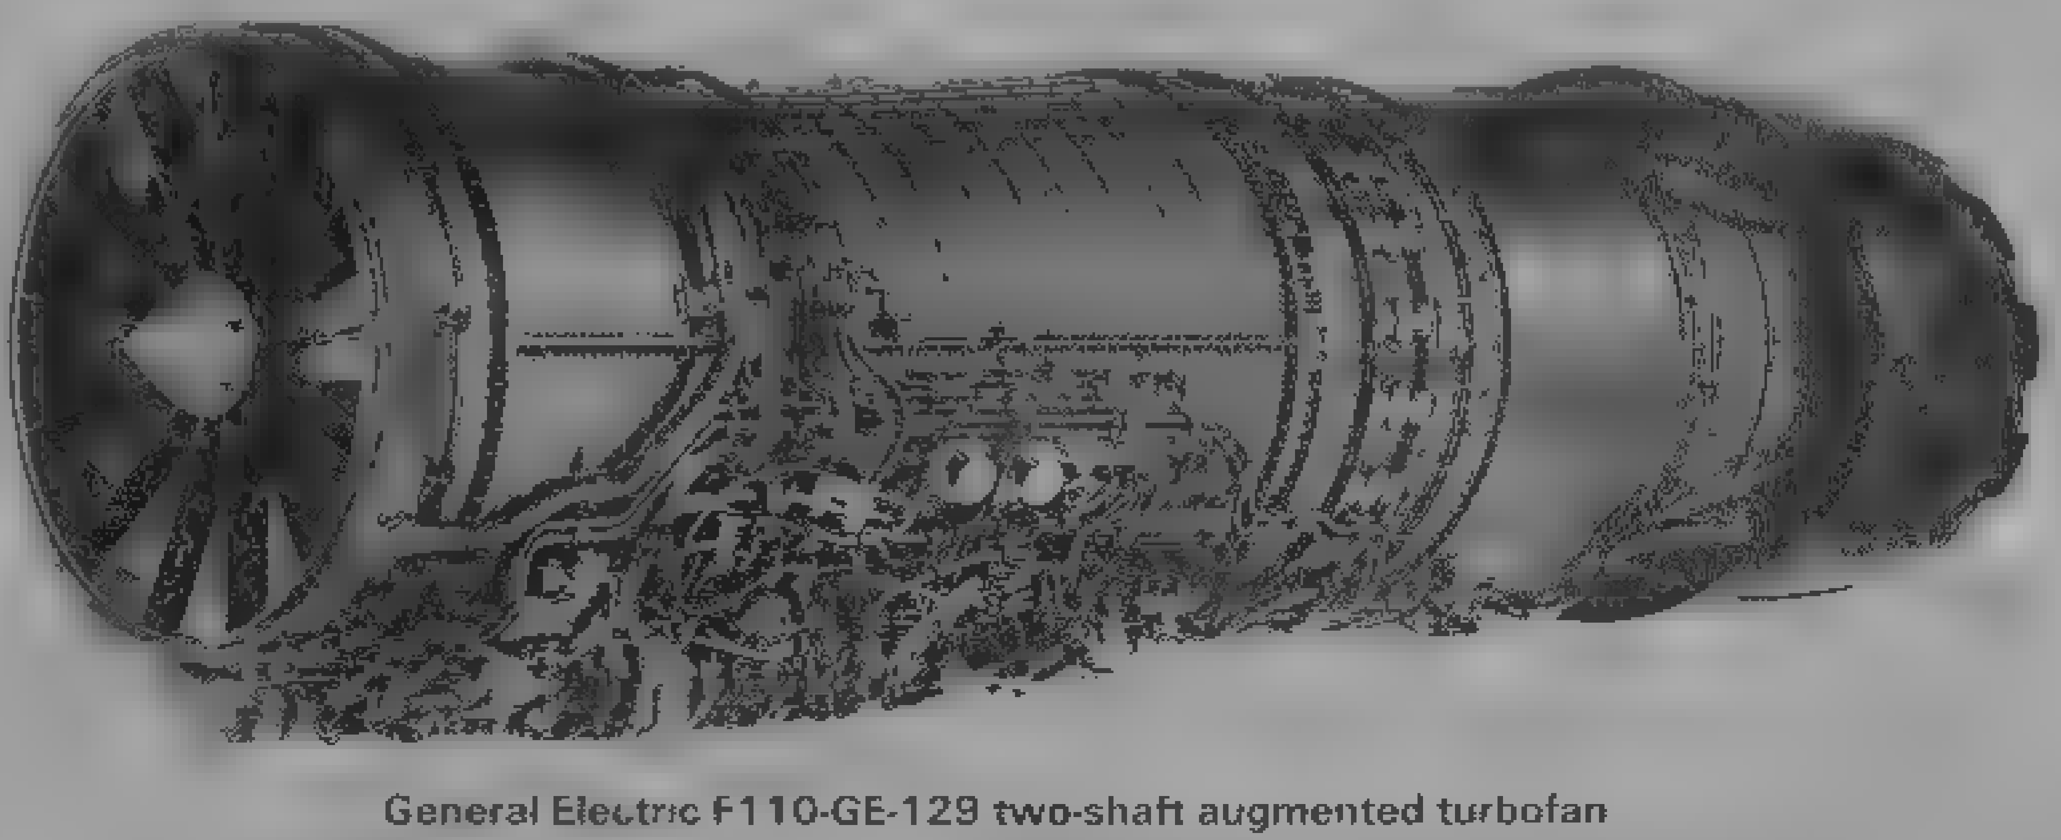
F110-GE-100. Initial USAF engine, also selected by Bahrain, Egypt, Greece, Israel and Turkey. Delivery of production F-16C/D aircraft with F110 engines began in mid-1986. The US Navy selected the Dash-100 to power its F-16Ns for the adversary role in its Top Gun programme. By 1995 over 1,400 engines had flown 1.4 million hours.

F110-GE-100A. Modification of -100 by Bet-Shemesh in Israel, giving additional emergency thrust at low level.

F110-GE-100B. Upgraded engine with FADEC and improved combustor and turbine. Inspection interval to be 4,000 cycles.

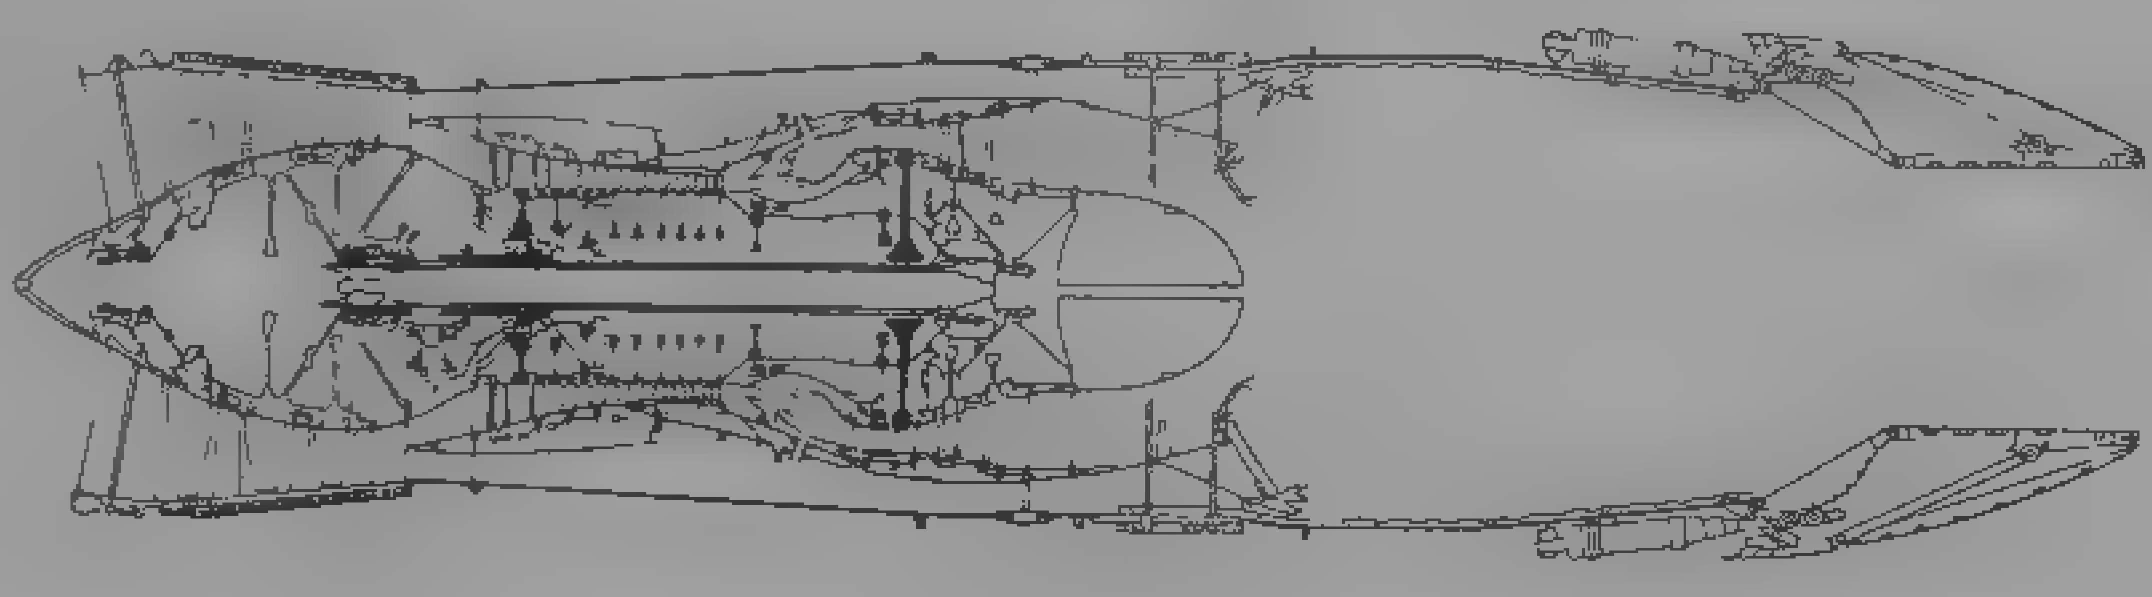
F110-GE-400. Powers F-14A (Plus) and F-14D Tomcat for the US Navy. First production aircraft with this engine delivered to Navy in November 1987. Tomcats powered with this engine show a significant improvement in fuel consumption and the ability to catapult launch without use of an afterburner, resulting in a 61 per cent time-to-climb reduction and a 62 per cent improvement in mission range. Ratings are maximum 120.2 kN (27,000 lb st), dry 71.2 kN (16,000 lb st).

F110-GE-129. Rated at 129 kN (29,000 lb st), the GE IPE (Improved Performance Engine) is the successor to the F110-GE-100. Through the use of improved design and materials, higher operating temperatures, speeds and pressures, the GE IPE increases thrust levels by as much as 30 per cent in certain areas of the flight envelope, while retaining more than 80 per cent parts commonality. The IPE's digital electronic control has 50 per cent fewer parts than previous controls, and offers substantially improved reliability. The IPE first flew in an F-16C/D in August 1988, and a very successful USAF field service evaluation programme was completed in mid 1992. Service entry was achieved in 199 . The engine has also been ordered by Egypt, Greece and Turkey and selected to power Japan's FS-X fighter.



General Electric F110-GE-129 two-shaft augmented turbofan

1995



Longitudinal section of General Electric F110 two-shaft augmented turbofan

1987

The following refers to the F110-GE-129:
FAN: Three stages. Bypass ratio 0.76. Air flow 122 kg (270 lb)/s
HP COMPRESSOR: Nine stages. Overall pressure ratio, 31 class
COMBUSTOR: Annular scroll
HP TURBINE: Single-stage with air cooled blades
LP TURBINE: Two stages, drives fan
AUGMENTOR: Close coupled mixed flow linear thrust afterburner
EXHAUST NOZZLE: Convergent/divergent exhaust nozzle with hydraulic actuation
DIMENSIONS:

Length	4,620 mm (181.9 in)
Diameter	1,180 mm (46.5 in)

PERFORMANCE RATINGS (S/L):

T-O	129 kN (29,000 lb st)
Max dry	75.7 kN (17,000 lb)

UPDATED

GENERAL ELECTRIC F118

This unaugmented turbofan has been developed under USAF contract to meet the demanding propulsion requirements of the Northrop Grumman B-2A bomber. An 84.52 kN (19,000 lb st) class derivative of the F101 and F110 engines, the non-afterburning **F118-GE-100** employs new long-chord fan technology with the compressor and turbine used on the F110. The F118 has a higher air flow and increased pressure ratio than the F110, resulting in higher dry thrust. The engine was qualified in 1987, powered the B-2A in the USAF flight test programme since July 1989, and has accumulated more than 28,000 hours including service with the 509th Bomb Wing. A feature is the use of common F101/F110 production tooling for low cost.

The accompanying photograph shows the actuation ring for the trailing flaps of the inlet guide vanes, a large inlet bleed-air de-icing pipe, and the ribbed bypass duct. The cooled jets issue across what appear to be carbon areas above the B-2A wing.

In Autumn 1989 a Lockheed U-2R began a flight test programme powered by a derivative of the F118, designated **F118-GE-101**. This engine is lighter and shorter but delivers more dry thrust than the J75-P-13B originally fitted. It has been retrofitted to the fleet, upgrading aircraft to U-2S.

UPDATED

GENERAL ELECTRIC T64

The T64 was developed initially for the US Navy. It is available as a turboshaft or turboprop. Current versions are:

T64-GE-100. -7A with improved turbine. Powers MH-53J.

T64/T4C2. T64-100 with changed HP turbine. Powers RH-35D.

T64-GE-413. Powers CH-53D.

T64-GE-415. Improved combustion liner and turbine cooling. Powers RH-53D.

T64-GE-416. As -415 with changed fuel control. Powers CH/MH-53E.

T64-GE-416A. As -416, improved turbine.

T64-GE-419. As -416A, with integral fuel/oil heat exchanger, and OEI emergency power on a 32.2°C day. To power MH-53E from 1995.

CT64-820-4. Turboprop, powers DHC-5D.

T64/P4D. Turboprop, powers G222 and C-27A. Production by FiatAvio, supported by Alfa Romeo Avio from 1975.

TYPE: Free turbine turboshaft/turboprop.
COMPRESSOR: Fourteen-stage axial flow, single-spool steel rotor for -820/-1/2/3, titanium and steel compressor for -100, T4C2, -413, -415, -416, -416A, -419, -P4D and CT64-820-4. Inlet guide vanes and first four stages of stator vanes variable, air mass flow per second: -100, T4C2, -413, -415, -416, -416A, -419, 13.3 kg (29.4 lb); -820-4 11.9 kg (26.2 lb); P4D, 12.2 kg (27.0 lb). Pressure ratio: -820-4, 12.5; -100, T4C2, -413, -415/-416/-416A, -419 14.0; P4D, 13.0.
COMBUSTION CHAMBER: Annular type. Double fuel manifold feeds 12 duplex type fuel nozzles.
GAS GENERATOR TURBINE: Two-stage, coupled directly to compressor rotor by spline connection. Engines rated 3,265 kW (4,380 shp) or over have air cooled first-stage blades.
POWER TURBINE: Two-stage, independent of gas generator.
REDUCTION GEAR: Remotely mounted for turboprop, offset and accessible for inspection and replacement. Ratio 13.44.
STARTING: Mechanical, airframe supplied.
DIMENSIONS:
Length: T64-GE-100, T4C2, -413, -415, -416, -416A, -419 2,006 mm (79 in)
T64/P4D, CT64-820-4 2,793 mm (110 in)
Width: T64-GE-100, T4C2, -413, -415, -416, -416A, -419 660 mm (26.0 in)
T64/P4D, CT64-820-4 683 mm (26.9 in)
Height: T64-GE-100, T4C2, -413, -415, -416, -416A, -419 825 mm (32.5 in)
T64/P4D, CT64-820-4 1,167 mm (46 in)
WEIGHT, DRY:
T64-GE-100, T4C2, -413, -415, -416, -416A 327 kg (720 lb)

General Electric F118-GE-100 two-shaft unaugmented turbofan

1990

T64-GE-419	343 kg (755 lb)
CT64-820-4	520 kg (1,145 lb)
T64/P4D	538 kg (1,188 lb)

PERFORMANCE RATINGS (max rating (S/L)):

T64-GE-100	3,229 kW (4,330 shp) to 29.4°C
T64-GE-413	2,927 kW (3,925 shp)
T64-GE-415, -416, -416A	3,266 kW (4,380 shp)
T64-GE-419	3,542 kW (4,750 shp)
CT64-820-4	2,336 kW (3,133 shp)
T64/P4D	2,535 kW (3,400 shp)

SPECIFIC FUEL CONSUMPTION (max rating (S/L)):

T64-GE-100, -413, -415, -416, -416A, -419	79.4 µg/J (0.47 lb/h/shp)
CT64-820-4, T64/P4D	81 µg/J (0.48 lb/h/shp)

UPDATED

GENERAL ELECTRIC T700

The T700 was selected in 1971 to power the US Army's utility tactical transport aircraft system (UTTAS). The first T700 went to test in 1973, and in 1976 it was the first turboshaft to pass current US military qualification standards. The engine went into production in 1978. Of the following models, only the 401, 401C and 701C are in production.

T700-GE-700. First production model delivered from early 1978. Following description refers to this version, except where otherwise noted. Powers UH-60A Black Hawk.

T700-GE-701. First-step growth derivative. Powers AH-64 Apache.

T700-GE-401. Navalised first-step growth derivative. Powers SH-60B Seahawk, SH-2G Super Seasprite and AH-1W SuperCobra.

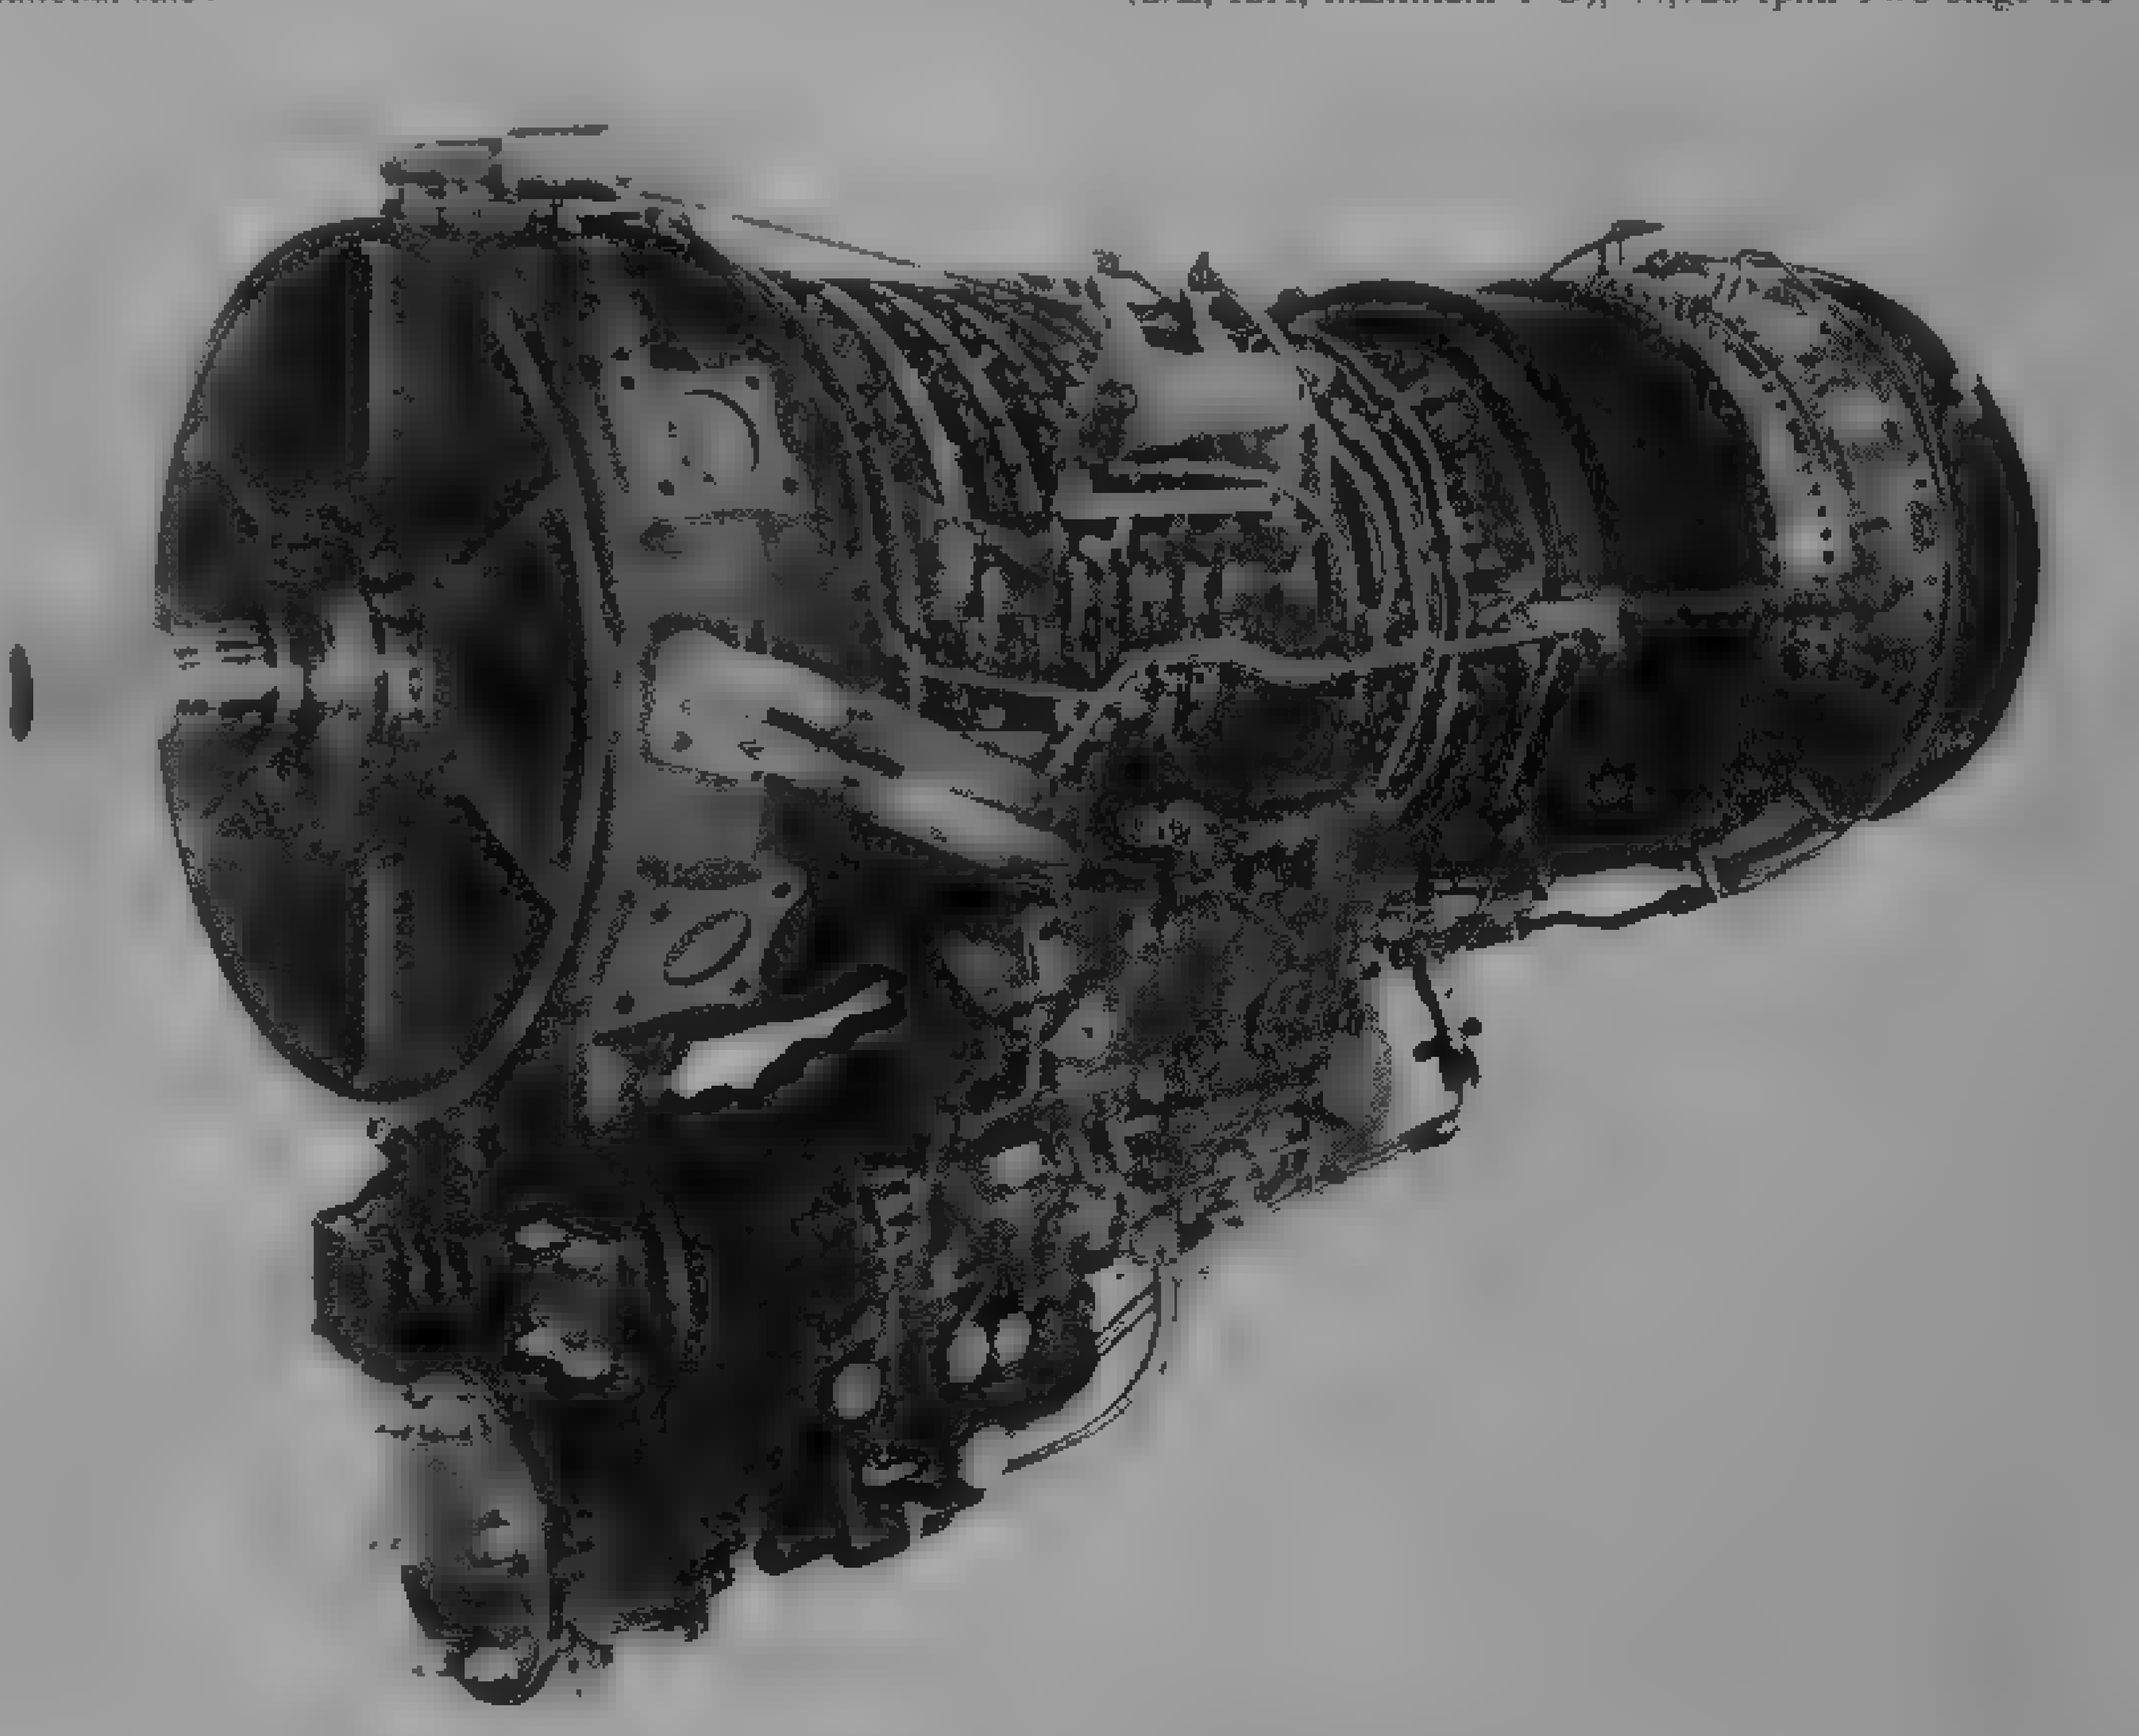
T700-GE-701C. Second-step growth derivative. Went into production in 1989 for Black Hawk and Apache. Offered for future S-70/WS-70 Black Hawk derivatives for international sales.

T700-GE-401C. Navalised second-step growth derivative. Chosen by US Navy for Seahawks and derivatives. First production engines delivered in 1988 to power HH-60H. Royal Australian Navy also a launch customer.

T700/T6A. A step-3 growth engine co-developed by GE, Alfa Romeo Avio, and FiatAvio. Qualified for military configurations of the EH 101 helicopter.

GE has entered into a number of international agreements relative to the sale, production, and maintenance of T700 and CT7 engines for both rotor and fixed-wing aircraft. Co-production and maintenance agreements have been struck with EGT (European Gas-Turbine) in the UK, Alfa Romeo Avio in Italy, IHI (Ishikawajima-Harima Heavy Industries) in Japan, KAL (Korean Airlines) and SSA (Samsung Aerospace) in Korea, and HDH (Hawker de Havilland) in Australia, maintenance agreements, with H+S Aviation in the UK, IPTN of Indonesia and FFV (Scania) in Sweden, and sales agreements, with FiatAvio and Alfa Romeo Avio in Italy, Derlan in Canada, and IPTN in Indonesia.

TYPE: Ungeared free turbine turboshaft engine.
INTAKE: Annular, with anti-iced separator designed to remove 95 per cent of sand, dust and foreign object ingestion. Extracted matter discharged by blower driven from accessory gearbox.
COMPRESSOR: Combined axial/centrifugal. Five axial stages and single centrifugal stage mounted on same shaft. Each axial stage is one-piece 'blisk' (blades plus disc) in AM355 steel highly resistant to erosion. Inlet guide vanes and first two stator stages variable. Pressure ratio about 15. Mass flow about 4.5 kg (10 lb)/s at 44,720 rpm.
COMBUSTION CHAMBER: Fully annular. Central fuel injection to maximise acceptance of contaminated fuel and give minimal smoke generation. Ignition power from separate winding on engine-mounted alternator serves dual plugs.
TURBINE: Two-stage gas generator (HP) turbine. Rated speed (S/L, ISA, maximum T-O), 44,720 rpm. Two-stage free



General Electric T64-GE-415/416 turboshaft

1990

power turbine, with tip shrouded blades and segmented nozzles. Output speed, 21,000 rpm

CONTROLS: Hydromechanical control can be replaced in less than 12 minutes. Electrical control provides multi-engine speed and torque matching

ACCESSORIES: Grouped at top of engine, together with engine control system. Integral oil tank, plus emergency mist lubrication. Torque sensor provides signal to electrical control

DIMENSIONS:

Length overall	1,168 mm (46.0 in)
Width	635 mm (25 in)
Height overall	584 mm (23 in)

WEIGHT, DRY (with particle separator):

T700-700	198 kg (437 lb)
T700-401	197 kg (434 lb)
T700-701C	207 kg (456 lb)
T700-401C	208 kg (458 lb)

PERFORMANCE RATINGS (ISA, S/L, static):

T700-700: intermediate	1,210 kW (1,622 shp)
continuous	987 kW (1,324 shp)
T700-701: contingency	1,285 kW (1,723 shp)
intermediate	1,266 kW (1,698 shp)
continuous	1,126 kW (1,510 shp)

intermediate	1,260 kW (1,690 shp)
continuous	1,072 kW (1,437 shp)
T700-701C: max	1,409 kW (1,890 shp)
intermediate	1,342 kW (1,800 shp)
continuous	1,239 kW (1,662 shp)
T700-401C: contingency	1,447 kW (1,940 shp)
intermediate	1,342 kW (1,800 shp)
continuous	1,239 kW (1,662 shp)

SPECIFIC FUEL CONSUMPTION (ISA, S/L, static):

T700-700 continuous	79.41 µg/J (0.470 lb/h/shp)
T700-701 continuous	78.73 µg/J (0.466 lb/h/shp)
T700-401 continuous	79.60 µg/J (0.471 lb/h/shp)
T700-701C continuous	77.56 µg/J (0.459 lb/h/shp)
T700-401C continuous	77.56 µg/J (0.459 lb/h/shp)

UPDATED

GENERAL ELECTRIC CT7

Commercial engine based on the T700. Certification in April 1977. The **CT7-2A** turboshaft powers the Bell 214ST. The **CT7-2D** and **-2D1** power the Sikorsky S-70. The CT7-2D is the commercial equivalent of the -701/-401. The CT7-2D1 is the commercial equivalent of the -701C/-401C and received FAA certification in June 1989.

The **CT7-6** is a Step 3 growth engine, co-developed by Alfa Romeo Avio, FiatAvio and GE for the EH 101 and other helicopter applications, such as the NH 90. First delivery for the EH 101 took place in April 1988, first flight of a CT7-6 powered EH 101 took place in September 1988. The marinised **CT7-6A** powers the Italian Navy's EH 101 prototype. The CT7-6/-6A has received FAA certification, as well as RAI and BCAA validation.

The same core is used in the CT7 turboprop, which has a remote propeller gearbox. This engine received FAA certification in August 1983 and is in production as the **CT7-5A** for the Saab 340 and as the **CT7-7A** for the Airtech CN-235.

CT7 turboprop growth engines include the **CT7-9B** and **-9C** flat rated at 1,394 kW (1,870 shp). Increased power is obtained by improvements in aerodynamics, materials and turbine cooling. These engines power later versions of the CN-235, Saab 340 and Sukhoi S-80. The -9D is the power plant for the Let L-610G.

Data below are for the current turboshaft versions; see adjacent table for turboprop models.

DIMENSIONS:

PO Box 52181, Phoenix, Arizona 85072-2181
Telephone: (602) 231 4844
Fax: (602) 231 5671

These two companies jointly developed the Army Qualified T800-LHT 800 975 kW (1,300 shp) class turboshaft engine for the RAH-66 Comanche programme. The CTS800 is an FAA Certified version for commercial applications.

VERIFIED

LHTEC T800-LHT-800

This fully metric, high power density helicopter engine stems from programmes that the two partners started prior to 1983. AlliedSignal's core engine based on the F109 had extensive running time. Allison's engine was developed under the Army's Advanced Technology Demonstrator Engine (ATDE) programme. The blending of these two engines produced the T800 technology prototypes, which exceeded 940 kW (1,260 shp) in December 1984, with lower than specified fuel consumption. After fierce competition, LHTEC was selected by the US Army in October 1988 to continue the engine development and subsequent production.

The CTS800/T800 is designed for unprecedented reliability, maintainability and supportability, tilt-rotor compatibility and low specific fuel consumption. Its basic design philosophy includes module/LRU removal and replacement times of less than 15 minutes using six basic hand tools, and on-condition maintenance.

In 1993 the CTS800/T800 became the first engine concurrently to satisfy FAA Certification and Army Qualification requirements. Over 17,000 full-up, engine test hours have been completed. In December 1992 the US Army awarded LHTEC a growth contract to increase power by 17 per cent, to over 1,044 kW (1,400 shp). The first growth engine (-801) began testing in March 1994. By the end of 1994, the -801 engine had accumulated over 1,200 hours of development testing. Turboprop, ground power and vehicle derivatives are expected.

Since 1988 the Agusta A 129 has been involved in an active flight test programme using twin CTS800 engines, and the engine has also flown in a Lynx, Panther and HH-65. In 1993, the Global Huey800 (UH-1H+T800 engine) demonstrator established a world point-to-point record flying 1,714 n miles (3,175 km, 1,973 miles) in 13 hours and 6 minutes. This demonstrator has now logged over 480 hours performing flight demonstrations worldwide. Based on this proven concept, LHTEC began work in 1994 to deliver five re-engined UH-1H helicopters to the US Border Patrol for border surveillance and drug interdiction. LHTEC is also under contract to perform a CTS800 study on the Advanced Light Helicopter (ALH) manufactured by Hindustan Aeronautics.

INLET: Annular, with solids extracted by particle separator of over 97 per cent efficiency.

COMPRESSOR: Two centrifugal stages in tandem. One-piece titanium impellers.

COMBUSTION CHAMBER: Annular reverse-flow.

COMPRESSOR TURBINE: Two axial stages with single-pass cooling.

POWER TURBINE: Two axial stages with tip shrouds.

LUBRICATION SYSTEM: Self-contained, with tank of 4.1 litres (1.08 US gallons, 0.90 Imp gallon), air/oil heat exchanger.

OIL GRADES: MIL-L-7808, MIL-STD-23699.

FUEL GRADES: MIL-T-5624, MIL-T-83133, JP-4, JP-5, JP-8 (emergency DF-A, DF-1, DF-2).

CONTROL SYSTEM: FADEC.

ACCESSORIES: Mounted above engine with drive from core. Self-contained electrical system.

REDUCTION GEAR: Drive at 23,000 rpm to front or rear. Reduction gearbox gives output at 6,000 to 6,600 rpm.

This company is marketing a wide range of ZM water-cooled 90° V-8 piston engines. Entirely of original design these have capacities of 400, 500 or 600 cu in (6.56, 8.2 or 9.84 litres), and are available upright or inverted, with direct fuel injection, with or without reduction gear or turbocharger. Direct drive engines weigh 168 to 202 kg (370 to 446 lb) and are rated at 171.5 to 283 kW (230 to 380 hp) at 2,700 rpm. Geared engines weigh from 195 to 225 kg (430 to 496 lb) and are rated at 313 to 447 kW (420 to 600 hp) at 4,300 or 4,500 rpm. TBO is uniformly 2,200 hours.

Fax: 1 (813) 261 8345
PRESIDENT: Charles R Rhoades

Nelson Aircraft Corporation, among its many industrial activities, produces to order the Nelson H-63 four-cylinder two-cycle air-cooled engine, which is certificated by the FAA as a power unit for single-seat helicopters, and is also available as a power plant for propeller-driven aircraft.

VERIFIED

NELSON H-63

US military designation: YO-65

Developed originally as a power unit for single-seat helicopters, the H-63 is available in two versions, as follows:

H-63C. Helicopter power unit for vertical installation. Battery/electronic ignition and direct drive.

H-63CP. Without clutch, fan and shroud. Intended for installation in horizontal position, with direct drive to propeller.

Full details of these engines appeared in the 1992-93 *Jane's*.

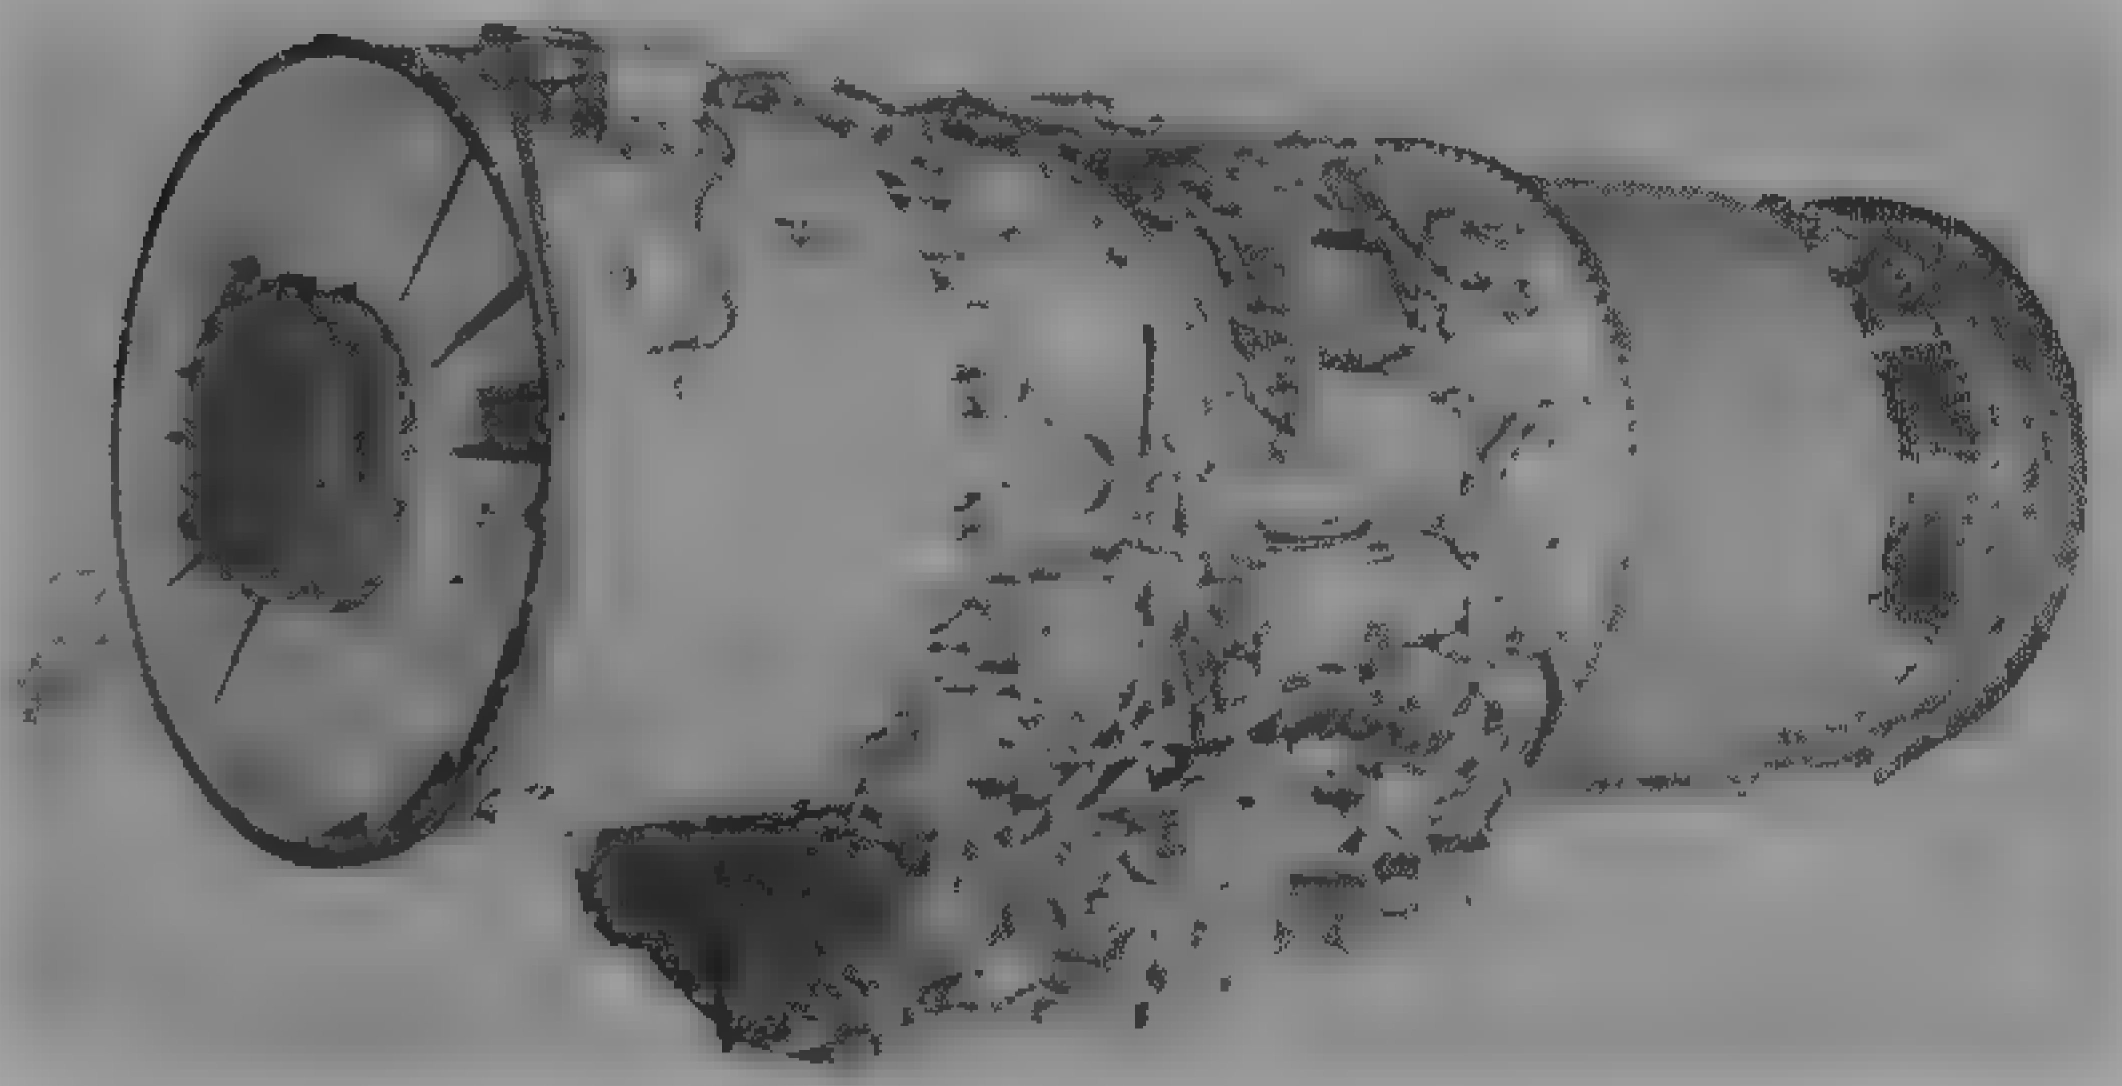
Pratt & Whitney Aircraft was formed in 1925 and today is the world's largest producer of gas-turbine engines. Excluding P&W Canada (which see) it has delivered some 68,000 aircraft gas-turbines, including more than 27,000 airline jet engines.

UPDATED



Pratt & Whitney J52-P-408 two-shaft turbojet
1980

PRATT & WHITNEY JT8

US military designation: J52

The J52 is a two-spool turbojet, with 12 compressor stages, a can-annular combustion system fed by 36 dual orifice injectors and single-stage HP and LP turbines. The P-408 has two position inlet guide vanes and air-cooled first-stage turbine vanes and blades. New production P-409 offers higher thrust and increased life.

J52-P-6A, 6B, 8A, 8B. Rated at 37.8 kN (8,500 lb st) (6A, 6B) or 41.4 kN (9,300 lb st) (8A, 8B). Powers A-4 and A-6.

J52-P-408/P-408A. Rated at 49.8 kN (11,200 lb st). Powers A-4F, A-4M, some export A-4 versions, EA-6B.

J52-P-409. Rated at 53.4 kN (12,000 lb st). Powers EA-6B ADVCAP, available for upgraded A-6E.

Data below are for the P-408:

DIMENSIONS

Diameter	814.3 mm (32.06 in)
Length	3,020 mm (118.9 in)
WEIGHT, DRY	1,052 kg (2,318 lb)

PRATT & WHITNEY JT8D

This turbofan was developed to power the Boeing 727. Military versions have been developed in Sweden by Volvo Aero (see RM8 in that company's entry). Almost 12,000 were delivered. Details appeared in the 1994-95 *Jane's*.

UPDATED

PRATT & WHITNEY JT8D-200 SERIES

This reduced noise derivative of the JT8D combines the HP compressor, HP turbine spool and combustion section of the JT8D-9 with advanced LP technology. It offers increased thrust with reduced noise and specific fuel consumption. The fan has increased diameter. The new six-stage LP compressor, integral with the fan, offers increased pressure ratio. The LP turbine has 20 per cent greater annular area and achieves a higher efficiency. Surrounding the engine is a new bypass duct. The exhaust system includes a 12-lobe mixer. FAA certification of the JT8D-209 was awarded in June 1979. Over 2,500 engines have been delivered of the following series:

JT8D-209. Rated at 82.2 kN (18,500 lb st) to 25°C, and 85.6 kN (19,250 lb st) following loss of thrust on any other engine. Entered service in October 1980, powering the MD-81.

JT8D-217. Rated at 88.96 kN (20,000 lb st), and 92.75 kN (20,850 lb st) following loss of thrust on any other engine. Powers MD-82.

JT8D-217A. T-O thrust available to 28.9°C or up to 1,525 m (5,000 ft). Powers MD-82.

JT8D-217C. Incorporates JT8D-219 performance improvements to reduce sfc. Powers MD-82 and -87.

JT8D-219. Rated at 93.4 kN (21,000 lb st), with a reserve thrust of 96.5 kN (21,700 lb st). Powers MD-83 and other MD-80 aircraft.

TYPE: Two-spool turbofan.

FAN: Single-stage front fan has 34 titanium blades, with part span shrouds. Mass flow: -209, 213 kg (469 lb)/s; -217 (all), 219 kg (483 lb)/s; -219, 221 kg (488 lb)/s. Bypass ratio: -209, 1.78; -217 (all), 1.73; -219, 1.77.

LP COMPRESSOR: Six-stage axial, integral with fan.

HP COMPRESSOR: Seven-stage axial. Overall pressure ratio: -209, 17.1; -217 (all), 18.6; -219, 19.2.

COMBUSTION CHAMBER: Nine can-annular low-emissions burners with aeration fuel nozzles.

HP TURBINE: Single-stage. Air-cooled blades in -217, -217C and -219.

LP TURBINE: Three-stage.

DIMENSIONS

Diameter	1,250 mm (49.2 in)
Length	3,911 mm (154 in)

WEIGHT, DRY

JT8D-209	2,056 kg (4,533 lb)
JT8D-217, -217A	2,072 kg (4,524 lb)
JT8D-217C, -219	2,092 kg (4,612 lb)

PERFORMANCE RATINGS

T-O (S/L static): see model descriptions

Max cruise thrust (10,670 m, 35,000 ft) at Mach 0.8

JT8D-209	22.0 kN (4,945 lb)
JT8D-217, -217A, -217C	23.31 kN ([illegible] lb)
JT8D-219	23.35 kN ([illegible] lb)

SPECIFIC FUEL CONSUMPTION

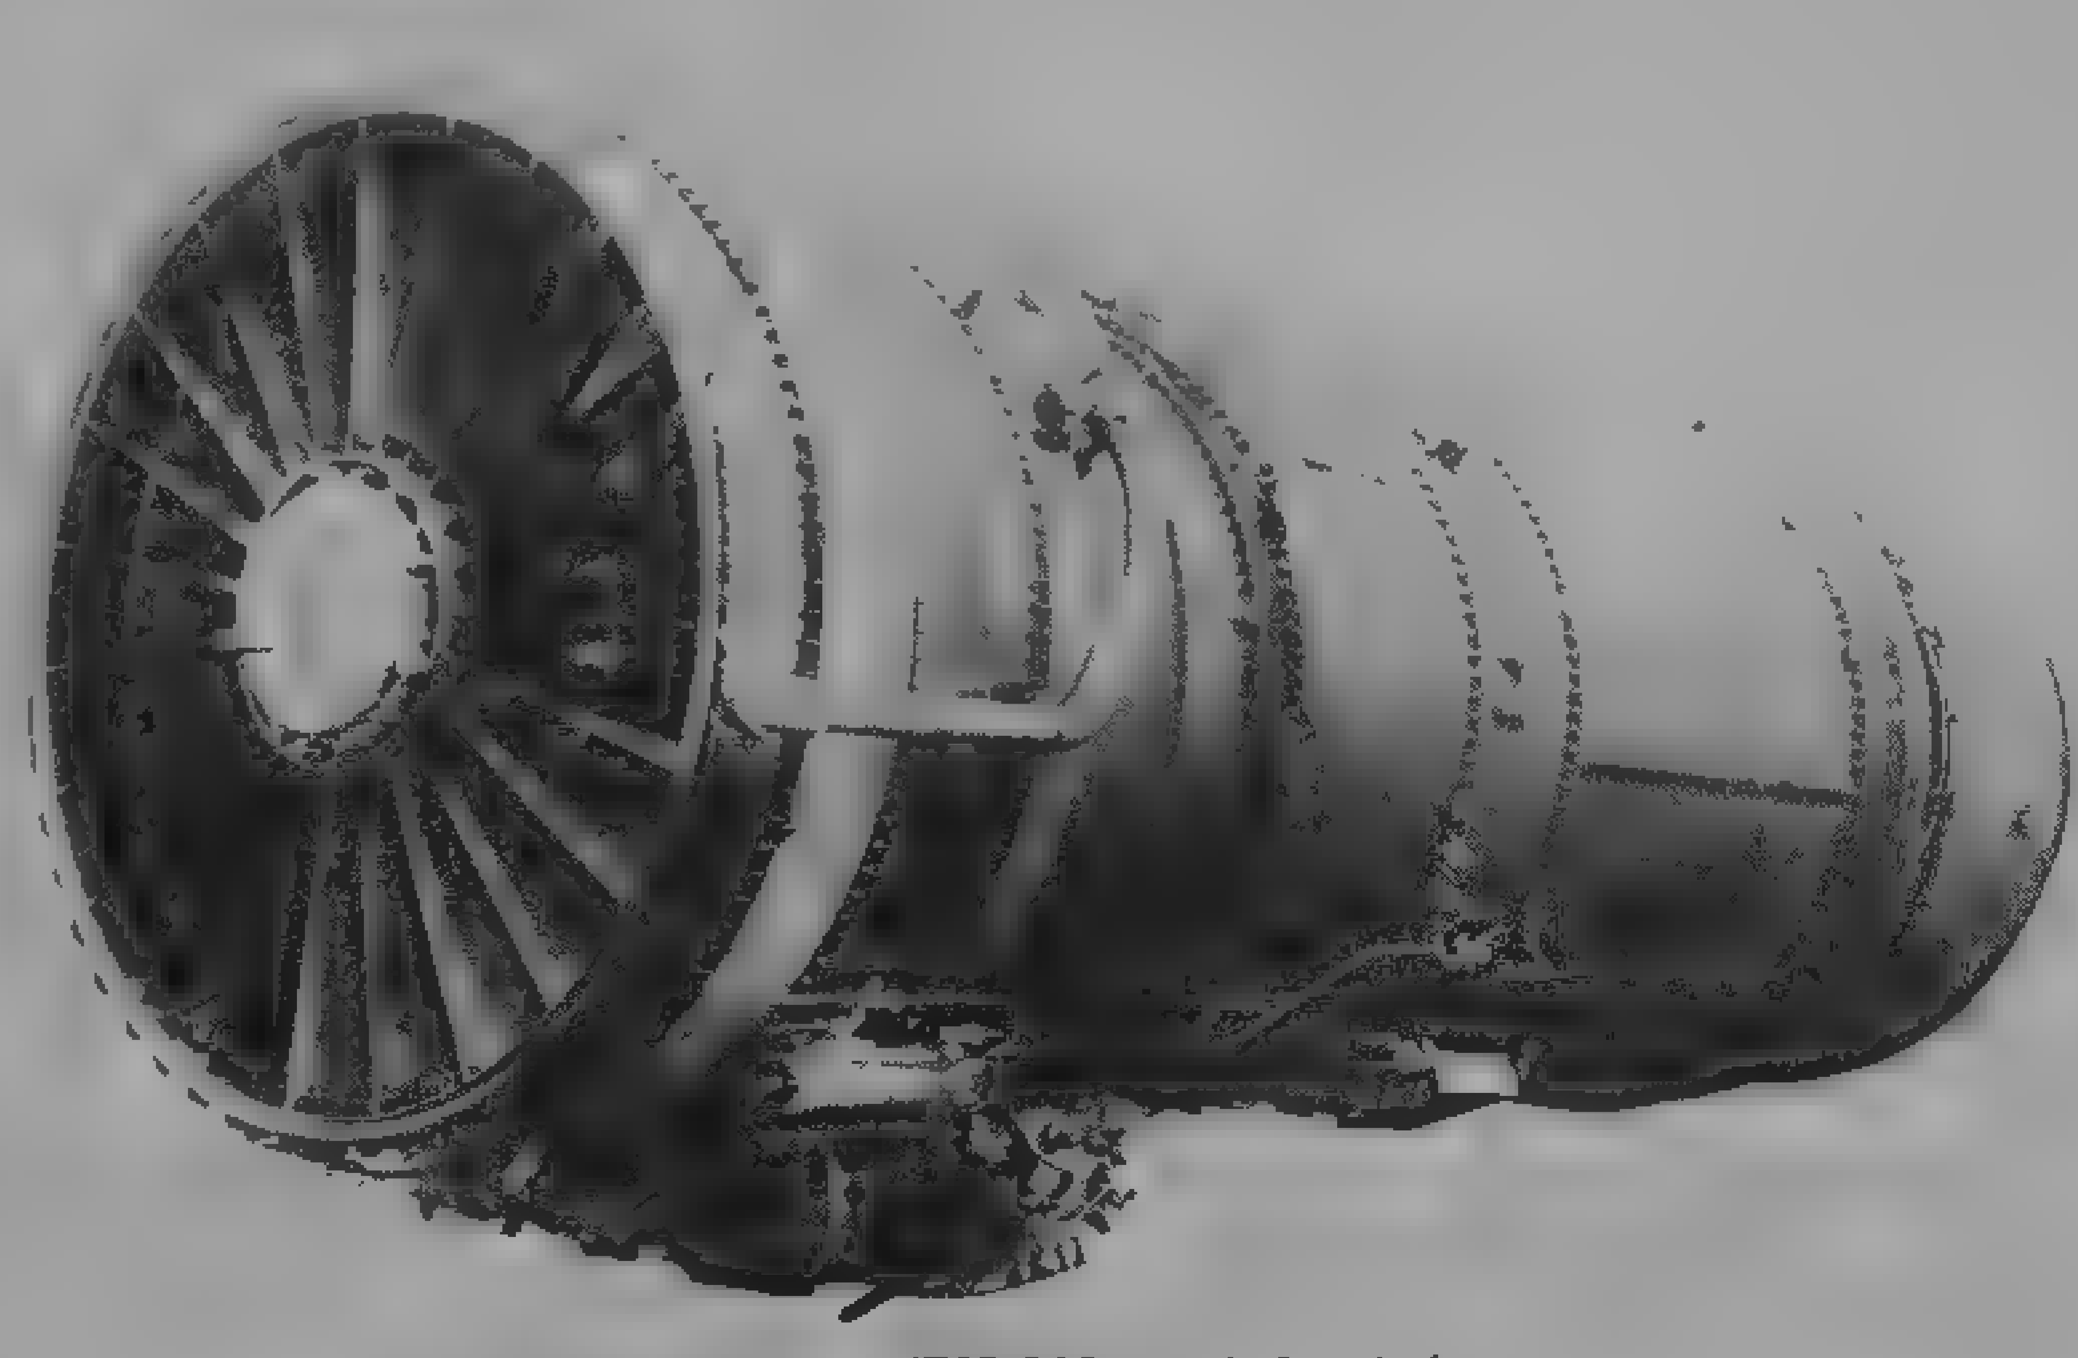
Max cruise rating, as above

JT8D-209	20.50 mg/Ns (0.724 lb/h/lb)
JT8D-217, -217A	21.32 mg/Ns (0.753 lb/h/lb)
JT8D-217C	20.84 mg/Ns (0.736 lb/h/lb)
JT8D-219	20.87 mg/Ns (0.737 lb/h/lb)

VERIFIED

PRATT & WHITNEY PW4000

The PW4000 is a third-generation turbofan for wide-body transports. Ratings range from 222.4 kN (50,000 lb st) to 373.7 kN (84,000 lb st). The first engine achieved 275 kN (61,800 lb st) during initial testing in April 1984. First flight test on an A300B took place on 31 July 1985. Certificated



Pratt & Whitney JT8D-219 two-shaft turbofan
1987

July 1986 at 249 kN (56,000 lb st) and in 1988 at 266.9 kN (60,000 lb st). Entered service on Pan Am A310 on 20 June 1987. The last two numbers denote thrust (thus, the initially certificated 56,000 lb st engine is the PW4056). Programme sharing agreements have been signed with Techspace Aero (Belgium), FiatAvio (Italy), Norsk Jet Motors (Norway), Kawasaki (Japan), Samsung (South Korea), Eldim (Netherlands), Mitsubishi (Japan) and Singapore Aircraft Industries.

Fuel consumption was initially reduced 7 per cent compared with the JT9D-7R4. There are about half as many parts, promising reductions in maintenance cost exceeding 25 per cent. HP compressor pressure ratio is increased by 10 per cent and the HP rotor operates at 27 per cent higher speed.

The PW4000 incorporates single-crystal turbine blades, aerodynamically enhanced aerofoils, and a full-authority digital electronic engine control (FADEC). The PW4000 was the first FADEC engine approved for ETOPS operations beyond 180 minutes from alternates.

PW4168. For A330, fan diameter increased to 2,535 mm (99.8 in) and an extra stage on the LP compressor and LP turbine. Initial A330 deliveries were at 302.5 kN (68,000 lb st) in 1994. Cleared for 120 minute ETOPS in February 1995, 180 minutes in July 1995.

PW4084. For Boeing 777, fan diameter again increased to 2,845 mm (112 in) diameter (using new hollow titanium blades without part-span clappers), with six-stage LP compressor and seven stage LP turbine. The first PW4084 achieved 400.3 kN (90,000 lb st) in August 1992. Certified April 1994 at 376.3 kN (84,600 lb st). Cleared 180 minute ETOPS May 1995. In service 7 June 1995 at 343 kN (77,000 lb st).

PW4090. Improved HP compressor and increased temperatures for 777. To be certified in June 1996 at 400.3 kN (90,000 lb st).

PW4098. Based on 4090 core with additional LP compressor stage, improved fan aerodynamics (still 2,845 mm, 112 in) and increased flow. To be certificated in September 1997 at 435.9 kN (98,000 lb st).

By 1995 over 70 airlines had ordered more than 2,600 PW4000 engines.

The following data apply to the basic PW4000, except where indicated:

TYPE: Two-shaft turbofan.

FAN: Single-stage. Titanium alloy hub retains 38 titanium alloy blades with aft part-span shrouds. Diameter 2,377 mm (93.6 in). Data for 249 kN (56,000 lb st) rating: mass flow 773 kg (1,705 lb)/s. Fan pressure ratio 1.7. Bypass ratio 4.85.

LP COMPRESSOR: Four stages with controlled diffusion aerofoils.

HP COMPRESSOR: Eleven stages with first four vane rows variable. Clearance control accomplished via rotor/case thermal matching. Overall pressure ratio at 251.5 kN rating 30.3.

COMBUSTOR: Annular, forged nickel alloy roll-ring with double-pass cooling, 24 airblast anti-coking injectors. Segmented Floatwall burner liner introduced in 1993.

HP TURBINE: Two stages with air-cooled blades cast as single-crystal (PWA 1480) in first row and directional crystal (PWA 1422) in second row, retained in double-hub nickel alloy rotor with active clearance control. Vane aerofoils thermal barrier coated.

LP TURBINE: Four stages with active clearance control.

CONTROL SYSTEM: Full-authority digital electronic with dual channel computer.

DIMENSIONS:

Length: PW4000	3,371 mm (132.7 in)
PW4168	4,143 mm (163.1 in)
PW4084	4,868 mm (191.7 in)
Fan case diameter: PW4000	2,463 mm (96.98 in)
PW4168	2,718 mm (107.0 in)
PW4084	3,048 mm (120.0 in)

WEIGHT, DRY:

Basic PW4000	4,264 kg (9,400 lb)
PW4168 (complete system)	6,509 kg (14,350 lb)
Basic PW4084	6,335 kg (13,965 lb)

RATINGS: See table

SPECIFIC FUEL CONSUMPTION (ISA, ideal nozzle Mach 0.8 10,670 m, 35,000 ft):

PW4056	15.21 mg/Ns (0.537 lb/h/lb)

UPDATED

PRATT & WHITNEY JT9D

This was the first of the new era of large, high-bypass ratio turbofans on which the design of wide-body commercial transports rests. First run was in December 1966. The first flight of the Boeing 747 was on 9 February 1969.

Current versions include:

JT9D-3A. Water injection rating of 200.8 kN (45,150 lb) to 26.7°C. Powers 747-100 and -200B.

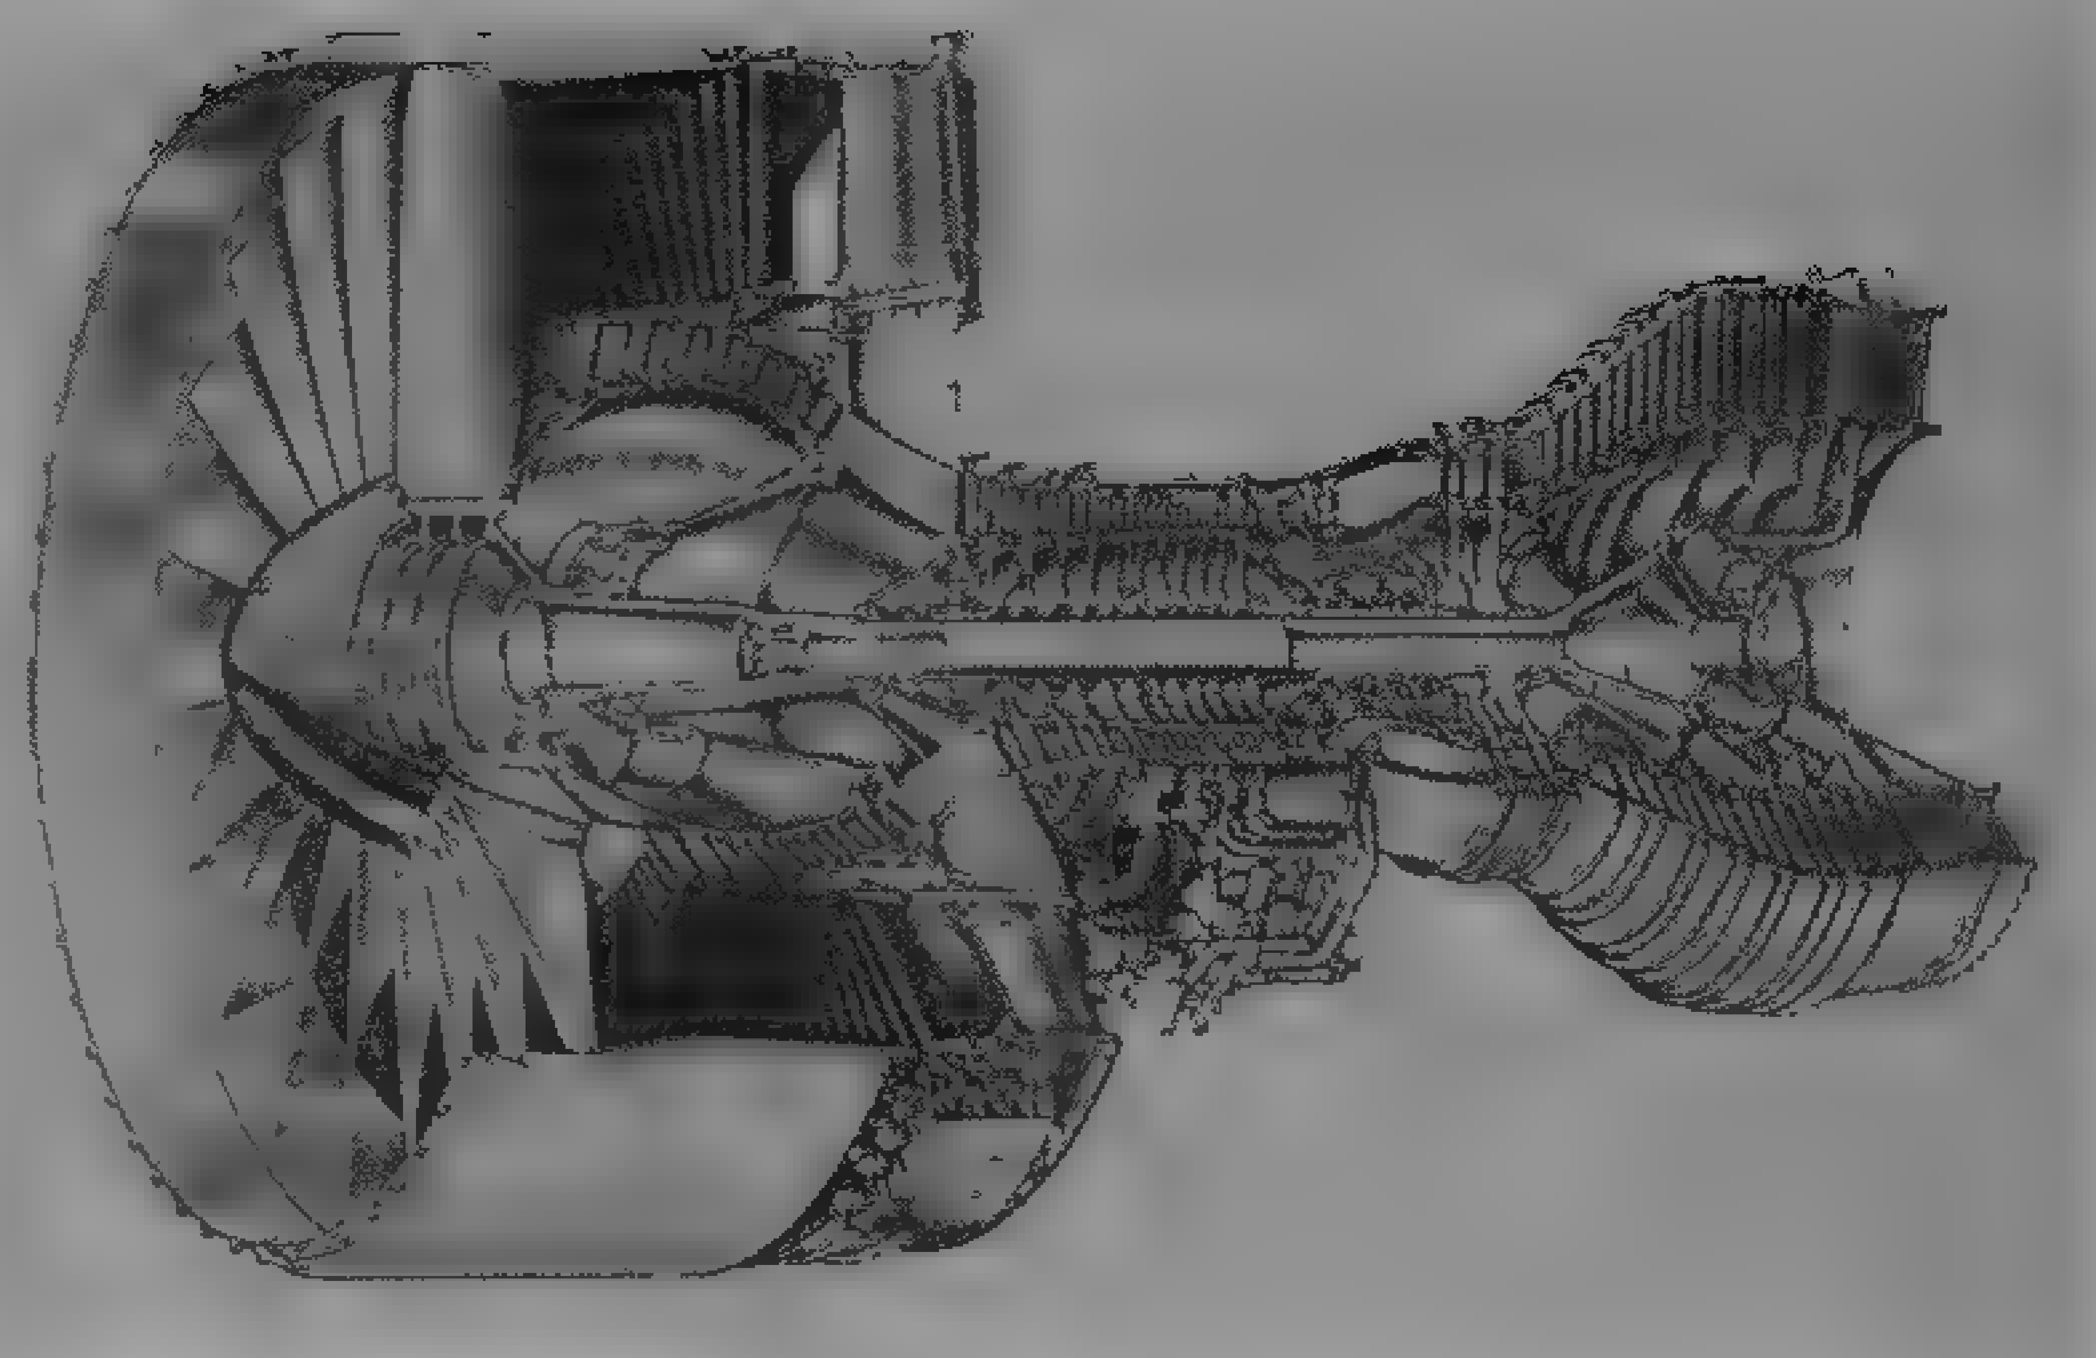
JT9D-7. Higher thrust version with air-cooled DS HP turbine blades, powers 747-200B, C, F and SR.

JT9D-7A. Aerodynamic improvements, powers 747-200 and 747SP.

JT9D-7F, -7J. Improved DS blades, 7J with shower head cooled first stage, giving -7F T-O rating without water injection.

JT9D-7Q, -7R. Described later.

JT9D-20, -20J. D-7A and D-7J with accessory gearbox under fan case. Powers DC-10-40.



Pratt & Whitney PW4084 turbofan

1995

PW4000 MODELS

Model	Thrust (ideal nozzle)	Application
PW4152	231.3 kN (52,000 lb) to 42.2°C	A310-300
PW4156	249.1 kN (56,000 lb) to 30°C	A300-600/A310-300
PW4158	258.0 kN (58,000 lb) to 30°C	A300-600R
PW4168	302.5 kN (68,000 lb) to 30°C	A330
PW4052	232.2 kN (52,200 lb) to 33.3°C	767-200/-200ER
PW4056	252.4 kN (56,750 lb) to 33.3°C	767-300/-300ER/747-400
PW4060	266.9 kN (60,000 lb) to 33.3°C	767-300ER/747-400
PW4062	275.8 kN (62,000 lb) to 30°C	767-300ER/747-400
PW4074	329.2 kN (74,000 lb) to 30°C	777
PW4077	342.5 kN (77,000 lb) to 33.3°C	777
PW4084	373.7 kN (84,000 lb) to 30°C	777
PW4090	400.3 kN (90,000 lb) to 30°C	777
PW4098	435.9 kN (98,000 lb) to 30°C	777
PW4460	266.9 kN (60,000 lb) to 30°C	MD-11
PW4462	275.8 kN (62,000 lb) to 30°C	MD-11

Ratings are S/L static, no bleed or power extraction

JT9D-59A, -70A. Fan diameter approximately 25.4 mm (1 in) larger, with re-profiled blades. LP compressor has zero (fourth) stage and is redesigned, burners recontoured, No. 3 bearing carbon seal added, HP blades directionally solidified and HP annulus larger. Both configured for common nacelle for 747 (-70A) or DC-10 and A300B (-59A).

JT9D-7Q, -7Q3. As -59A and -70A but configured like -7 for 747-200 nacelle. Thrust 236 to 249 kN (53,000 to 56,000 lb).

JT9D-7R4 Series. Seven models (7R4D to 7R4H1), with larger fan with wide-chord blades, zero stage on LP compressor, improved combustor, H1 has single-crystal HP turbine blades, increased diameter LP turbine, supervisory electronic fuel control and many smaller changes. 7R4D, 7R4E and 7R4E4 for Boeing 767, 7R4D1 and 7R4E1 for A310, -7R4G2 for 747-300, -7R4H1 for the A300B 600.

Deliveries were completed at 3,265 in 1990, of which about 2,800 are still in use. Flight time by early 1995 was in excess of 130 million hours. Full details appeared in the 1992-93 *Jane's*.

DIMENSIONS:

JT9D-3A, -7, -7A, -7F, -7J, -20:

JT9D-7R4G2 18.10 mg/Ns (0.639 lb/h/lb)
JT9D-7R4H1 17.79 mg/Ns (0.628 lb/h/lb)

UPDATED

PRATT & WHITNEY PW2000

US military designation: F117

The PW2000 is a third-generation turbofan upon which major changes have been made since 1972. In mid-1980 it was scaled up to be compatible with the Boeing 757-200, at 170.1 kN (38,250 lb st). The first model was given the designation **PW2037**, the last two digits denoting thrust in thousands of pounds. The first engine test run took place in December 1981. FAA certification was achieved in December 1983, and the first flight was made on the prototype 757 on 14 March 1984. FAA 120 minute ETOPS received December 1989, 180 minutes received April 1992.

Companies participating are MTU of Germany and FiatAvio of Italy. Pratt & Whitney bears 70.8 per cent of the programme, MTU 21.2 per cent and FiatAvio 4 per cent. A collaboration agreement between these companies was signed in July 1977. In 1987 Volvo Aero of Sweden joined the programme as a 4 per cent manufacturing partner.

Pratt & Whitney PW2000 series two-shaft turbofan

1994

Current applications are in versions of the Boeing 757 and McDonnell Douglas C-17A. The PW2037-powered 757 was certificated on 25 October 1984 and entered revenue service on 1 December. An uprated engine, the **PW2040**, was certificated in January 1987 and entered service in September 1987. The C-17A is powered by four **F117-PW 100** engines similar to the PW2040. The F117 was certificated in December 1988 and entered USAF service in June 1993.

Four **PW2337** engines rated at 170.1 kN (38,250 lb st) began flight testing in the Ilyushin Il-96M in April 1993, with certification scheduled for 1995. In June 1995 an unspecified version was granted FAA certification at 191.2 kN (43,000 lb st).

Nearly 650 PW2000 engines have been delivered, accumulating 5.2 million flight hours. In March 1994 the first Improved PW2000 engines entered service, with new fan blades, new HP turbine blades and new fan-duct acoustic treatment. In 1995 a major upgrade package was marketed, concentrating on the HP system.

TYPE: Two-shaft turbofan of high bypass ratio.

FAN: Single-stage. Titanium forged hub, with 36 inserted titanium alloy blades with part-span shrouds. Tip diameter 1,994 mm (78.5 in). Mass flow 608 kg (1,340 lb)/s. Pressure ratio 1.7. Bypass ratio 6.0.

LP COMPRESSOR: Four stages, with controlled diffusion aerofoils with thick leading- and trailing-edges.

HP COMPRESSOR: Twelve stages, with controlled diffusion aerofoils. Variable vanes on first five stages and active clearance control on last eight stages. Overall cruise pressure ratio 31.8.

COMBUSTION CHAMBER: Annular, with flame tube fabricated in nickel alloy. Single-pipe fuel nozzles.

HP TURBINE: Two stages with air-cooled blades cast as single crystals in PW 1480 and PW 1484 alloy. Rotors with active clearance control. Both discs of PW1100 nickel based powder.

LP TURBINE: Five stages, with active clearance control.

CONTROL SYSTEM: Full-authority digital electronic with two redundant computers.

DIMENSIONS:
Length 3,729 mm (146.8 in)
Fan case diameter 2,154 mm (84.8 in)

WEIGHT, DRY:
PW2000 3,311 kg (7,300 lb)
F117 3,220 kg (7,100 lb)

PERFORMANCE RATING (T-O, S/L):
PW2037 170.1 kN (38,250 lb st)
PW2040 185.5 kN (41,700 lb st)

SPECIFIC FUEL CONSUMPTION (ideal nozzle, cruise at Mach 0.8 at 10,670 m, 35,000 ft) 15.95 mg/Ns (0.563 lb/h/lb)

PRATT & WHITNEY F100

Family of afterburning turbofan fighter engines. Versions listed below for the F-15 and F-16 are now leading to a 160.1 kN (36,000 lb st) version for possible use in advanced US combat aircraft. Nearly 6,000 have flown nearly 10 million hours since 1974.

F100-PW-100 Powered all early versions of F-15.

F100-PW-200. Modified for early versions of F-16.

F100-PW-220 Redesigned to incorporate new technology including digital control and later material and heat transfer concepts for extended life and improved safety and maintainability. Entered Alternate Fighter Engine competition for combined future F-15 and F-16 production.

F100-PW-220E. Conversion of earlier engines by kit providing all advanced features of PW-220. USAF plans to upgrade all PW-100/-200 engines during 1990s.

F100-PW-229 Most advanced production version, incorporating further new technology. Installed in some later production F-16C/Ds.

F100-PW-220P Being developed to incorporate Dash-229 technology into earlier engines, notably advanced fan, augmentor fuel management and digital control.

The following refers to the PW-229.

TYPE: Two-shaft axial turbofan with mixed-flow afterburner (augmentor).

FAN: Damage-tolerant three-stage with mid-span shrouds on stages 1 and 2. Inlet diameter 886.5 mm (34.9 in). Bypass ratio 0.36.

COMPRESSOR: Damage-tolerant 10-stage, with variable stators on first three stages. Overall pressure ratio 32.

COMBUSTOR: Smokeless annular with Floatwall film cooling. 24 airblast nozzles and continuous capacitor discharge ignition.

HP TURBINE: Two stages with single-crystal air-cooled blades. Inspection interval 4,300 cycles (seven to nine years).

LP TURBINE: Two stages with uncooled directionally solidified blades. Inspection interval 4,300 cycles.

AFTERBURNER: Eleven-segment mixed flow with advanced fuel management and high-energy ignition.

NOZZLE: Variable-area convergent/divergent with balanced beam multiflap construction.

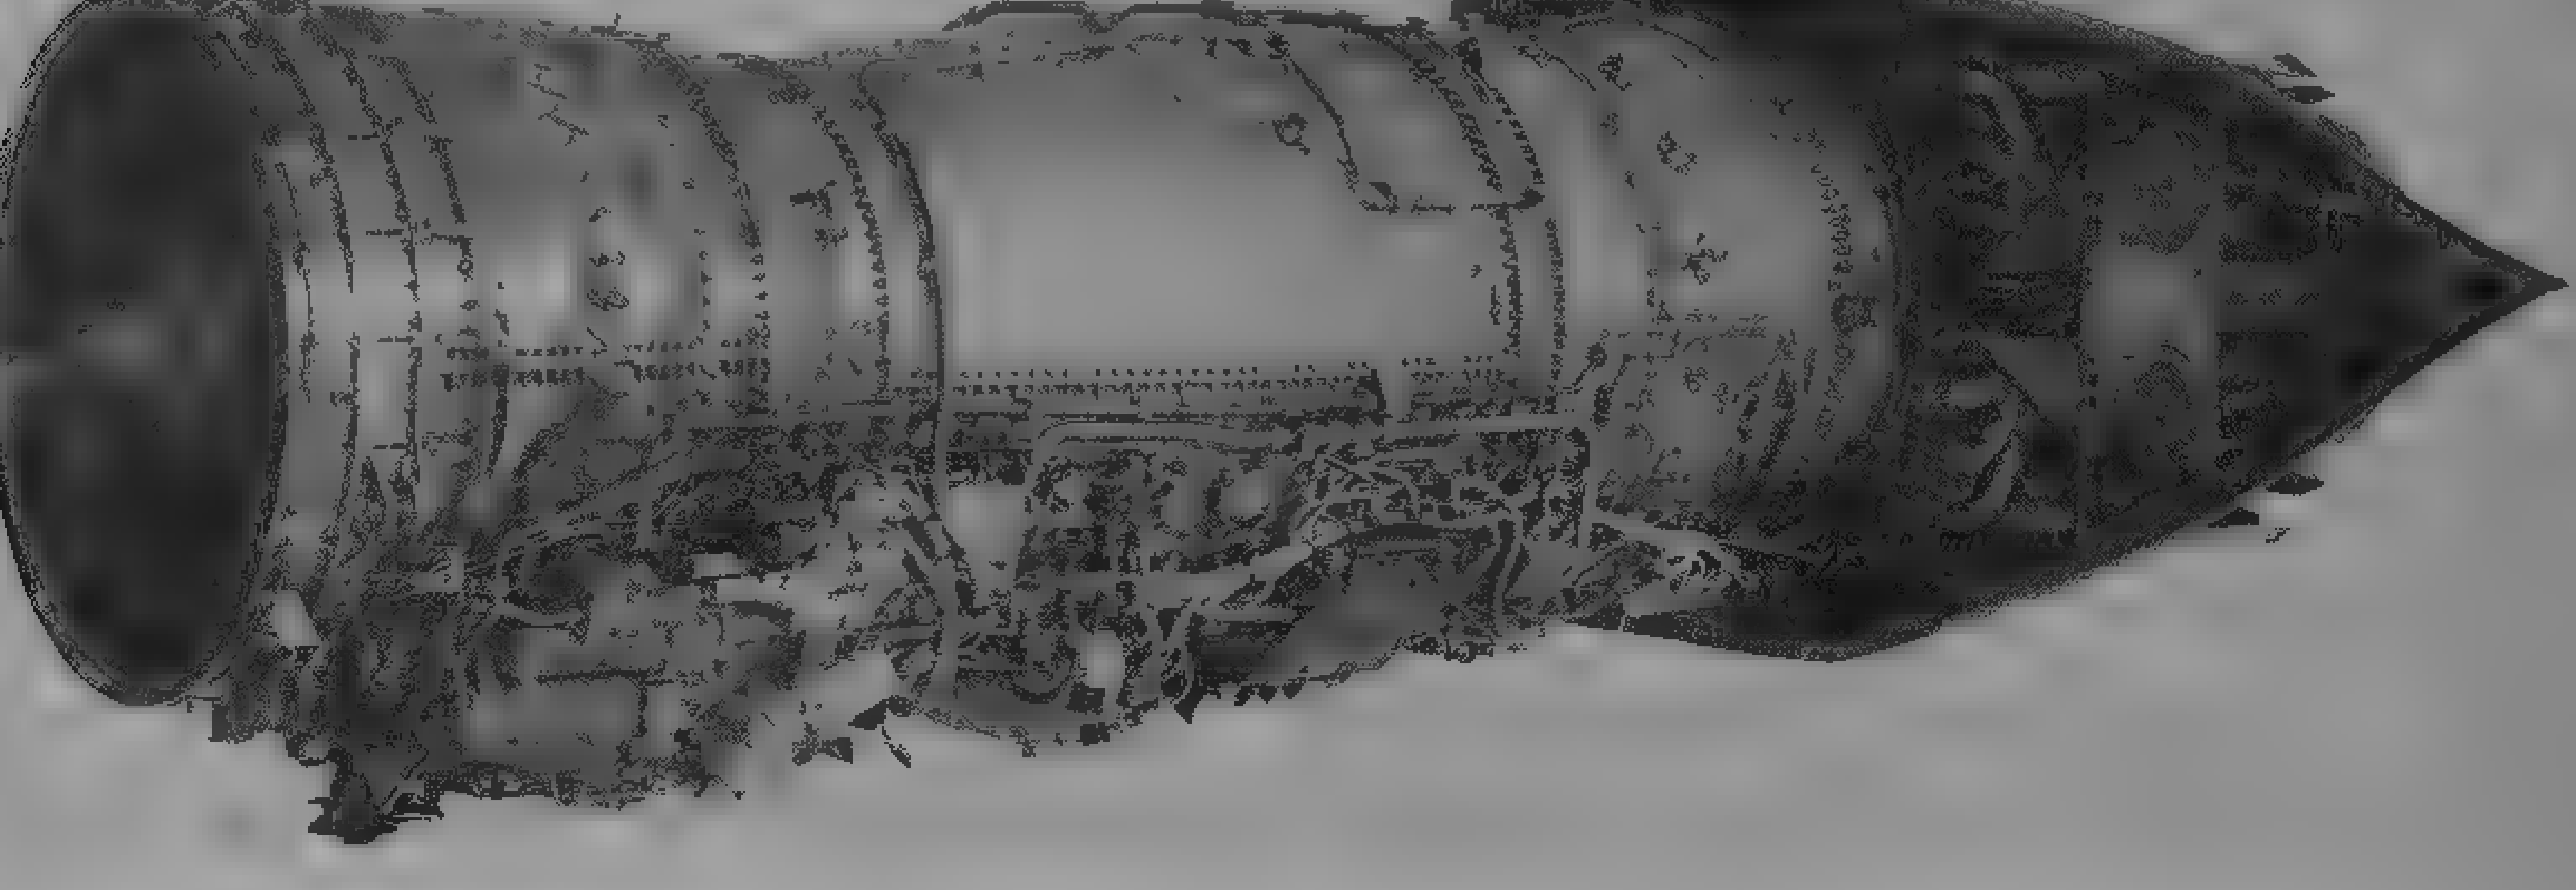
CONTROL SYSTEM: FADEC with integrated diagnostics and aircraft control system interactive capability.

DIMENSIONS:	
Length	4,855 mm (191.15 in)
Diameter overall	1,181 mm (46.5 in)
WEIGHT, DRY:	
PW-220	1,451 kg (3,200 lb)
PW-220E	1,429 kg (3,151 lb)
PW-229	1,681 kg (3,705 lb)
PW-220P	1,526 kg (3,365 lb)
PERFORMANCE (S/L static):	
Military (dry)	
PW-220, 220E	65.26 kN (14,670 lb st)
PW-229	79.18 kN (17,800 lb st)
PW-220P	74.29 kN (16,700 lb st)
Max (afterburner)	
PW-220, 220E	106.0 kN (23,830 lb st)
PW-229	129.45 kN (29,100 lb st)
PW-220P	120.1 kN (27,000 lb st)

UPDATED

PRATT & WHITNEY F119

This advanced augmented turbofan was selected by the US Air Force over the rival General Electric F120 to power the Lockheed F-22A Advanced Tactical Fighter in April 1991. Basic requirements were the simplest and most robust design for maximum reliability and maintainability, supercruise (supersonic persistence) capability without afterburner and a 2D (two-dimensional) nozzle incorporating limited thrust vectoring. The rival companies began formal development of their competing designs in 1983. From the outset Pratt & Whitney chose to offer a mature low-risk engine, even if in some respects it might appear to be less advanced than the rival F120. This philosophy was followed when, as the result of weight growth in the competing ATF aircraft, the thrust



Pratt & Whitney F119, with two-dimensional nozzle and fairing as fitted in YF-22

1994

requirements were upgraded in early 1988. By this time the design had long been fixed and the first YF119 demonstrator was about to run. The decision was taken not to change the engine, but to meet the extra thrust requirement by a subsequent slight increase in fan diameter, leaving the rest of the engine unaltered.

Bench testing began in December 1988. In the Summer of 1990, F119 engines made 65 flights totalling 153 hours, with no stalls or shutdowns. By April 1991, engines on ground test had run over 3,000 hours, including 1,500 with the two-dimensional nozzle. Production engines are due for delivery from 1997, the full programme total exceeding 1,500 engines priced at over $12 billion.

In partnership with Rolls Royce, a derivative of the F119 is being developed as a candidate engine for the Lockheed Martin JAST combat aircraft, with gas drive to an Allison lift fan. A simpler vectored-thrust version would power the Boeing contender.

TYPE: Two-shaft low-bypass ratio augmented turbofan.
FAN: Three stages of snubberless wide-chord blades.
COMPRESSOR: Multistage spool with integrally bladed rotors turning in opposition to the fan.
COMBUSTION CHAMBER: High intensity short annular with smokeless burning.
TURBINES: Single-stage contrarotating HP and LP turbines.
CASING: Integrally stiffened bypass duct and inner compressor casing both split for easy maintenance access.
AUGMENTOR: Single spray ring for combustion downstream of both bypass duct and core.
NOZZLE: Two-dimensional (rectangular) with external flaps to meet aircraft aerodynamic and LO (low observables) requirements and internal flaps to match engine operating parameters. Hydraulic control to ±20°. No reversing capability.
ACCESSORIES: Grouped for immediate access from below. All LRUs mounted one-deep. FADEC control.
DIMENSIONS: Generally similar to PW1129.
PERFORMANCE RATING (S/L): 155.6 kN (35,000 lb st) class

RotorWay International produces its own liquid-cooled aircraft power plant.

VERIFIED

ROTORWAY RI 162

TYPE: Horizontally opposed, water cooled, four-cylinder four-stroke piston engine. Crankshaft vertical.
CYLINDERS: Offset left and right for plain connecting rods side by side. Capacity 2.66 litres (162 cu in). Compression ratio 9.6.
INDUCTION: Single two-barrel downdraught carburettor with integral manifold heating.
IGNITION: Dual direct fire electronic with redundant coils, sensors, timing processors and plugs.
FUEL GRADE: Autogas 92 octane or Avgas 100LL.
WEIGHT, DRY (with starter): 77.1 kg (170 lb)
PERFORMANCE RATING: 113 kW (152 hp) at 4,400 rpm

SOLOY

SOLOY CORPORATION

450 Pat Kennedy Way SW, Olympia, Washington 98502
Telephone: 1 (206) 754 7000
Fax: 1 (206) 943 7659
PRESIDENT: Joe I. Soloy

Leader in field of engineering and certificating turbine engine installations for aircraft originally powered by reciprocating engines, develops and manufactures turbine conversion kits for Bell 47 and Hiller UH-12E helicopters and Cessna 206 and 207 light aircraft. Patented Dual Pac combining gearbox technology, now applied in contract development of Tridair Gemini ST twin-engined version of Bell 206L-3 LongRanger III; also used in PT6 Dual Pac twin engine/single propeller power plant being developed jointly with Pratt & Whitney Canada. ENAER T-35 Turbo Pillan (which see) developed and tested by Soloy under contract to Empresa Nacional de Aeronautica, Chile.

Further details of conversions given in *Jane's* up to and including 1991-92 edition; can now be found in *Jane's Aircraft Upgrades*.

VERIFIED

Soloy 206 Turbine Pac free turbine turboprop
1985

SOLOY TURBINE PAC

The Soloy Turbine Pac is an FAA Supplemental Type Certificate approved turboprop engine assembly, rated at 312 kW (418 shp) with a propeller rpm range of 1,450 to 1,810. Its Allison 250-C20S turboshaft engine is combined with Soloy's propeller gearbox and other components to produce a turboprop configured for single-engined aircraft. Its high thrust line and rear inlet suit it particularly to bush aircraft. The engine assembly includes propeller governing and overspeed systems, and a self-contained lubrication system. Customised models are available in pusher configuration and can utilise the 485 kW (650 shp) Allison 250-C30 engine for tractor or pusher configurations.

VERIFIED

SOLOY DUAL PAC INC

Address as Soloy Corporation

SOLOY DUAL PAC

The first production model of the Soloy Dual Pac multi-engine system utilises two Allison 250-C30S turboshaft engines, each rated at 522 kW (700 shp). The Soloy combining gearbox is rated at 1,119 kW (1,500 shp) to accommodate possible future power increases for the Allison engine. In 1992 a Dual Pac Cessna Caravan conversion was offered using a pair of PT6A-114A engines. The -114A Dual Pac rated at 991 kW (1,329 shp), selected in 1994 for Washington Aeroprogress T-720DP Korshun. The Dual Pac's redundancy, separation, and isolation of engine and drive train systems allows it to satisfy FAA requirements for designation as a twin engine, and Dual Pac-powered aircraft to be defined as multi-engined. Patented free-wheeling units at the final stage drive train provide automatic disengagement in the event of an engine shutdown, with no adverse effect on aircraft drag or thrust symmetry.

The Dual Pac is designed for tractor or pusher configuration, and is planned for use in both single-propeller and multipropeller aircraft. The first stretched Cessna Grand Caravan, with twin PT6A-114A power sections, was expected to fly in September 1995.

TCM produces piston, rotary combustion and turboprop engines for general aviation.

TELEDYNE CONTINENTAL O-200 SERIES

The O-200-A is a four-cylinder horizontally opposed air-cooled engine. It is fitted with a single updraught carburettor, dual magnetos and starter and generator. The O-200-B is designed for pusher installation.

For other details, see table on page 769.

VERIFIED

TELEDYNE CONTINENTAL IO-240

This four-cylinder engine stems from a design by former licensee Rolls-Royce. For details, see table on page 769.

Teledyne Continental IO-360ES six-cylinder air-cooled engine

1994

TELEDYNE CONTINENTAL O-360

These engines use six cylinders of the same size as the IO-240

VERIFIED

TELEDYNE CONTINENTAL IO-520 SERIES

These engines are similar to the earlier IO-360, but with cylinders of larger bore. They are fitted with an alternator driven either by a belt or by a face gear on the crankshaft. The TSIO-520 series are turbocharged. In 1981 TCM announced a lightweight series of engines with magnesium replacing aluminium in some areas, modified camshaft and cylinder heads (with parallel valves or inclined valves of larger diameter) and a range of turbocharging options. The GTSIO-520 series is geared

VERIFIED

TELEDYNE CONTINENTAL IO-550

In 1984 this series of fuel-injected engines was introduced, similar to the IO-520 but with greater stroke. It is marketed naturally aspirated and turbocharged to OEMs and converters. Initial applications were the Beechcraft Baron and Bonanza

VERIFIED

TELEDYNE CONTINENTAL VOYAGER 550

The 550 cu in family are the only liquid-cooled engines still produced by TCM. The T-550 was designed for Bonanza conversions and the geared GT-550 for the Chieftain

TEXTRON LYCOMING

652 Oliver Street, Williamsport, Pennsylvania 1770.
Telephone: 1 (717) 327 704
Fax: 1 (717) 327 7022

Following the 1994 sale of Textron Lycoming's turbine engine division to AlliedSignal (which see) its Pennsylvania operation was retained and continues to be the world's largest producer of piston engines for general aviation.

UPDATED

TEXTRON LYCOMING O-235 SERIES

Four cylinders of 111 mm (4⅜ in) bore and 98.4 mm (3⅞ in) stroke. The high-compression O-235-N is the most recent production version of the O-235, used in several trainers. It requires 100 octane fuel.

TEXTRON LYCOMING O-320 and IO-320 SERIES

Cylinder bore increased to 130 mm (5⅛ in). The O-320 is an engine in the 112 to 119 kW (150 to 160 hp) class. Both carburetted and fuel injected versions are produced in low and high-compression models for use with 80/87 or 100 octane minimum grade fuels, respectively. Fully aerobatic models are available.

VERIFIED

TEXTRON LYCOMING O-360 and IO-360 SERIES

The O-360 series is basically the same as the O-320 except for an increase in stroke to 111 mm (4⅜ in). Like the O-320 this engine is manufactured with low- or high-compression, with carburettor or fuel injection. The various models include aerobatic capability, a specific design for helicopters and turbocharged versions. The IO-360-A has fuel injection, tuned induction and high-output cylinders, while the IO-360-B has continuous flow port injection and standard cylinders. In the TIO-360-C the turbocharger is pilot controlled.

VERIFIED

TEXTRON LYCOMING O-540 and IO-540 SERIES

The O-540 is a direct drive, six-cylinder version of the four-cylinder O-360. It is available in low- and high-compression versions, and the VO-540 is a helicopter power plant with crankshaft vertical. Fuel injected IO-540 models are manufactured with ratings of 186 to 224 kW (250 to 300 hp). An aerobatic version is available.

VERIFIED

TEXTRON LYCOMING TIO-540 SERIES

This is a turbocharged version of the fuel-injected IO-540, some of which have tuned induction. It is manufactured for unpressurised and pressurised aircraft, and several models incorporate an intercooler.

VERIFIED

TEXTRON LYCOMING TIO-541 SERIES

Although the displacement of this turbocharged, six-cylinder series is the same as that of the TIO-540, the TIO-541 and geared TIGO-541 are totally redesigned. The TIO-541-E is rated at 283 kW (380 hp) and the geared TIGO-541-E at 317 kW (425 hp). A double scroll blower is available to provide cabin pressurisation.

VERIFIED

TEXTRON LYCOMING IO-720 SERIES

This eight-cylinder version of the IO-540 is used at ratings from 280 to 298 kW (375 to 400 hp).

Details of the engines manufactured by Williams for unmanned applications can be found in the 1987-88 *Jane's*

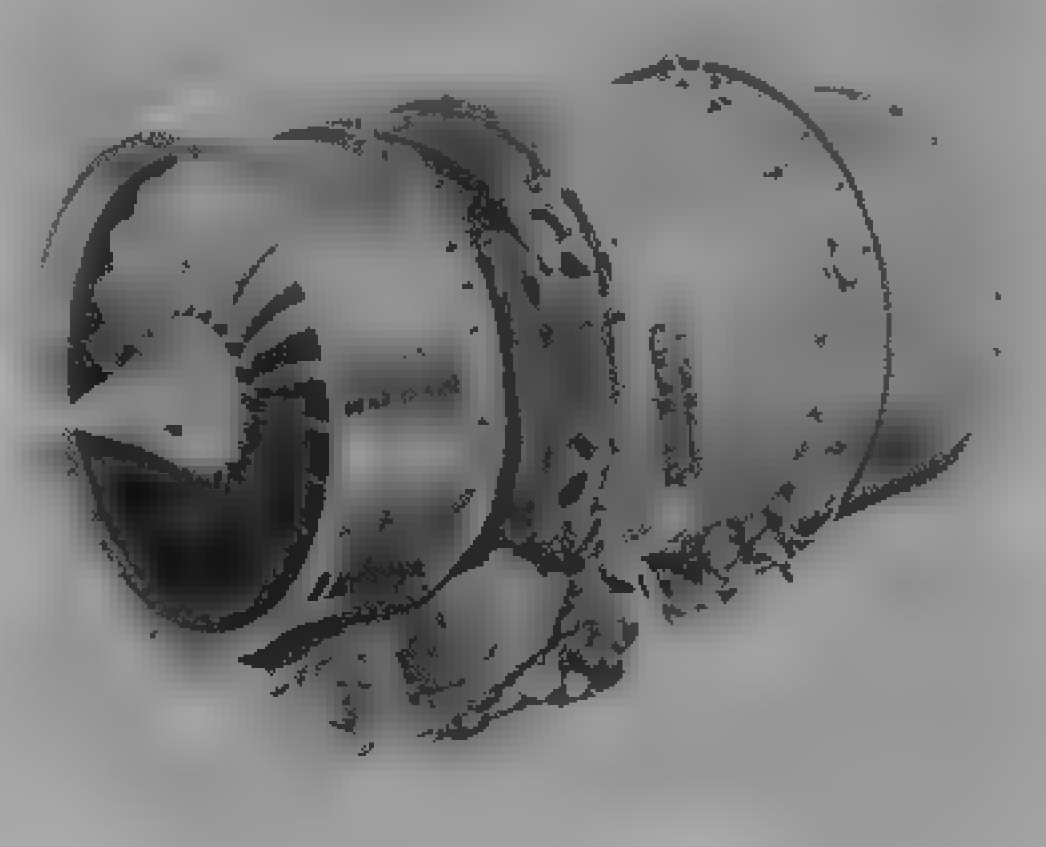
VERIFIED

WILLIAMS-ROLLS FJ44

US military designation F129

Rolls-Royce joined Williams as a partner on the FJ44 in 1989 Williams is the design authority, with Rolls-Royce providing its expertise for certain components as well as assisting in product support. In production, the majority of manufacturing and final assembly is being accomplished at the Williams facility in Ogden, Utah, while Rolls-Royce manufactures the LP turbine shaft and the three turbine rotors. The engine is marketed and supported worldwide by Williams-Rolls Inc, a joint business arrangement between Williams International and Rolls-Royce

The FJ44, with its low acquisition and maintenance cost, low specific fuel consumption, and high reliability, made feasible a new category of light business jets and trainers. It completed FAA certification on schedule in March 1992, with the first production engines being delivered in June 1992 The Cessna CitationJet is in production, and other aircraft either in development or certification include the Swearingen SJ30, the Promavia twin-engine ATTA trainer, the Promavia single-engine Squalus trainer, and the AASI



Williams-Rolls FJ44 two-shaft turbofan *1992*

Stratocruzer business jet. The Royal Swedish AF has ordered 240 engines to re-engine Sk60 trainers. All FJ44 engines are assembled at and shipped from Williams' Ogden, Utah facility

Intended applications include the Romanian NOGA VI business jet

Williams International announced during 1993 details of its military version of the FJ44, the **F129** A derated version of this engine was selected by Cessna for its JPATS twin-engine trainer

FAN: Single-stage wide-chord axial Bypass ratio 3.28
COMPRESSOR Single-stage axial on LP shaft followed by a single-stage centrifugal on HP shaft
COMBUSTION CHAMBER: Annular radial outflow
TURBINES Single-stage axial HP turbine Two-stage axial LP turbine. All three rotors with inserted blades
CONTROL SYSTEM. Hydromechanical
NOZZLE. Full-length fan duct Common fan and core exhaust.
DIMENSIONS
Length 1,024 mm (40 3 in)
Max diameter 602 mm (23 7 in)
WEIGHT DRY 203 kg (447 lb)
PERFORMANCE RATINGS (uninstalled)
T-O (S/L) to 22°C 8.45 kN (1,900 lb st)
Max continuous (11,000 m, 36,090 ft, Mach 0.7) 2 25 kN (506 lb)
SPECIFIC FUEL CONSUMPTION
T-O (S/L) 13 45 mg/Ns (0.475 lb/h/lb st)
Max continuous (as above) 21 47 mg/Ns (0 758 lb/h/lb)

UPDATED

YUGOSLAVIA

Aero-engine manufacture in Yugoslavia had a long tradition. Over 1,200 engines of indigenous or licensed design were built in the country between 1923-1941

The group of aero-engine makers was integrated within the Business Association of the Yugoslav Aerospace Industry. They manufactured under collaborative or counter-purchase arrangements The group also performed modifications, upgrades, repair and overhaul of engines and their components. There was also a Business Association of Air Depots. The fate of the engine factories in the war was not known as this edition went to press. The *Jane's* enquiries for the 1995-96 edition were all returned undeliverable because of international sanctions or military blockade

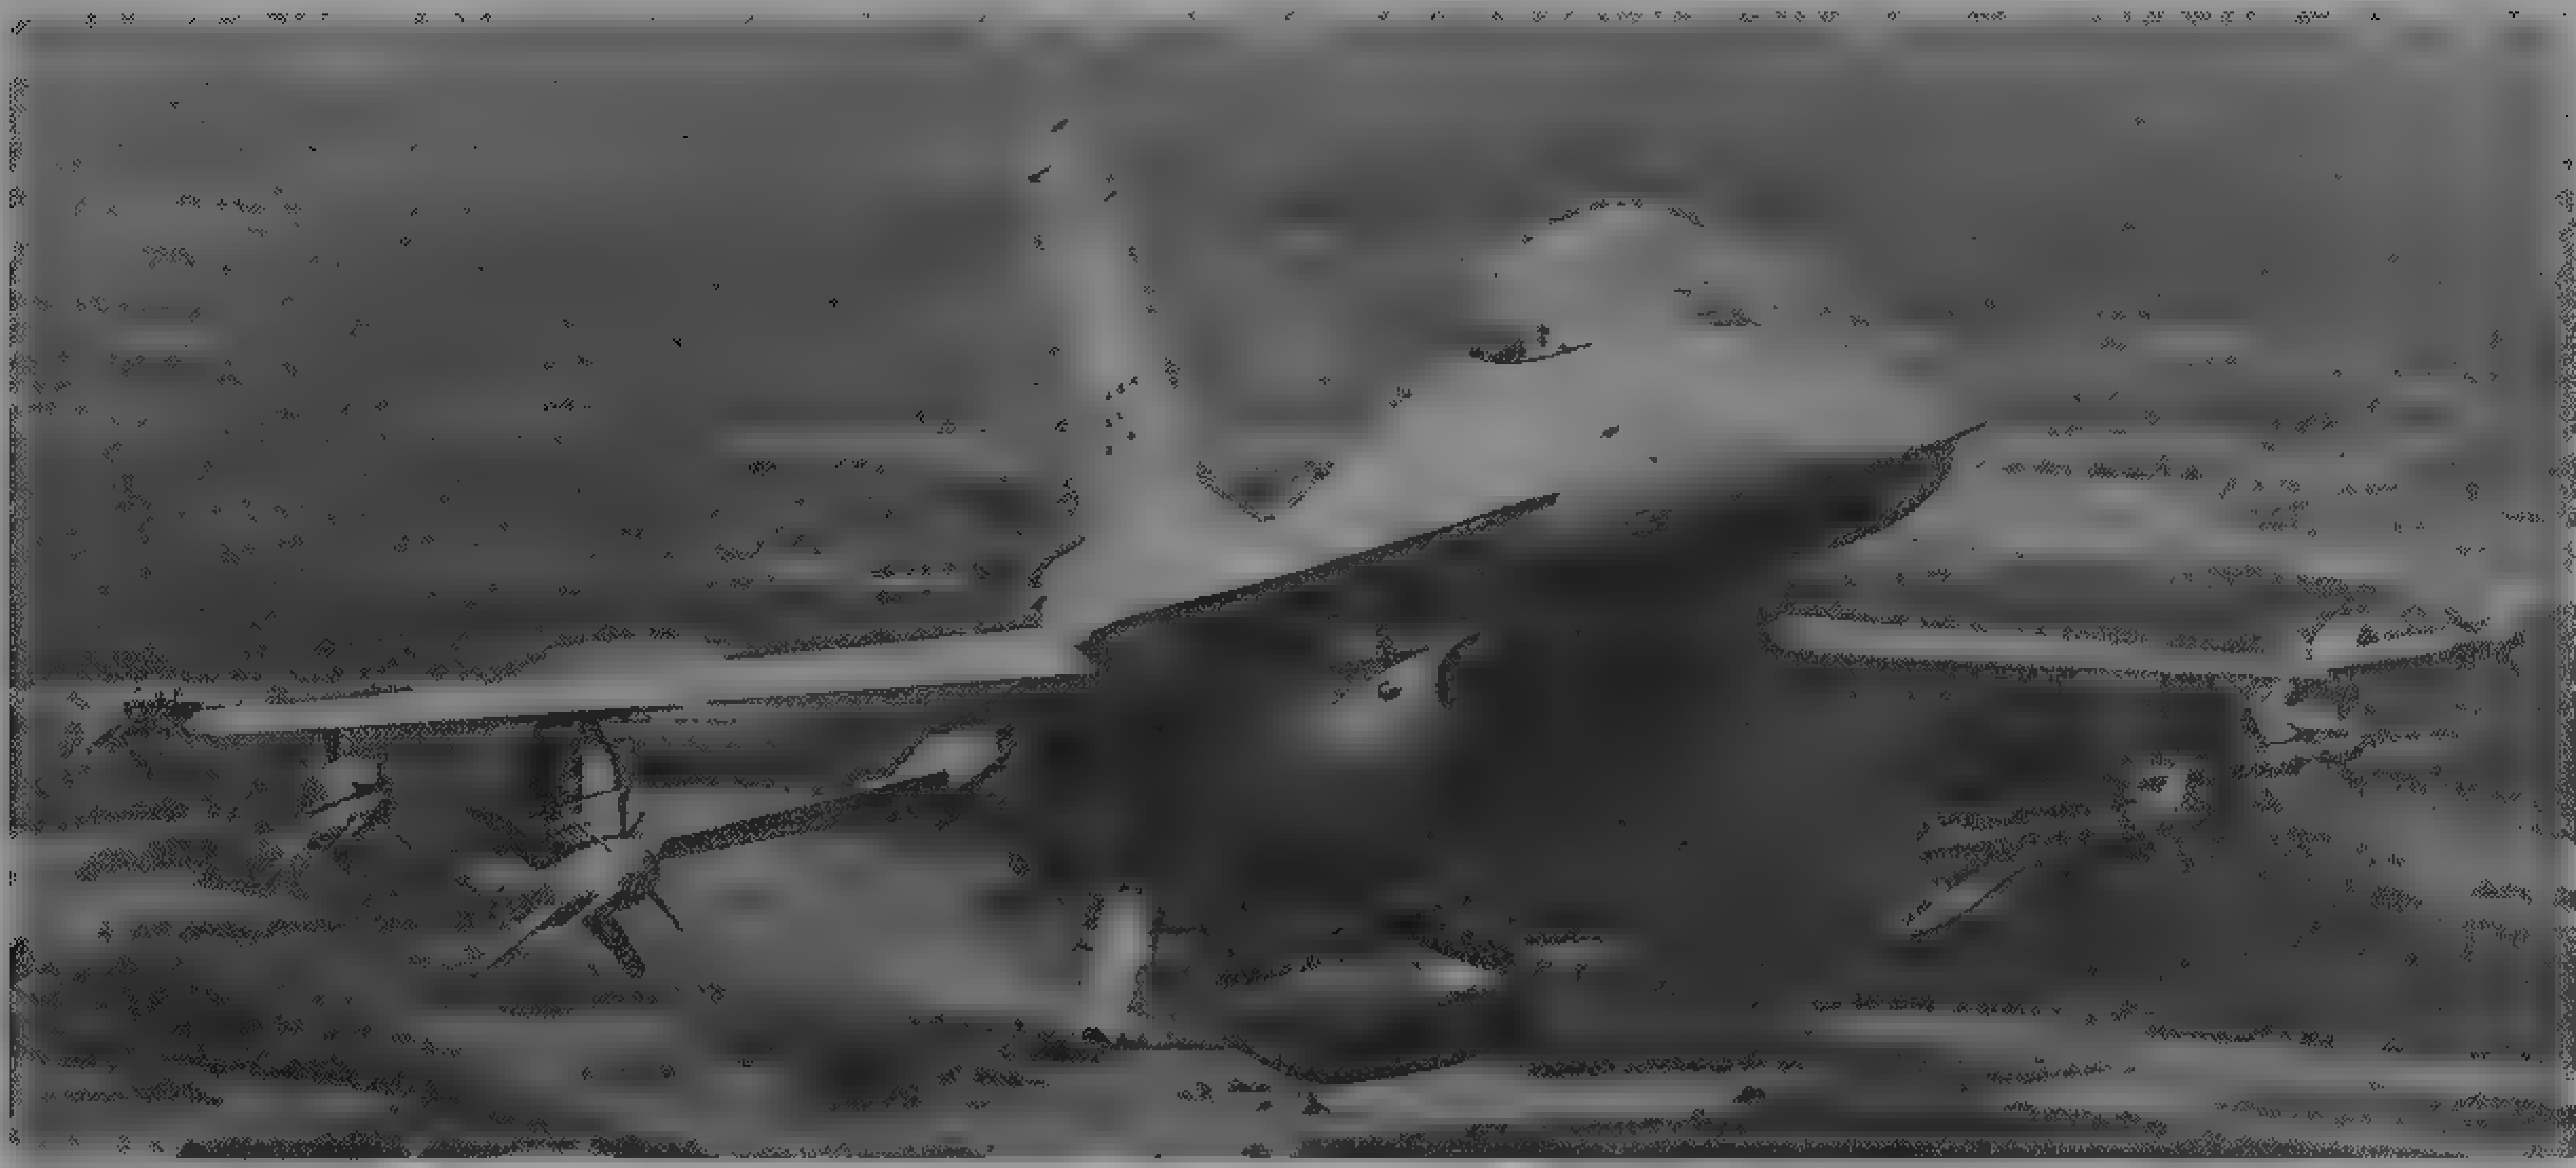
AIR-LAUNCHED MISSILES



Two NFT Penguin Mk 3 anti-ship missiles are carried on the inner wing pylons of a Royal Norwegian Air Force No 334 Squadron F-16A Fighting Falcon, augmented by four Bodensee-built AIM-9L Sidewinder AAMs outboard

1995

This section returns to *Jane's*, having last appeared in the 1987-88 edition. Meanwhile, missiles and related devices released from, and carried within, aircraft have been covered in detail by our sister publications, currently the *Jane's Air-Launched Weapons* binder, to which the reader is referred for full descriptions.

It is, therefore, the purpose of the following pages to support the Armament paragraphs of aircraft descriptions in this book by explaining in brief how the potential of individual aircraft is enhanced by their missile armament. Coverage is restricted to missiles carried by, or applicable to, aircraft in the current edition; for this reason, some older missiles are excluded, as are future projects still in the early stages of definition. Contents do include certain anti-tank and shoulder-launched anti-aircraft missiles which have airborne applications, mostly on helicopters.

To expedite retrieval of data, missiles are listed in alphabetical order of name or designation, with full cross-references to alternative epithets. In many instances, the 'manufacturer' of Chinese and Russian missiles is actually the export sales agency.

ADDENDA

AIRCRAFT

AUSTRALIA

GIPPSLAND AERONAUTICS (page 7)

(page 7)

GIPPSLAND GA-8 AIRVAN

TYPE: Single-engined utility transport

PROGRAMME: Design completed 1994, first flight 3 March 1995; certification targeted for mid-1996

DESIGN FEATURES: Strut-braced high-wing monoplane with sweptback vertical tail and fixed tricycle landing gear designed to operate from unprepared strips

POWER PLANT: Prototype powered by 186.4 kW (250 hp) Textron Lycoming O-540 flat-six engine driving a two-blade propeller; 224 kW (300 hp) IO-540 intended for production aircraft. Fuel capacity 340 litres (89.8 US gallons; 74.8 Imp gallons)

ACCOMMODATION: Pilot and up to seven passengers or equivalent cargo, crashworthy seats. Forward-opening door each side of flight deck, forward-sliding cargo door on port side aft of wing.

DIMENSIONS, EXTERNAL:	
Cargo door: Height	1.08 m (3 ft 6½ in)
Width	1.07 m (3 ft 6 in)
Height to sill	0.89 m (2 ft 11 in)
DIMENSIONS, INTERNAL:	
Cabin: Length, inc. flight deck	4.01 m (13 ft 2 in)
Max width	1.27 m (4 ft 2 in)
Max height	1.19 m (3 ft 11 in)
Floor area: incl flight deck	5.02 m² (54.0 sq ft)
excl flight deck	3.44 m² (37.0 sq ft)
Volume, incl flight deck	5.10 m³ (180.0 cu ft)
WEIGHTS AND LOADINGS:	
Weight empty	862 kg (1,900 lb)
Max payload	816.5 kg (1,800 lb)
Max T-O weight	1,724 kg (3,800 lb)
PERFORMANCE (estimated):	
Range at 120 kts (222 km/h, 138 mph)	680 n miles (1,259 km, 782 miles)

NEW ENTRY

GOAIR
GOAIR PRODUCTS

Hangar 675, Drover Road, Bankstown Airport, NSW 2200
Telephone: 61 (2) 796 3426 or 791 9141
Fax: 61 (2) 791 0354
MANAGING DIRECTOR: Phil Goard

Company manufactures auxiliary fuel tanks and other aviation items. Trainer is first own-design aircraft venture

NEW ENTRY

GOAIR TRAINER

TYPE: Side by side two-seat trainer and tourer

PROGRAMME: Four years in design, public debut at Avalon Air Show March 1995, aimed primarily at flying schools, certification and production dependent upon (initially positive) market response

DESIGN FEATURES: Conventional low wing, fixed gear monoplane (see accompanying illustrations); design goals strength, simplicity, low cost, docile stall characteristics and ease of maintenance; all-metal construction thought more likely to appeal than composites

FLYING CONTROLS: Conventional mechanical

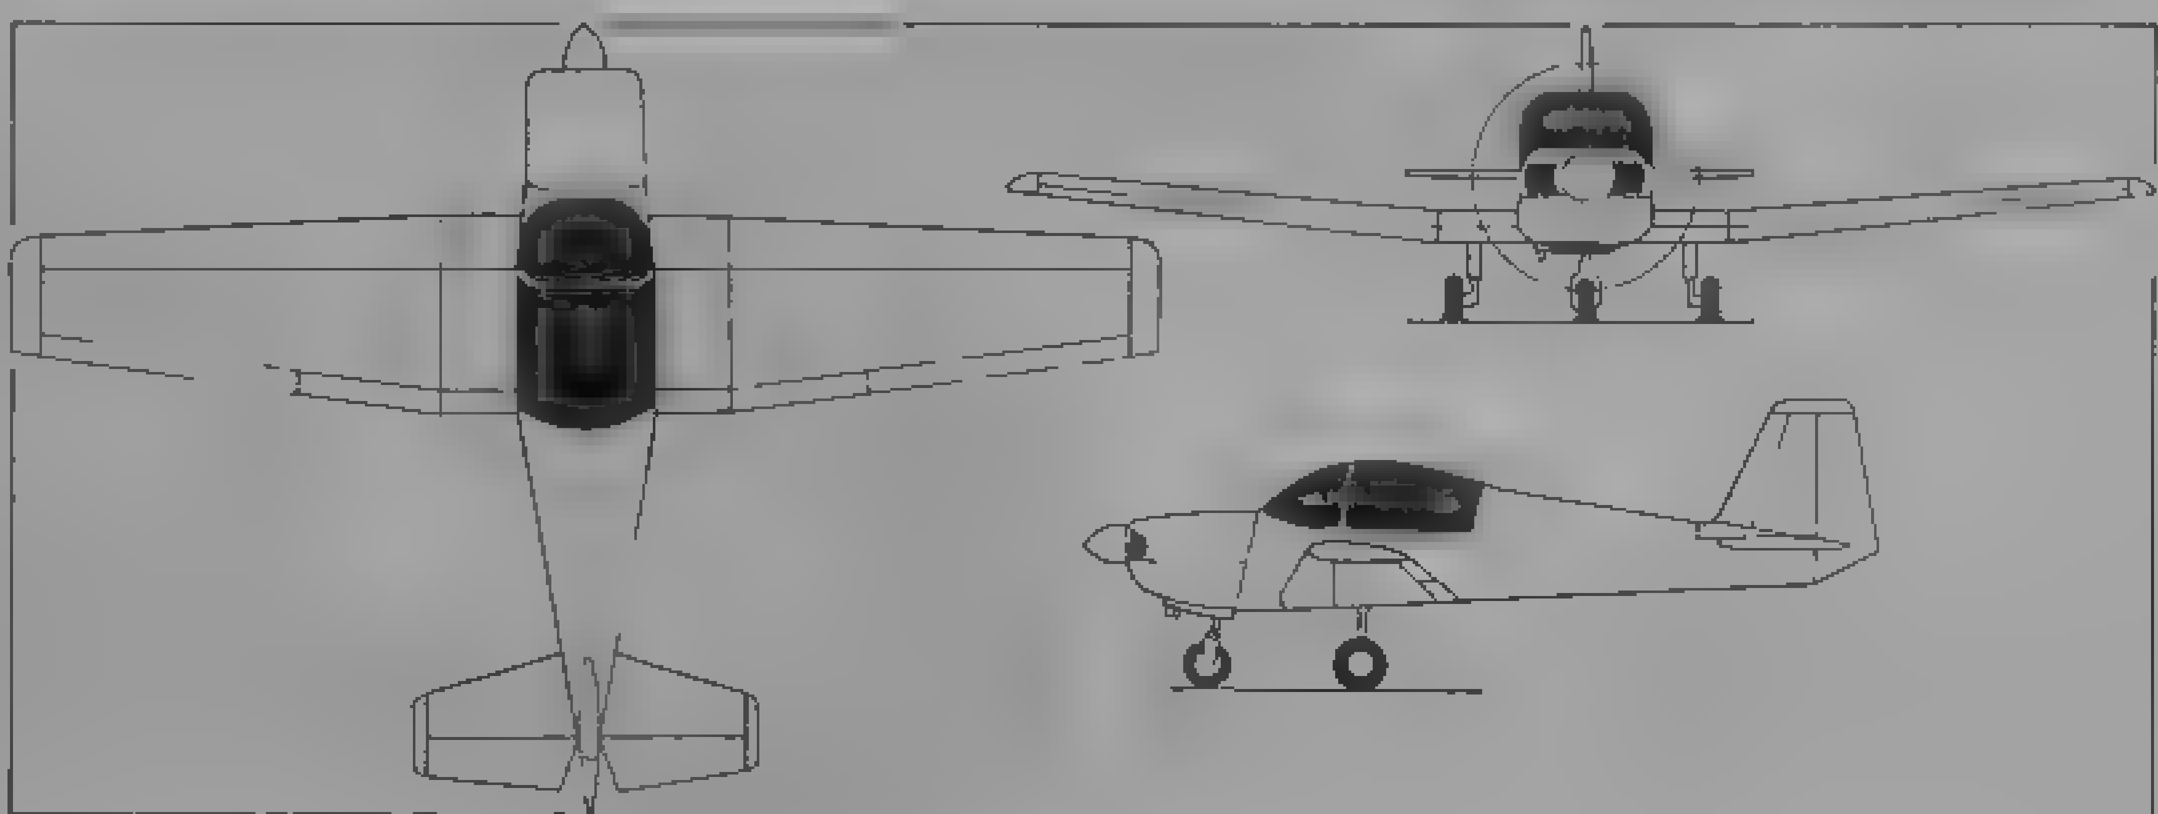
LANDING GEAR: Non-retractable tricycle type

POWER PLANT: One 85.8 kW (115 hp) Textron Lycoming O-235 flat four engine, driving a two-blade metal propeller. Fuel capacity 130 litres (34.3 US gallons, 28.6 Imp gallons)

ACCOMMODATION: Two side by side seats, adjustable fore and aft, dual controls standard. Baggage compartment (0.17 m³; 6 cu ft) behind seats.

AVIONICS: Instrumentation to NVMC standard available

Prototype Goair Trainer at Avalon in March 1995 *(Australian Aviation/Gerard Frawley)*
1995



Goair Trainer (115 hp Textron Lycoming O-235) *(Jane's/Paul Jackson)*
1995

DIMENSIONS, EXTERNAL:
Wing span 8.76 m (28 ft 0 in)
Wing chord at root 1.52 m (5 ft 0 in)
Wing aspect ratio 7.31
Length overall 6.25 m (20 ft 6 in)
Height overall 2.03 m (6 ft 8 in)
AREAS:
Wings, gross 10.50 m² (113.0 sq ft)
WEIGHTS AND LOADINGS:
Weight empty 408 kg (900 lb)
Max T-O weight 680 kg (1,500 lb)
Max wing loading 64.81 kg/m² (13.27 lb/sq ft)
Max power loading 7.94 kg/kW (13.04 lb/hp)
PERFORMANCE (estimated, at 590 kg; 1,300 lb AUW):
Max level speed 115 kts (213 km/h; 132 mph)
Cruising speed 100 kts (185 km/h; 115 mph)
Stalling speed 45 kts (84 km/h; 52 mph)
Max rate of climb at S/L 244 m (800 ft)/min
T-O and landing run 138 m (450 ft)
Endurance 4 h

HB FLUGTECHNIK GmbH

Dr Adolf Scharf Strasse 42, PO Box 74, A-4053 Haid-Ansfelden
Telephone: 43 (7229) 79104 or 79117
Fax: 43 (7229) 7910415 or 7911715
MANAGING DIRECTOR: Ing Heino Brditschka

NEW ENTRY

HB FLUGTECHNIK HB-207 ALFA

TYPE: Two-seat light training and touring aircraft, conforms to JAR VLA requirements.

PROGRAMME: First flight (OE-CHC) 14 March 1995.

CURRENT VERSIONS: Offered with several power plant, propeller and avionics options (see relevant paragraphs).

COSTS: Standard aircraft AS399,750 (1995).

DESIGN FEATURES: Constant chord low wings with raked tips, slightly sweptback fin and rudder; one-piece elevator aft of vertical tail.

FLYING CONTROLS: Conventional mechanical (pushrods for ailerons and elevator, cable for rudder). Large central trim tab in elevator. Manual (optionally electric) operation for flaps.

STRUCTURE: Mainly metal primary structure with GFRP skin; moving surfaces have Ceconite covering.

LANDING GEAR: Retractable tricycle type, with size 4.00-4 wheel and tyre on each unit. Main units have brakes and rubber in compression shock-absorption, and retract inward; nosewheel retracts rearward.

POWER PLANT: Standard engine is an 82 kW (110 hp) VW-HB 2400 G/2 flat-four; alternatives can include 59.7 kW (80 hp) Rotax 912A, 74.6 kW (100 hp) Rotax 914, or Limbach or Textron Lycoming engines of similar ratings. Choice of propellers: two-blade wooden fixed-pitch, three-blade adjustable- or variable-pitch, or five-blade adjustable- or variable-pitch. Fuel tank in each wing, combined capacity 80 litres (21 US gallons; 17.6 Imp gallons).

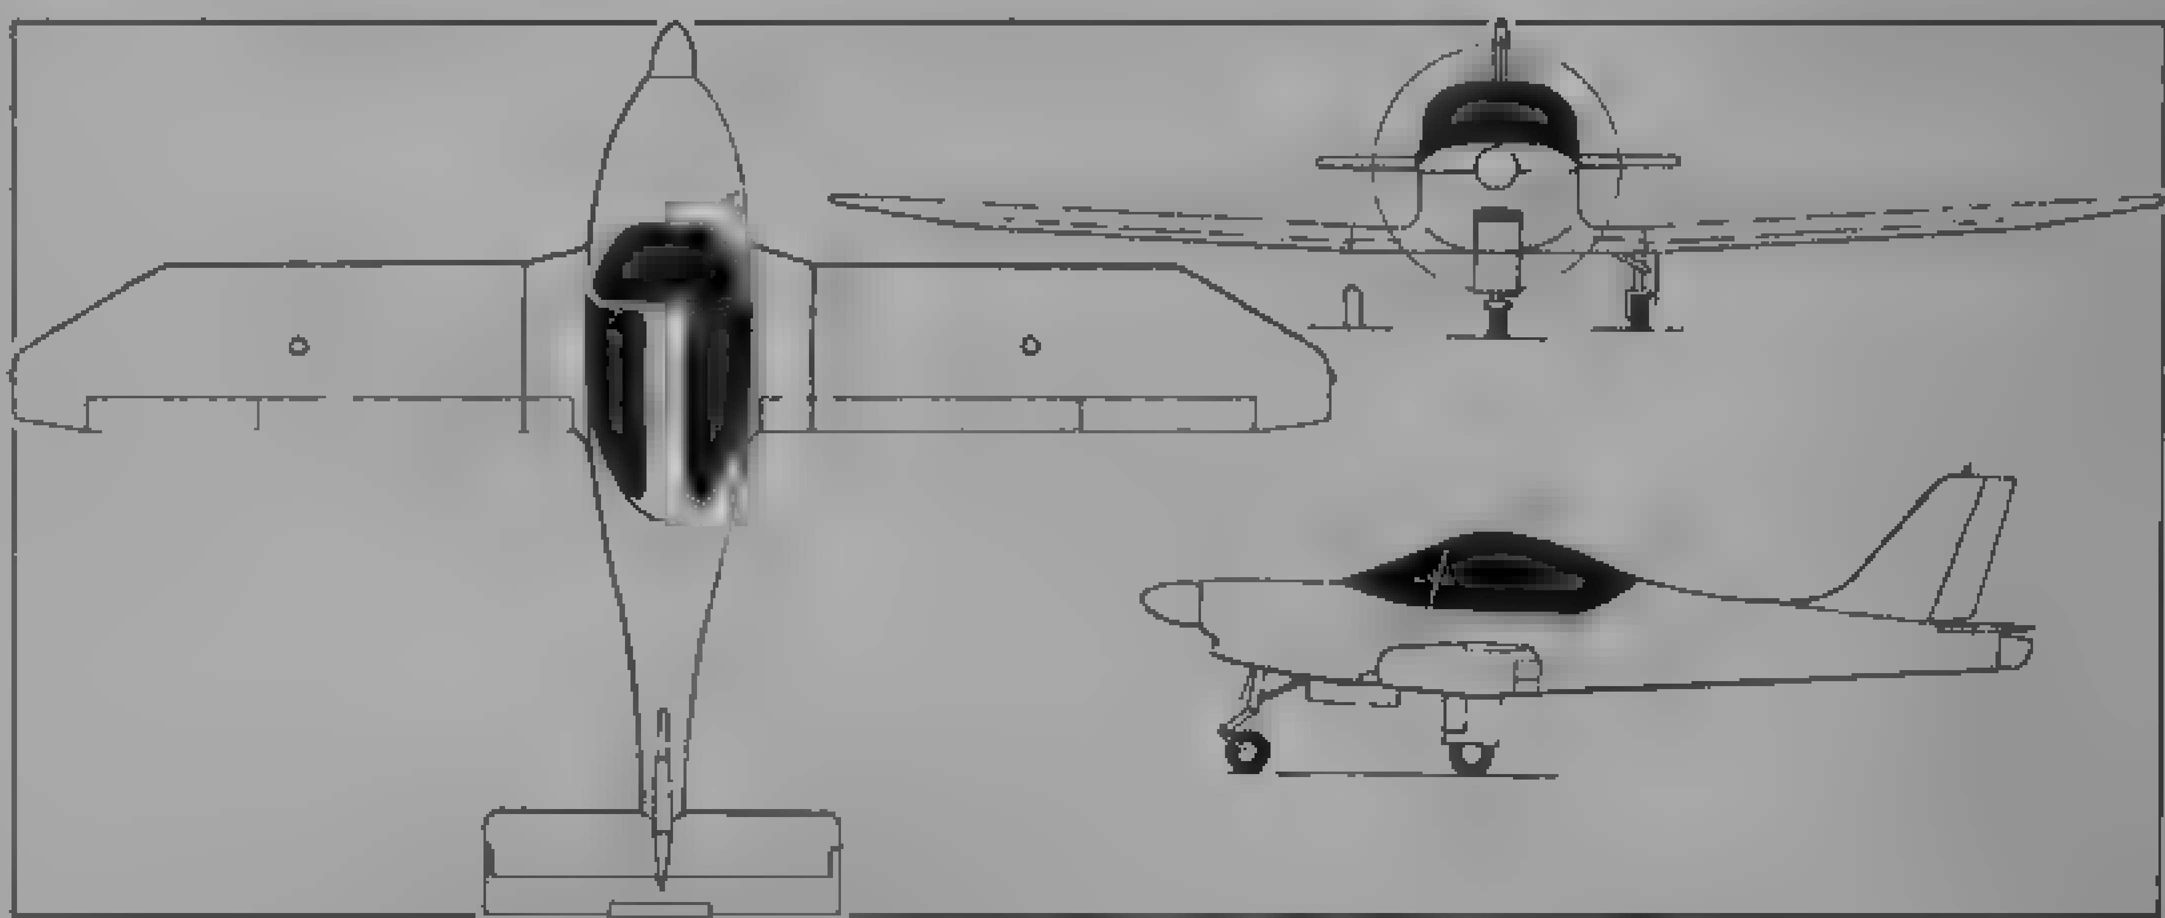
ACCOMMODATION: Two seats side by side under rearward sliding fully transparent canopy.

SYSTEMS: Electrical system: 200 A 15 Ah (optionally 20 Ah) battery.

AVIONICS: *Comms:* Bendix/King 760-channel KX 155 transceiver, KT 76A transponder and ELT optional.
Flight: Bendix/King KX 125 VOR with KI 208 indicator optional.
Instrumentation: VFR flight and engine transmission instrumentation standard.

DIMENSIONS, EXTERNAL:
Wing span 9.00 m (29 ft 6¼ in)
Wing aspect ratio 8.53
Length overall 5.90 m (19 ft 4¼ in)
Height overall 1.95 m (6 ft 4¾ in)
AREAS:
Wings, gross 9.50 m² (102.26 sq ft)
WEIGHTS AND LOADINGS:
Weight empty 430 kg (948 lb)
Max T-O weight 640 kg (1,411 lb)
Max wing loading 67.37 kg/m² (13.80 lb/sq ft)
Max power loading:
VW HB-2400 G/2 7.81 kg/kW (12.83 lb/hp)
Rotax 912A 10.73 kg/kW (17.64 lb/hp)

Austrian HB-207 Alfa two-seat lightplane *1995*



HB Flugtechnik Alfa (Volkswagen engine) *(Jane's/Paul Jackson)* *1995*

PERFORMANCE (at max T-O weight, VW-HB 2400 G/2 engine):
Max level speed 166 kts (308 km/h; 191 mph)
Cruising speed 135 kts (250 km/h; 155 mph)
Stalling speed: flaps up 49 kts (90 km/h; 56 mph)
30° flap 41 kts (75 km/h; 47 mph)
Max rate of climb at S/L 330 m (1,082 ft)/min
T-O run 180 m (591 ft)
T-O to 15 m (50 ft) 350 m (1,149 ft)
Range approx 540 n miles (1,000 km; 621 miles)
g limits: Aerobatic +6/−3
Utility +4.4/−2.2

NEW ENTRY

HOAC (page 11)

HOAC HK-36R SUPER DIMONA

CURRENT VERSIONS: **Super Dimona:** Main production variant.

Super Dimona TS: Introduced 1995, fitted with winglets, increasing span to 16.55 m (54 ft 3½ in); max rate of climb at S/L increased to 270 m (885 ft/min); certified for glider- and banner towing.

NEW ENTRY

Winglets and towing hook are visible in this view of Super Dimona TS prototype OE-9416 *(Paul Jackson)* *1995*

CANADA

BELL HELICOPTER TEXTRON (page 24)

BELL 407

Following are additional preliminary data

POWER PLANT: Usable fuel capacity (407) 477 litres (126 US gallons, 105 Imp gallons) standard, provision for 76 litre (20 US gallon, 16.7 Imp gallon) auxiliary tank

DIMENSIONS, EXTERNAL

Main rotor diameter	10.67 m (35 ft 0 in)
Tail rotor diameter	1.63 m (5 ft 4 in)
Length overall	12.70 m (41 ft 8 in)
Height overall	3.56 m (11 ft 8 in)

WEIGHTS AND LOADINGS

Weight empty, equipped	1,170 kg (2,600 lb)

PERFORMANCE (estimated, at internal load MTOW, ISA):

Max cruising speed: at S/L	128 kts (237 km/h, 147 mph)
at 1,200 m (3,940 ft)	131 kts (243 km/h, 151 mph)
Econ cruising speed: at S/L	116 kts (215 km/h; 134 mph)
at 1,200 m (3,940 ft)	114 kts (211 km/h, 131 mph)
Service ceiling	5,460 m (17,900 ft)
Hovering ceiling: IGE	3,440 m (11,285 ft)
OGE	2,470 m (8,100 ft)
Range at above econ cruising speeds:	
at S/L	328 n miles (608 km; 378 miles)
at 1,200 m (3,940 ft)	361 n miles (669 km; 416 miles)

UPDATED

BELL 430

The following details amend or are additional to those on page 29:

POWER PLANT: Transmission rating 779 kW (1,045 shp) for 5 minutes for T-O, 738 kW (990 shp) maximum continuous. Usable fuel capacity 935 litres (247 US gallons, 206 Imp gallons) in skid version, 710 litres (187.5 US gallons, 156 Imp gallons) in wheeled version; provision in both versions for 182 litre (48 US gallon, 40 Imp gallon) auxiliary tank

DIMENSIONS, EXTERNAL

Length: fuselage (incl tailskid)	13.44 m (44 ft 1 in)
overall, rotors turning	15.39 m (50 ft 6 in)
Fuselage max width over sponsons	3.45 m (11 ft 4 in)
Height to top of rotor head:	
skid version	3.86 m (12 ft 8 in)
wheeled version	3.71 m (12 ft 2 in)

WEIGHTS AND LOADINGS (A: skid version, B: wheeled version):

Weight empty, equipped: A	2,352 kg (5,185 lb)
B	2,388 kg (5,265 lb)
Max external load: A, B	1,586 kg (3,496 lb)
Max T-O weight, internal load: A, B	4,082 kg (9,000 lb)

PERFORMANCE (estimated, at internal load MTOW except where indicated, ISA, A and B as above):

Max cruising speed at S/L:	
A	139 kts (257 km/h, 160 mph)
B	143 kts (265 km/h; 165 mph)
Econ cruising speed at average mid-cruise weight:	
A	122 kts (226 km/h, 140 mph)
B	126 kts (233 km/h, 145 mph)
Service ceiling: A, B	4,450 m (14,600 ft)
Service ceiling, OEI: A, B	1,890 m (6,200 ft)
Hovering ceiling: IGE: A, B	4,180 m (13,715 ft)
OGE: A, B	2,440 m (8,000 ft)
Range at above econ cruising speeds, no reserves:	
A	378 n miles (700 km, 435 miles)
B	293 n miles (543 km, 337 miles)

UPDATED

CANADAIR (page 31)

Cutaway drawing of Canadair Global Express

1995

CHINA, PEOPLE'S REPUBLIC

CAC (page 48)

CHENGDU FC-1

TYPE: Single-seat air superiority fighter and ground attack aircraft

PROGRAMME: Fighter China (FC) programme launched 1991 following cancellation of US participation in development of Chengdu Super-7, which it apparently replaces. Some design assistance from MAPO-Mikoyan OKB. Two static test airframes being built, to begin testing second half of 1996. First of three prototypes due to fly early 1997, followed by service entry in about 2000. Expectation of eventual production rate of approximately 50 per year

CUSTOMERS: Envisaged for air forces of China and Pakistan initially, but costed to be competitive in wider export market. Seen as potential replacement for Shenyang F-6, Northrop F-5 and Dassault Mirage III/5

COSTS: CATIC forecast (1995) of unit cost below $15 million.

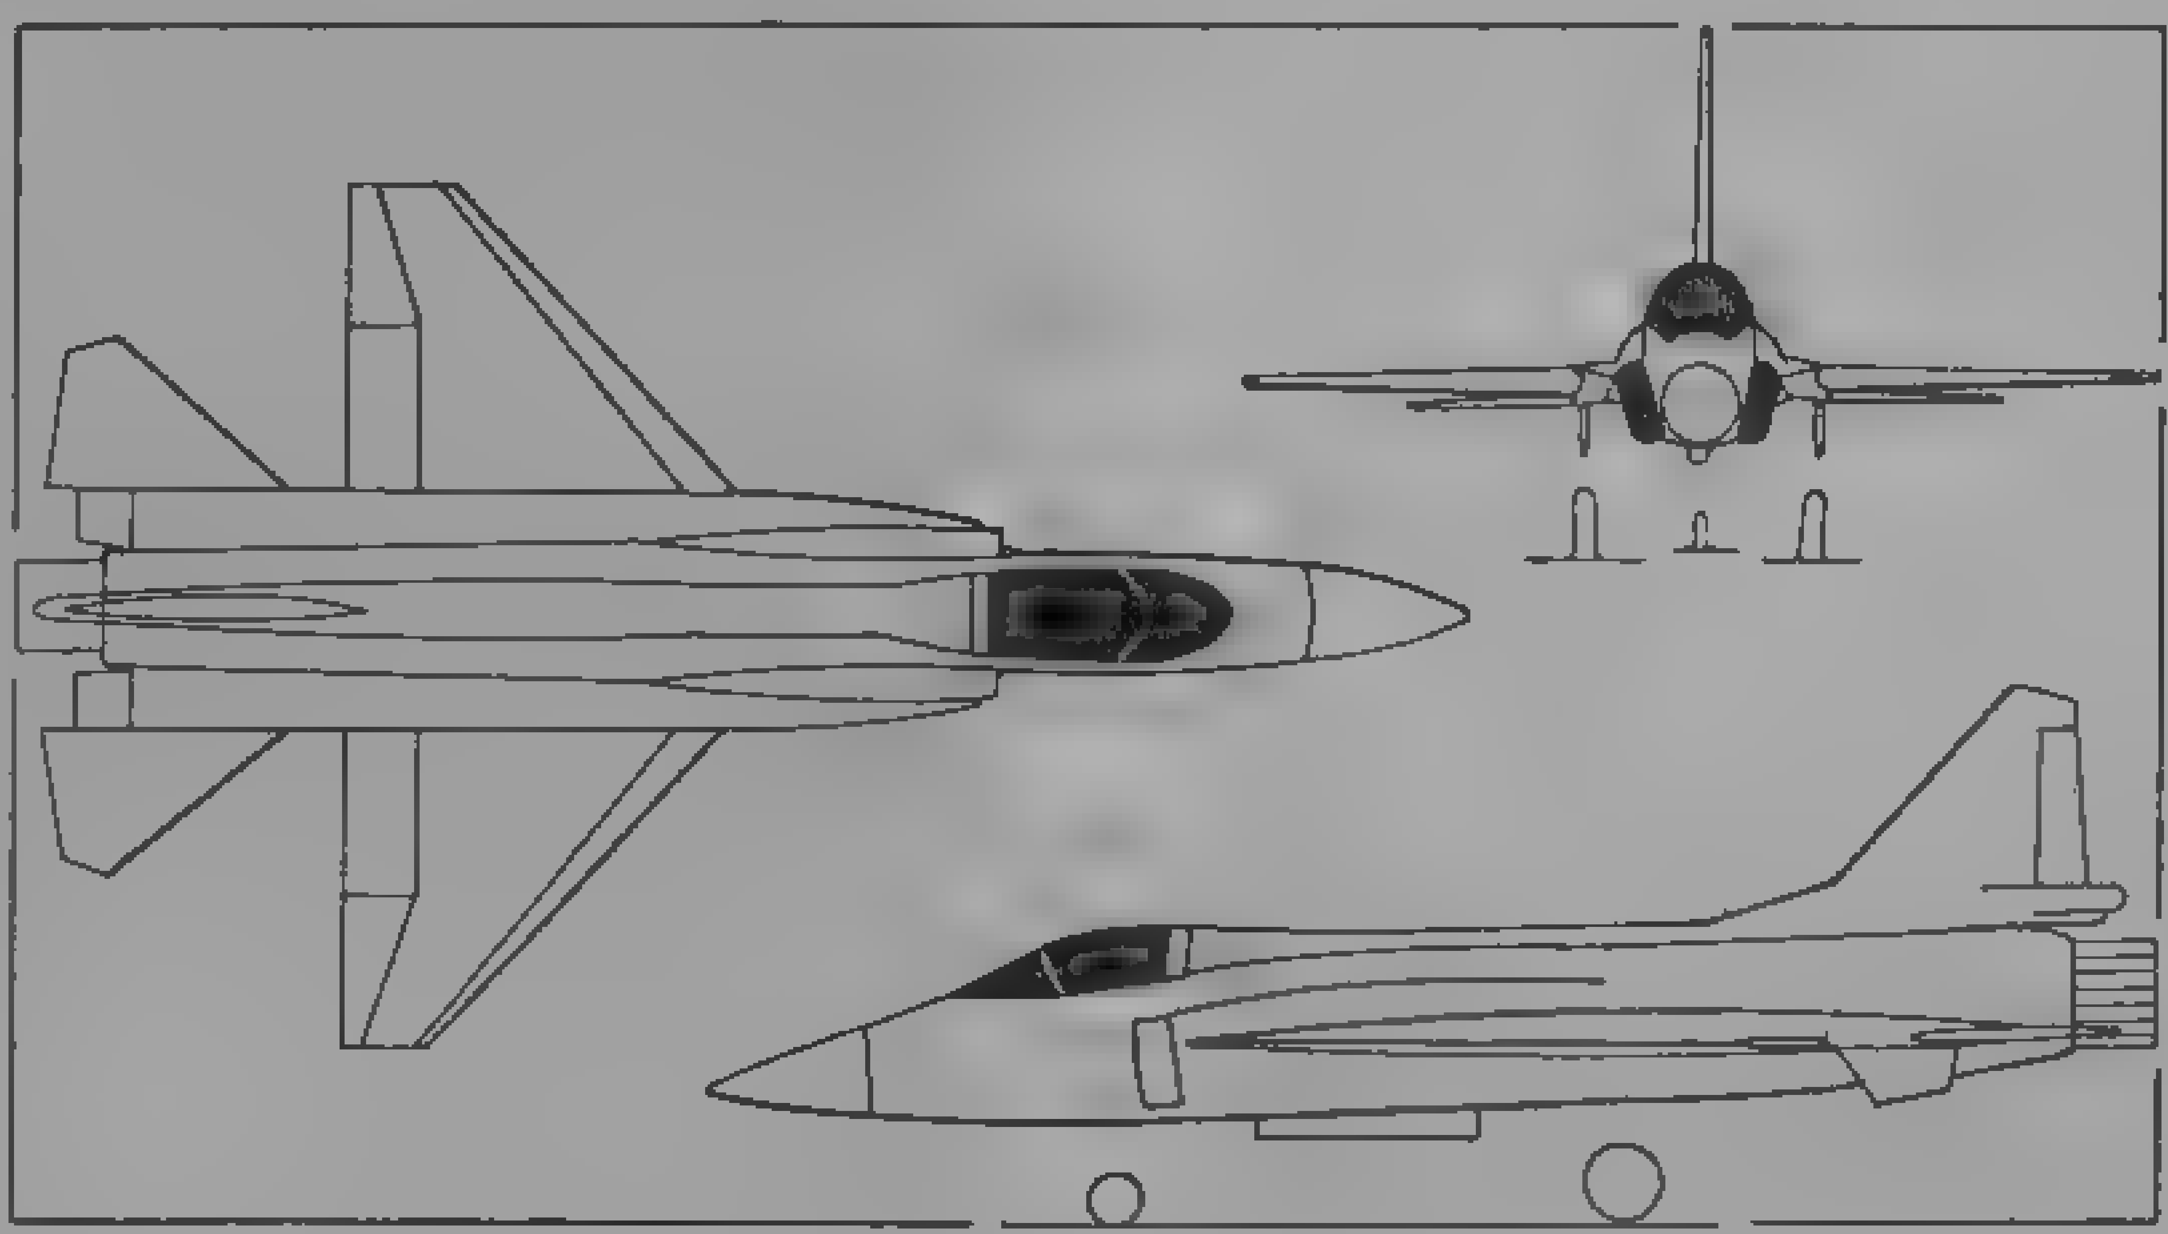
DESIGN FEATURES: Mid-mounted delta wing with narrow wingroot strakes at leading-edge; single turbofan engine, side-mounted twin intakes, with splitter plates, large intake trunks provide space for considerable internal fuel capacity. Large main fin with dorsal fairing; two smaller, uncanted ventral fins.

FLYING CONTROLS: Conventional hydraulic servo-operated control of ailerons, rudder and all moving tailplane initially, with single analog fly-by-wire system for back-up, provision for FBW to become primary system later. Trailing-edge flaps; emphasis on high manoeuvrability probably also indicates use of leading-edge flaps.

STRUCTURE: Primary structure conventional aluminium alloy semi-monocoque. Some components to be manufactured in Pakistan

LANDING GEAR: Retractable tricycle type, with single wheel and oleo shock-absorber on each unit. Mainwheels retract upward into engine intake trunks; nosewheel retracts rearward

POWER PLANT: One Klimov RD-93 (RD-33 derivative) turbofan (81.4 kN; 18,300 lb st with afterburning), possibly to be licence built by Liyang Machinery Corporation for production aircraft. Could have alternative Western engine at customer's option. Substantial internal fuel capacity. Provision for external fuel tanks



Provisional drawing of the Chengdu FC-1 multirole fighter *(Jane's/Paul Jackson)*

1995

ACCOMMODATION: Single seat (Martin-Baker zero/zero Mk 10 in aircraft for Pakistan) under one-piece canopy. Two-seat training versions also planned

AVIONICS: Expected to be of domestic origin for Chinese squadrons and Western type for Pakistan Air Force. Will include pulse Doppler multirole radar

ARMAMENT: Underfuselage centreline station for 23 mm GSh-23-2 twin-barrel cannon or other store, two

attachments under each wing and one at each wingtip. Weapons expected to include PL-7 and/or PL-10 AAMs, ASMs, bombs, gun and rocket pods, or other stores

DIMENSIONS, EXTERNAL:

Wing span over AAMs	9.50 m (31 ft 2 in)
Length overall	13.95 m (45 ft 9¼ in)
Height overall	5.015 m (16 ft 5½ in)
Wheel track	2.30 m (7 ft 6½ in)
Wheelbase	5.135 m (16 ft 10¼ in)

WEIGHTS AND LOADINGS:

Operating weight empty	9,300 kg (20,530 lb)
Max external stores load	3,200 kg (7,055 lb)
Max T-O weight	12,500 kg (27,557 lb)
Max power loading	102.0 kg/kN (1.51 lb/lb st)

PERFORMANCE (estimated):

Max level speed at altitude, clean	Mach 1.6 to 1.8
Service ceiling	16,000 m (52,000 ft)
T-O run	400 m (1,313 ft)
Landing run	600 m (1,969 ft)
Combat radius:	
fighter	648 n miles (1,200 km, 745 miles)
ground attack	378 n miles (700 km, 435 miles)
Max range on internal fuel	864 n miles (1,600 km, 994 miles)

CZECH REPUBLIC

AERO (page 69)

AERO L 159

TYPE: Single-seat light attack aircraft.

PROGRAMME: F124 turbofan selected as power plant mid-1994; avionics contract, competed for by Rockwell Aerospace, Sextant Avionique and Elbit, awarded late 1994 and valued at about $190 million. Czech government development agreement given 7 April 1995 and production commitment later same month. First prototype to be two-seater, to fly second half 1996, followed by second prototype (single-seater) first quarter 1997; production deliveries to Czech Air Force planned to begin late 1998/early 1999 and continue until about 2005.

CUSTOMERS: Czech Air Force (initial commitment for 72).

COSTS: Estimated CKr1,400 million ($50 million) to develop single-seat version (1995).

DESIGN FEATURES: Configuration generally as L-39/59 except for larger, redesigned nose to accommodate radar; fatter rear fuselage; single-seat armoured cockpit; Western avionics; 297 kg (655 lb) additional fuel tank in lieu of second seat.

STRUCTURE: Generally as for L-39/59 except for cockpit armour protection with composites and ceramics.

POWER PLANT: One 28.02 kN (6,300 lb st) AlliedSignal/ITEC F124-GA-100 turbofan.

ACCOMMODATION: Single seat in armoured cockpit. First prototype and some 10 per cent of Czech Air Force initial batch will be two-seaters.

AVIONICS: Systems integration of complete suite by Rockwell Aerospace, all linked to MIL-STD-1553B databus

Comms: Include Bendix/King APX 100 IFF transponder

Radar: FIAR Grifo L multimode pulse Doppler radar

Flight: Honeywell H-764G strapdown ring laser gyro INS with GPS, Bendix/King R/Nav, air data computer and liquid crystal colour MFDs, Mason Electric HOTAS controls, Flight Visions FV 3000 HUD; Lear Astronics autopilot and yaw damper

Mission: Dynamic Control Corporation stores management system. Future possibility of reconnaissance, ECM and night navigation/targeting pods

Self-defence: GEC Marconi Sky Guardian 200 E/J-band RWR, integrated with Vinten Vicon 78 Series 455 ECM

ARMAMENT: Centreline hardpoint for gun pod or other store, plus three stores stations under each wing. Planned weapons include AIM 9 Sidewinder or other air-to-air missiles, AGM-65 Maverick or other air-to-surface missiles; gun and rocket pods, and bombs

DIMENSIONS, EXTERNAL:

Wing span	9.54 m (31 ft 3 in)
Length overall	12.53 m (41 ft 1¼ in)
Height overall	4.77 m (15 ft 7¾ in)

WEIGHTS AND LOADINGS:

Weight empty	4,160 kg (9,171 lb)
Max internal fuel weight, incl wingtip tanks	1,497 kg (3,300 lb)
External fuel weight (four drop tanks)	1,088 kg (2,398 lb)
Max external stores load	2,340 kg (5,159 lb)
Max T-O weight	8,000 kg (17,637 lb)

PERFORMANCE (estimated):

Max level speed at S/L	502 kts (930 km/h, 578 mph)
Max rate of climb at S/L	2,820 m (9,252 ft)/min
Service ceiling	13,200 m (43,300 ft)
T-O run	490 m (1,608 ft)
Max range, internal fuel, 10% reserves	850 n miles (1,574 km, 978 miles)
g limits	+8/−4

NEW ENTRY

AERODYN SKYRANGER

TYPE: Twin-engined seven-seat amphibian

PROGRAMME: Design study

DESIGN FEATURES: High wing, T tail amphibian with fixed floats on struts at about half-span. Design is intended to be to FAR and JAR Pt 23

FLYING CONTROLS: Mechanically operated ailerons, elevator and rudder. Elevator tab for pitch trim

LANDING GEAR: Seaplane fuselage and retractable tricycle type for runways

POWER PLANT: Two 119 kW (160 hp) Lycoming IO-320 flat-four piston engines with five-blade propellers

ACCOMMODATION: Up to seven, including crew. Cargo, ambulance and motor home layouts designed

SYSTEMS: Electrical system: 12 V battery, 14 V alternator

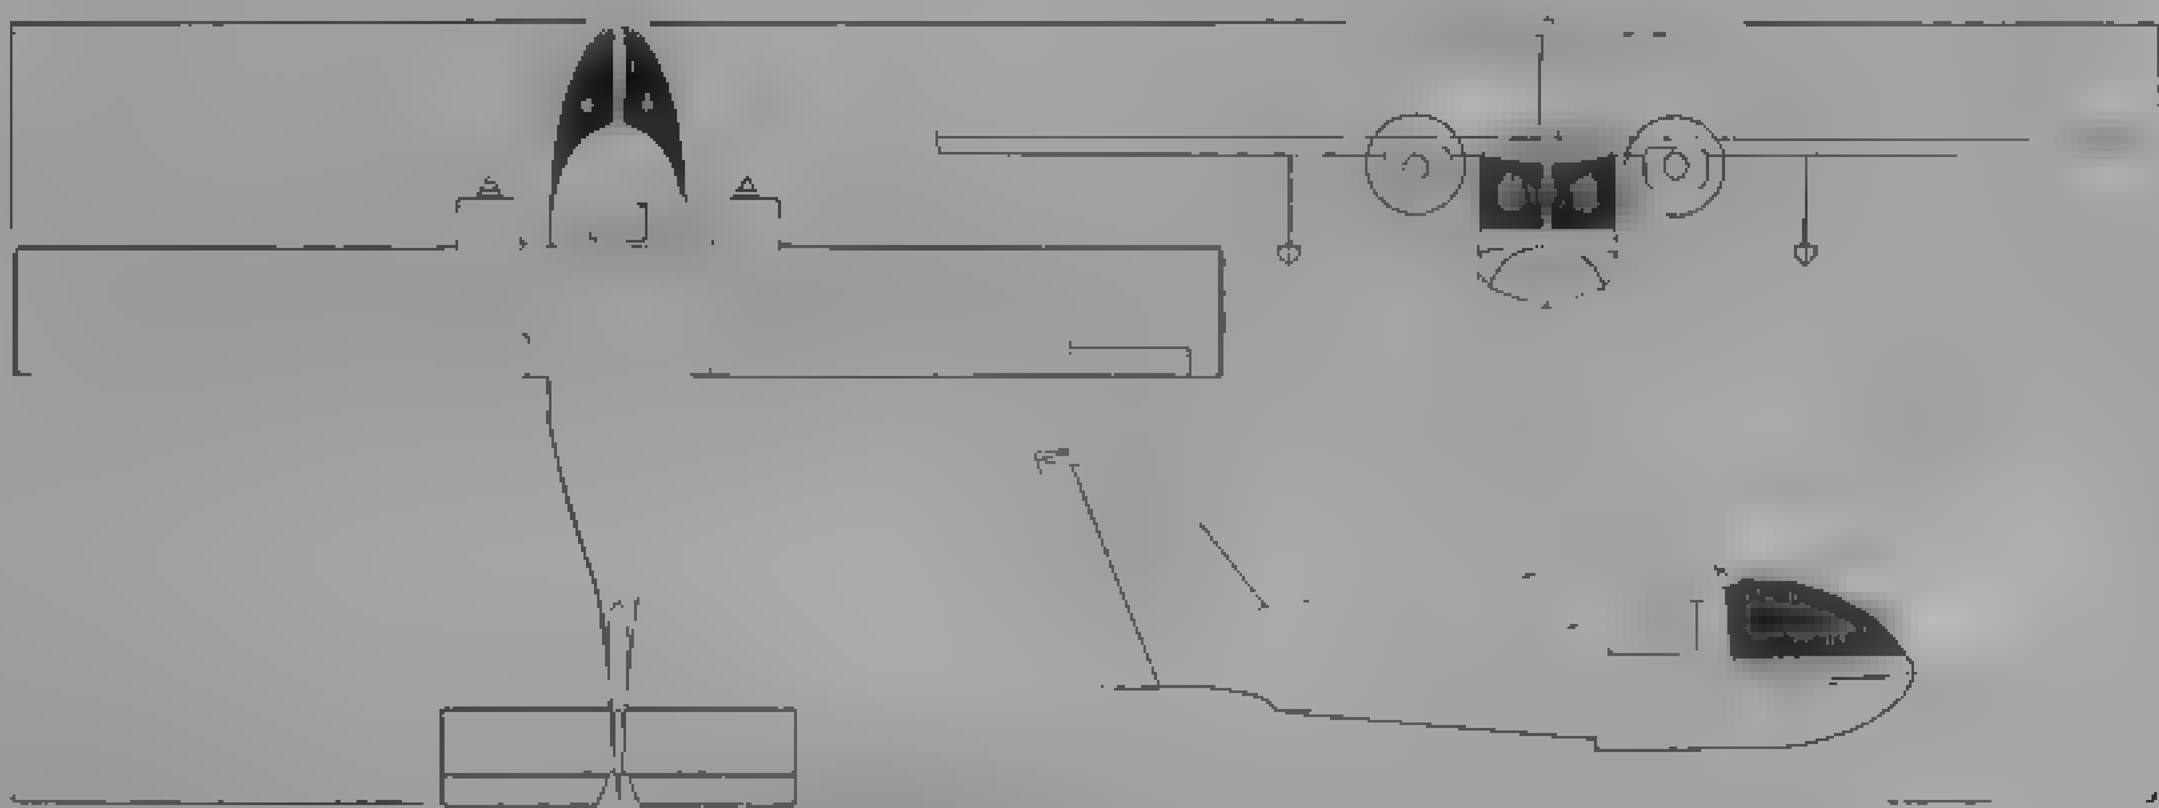
AVIONICS: Customer specified

DIMENSIONS, EXTERNAL:

Wing span	16.90 m (55 ft 5¼ in)
Length overall	10.30 m (33 ft 9½ in)
Height overall	4.70 m (15 ft 5 in)

DIMENSIONS, INTERNAL:

Cabin: Length	7.08 m (23 ft 2¾ in)
Max width	1.70 m (5 ft 6 in)
Max height	1.80 m (5 ft 10¾ in)
Floor area	12.06 m² (129.8 sq ft)
Volume	19.55 m³ (609.4 cu ft)



Aerodyn Skyranger amphibian design study

1995

WEIGHTS AND LOADINGS:

Weight empty	950 kg (2,094 lb)
Max payload	450 kg (992 lb)
Max T-O weight	1,800 kg (3,968 lb)
Max power loading	7.56 kg/kW (12.43 lb/hp)

PERFORMANCE (at max T-O weight, ISA):

Max level speed	140 kts (260 km/h; 161 mph)
Econ cruising speed at 65% power at 1,525 m (5,000 ft)	108 kts (200 km/h, 124 mph)
Service ceiling	4,500 m (14,760 ft)
T-O run: runway	150 m (492 ft)
water	250 m (820 ft)
Landing run, runway and water	160 m (525 ft)
Range with max internal fuel	540 n miles (1,000 km, 621 miles)
Ferry range, two pilots and overload fuel	1,280 n miles (2,370 km; 1,472 miles)

CAMPANA AN4

TYPE: Light two-seat aircraft designed to JAR VLA

PROGRAMME: Prototype first flew May 1993, preproduction aircraft (Alhambra F-JBCP) first flew November 1994. Available as quick build version needing engine and instrument panel or as conventional kit taking 250 to 500 man-hours to complete

CURRENT VERSIONS: **AN4**: Basic version *as described*

Alhambra 503: Sporting version, Rotax 503 engine

Observer: For police duties

Whymper: For rough field operations

DESIGN FEATURES: Low-wing monoplane, parallel-chord wing, conventional tail surfaces

FLYING CONTROLS: Mechanically operated ailerons, elevator and rudder. Elevator tab for pitch trim. Fixed tabs on ailerons and rudder. Plain flaps inboard of ailerons

STRUCTURE: Carbon and glassfibre sandwich construction

LANDING GEAR: Tricycle type with spats, tailwheel version available. Cantilever mainwheel legs

POWER PLANT: One 59.7 kW (80 hp) Rotax 912 four-cylinder four-stroke engine driving a variable-pitch three-blade propeller. Fuel capacity total 80 litres (21.1 US gallons; 17.6 Imp gallons) in two wing tanks, alternative total 150 litres (39.6 US gallons; 33.0 Imp gallons) with long-range tanks

ACCOMMODATION: Two side by side seats

SYSTEMS: Electrical system: 12 V 30 Ah battery, 14 V alternator

AVIONICS: Customer specified

DIMENSIONS, EXTERNAL:
- Wing span: 11.08 m (36 ft 4¼ in)
- Wing aspect ratio: 8.58
- Length overall: 6.90 m (22 ft 7¾ in)

DIMENSIONS, INTERNAL:
- Cockpit: Max width: 1.10 m (3 ft 7¼ in)
- Baggage volume: 0.23 m³ (8.2 cu ft)

AREAS:
- Wings, gross: 14.31 m² (154.0 sq ft)

WEIGHTS AND LOADINGS:
- Weight empty: 248 kg (546 lb)
- Max payload: 202 kg (445 lb)
- Fuel weight: basic: 57.6 kg (127 lb)
- long-range tanks: 108.0 kg (238 lb)
- Max T-O weight: 450 kg (992 lb)
- Max wing loading: 31.45 kg/m² (6.44 lb/sq ft)
- Max power loading: 7.54 kg/kW (12.38 lb/hp)

PERFORMANCE (at max T-O weight, ISA):
- Never-exceed speed (VNE): 135 kts (250 km/h; 155 mph)
- Max cruising speed: 113 kts (210 km/h; 130 mph)
- Stalling speed, power off, flaps down: 34 kts (63 km/h; 39 mph)
- Max rate of climb at S/L: 457 m (1,500 ft)/min
- Glide ratio, engine off: 18
- T-O run: 60 m (197 ft)
- Landing run: 80 m (263 ft)
- Range: 918 n miles (1,700 km; 1,056 miles)
- g limits: +3.8/–1.9

NEW ENTRY

CATA LMK.1 ORYX

TYPE: Two-seat high-performance kitplane

PROGRAMME: Design started 1991; ⅓ scale model flew 1992; full scale prototype (F-PLMK) flew September 1994. Permit-to-fly granted by DGAC October 1994. Flown 50 hours by March 1995. Kits produced at one per month from mid-1995, then planned for 30 per year

CUSTOMERS: Three kits to be delivered by June 1995. About 150 expressions of interest

COSTS: About FFr155,000, excluding VAT

DESIGN FEATURES: Designed to FAR Pt 23

FLYING CONTROLS: Mechanically operated ailerons, elevator and rudder. Electrically operated pitch trim and flaps

STRUCTURE: General construction of GFRP

LANDING GEAR: Retractable tricycle type; all legs retract into fuselage. Electrical hydraulic pump with emergency hand pump in cockpit. Castoring nosewheel; directional control by differential toe-operated wheelbrakes

POWER PLANT: One 119 kW (160 hp) Textron Lycoming IO-320B1E with a Mühlbauer MTV11 constant-speed wooden propeller. Fuel capacity 160 litres (42.3 US gallons; 35.2 Imp gallons) in two wing tanks

ACCOMMODATION: Two seats side by side under single-piece, forward-hinged canopy

SYSTEMS: 12 V 30 Ah battery, 14 V alternator

AVIONICS: Customer specified. Space for IFR if required

DIMENSIONS, EXTERNAL:
- Wing span: 7.87 m (25 ft 10 in)
- Wing aspect ratio: 7.65
- Length overall: 6.38 m (20 ft 11¼ in)
- Height overall: 2.06 m (6 ft 9 in)
- Wheel track: 1.07 m (3 ft 6 in)
- Propeller diameter: 1.78 m (5 ft 10 in)

AREAS:
- Wings, gross: 8.10 m² (87.2 sq ft)

WEIGHTS AND LOADINGS:
- Weight empty, equipped: 510 kg (1,124 lb)
- Max payload: 174 kg (383 lb)
- Max fuel weight: 115 kg (253 lb)
- Max T-O weight: 800 kg (1,763 lb)
- Max wing loading: 98.77 kg/m² (20.23 lb/sq ft)
- Max power loading: 6.71 kg/kW (11.02 lb/hp)

PERFORMANCE (at max T-O weight, ISA):
- Never-exceed speed (VNE): 200 kts (370 km/h; 230 mph)
- Max cruising speed at 75% power at 2,440 m (8,000 ft): 180 kts (333 km/h; 207 mph)
- Stalling speed, power off:
  - flaps up: 62 kts (115 km/h; 71 mph)
  - 25° flap: 56 kts (103 km/h; 64 mph)
- Max rate of climb at S/L: 411 m (1,350 ft)/min
- T-O run: 450 m (1,476 ft)
- Landing run: 550 m (1,804 ft)

DASSAULT AVIATION (page 84)

DASSAULT ATLANTIQUE

CURRENT VERSIONS: **Atlantique 3 (ATL-3)**: Developed version, first proposed 1988, renewed promotion in 1995 for UK's Nimrod replacement; features include 50 per cent UK involvement in manufacture; Allison AE 2100 turboprop engines offered as alternative to Rolls-Royce Tyne; high proportion of UK sensors; armament expanded to include provision for four self-protection AAMs

UPDATED

DASSAULT FALCON 50

It was announced on 10 June 1995 that five Falcon 50s in maritime surveillance configuration would be acquired for the French Navy

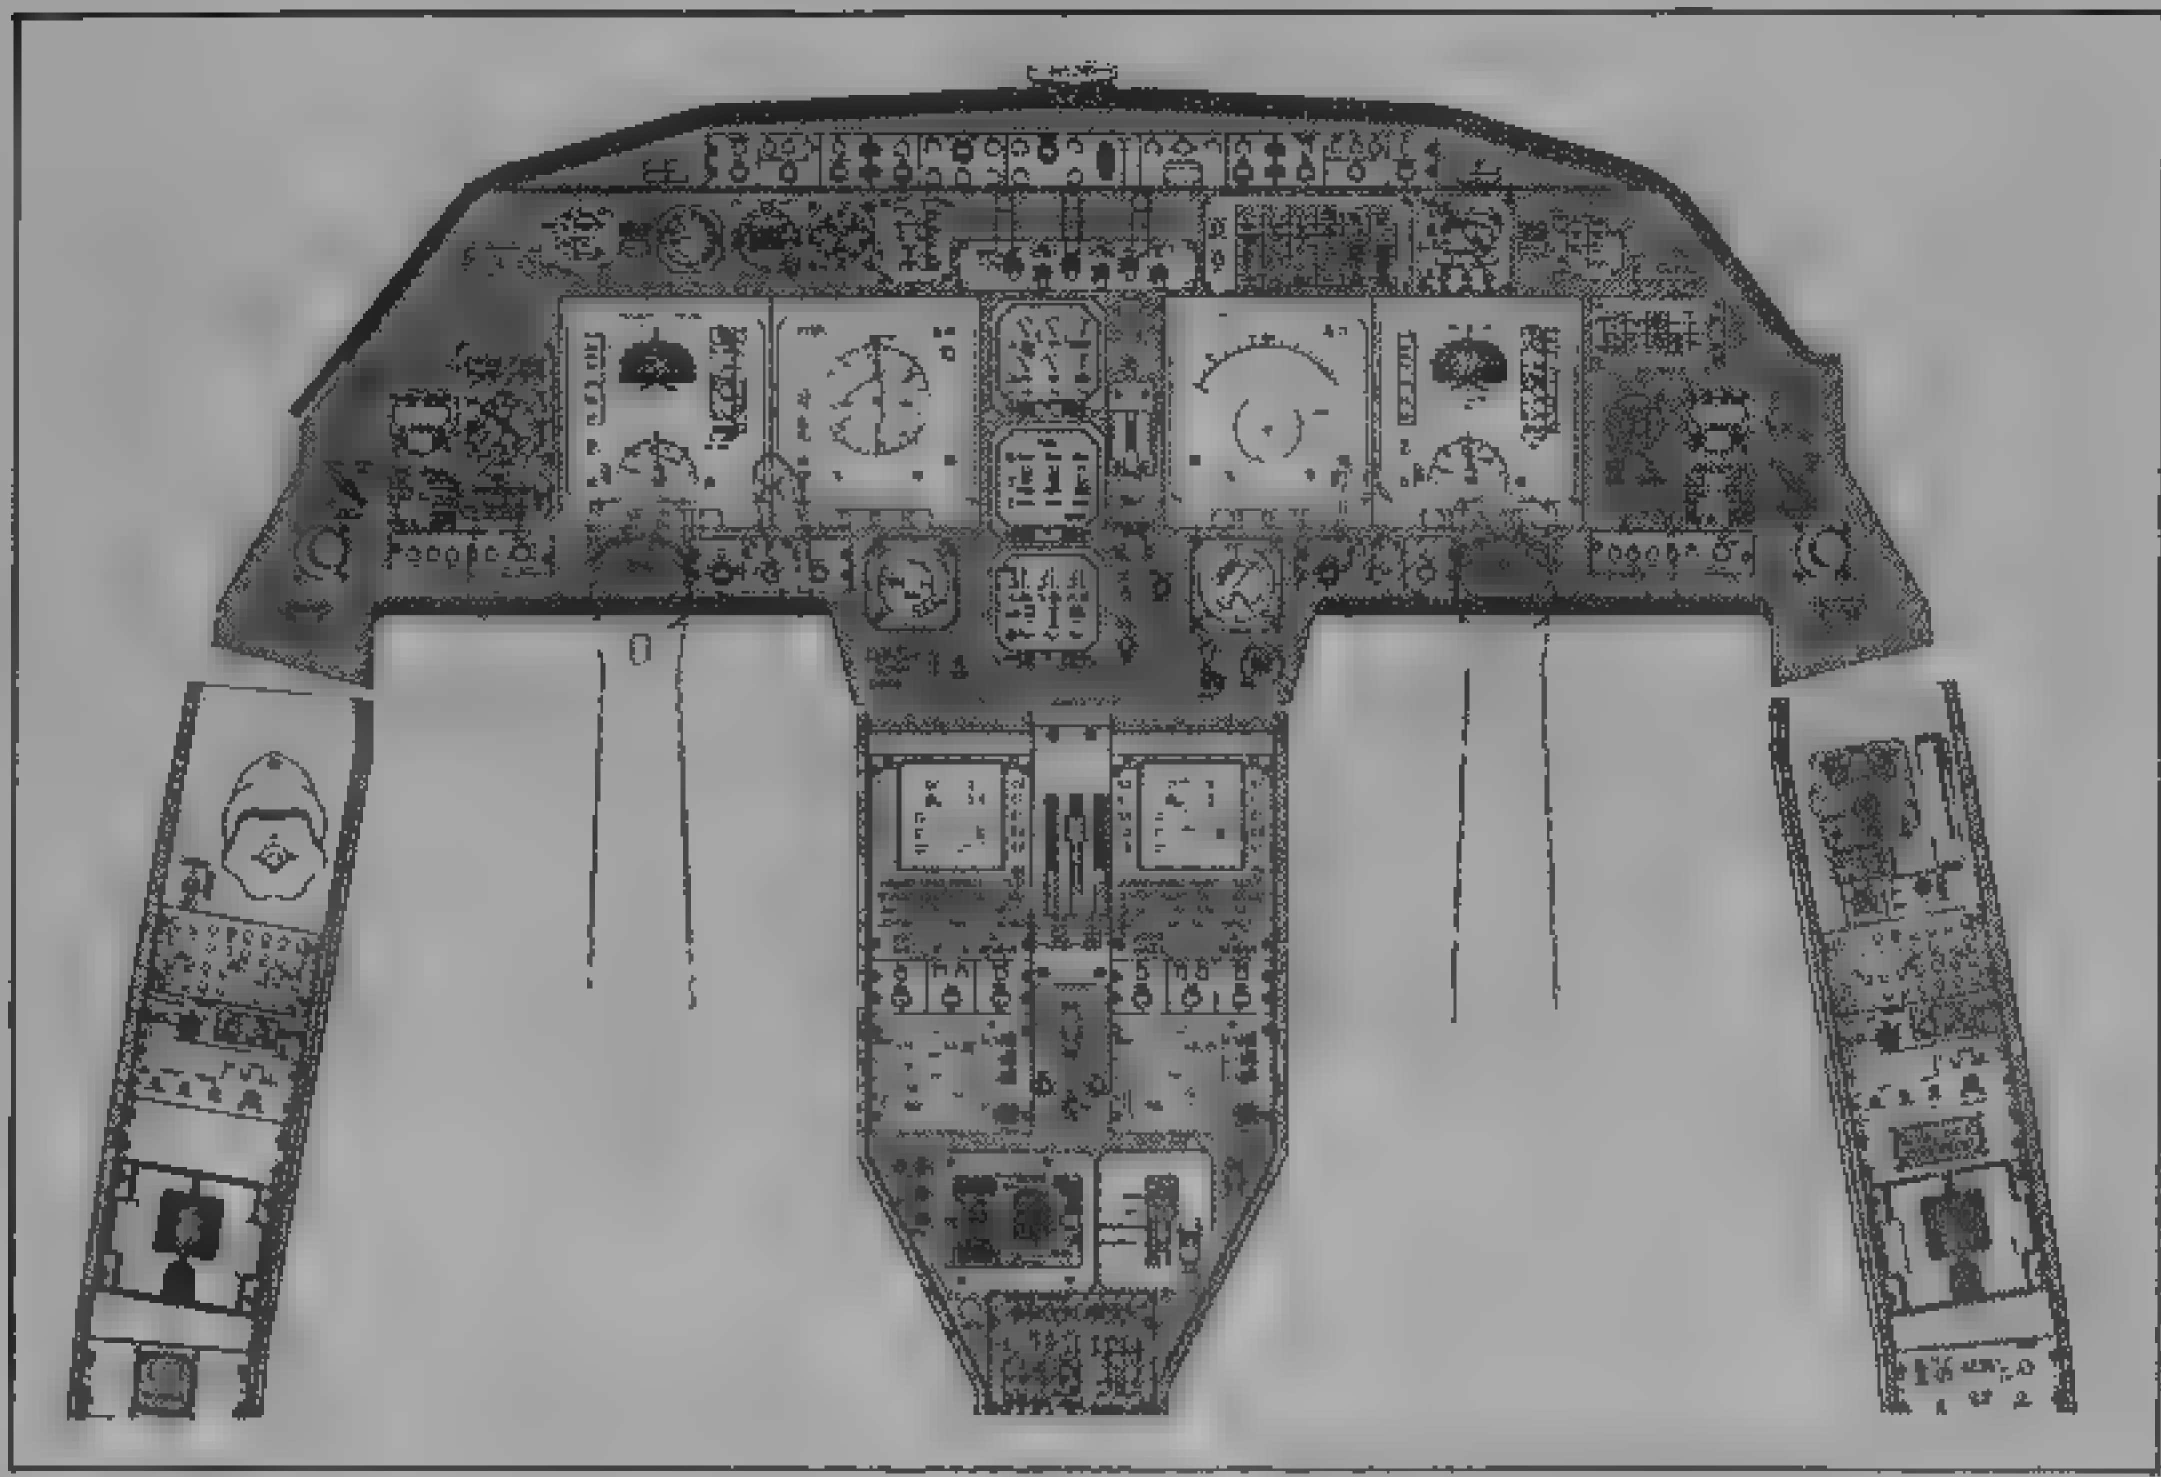
CURRENT VERSIONS: **Falcon 50EX**: Long-range variant announced 26 April 1995, to be powered by three AlliedSignal TFE731-40 turbofans, each rated at 16.46 kN (3,700 lb st), providing a 7 per cent improvement in fuel consumption and a 400 n mile (741 km; 460 mile) increase in maximum range at maximum cruise speed over current model. Maximum cruise speed at 12,200 m (40,000 ft) will increase from Mach 0.75 to Mach 0.80. Time-to-height target is 23 minutes to reach improved initial cruising altitude of 12,500 m (41,000 ft). Falcon 50EX will feature a Collins

Model of Dassault Atlantique 3 *(Paul Jackson)*

1995

Pro Line IV EFIS avionics suite similar to that installed in the Falcon 2000. First two aircraft in production Summer 1995 for first flight in first quarter of 1996, with deliveries beginning in 1997. Unit cost is about $16 million, with estimated market for 150 to 200 over unspecified period. Latécoère, Potez, Reims Aviation, SEFCA and Socata are new subcontractors on programme.

UPDATED



Falcon 50EX flight deck is based on newer Falcon 2000

NEW ENTRY

HYDRAVION HYDRO 2000

TYPE: Large cargo seaplane
PROGRAMME: Design study stage, 1995
CURRENT VERSIONS: Four-, six- and eight-engined versions proposed, with maximum T-O weights of 800,000 kg (1,763,700 lb); 1,000,000 kg (2,204,600 lb); 1,500,000 kg (3,306,900 lb). *Data follows for six-engined version*
COSTS: Development estimated at $12 billion; unit production cost $400 million
DESIGN FEATURES: Operable in sea conditions with 2 m (6 ft 6 in) wave troughs. High, moderately swept wing with engines mounted on pylons on top of wing to avoid spray. Seaplane fuselage with sponsons below and ahead of wing, and foreplanes above sponsons. T tail
FLYING CONTROLS: Fully powered ailerons, elevator and rudder. Foreplanes above leading edge of sponsons. Fowler flaps
LANDING GEAR: Seaplane hull
POWER PLANT: Six turbofans of 413.7 kN (93,000 lb st) each, options include GE 90, RR Trent 211-52 and PW4087. Fuel capacity 300,000 litres (72,254 US gallons, 65,992 Imp gallons).
ACCOMMODATION: All cargo, one or two loading decks. Up to 114 containers size 2.44 × 2.44 × 3.05 m (8 × 8 × 10 ft); alternatively ISO marine containers: 30 at 12.19 m (40 ft) or 60 at 6.10 m (20 ft).
DIMENSIONS, EXTERNAL (approx):
Wing span 110 m (361 ft)

Wing aspect ratio	9.31
Length overall	108 m (354 ft)
Height overall	25 m (82 ft)

DIMENSIONS, INTERNAL:

Cargo bay: Length	62 m (203 ft)
Max width	8.20 m (26 ft 10¾ in)
Max height	5.70 m (18 ft 8½ in)
Floor area	508.4 m² (5,472 sq ft)
Volume	2,898 m³ (102,338 cu ft)

AREAS:

Wings, gross	1,300 m² (13,993 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	360,000 kg (793,675 lb)
Max payload	400,000 kg (881,850 lb)
Fuel weight	240,000 kg (529,100 lb)
Max T-O weight	1,000,000 kg (2,204,625 lb)
Max wing loading	769.2 kg/m² (157.6 lb/sq ft)
Max power loading	402.8 kg/kN (3.95 lb/lb st)

PERFORMANCE (at max T-O weight, ISA):

Max cruising speed	Mach 0.78
Econ cruising speed	Mach 0.72
T-O run	2,900 m (9,514 ft)
Aborted T-O run	5,000 m (16,404 ft)
Landing run	1,850 m (6,070 ft)

Range with max internal fuel, at Mach 0.72:
400 t (881,849 lb) payload
3,500 n miles (6,482 km; 4,028 miles)
200 t (440,925 lb) payload
7,500 n miles (13,890 km; 8,631 miles)
Ferry range 9,500 n miles (17,594 km; 10,932 miles)

MONIOT APM-20 LIONCEAU (LION CUB)

TYPE: Low-wing, side by side two-seat training aircraft.

PROGRAMME: To be certified to JAR-VLA; prototype F-WWMP exhibited at Paris Air Show 1995 prior to first flight. First production aircraft available late Summer 1996.

COSTS: FFr500,000 to 550,000.

DESIGN FEATURES: Low wing, NACA 63618 airfoil, fixed undercarriage, low-mounted tailplane. Designed by Les Industries de Composites d'Auvergne Reunites (ICAR).

FLYING CONTROLS: Mechanically operated ailerons, elevator and rudder. Elevator tab for pitch trim. Fixed tabs on ailerons and rudder. Electrically operated slotted flaps to about two-thirds span.

STRUCTURE: General construction of composites, carbonfibre wing primary structure.

LANDING GEAR: Fixed tricycle type.

POWER PLANT: One 59.6 kW (80 hp) Rotax 912 four-cylinder four-stroke. Fuel capacity 104 litres (27.5 US gallons; 22.9 Imp gallons).

ACCOMMODATION: Two seats side by side.

SYSTEMS: 12 V 30 Ah battery, 14 V alternator.

AVIONICS: Customer specified.

DIMENSIONS, EXTERNAL:

Wing span	8.40 m (27 ft 6¾ in)
Wing aspect ratio	7.67
Length overall	6.25 m (20 ft 6 in)

DIMENSIONS, INTERNAL:

Cabin: Max width	1.10 m (3 ft 7¼ in)

AREAS:

Wings, gross	9.20 m² (99.0 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	324 kg (714 lb)
Max T-O weight	600 kg (1,323 lb)
Max wing loading	65.22 kg/m² (13.36 lb/sq ft)
Max power loading	10.07 kg/kW (16.54 lb/hp)

PERFORMANCE (at max T-O weight, ISA):

Max cruising speed	108 kts (200 km/h; 124 mph)
Econ cruising speed	89 kts (165 km/h; 102 mph)

Stalling speed, power off, flaps down
44 kts (82 km/h; 51 mph)
Range with max internal fuel
540 n miles (1,000 km; 621 miles)

SOCATA (page 105)

SOCATA HALE

TYPE: High-altitude long-endurance (HALE) surveillance aircraft

PROGRAMME: Design study

DESIGN FEATURES: Intended for both manned and unmanned flight, the latter with increased fuel, range and endurance. Roles include communications and electronic intelligence gathering, optical/radar/IR observation, and, with suitable sensors, datalinks and computers, warning of, and impact point calculations on, incoming ballistic missiles.

Very high aspect ratio single-engined monoplane. Fuselage similar to TBM 700 but with much larger fin and tailplane. Has lift dumpers (spoilers) on each wing to increase rate of descent from operating altitudes.

LANDING GEAR: Retractable tricycle type.

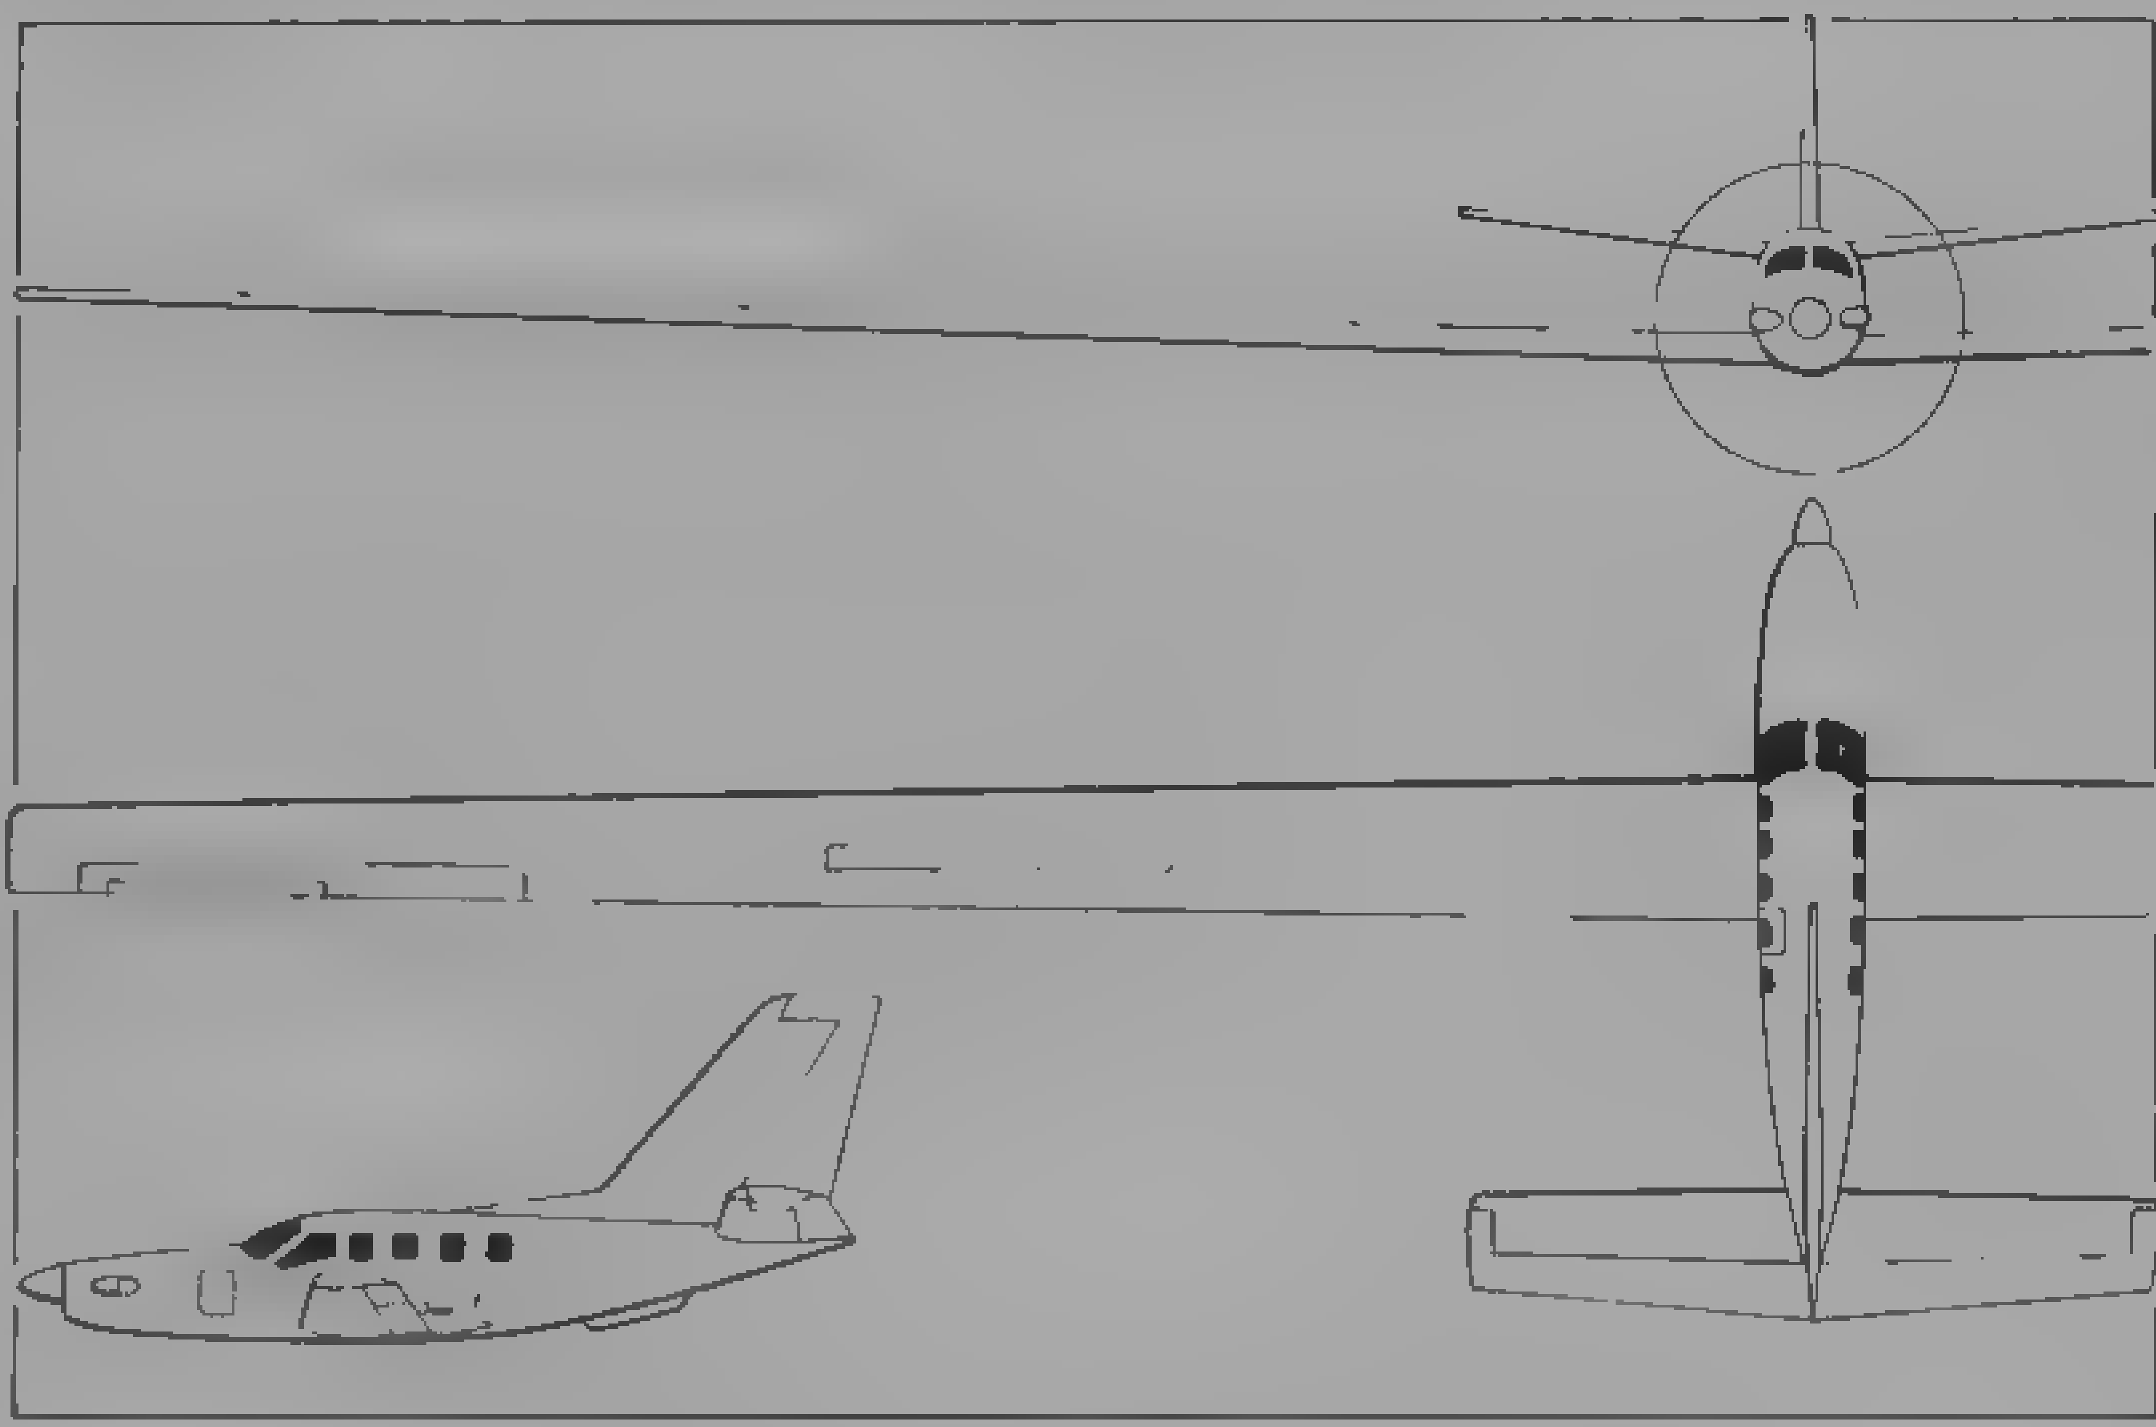
POWER PLANT: One 783 kW (1,050 hp) Pratt & Whitney Canada PW127C turboprop. Fuel capacity: manned flight 1,275 litres (336.8 US gallons, 280.5 Imp gallons), unmanned flight 1,500 litres (396.3 US gallons, 330.0 Imp gallons).

ACCOMMODATION: Two-man crew, maximum crew weight with full fuel 225 kg (496 lb), optionally unmanned.

AVIONICS: Customer specified.

EQUIPMENT: Customer specified, see roles under Design Features.

DIMENSIONS, EXTERNAL:	
Wing span	48.00 m (157 ft 5¾ in)
Wing aspect ratio	32.91
Length overall	10.81 m (35 ft 5 in)
Tailplane span	9.20 m (30 ft 2¼ in)
Propeller diameter	4.00 m (13 ft 1½ in)
DIMENSIONS, INTERNAL:	
Cabin: Pressurised volume	3.50 m³ (123.6 cu ft)
AREAS:	
Wings, gross	70 m² (753 sq ft)
WEIGHTS AND LOADINGS:	
Max payload	400 kg (882 lb)
Fuel weight (JP 5): manned flight	1,037 kg (2,286 lb)
unmanned flight	1,245 kg (2,745 lb)
Max T-O weight	4,500 kg (9,921 lb)
Max wing loading	64.29 kg/m² (13.17 lb/sq ft)
Max power loading	5.75 kg/kW (9.44 lb/shp)
PERFORMANCE (at max T-O weight, ISA):	
Service ceiling	18,300 m (60,000 ft)
Time to: service ceiling	1 h 39 min
15,764 m (55,000 ft)	45 min
Range with max fuel:	
manned	3,185 n miles (5,900 km, 3,666 miles)
unmanned	3,833 n miles (7,100 km, 4,411 miles)
Endurance with max fuel: manned	19 h 42 min
unmanned	23 h 36 min



Socata High-Altitude Long-Endurance aircraft *(Jane's/James Goulding)* 1995

NEW ENTRY

SOCATA TB 320 TANGARA

TYPE: Four-seat twin-engined cabin monoplane.

PROGRAMME: Socata acquired rights in 1995 to manufacture Grumman/Gulfstream American/American General GA-7 Cougar (see 1979-80 *Jane's*). Certified to FAR Pt 23 VFR/IFR. Deliveries from late 1996, mainly intended for training market.

DESIGN FEATURES: Wing section NACA 63A-415 (modified), wing dihedral 5°, sweptback fin.

FLYING CONTROLS: Mechanically operated ailerons, elevator and rudder, each with trim tab. Electrically operated Fowler flaps.

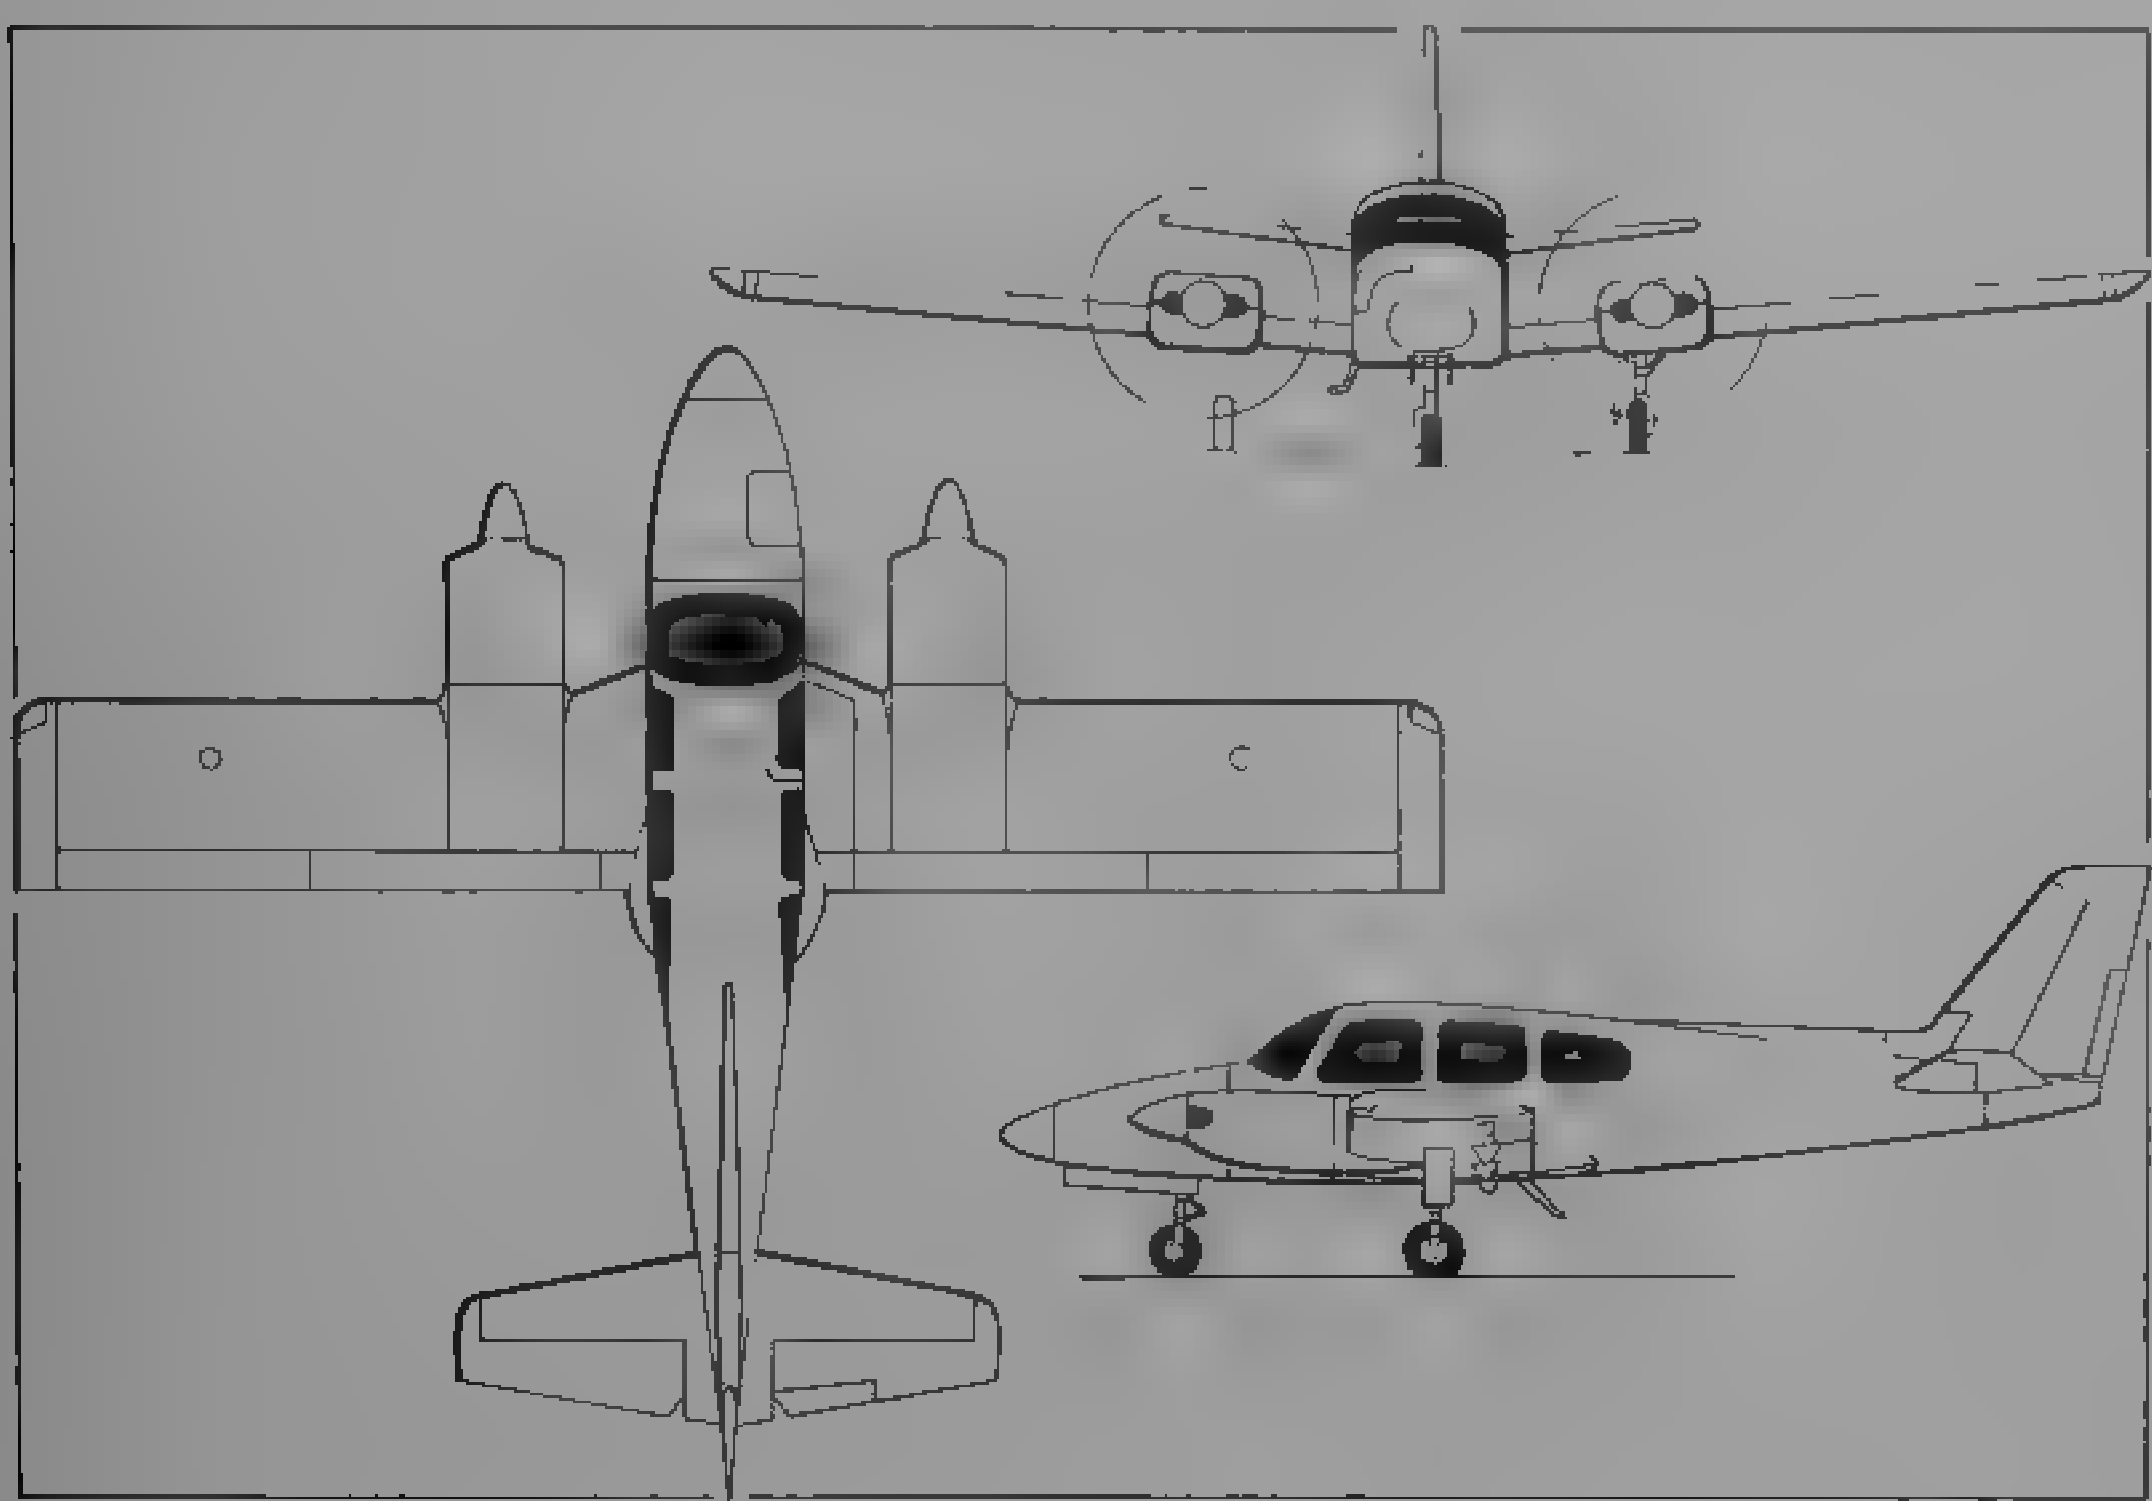
STRUCTURE: Wing has two-spar construction, fuselage is semi-monocoque.

LANDING GEAR: Hydraulically retractable tricycle type with single wheel on each unit. Steerable nosewheel retracts forward, main units outward into undersurface of wing. Oleo-pneumatic shock-absorbers. Free-fall emergency extension system. Main wheels have 17 × 6.00-6 6 ply tyres, nosewheel has 15 × 6.00-6 4 ply tyre. Toe-operated hydraulic brakes. Parking brake.

POWER PLANT: Two 119.3 kW (160 hp) Textron Lycoming O-320-D1D flat-four engines, each driving a Hartzell two-blade constant-speed fully feathering metal propeller. Integral fuel tank in each wing, with a combined capacity of 447 litres (118 US gallons, 98 Imp gallons). Refuelling point on upper surface of each wing. Oil capacity (each engine) 7.6 litres (2.0 US gallons, 1.7 Imp gallons).

ACCOMMODATION: Four seats, in two side by side pairs, in enclosed cabin. Dual controls standard. Overwing door on starboard side of fuselage. Baggage space aft of rear seats with external access door on starboard side. Door on starboard side of nose section to give access to battery and electronics, as well as an additional 0.34 m³ (12 cu ft) of baggage space. Provision for lightweight radar antenna in nosecone.

SYSTEMS: Hydraulic system for landing gear actuation and operation of brakes. Electrical system includes 14 V 60 A engine-driven alternators, 14 V voltage regulators and a



Socata TB 320 Tangara (Textron Lycoming O-320 engines) *(Jane's/James Goulding)* 1995

12 V 25 Ah battery. Heating, ventilation, and windscreen defrosters standard

AVIONICS: Customer specified, full IFR available

DIMENSIONS, EXTERNAL:
Wing span 11.23 m (36 ft 10¼ in)
Wing chord (constant) 1.45 m (4 ft 9 in)
Wing aspect ratio 7.38
Length overall 9.09 m (29 ft 10 in)
Height overall 3.16 m (10 ft 4¼ in)
Tailplane span 4.24 m (13 ft 11 in)
Wheel track 2.03 m (6 ft 8 in)
Wheelbase 3.30 m (10 ft 10 in)
Propeller diameter 1.85 m (6 ft 1 in)

DIMENSIONS, INTERNAL:
Cabin: Length 9.09 m (29 ft 10 in)
Max width 1.14 m (3 ft 9 in)
Max height 1.25 m (4 ft 1 in)

AREAS:
Wings, gross 17.09 m^2 (184 sq ft)
Vertical tail surfaces (total) 1.86 m^2 (20.0 sq ft)
Horizontal tail surfaces (total) 4.46 m^2 (48.0 sq ft)

WEIGHTS AND LOADINGS:
Weight empty 1,174 kg (2,588 lb)
Max baggage weight 114 kg (250 lb)
Max T-O and landing weight 1,724 kg (3,800 lb)
Max wing loading 100.8 kg/m^2 (20.65 lb/sq ft)
Max power loading 7.23 kg/kW (11.88 lb/hp)

PERFORMANCE (at max T-O weight):
Max level speed at S/L 168 kts (311 km/h; 193 mph)
Max cruising speed, 75% power at 2,590 m (8,500 ft) 160 kts (296 km/h; 184 mph)
Econ cruising speed, 45% power at 2,590 m (8,500 ft) 109 kts (203 km/h; 126 mph)
Stalling speed, power off:
flaps up 71 kts (132 km/h; 82 mph)
flaps down 63 kts (117 km/h; 72.5 mph)
Min control speed, single engine 61 kts (113 km/h; 70.5 mph)
Max rate of climb at S/L 354 m (1,160 ft)/min
Rate of climb at S/L, OEI 61 m (200 ft)/min
Service ceiling 5,305 m (17,400 ft)
Service ceiling, OEI 1,295 m (4,250 ft)
T-O run 305 m (1,000 ft)
T-O to 15 m (50 ft) 564 m (1,850 ft)
Landing from 15 m (50 ft) 405 m (1,330 ft)
Landing run 216 m (710 ft)
Max crosswind 15 kts (28 km/h; 17 mph)
Range at 2,590 m (8,500 ft), with max fuel, incl allowances for start, taxi, T-O, and reserves for 45 min at 45% power: max cruising speed 840 n miles (1,555 km; 966 miles)
econ cruising speed (45% power) 1,170 n miles (2,166 km; 1,346 miles)

EUROSPACE F.15F EXCALIBUR

TYPE: Single-engined four-seat tourer.

PROGRAMME: Developed from, and slightly larger and heavier than, Procaer/General Avia F 15 Picchio and Delfino designed by Dott Ing Stelio Frati (see Procaer in 1983-84 *Jane's*). Manufacture in Russia by Sokol, airframes to HOAC for completion and delivery. First deliveries planned in 1996.

COSTS: $175,000 (1995).

DESIGN FEATURES: Single-engined low-wing monoplane of conventional layout.

FLYING CONTROLS: Mechanically operated ailerons, elevator and rudder. Elevator tab for pitch trim. Fixed tabs on ailerons and rudder.

LANDING GEAR: Retractable tricycle type. Mainwheels retract inwards, nosewheel rearwards.

POWER PLANT: One 149 kW (200 hp) Textron Lycoming IO-360-A1B6 flat-four piston engine.

ACCOMMODATION: Four seats, two bucket seats in front, bench seat in rear, under rearward-sliding canopy.

SYSTEMS: Electrical system: 12 V 30 Ah battery, 14 V alternator.

AVIONICS: Bendix/King avionics as standard.

Comms: KX 155 com/nav/ISO/AA, KT 76A transponder.

Flight: KI 208 VOR/LOC/CV.

Instrumentation: Full panel with vacuum AH and electric T&S. Engine instruments include hours counter, fuel pressure, suction, and volts.

DIMENSIONS, EXTERNAL:

Wing span	10.28 m (33 ft 8¾ in)
Length overall	7.29 m (23 ft 11 in)
Height overall	3.01 m (9 ft 10½ in)

WEIGHTS AND LOADINGS:

Weight empty	780 kg (1,720 lb)
Max payload	445 kg (981 lb)
Max T-O weight	1,225 kg (2,701 lb)
Max power loading	8.22 kg/kW (13.51 lb/hp)

PERFORMANCE (at max T-O weight, ISA):

Never-exceed speed (VNE)	200 kts (370 km/h; 230 mph)
Max level speed	152 kts (281 km/h; 175 mph)
Econ cruising speed at 75% power at 1,980 m (6,500 ft)	145 kts (268 km/h; 170 mph)
Stalling speed, power off, flaps down	58 kts (107 km/h; 67 mph)
Max rate of climb at S/L	288 m (945 ft)/min
Service ceiling	4,575 m (15,000 ft)
T-O run	360 m (1,180 ft)
Range with max internal fuel, 65% power	725 n miles (1,342 km; 834 miles)
Endurance with max internal fuel, 65% power	5 h 30 min

AGUSTA (page 218)

AGUSTA A 119 KOALA

TYPE: Single-turbine light helicopter.

PROGRAMME: First flight (I-KOAL) early 1995, public debut at Paris Air Show June 1995; certification scheduled for late 1995, first deliveries Spring 1996.

DESIGN FEATURES: Fully articulated four-blade composite main rotor with titanium hub, composite materials grips and elastomeric bearings; two-blade tail rotor.

STRUCTURE: Aluminium alloy fuselage.

LANDING GEAR: Fixed skids.

POWER PLANT: First prototype has 596.5 kW (800 shp) Turbomeca Arriel I turboshaft; other 633.8 kW (850 shp) class engines from Allison or Pratt & Whitney Canada may be offered on production aircraft.

ACCOMMODATION: Pilot and passenger in front, six passengers in main cabin, claimed to be 30 per cent larger than that of any current single-turbine light helicopter; flight-accessible baggage compartment in cabin; main baggage compartment in rear fuselage; in EMS configuration can accommodate two stretchers in main cabin without intrusion into cockpit area. Large sliding doors on each side of main cabin, forward-hinged door to cockpit on right side.

EQUIPMENT: Auxiliary equipment, transportable in baggage compartment and requiring no special tools to install, permits quick on-site role conversion.

DIMENSIONS, INTERNAL:

Cabin: Length	2.10 m (6 ft 10¾ in)
Max width	1.61 m (5 ft 3½ in)
Max height	1.28 m (4 ft 2½ in)
Volume	3.45 m³ (121.8 cu ft)

WEIGHTS AND LOADINGS:

Max T-O weight: internal load	2,600 kg (5,732 lb)
external load	2,720 kg (5,997 lb)
Useful load: internal	234 kg (2,720 lb)
external	2,704 kg (5,961 lb)

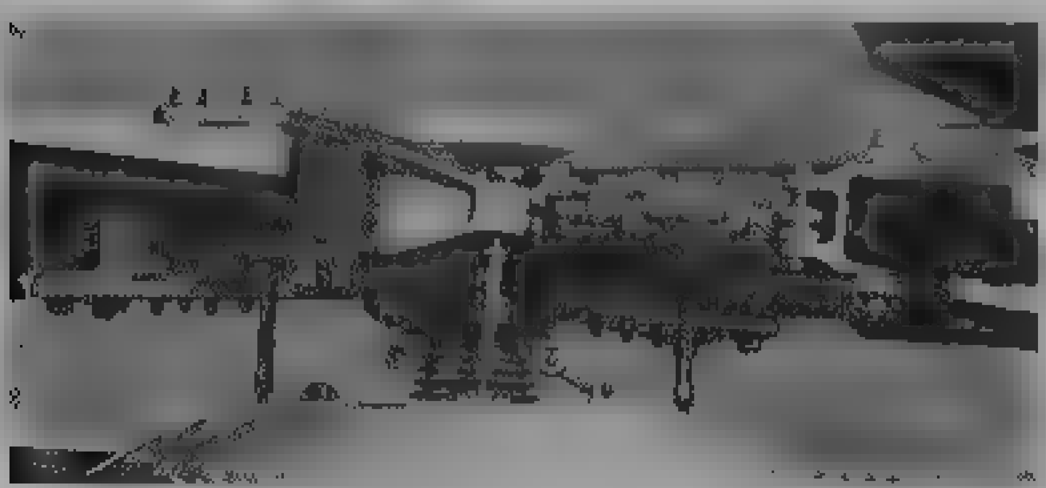
PERFORMANCE (at max T-O weight, ISA):

Never-exceed speed (VNE)	150 kts (278 km/h; 173 mph)
Max cruising speed	133 kts (246 km/h, 153 mph)
Service ceiling	4,240 m (13,911 ft)
Hovering ceiling: IGE	2,400 m (7,874 ft)
OGE	1,230 m (4,035 ft)
Max range	360 n miles (667 km, 414 miles)
Endurance	3 h 48 min

NEW ENTRY

Clearly a close relative of the A 109, Agusta's Koala is pictured preparing for a test flight

1995



Rotor head of the Agusta A 119 Koala

1995

AGUSTA A 109C

CURRENT VERSIONS: **A 109 Power**: New version first flown in early 1995 and announced at Paris Air Show in June, by which time prototype had accumulated more than 60 hours of flight testing and construction of second aircraft well advanced. Based on A 109K2 airframe with new, A 129-derived lightweight, low-maintenance titanium main rotor head connected to composite material grips via single elastomeric bearing on each blade; two Pratt & Whitney Canada PW 206C engines, each rated at 546 kW (732 shp), with FADEC and liquid crystal multifunction displays for engine management, and new landing gear. Weight empty 1,555 kg (3,428 lb); normal T-O weight 2,720 kg (5,997 lb), maximum T-O weight with external load 3,000 kg (6,613 lb), maximum cruising speed 160 knots (296 km/h, 184 mph). Cabin length as for A 109K2, retaining quick-change facility from passenger to EMS operation, but flight deck and cabin wider than previous models. First delivery expected 1996 at IFR-equipped price of $2.7 million, production target of 40 to 45 per year.

DRAGON FLY SRL
Via Raffaello, 1/A, I 22060 Cucciago (Co)
Telephone: 39 (031) 725190
Fax: 39 (031) 787642

Company founded by twin brothers Angelo and Alfredo Castiglioni. Dragon Fly in production by a workforce of 35.

NEW ENTRY

DRAGON FLY

TYPE: Two-seat, very light helicopter.

PROGRAMME: Developed originally by CRAE Elettromeccanica SpA, Dragon Fly srl formed 1993 from substantially same workforce. Design studies and manufacture of single-seat prototype 1985-88, ground and flight testing of this aircraft, 1989-90; two-seat prototype built and tested, 1991-93. Total of two single-seat and three two-seat prototypes, followed by four preseries aircraft; initial production rate (1994) three per month, increased to eight per month at new factory from October 1994.

CUSTOMERS: First delivery in May 1994 to Chinese Civil Protection Volunteers.

COSTS: Lit148 million ($89,000) flyaway, October 1994.

DESIGN FEATURES: Developed and tested by manufacturer to standards approaching FAR Pt 27; initial Italian certification is in ultralight class, but programme for domestic VLR (very light rotorcraft) certification began October 1994. Two-blade, semi-rigid main rotor and two-blade tail rotor; all blades of NACA 0012 aerofoil section; main rotor nominal speed 500 rpm. Can be road-towed on trailer with main blades removed. Optionally available in kit form.

FLYING CONTROLS: Conventional mechanical.

Dragon Fly (Göbler-Hirth F-30A26AK engine)

1995

STRUCTURE: Cabin is welded titanium frame with composites outer shell, aluminium alloy tailboom and landing skids. Full corrosion protection.

LANDING GEAR: Conventional twin-skid type.

POWER PLANT: One 78.3 kW (105 hp) Göbler-Hirth F-30A26AK four-cylinder two-stroke with twin-spark ignition, modified for helicopter use. Transmission driven through centrifugal clutch and two V belts. Fuel capacity 64 litres (16.9 US gallons, 14.1 Imp gallons).

ACCOMMODATION: Side by side seats, with harnesses, for two persons. Dual controls standard. Small baggage compartment aft of seats.

AVIONICS: *Comms:* Provision for transceiver and intercom.

Flight: Optional electric lateral trim.

Instrumentation: Standard equipment and instruments include ground-handling wheels, altimeter, voltmeter, ASI, bank indicator, compass, collective indicator, engine and rotor rpm indicator, engine hour meter, fuel gauge and engine temperature gauge. Provision for fuel pressure gauge, engine fire warning light, fuel shut-off valve and main/tail rotor transmission chip detectors.

DIMENSIONS, EXTERNAL:
Main rotor diameter 6.60 m (21 ft 7¾ in)
Tail rotor diameter 1.12 m (3 ft 8 in)

AREAS:
Main rotor disc 34.21 m² (368.25 sq ft)
Tail rotor disc 0.99 m² (10.56 sq ft)

WEIGHTS AND LOADINGS:
Weight empty 230 kg (507 lb)
Max normal T-O weight 450 kg (992 lb)
Max emergency overload T-O weight 500 kg (1,102 lb)

PERFORMANCE:
Never-exceed speed (VNE) 80 kts (148 km/h, 92 mph)
Cruising speed 65 kts (120 km/h, 75 mph)
Max rate of climb at S/L 390 m (1,280 ft)/min
Hovering ceiling: IGE 2,050 m (6,725 ft)
OGE 1,450 m (4,755 ft)
Endurance at above cruising speed 2 h 30 min

BERIEV (page 310)

BERIEV Be-32

Estimated data for version with Pratt & Whitney Klimov PK6A-65B turboprops.

ACCOMMODATION: Basic seating for two crew and 16 passengers, seat pitch 73.75 cm (29 in). Business layout for seven passengers, with galley. Ambulance for six stretcher patients, 10 seated casualties and one attendant. Alternative payloads include 15 paratroops or 1,900 kg (4,190 lb) cargo in cabin 7.10 m (23 ft 3½ in) long, volume 17 m³ (600 cu ft).

PERFORMANCE (estimated):
Max cruising speed at 3,000 m (9,840 ft) 259 kts (480 km/h, 298 mph)
Econ cruising speed at 3,000 m (9,840 ft) 196 kts (363 km/h, 225 mph)
T-O to 10.7 m (35 ft) 480 m (1,575 ft)
Landing from 15 m (50 ft) 500 m (1,640 ft)
Range, 30 min reserves:
with 1,550 kg (3,417 lb) payload (16 passengers):
at max cruising speed 324 n miles (600 km; 372 miles)
at econ cruising speed 432 n miles (800 km; 497 miles)
Business transport, 7 passengers:
at max cruising speed 781 n miles (1,450 km, 901 miles)
at econ cruising speed 998 n miles (1,850 km, 1,149 miles)
Endurance: Border patrol mission 5 h 24 min

UPDATED

BERIEV A-50

EQUIPMENT: LO-82 IR warning receiver for protection against short-range IR guided air-to-air missiles. New IR launch-warning system detects launch of tactical, medium-range and submarine-launched missiles at ranges up to 540 n miles (1,000 km, 621 miles) with aircraft at 10,000 to 12,000 m (32,800 to 39,370 ft).

UPDATED

ILYUSHIN (page 315)

ILYUSHIN Il-114

Additional version announced June 1995.

Il-114PC: With P&WC PW127C turboprops, new avionics and upgraded systems, primarily for export; first flight scheduled for late 1996, certification 1997.

Additional information available June 1995

POWER PLANT: Two Rolls-Royce Trent 884 turbofans, each 384.8 kN (86,500 lb st)

DIMENSIONS, EXTERNAL (approx):

Wing span	57 m (187 ft)
Length overall	62 m (203 ft)
Height overall	19 m (62 ft)
Wing sweep	33° 18′
Wing aspect ratio	9.6

WEIGHTS AND LOADINGS:

Max payload	55,000 kg (121,250 lb)
Max fuel	88,000 kg (194,000 lb)
Max T-O weight	245,000 kg (540,125 lb)

PERFORMANCE (estimated):

Max operating Mach number at 11,000 m (36,000 ft) 0.85

Balanced runway length at 340 m (1,115 ft), 30°C 3,200 m (10,500 ft)

Nominal range with 400 passengers 5,500 n miles (10,200 km; 6,335 miles)

UNITED KINGDOM

CLARK-NORMAN

Sandown Airport, Isle of Wight

DIRECTORS:

Alec Clark

Desmond Norman

Clark Norman was formed to design and build the Triloader aircraft described below.

NEW ENTRY

CLARK NORMAN TRILOADER

TYPE: Three-turboprop utility transport.

PROGRAMME: Planned first flight August 1997, certification December 1998. Negotiations under way with a European manufacturer for series production.

DESIGN FEATURES: General layout similar to Desmond Norman's earlier Trislander design but with square-section fuselage designed for palletised cargo, strutted wing supports, and main undercarriage legs mounted on the fuselage instead of the wings.

FLYING CONTROLS: Mechanically operated ailerons, elevator and rudder. Elevator tab for pitch trim and fixed tabs on ailerons and rudder. Plain flaps inboard of ailerons.

LANDING GEAR: Fixed tricycle type; main legs fuselage-mounted.

POWER PLANT: Three 450 kW (603 shp) turboprop engines, one on each wing and one mounted on leading-edge of fin.

ACCOMMODATION: Two crew, up to five LD 3 containers through front loading system. Smaller palletised cargo loaded through side doors.

AVIONICS: Customer specified.
DIMENSIONS, EXTERNAL (approx):
Wing span 24.4 m (80 ft 0 in)
Length overall 19.0 m (62 ft 6 in)

WEIGHTS AND LOADINGS (approx):
Max payload 3,000 kg (6,600 lb)
Max T-O weight 8,350 kg (18,400 lb)
Max power loading 6.19 kg/kW (10.16 lb/shp)
PERFORMANCE (at max T-O weight, ISA):
Econ cruising speed 156 kts (290 km/h; 180 mph)
T-O run 225 m (738 ft)
Range 313 n miles (580 km; 360 miles)

NEW ENTRY

REVOLUTION HELICOPTER MINI-500

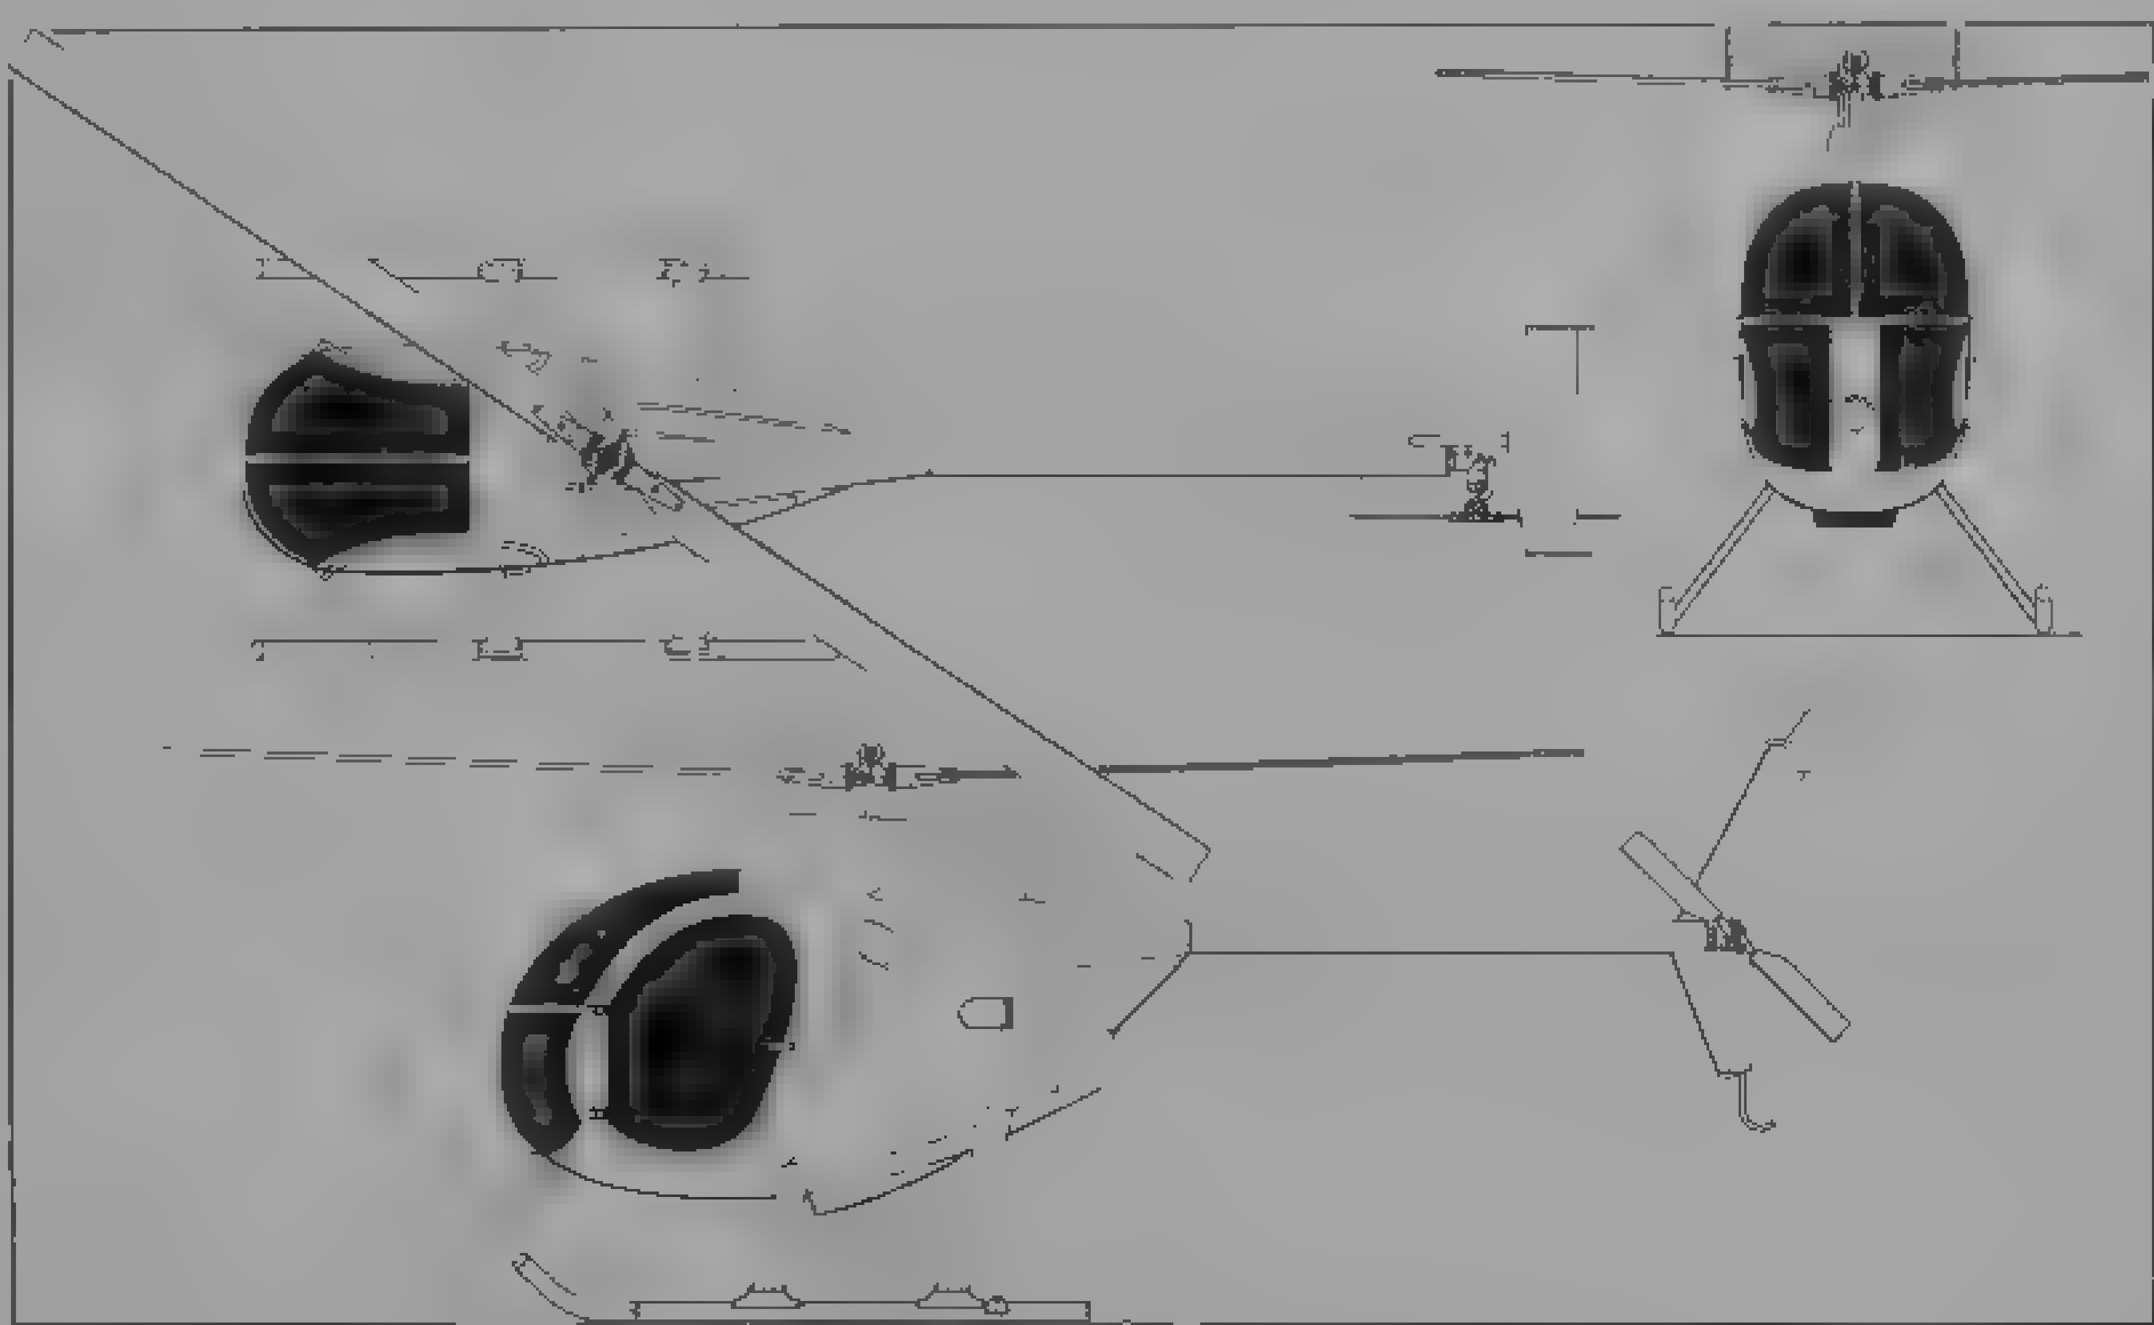
TYPE: Single-seat homebuilt helicopter; scale replica of McDonnell Douglas MD 500.

PROGRAMME: Based on X101 prototype, a single-seat open structure helicopter designed by Argentine Augusto Cicaré and with whom Dennis Fetters established Revolution Helicopters. The Mini-500 in kit form has similar dynamics but incorporates a modified and light structure and features a moulded glassfibre cabin shell and unsupported tailboom with new tail surfaces. Kit assembly in 40 to 60 hours.

COSTS: Kit: $24,500 (1995).

DESIGN FEATURES: Two-blade semi-rigid teetering main rotor, turning at 550 rpm, constructed using aluminium alloy spars and composite skins. Teetering two-blade tail rotor of aluminium alloy and steel construction, turning at 2,671 rpm. Rubber insulators, flex-packs and counterbalances for vibration damping. Optional rotor brake.

STRUCTURE: Welded steel tube structure, with moulded glassfibre cabin enclosure. Twin skid landing gear. Floats and skis optional.



Revolution Mini-500 (Rotax 582 piston engine) *1995*

POWER PLANT: One 50 kW (67 hp) Rotax 582, with belt drive to transmission. Fuel capacity 55.6 litres (14.7 US gallons; 12.25 Imp gallons). Transmission rating 40 kW (53.6 hp) at take-off and 82 kW (110 hp) capacity.

DIMENSIONS, EXTERNAL:
Main rotor diameter 5.79 m (19 ft 0 in)
Main rotor blade chord 0.20 m (8 in)
Tail rotor diameter 1.17 m (3 ft 10 in)

Tail rotor blade chord 0 10 m (4 in)
Length of fuselage 5 49 m (18 ft 0 in)
Length overall (incl main rotor) 6 86 m (22 ft 6 in)
Height overall 2 46 m (8 ft 1 in)
Skid track 1 60 m (5 ft 3 in)
AREAS
Main rotor disc 26 57 m² (286 0 sq ft)
WEIGHTS AND LOADINGS
Weight empty 220 kg (485 lb)
Max payload 161 kg (355 lb)
Max T-O weight 381 kg (840 lb)
PERFORMANCE
Never exceed speed (VNE) 130 kts (241 km/h, 150 mph)
Max level speed at 1,525 m (5,000 ft) 82 kts (153 km/h, 95 mph)
Cruising speed at 1,525 m (5,000 ft) 65 kts (121 km/h, 75 mph)
Max rate of climb at S/L 335 m (1,100 ft)/min
Service ceiling 3,050 m (10,000 ft)
Hovering ceiling IGE 2,135 m (7,000 ft)
OGE 1,525 m (5,000 ft)
Range 195 n miles (362 km; 225 miles)
Endurance 3 h

NEW ENTRY

TRI-R KIS

TYPE: Side by side two-seat homebuilt monoplane

COSTS: Basic kit #11,500 plus VAT without engine, avionics, propeller, spinner, upholstery, battery, instruments and paint (1995)

DESIGN FEATURES: Consistent with designation KIS (keep it simple)

FLYING CONTROLS: Conventional, manually operated Upturned wingtips

STRUCTURE: Constructed of high-temperature epoxy pre-impregnated GFRP/CFRP premoulded components, with either divinycell or honeycomb core All metal components prewelded or premachined

LANDING GEAR: Non-retractable, with single wheels and cantilever main legs, optional spats

POWER PLANT: One 59 7 kW (80 hp) Limbach L2000 engine as standard Alternatives up to 93 kW (125 hp) Teledyne Continental IO-240

DIMENSIONS, EXTERNAL
Wing span standard 7 01 m (23 ft 0 in)
Length overall 6 71 m (22 ft 0 in)
Propeller diameter 1 42 m (4 ft 8 in)

Tri-R KIS kitplane assembled in UK *(Paul Jackson)* *1995*

DIMENSIONS, INTERNAL
Cockpit: Length 1 65 m (5 ft 5 in)
Max width 1 07 m (3 ft 6 in)
Max height 1 02 m (3 ft 4 in)
AREAS
Wings, gross 8 18 m² (88 0 sq ft)
WEIGHTS AND LOADINGS
Weight empty 308 kg (680 lb)
Max T-O weight (Limbach) 544 kg (1,200 lb)
Max wing loading 66 58 kg/m² (13 64 lb/sq ft)
Max power loading (Limbach) 9 13 kg/kW (15 0 lb/hp)
PERFORMANCE
Max level speed more than 130 kts (241 km/h, 150 mph)
Cruising speed 117 kts (217 km/h, 135 mph)
Stalling speed 48 kts (89 km/h, 55 mph)
Max rate of climb at S/L 228 m (750 ft)/min
T-O run approx 305 m (1,000 ft)
Range at cruising speed more than 521 n miles (965 km, 600 miles)
g limits +4.4/−2 2
